In this period the sterling area's position in the European Payments union deteriorated markedly so that by the end of October the United Kingdom had not only repaid all the gold it had received from the E.P.U., but had also received from it credits amounting to the equivalent of $356,000,000 and had made net gold payments to it of $36,000,000.

To halt the drain on the reserves, new restrictions were imposed in November on payments to nonsterling countries. Imports were to be cut sharply, a step which involved the reimposition of quota restrictions on imports from other countries of western Europe, a reduction in the rate of stock-piling and in tourist allowances. These cuts were estimated to yield total savings equivalent to about $1,000,000,000 in 1952. The inflationary pressure expected to result from the improved balance of payments position would be offset by the reduction in investment and government expenditures which would flow from the rise in bank rate and other domestic financial measures introduced at the same time.

As a further step aimed at restoring confidence in sterling, the Bank of England on Dec. 15 ceased to quote official exchange rates for forward exchange and restored freedom to the commercial banks to deal in forward sterling at market rates. Banks were permitted to deal in U.S. dollars only with banks in the American account area. At the same time, although spot sterling remained fixed at $2.80 per pound, the spread between the buying and selling rates was widened to allow sterling to fluctuate between $2.77 and $2.83, depending on supply and demand. These relaxations in the British exchange control system were of limited scope. Sterling remained inconvertible, and import restrictions were tighter than before. The measures were significant in that they were the first important moves made since 1939 toward a free market in foreign exchange. In the following days there was a significant recovery in forward sterling in New York, while the Federal Reserve bank of New York, as agent for the Bank of England, did not have to buy spot sterling for support purposes.

There were no changes in exchange rates in the sterling area in 1950. The controversy surrounding the Pakistan rupee, the only sterling area currency not devalued in Sept. 1949, ceased after the International Monetary fund announcement in March of the establishment of the initial par value for the Pakistan rupee at 3.30852 rupees per U.S. dollar, the rate proposed by the government of Pakistan and corresponding to the existing effective rates.

Europe.—In Europe the most striking developments in 1951 were the shifts in payments relations among western European countries and the tightening or relaxation of import and exchange controls which resulted from them. These changes were reflected clearly in the transactions of the European Payments union. At the beginning of the year the United Kingdom and France had built up large surpluses and were receiving substantial gold payments from the E.P.U., the Belgium-Luxembourg economic union was more or less in balance with the E.P.U., while Denmark, the Netherlands and in particular Germany had run up very large deficits. At the end of November the British and French cumulative surpluses had disappeared, and they were running substantial deficits with the E.P.U. The Netherlands and Denmark were improving their positions, while Portugal, Sweden, Switzerland and particularly Italy and Belgium had run up extremely large surpluses.

Unlike 1950, when its currency had weakened slightly, the international economic position of Belgium became progressively stronger in the course of 1951. Mainly as a result of increased steel exports, the country's monetary reserves exceeded $1,000,000,000 equivalent at the end of November, having risen by more than $250,000,000 equivalent since the end of 1950. As indicated above, most of the improvement was in transactions with other European countries, a surplus which was covered only in part by hard currency receipts and in part by the extension of Belgian franc credits. In these circumstances various measures were taken by the Belgian monetary authorities to reduce the payments surplus with other European countries and thereby the need to extend them additional credit. On the one hand, for instance, complete freedom was given to Belgian capital for investment in all E.P.U. countries except Switzerland. On the other hand, however, in order to restrain Belgian exports, and also the inflow of hot money, the import of Belgian bank notes into the E.P.U. was further restricted, and Belgian banks' purchases of E.P.U. currencies were subjected to a tighter control by the monetary authorities.

Since Belgium's deficit with the dollar area remained substantial, some additional restrictions were also applied to imports from the dollar area in order to safeguard the country's reserves of hard currency. Thus, although the stronger position of the Belgian franc was reflected in its appreciation in terms of some European currencies in the free market in Brussels, it did not lead on balance to a significant relaxation of Belgian exchange restrictions.

In Finland a tax of 30% on all foreign exchange sold for travel purposes was applied after June 11, 1951. More important, on June 28, after consultations with the International Monetary fund, an initial par value of 230 Finnish markkaa per U.S. dollar was established. This step was made possible by the greater degree of internal financial stability in Finland and by the sharp improvement in the country's balance of payments resulting from the rise in timber and pulp prices.

The second half of the year saw a significant deterioration in the French foreign exchange position. This resulted in part from an increased trade deficit and the temporary stoppage of U.S. financial assistance, but was in the main caused by an outflow of capital from France. At the end of November the curb rate in Paris stood at 445 fr. per U.S. dollar compared with around 380 at the end of 1950. To prevent further capital flight and to reduce the pressure on reserves the government took various measures in October and November. The issue of dollar import licences was cut sharply, while importers of goods entirely or partially freed from quantitative import restrictions, coming mainly from other E.P.U. countries, were permitted to pay for the imports only after they had been delivered in France. Furthermore, French commercial banks were obliged to transfer to accounts of the Stabilization fund with foreign central banks any balances in excess of those held on June 6, 1951.

The position of western Germany changed radically in 1951, particularly in relation to other European countries. In the spring its deficit with other E.P.U. countries had become so large that not only had western Germany to be granted a special gold loan from the European Payments union, but that country was also unable to adhere to the O.E.E.C. program of liberalizing intra-European trade and payments and had to impose special restrictions on imports from these countries. By the end of the year, however, western Germany was recording substantial surpluses with the European Payments union, had recovered all the gold and dollars paid to the E.P.U. in the latter part of 1950 and had more than doubled its foreign exchange assets. As a result the O.E.E.C. council decided that, as from Jan. 1, 1952, the special restrictions imposed on imports from other E.P.U. countries would be revoked at least in part, and the special treatment which Germany had enjoyed since the spring progressively brought to an end.

An important technical change was made in the Greek foreign exchange system on June 1. Hitherto persons offering foreign exchange to the central bank for sale received certificates of exchange, while those wishing to purchase exchange had to present such certificates. The prices of these certificates, which had been maintained by the Bank of Greece at dr. 10,000 per U.S. dollar and dr. 22,000 per pound sterling, were henceforth incorporated in the official exchange rates and the certificate system abolished. This step, however, did not entail any change in the effective official exchange rates. The drachma showed some signs of strengthening when the price of gold sovereigns remained at or below dr. 226,000 in the spring and summer without the Bank of Greece having to intervene as a seller. After the middle of September, however, substantial official sales of sovereigns had to be made to the public to maintain the rate.

Although Italy's deficit with the dollar area was larger than in the previous year, the Italian position improved substantially in relation to most European countries. In the latter half of the year Italy built up a very substantial credit position in the European Payments union from which Italy also received large gold payments. In an effort to reduce the E.P.U. surplus an attempt was made in the fall to encourage imports by relaxing various import and exchange controls.

Spain simplified its multiple-exchange rate structure further in 1951. The various export rates previously in effect, which had ranged from 10.95 pesetas per U.S. dollar to the free rate, were replaced from Nov. 1 by a single rate of 21.90 pesetas per U.S. dollar. This rate was applicable to 100% of most export proceeds, including those from fruit exports, but certain exports were encouraged by the fact that exporters of them were entitled to sell from 10% to 90% of their proceeds on the free market. Import rates remained unchanged. At the same time the government authorized commercial banks to undertake foreign exchange transactions with their customers directly instead of through the foreign exchange office.

On Aug. 31 Sweden became the 50th member of the International Monetary fund, and on Nov. 5 the initial par value for the krona was established at 5.17321 kronor per U.S. dollar. Effective exchange rates thus remained unchanged.

Late in December the Yugoslav government announced a change in the exchange rate of its currency from 50 to 300 dinars per U.S. dollar to take effect from Jan. 1, 1952. This step, which had the approval of the International Monetary fund, was much more than a devaluation. Hitherto the exchange rate, like others in eastern Europe, had had little influence on the volume or direction of the country's foreign trade which was conducted by state-owned agencies in accordance with the plan of the central government and was not determined by relative prices in Yugoslavia and foreign countries. (It did, of course, have a significance for various financial transactions, such as foreign government expenditures in Yugoslavia.) The change in the exchange rate was an essential feature and indeed an inevitable result of the Yugoslav government's new policy of placing less reliance on detailed direction of production by a central planning agency and greater emphasis on the market as a regulator of what should be produced, consumed, imported and exported. Under the new system independent industrial units would remain state-owned but would be permitted to trade with foreign countries. The exchange rate would exercise its normal function of determining what would be exported and imported. It was expected that at the new rate all major exports would be competitive in foreign markets, while imports would be curbed significantly, both of which aims were sought by the government.

Middle East.—Only minor modifications were made in exchange control systems in the middle east. In Egypt, changes in the exchange regulations were made which had the effect of increasing the freedom of exporters to use their foreign exchange proceeds. For instance, exporters selling cotton to the U.S. in excess of the quota were allowed to retain 30% of the dollar proceeds to pay for their own imports of specified goods. In part as a result of these steps, the value of the Egyptian pound in the free exchange market slipped somewhat lower throughout the year.

On June 25 Iraq took certain steps to eliminate exchange losses and to move toward the unification of its multiple-rate structure. By buying exchange from exporters at 48.50 rials per U.S. dollar and selling part of it to importers of essential goods at the rate of 40 rials, the government had incurred substantial losses. Under the new system the rate at which export proceeds were sold to the monetary authorities was reduced to 47 rials while the rate for essential imports was raised to 41.50 rials and that for nonessentials lowered from 48.50 to 47 rials to the dollar. At the same time certain imports were shifted from the essential to the nonessential group. By this means the government aimed at equalizing purchases of exchange from exporters and sales to importers of nonessentials at the same rate of 47 rials per U.S. dollar.

In the latter half of the year Iran's foreign exchange position worsened as a result of the government's dispute with the Anglo-Iranian Oil company and the consequent stoppage of oil production and exports.

New exchange and currency regulations were introduced in Jordan in April. Apart from certain limited exemptions, these forbade the import and export, without authorization, of Jordan currency or of any foreign exchange, gold and bills. Only dealers authorized by the controller of currency were permitted to lend, sell, borrow or buy foreign exchange.

In Syria and Lebanon most foreign exchange transactions continued to be conducted through the free markets at rates determined by supply and demand. Indeed, in the former country the scope of the free market was widened in September when the government revoked the regulation requiring foreign tourists and receivers of remittances from emigrants to surrender 10% of their exchange holdings to the exchange office at the official rate. In the Beirut free market the most noteworthy feature in 1951 was the tendency for sterling and particularly French francs to be traded at an increasing discount in the latter half of the year. The reasons for this movement have already been noted.

Far East.—In the far east significant changes in exchange rates and regulations resulted from the consolidation of Communist control on the Chinese mainland. On Jan. 20 the Peking government announced a new exchange rate for the People's yuan of 3.880 to one Hong Kong dollar. Thereafter, the special currencies previously issued by the Communist regime in Manchuria and Inner Mongolia were abolished, and the People's yuan was made the sole legal tender in those areas also.

There were signs of an outflow of capital from China. The demand for gold and dollars was steady in Hong Kong where the People's yuan was quoted at a substantial discount in the open market. The volume of transactions was small, however, particularly after controls on trade with China were tightened in the summer.

In an effort to control imports more effectively, the Philippine government imposed on March 28 a 17% tax on sales of foreign exchange except those to be used to import specified essential commodities, mainly foodstuffs and drugs, and for designated nontrade payments, primarily insurance. This raised the selling rate from 2.015 to 2.358 pesos to the dollar, and after its imposition the spread between the free rate and the official rate (with tax) shrank further, the former falling from around 3.80 to less than 3 pesos per U.S. dollar. (*See* also EUROPEAN RECOVERY PROGRAM; GOLD; INTERNATIONAL TRADE; TARIFFS.)

Exploration and Discovery.

The Norwegian-British-Swedish antarctic expedition continued during 1951 to make good progress. The purpose of the expedition was to conduct extensive explorations in Queen Maud Land, on the antarctic continent. The expedition had been there for several years, and intended to remain for the balance of the summer season.

From the main base at Maudheim, the explorers conducted expeditions to the south, east and west. They had available aircraft and a "weasel," whose caterpillar track proved well suited for the terrain. With this motorized transport, a base was established 185 mi. to the southeast, at about lat. 72° 16′ S. and long. 3° 49′ W. Extensive studies of the physics of the shelf ice were in progress, as well as the usual work in geology, glaciology, meteorology and on the rather scant flora and fauna of the region. On the geographic side, a new mountain range was discovered. The aerial mapping was successful and work on glaciology and seismic exploration were being continued.

A Mt. Everest reconnaissance expedition was in the field. Since the traditional approach to Everest via the valleys of Tibet was closed, the approach from the south via Nepal was being studied. The Nepalese government had granted permission for an expedition to enter Nepal and to make a reconnaissance of this route.

An expedition from Birmingham university to Spitsbergen did geological work and topographic mapping, as also did one from Cambridge university. R. A. Young, of the Durham University Exploration society, did mapping ecological and ornithological work in Iceland. A survey expedition was led by Duncan Carse to South Georgia, and a geological expedition was led by W. G. Kennedy to Mt. Ruwenzori, Belgian Congo.

The ship "Wanderer" of the Sperry Gyroscope company made studies of the Gulf stream, and especially studied the velocity profiles of the stream. The Woods Hole Oceanographic institution had also been studying this current. They found current velocities of four to five knots in narrow bands of 10 or 15 mi. width which shift as much as 10 mi. in a day.

The report by George Salt on the Kilimanjaro expedition was made available. The expedition conducted extensive studies of the Shira plateau on Mt. Kilimanjaro, Tanganyika, especially collecting and studying the flora and fauna of this region. The Shira plateau lies at altitudes between 11,500 and 13,500 ft. to the west of the main Kibo cone of the triple-vent volcano, and between these contours is an area of about 24 sq.mi. that is rarely visited. The expedition installed and operated nine rain gauges, and made temperature and glaciological studies as well as studying the biology of this area.

The program of regular weather flights over the north pole was continued. The B-29 type planes flying from Alaskan fields completed their 500th flight over the pole since the inauguration of the work in 1947. The round trip normally took about 16 hours. Much new information about polar meteorology, as well as photographic studies of ice movement in polar areas, was obtained. Considerable experience was accumulated in the operation of new types of night celestial navigation equipment, the magnetic compass being largely useless.

The National Geographic society expedition to Panamá, led by Matthew W. Stirling, obtained much new archaeological data. Stirling specialized in a study of the region around La Pintada, with attention to present-day customs as well as to the traces of former cultures. Alexander Wetmore, secretary of the Smithsonian institution, also visited the Darien region, and brought back many new ornithological specimens. Other expeditions to the interior of the isthmus were conducted by Lorus J. Milne and Mrs. Milne, who specialized in the photography of animal life in its natural habitat, and in the comparative biology of the animal types found there, and F. Masland, who obtained an interesting photographic record of the primitive tribes.

The third Danish expedition to central Asia, under the leadership of Prince Peter of Greece and Denmark, having been unable to gain access to Tibet because of the political situation, was operating around Kalimpong in northern India. They were continuing their program of anthropologic and ethnographic studies.

Another reconnaissance expedition of the Nepalese approach to Mt. Everest was conducted by H. W. Tilman, who ascended the river valleys both east and west from Kathmandu. On his eastern trip he made a traverse of the Khumba glacier and attained an altitude of about 18,000 ft. on the southern portion of the Everest massif, while on his western trip he explored the Annapurna Himal, just south of the main crest separating Nepal from Tibet.

Dillon Ripley of the Peabody museum of Yale university went to Assam on an ornithological expedition and many new specimens in this area were found.

Quentin Keynes took a four-wheel drive vehicle through South-West Africa, finally reaching the Skeleton coast on the Atlantic. He obtained many animal photographs, including some of the rare white rhinoceros.

The Roncador-Xingú expedition, sponsored by the Brazilian government for the purpose of opening up the interior of Brazil to settlement, continued its work. It pushed farther into the jungle, built air strips and made contact with Indian tribes seldom previously visited.

Wendell Phillips, in charge of an expedition for the American Foundation for the Study of Man, did exploratory and excavation work in southern Arabia. In particular he was seeking further knowledge about the travels of the queen of Sheba.

The University of Puerto Rico expedition to Venezuela, led by Ventura Barnes and Paul Nesbitt, obtained much new data in the fields of botany, biology and ornithology.

Further studies of the ocean bottom were conducted by Maurice Ewing of Columbia university, who devoted special attention to the large flat areas recently found in the west central Atlantic and to the approaches to the central Atlantic ridge. New devices for photographing the ocean bottom at great depths and for obtaining core samples as long as 50 or 60 ft. were successfully used.

Forming a part of the scientific research program of the Arctic Institute of North America, Project "Snow Cornice" was inaugurated in 1948 to conduct a program of general scientific studies of the region encompassed within the drainage system of the Seward-Malaspina glacier system, Alaska-Canada. The program was continued in 1949, 1950 and 1951. Fields of investigation included biology, meteorology, geology and stereophotogrammetric survey, but primary emphasis was directed to glacier studies in an effort to assess characteristics of glacier behaviour, structure and regimen and to evaluate glaciological phenomena in their relation to environmental factors.

Operations were logistically supported by a ski-wheel-equipped Norseman aircraft. In 1951 studies were extended to include the broad Malaspina glacier, which covers an area of more than 1,000 sq.mi. between the St. Elias mountains and the Pacific ocean. Near the centre of the piedmont a shaft was sunk into the ice to a depth of more than 1,000 ft. by electrically heated "hot point." The drill pipe was left in place and surveys of its attitude were made by inclinometer inserted in the pipe. These would be compared with similar surveys in later years to determine the deformation of the pipe and test the mode of flow within such ice bodies. Seismic studies were conducted to determine the three-dimensional aspects of the Malaspina and to interpret the conformation of the glacier rock floor. The ice was found to exceed 2,000 ft. in thickness.

SKELETAL REMAINS believed at the time of their discovery to be those of the British explorer P. H. Fawcett, who vanished in 1925. The skull was found in the Matto Grosso, Braz., jungles in April 1951 by Orlando Vilasboas (left), Brazilian explorer

During the year the first ascents of Mt. Hubbard (14,950 ft.) and Mt. Alverstone (14,500 ft.) were accomplished, the party being transported and supplied entirely by air. The program was directed by Walter A. Wood of the Arctic Institute of North America. Field personnel comprised 21 scientists representing the Arctic institute, California Institute of Technology, U.S. geological survey, American Alpine club, Toronto university and Haverford college.

The Juneau Ice Field Research project of the American Geographical society, headed by W. O. Field and Maynard Miller, continued the work started in former years. They established a camp in the centre of the large Juneau ice field, supported largely by air, and continued their studies in meteorology, glaciology, botany and ice physics. They made long core samples, density determinations and geophysical thickness studies. They studied temperatures at various depths in the ice, and measured ice movement, ablation and accumulation and allied phenomena.

The Expéditions Polaires Françaises, under the leadership of Paul-Émile Victor, continued its work along similar lines.

They occupied a station in the middle of the Greenland ice cap. There they studied meteorology, glaciology and ice phenomena over a period of many months. The other phase of the expedition consisted of a group working in Adélie Land, thus enabling data in the southern and northern polar regions to be co-ordinated and intercompared.

Exploration for possible sites for high-altitude research stations received a considerable impetus during 1951. Terris Moore, president of the University of Alaska, conducted an air and ground reconnaissance of Mt. Sanford, a 16,200-ft. peak in southeastern Alaska, with a view to ascertaining the feasibility of constructing a cosmic ray station on this mountain. At the same time, Bradford Washburn, director of the Boston Museum of Science, ascended Mt. McKinley in Alaska, and his party conducted extensive explorations and investigations in the vicinity.

The University of Chile announced plans for an observing station on the summit of Cerro Colorado, an 11,000-ft. peak just east of Santiago, at lat. 33° 20′ S. and long. 70° W. A station was also started at the 13,700-ft. level on White mountain, Calif., at lat. 38° N. and long. 118° W. Exploratory expeditions, with a view to finding suitable locations in the Himalaya, explored several possible sites in northern India, and another expedition located a proposed station in Pakistan. Explosions: *see* DISASTERS.

Export-Import Bank of Washington.

In Oct. 1951 Congress increased the lending authority of the Export-Import bank from $3,500,000,000 to $4,500,000,000 to carry out its purpose of facilitating the export and import trade of the United States.

During the calendar year 1951, in close co-operation with the defense agencies, the bank established credits to finance the expansion of capacity and the production and treatment abroad of essential materials for the United States stockpile for use by industry in the United States and the free world.

The total amount of loans authorized by the bank from the time of its establishment in 1934 to the end of 1951 approximated $5,300,000,000. Disbursements during 1951 were approximately $204,100,000 and repayments during 1951 were approximately $134,600,000. Outstanding loans of the bank totalled $2,300,000,000 at the end of 1951. (S. SD.)

Eye, Diseases of.

Further experience during 1951 with the use of cortisone and ACTH in a variety of diseases of the eye made possible evaluation of the effectiveness of the hormones and revealed certain contraindications to their use.

The most beneficial results were observed in acute inflammatory disturbances of the anterior segment of the eye. Administration of cortisone and ACTH in tuberculous animals and in animals with induced tuberculous eye lesions resulted in reactions that indicated the drugs should be used in such cases with caution, if at all. ACTH and cortisone, given by injection into the muscles, were shown to inhibit the mechanism by which a focal tuberculous lesion is walled off by fibrous tissues. The tubercle bacilli were found to be more numerous and were more rapidly and widely disseminated in the cortisone-treated animals. For this reason a warning was given against the use of cortisone in the eye in ocular tuberculosis. The use of these hormones seemed to do more harm than good, by permitting the primary lesion to progress without interference by the body's natural defenses.

Application by a new technique of an old and accepted method for the treatment of certain stages and types of chronic glaucoma promised better results, with less risk, according to statistical findings on a small series of clinical cases. The procedure was called cycloelectrolysis because electrolysis was used instead of diathermy to cause destruction of the ciliary body within the eye. In cycloelectrolysis a chemical reaction occurs between sodium hydroxide, formed at the cathode, and the tissues, causing liquefaction of the adjacent cells. In cyclodiathermy the strong current produces enough heat to cause tissue destruction. The new technique of treating all types and stages of glaucoma by cycloelectrolysis was advocated for persons of deeply pigmented skin because of the keloid reaction following conventional surgical operations for glaucoma. With cycloelectrolysis there is a minimal proliferative reaction, and hence less probability of a tissue reaction that reverses the anticipated result.

The mechanism of glaucoma was elucidated somewhat by a carefully controlled series of measurements of the rate of flow of aqueous humour in the human eye by a method of tonography. W. Morton Grant demonstrated, by means of statistical analysis of data obtained by measuring the intraocular pressure with a tonometer, that the rate of aqueous formation and its outflow averages 2.4 cu.mm. per minute. He measured the rate of flow of aqueous in many eyes with different types of glaucoma, and in none of them could he demonstrate an overproduction of aqueous. He concluded, therefore, that in glaucoma there is an impediment to the outflow of aqueous, which accounts for the rise in intraocular pressure. In those cases of glaucoma which had been successfully operated on, a return to normal, or even subnormal, rate of flow of aqueous was found. The results of investigations by others confirmed Grant's conclusions.

The formation of cataract after exposure of the human eye to X-rays had been known for years. Cataracts also are formed as a result of exposure of the eye to neutrons from cyclotrons and from atomic bombs. The comparison of the cataracts shows a difference in the manner in which they are formed. The X-rays cause cataract by damaging the actively proliferating cells of the anterior lens epithelium. Abnormal fibres then develop from the cells, and after nine months to 12 years opacities are seen in the subcapsular areas. The total dosage necessary to produce cataract varies from 1,000 to 2,000 roentgens, and the longer rays produce the greatest damage. Neutrons are capable of producing cataract by causing oxidation of glutathione. Without glutathione in a form to carry out normal enzymatic respiration, abnormal cells are produced, resulting in vacuolization and swelling of the lens fibres. Neutrons were found to be more damaging than X-rays, and the latent period much shorter.

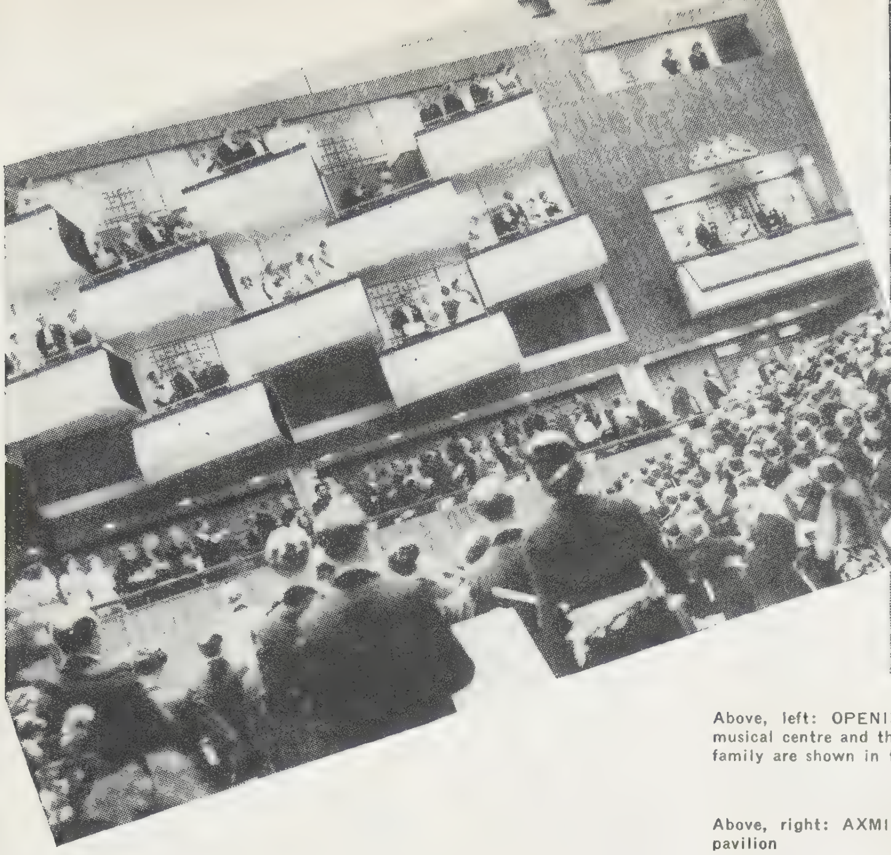
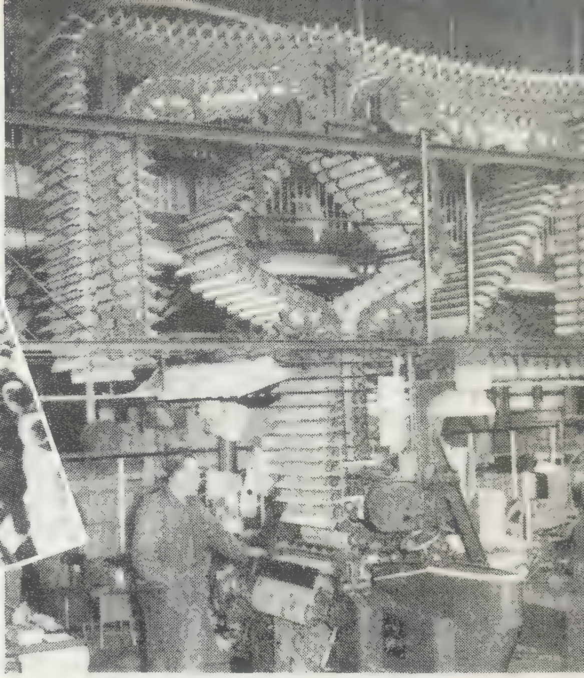
Fairs and Exhibitions.

The 2,200 fairs and exhibitions of the U.S. and Canada had another record year in 1951. While the entertainment and holiday features were more strongly emphasized than ever before, the





Scenes at the Festival of Britain, opened on the south bank of the Thames in London on May 3, 1951

educational features maintained the high standards that had done so much to improve agriculture, livestock husbandry and rural standards of living. Exhibits of livestock and agricultural products were fully up to the standard of the previous year, and commercial exhibitors had exceptionally large showings of improved farm machinery and equipment as well as refrigerators, ranges, radios and other home furnishings. Special interest was shown in the exhibits of television sets in territories which had been out of range of TV in previous years. Particularly noticeable was the increase in the use of radio and stage stars in promoting attendance. Jimmy Durante, Eddie Cantor, Ken Murray, Eddie Arnold and Gene Autry were some of the stars booked for leading fairs. The Texas state fair, Dallas, had probably the greatest array of entertainment of any fair. It included the stage hit "Guys and Dolls," a major football game, a music festival, a big ice skating spectacle, "Icecycles," and a "thrillcade" of automobile daredeviltry. Railroads and air lines joined in a huge exploitation campaign for the fair.

Harness racing, one of the most popular though not financially profitable fair features, suffered in 1951 because professional harness racing tracks where parimutuel betting is allowed took the best of the harness horses.

The Texas state fair's 1951 attendance of 2,320,129 took a slight lead over that of the Canadian National exhibition, Toronto, which totalled 2,300,000, or slightly less than in 1950. Los Angeles county fair, Pomona, Calif., was third with an attendance of 1,076,654. It was one of the few large fairs having parimutuel betting on the races and reported a total handle of $6,894,665 on the mutuels. Minnesota state fair, St. Paul, registered an attendance of 900,399; Wisconsin state fair, Milwaukee, 814,110; California state fair, Sacramento, 762,029. Southeastern fair, Atlanta, Ga., and Indiana state fair, Indianapolis, each reported more than 600,000, and a score of other fairs had attendances which ranged from 300,000 to 450,000. For years the middle west had held the lead over all other sections of the country in size and importance of its fairs and with few exceptions this lead was maintained in 1951. The state fairs of Indiana, Illinois, Ohio, Iowa, Minnesota, Wisconsin and Texas represented huge investments in grounds, buildings and equipment, with values ranging from $3,000,000 to $20,000,000 each.

Building programs of many of the larger fairs had soared during the past decade. A number of fairs had costly auditoriums in which huge stage productions, ice skating shows and spectacles of various kinds were presented throughout the year, and many had buildings devoted to the 4-H club, Future Farmers of America and other youth organizations, as well as large and elaborate livestock and agricultural buildings. (NA. G.)

Great Britain.—The outstanding exhibitions of 1951 were those of the Festival of Britain on the South Bank, London; a land-travelling exhibition which visited Manchester, Leeds, Birmingham and Nottingham; and a sea-borne exhibition in the converted aircraft carrier "Campania" which visited Southampton, Dundee, Newcastle-upon-Tyne, Hull, Plymouth, Bristol, Cardiff, Belfast, Birkenhead and Glasgow. In Scotland there was an exhibition of industrial power at Kelvin hall, Glasgow, and in Northern Ireland a farm and factory exhibition. From May 4 to Sept. 30, 8,455,863 persons visited South Bank, 462,289 the land-travelling exhibition and 889,792 the "Campania."

Associated with the Festival of Britain were many exhibitions throughout the country. Among these were the bicentenary exhibition of old Worcester porcelain in London and at Worcester (May–September), an Anglo-Jewish exhibition at University college, London (July 9–Aug. 3), the Royal Society of Arts "Exhibition of Exhibitions" (May–October), a photographic display by the *Times* (London) covering the period 1921–51 (May 7–29) and a Regency exhibition at Royal pavilion, Brighton (July 16–Aug. 26) which attracted more than 120,000 visitors.

The National Book league sponsored more than 50 exhibitions of books outside London. These included displays at Plymouth, Lichfield, York, Belfast, Glasgow, Edinburgh and in the library of Glanllyn, Llanywchyllyn, Merionethshire.

The 30th British Industries fair was again held at Olympia and Earls Court, London, and at Castle Bromwich, Birmingham (April 30–May 11). There were nearly 3,000 exhibitors—of which 1,246 were at the heavy section at Castle Bromwich—19,266 overseas buyers and 99,455 home buyers. A Welsh industries fair was held at Cardiff (June 4–14).

The total attendance of 373,129 at the 36th Motor show at Earls Court (Oct. 17–27) was 102,197 fewer than in 1950. The Motor Cycle and Cycle show—not held in 1950—took place at Earls Court.

The Radio show (Aug. 28–Sept. 9), held for the first time at Earls Court, attracted 232,752 visitors. The first national packaging exhibition to be held in London opened at Olympia on Jan. 30. It was sponsored by the Institute of Packaging.

Agricultural Shows.—The show of the Royal Agricultural Society of England was held at Trumpington, Cambridge (July 3–6); the show covered 150 ac. and the total attendance was 131,333. The livestock entry was 4,697 head.

Gloucester was the site of the Three Counties show (June 12–14) and Dorchester, for the first time since 1928, that of the Bath, West and Southern Counties show (May 30–June 2). The total attendance at the "Bath and West" was 89,329, about 17,000 more than at Birmingham in 1950. The Great Yorkshire show at Harrogate (July 10–12) received more entries, 3,308, than in any of the 104 years of the show's existence. For the first time only animals from attested herds were accepted. The Royal Counties show was held at Stoneham, near Southampton (June 20–23); attendance was nearly 51,000. The Royal Highland show was held at Hazelhead, Aberdeen (June 19–22), and the Royal Welsh show at Llandrindod Wells (July 25–27). The Royal Lancashire show was held at Witton Park, Blackburn (Aug. 1–4).

The 65th annual Dairy show was held at Olympia (Oct. 23–26); the attendance was 66,679, compared with 96,867 in 1950 and 103,341 in 1949. The Smithfield show and Agricultural Machinery exhibition at Earls Court (Dec. 3–7) was marred by restrictions on the movement of animals following outbreaks of foot-and-mouth disease and swine fever. Despite these restrictions more than 650 animals were on display. All animals had to be slaughtered in the London area after the show. The attendance of 66,003 was the largest for 48 years.

A record entry of 1,500 was received for the International Horse show at the White City, London (July 23–28); Spain, Italy and Ireland entered official teams in the show-jumping events. The Royal Dublin society's horse show was again held at Ballsbridge, Dublin, in August. The Horse of the Year show was held indoors at Harringay arena, London (Oct. 3–6).

Canada.—At the fourth international trade fair at Toronto (May 28–June 8), 20 countries were represented, Canada and Great Britain again having the biggest displays. A British motor show, the third in three years, was held in Montreal in March.

Czechoslovakia.—At the 52nd Prague International fair (May 20–June 3) the largest display was that of the U.S.S.R. There were state exhibits from other Communist-controlled nations, and from Egypt, Pakistan and Turkey; and commercial exhibits from eight other countries, including Great Britain.

Germany.—The annual shows were again held at Leipzig in eastern Germany (March 4–11; Sept. 2–7) and at Frankfurt in western Germany (March 11–16; Sept. 2–6). The German Industries fair was held at Hanover in two sections, light industry

(Feb. 27–March 4) and heavy industry (April 29–May 8). Started by the British authorities in 1947 as the Hanover fair, it had by 1951 become the German Industries fair. There were 8,352 exhibitors from Germany and 16 other countries at the Leipzig spring fair. The largest overseas exhibit was the pavilion of the U.S.S.R. which attracted 100,000 visitors in the first two days. China was represented for the first time. Great Britain was the largest overseas exhibitor at the Frankfurt spring fair.

Greece.—For the first time since before World War II, the Salonika international fair was again held (Sept. 16–Oct. 3). There were 5,800 exhibitors, including 350 foreign firms.

Falk Foundation, Maurice and Laura: *see* Societies and Associations, U.S.

Falkland Islands. A British colony and two groups of dependencies in the South Atlantic. The colony consists of East and West Falkland and adjacent islands. Dependencies: (1) South Georgia (four whaling stations) with South Orkney and South Sandwich, and (2) South Shetland and Graham Land. Area of colony: 4,618 sq.mi.; pop. (1949) 2,267, almost all of British descent, mainly Protestant. Capital and only town, Stanley (pop. *c.* 1,200). Governor in 1951, Sir Miles Clifford.

History.—A further measure of constitutional reform was in preparation at the end of 1951. The 1949 constitution provided for a legislative council of six unofficial members, four elected and two nominated, and six official members, the governor as president having a casting vote. The casting vote had to be used too often, and it was proposed to provide for an unofficial majority by reducing the number of official members to five. The Colonial Development corporation's seal oil project came into production during the year and the construction of the corporation's freezing plant at Port Stanley to handle 1,000 beef and 30,000 mutton carcasses a year was due to start production early in 1952.

Argentina maintained its claim to the Falklands and their dependencies at the Conference of American Foreign Ministers in Washington, D.C., and sought to reinforce it by establishing another (and this time a naval) base in the dependencies. Chile also established a third base, and the British government continued to propose, without success, that the dispute be submitted to the International Court of Justice. The work of the Falkland Islands survey proceeded without interruption.

Education.—One school in Stanley, ten settlement schools on sheep ranches, and travelling teachers; in 1948 total pupils 338.

Finance and Trade.—Currency: pound sterling, with local notes. Budget (1950–51 est. for 15 months): colony, revenue £194,000 and expenditure £191,000; dependencies, revenue £129,806 and expenditure £102,864. Foreign trade (1950): imports £6,600,000; exports £6,200,000. Principal exports: wool, whale oil. (K. G. B.)

Family Income: *see* Census Data, U.S.
Famines: *see* Agriculture.
Farm Co-operatives: *see* Co-operatives; Farm Credit Administration.

Farm Credit Administration. Farmers and farmers' co-operatives in the continental United States and Puerto Rico obtained $2,300,000,000 in loans in the year 1951 from the banks and associations operating under the supervision of the Farm Credit administration of the U.S. department of agriculture. This may be compared with $1,900,000,000 in 1950.

This co-operative Farm Credit system operates through 12 district offices and local credit co-operatives. Farmers obtain short-term operating credit from 500 local production credit associations, and long-term farm mortgage credit through 1,000 local national farm loan associations. Each farmer-borrower is a member and owns capital stock in his association equal to at least 5% of his loan. Farmers' business co-operatives deal directly with the bank for co-operatives of the district in which the co-operative is located or, in the case of large regional co-operatives, with the Central Bank for Cooperatives. Each borrowing co-operative owns stock in the bank for co-operatives from which it obtains its loan.

Farmers and farmers' co-operatives at the end of 1951 owned more capital stock in their co-operative Farm Credit system than at any previous time. They owned a total of $166,000,000 compared with $148,000,000 at the end of 1950.

Farmer-borrowers owned all the capital stock of the national farm loan associations and, through their associations all the capital stock of the 12 federal land banks. The capital stock of the 12 federal land banks totaled $62,900,000 on Dec. 31, 1951, compared with $60,000,000 the year previous.

Farmer-members of production credit associations owned $82,900,000 in capital stock of their associations, compared with $71,000,000 on Dec. 31, 1950. Government capital in these associations declined from $15,700,000 at the end of 1950 to $11,400,000 on Dec. 31, 1951. In 1951, the production credit associations increased their membership from 462,400 to 472,500. On Jan. 5, 1952, 238 production credit associations were completely member-owned compared with 176 on Jan. 2, 1951, and 116 on Jan. 2, 1950.

Farmers' co-operatives increased their capital ownership in the 13 banks for co-operatives from $16,600,000 on Dec. 31, 1950, to $20,300,000 on Dec. 31, 1951.

Farmers in 1951 obtained 39,700 farm mortgage loans amounting to $214,200,000 through their national farm loan associations and federal land banks. This may be compared with 43,100 loans for $206,000,000 in 1950. On Dec. 31, 1951, farmers were using 307,900 land bank loans totalling $997,600,000, the largest amount since July 1946. Funds used to make these loans were largely obtained by the sale of consolidated farm loan bonds to investors. The bonds are not guaranteed in any way by the United States government.

In the year, farmers obtained 284,300 loans totalling $1,300,000,000 in credit from the 500 production credit associations, compared with just under $1,100,000,000 and 288,100 loans in 1950.

Farmers' marketing, purchasing, and business service co-operatives obtained 1,569 loans for $569,000,000 in operating capital, facility, and commodity loans from the 13 banks for co-operatives in 1951 compared with $402,000,000 in 1950. The number of loans made by the 13 banks increased 11.0% and the amount of loans 41.5% over the preceding year. The funds obtained were used directly in purchase of farm production supplies and marketing, processing or distributing foods and fibre produced by farmers.

The 12 federal intermediate credit banks, the principal source of loan funds of the production credit associations and of part of the loan funds of the 13 banks for co-operatives, as well as of certain types of privately financed credit institutions, made loans and discounts in 1951 totalling $2,100,000,000 compared with $1,600,000,000 in 1950. The consolidated debentures of these banks sold to investors were the source of their loanable funds. These debentures are not guaranteed by the United States government. The banks' total loans and discounts for the year included 82.5% for production credit associations, 6.0% for banks for co-operatives, 10.8% for privately capitalized institutions, and 0.7% for farmer co-operatives.

Another important work of the Farm Credit administration is carried on through its co-operative research and service division.

As directed by congress in the Cooperative Marketing Act of 1926, it conducts research and service activities to help farmers through their co-operatives develop sound merchandising, management, accounting, membership and other programs important to the success of the purchasing and marketing branches of their business. This division had underway about 90 research and service projects under this program at the close of 1951. (I. W. D.)

Farmers Home Administration.

This agency of the United States department of agriculture helped family-type farmers on underproducing farms to work out balanced farming systems and increase their output of essential food, feed and fibre; helped low-income families improve their economic position and have better living through better farming; assisted qualified war veterans to make a good start in agriculture; and contributed indirectly, through these activities, to the development of prosperous rural communities.

In the first 11 months of 1951, credit services were furnished to about 100,000 families who had no other sources of loans to finance improvements in their operations, landholdings or homes and buildings, to buy farms or to put land back into production after flood, drought or similar disaster. Veterans received about half of the appropriated funds advanced.

In addition, about 142,500 families who borrowed previously continued to receive guidance from the agency's local supervisors in making and carrying out farm-and-home plans for best use of all their resources.

Continued emphasis was given the policy of helping families become established on a basis that allowed them to make most effective use of their time and their land. Thus nearly all the 77,215 operating loans were five-year adjustment loans planned to create sound, balanced farming setups, and about half of the 4,139 farm-ownership loans were for development or enlargement of underproductive farms into efficient family-type farms. Operating credit advances totalled $96,761,664. Farm-ownership loans amounted to $31,528,379, of which $11,469,661 was advanced by private lenders with the guarantee of the Farmers Home administration that they would receive full repayment.

Housing loans aggregating $21,531,219 were made to 4,608 farm owners for construction or repair of homes and farm buildings. Water facilities loans totalling $3,663,809 were made to 1,127 individuals and 23 farmers' associations in the west. Also, in areas designated by the secretary of agriculture, emergency loans in the amount of $18,887,000 were advanced from a revolving fund to 12,861 farmers who had production losses because of flood, drought or other disaster, to enable them to continue production. About 190 special loans were made to fur farmers and orchardists.

Records of families who completed payments on past loans showed that supervised credit helped them achieve production increases of 40% to 60% per acre. At the same time they improved their incomes and net worth and made substantial gains in living standards. Current borrowers' progress was reflected in reports of many new farm-and-home practices adopted; families using adjustment credit were following 50% more approved farming practices in the summer of 1951 than a year earlier.

To serve farmers more adequately, the congress passed legislation raising the maximum amount of an operating loan from $3,500 to $7,000 and lengthening the repayment term from five to seven years. (D. B. L.)

Farm Income: *see* AGRICULTURE.
Farm Machinery: *see* AGRICULTURE.
Farm Population: *see* AGRICULTURE; CENSUS DATA, U.S.

Fascism.

Fascism in 1951 was in power not only in Spain and Argentina, but it showed renewed strength in the former strongholds of fascism, Italy and Germany. In both countries, especially in Italy, former members of the fascist parties again took an active part in the political and cultural life. In Germany the fascist or nazi tendency found its organization mainly in the Socialist Reichs party under the leadership of formerly prominent nazis like Fritz Dorls, Gerhard Kruger and Maj. Gen. Otto Ernst Remer, who foiled the July 20, 1944, uprising against Hitler. This party scored successes in the elections in Lower Saxony in May 1951 where it received 367,000 votes, 11% of the total, and in Bremen in October where it became the fifth strongest party, receiving only one seat less than Chancellor Konrad Adenauer's Christian Democratic Union. In its propaganda the party stressed what it called the good parts of the former nazi program, explained the rise of Hitler as the result of the Allied "crime" of Versailles, saw only in a strong man devoted to Germany, as Hitler was, the possible salvation for the nation and was extremely contemptuous of U.S. "plutocracy" and western liberalism. More disturbing was the fact that the same tendencies and slogans were at work in the officially more moderate Deutsche Partei which formed part of Chancellor Adenauer's coalition.

In Italy the Italian Social Movement was the standard-bearer of neofascism. In the municipal and provincial elections in the spring of 1951 it polled 850,000 votes or about 5% of the total, a considerable increase from the 2% of the total in 1948. The party made the best showing in Sicily.

In northern Europe the New Swedish Movement of the Swedish opposition, which resumed the Swedish nazi organization started at Uppsala university in the early days of Hitlerism, called an international congress of neofascism, which met in Malmö, Swed., on May 13. Delegates from Germany, Italy, France, Belgium, Switzerland and the three Scandinavian countries attended. The program agreed on stressed the need of a "European revolution to regenerate man, society and state spiritually," and proposed the creation of a European empire which would be equally independent of the Soviet Union and of the United States.

In Argentina the fascist regime of Pres. Juan D. Perón built itself a doctrine which was declared to be equally anticapitalistic and anti-Communist.

The "glorious Oct. 17," the day of the seizure of power in 1945, was made into a national holiday, and *Perón cumple* ("Perón accomplishes things") greeted the onlooker from buildings and posters. The famous independent newspaper *La Prensa* was closed on Jan. 26 and later turned over to the General Confederation of Labour, Perón's most faithful backer in the country. In typical totalitarian manner, the representatives of Argentine publications withdrew from the Inter-American Press association at its meeting in Montevideo, Urug., on Oct. 9 and formed a rival organization which would be "truly representative of the democratic Latin American press, without domination by Yankee organs of capitalist imperialism."

(H. Ko.)

Fashion and Dress.

The year 1951 was one in which looking smart meant also looking youthful and pretty. There were few if any bizarre fads. All the arts and skills of fashion designers were directed toward giving a woman a very "pretty body," with small waist and high, usually draped bosom, natural, graceful shoulders, a small decorative head and always a very full skirt. To emphasize the small dainty torso, skirts were deliberately magnified in bulk, stiffened by interlinings and worn over crinolines and petti-

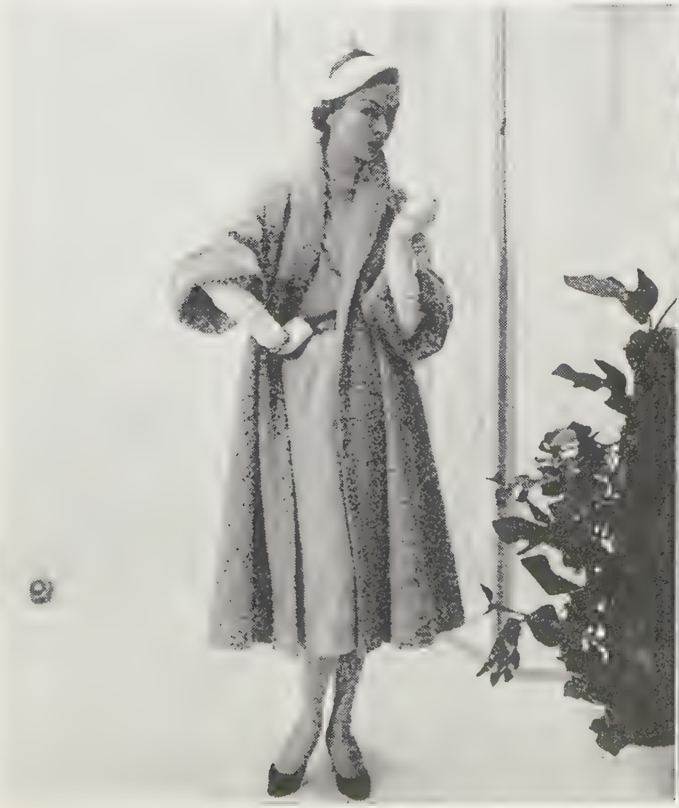
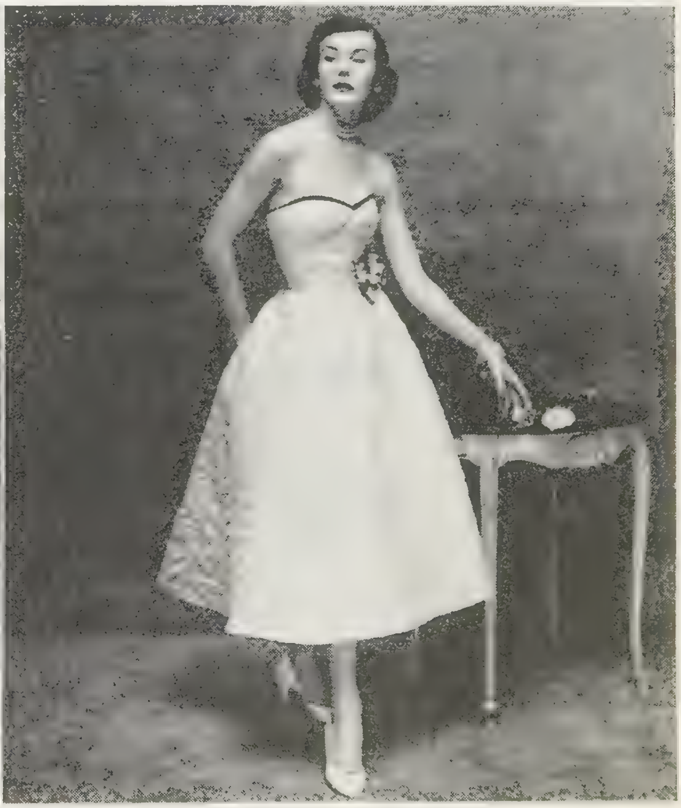
Below: SHORT EVENING DRESS with empire bodice and the built-out skirt of 1951





coats. Even tailor-mades had their petticoats.

The suit, always a guidepost on the general path of fashion, blended impeccable tailoring with "young" and feminine touches; it was a "little" suit with elegance in its outline and material. The typical suit jacket was moulded close to the figure through the shoulders; the waist and bosom were noticeably rounded out at the hips and front. High-placed lapels or a small round collar replaced the mannish suit necklines of other years.

Featherboning and interlinings were revived to give dresses a delicate yet firm "body." This technique was coupled with an echo of the high-bosomed, beltless empire line to achieve a distinctively 1951 silhouette.

The fitted coat shared prominence with the loose full coat. Both were notable for their large, picturesque collars and pockets. Toward the end of 1951 a new duster coat made its appearance; it hung straight at the back but had a slightly fitted front.

Very large balloon sleeves in light sheer fabrics were shown on dresses of dark taffeta. Tailored sleeves were set on below the edge of the shoulder and were interestingly cut to give the effect of forward or backward movement. Long sleeves stopped well above the wrist and most short sleeves covered the elbow.

A major style factor in 1951 lay in the texture of fabrics. Pure silks of great beauty and variety, particularly stiff brocades, taffetas and failles and sheer gauzy evening silks were seen. Wools were featherweight but bulky, with magnified weaves or shaggy surfaces. Tweed appeared for town as well as for country clothes. Velvet, taffeta, chiffon and silk organdy became established as year-round fabrics.

During 1951, colour was considered more fashionable than black. The gray suit replaced the black or navy-blue suit. The cloth coat was apt to be red, gray, beige or sapphire blue. Evening clothes were festive in colour as well as rich in fabric. The staid black dinner dress was in eclipse.

Added to the traditional American love of suits was the widespread interest in separate skirts and blouses both for day and evening, chosen à la carte and mixed by individual taste. Sweaters played a key part in this fashion, and there were unusual combinations, such as lace and wool jersey, or lace and cotton pique.

Perhaps because of television and a renaissance of entertaining at home, a new kind of informal yet decorative fashion was developed in the at-home costume. These were usually two-piece: dinner skirts of rich fabrics worn with sweater tops and a great deal of jewellery.

In 1951 it seemed that even the woman who thought she could never wear a short evening dress decided she had been wrong. Only debutante dresses and ball gowns remained long. Short dresses appeared in the richest fabrics, and with elaborate skirt drapery and embroidery. Many short dresses were also strapless.

Hats were piquant, colourful and charming. They were invariably small and slanted somewhat to the side, front or back of the head. The contour veil, glittering with jewels, was an evening essential.

Stockings returned to flesh tones. Shoes were designed to give the foot a long aristocratic shape, with narrow heels and rather pointed closed toes. For evening, however, very open strip sandals, often covered with jewels, were seen.

Cloth coats outshone fur in 1951 fashion, but the small fur was extremely popular. These were cut and shaped to stay snug around the shoulders. Blonde furs such as otter, clipped fox and dyed moleskin were seen in sport coats and linings.

The well-groomed woman of 1951 wore light, unobtrusive make-up to enhance her particular features and colouring. The eyes were accented, sometimes subtly elongated, the complexion was freshly pink and white, lips and eyebrows natural. Hair was worn short, brushed up and back. Toward the end of the year the short "poodle" haircut became popular. (*See* also FURS.)

(HA. CA.)

FBI: *see* FEDERAL BUREAU OF INVESTIGATION.

Fechteler, William Morrow

(1896–), U.S. chief of naval operations, was born on March 6 in San Rafael, Calif., and was graduated from the U.S. Naval academy at Annapolis, Md., in 1916. He served aboard the flagship "Pennsylvania" of the U.S. Atlantic fleet during World War I. He was operations officer of the fleet destroyer command at the outbreak of World War II, and early in 1942 was named assistant director of the bureau of naval personnel. During the campaigns in the Pacific, he commanded the battleship "Indiana," and later commanded an amphibious group, a carrier and a task force. He was named assistant chief of naval personnel in 1945, deputy chief of naval operations for personnel in 1947, and on Feb. 1, 1950, as a four-star admiral, he became commander in chief of the Atlantic command and fleet. He served as chairman on the North Atlantic Ocean Regional Planning group, largest in the North Atlantic Treaty organization. In 1951 he was prominently mentioned for the post of NATO supreme Allied commander in the Atlantic, but when Adm. Forrest P. Sherman died, Adm. Fechteler was named to succeed him as U.S. chief of naval operations. He assumed the office on Aug. 7, 1951.

Federal Bureau of Investigation.

The Federal Bureau of Investigation, as the investigative arm of the United States department of justice, is charged with the duty of investigating violations of the laws of the United States, collecting evidence in cases in which the United States is or may be a party in interest, and performing other duties imposed by law. Established in 1908 by Attorney General Charles J. Bonaparte, the FBI had in 1951 investigative jurisdiction over more than 120 violations of federal law.

The responsibilities of the FBI are in two general fields: domestic intelligence operations and general investigations. In addition, the FBI engages in several co-operative functions designed to assist local, county and state law-enforcement agencies as well as other branches of the federal government.

In the field of domestic intelligence, the FBI's work during 1951 was concentrated primarily in combating the machinations of the Communist party in the U.S. During the year the party continued to drop deeper underground and to make its security measures ever more stringent. On June 4, 1951, the supreme court affirmed the judgment of the second circuit court of appeals and thereby established the constitutionality of the Smith act under which 11 top functionaries of the Communist party were convicted on Oct. 14, 1949.

During the 1951 fiscal year, ending June 30, 1951, six individuals were convicted on charges of espionage and conspiracy to commit espionage in connection with the securing of information, principally concerning the atomic bomb, for soviet espionage apparatuses. In addition, there were a number of other convictions resulting from FBI investigations. However, the effectiveness of the FBI's domestic intelligence operations cannot be measured by the number of convictions or sentences imposed. In many instances, in order to gain intelligence data, it is advisable not to arrest an espionage agent, but to allow him to remain at large in an endeavour to determine his contacts, associates and plans.

In addition, the FBI during 1951 continued to fulfill its responsibilities in special security operations, such as investigations under the Atomic Energy act of 1946 and the federal employees loyalty program. The FBI's role in these programs, as in all its investigations, is strictly to obtain, accurately and impartially, the facts. At no time does the FBI make recommendations or evaluations. Under the loyalty program the FBI is required to check the applicant's or employee's name against its files for any information which reflects on the loyalty of the individual. Fingerprints are also checked against the files of the FBI identification division and preliminary or full field investigations are conducted in those instances where data indicating disloyalty are discovered.

FBI activities in the general investigative field during the 1951 fiscal year resulted in the highest percentage of convictions in FBI cases brought to trial ever recorded for any fiscal year. The percentage of convictions was 97.5%. There were 8,408 convictions recorded which resulted in the imposition of sentences totalling 21,712 years, 1 month and 26 days. In addition, there were two death sentences imposed as well as five life terms.

A total of 6,370 fugitives were located during the 1951 fiscal year, an increase of 273 over the preceding year. This included 677 Selective Service fugitives, 2,325 deserters from the armed services and 3,368 criminal fugitives. A total of 10,781 stolen motor vehicles were recovered in cases investigated by the FBI. This criminal category alone realized a recovery value of $13,288,279. Total savings and recoveries resulting from FBI cases amounted to $38,517,740. Fines imposed aggregated $1,088,120.

In the field of co-operative services, the FBI laboratory conducted 104,937 examinations during the 1951 fiscal year, representing a 4.4% increase over the previous fiscal year. There were 21,849 individual requests for examinations which involved 88,874 specimens, 2,866 more than were received for examination during the 1950 fiscal year.

As of Nov. 1, 1951, the FBI identification division had in its possession a total of 122,067,850 active fingerprint records, consisting of 22,039,999 criminal prints and 100,027,851 civil prints. A total of 5,448,245 fingerprints were received during the 1951 fiscal year from 12,225 contributors.

During 1951 three sessions of the FBI National academy were held and 173 police officers graduated, bringing to 2,426 the total number of graduates since establishment of the academy in 1935. The purpose of the academy is to train selected local law-enforcement officers as executives and as instructors. (*See* also CRIME; JUVENILE DELINQUENCY; POLICE; SECRET SERVICE, U.S.) (J. E. H.)

Federal Communications Commission.

Important procedural steps for the development of an enlarged and improved national television system were taken by the Federal Communications commission in 1951.

Pending the completion of its blueprint for the future of television, the commission maintained the ban on the construction of new stations which it ordered in 1948 to give it time to study various problems relating to the future of television.

The commission's promulgation of standards in 1950 for colour television based on the field-sequential system was affirmed by the United States supreme court in May. The Columbia Broadcasting system broadcast the first colour program in September. However, in October, because of the critical material shortages, Defense Mobilization Director Charles E. Wilson requested Columbia Broadcasting system to suspend mass production of colour television receivers, and the colour broadcasts were discontinued.

In March, after extensive public hearings, the commission issued revised proposals for other aspects of the development of television. These included: (1) engineering standards to eliminate interference; (2) an assignment plan utilizing 70 ultra-high-frequency channels in addition to the 12 very-high-frequency channels which were in use; (3) reservation of 209 channels for noncommercial educational stations.

This assignment plan would permit the authorization of more than 2,000 commercial and noncommercial new stations. A final decision was expected in 1952.

A coast-to-coast microwave relay system was inaugurated for television with the broadcast of the signing of the Japanese peace treaty in San Francisco in September. There were 108 stations on the air.

Standard (AM) broadcasting continued to grow, with 2,300 stations in operation and 100 more authorized. There were 640 frequency modulation stations in operation.

This 75th anniversary year of telephony saw significant developments in telephone service. The coast-to-coast microwave radio relay system was capable of carrying several television programs and hundreds of telephone conversations simultaneously. The year saw a tremendous upsurge in the use of radio to supplement wire lines for long distance telephone service generally over the nation. Another development was the beginning of service at Englewood, N.J., which enabled telephone users to dial long distance calls to certain areas as far away as the west coast.

The United States in 1951 had 45,000,000 telephones (more than half the world's total) and 28,000 telegraph offices. Overseas and foreign telegraph service was furnished by cable and radio directly to 82 foreign countries and United States territories and through them to most of the other cities of the world. Radiotelephone service was furnished directly and indirectly to 88 foreign countries and United States possessions.

Safety and industrial uses of radio, including police, fire, forestry, marine, aeronautical, railroad, truck, bus, taxicab, public utility, petroleum, relay press and amateur stations, were greatly accelerated during the year, the number of stations climbing to 200,000.

In February the commission established the Disaster Communications service for essential communications when normal facilities were inadequate, impaired or unavailable during disasters or other occurrences threatening public safety. It provided for communication and co-operation between the various safety and industrial stations mentioned above.

Other significant developments in the safety and special communications field included continued expansion of microwave systems for industrial use, aggregating 16,000 circuit miles, and establishment of the new radiolocation service which provided radio facilities of importance to the location and development of mining and petroleum resources. (*See* also RADIO; TELEGRAPHY; TELEPHONE; TELEVISION.) (W. CY.)

Federal Deposit Insurance Corporation.

In the calendar year 1951 two insured banks, with total deposits of nearly $3,500,000, required the assistance of the Federal Deposit Insurance corporation. A little less than $1,900,000 was disbursed by the corporation to facilitate the merger of each bank with a solvent insured bank. Depositors in the distressed banks were fully protected against loss.

The number of banks participating in deposit insurance continued to increase, totalling 13,653 on Sept. 30, 1951, or more than 93% of all banks of deposit. It is estimated that on that date about 54% of total deposits in these banks were insured.

The second of two equal installments of repayment of interest on the capital stock was made during 1951 in an amount of more than $40,000,000. On June 30, 1951, after this payment, the surplus of the Federal Deposit Insurance corporation amounted to $1,244,000,000.

The board of directors of the Federal Deposit Insurance corporation was composed of Maple T. Harl, chairman, Preston Delano, comptroller of the currency, and H. E. Cook. Upon the expiration of their terms of office, both Harl and Cook were reappointed by the president to new six-year terms. These appointments were confirmed by the senate. (*See* also BANKING).

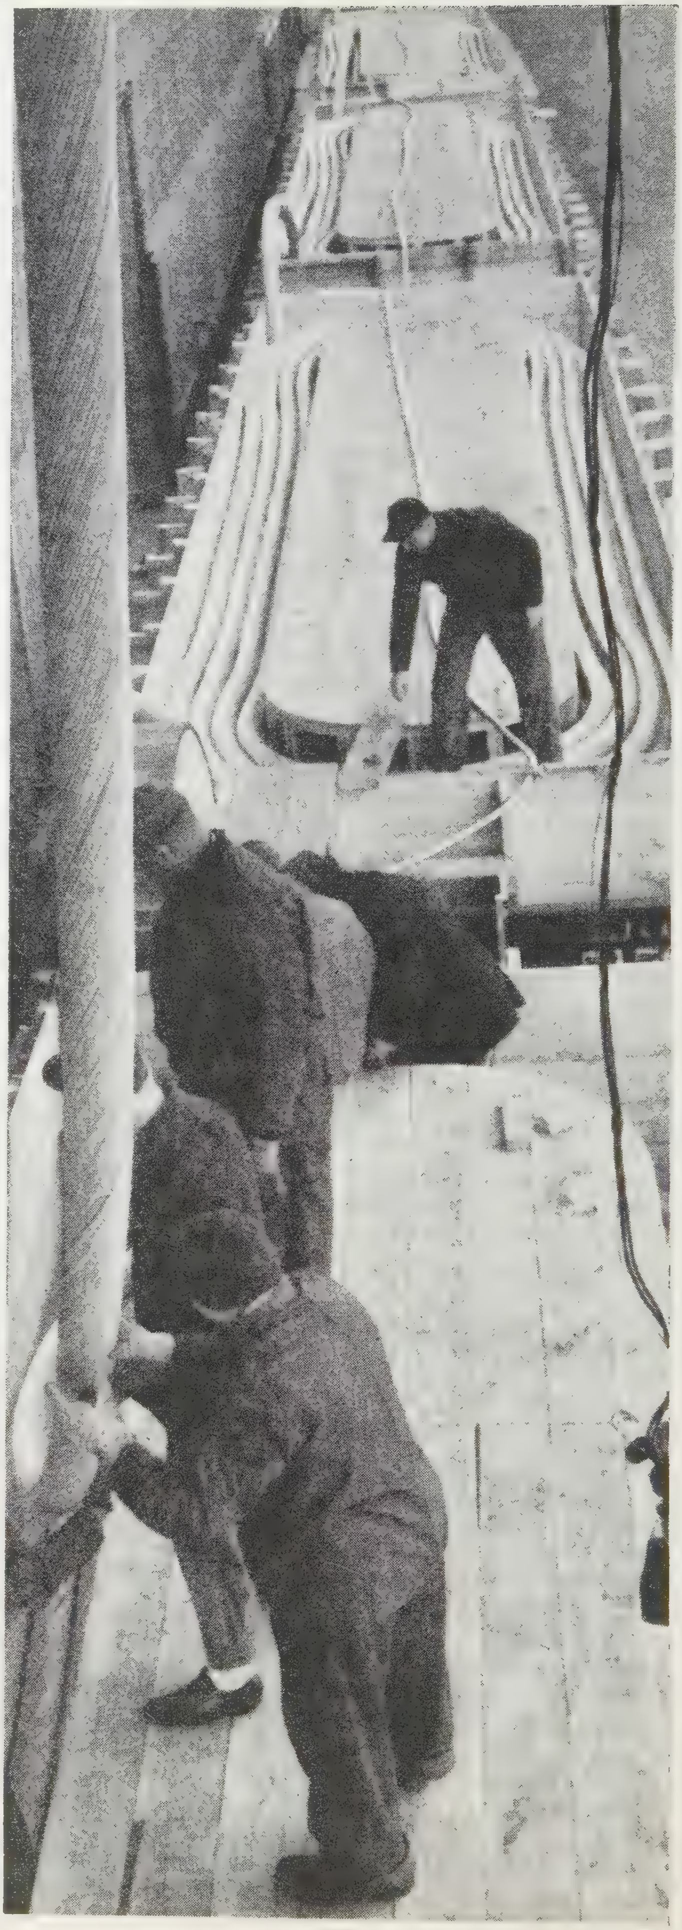
Federal Power Commission.

More than $90.000,000 annual increases in natural gas rates were proposed in applications to the Federal Power commission filed by interstate gas companies in 1951; they declared that higher costs of purchased gas, taxes and operating expenses did not enable them to earn sufficient returns on their investment. Practically all these were suspended, but if not determined in five months could become effective if companies posted bonds to refund to customers such increases as the commission finally found were not justified. In the first of these major cases adjusted, in which the Tennessee Gas Transmission company asked an increase of $18,000,000, representatives of the company, its utility customers and the commission, meeting jointly, agreed upon an increase of $11,400,000. This led to the hope that most of these cases could be settled without resort to the courts.

Rate regulation was also involved in the court appeal of the state of Wisconsin, the Wisconsin Public Service commission, the cities of Detroit, Milwaukee and Kansas City from the Federal Power commission's decision that the commission had no authority over the Phillips Petroleum company, with its vast gas reserves, because of the provision of the Natural Gas act prohibiting its interference with the production and gathering of natural gas. Opponents contended that this decision yielded practically all that producers demanded in the Kerr bill which was passed by congress and vetoed by the president. Pres. Harry S. Truman, however, expressed his opinion that the commission had decided this case in accordance with the evidence.

Natural gas pipe lines continued their enormous expansion. The Texas-Illinois 1,140-mi. pipe line was completed, augmenting Chicago's gas supply. The Northeastern Gas Transmission company completed its lines across Massachusetts, carrying natural gas to a large part of New England. The Tennessee Gas Transmission company increased its capacity to 1,300,000,000 cu.ft. per day. Texas Eastern Transmission corporation, United Gas Pipe Line company, Panhandle Eastern Pipe Line company, Northern Natural Gas company, Texas Gas Transmission corporation, Transcontinental Gas Pipe Line corporation, the Columbia Gas System, Inc., Consolidated Natural Gas company and other systems greatly increased their mileage and capacity, while the El Paso Natural Gas company pushed new lines to California to supply regions as far as the San Francisco bay area. The Federal Power commission authorized approximately 12,000 mi. of new pipe lines and extensions. More than $1,000,000,000 was expended in transmission and distribution lines and equipment, and before the year's end 17,000,000 customers were served in 39 states. Natural gas companies' revenues in the 12 months ending Oct. 31, 1951, rose to $1,512,454,441, an increase of 21.5%, and their net utility plant was valued at $3,645,925,241.



CABLE FOR EXTENDING the grid of the Bonneville Power administration under Puget sound to the San Juan Islands, Wash., in 1951. The 7½-mi. length of cable was transported overland from a factory in New Jersey by coiling it into a special train of nine gondola cars (above)

Electric power production rose to an all-time high. Weeks in which the output was 7,000,000,000 kw.hr. became frequent, to be eclipsed finally by the week before Christmas when output reached 7,823,731,000 kw.hr. The Federal Power commission reported that in the 12 months ending Nov. 30, 1951, electric utility plants produced 367,751,698,000 kw.hr., a gain of 13.9% over the previous year. Generating capacity rose to 75,184,147 kw., compared with the 67,975,389 kw. in service 12 months before, a gain for the year of 7,208,758 kw. Industries and railways generating energy for their own use had 14,229,184 kw. installed in their plants. Added to the public utilities, this gave a total national generating capacity of 89,413,331 kw. Continuing its multibillion-dollar expansion program, the electric industry spent vast sums to increase generating capacity, principally in steam plants.

Large hydroelectric projects authorized by the Federal Power commission included the Roanoke Rapids dam, licensed to the Virginia Electric and Power company, which was appealed to the courts by the secretary of the interior and Rural Electrification administration co-operatives; the Kings River projects of the Pacific Gas and Electric company in California; the Pelton project of the Portland General Electric company on the Deschutes river in Oregon; and the city of Tacoma's $143,000,000 project on the Cowlitz river. Installed capacity involved in hydroelectric projects under commission licence rose to more than 7,000,000 h.p. Ultimate proposed installation of all licensed projects advanced during the fiscal year from 8,678,000 to 9,932,000 h.p., and the total claimed cost of all major projects under licence rose from $958,000,000 to $1,134,000,000. In its studies of river basin development and hydroelectric possibilities of flood-control projects the commission staff participated in 101 co-operative investigations with the corps of engineers and 50 basin surveys or project investigations with the bureau of reclamation. Six power market surveys were completed, and work was in progress on several others.

Chairman Mon C. Wallgren resigned on Oct. 1, and, as no successor was appointed, Vice-Chairman Thomas C. Buchanan was acting chairman until the end of the year. Commissioner Claude L. Draper, the only remaining member appointed by Pres. Herbert Hoover when the commission was reorganized in 1930, was reappointed for another five-year term. (*See* also ELECTRICAL INDUSTRIES; GAS, NATURAL AND MANUFACTURED.)

(J. W. JE.)

Federal Reserve System.

During the year 1951 the federal reserve system took several steps of great consequence in restraining credit expansion for nondefensive purposes. In March the treasury and the federal reserve system announced an "accord," the federal open market committee gradually withdrew its support from the government bond market, and the par pegs established during World War II were abandoned. The federal reserve system and the financing institutions of the nation worked out a voluntary credit restraint program to curtail loans for nonessential purposes. Late in the year the federal open market committee greatly curtailed its support of the treasury bill market in the face of strong money market pressures and forced banks to borrow if they wanted more funds. Early in December member bank borrowing set an 18-year record in reaching a level of almost $1,000,000,000. The proper role of federal reserve open market policy was the subject of repeated discussions in congress, and late in the year, the Patman subcommittee began its monetary inquiry.

The Defense Production act amendments of 1951 reduced the administrative discretion of the board of governors in control of consumer credit. In accordance with this legislation, the board amended regulation W, effective July 31 so that (1) the maximum maturity applicable to instalment credit for automobiles, household appliances, radio and television sets, and furniture was lengthened from 15 to 18 mo., and for home repair and improvements from 30 to 36 mo.; (2) the down payment requirements for household appliances and for radio and television sets were reduced from 25% to 15%; and (3) the down payments required by the regulation may be made in cash, trade-in or a combination of trade-in and cash.

Several changes were made during the year in the coverage and terms of regulation X relating to real estate construction credit. Effective Jan. 12, the scope of the regulation was broadened by making it applicable to credit in connection with three- and four-unit residences and multi-unit residential property. Effective Feb. 15, the regulation was further broadened to include, in general, most new nonresidential construction, with maximum loans on such structures limited to 50% of the value of the property, maturities limited to 25 years, and amortization required. Effective March 5, terms different from those prescribed by the regulation were permitted to apply to specific new construction necessary to the national defense. Effective Sept. 1, the regulation was amended so as to bring it into conformity with the provisions of the new Defense Housing and Community Facilities and Services act of 1951. This legislation provided, among other things, for (1) the suspension and relaxation of restrictions in critical defense housing areas; (2) minimum down payments for veterans' loans on houses having a sale price of less than $12,000; (3) maximum down payments which were lower than the previous terms of regulation X in connection with conventional or FHA financing of homes where the transaction price is $12,000 or less; and (4) maximum maturity on any such loans of not less than 25 years, as compared with a maximum maturity under the previous regulation of 20 years for housing priced at more than $7,000.

Amendments to regulations T and U by the board of governors, effective Jan. 17, increased margin requirements from 50% to 75% for extensions of credit by brokers and dealers on listed securities, for short sales and for loans by banks on stocks. A general increase in reserve requirements during January raised the required reserves of member banks by a total of about $2,000,000,000 and left reserve requirements at their existing statutory maximum levels except for an additional two percentage points against net demand deposits in central reserve city member banks.

Thomas B. McCabe resigned as a member and chairman of the board of governors of the federal reserve system, effective March 31, and William McChesney Martin, Jr., was appointed by the president to succeed him as a member of the board and was designated as chairman of the board. Marriner S. Eccles resigned as a member of the board, effective July 15, after service as a member since 1934 and as chairman from 1935 to 1948. (*See* also BANKING; CONSUMER CREDIT.) (J. K. L.)

Federal Security Agency.

For the Federal Security agency, the year 1951 was notable as the first full year of operation of the 1950 Social Security act amendments. Under the new law, 10,000,000 more workers, including many in agriculture, domestic work and self-employment, gained old-age and survivors insurance protection. Average monthly payments increased substantially. As a direct result of the changes in the insurance system, the number of insurance beneficiaries became greater for the first time than the number receiving old-age assistance.

The amendments provided more money for child health and welfare and improved the method of payment for medical expenses of public-assistance recipients. They added a fourth public-assistance category—aid to the permanently and totally disabled. By June about half the states were already taking part in this new program.

In education, the long-debated principle of federal aid was put into effect—but only as a defense measure. Companion bills, passed in the fall of 1950, authorized federal help for building and running schools in communities where federal activity had resulted in overcrowded schools. Under the law, 708 communities were eligible for emergency aid in school construction. But with $96,500,000 appropriated for this purpose during the fiscal year, there were only enough funds for grants to the 243 communities with top priority. This federal aid would help provide schools for 123,000 children but would leave 430,000 children without adequate school facilities in communities technically eligible for aid.

In June Pres. Harry S. Truman laid the cornerstone of the Clinical centre of the National Institutes of Health. Begun in 1948 and preparing to receive patients in Jan. 1953, this public health service institution, combining hospital and laboratory facilities, would become a world centre for clinical research.

The public health service during the fiscal year 1951 administered federal grants to states totalling more than $152,000,000 for general health activities; for the control of heart disease, tuberculosis, venereal disease and cancer; for mental health programs; for industrial waste studies; and for hospital construction, survey and planning. The public health service joined in the all-out research program on ACTH and cortisone, covering such important aspects as the investigation of the medical usefulness of these substances in a wide variety of diseases including rheumatic fever, arthritis, congestive heart failure, leukemia and many others.

The Food and Drug administration participated in this advance by evaluating the safety of these potent drugs, as a statutory prerequisite to their release for sale, and by policing distribution to prevent the marketing of the drugs by those who had not met safety requirements.

Defense mobilization made more and more demands upon the agency throughout the year. What stood out most strikingly was the fact that an agency explicitly dedicated to civilian pursuits —to matters affecting health, education and family security— should be so broadly involved in defense mobilization. Every step in defense mobilization creates its own specialized demands upon health, education and welfare services, the scope of which was clearly defined by the director of defense mobilization in delegating certain defense responsibilities to the agency.

An armed attack could create desperate health and welfare problems. The public health service organized epidemic teams and an improved disease-reporting system to cope with the dangers of biological or chemical warfare, and the Food and Drug administration developed contamination detection teams and took other action for protection against atomic, biological and chemical warfare.

The Office of Vocational Rehabilitation reported that more than 66,000 handicapped men and women were prepared for and placed in jobs during the fiscal year. They were working in many occupations in which there were shortages. More than 10% of the rehabilitants added to the labour force were removed from the public-assistance rolls.

The Defense Production administration gave the agency responsibility for determining the extent of need for critical materials required in the construction of schools, colleges, libraries, hospitals and health facilities and assigned similar responsibility with respect to critical materials needed for equipment and supplies in the entire fields of education, health, welfare and recreation.

The Food and Drug administration stepped up its activities as it foresaw the difficulties which defense mobilization might cause in the food and drug industries and, on a number of occasions, put a halt to the attempts of unscrupulous operators to capitalize on emergency before they could undermine the integrity of the country's food and drug supplies.

The public health service had similar responsibilities for assuring the safety and potency of commercial vaccines, serums and other biologics and was the sole source of some medical supplies, including certain serums and yellow-fever vaccine, all of which would become critically essential in time of emergency.

Thus, the federal government's essential peacetime services for health, education and security—which had been adapted to wartime needs in the 1940s—once again were being utilized in this period of emergency. (*See* also DRUG ADMINISTRATION, U.S.; EDUCATION; PUBLIC HEALTH SERVICES; SOCIAL SECURITY; VOCATIONAL REHABILITATION, OFFICE OF.) (O. R. E.)

Federal Trade Commission.

During the fiscal year 1950–51, the Federal Trade commission issued 109 formal complaints and 130 orders to cease and desist from violations of law. It approved 146 stipulations to discontinue unlawful practices and promulgated trade practice rules for nine industries. Its staff made inspections of the labelling practices of more than 12,000 establishments of wool products manufacturers and dealers throughout the U.S. They examined more than 323,000 advertisements in newspapers, magazines and trade journals; in excess of 14,000 mail order catalogues; and more than 31,000 television continuities and 344,000 commercial radio broadcasts, aggregating well over 1,000,000 pages; and as a result, set aside about 28,500 ads as possibly false. Three new export associations, concerned with the sale abroad of machine tools and dried fruit, were organized, bringing to 45 the number registered with the commission.

At the request of price control agencies, the quarterly reports of operating statements of manufacturing corporations, published in co-operation with the Securities and Exchange commission, were expanded to include wholesale and retail trade corporations. In addition, the commission furnished the Office of Price Stabilization with tabulations and special studies on specific industries, such as machine tools, footwear, steel works and rolling mills, paper and paperboard mills and petroleum refining.

The commission's financial reports and other services were extensively used by the president's council of economic advisers, the federal reserve board, the departments of commerce, treasury and agriculture, the national military establishment and other government agencies, as well as by business groups, labour unions and research organizations.

The commission helped to give the orders of the National Production authority effect by making, at that agency's request, industry-wide surveys of compliance with its orders. The surveys included the aluminum and copper industries, cross sections of various segments of such heavy industries as iron and steel, lumber, machinery, chemicals, power equipment, leather and packers and distributors of products packed in metal cans. Under the Defense Production act and pursuant to presidential directives, it carried on certain activities intended to minimize factors which might tend to eliminate competition or otherwise promote undue concentration of economic power incident to defense mobilization.

The commission administers, in whole or in part, five different statutes, including the Federal Trade Commission act, designed to prevent unfair commercial practices such as restraint of trade, concerted price fixing and false advertising; the Clayton Antitrust act making unlawful monopolistic price discrimination and other specific practices tending to monopoly; the Export Trade act excepting foreign trade associations from operation of the Antitrust acts; the Wool Products Labeling act requiring disclosure of the fibre content and source of wool products; and the Lanham Trade-Mark act of 1946 permitting the commission to petition for cancellation of registered trademarks violative of law. Its members in 1951 were James M. Mead, chairman, of New York; William A. Ayres of Kansas; Lowell B. Mason of Illinois; John Carson of Michigan; and Stephen J. Spingarn of New York. (J. M. Md.)

Federated Malay States: *see* MALAYA (FEDERATION OF) AND SINGAPORE.

Fencing. The United States championships were held in Detroit, Mich., June 16–23, 1951. This was the second time in the history of the American Fencers League of America and the first time since 1939 that the championships were held outside of New York. The Fencers club of New York won the foil team title; the New York Athletic club won the sabre team title; and the Faulkner School of Fencing (Los Angeles, Calif.), won the women's team for the fourth straight time. The Fencers club also wrested the épée team championship from the defenders, the Salle Santelli, of New York. The Salle Santelli lost its remaining team title to the New York Athletic club in the three-weapon event.

In the individual championships, Janice Lee Yorke of the southern California division, fencing unattached, retained the women's individual title. Maxine Mitchell of the Cavaliers (southern California) was second and Polly Craus of the Faulkner School of Fencing was third. Silvio Giolito of the New York Athletic club retained the foil championship, and Tibor Nyilas of the Salle Santelli (New York) retained the sabre crown. Norman Lewis in épée did not defend the title he had held for three successive years.

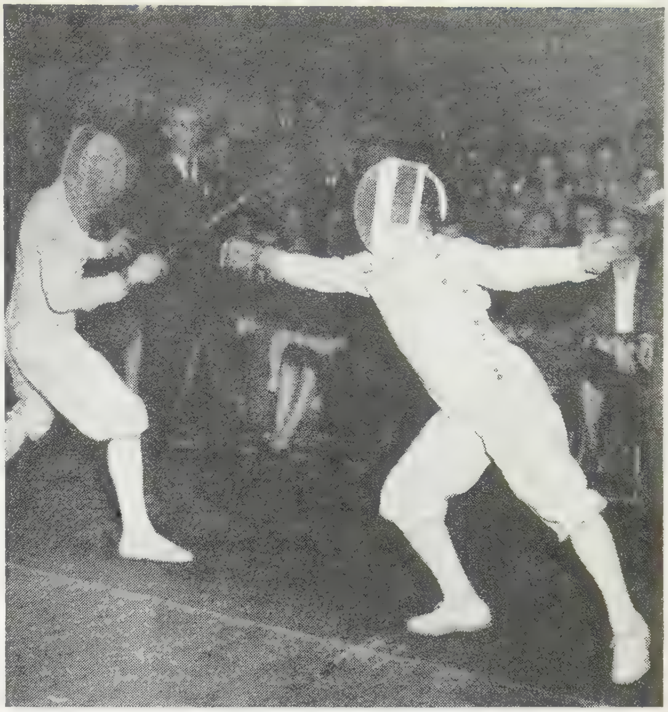
The Pacific coast championships were held in San Francisco, Calif., May 19 and 20. The Faulkner School of Fencing (Los Angeles) won the women's team, the Olympic Club of San Francisco the foil team and the Los Angeles Athletic club won the épée and sabre teams. Janice Lee Yorke (unattached) of southern California won the women's individual title, with Mrs. Muriel Bower of the Los Angeles Athletic club second and Polly Craus of the Faulkner School of Fencing third. Sewell Shurtz of the Faulkner School of Fencing won both the foil and épée championships and Salvatore Giambra of the Olympic club of San Francisco won the sabre title.

The midwest championships were held in Lexington, Ky. Paula Sweeney of Michigan won the women's foil, Byron Krieger, also of Michigan, won the sabre and also the foil, and Albert Wolff of the Kentucky division won the épée.

The southwest championships were held in Houston, Tex. Mrs. Naomi Abbott of the Galveston club won the women's foil, William Spinks of Texas Technological college, Lubbock, won the sabre, John Baird of the Buccaneers of Galveston retained the foil title and the épée championship was won by Curtis Wilson of Texas A. & M.

The all-eastern championships are held in New York when the national championships are held out of New York. Grace Acel of the Salle Santelli won the women's foil, Daniel Bukantz won the men's foil, the épée title was won by Alfred Skrobisch of the Fencers club, and the sabre event was a sweep by the Salle Santelli when George Worth finished first, John Gorlin second and Tibor Nyilas third.

In college fencing, the National Collegiate Athletic association championships were held at the University of Illinois, Urbana, March 30 and 31. Robert Nielsen of Columbia university retained the foil crown, Daniel Chafetz of Columbia university won the épée championship and the sabre crown went to Chambless Johnston of Princeton university.



FOILS FINALS at the first German championship matches since World War II; they were held at Mainz early in 1951

The Intercollegiate Fencing association held its 54th annual championship at the U.S. Military academy at West Point. Columbia university won the foil team, the three-weapon team and tied with Yale and the University of Pennsylvania, Philadelphia, for the sabre team championship. Navy won the épée team. The individual titles went to Paul Uttenback, Navy, in épée, Robert Nielsen of Columbia university in the individual foil and Carl Knoblock of Yale in the sabre.

The world championships were held in Stockholm, Swed., May 20 to June 2. The men's foil team, the women's foil team and the épée team were all won by France. Hungary won the sabre team. In the individual events M. Di Rosa of Italy was first, while Mrs. I. Flek of Hungary won the women's event. The individual épée was won by E. Mangiarotti of Italy and the sabre championship was won by E. Gerevich of Hungary. (W. A. Dw.)

Ferguson, Homer (1889–), U.S. senator, was born at Harrison City, Pa., on Feb. 25. He studied at the University of Pittsburgh, took his law degree from the University of Michigan, Ann Arbor, in 1913 and practised law until 1929, when he became circuit judge for Wayne county, Mich. In the same year he was also appointed professor of law at the Detroit College of Law. As circuit judge and as a one-man grand jury, he received national attention for his investigation of crime and graft in Wayne county. He was elected Republican senator from Michigan in 1942 for the term 1943–49 and was re-elected in 1948 for the term expiring in 1955. In the senate he soon became known as one of the most vigorous opponents of the New Deal and the Fair Deal.

On Jan. 18, 1951, he was appointed to the senate internal security (McCarran) subcommittee and in this position frequently attacked the state department and Secretary of State Dean Acheson. He voted against sending additional U.S. troops to Europe (April 4) and approved the cease-fire parleys in Korea with the proviso that there should be no appeasement of the

Chinese Communists. A consistent foe of bureaucratic spending, Ferguson on Sept. 18 was one of the small group of nine senators who voted to uphold Pres. Harry S. Truman's veto of a bill granting pensions to veterans for disabilities not connected with military service.

Fertilizers.

The world production of all three primary plant foods, nitrogen (N), available phosphoric acid (P_2O_5) and potash (K_2O), increased during the year July 1, 1950, to June 30, 1951, as compared with the same period in 1949–50, according to surveys made by the Food and Agriculture organization of the United Nations. (None of the data given in this article include the U.S.S.R.) In Table I, prepared from data furnished by F.A.O., these increases are shown, as well as the large increases in the production of these commodities from the prewar year of July 1, 1938, to June 30, 1939. The estimated outlook for the 1951–52 year showed additional expected increases in nitrogen and potash production, but a decrease in the production of available phosphoric acid. The reason for the anticipated decrease in available phosphoric acid production was the shortage of sulphuric acid. (*See* also SULPHUR.) The preparedness and defense programs of the United States and other principal nations called for enormous additional production of steel, rubber, aviation fuels and many other commodities, all of which required sulphuric acid in their manufacturing processes.

Table I.—*World Production of Fertilizers*

(In thousands of metric tons)

	1938–39	1948–49	1949–50	1950–51	Estimated 1951–52
N	2,596	3,310	3,590	3,956	4,090
P_2O_5	3,554	5,130	5,417	5,643	5,350
K_2O	2,789	3,280	3,793	4,302	4,557
Total	8,939	11,720	12,800	13,901	13,997

The changing pattern of production in 1950–51 as compared with 1949–50 is shown in Table II, which reports by continents the net increases or decreases in the production of all three plant foods for these two years. The reactivation of plants in Europe and in Japan is reflected in the large increases in the figures for Europe and Asia. The declines in nitrogen and phosphoric acid production in North and Central America, amounting to only $1\frac{1}{2}\%$ and $2\frac{1}{2}\%$, respectively, were probably the result of decreases in exports to occupied countries.

Consumption of plant foods in the several continents as shown in Table III also increased from 1949–50 to 1950–51. A number of plants in central Europe and in Japan, which had been closed for several years because of damage sustained during World War II, went back into production in 1950 and 1951. In North and Central America a number of new operations were opened in nitrogen fixation, superphosphate production and potash mining and refining, and some existing plants were enlarged.

During 1951 the greatest problem in fertilizer production was the shortage of sulphur. Sulphuric acid, which is made largely from sulphur, is essential in the production of superphosphate, the source of about 90% of the available phosphoric acid used in agriculture. It is also the base for the manufacture of sulphate of ammonia, whether the ammonia is derived as a by-product of the coking of coal or is produced synthetically from the air. The United States produced in 1951 about 85% of the world's sulphur output of 6,150,000 tons and under international allocation of sulphur by the International Materials conference, of which the United States is a member, was required to export nearly 20% of its output, or approximately 1,000,000 tons. The result was that the makers of sulphuric acid in the United States, by executive decree, were forced to accept reductions of from 10% to 15% in the amount of sulphur they could obtain or use. Like limitations were placed on the use of sulphuric acid for the production of phosphatic fertilizers. The total fertilizer production in the United States for the crop planting year 1951–52 was estimated to reach more than 19,000,000 tons. Nitrogen was expected to increase about 5% above the previous year, potash about 5% and phosphoric acid to decrease 8% to 10%. Total fertilizer consumption in the United States in the year 1949–50 reached 18,350,000 short tons, containing about 4,060,000 short tons of the three major plant foods, nitrogen, available phosphoric acid and potash. No world estimate was available as to total tonnages of all fertilizers used, but the corresponding world figure for the content of the three primary plant foods ($N+P_2O_5+K_2O$) as shown in Table I was 12,800,000 metric tons, equivalent to 14,100,000 short tons. (*See* also AGRICULTURE; TENNESSEE VALLEY AUTHORITY.)

Finland.

An independent republic of northern Europe, Finland has an area of 130,159 sq.mi., including the Åland Islands. Pop. (census 1940) 3,695,617; preliminary 1950 census 4,029,000. Capital: Helsinki (pop. Jan. 1, 1947, tax list figures) 358,195. Other principal cities: Turku (Åbo) 93,735; Tampere 93,665. Language and nationality: 90% Finnish, about 10% Swedish. Religion: Lutheran Christian. President in 1951: Juho K. Paasikivi; prime minister: Urho K. Kekkonen.

The Åland Islands, a Swedish-populated archipelago belonging to Finland, lie to the southwest at the mouth of the Gulf of Bothnia. Area: 581 sq.mi. Pop. (tax list, Jan. 1, 1947) 22,787. Chief town: Mariehamn, pop. 3,239.

History.—Finland continued to navigate precariously during 1951 between a political Scylla and an economic Charybdis. In April the trade union elections were bitterly contested. Soviet-owned business concerns in Finland contributed large sums to the Communist party, which had about four times as much money to spend as the Social Democrats. Control of the unions in Finland was almost as important as control of the government; it was the unions that called strikes, forced upward the inflationary spiral and threatened the economic life of the country. The Communists repeatedly used the unions for political purposes.

But this time, when the chips were counted, the Social Democrats had won control of 25 unions and the Communists 8; for the trade union congress in June the Social Democrats had won 152 seats, the Communists 65 and the independent Seamen's union 5. Three Communist-controlled unions had been expelled from the federation and thus did not vote, but the Social Democratic victory was clear-cut. The membership vote was 107,353 to 88,585.

When the trade union congress met in June it voted (143–63) to withdraw from the soviet-directed World Federation of Trade Unions.

The coalition government headed by the Agrarian Urho Kekkonen faced repeated crises. In March the Social Democrats walked out in protest against a bill to raise apartment rents by 43%; they thought increases should be postponed until after the union vote and the regular election in July. Actually, after the anti-Communist showing in the unions, the July election was a disappointment to the government. In 1948 the Communists (or Folk Democrats) had dropped from 49 to 38 representatives in the parliament; in 1951, with a slight shift in the popular vote, they regained 7 seats for a total of 45 out of the 200. Otherwise there was no significant shift in parties, and the coalition held on.

Relations with the U.S.S.R. were tense but unpredictable. The soviet diplomatic group in Helsinki suddenly became affable in the spring. However, occasional propaganda outbursts from the U.S.S.R., especially at the times of the elections, accused Finnish leaders of being pro-U.S.. too wealthy and tools of Wall street imperialism.

The Finns obviously could not join in the Marshall plan or ally with the west, and the U.S.S.R. and Poland kept them out of the United Nations. But neither would they knuckle under to their powerful neighbour. Reparations payments were more than 90% fulfilled, and by the middle of 1952 the Finns expected to be economically free. The Finns regarded soviet power with respect but never with subservience.

The political firmness of the Finns was not paralleled in the economic realm. The price spiral, encouraged by the automatic wage raises linked to the cost of living index, soared to 1,131 (1939=100). Finland's price inflation was the steepest of all 23 countries surveyed by the International Labour conference. The situation became so desperate that all the large labour and business groups agreed on an economic truce from May 1 to Sept. 30. An economic planning council was established to make specific proposals to save the economy.

By the end of September some results had been achieved. Negotiations between the major parties and labour market organizations produced agreement on: a five-month continuation of the price-wage stop, reduction of income taxes, increase of the state contribution for children, increased tax on exports to be used to subsidize imports, a quarterly rather than a monthly adjustment of wages in relation to the index and the establishment of a new index based on the situation at the end of October. The removal of the turnover tax on Oct. 1 was expected to lower prices on shoes, textiles and other items by 5% to 30%, but effects would be slow and at first irregular.

Almost simultaneously with these economic reforms came a rebuilding of the cabinet, but still under the leadership of Kekkonen. Social Democratic and Swedish People's parties each demanded more representation, and the new ministry contained seven places for the former, two for the latter and seven for the Agrarians. The foreign office post went to a nonparty man, Sakari Tuomioja, chief of Finland's bank.

The new autonomy statute for the Åland Islands was debated strenuously in the Finnish parliament, but was passed in October. The new law somewhat strengthened Åland's favoured position, and made the island state almost a dominion. The Ålanders continued to be free from military service and to retain tax privileges. The statute said nothing about the international guarantee which was written into the treaty after World War I; Sweden formally served notice, however, that it regarded those guarantees as still binding.

Finland had great expectations for the Olympic games, scheduled to meet in Helsinki in 1952.

(F. D. S.)

Education.—Schools (1950): elementary 6,108, pupils 481,468; secondary 336, pupils 91,677, teachers 5,417; technical, commercial and special (1949) 458, pupils 24,578; for adults (1949) 76, pupils 3,993, teachers 707. Teachers' training colleges (1950) 9, pupils 1,597, teachers 118. Universities (1950) 3, students 9,440, professors and lecturers 632. Institutions of higher education 5, students 3,528, professors and lecturers 403.

Finance and Banking.—Budget: (1950 est.) revenue 134,800,000 markkaa, expenditure 127,800,000 markkaa. National debt (May 1951) 115,400,000 markkaa. Currency circulation (Sept. 1951) 42,800,000 markkaa. Gold and foreign exchange (Sept. 1951): U.S. $165,500,000. Bank deposits (Sept. 1951) 34,200,000 markkaa. Monetary unit: markka with an exchange rate of 231 markkaa to the U.S. dollar.

Foreign Trade.—(1950) Imports 89,112,000,000 markkaa, exports 81,420,000,000 markkaa, excluding reparations 7,850,000,000 markkaa. Main sources of imports (1950): U.K. 16%; Poland 7%; the Netherlands 7%; Denmark 7%. Main destinations of exports: U.K. 20%; U.S.S.R. 16%; U.S. 9%; the Netherlands 7%. Main imports (1949): metals and manufactures 18%; textiles 18%; fuel and oils 9%; machinery and apparatus 8%. Main exports: wood and wooden goods 47%; wood pulp 22%; cardboard and paper 19%.

Transport and Communications.—Roads (1950): 36,518 mi. Motor vehicles licensed (Dec. 1950): cars 26,780, commercial 34,469. Railways (1950): 3,533 mi.; passengers 43,000,000; freight carried 16,000,000 tons; freight net ton-miles, 2,120,000,000. Shipping (merchant vessels of 100 gross tons and over, July 1950): 335; gross tonnage 514,751. Air transport (1950): passenger-miles 16,600,000; cargo net ton-miles 335,000. Telephones (1950): 313,975. Radio receiving set licences (1950): 721,500.

Agriculture.—Main crops (metric tons, 1950): wheat 291,000; rye 254,000; barley 187,000; oats 722,000; sugar, raw value 26,000; potatoes 1,210,000. Livestock (June 1950): cattle 1,844,000; sheep 1,330,000; pigs 470,000; horses 382,000. Fisheries: total catch (1949) 65,700 metric tons.

Industry.—Industrial establishments (1947): 5,999; persons employed 249,936. Electricity production (1950) 4,164,000,000 kw.hr. Raw materials (metric tons, 1950): pig iron 64,300; crude steel 112,400. Forest products (1950): sawed softwood, 875,000 standards; sawed hardwood 46,700 cu.m.; pit props 869,000 cu.m.; plywood 215,000 cu.m.; cellulose 1,194,000 metric tons; mechanical pulp 719,000 metric tons; newsprint 421,000 metric tons; other paper and paper board 350,000 metric tons.

Finletter, Thomas Knight (1893–   ), U.S. secretary of the air force, was born on Nov. 11 in Philadelphia, Pa. He studied at the University of Pennsylvania, Philadelphia, where he received his bachelor's degree in 1915 and law degree in 1920, and practised law in New York city from 1920 to 1941.

From 1941 to 1944 Finletter served as an adviser to the state department on international economic affairs. He again came into public service in July 1947, when Pres. Harry S. Truman appointed him chairman of a five-man air policy commission to study aerial defense needs. The commission's report, "Survival in the Air Age," had much to do with U.S. decisions to step up research and production of both civilian and military aircraft. Finletter later served on the delegation appointed by Economic Cooperation Administrator Paul G. Hoffman to study U.S. and British productivity and distribution problems. President Truman appointed him secretary of the air force in March 1950.

In June 1951 he warned, after a tour of Korea, that the Chinese reds were massing soviet-built planes and could be expected to step up their air operations against the U.N. forces. In July he declared that the ability of the U.S. strategic air command to deliver atomic bombs was the greatest deterrent to war. He revealed in August that the air force had been given the new mission of developing use of atom bombs against ground troops, and said this new tactic would also help deter any attack on western Europe. On Oct. 7 he said that the U.S. expected to have 309,131 troops overseas by June 30, 1952.

Fires and Fire Losses.

Fire losses in the United States for 1951 hit an all-time peak. The National Board of Fire Underwriters estimated losses in 1951 at $731,405,000. The previous high mark was 1948 when losses totalled $711,114,000.

The National Fire Protection association estimated that fires caused 12,518 fatalities in the United States and Canada in 1951.

No single catastrophe occurred during the year comparable with the disastrous windstorm of Nov. 25, 1950, or the devastating explosion and fire at Texas City, Tex., in 1947, or the South Amboy, N.J., loss of 1950. The most substantial destruction of property occurred in the Kansas City flood of July 1951. Most of the insurable losses sustained fell into the inland marine category. But there was about $5,000,000 of fire loss when a gasoline storage tank ruptured and its contents ignited.

The trend of losses since 1942 had been upward. Until 1949 each year outdistanced its predecessor. There was a drop in 1949 and then the upward swing commenced again in 1950, culminating in the all-time record of 1951. (*See* also DISASTERS.)

Fisheries.

The world catch of fish totals about 55,000,000,000 lb. annually on a round fresh-weight basis, according to data assembled by the fisheries division of the Food and Agriculture Organization of the United Nations. Herring, pilchard, anchovies, menhaden and similar species account for about 21% of the total, while fresh- and brackish-water fish are a close second with 19%. Cod, haddock, hake, pollock and similar species comprise 14% of the total, and crustaceans such as crabs, shrimp and lobsters, and molluscs such as clams, oysters and mussels, 8%. Salmon, tuna and flat fishes are represented by lesser percentages. Asia, excluding the U.S.S.R., is the leading continent in the production of fish, with an annual catch of about 26,400,000,000 lb.; Europe, excluding the U.S.S.R., holds second place with 13,200,000,000 lb. The U.S.S.R. catch is estimated at 4,400,000,000 lb. North and Central America account for 8,300,000,000 lb., Africa 1,300,000,000 lb., South America 1,100,000,000 lb. and Oceania 300,000,000 lb.

About half the world catch of fish is made by six countries. These are, in order of the volume of their catch: Japan, United States, China, the U.S.S.R., Norway and the United Kingdom.

Fishery experts estimated that the world's oceans, lakes, ponds and streams could support an annual catch of 110,000,000,000 lb. without danger to the resource.

In recent years herring had been abundant on Norwegian fishing grounds and record catches were made. Both the capacity and efficiency of the herring fleet and shore processing facilities had been increased because of the abundance of herring. Norway's 1951 herring oil production was estimated at a record high of 66,200 short tons.

Iceland's 1951 summer herring fishery opened with catches considerably greater than in the previous year. However, after the first two weeks of the season, fish were sighted only infrequently and in small numbers. By Aug. 11 the catch of 54,000 metric tons was below the average of the previous six years, all of which were considered failures.

Because of the failure of herring to appear in normal quantities off Maine and Alaska, the United States' 1951 herring catch was only one-third as great as the 1950 production of about 360,000,000 lb.

Cod fishing off Norway during 1951 was characterized by a much greater use of purse seines than ever before. Used in connection with depth recorders, which locate schools of cod below the surface, the seines were more effective than the old methods of taking cod, and the number of purse seines increased from 80 in the previous year to more than 500 at the height of the 1951 season. The total Norwegian cod catch amounted to nearly 373,000,000 lb., or 89,000,000 lb. more than in 1950.

Since June 1950 Japan had made great strides in the use of mother ships to exploit the rich tuna resources of the central Pacific. By Oct. 1951 nine mother ship operations had been authorized and had been completed or were at sea taking tuna.

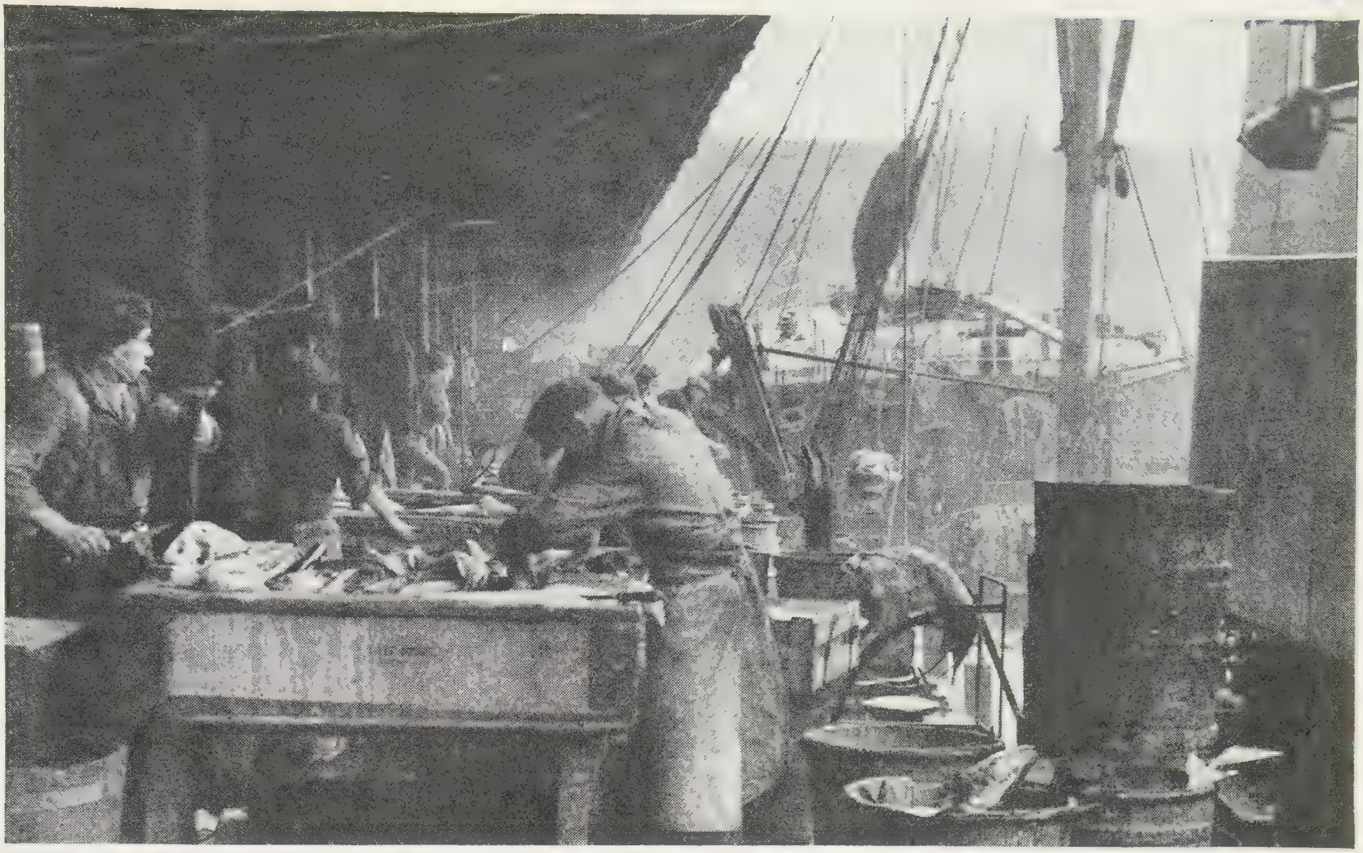
During the 1950–51 antarctic whaling season, 19 floating factories, 3 land stations and 262 whale catchers operated. The season, which opened on Dec. 22, 1950, and terminated March 9, 1951, was the shortest on record. Approximately 34,000 whales were taken. The production of whale and sperm oil amounted to 2,305,187 bbl., compared with 2,166,505 bbl. the previous season. Because the yield of oil at the beginning of the 1950–51 season was low, the International Commission on Whaling decided to postpone the opening of the 1951–52 antarctic season until Jan. 2, 1952.

The United States' annual catch of ocean perch, also known as rosefish and redfish, had increased from 264.000 lb. in 1933 to more than 250,000,000 lb. in 1951. During 1951 a survey by the Fisheries Research board of Canada from the northern part of the Grand Bank northward along the Labrador coast increased by 600 nautical mi. the known range in which ocean perch could be caught in sufficient numbers to make commercial fishing profitable. Huge schools of ocean perch were reported off northern Norway during 1951. Trawlers operating off Finnmark were reported to have filled their holds (of 200- to 250-metric-ton capacity) in only ten hours.

Despite continued expansion of the United States fishing fleet, and a good demand for most species of fish and shellfish, the 1951 catch totalled only about 4,500,000,000 lb., or nearly 10% less than in the previous year. Failure of the Maine and Alaska herring and California pilchards to appear in normal quantities, and reduced fishing effort for tuna because of excessive inventories of canned tuna, accounted for the major portion of the decline. Record, or near-record, catches of menhaden, ocean perch (rosefish) and shrimp were made during the year.

Exploratory Fishing.—Investigations to determine the distribution and extent of fishery resources were carried on in many areas throughout the world in 1951. Although the United States had lagged behind most of the important fishery nations in fishery exploration, funds were being made available for this work and a number of surveys were conducted in 1951. Exploratory fishing for tuna was conducted off the New England, South Atlantic and North Pacific states and in the mid-Pacific. Surveys to locate new shrimp resources were carried on in the Gulf of Mexico and in Alaska. Exploratory fishing was also carried on to determine the extent of bottom fish resources on the Pacific coast of the United States and of abalone in Alaska.

During 1951 projects for fishery development were an important part of the expanded technical assistance program of the Food and Agriculture Organization of the United Nations (F.A.O.). Assistance was given a number of governments in increasing fish production, management of fisheries resources and processing and marketing fishery products. Projects were carried



EARLY MORNING at the fish dock in Hull, Eng., where about half the nation's fish supply, mostly cod, is landed, processed and sold. Because of the meat shortage in 1951, the price of fish in England rose noticeably

on in such countries as Ecuador, Pakistan, Ceylon, Haiti, Peru and Chile. (*See* also MARINE BIOLOGY; OCEANOGRAPHY.)

International Fishery Conferences.—The first meeting of the International Commission for the Northwest Atlantic Fisheries was held in Washington, D.C., April 2–10, 1951. The meeting was largely of an organizational nature. It was decided that the site of the commission's headquarters would be in Canada and that the second meeting of the commission would take place in St. Andrews, N.B., in June 1952.

The Indo-Pacific Fisheries council held its third regular annual meeting at Madras, India. The principal function of the council is to assist in the development and proper utilization of the aquatic resources of the Indo-Pacific region.

An International Meeting on Fisheries Statistics was held by the F.A.O. in Rome, It., Oct. 29 to Nov. 3, 1951. The F.A.O. conference considered fishery statistics a prerequisite for policy making in the field of fisheries production and trade, and devoted much of its activities to improving the collection, compilation and dissemination of fisheries data.

A Latin-American fisheries meeting of the Food and Agriculture organization convened at Lima, Peru, Sept. 17–22, 1951. It considered and favourably recommended establishment of a fisheries council for the Latin-American area. The recommendation was later approved by the sixth session of the F.A.O. conference meeting in Rome in November. The agreement would become effective when approved by five of the member governments.

The third annual meeting of the International Whaling commission convened at Capetown, U. of S.A., on July 23, 1951. The commission, consisting of representatives of 17 nations, is charged with responsibility for safeguarding the whale stocks of the world.

Negotiations for a fisheries treaty between Japan, Canada and the United States were begun at Tokyo, Jap., in Nov. 1951. (*See* also CANNING INDUSTRY.)

BIBLIOGRAPHY.—Rachel L. Carson, *The Sea around Us* (1951); Donald K. Tressler and James McW. Lemon, *Marine Products of Commerce* (1951); Harden F. Taylor and associates, *Survey of Marine Fisheries of North Carolina* (1951); Jan-Olaf Traung, "Improving the Design of Fishing Boats," F.A.O. *Fisheries Bulletin*, vol. 4, numbers 1, 2 (Jan.–Feb. and March–April 1951). (E. A. PR.)

Canada.—During 1951 Canada negotiated with the U.S. and Japan for a treaty for the protection of Pacific coast fisheries; parliament voted $253,850 for 1951–52 to enable Canada to co-operate with the U.S. for the conservation of halibut, salmon and whales; the federal government maintained price supports on Newfoundland shore-caught and Labrador semidry salted codfish, totalling $275,211 for the Nov. 1, 1950–Oct. 31, 1951, period; the federal government was successful in extending through 1951 its 1950 arrangement with the United Kingdom government to sell Newfoundland codfish in European markets for convertible sterling, subject to an over-all ceiling of $4,000,000; under the Torquay tariff agreements, Canada granted concessions on 4 fish products imported from contracting countries in return for lower tariff rates on 13 fish products exported to nine countries.

In British Columbia the tuna, which appeared mysteriously off that coast in 1948, failed to return in 1951; active hydroelectric power developments kept British Columbia authorities alert against blocks to the vital salmon runs. Manitoba reported that the goldeye slump (1946–47 production fell to 78,800 lb.) was over (1949–50 production, 228,500 lb.). After a large-scale fertilization experiment, Ontario reported that many problems remained to be solved before the true value of adding chemicals to lakes to increase game fish could be established.

With statistics revealing that Canadian annual fish consumption per capita was hardly more than 10 lb. (compared with 46.7 lb. in Norway, 35.9 lb. in Denmark and 29.9 lb. in the United Kingdom), the federal department of fisheries and the fisheries council of Canada joined forces in a nation-wide drive to induce Canadian restaurants and hotels to serve more fish.

Floods and Flood Control.

The U.S. flood control act, approved Oct. 24, 1951, provided $388,544,100 for flood control work during the fiscal year ending June 30, 1952. The funds were classified as follows: flood control general $316,544,100; emergency fund $10,000,000; lower Mississippi river $60,500,000; Sacramento river $1,000,000; Mississippi river emergency fund $500,000. Of the flood control general fund, $306,184,100 was specified for new construction; $1,000,000 for advance planning; and $5,260,000 for operation and maintenance. Exclusive of the lower Mississippi river and the Sacramento river, flood control construction was continued or begun on 78 projects in 32 states. The $60,500,000 funds allotted the lower Mississippi river project were designated for work in seven states: Kentucky, Illinois, Tennessee, Louisiana, Missouri, Arkansas and Mississippi.

Congress also passed a supplemental appropriation act, providing a total of $12,900,000. Another $12,000,000 was allotted for additional emergency work during the Kansas river flood. This fund was in addition to special funds appropriated by congress for flood relief in Kansas handled by the particular relief agency set up by the president.

At the end of June 1951, approximately 334 flood control projects were in operation. The three largest multipurpose projects placed in operation during the fiscal year were Fort Gibson reservoir, Okla., Bull Shoals reservoir, Ark., and Hulah reservoir, Okla.

RED CROSS CAMP for families waiting to return to their inundated homes in St. Louis county, Mo., in July 1951

Channel improvement of the Mississippi river proper was continued during 1951 at a number of places below Cairo, Ill. Additional levee construction authorized by congress brought the total system to about 3,000 mi. of levees. Completed levee construction totalled approximately 1,650 mi. of main-stem levees, extending from near Head of Passes, La., to Rock Island, Ill. Co-ordinated with main-stem levees were 1,400 mi. of tributary levees, about 50% complete in 1951. Below Cairo work continued on river bank protection.

Revetment in place totalled approximately 225 mi. of river bank.

The rapid melting of excessive snow cover in the Minnesota river basin caused the river to flood in April causing damage exceeding $10,000,000. Other major floods occurred in Washington and Oregon from the Columbia river and tributaries; on the Arkansas river in Arkansas and Oklahoma; the upper Cumberland in Kentucky; the Missouri river in Nebraska and Iowa; and the Warrior system in Alabama.

Between May and July a record rainfall over approximately 1,000 sq.mi. centred by Kansas caused rivers of the region to rise to unprecedented heights. The Missouri, the Kaw (Kansas), and the upstream tributaries, the Republican, Saline, Smoky Hill, Solomon, Blue and the Little Blue, flooded causing the greatest flood damage on record: more than $870,000,000 in property loss and an equal amount in farm crops and wages lost. The Kaw river broke its banks above Kansas City, Mo., and, descending on the city from the unprotected rear, flooded the industrial section.

In Kansas, the tributaries flooded Lawrence, Topeka, Salina and approximately 100,000 ac. of cropland.

(G. Hb.)

Other Countries.—In Great Britain the year 1951 opened in most parts of the country with extremely heavy snowfall, and the thaw was immediately followed by prolonged and severe rainstorms. As a result, considerable flooding occurred over a period of several weeks and in many places roads became blocked and bridges were impassable. Rivers rose very rapidly and much damage was done in the north of England and in Scotland. Thick snow fell again in February, and the rainfall in the south, particularly in the Thames valley, was the highest ever recorded.

At Kew observatory 4.21 in. of rain fell in the course of three weeks; the previous highest total for the whole month of February was 4.13 in. in 1879. In the Thames basin the rainfall for the month of February was 5.23 in., which exceeded the previous highest total of 4.96 in. recorded in Feb. 1900. Flood warnings were issued on 10 consecutive days. In November heavy rainfall was again experienced in most parts, and more extensive flooding occurred over large areas.

In Surrey, a conference of local authorities was convened to consider a £600,000 flood prevention scheme, and the Bala Lake scheme of the Dee and Clwyd River board, which had the dual purpose of flood prevention and the provision of compensation water to the River Dee, estimated to cost £273,000, was approved.

Extensive new land drainage powers for river boards were proposed in a comprehensive report of a subcommittee of the Central Advisory Water committee, published in April 1951. The report recommended the control of watercourses for which no drainage authority was responsible, methods of raising additional revenue, and further financial assistance to river boards and other drainage authorities with limited local resources.

In March the rivers Guadalquivir and Guadaira in Spain overflowed as the result of heavy rains, and 4,000 people were rendered temporarily homeless in Seville when the rivers flooded the low-lying districts on the city's outskirts. Great damage was

FIGHTING a blaze that destroyed a flooded fuel depot and lumberyard at Kansas City, Mo., in July 1951, during the worst flood on record in the area

caused in Granada in September by a cloudburst, unparalleled for 60 years, and the river Darro, which traverses the city in a covered channel, burst through the masonry.

In July melting snows, heavy rainstorms and strong winds combined to swell the River Rhône throughout its course in Switzerland, and raised the level of Lake Geneva to an unusual height. The mountain torrents brought down masses of rock, stones and earth, causing damage to fruit gardens and farms. At the western end, the Geneva lakeside promenades were awash, and the valley road to the Simplon pass at the eastern end was impassable. Three weeks later, further tremendous rains over eastern and southern Switzerland caused widespread floods, swept away railway bridges and blocked roads with landslides. The Maggia river, near Locarno, rose seven feet in half an hour, and the Cassarate river overflowed and flooded parts of Lugano at the height of the holiday season. The Sanadon river overflowed its banks and large areas of land were inundated near St. Moritz.

Similar storms occurred in cantons Ticino and Grisons; many towns were completely isolated, and the railway line linking Switzerland and Italy was blocked. Landslips occurred and much damage was done.

In the Lake Como area in Italy, it was necessary to use explosives to clear river beds of obstacles brought down by flood waters, and many persons were buried under the mud. On Aug. 8, in the vicinity of Paris and Amsterdam, more than a month's rainfall fell in a few hours, causing flooding and dislocation of gas and water supplies.

In southern Italy, violent storms caused severe flooding in October, and many places in Sardinia and Calabria were isolated; road and railway bridges collapsed, and the supply of drinking water was interrupted by the destruction of 14 aqueducts. More than 70 deaths were reported. An abnormal rainfall of 16 in. in 19 days occurred in Malta in October, resulting in the flooding of large areas and the loss of lives and property.

Extensive flooding of the Po and Adige rivers in northern Italy in November, the worst in more than half a century, caused about 150,000 people to flee from their homes in villages near Ferrara, and the dikes surrounding Rovigo were destroyed. A death roll of about 100 was reported. British amphibious troops from Trieste rescued marooned villagers, and United States transport planes assisted in the rescue work. More than 150,000 ac. of agricultural land were under as much as 12 ft. of water, and there was widespread dislocation of road and rail traffic out of Turin and Milan. The main lines through the Simplon and St. Gotthard passes were under water. Lake Como overflowed and Lake Maggiore rose seven feet in 36 hours. In Venice, most of the squares and streets were under five feet of water, and many of the city's population of 300,000 were stranded in their homes. On the Riviera more than 6 in. of rain fell in a week and the Charles Albert bridge across the Var at St. Martin, six miles from Nice, collapsed. At Avignon the river rose 20 ft. above normal level.

In January four-fifths of the state of Queensland, Austr., suffered from the effects of torrential rain and flooding, and rivers in the central, western and northern parts of the state broke their banks. Hundreds of square miles were submerged, causing many roads to be completely out of use and resulting in dozens of breaks in the railway lines. At about the same time, Johannesburg, U. of S. Af., experienced the heaviest rainfall ever recorded, when 8.7 in. were registered in 40 minutes. During the storm, whirlwinds and gales lifted roofs and tore down trees.

Flooding of the Brahmaputra, in upper Assam, India, was reported in September to have caused the complete washing away of the Assam sawmills and factory, which produced 500,000 tea chests a year, about one-fifth of the country's total production. In October it was reported that the worst seasonal rains in 50 years had washed away bridges and buildings in Yemen, and in one area 40 deaths occurred.

Across the Red sea, Eritrea also suffered, and great damage was caused in the Keren valley.

In China, extensive work was carried out in the provinces of Shantung and Kiangsu on the river Shu-ho in order to avert the danger of flooding. A system of dams and several big weirs was built along the river over a distance of 140 km., and the flow was to be diverted through a new course, made considerably deeper and wider, through a mountain ravine 14 km. long, direct to the sea. It was claimed that this would prevent flooding resulting from the merging of the rivers Shu-ho and I-ho. In Korea the heaviest floods in 60 years occurred in August, destroying crops and causing great material loss to the population.

Florida. The extreme southeastern state of the United States, Florida was admitted to the union in 1845. It is called the "Sunshine state" and sometimes the "Peninsula state." Its coast line, not taking into account the numerous bays and indentations, is greater than that of any other state, extending 472 mi. along the Atlantic and 674 mi. along the Gulf of Mexico. Area: 58,560 sq.mi., of which 4,298 sq.mi. are water surface; population (1950 U.S. census) 2,771,305, an increase of 873,891 or 46.1% over the 1940 census. Of these, 2,166,047 were white, 605,258 were nonwhite; 1,813,890 were urban dwellers and 957,415 were rural. The 14 largest cities with their 1950 populations are: Miami, 249,276; Jacksonville, 204,517; Tampa, 124,681; St. Petersburg, 96,738; Orlando, 52,367; Miami Beach, 46,282; Pensacola, 43,479; West Palm Beach, 43,162; Fort Lauderdale, 36,328; Lakeland, 30,851; Daytona Beach, 30,187; Tallahassee (the capital), 27,237; Gainesville, 26,861; Panama City, 25,814.

History.—The state elective administrative officers in 1951, whose terms were to expire in Jan. 1953, were: Fuller Warren, governor; R. A. Gray, secretary of state; Richard W. Ervin, attorney general; C. M. Gay, comptroller; J. Edwin Larson, state treasurer; Thomas D. Bailey, superintendent of public instruction; Nathan Mayo, commissioner of agriculture.

The Florida legislature was in regular session during the months of April and May 1951. Several measures of state-wide interest were passed. Of special importance were acts authorizing the establishment of juvenile courts and small claims courts in the various counties of the state. The increase of the population of the state as revealed by the 1950 U.S. census gave Florida an additional two representatives in the congress of the United States; consequently the legislature redistricted the state, increasing the number of congressional districts from six to eight. The legislature amended the homestead realty tax-exemption law to the effect that a person must be a legal resident of the state for one year prior to making application for homestead exemption.

In the session of 1951 the legislature proposed 11 amendments to the state constitution which would be voted on at the general election Nov. 4, 1952. One of these provided that part of the revenue from motorcar licences should be used for capital outlay and debt service for school purposes. Another would increase the number of state supreme court justices from seven to ten. Another provided for the granting of county charters by the legislature. Two proposed amendments provided for an increase of two state senatorial districts, thereby increasing the size of the state senate from 38 to 40.

Education.—Enrolment in the public schools for the year 1950–51 through grades 1–12 was as follows: white, 397,020; Negro, 125,834; total, 522,854. Kindergartens: white, 2,882; Negro, 123; total, 2,945. Junior colleges (grades 13 and 14): white, 1,241; Negro, 134; total, 1,375. There were 1,320 elementary and 740 secondary public schools, 50 kindergartens and 5 junior colleges in the state, of which there were 779 white and 541 Negro elementary schools; 498 white and 242 Negro secondary schools; 48 white and 2 Negro kindergartens; and 4 white and 1 Negro junior colleges. These schools had instructional staffs (exclusive of 184 supervisors) of 17,853 teachers and 845 principals, of whom 13,584 teachers and 670 principals taught in schools for whites, and 4,269 teachers and 175 principals in schools for Negroes.

Social Insurance and Assistance, Public Welfare and Related Programs.—Florida disbursed for state welfare through the state welfare board $49,807,066.53 in 1950–51. From grants by the federal government the state received in 1950–51 for old-age assistance $19,918,069.11; for dependent children $11,436,677.64; and for aid to the blind $1,026,426.64; total, $32,381,173.39. Disbursements for old-age assistance were $31,547,134.07; for dependent children $16,604,141.26; and for the blind $1,655,791.20; total, $49,807,066.53. Administrative and other welfare services amounted to $2,899,062.71. The unemployment benefit receipts were $10,139,441.98 with net benefit payments of $5,992,855.04.

The appropriations for prisons and other institutions for 1951–52 were: the prison at Raiford $936,565; the prison farm at Belle Glade $509,720; the industrial school for boys at Marianna $446,242; the industrial school for girls at Ocala $227,700; the Apalachee Correctional institution $421,000; the Female Correctional institution at Forest Hill near Ocala $75,000. The state supports state hospitals for the insane at Chattahoochee and Arcadia, the Florida Farm colony for the feeble-minded at Gainesville and the Florida School for the Deaf and Blind at St. Augustine. The appropriations for these institutions for 1951–52 were $8,015,350, $1,504,280 and $1,118,950, respectively.

Table I.—*Principal Crops of Florida*

	1951	1950	Average, 1940–49
Corn, bu.	9,616,000	8,582,000	7,831,000
Oats, bu.	500,000	288,000	444,000
Hay, tons	60,000	56,000	64,000
Tobacco, lb.	32,392,000	23,268,000	19,296,000
Cotton, bales	35,000	14,000	14,000
Potatoes, bu.	6,321,000	5,582,000	4,306,000
Sweet potatoes, bu.	510,000	598,000	1,113,000
Peanuts, lb.	61,200,000	59,040,000	64,736,000
Sugar cane, short tons	1,228,000	1,203,000	945,000
Sugar cane syrup, gal.	960,000	980,000	1,936,000
Tung nuts, tons	15,000	8,200	8,645
Oranges, boxes	72,500,000	67,300,000	46,070,000
Tangerines, boxes	5,000,000	4,800,000	3,890,000
Grapefruit, boxes	35,000,000	33,200,000	27,280,000

Communications.—The total highway and street mileage in the state at the end of the year 1950 was 51,086 mi., of which 21,075 were paved and 3,946 were hard-surfaced with gravel or stone. Disbursements for the calendar year 1950 were $39,566,899.74 for construction and $8,987,250.72 for maintenance. The state road department's tentative budget for 1951 was $90,411,651 for construction and $7,033,547.67 for maintenance. Florida had in 1951 approximately 5,000 mi. of railroads, exclusive of yard tracks.

Banking and Finance.—On June 30, 1951, there was a total balance in the state treasury of $58,578,148.66, with outstanding warrants of $15,427,977.46. The state is constitutionally forbidden to incur a debt by borrowing except to put down insurrection and repel invasion. The constitution also prohibits the legislature from levying an income tax, forbids any state ad valorem tax on real estate and exempts homesteads from taxation by local taxing units up to the value of $5,000.

On June 30, 1951, there were within the state 63 national banks with deposits amounting to $1,380,064,000, and 135 state banks and trust companies with deposits of $659,512,062.90, representing total deposits of $2,039,576,062.90, a gain of $144,504,851.74 in the fiscal year.

Agriculture.—The sale of citrus products amounted to $222,451,000 for the year 1950. The sale of truck crops, including strawberries, for the year 1950 amounted to $97,848,000. On Jan. 1, 1951, the livestock resources of the state were as follows: 1,200,000 beef cattle and calves; 152,000 milk cows; 631,000 swine; 12,000 sheep; 23,000 horses; 28,000 mules.

The total income from the sale of agricultural commodities for the year 1950 was $498,325,000. This included income from the sale of cattle and hogs $52,258,000; poultry $18,706,000; dairy products $33,955,000; truck crops $97,848,000; citrus $222,451,000; from field crops: tobacco $18,450,000, potatoes $9,165,000, corn $1,188,000, sugar cane $7,702,000.

Manufacturing.—In 1947, according to the census of manufactures, the latest report available, there were 2,807 manufacturing establishments in Florida. Florida factories and plants in 1947 shipped $819,000,000 of goods manufactured in the state. Florida manufacturing establishments which were subject to state unemployment compensation had a pay roll in 1950 of $1,068,204,000, with an average number of employees of 408,911. In 1948 there were about 700 sawmills in Florida which produced 546,900,000 bd.ft. of lumber. The state also produced 1,221,200 cords of pulpwood. The increase from Florida forest products for 1948, the latest report available at the close of 1951, was $200,216,000 wholesale manufactured value. Forest products had a pay roll value in 1948 of $69,821,000. (A. N. P.)

Mineral Production.—The accompanying table shows the tonnage and value of those minerals produced in the state in 1949 whose value exceeded $100,000, and the corresponding data for 1950, so far as they were available at the close of 1951. Florida is by far the largest producer of phosphate rock.

Table II.—*Mineral Production of Florida*

(In short tons, except as noted)

Mineral	1949		1950	
	Quantity	Value	Quantity	Value
Clays	95,516	$ 1,446,544	126,852	$1,954,641
Petroleum (bbl.)	441,000	*	487,000	?
Phosphate rock	7,633,908	37,857,983	9,056,174	45,377,842
Sand and gravel	2,243,898	1,879,733	2,793,865	2,806,431
Stone	4,215,090	4,748,253	5,313,400	6,885,394
Other minerals		9,065,380		?
Total		$54,998,000		?

*Value included with other minerals.

Flour. **Wheat Flour Production.**—Commercial production of wheat flour in 1950 for the U.S. totalled 224,900,000 cwt. This was 4% below the 1949 output, but still about 6% above the 212,700,000 cwt. produced in 1940. The 1950 flour milling survey covered all known commercial wheat and rye flour mills in the U.S. The monthly production data collected by the bureau of the census accounts for approximately 96% of the total U.S. output which represents the production of about 375 mills. The remaining 4% is accounted for by approximately 875 mills having relatively small grinding capacities.

Table I.—*U.S. Commercial Wheat Milling Production*

Crop years starting July 1	Wheat flour production (thousand cwt.)	Wheat grindings (thousand bu.)	Offal Production (thousand tons)	Average number of lb. per sack of flour		Flour extraction rate
				Wheat	Offal	
1940	212,700	494,900	4,302	139.6	40.5	71.6
1941	216,800	504,300	4,356	139.6	40.2	71.6
1942	221,100	515,300	4,444	139.8	40.2	71.5
1943	237,900	551,100	4,718	139.0	39.7	71.9
1944	243,400	565,100	4,878	139.3	40.1	71.8
1945	274,400	640,720	5,598	140.1	40.8	71.4
1946	278,900	624,740	4,895	134.4	35.1	74.4
1947	305,499	701,799	5,913	137.8	38.7	72.6
1948	279,133	639,476	5,337	137.4	38.2	72.8
1949	234,351	543,475	4,651	139.1	39.7	71.9
1950	224,899	523,411	4,534	139.6	40.3	71.6

New Crop Flour Quality.—According to the annual survey of southwestern flours by the staff of *Bakers Weekly*, the 1951 crop of southwestern wheat was shown to have yielded flour of good quality, in general much the same as for 1950. Ash content was substantially the same as for the previous year, while protein content was mostly the same to slightly lower. Absorption was slightly lower, and the mixing response was good to slightly improved over 1950. Fermentation tolerance was good, and baking characteristics were good to excellent. Other characteristics, including gas retention, gassing power and response to oxidizing agents, were reported to be about equal to or slightly better than the flour of the 1950 crop.

Flour Consumption; Domestic Uses and Trends.—Although, according to the U.S. bureau of agricultural economics, the average daily caloric intake for persons in the U.S. for 1950 had declined only about 1% from the 3,350-cal. level of 1920, the per capita rate of flour consumption had dropped from 189 lb. to approximately 138 lb. during the same period. During this time the U.S. population had increased from 105,710,620 to 150,697,361, according to the bureau of the census, so that the total quantity of flour used per annum had actually increased by about 7% since 1920.

Consumption of flour in the home followed a trend toward the use of more packaged cake mixes and less straight flour as indicated in Table II.

Table II.—*Household Flour Consumption in the U.S.*

Year	All-purpose family flour (cwt.)	Packaged cake flour (cwt.)	Cake mixes (flour values) (cwt.)	Total cake (cwt.)	Total family (cwt.)
1947	57,510,000	1,680,000	210,000	1,890,000	59,400,000
1948	57,100,000	1,850,000	370,000	2,220,000	59,320,000
1949	56,500,000	1,630,000	630,000	2,260,000	58,760,000
1950	54,000,000	1,530,000	770,000	2,300,000	56,300,000

Great Britain.—The quality of bread and bakery products is influenced by many factors but the extraction rate is one of the most important. Before World War II, the miller made, from 100 parts of wheat, about 72 parts of flour, the remainder being coarse offal used for animal feeding. Such flour was designated 72% extraction flour and was, of course, white. During the war, the extraction rate was raised to 85% and even higher, which meant that the flour was darker and, from the baker's point of view, was far from ideal. In 1950, the extraction rate was reduced to approximately 80%, but in 1951 there was no further reduction. The controversy as to the nutritive value of short and long extraction flour continued.

The problem that greatly exercised the minds of millers and bakers during 1951 was the desirability of the chemical treatment of flour and, especially, of the use of nitrogen trichloride. Why is flour treated at all? It is well known that the baking quality of flour, that is, its ability to make satisfactory bread, improves as the flour is stored and aged. Obviously, oxidation has to take place, and the practice in 1951 was to secure this necessary oxidation immediately by such chemical treatment as, for example, the addition to flour of 1 part in 100,000 of potassium bromate. A particularly effective treatment was the use of a trace of nitrogen trichloride. But it was found that, if dogs consumed very large quantities of bread made from flour so treated, running fits might be induced. The actual toxic substance responsible for this was identified, by the Research Association of British Flour Millers, as methionine sulphoximine, which, although it did not affect human beings, raised the whole question of the treatment of food by traces of chemicals. While it was felt that there was a need for the proper use of certain chemicals in foodstuffs, the use of nitrogen trichloride did not seem likely to be continued after 1951.

Improvement in wheat varieties continued and advances in milling technique occurred on the lines indicated in 1950, especially in connection with pneumatic conveying, which led to increased cleanliness and freedom from insect pests. A new instrument for assessing flour colour accurately attracted considerable attention. (*See* also BREAD AND BAKERY PRODUCTS; WHEAT.) (D. W. K-J.)

Football. The season of 1951 was a rather unhappy one for intercollegiate football in the United States. The game came under the severest criticism in years. The lengths to which some of the colleges went, in their efforts to field a winning team—"doctoring" student high school transcripts, giving athletic scholarships in wholesale quantities and permitting their players to take useless courses counting toward degrees—awakened the country to the need for reform if the game was to survive.

Postseason bowl games also were attacked as harmful overemphasis. A committee of college presidents appointed by the American Council on Education met in Washington, D.C. and reported itself as unanimously in favour of the abolition of all bowl games. The presidents agreed also that restrictions should be put on the length of the season in all of the college sports, that the athletes should be required to maintain the same standard of work in the class room as other students and that all scholarship funds should be handled by the school.

The televising of games was another problem to which the colleges gave serious consideration. Fearful lest the smaller schools lose their patronage and the receipts which made it possible for them to carry on their athletic programs, because of the public's absorbing interest in the telecasting of the big attractions of the leading teams, the National Collegiate Athletic association appointed a committee to make a survey. An experimental program was carried out by the committee throughout the season, restricting the number of games that were telecast. The findings of the survey were to be made known in Jan. 1952.

The end of the playing season found Tennessee ranked as the number one team of the country. The Volunteers had a perfect record for the first time since 1940 and were awarded the Father O'Donnell trophy, given annually to the team that finishes at the top in the final Associated Press poll. Then followed, in that poll, Michigan State, Maryland, Illinois, Georgia Tech, Princeton, Stanford, Wisconsin, Baylor and Oklahoma, the latter just edging ahead of Texas Christian.

The winner of the Heisman award as the football player of the year was Richard Kazmaier of Princeton. The football coach of the year, as voted by the college coaches of the country, was Charles A. Taylor of Stanford, who, in his first year as a varsity head coach, piloted his team to the Pacific Coast conference championship and to the Rose Bowl, though at least three other elevens in the conference were ranked ahead of Stanford at the start of the season.

Kazmaier led Princeton through 22 successive victories, to finish its second consecutive season with a perfect record. The 22 victories, dating from 1949, constituted an all-time Tiger record. Another one was established when Nassau won the Big Three honours for the fifth year in a row, eclipsing the mark of the Harvard teams of 1912–1915. Princeton also won the Lambert trophy, symbol of eastern supremacy, and the Ivy league championship for the second successive year.

Second in the balloting for the Heisman award was Hank Lauricella of Tennessee. Vito Parilli of Kentucky was third; Bill McColl of Stanford, fourth; Johnny Bright of Drake, fifth; Johnny Karras of Illinois, sixth; Larry Isbell of Baylor, seventh; and Hugh McElhenny of Washington, eighth.

Honours were heaped upon Kazmaier. He was also voted the Maxwell trophy, ran far ahead of all others in the Associated Press and United Press polls for the back of the year and was a unanimous choice on the many all-America teams.

The sectional champions were as follows: Eastern, Princeton; Big Ten, Illinois; Pacific Coast, Stanford; Big Seven, Oklahoma (fourth year in succession); Southwestern, Texas Christian; Southeastern, tie between Tennessee and Georgia Tech; Southern, tie between Maryland and Virginia Military Institute; Missouri Valley, Tulsa.

Stanford and Illinois, as the winners of their conference championships, were chosen to play in the Rose Bowl at Pasadena, Calif. They met on New Year's day and Illinois won by the score of 40–7. In the Sugar Bowl at New Orleans, La., Tennessee and Maryland were the opponents and victory went to Maryland, 28–13. Texas Christian and Kentucky played in the Cotton Bowl at Dallas, Tex. and the latter was the winner by the score of 20–7. The Orange Bowl game at Miami, Fla., matched Georgia Tech and Baylor and was won by Georgia Tech, 17–14.

The Army team, wrecked by the dismissal of virtually the entire varsity squad for honour code violations, lost seven games and won two, one of its worst seasons in history. In the final game the West Point team, made up largely of plebes and sophomores, was crushed, 42–7 by Navy, which ran up the largest number of points ever scored by either team in the rivalry.

The outstanding choices for all-America honours were Kazmaier and Lauricella, backs, and McColl, Jim Weatherall of Oklahoma, Don Coleman of Michigan State and Bob Ward of Maryland, linemen. Other backs who were honoured were Ollie Matson of San Francisco, Karras, Bobby Dillon of Texas, Parilli, Pat Cannamela and Frank Gifford of Southern California, Isbell, McElhenny and Al Brosky of Illinois. Other linemen were Ray Beck of Georgia Tech, Pug Pearman of Tennessee, Bob Carey of Michigan State, Les Richter of California, Pat O'Donahue of Wisconsin, Dick Hightower of Southern Methodist, Doug Moseley of Kentucky, Dewey McConnell of Wyoming, Joe Palumbo of Virginia, Bob Toneff of Notre Dame and Ted Daffer of Tennessee. McColl was voted the lineman of the year in the Associated Press poll.

There was a noticeable increase in the roughness of the play, fisticuffs breaking out in many games and at times leading to free-for-all fights in which spectators joined. In the game between Drake and Oklahoma A. and M. Johnny Bright, Negro backfield star, suffered a broken jaw and Drake officials contended he had been slugged by a member of the Oklahoma team. Refusal of the Missouri Valley Conference to investigate the case led to the withdrawal of Drake from the conference, and Bradley university also withdrew.

Professional Football.—The Los Angeles Rams ended the Cleveland Browns' five-year record of invincibility to win the championship of the National Football league. Finishing on top of the National conference division, they defeated the Browns, champions of the American conference, in the play-off at Los Angeles, Calif., 24–17.

During the 1951 season, Cleveland lost its opening game and then won all of its 11 other contests in the American division to finish ahead of the New York Giants, who placed second with 2 defeats, 1 tie and 9 victories. Los Angeles won the honours in the National division on the final day, defeating the Green Bay Packers while the Detroit Lions were losing to the San Francisco Forty-Niners.

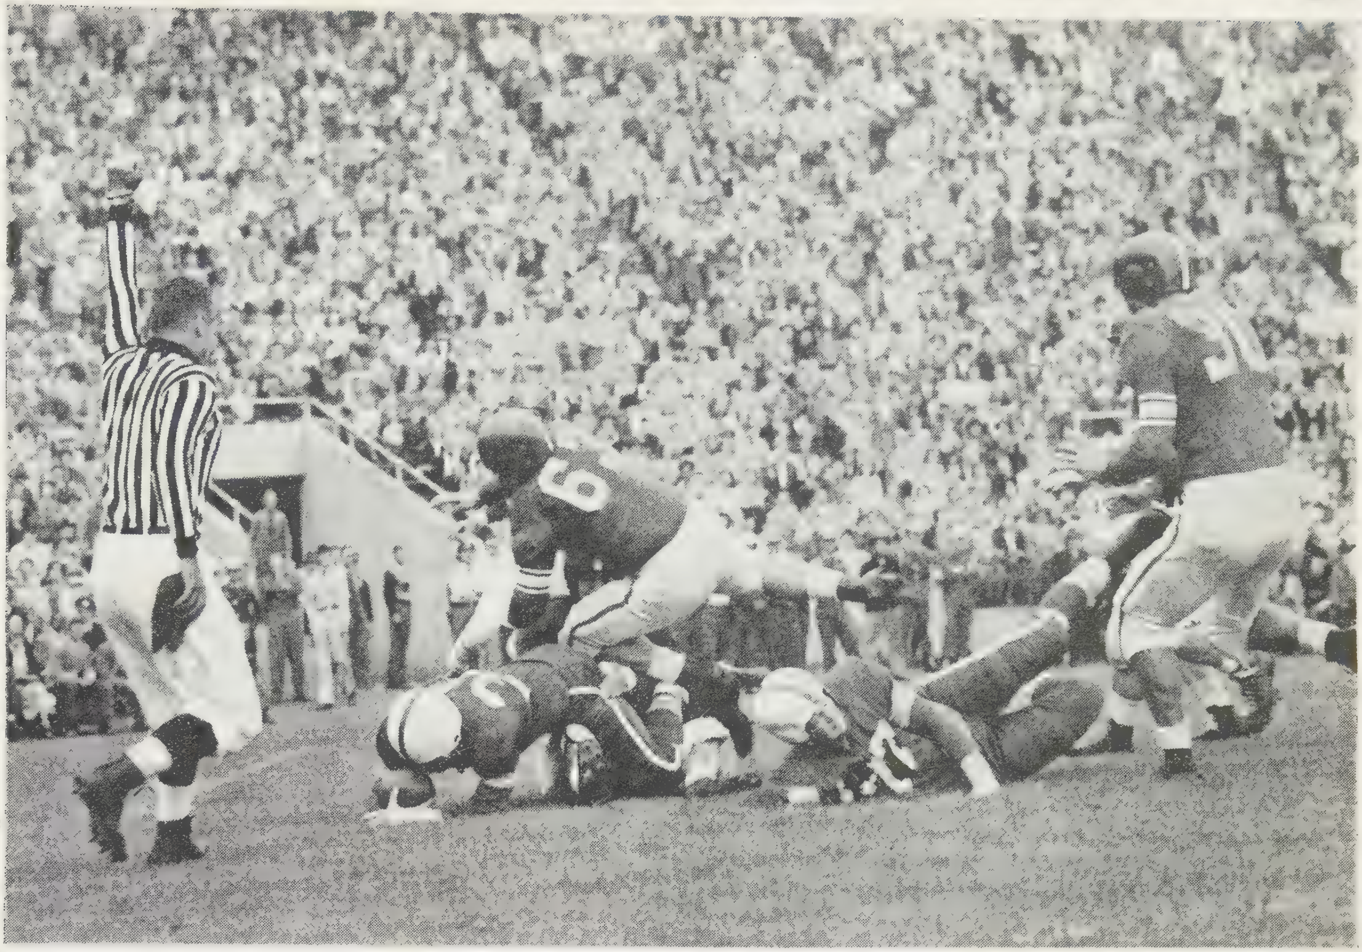
Canada.—A record Canadian football crowd of 27,326 saw the Ottawa Rough Riders win the Dominion championship in Toronto's Varsity stadium. In the East-West final for the Grey cup they defeated the Saskatchewan Roughriders, 21–14.

Before the East-West playoff, three teams tied for first place in each of the two big professional leagues. In the Western Canada conference they were the Saskatchewan Roughriders, the Winnipeg Blue Bombers and the Edmonton Eskimos. The Eskimos defeated the Blue Bombers and then in turn were beaten by the Roughies, who thus earned the right to represent the West.

In the East's Interprovincial Rugby union, commonly known as the Big Four, Ottawa, the Toronto Argonauts and the Hamilton Tiger-Cats tied. First the Tiger-Cats eliminated the Argonauts, 1950 Dominion champions. Then they in turn were defeated by the Ottawa Rough Riders. Finally Ottawa met and overcame the Sarnia Imperials, winner of the Ontario Rugby Football union title, to become champions of eastern Canada.

Bruce Cummings of the Ottawa team won the oldest and most prized award in the Big Four, the Jeff Russell Memorial trophy. It goes annually to the player who best combines good sportsmanship with effective play. Glenn Dobbs was named the most valuable player in the Western Canada conference.

The college championship was won by the University of Toronto Blues. They defeated the McGill Redmen, 11–7, in the final game of the schedule, thus preventing the Redmen from



FIRST-PERIOD PLAY in which Ohio State lost four yards to Michigan State and was pushed back to its own three-yard line, Oct. 6, 1951. Michigan State won the game, 24 to 20

bringing about a sudden-death playoff. (A. Da.)

Great Britain.—*Association.*—England's association football team once more in 1950 resisted every attempt to inflict a first home defeat by a side from outside the British Isles but its supporters had an anxious time before it drew 2–2 with Yugoslavia and France and beat Argentina 2–1.

Tottenham Hotspur, who had been the most attractive side in the country while winning the second division title in 1950 went straight on in the first division to win the 1951 championship, a feat previously achieved only by Everton and Liverpool. For the fourth time in five years the runners-up were Manchester United. Newcastle United won the Football association cup, beating Blackpool by 2–0 in the final. Pegasus, a combination of past and present undergraduates of Oxford and Cambridge, won the Football association amateur cup, with 2–1 against Bishop Auckland in the final.

In Scotland a young Hibernian side was outstanding, finishing ten points ahead of Glasgow Rangers. Celtic won the cup final 1–0.

Scotland won the home international title, beating Wales 3–1 at Cardiff, Ireland 6–1 at Hampden Park and England 3–2 at Wembley, and also defeated Belgium 5–0, France 1–0, and Denmark 3–1, but lost 0–1 and 0–4 to Austria, perhaps the best of the European teams. England beat Wales 4–2 at Sunderland and Ireland 4–1 in Belfast; Wales won 2–1 in Belfast. (For association football in the U.S., *see* the article Soccer.)

Rugby Union.—The South African side visiting Great Britain in 1951 won its first nine games before losing 9–11 to London Counties. Ireland recovered the home international championship. The Welsh began with a 23–5 win over England at Swansea, but lost 0–19 to Scotland in Edinburgh after the Scots had lost 12–14 in Paris. Ireland got home by 9–8 and 3–0 against France and England in Dublin. Ireland beat Scotland at Murrayfield, 7–3. Wales drew 3–3 with Ireland at Cardiff and was beaten 8–3 by France in Paris. France won her first victory at Twickenham by 11–3, but England won the Calcutta cup by beating Scotland 5–3.

East Midlands, runners-up in 1950, won the county championship, beating Middlesex in the final.

Rugby League.—France won the home international championship on points average. and then on her first visit to Australasia beat Australia in the tests and only just lost to New Zealand in a rough match at Auckland. The French team received almost a national welcome on its return to Marseilles, but a few weeks later the side was beaten 17–14 at Hull by Other Nationalities.

Workington Town won the Northern Rugby league championship. Wigan won the Rugby league challenge cup final, beating Barrow 10–0, and retained the Lancashire cup for a sixth year. Leeds won the Yorkshire league and Wakefield the Yorkshire cup. Cumberland took the county title on points average.

The New Zealand team visiting Britain in the autumn of 1951 were unlucky to lose the first two tests 15–21 and 19–20.

Foreign Investments.

United States Investments Abroad.—The value of United States investments in foreign countries (and international organizations) aggregated approximately $35,660,000,000 on June 30, 1951 or about $1,000,000,000 higher than at the end of 1950. Although the outflow of private and U.S. government capital in the first half of 1951 of about $725,000,000 was more than double the volume during the same period a year earlier, the movement for the year as a whole probably was well below the preceding year because of a sharp decline in private investments in the second half of the year. As a result, the increase in the total value of U.S. investments abroad in 1951 was probably much less than the rise of $2,000,000,000 that occurred in 1950.

The bulk of the growth was for the account of private organizations and individuals as in the previous year. New investments and claims by the U.S. government on foreigners increased by about $140,000,000 in the first half of 1951 and by a small amount during the third quarter, or at about the same rate as a year earlier, according to the U.S. department of commerce. The investment of private capital in the first nine months of the year was $583,000,000 or $476,000,000 less than for the same period of 1950, a year in which a postwar record outflow of more than $1,300,000,000 was reached.

Portfolio Investments.—During 1951, Canadian issuers found it advantageous to borrow directly in the United States and a larger net volume of new Canadian bonds, whose interest and principal were payable in U.S. dollars, were sold in the latter country than in any year since 1930. Through Nov. 1951 there were 20 major Canadian new issues sold in the United States (not including issues of direct-investment companies) of which the amount taken by U.S. investors was about $280,000,000. The issues were by various Canadian provinces and municipalities, and only about $15,000,000 of the total was to refund issues outstanding in the United States. The balance was new U.S. capital going to Canada, although the issuers used some of the funds to retire obligations held in Canada rather than for new works programs.

Aside from Canada, the outflow of United States portfolio investments was mainly to the International Bank for Reconstruction and Development, and there was no apparent revival of interest in large-scale lending to other foreign borrowers. Much of the potential lending to these countries was in fact channeled through the International bank. The two issues of this institution totalling $150,000,000 in 1951, nearly all of which was taken by U.S. investors, were in effect fully guaranteed by the subscription of the United States government to its capital. Most foreign borrowers were able to secure loans from the International Bank on terms better than could be found in the private U.S. capital market. As in earlier years, the experience of the International bank showed that an important limiting factor on the volume of private United States lending either directly or through the bank was the lack of well-conceived and planned projects by potential borrowers.

To finance its ambitious development program, the Israel government undertook to sell $500,000,000 of bonds in the United States beginning in May 1951, without resorting to traditional underwriting and marketing channels. A large corps of salesmen and volunteer workers arranged meetings of potential purchasers throughout the United States and through other means began to market the bonds in the first year of the three allotted for this purpose.

Direct Investments.—The amount of U.S. capital flowing to controlled enterprises in foreign countries in the first nine months of 1951 was $440,000,000, a decline of $125.000.000 from the same period a year earlier. An important factor in the decrease was the completion of major foreign projects of the oil industry. As a consequence, the rate of investments in the third quarter was at about $260,000,000 for the year—only about a third of the average rate in 1949–50. In 1951 the flow of capital to a number of foreign enterprises was reversed as they turned over to their parent enterprises the cash proceeds of their sales of petroleum and other products which they no longer required for investment. However, the aggregate retention abroad of undistributed profits was probably large; in 1950 they had amounted to about $443,000,000. These funds were as important in expanding overseas investments as new funds coming directly from the United States.

The world demand for petroleum and its products was at peak levels in the early part of 1951 when steps were initiated by the Iranian government to nationalize the vast Iranian properties of the Anglo-Iranian Oil company, a British-controlled enterprise. With the subsequent interruption of the flow of oil from Iran, the rising oil exploration and development program of the United States was further accelerated, both at home and abroad.

In Canada, facilities were expanded for the marketing of the oil of newly developed fields in the western portion of the country and the financing of a proposed catalytic refining plant and oil line were discussed. Elsewhere, in central Sumatra, two U.S. companies were developing discoveries of major importance on which it was said that about $20,000,000 was spent in 1951. An oil refinery with a daily capacity of 10,000 bbl. was undertaken in South Africa with a projected cost of $12,000,000. United States firms expanded operations in Mexico, Colombia and Ethiopia and indicated a readiness to participate with Brazilian capital on an equal basis in the exploitation of large hitherto undeveloped Brazilian reserves. Plans were under way for a $10,000,000 investment in Egyptian oil fields, pending the amendment of an Egyptian law requiring that Egyptians hold a majority interest in any company exploiting the nation's oil reserve.

Toward the end of the year it was announced that U.S. companies would invest up to $70,000,000 in refineries in India following a change in that country's policy toward foreign capital. Earlier, Indian policy had required that foreign investors allot to Indian nationals 51% of the controlling shares of an enterprise in India. Under the terms of the agreements with the oil companies, Indian investors would be offered an opportunity to purchase preferred stock to the extent of 25% of the stock capitalization. Other provisions of the agreement included a guarantee that foreign exchange would be made available for annual repatriation of profits, imports of crude oil to feed the refinery would be exempted from customs duty, the importation of machinery by the companies would be assessed at a special low rate, and the enterprises would be permitted to sell their petroleum output in India at a price equal to that of imported products.

In other oil-producing countries the share of local profits from United States oil operations was raised during the year. The ruler of Arabia was believed to have received an income of about $100,000,000 to $120,000,000 during 1951 as a result of an agreement at the end of 1950 that raised his share of the net income from U.S. oil operations to an equal basis with that of the operating company. Beginning with Dec. 1951 a somewhat similar arrangement was made with the Sheikh of Kuwait.

The intensive search for mineral deposits in foreign countries continued during 1951 and U.S. capital was invested in many promising ventures. The U.S. government, insurance companies and industrial organizations, in conjunction or separately, placed on a production basis important mineral deposits in Canada and elsewhere. The extensive explorations of potentially rich iron ore properties in Canada was financed by steel and other companies in the United States. Work was in progress during the year on a railroad from the Gulf of St. Lawrence to the iron ore fields astride the Quebec-Labrador boundary—a distance of 360 mi. In Venezuela a contract between that government and a subsidiary of a leading U.S. steel producer called for the initial investment of $250,000,000 by the company for the extraction and movement to tidewater of high-grade ores from the Cerro Bolivar deposits. Other U.S. companies explored in Venezuela for rich iron ore bodies during the year.

*No allowance has been made for the value of direct investments abroad damaged during the war, written off or expropriated without compensation. Holdings of portfolio securities of former enemy countries, or of countries where no realistic valuation is obtainable have been excluded.

†Government long-term investments exclude commercial bank loans guaranteed by the Export-Import bank. The latter are included under other private long-term investments. Only the outstanding amount of government loans, rather than the authorized amount, are included in government long-term investments.

Source: U.S. Department of Commerce.

During the year the American and Foreign Power Company, Inc., announced that it planned to make expenditures of $200,000,000 in South and Central America by 1955, and other U.S. interests were considering the investment of vast sums in gas pipe line ventures in Canada and lesser sums in other ventures including wood pulp, cellulose acetate and many organic chemicals.

The efforts of the Israel government to attract U.S. capital resulted in numerous investments in 1951 among which were the country's largest tire and rubber plant and the formation of a $1,000,000 enterprise to manufacture plastics for consumer and industrial use. However, the effort to interest U.S. capital in Israel met with mixed success during the year as a result of political tensions in the near east, and incidents occurred that indicated the type of risk to which capital investments in foreign countries were exposed. For example, in October the Iraqi government banned the importation into that country of all products of a U.S. automobile manufacturer following the establishment in Israel of a plant producing automobiles, spare parts and other products owned by the same company.

The value of new U.S. investments in the former enemy countries, Germany and Japan, remained relatively small during 1951. Among the investments coming to the attention of the public were the opening of a branch bank in Germany and several investments in Japan.

Information regarding the liquidation of U.S. overseas investments during the year was meagre, although publicity was given to the sale of shares of F. W. Woolworth and Co., Ltd., of London. The last large block of U.S.-owned shares of this company with a value exceeding $6,000,000 was sold in the first quarter of the year.

United States Government.—Long-term loans to foreign governments by the United States government remained relatively low during 1951, totalling only $152,000,000 during the first nine months of the year, mainly reflecting the low volume of credits under the declining European Recovery program. Drawings against Export-Import bank loans declined somewhat in this period compared with a year earlier, although several fairly large loans were authorized to Latin American borrowers. Through Aug. 1951 about $46,000,000 of additional loans were authorized by the U.S. government to individual Spanish enterprises for projects having prospects for contributing substantially to the improvement of the Spanish economy. These included railways, fertilizer and steel plants, minerals production, electric power plants and the purchase of certain commodities.

On Oct. 1 the British government paid the final instalment on its $390,000,000 loan from the Reconstruction Finance corporation contracted in 1941. With the payment of this debt the British treasury regained U.S. securities valued at $1,000,000,000. This was about twice their value at the time the loan was made. On the last day of 1951 the British government made the first payments of interest ($87,000,000) and principal ($51,500,000) due on loans granted after World War II, totalling $4,350,000,000.

Other.—In September, the United States and Switzerland concluded a convention designed to eliminate, in so far as possible, the levying of taxes by both countries on income earned in either country. The agreement, which would run for at least five years, followed agreements entered into by the United States and other countries and would relieve considerably from double taxation investment income earned in Switzerland by U.S. citizens, while also relieving from double taxation income earned on Swiss investments in that country.

Foreign Investments in the United States.—The value of foreign investments in the United States rose to approximately $20,570,000,000 on June 30, 1951, or by about $420,000,000 during the first six months of the year. The increase was probably not impaired during the remainder of the year by the re-emergence of a basic disequilibrium in the international transactions of the United States with the rest of the world and among countries in general, since foreign countries probably drew on their gold holdings rather than on their investments to meet indebtedness.

The change for 1951 was in sharp contrast with the increase of about $2,500,000,000 in the value of foreign investments in the United States during 1950. In the latter year, the strong demand for basic products by the United States from other countries in connection with the rising military mobilization program had resulted in sizeable increases in both foreign short- and long-term dollar assets in the United States. The U.S. demand continued to increase during the first half of 1951. However, in the third quarter of the year a relative relaxation in business and consumer demand in many sectors of the market occurred, accompanied by lower price levels, and represented a moderate adjustment from the great demand pressure evident earlier in the year. As part of this softening in demand, U.S. merchandise imports fell about $500,000,000 during the quarter coincidental with declines of about $175,000,000 in government aid to foreign countries and about $340,000,000 in the movement of U.S. private and government capital to foreign countries.

Short-term Investments and Gold.—As a result, many countries that had gained short-term assets in the United States and gold during the first year following the outbreak of hostilities in Korea—the countries producing raw materials or their mother countries—suffered losses thereafter. The sterling area, which had had the greatest gain in reserves to the middle of 1951, had the greatest losses in subsequent months. France, although primarily not a raw material producing country, had a similar

Source: U.S. Department of Commerce.

experience. On the other hand, Germany, the Netherlands and other countries had lost reserves since mid-1950 but were reacquiring them during the second half of 1951. Other countries that gained dollars and gold included Belgium, Japan and Indonesia.

In the first half of the year foreigners had acquired about $950,000,000 of gold from the United States in addition to acquiring $109,000,000 of short- and long-term investments. In the third quarter of the year foreigners lost almost $300,000,000 of gold to the United States and neither acquired nor lost capital to the United States on balance. In the remaining quarter of the year sizeable foreign liquidations of short-term assets and gold probably occurred. The unstable character of international financial relations was reflected by concern expressed in the fall of 1951 that some foreign countries might have to devalue their foreign currencies, although it was the first occasion since the third quarter of 1949 that foreign countries as a group had had to draw upon their reserves to settle their accounts with the United States. During the intervening 21-month period it had been necessary for the United States to settle its international accounts by making net payments to the rest of the world. These gold and dollar payments had amounted to $5,100,000,000 and had permitted foreign countries in the aggregate to regain from the United States all but $2,500,000,000 of the dollar assets and gold that they had lost to that country during the period from the end of 1945 through Sept. 30, 1949.

The increase in foreign short-term claims on the financial institutions of the United States amounted to about $175,000,000 during the first half of 1951 and may be attributed largely to a shift in the portfolio holdings of foreigners who acquired short-term government issues and other assets with the proceeds of maturing medium-term government issues. In general, foreign governments continued to convert to gold a portion of their rising claims against the United States resulting from the improvement in their financial transactions with that country after 1949.

Long-term Investments.—The aggregate value of foreign long-term investments in the United States reflects (1) the level of share and bond prices on the leading securities markets; (2) the movement of foreign capital, additions and liquidations; and (3) the book value of foreign-controlled enterprises in the United States, direct investments. The combined effect of these influences was to raise the value of foreign long-term investments by almost $250,000,000 in the first half of 1951, to $10,100,000,000. This increase was less than the rise in value resulting from increased security price quotations which was partly offset by a net sale of foreign-held securities.

The value of corporate shares rose $290,000,000 of which all but $23,000,000 represented an 8.4% rise in the stock market prices of the $3,190,000,000 of shares held at the end of 1950. The balance represented new capital invested in the United States. Declines in the values of corporate bonds and obligations of the U.S. government reflected both declines in market prices and liquidations by foreign holders. Sales of the latter consisted mainly of maturing medium-term government issues whose proceeds, as mentioned, were utilized for the acquisition of short-term assets.

The continued absence of foreign purchases of securities during the first half of the year, at a time when both foreign reserves and security prices in the United States were rising, indicated that foreign governments were still exercising fairly rigid controls over the use of dollar earnings. The need for dollar exchange in some countries remained great.

The increase in the value of direct investments was slightly higher than in the same period a year earlier as prosperous business conditions in the United States were reflected in larger net incomes and undistributed profits. Retained earnings accounted for about two-thirds of the increase of $147,000,000 in total value of direct investments. The balance came as advances on book accounts from foreign parent companies who increased their advances over the previous year, pacing the rise in business volume.

Income.—In contrast with U.S. investments abroad, foreign investors in the United States concentrated on portfolio investments, so that the data on investment income released by the U.S. department of commerce in Oct. 1951 show that of some $437,000,000 of income paid to foreigners in 1950, $241,000,000 was on portfolio investments. Dividends paid abroad on portfolio account amounted to nearly half of all income payments. In the postwar period these had risen at a somewhat higher rate than all U.S. dividend payments in spite of some reduction in foreign holdings. This suggested that foreign holdings of U.S. shares were concentrated in stock issues on which dividend rates had risen sharply in recent years.

Interest payments on foreign holdings of private corporate and U.S. government bonds were comparatively minor and were close to $50,000,000 in 1950. Payments on government bonds resulted from a tendency of foreign governments and central banks to invest a portion of their dollar reserves in seasoned interest-bearing securities rather than to hold them all in the form of demand deposits or gold which yielded no income.

As indicated, foreign-controlled companies operating in the United States depended almost entirely on earnings in that country as a source of funds for expansion. For the period 1946–1950 about $750,000,000 of total earnings of $1,200,000,000 were used in this manner. In 1950 direct-investment subsidiaries retained about $172,000,000 of earnings of $282,000,000 and distributed the balance as dividends to foreign parent companies.

More than 70% of all income payments to foreigners went to European Recovery program countries in 1950, reflecting the fact that foreign investments in the United States represented largely a remainder of past foreign investment activities of western European countries, principally England, Switzerland and the Netherlands. Payments to Canada were next in importance, comprising about 18% of total. Most of the income paid to Canada was by Canadian-controlled companies in the United States. Forests.

The Defense Production act of 1950 authorized U.S. government loans or accelerated tax amortization for expansions of manufacturing plant facilities contributing to the national defense effort. As a result, the National Production authority, a federal agency set up under this act, received hundreds of proposals for plant expansions during 1951. Many of these involved forest products, including proposals for new pulp and paper mills, rayon textile mills, sawmills, plywood manufacturing plants and facilities for the preservative treatment of wood. The proposed forest products plant expansions called for a total expenditure of several hundred million dollars. In the aggregate, they would cause a substantial increase in the drain on the timber resources of the United States, although the installed plant capacity in many areas was already in excess of the growth rate of the local timber. Many of the proposed expansions of plant capacity, however, were based on increased utilization of mill or woods waste, or of hitherto little used tree species.

Others were in locations where an increase in timber growth was in prospect, because of fire protection, reforestation and improved forest management.

The role of forests in watershed protection was recognized in river basin planning during the year. The report of the president's Water Resources Policy commission, appointed to make a special study of the nation's water resources, declared that watershed management should be one of the principal objectives in the planning and development of river basin programs. It recommended action to bring economically controllable deterioration of forest and other watershed lands under control within a reasonable period of time. Federal interagency river basin committees began the preparation of comprehensive plans for the development, utilization and conservation of the water resources of the Arkansas-White-Red river basin and of the New England-New York region. Forestry agencies assisted the committees on matters pertaining to forest watersheds. In the Columbia and Missouri river basins the department of agriculture was engaged in the development of comprehensive agricultural and forestry programs to bring the land phases of river basin planning abreast of engineering programs already advanced for development of the streams.

The area of national forests and other conservation lands under administration of the U.S. forest service on June 30, 1951, was 181,034,882 ac. The properties included 151 national forests, 33 purchase units established pursuant to the Weeks law of 1911, 16 experimental areas, and 9 land utilization projects. During the fiscal year, 25,451 timber sales were made. The volume of timber cut from the national forests totalled 4,688,000,000 bd.ft.

This was the highest for any year since the national forests were established.

CHARRED TREES in the Crook National forest, Ariz., one of more than 250 areas destroyed by forest fires in the tinder-dry state during 1950–51

The largest timber sale of the year made by the forest service was in the Tongass National forest in Alaska. The forest service made final award to the Ketchikan Pulp and Paper company on its bid to purchase 1,500,000,000 cu.ft. of timber. The terms of the agreement called for construction in Alaska of a pulp mill of at least 300 tons daily capacity. The sale contract provided for handling of the timber on a sustained-yield cutting plan, safeguarding of salmon spawning streams important to Alaska's fishing industry, prevention of water pollution and preservation of significant scenic values. This timber sale culminated many years of effort by the forest service to bring about the establishment of a pulp and paper industry in Alaska, where large reserves of publicly owned timber, managed for sustained yield, could support such an industry permanently.

Canada.—Forest conservation week (May 19–26) was celebrated in 1951 on a Canada-wide basis for the first time. The federal government helped inaugurate the week by announcing measures of federal co-operation with provincial governments under the 1949 Canada Forestry act, to include: (1) payment of half the cost of a national forest inventory to assist sustained yield programs; (2) contributing 25% of the cost of provincial reforestation; (3) research into forest protection from fire.

To finance these measures parliament voted $1,025,000 for 1951–52 operations.

Increased importance of cordage—wood too small for lumber—and the sustained demand for pulp and paper products made the prairie provinces examine their forest resources in a new way. Blueprints were completed for a newsprint mill at Edmonton to use northern Alberta cordage, and plans for newsprint mills in northern Saskatchewan and northern Manitoba moved ahead. The Alberta department of agriculture encouraged the planting of 1,200,000 trees on Alberta farms, as part of its scheme to reach a 100,000,000 total by 1975. But the Alberta rate of planting fell considerably short of the rate achieved by the Saskatchewan department of agriculture, which assisted in the 1951 planting of 20,000,000 trees on farms and along highways.

With about 85% of its land still owned by the people, Ontario moved further toward integrated logging and sustained yield by the dropping of the Doyle rule of timber measurement and by the appointment of Howard Kennedy (chairman of the 1946 Ontario royal commission on forestry) as full-time consultant of the department of lands and forests. Other 1951 Ontario developments: pulpwood producers were required to save the larger logs for timber; timber dues for about 1,000 pulp and sawlog companies were sharply increased; a 1,000,000-ac. forest management unit was established near Sault Ste. Marie; $1,306,000 was spent on reforestation and related works; and more than 20,000,000 trees were shipped from provincial nurseries for planting. (C. Cy.)

Great Britain.—Publication in April of a summary report of the census of woodlands of 1947–49 showed the full extent of wartime fellings; 800,000 ac. needed complete restocking. Up to 1951 only about 82,000 ac. were replanted or restocked, about half by the Forestry commission and half by private owners. This great replanting task was being further increased by about 22,000 ac. of new fellings each year, and it was obvious that the rate of rehabilitation of Britain's woodlands continued to be much too slow.

The planting up of new ground, usually a simpler task than rehabilitation, made good progress, particularly in Scotland where forest villages were built to house those who would be employed on the new woodlands. Mechanization of forestry work increased both in nursery operations and in the extraction of timber, but planting continued to be done by hand, the British soil and climate being unsuitable for tractor-hauled planting machines. The thinning of large areas of young coniferous plantations absorbed even more labour than in previous years, and the 1950–51 financial returns showed that the disposal and use of the resulting small timber had become an important industry.

The scheme of dedication of privately-owned woodlands to permanent forest management, which had made slow progress in the previous four years, at last made better headway and about 250,000 ac. were in process of dedication during 1951. Silvicultural research included a study of the history and present condition of the Yorkshire moors in relation to forest potentialities. Research was continued by the Forestry commission on the effects of drainage of peatlands and in the planting of upland heaths.

Commonwealth.—The progress made during previous years in both aerial and ground surveys of the forests of Australia made possible the compilation of maps of the commercial and reserved forest areas throughout the country. These were completed and printed during 1951, and plans for a national inventory of forests were agreed upon at an interstate conference and work began in June. Australia celebrated its jubilee year with a great tree-planting drive. In Queensland large quantities of nursery transplants were issued free to schools, and at a cheap rate to farmers. The Australian public was becoming tree-conscious and this greatly helped in undertaking new measures to suppress bush fires, the Australian forester's greatest problem. New fire-fighting equipment included two-way radio installations to connect the fire lookout towers with the fire-fighting crews and helicopters to take men to fires in remote areas. The opening up of the Dorrigo area forests in New South Wales made Wauchope the state's largest source of timber.

In South Africa the long-disputed question of logging and sawmilling by the state was settled on lines that gave the private sawmiller a fair share in the out-turn from state plantations. Extensive new plantations of conifers were started in Swaziland by the Colonial Development corporation and this entailed important road and bridge construction to open up the country.

The West African colonies found a greatly increased demand for tropical timbers, and the lesser-known timbers had a readier market. Difficulties in the conversion and seasoning of some of these timbers showed the need for further research, and the prevention of damage by sap stain and wood borers was also a difficult problem. Qualified forestry staff was still very short.

The East African Agriculture and Forest Research organization centre in Kenya opened its new headquarters building in April. The heavy fellings of timber in Northern Rhodesia to meet the fuel and construction needs of the copper mines resulted in forming what was probably the largest single area of newly exploited forest in Africa. The Forest department was doing all that was possible to obtain a satisfactory regrowth on the cleared areas, and it was expected that more coal might be available to reduce the heavy demands for wood fuel. The Rondo plateau in Tanganyika and the Mlanje plateau in Nyasaland were both exploited for the first time on a commercial scale, and similar development on the slopes of Kilimanjaro, Tanganyika, was under consideration.

In British Guiana the exploitation of the forests, not long started by the Colonial Development corporation and a number of private firms, led to some public criticism of the methods employed to ensure future replacement. Reports of the good natural regeneration which followed the heavy fellings were, however, more reassuring.

Europe.—In France good progress was made in the regeneration of the large pine forests in the Landes which were destroyed by fire in 1945 and 1947. The burnt timber had been removed and the sowing of maritime pine was supplemented by planting protective strips of other species. In Switzerland the great avalanches in the early months of 1951 devastated about 2,000 ac. of forest and destroyed more than 100,000 cu.m. of standing timber. In spite of a shortage of timber, which kept sawmills from full production, the fellings in both communal and cantonal forests were not allowed to exceed the annual normal growth increment, and timber-using industries were maintained by larger imports.

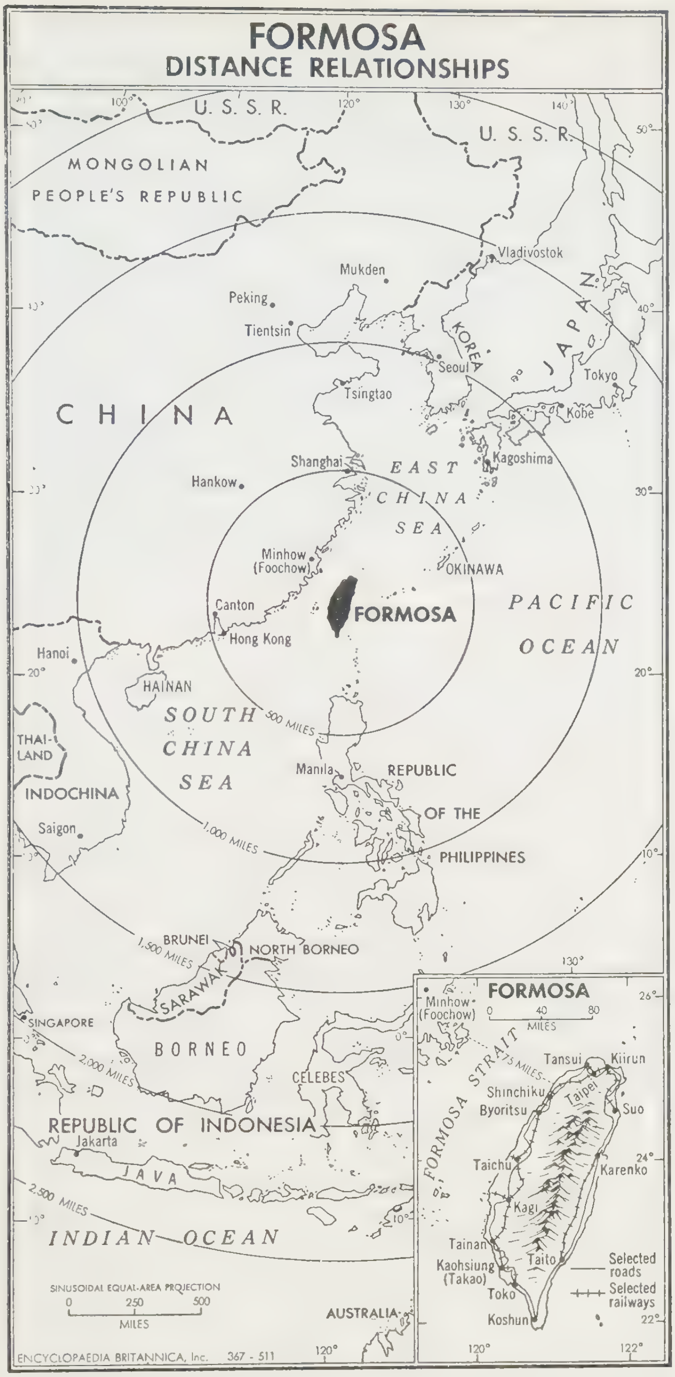
Formosa

(TAIWAN). Formosa is a large island in the western Pacific, separated from China to the west by the Straits of Formosa and from the Philippines to the south by the Bashi and Balintang channels. Area 13,906 sq.mi., including the Pescadores and 75 neighbouring islands. Population (est. 1951) 10,000,000, including Chinese nationalist troops and refugees from the mainland.

The capital is Taipei (or Taipeh, formerly Taihoku) (pop. 450,777 in May 1950); other municipalities are Kaohsiung (formerly Takao) (275,563); Tainan (229,452); Tai-chung (formerly Taichu) (207,009); and Chi-lung (or Keelung, formerly Kiirun) (145,240). The principal religions are Buddhism, Confucianism and Taoism. K. C. Wu, former mayor of Shanghai, was appointed governor in 1951.

History.—Formosa, the only territory remaining in the control of the Chinese nationalist government after the successful advances of the Chinese Communists, was converted into a nationalist military stronghold in 1949 and 1950. The capital of the nationalist government was moved to Taipei, Formosa's capital, on Dec. 8, 1949. To clarify the position of the U.S. government on the question of giving Formosa aid for its defense against the Chinese Communists, Pres. Harry S. Truman issued a statement on Jan. 5, 1950, which said that the United States would not interfere in any conflict between the Communist and nationalist governments and that the United States would not provide military aid to the nationalist forces on Formosa. As a result of the Communist invasion of the Republic of Korea, President Truman on June 27, 1950, ordered the United States



navy to prevent any Communist attack on Formosa since it would endanger the security of U.S. forces in the far east. At the same time the president called upon the Chinese nationalist government to cease all operations against the Communist-held mainland. He also stated the U.S. government's position that "the determination of the future status of Formosa must await the restoration of security in the Pacific, a peace settlement with Japan, or consideration by the United Nations." To assist the nationalist government in the defense of Formosa, the United States established the U.S. military assistance advisory group on May 1, 1951, under the command of Maj. Gen. William C. Chase.

Education.—In 1949 there were 1,199 primary schools with 900,648 students; 206 intermediate schools (middle, normal and vocational) with 114,616 students; and 6 higher schools (1 university and 5 colleges) with 5,905 students. The literacy rate in 1951 was estimated to be 60%.

Finance.—Upon taking over the administration of the island, the Chinese issued a special currency for Formosa, the Taiwan dollar, based on the former Japanese yen notes. In June 1949 a new currency, the new Taiwan dollar, was issued and the Taiwan dollar was eliminated. A dual exchange-rate system was instituted on April 10, 1951, providing for a foreign exchange certificate rate and an official exchange of 15.95 and 10.30 new Taiwan dollars respectively to U.S. $1.00. Certain transactions on government account, as well as certain specified private transactions, were accorded preferential treatment. On Sept. 30, 1951, the total note issue was about 450,000,000 new Taiwan dollars. Total revenues of the central, provincial and local governments in 1951 were estimated at 1,385,000,000 new Taiwan dollars and expenditures at 2,350,000,000. The deficit was made up from continued liquidation of the government's gold and other assets and from the sale of E.C.A.-financed goods. The E.C.A. program provided for the expenditure of U.S. $98,000,000 in the year ending June 30, 1951. About $80,000,000 was made available by the U.S. in the 1950–51 fiscal year for military assistance.

Trade.—Formosa's chief exports in 1950 were sugar, coal, salt, camphor, tea, rice and fruits. Chief imports were fertilizers, raw cotton and machinery. Japan and the U.S. were Formosa's important trading countries. In 1950 exports amounted to the equivalent of U.S. $72,400,000, of which sugar represented $54,000,000, while imports totalled U.S. $91,600,000, excluding E.C.A. aid. During the first six months of 1951, exports totalled U.S. $54,000,000 and imports totalled U.S. $44,300,000.

Transportation and Communications.—In 1946 there were 981 mi. of government railroads, more than 1,500 mi. of private railroads and 500 mi. of street railways; there were 10,000 mi. of roads of all types of which 2,200 mi. were main highways. In 1939 there were 220 telegraph offices, 195 post offices and 123 telephone exchanges.

Agriculture.—Agricultural production in the 1950–51 crop year in metric tons amounted to: rice (brown) 1,421,800; raw sugar 362,900; tea 6,700; pineapples 26,000; bananas 128,000; citrus fruits 28,800; tobacco 9,600; jute 5,000; sweet potatoes 1,420,000; peanuts 65,000; wheat 12,000; barley 2,000; and fish 64,500. The cultivated area in 1949 was estimated at 2,055,000 ac. or 23% of the total land area.

Industry.—Estimated industrial production in the year ending June 30, 1951, in metric tons amounted to: coal 1,414,000; cement 361,000; paper 19,000; chemical fertilizers 77,000; sulphur 4,500; salt 202,000; cotton yarn 2,155; and cotton cloth 22,000,000 m. About 4,000 troy ounces of gold were mined monthly. Coal reserves were estimated at about 400,000,000 tons.

Four-H Clubs.

Membership of boys and girls in the 4-H clubs of the United States reached 2,000,000, its highest figure, in 1951. Each boy or girl who joins a 4-H club undertakes a project, that is, some farming or homemaking activity to be carried out according to the latest scientific methods at the member's home under the guidance of the county extension agents and the voluntary local leaders trained by the agents. In 1951 the members completed an average of about one and one-half projects per member. The percentage of completed projects had increased slightly each year and reached a little more than 79% of all projects undertaken during 1951. Completion of a project includes doing the actual work involved in growing the crop or animal, in performing the homemaking task or whatever the project comprises, supplemented by keeping records of labour and cost, making an exhibit of the things produced in the project work and writing an account of what was done.

During the year more than 205,000 adults served as voluntary leaders, a considerable number of them former 4-H club members themselves. County extension agents held nearly 59,000 training meetings, helping to prepare these leaders for their work.

The age limits for 4-H club members are usually from 10 to 21 years with some variation in different states. As in previous years, the highest enrolment by age was in the 10- to 14-yr. groups. There was a slight increase in the percentage of members remaining in 4-H club work several years. Forty-eight per cent of the boys and girls who began their club work in 1947 had continued. Membership in the 4-H clubs is voluntary.

Interest of other countries in the methods followed in the conduct of 4-H club work in the United States continued in 1951. Co-operative extension workers and 4-H members in a number of states were visited by 25 representatives of rural youth organizations in eight countries who spent from three to six months studying methods in various parts of the United States. Countries represented were: Belgium, Burma, Denmark, France, Indonesia, Ireland, Norway and the United Kingdom. A number of co-operative extension service employees spent some time in 1951 in other countries, on their invitation, to discuss rural youth extension work.

The 4-H club work is a part of the educational program in agriculture and home economics of the co-operative extension service in which the U.S. department of agriculture, the state agricultural colleges and the county governments participate.

(M. L. W.)

France. Republic of western Europe bounded north by the English channel, northeast by Belgium and Luxembourg, east by Germany and Switzerland, southeast by Italy, south by the Mediterranean sea, southwest by Spain and west by the Atlantic ocean. Area: 213,010 sq.mi., including the Mediterranean island of Corsica (3,367 sq.mi.) and small Alpine territories ceded by Italy in 1947 (273 sq.mi.). Pop.: (1946 census) 40,502,513; (Dec. 1951 est.) 42,400,000. Language: French is almost universally spoken but there are also other regional languages or dialects: German in Alsace and part of Lorraine; Breton in Brittany; Flemish in the northern corner of the Nord *département;* Provençal in the Alpes Maritimes, Basses-Alpes, Var and Bouches-du-Rhône *départements;* Catalan in Roussillon (Pyrénées-Orientales); Basque south of Bayonne; and Italian in Corsica. Religion: mainly Roman Catholic with *c.* 1,000,000 Protestants and more than 230,000 Jews. Chief towns (pop., 1946 census): Paris (cap., 2,725,374); Marseilles (636,264); Lyons (460,748); Toulouse (264,411); Bordeaux (253,751); Nice (211,165); Nantes (200,265). President of the republic: Vincent Auriol (*q.v.*); premiers in 1951: René Pleven, Henri Queuille (from March 9 to July 10) and again René Pleven.

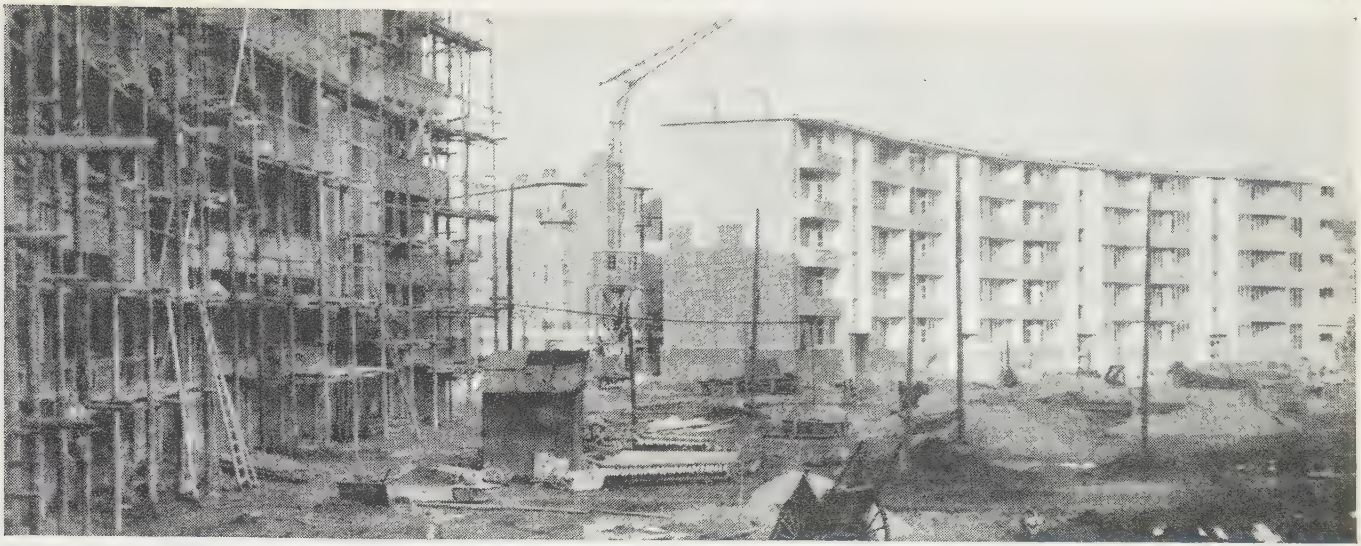
History.—During 1951 France had three governments. René Pleven (Union Démocratique et Socialiste de la Résistance), who had come into office on July 11, 1950, resigned on Feb. 28, 1951; Henri Queuille (Radical) was elected on March 9 and resigned on July 10 as soon as the new national assembly, elected on June 17, had re-elected Edouard Herriot as its president. After an exceptionally long interregnum René Pleven again became premier on Aug. 8 and brought his government before the assembly on Aug. 11. Robert Schuman (Mouvement Républicain Populaire) was foreign minister throughout the year. Queuille was minister of the interior both in the first Pleven cabinet and in his own; Charles Brune (Radical) became minister of the interior under Pleven. Maurice Petsche (Independent) was minister of finance in Pleven's first government and in Queuille's and was succeeded by René Mayer (Radical). Jules Moch (Socialist) was minister of national defense in the first Pleven government and in Queuille's and was succeeded by Georges Bidault (M.R.P.).

There was a certain similarity between the beginning and the end of the year. Pleven was at both times in office and his government was on both occasions coaxing the assembly into passing additional taxation. At either end of the year the police, mobilized in strength, prevented a Communist demonstration in the Avenue des Champs Elysées. But these similarities were deceptive. The victory won over Communist violence in 1950 was maintained in 1951. The only serious outbreak of strikes was at Easter time in both Paris municipal and national transport; there was no degeneration into disorder. The main theme of the year was the attempt to prevent the rise of prices in face of constant inflationary pressure. In this the French government was less successful than those of other member states of the Organization for European Economic Cooperation. A report on inflation issued by the council of that body (Nov. 1951) noted that price increases were 50% higher in France than in other western European countries. The weak position of the successive governments faced with very divided assemblies was no doubt partly responsible for this. René Mayer in November painted a grim picture to the assembly of a budget in prospective deficit, of a deficitary trade balance and a still graver deficit in dollars. But with the U.S. aid increased by $250,000,000 and an energetic attitude on the part of the government the situation looked somewhat more favourable at the beginning of December. The assembly was at least much further advanced with the next year's budget than had been its predecessor which had passed only the national defense section by the New Year and did not get the whole budget for 1951 into law till the night of May 24–25, when it was about to disperse forever. The 1952 budget was also presented in a new form, much clearer and more succinct.

Fall of the First Pleven Cabinet.—Pleven began the year with some successes which might ordinarily have been expected to foreshadow continuance in office. On Dec. 29, 1950, the assembly had approved national defense credits at the new total of 740,000,000,000 fr. by 416 votes to 180 and on Dec. 31 Pleven received four votes of confidence on his rearmament and taxation program. In Jan. 1951 Pleven announced his visit to Washington, D.C. This was at a time when French public opinion was particularly anxious about relations with the United States, being divided between fear of an extension of the war in the far east and that of diverging so far from the U.S. views on the question of German rearmament as to lose some of the benefits of U.S. assistance. The results of the visit to Washington (Jan. 29 and 30) were considered reassuring and more particularly a personal success for Pleven. In February the five-power conference to prepare a plan for a European army as proposed by Pleven in the previous year began to sit in Paris. But in internal politics Pleven was faced with the extremely difficult problem of preparing a new electoral law for elections to be held at the latest in October. This was described by Paul Reynaud, not without good reason, as a necessary measure of national defense. The proportional representation adopted for the elections of 1945 and maintained in 1946 was the system most favourable to a widely scattered party like the Communists and another election on this basis was likely to produce a parliament in which the parties of the republican coalition would be in a minority, as well as the Communists and the Gaullists—in which there would in fact be no majority at all and no possibility of forming a government.

That the country needed an electoral system less favourable to the Communists and more likely to produce a majority was common ground to all the parties of the majority, but there was no agreement as to what that system should be. The Radicals wished for the return of the prewar system; that is, single-member constituencies with a second ballot if no candidate obtained an absolute majority at the first, thus enabling voters to support a second preference if their preference had obviously no chance. The M.R.P. complained that this system too often ended in an anticlerical alliance. They wanted a system with only one ballot and if possible a form of proportional representation. This was comprehensible since the existing system was as favourable to them as to the Communists. Now the M.R.P. and the Communists had together a majority in the assembly. Pleven proposed on behalf of the government to accept as the government's policy any electoral reform scheme approved by the majority of the majority, but unfortunately, because of the division between the M.R.P. and the Radicals, the majority of the majority was only a minority of the assembly. Pleven resigned on Feb. 28 when it became evident that his plan for getting agreement on electoral reform was only splitting the coalition more and more deeply.

Second Queuille Cabinet.—After ten days' negotiation Queuille became premier on March 9 with a program to form a "100 days' government" and hold elections early in June. The two cabinets



HOUSING PROJECT in Suresnes, a suburb of Paris, Fr., designed to accommodate 155 families; it was one of several developments under way in the Paris area in 1951

were practically identical. The reason for holding elections at this date was first of all to wind up the assembly elected on Nov. 10, 1946, which was already so hagridden by the prospect of elections that it could do no useful work, and second to give the new assembly time to get into its stride early enough for the budget of 1952 to be voted by the end of 1951. It was not till May that a compromise bill finally became law. The battle had been so severe that the premier's health gave serious ground for anxiety. The new law provided for the maintenance of the multimember constituencies and voting for lists of candidates. In the Paris area pure proportional representation was maintained; elsewhere it was maintained only if neither one list of candidates, nor a group of lists, which had declared themselves to be in association (*apparentement*), gained an absolute majority. The list or group of associated lists which gained an absolute majority took all the seats, in the latter case dividing them proportionally among the jointly victorious lists. The point of this arrangement was that nowhere had the Communists allies with whom to enter into association, and that the Gaullists, as a result of the nature of their program, could do so only in a small number of departments. This left the advantage of "association" with its hope of an absolute majority (and therefore all the seats in a given constituency) to the parties of the republican majority. The disadvantage of the system was that the ordinary Frenchman expects to compromise in parliament rather than at the polls and was shocked to see anticlerical Socialists, Catholic M.R.P. and Independents (Conservatives) appealing for his vote under a system that was mutually advantageous, even though they maintained their identity and had separate lists. It also seemed odd that a party gaining only 20% of the votes, but forming part of a victorious "association," might win two or three seats whereas an isolated opponent winning 40% of votes might receive none.

Meanwhile the government was faced with one serious outbreak of strikes in the year, which began and ended with Paris passenger transport in March and April but which affected for a few days a large part of the French railways, gas and electricity and some other industries. In the course of these strikes and threats of strikes the national minimum wage was raised from 78 to 87 fr. an hour and the miners received an increase of about 12%.

After a last fortnight of embittered parliamentary business in which Queuille had to fight hard to keep vote-catching items off the agenda the budget in its final form nearly failed to be passed because of a dispute between the M.R.P. and the Socialists as to whether it should or should not include tax relief for Catholic schools (which received no public subsidy).

Meanwhile, after long negotiations and in face of much scepticism in France itself as well as elsewhere, an agreement had been reached on the basis of the Schuman plan with Belgium, the Netherlands, Luxembourg, Italy and Germany for the creation of a European steel and coal "community." In order that the Saar might be included and Germany also participate, the French signature was held to bind the Saar also and France agreed that the Saar should be represented on the assembly by 3 of its 18 seats. The treaty was signed on April 18. (*See* also EUROPEAN UNION.)

The election campaign was calm but the polling was about 78%. The electoral law played strongly in favour of the "associated" parties so that the Socialists and the combined lists of Radicals and U.D.S.R. both lost votes and gained seats. Opinion had changed so profoundly that the election results were compared less with the results of 1946 than with intervening expectations. Thus the M.R.P. was thought to have done well because it did not lose even more to the Gaullists as it would have done in 1947 or 1948, and the Gaullists to have done not so well because they did not sweep 30% of the voters into their net as in the municipal elections three years earlier.

Second Pleven Cabinet.—The elections gave 380 seats to members of the parties which had formed coalitions in the old assembly as against 224 to the two incompatible oppositions, Gaullist and Communist, but there were also 313 deputies from Gaullists to M.R.P. in favour of at last giving some financial assistance to Catholic schools, a proposal bitterly opposed by the Socialists and most of the Radicals as well as the Communists. The friends of the Catholic schools, already deeply committed, insisted that though theirs was not a majority that could govern, since on most other questions it was divided, it must be allowed to express itself in this one issue. The Socialists on the other hand insisted that any government they joined must prevent any breach of the lay school principle. The first consequence of this was that no government could be formed for 29 days after Queuille had resigned and that when Pleven was elected he had to form his government on a minority basis and stand by while the parties he wished to unite behind him tore themselves to pieces over a private member's bill giving about 12,000,000,000 fr. additional appropriation to the state schools in order also to give 4,000,000,000 fr. to the Catholic schools by a system so complicated (so that it might be arguably not a breach of the lay principle) that an administrative formula for putting it into effect had not yet been

"HARD TO KEEP ON THE ROAD," a cartoon by Alexander of the *Philadelphia Evening Bulletin* (Pa.), published in 1951

found in the first week of December.

When this had been voted on Sept. 10 the Socialists avenged themselves with an automatic sliding scale bill which they got through the assembly with the help of Communists and Gaullists. Pleven's cabinet felt too weak to oppose it at this stage and continued the practice of government by self-effacement, hoping to modify it when it returned from the council of the republic (upper house) in December. It was not till the end of September that the new assembly which had begun so inauspiciously, could be persuaded to adjourn.

These weary wrangles were not all France's history at this time. Gen. Alphonse Juin was at last released from his task as resident general of Morocco to assume the post of commander in chief of the North Atlantic treaty forces in the central sector of the European theatre. The government meanwhile had to fight price increases and adjust wages to them. For the second time in the year the basic minimum wage was raised, this time from 86 fr. an hour to 100 fr.—four points above the level required by a rigid interpretation of the index figure. War was opened on butchers, who tried closing their shops in protest against price fixing but finally yielded to the government's policy. The government was at least successful in avoiding strikes which had been expected in the autumn, but the franc was seriously weakened on the free market. In November the bank rate which had been raised from 2½% to 3% in October went up to 4%. Meanwhile the government had taken the unpopular measure of raising the price of both gasoline and tobacco by 20% to provide some immediate revenue for the treasury—a measure that would bring in about 70,000,000,000 fr. in a full year. In November the finance minister, René Mayer, told a depressed assembly that another 200,000,000,000 fr. taxes would be needed and that for lack of dollars the import program from the dollar zone would have to be cut from $850,000,000 to $500,000,000. This cut meant reduced import of coal, petroleum and a number of other raw materials. The whole foreign trade position had been reversed so that exports covered only 64% of imports in the third quarter of the year instead of 81% in the first. A program of austerity to meet the crisis did not gain the government votes. In November it had to be content with a majority of only 247 to 229 with the Socialists and half the Peasant party abstaining. The latter party split a few days later, 20 of its members adopting a new name and passing into the wake of the Gaullist French People's Rally. By the end of the month Mayer was able to announce that the United States had guaranteed an additional $250,000,000 in the U.S. budget year, $130,000,000 being probably available for Indochina but also at least $120,000,000 to increase the import program, especially of coal and petroleum. The favourable vote of the assembly foreign affairs commission on the ratification of the Schuman plan, by 26 votes to 18, gave hope of a consolidation of the government majority.

There was naturally a good deal of speculation in the second half of the year as to whether a centre-right majority could not be formed including the Gaullists and without the Socialists. Although Gen. Charles de Gaulle referred to other parties with greater cordiality than usual at the Nancy congress of his party in November, his claims to leadership, his ungracious references to the U.S. policy and his sharp opposition to both the Schuman and the Pleven plans were felt in most of the non-Gaullist right to make political co-operation still impossible.

On July 23 Henri Philippe Petain, the former marshal, died, still legally a prisoner but no longer in a fortress. Permission to live in an annex to a military hospital (in fact a private house so labelled) was given as soon as the elections were over. The treatment accorded Petain continued to cause bitter dissension, and even four months after his death a requiem mass in Notre Dame provoked a counterdemonstration. (*See* also FRENCH UNION; NORTH ATLANTIC TREATY ORGANIZATION.)

(D. R. GI.)

Education.—(1949–50) Elementary schools: state infant 3,726, pupils 446,947; private infant 188, pupils 23,116; state elementary 69,843, pupils 3,775,775; private elementary 11,028, pupils 886,948; state higher elementary, pupils 192,801; private higher elementary, pupils 58,916; total elementary 84,785, pupils 5,384,503. Secondary schools: boys' 588, pupils 225,000; girls' 395, pupils 187,000; total 983, pupils 412,000. Lower technical and vocational schools numbered more than 220 with more than 200,000 pupils in 1949. Higher education: state universities 17, students (July 31, 1950) 136,744, including 39,056 in the law faculties. There were 10 other state institutions of higher education, 6 free (Catholic) universities and more than 80 state and private institutions of higher technical education.

Finance.—Budget: (1950 est.) revenue 2,218,000,000,000 fr., expenditure 2,217,500,000,000 fr.; (1951 est.) revenue 2,104,000,000,000 fr., expenditure 2,648,000,000,000 fr.; (1952 est.) revenue 3,370,000,000,000 fr., expenditure 3,285,000,000,000 fr. National income (1950) 7,395,000,000,000 fr. Public debt (Sept. 30, 1949): internal 2,662,900,000,000 fr., external 1,181,900,000,000 fr. Currency circulation (Oct. 31, 1951) 1,828,000,000,000 fr. Deposit money (Oct. 31, 1951) 1,723,000,000,000 fr. Official exchange rate: 350 fr.=U.S. $1.

Foreign Trade.—Imports in 1951, including the Saar, were valued at 1,599,000,000,000 fr., compared with 1,072,728,000,000 fr. in 1950; exports in 1951 amounted to 1,480,000,000,000 fr. in 1951, compared with 1,072,644,000,000 fr. in 1950. Main sources of imports (1950): French union 26.2%, U.S. 12.3%, western Germany 6.6%, Australia and New Zealand 5%, Belgium-Luxembourg 4.6%, U.K. 3.7%. Main destinations of exports: French union 36.2%, U.K. 9.2%, western Germany 7.9%, Belgium-Luxembourg 6.4%, Switzerland 5.1%, U.S. 4%.

Transport and Communications.—Railways (1950): 41,272 km. including 4,026 kilometres electrified. Railway traffic (monthly average, 1950): passenger-kilometres 2,200,000,000; goods, ton-kilometres 3,244,000,000; goods transported 12,700,000 metric tons. Roads (1950): 715,696 km. including 80,231 km. of first-class national roads. Motor vehicles licensed (Jan. 1950): 2,295,000 including 572,800 commercial. Navigable inland waterways (1948): 8,488 km.; cargo (monthly average, 1950): loaded 2,986,000 metric tons, unloaded 2,865,000 metric tons. Shipping (Jan. 1951): merchant vessels 733, gross tonnage 3,080,000. Cargo in external trade (monthly average, 1950): loaded 1,562,000 metric tons, unloaded 2,586,000 metric tons. Civil aviation traffic, Air France only (monthly average, 1950): passenger-kilometres 93,200,000; cargo, ton-kilometres 3,900,000. Telephones (Jan. 1950): 2,318,673 including 1,411,678 (60.9%) automatic. Radio receiving set licences (1947): 5,728,000.

Agriculture.—Production (metric tons, 1951): wheat 7,028,000; rye 504,000; barley 1,667,000; oats 3,602,000; maize 612,000; potatoes 12,093,000. Livestock (Sept. 1950): cattle 15,432,000; pigs 6,760,000; sheep 7,480,000; goats 1,288,000; horses 2,414,000. Foodstuff production (metric tons): meat (1949) 1,805,000; butter (1950) 225,000; cheese (1948) 190,000; sugar, raw value (1950) 1,434,000; milk (1949) 125,000,000 hl. France is the world's largest producer and consumer of wine. Wine production in 1951 was 47,329,000 hl., compared with 65,132,000 hl. in 1950. In 1951, 11,000,000 hl. of wine were imported; in

RE-ENACTMENT of the first hydrogen balloon ascent, staged in Paris in July 1951, during celebrations marking the 2,000th anniversary of the French capital

1950 982,000 hl. were exported.

Industry and Production.—Industrial production (metric tons, est. 1951): coal 53,600,000; iron ore (33% metal content) 33,600,000; pig iron 8,640,000; steel ingots and castings 9,720,000; cement 8,100,000; woven cotton fabrics 171,000; cotton yarn 260,000; wool yarn 132,000; rayon filament yarn 56,000; rayon staple fibre 50,000; gas 2,400,000,000 cu.m.; electricity 34,000,000,000 kw.hr. There were 312,000 motorcars and 132,000 trucks produced. In 1950 the number of dwelling units built amounted to 68,050, including 30,120 repaired. The mid-1951 index of employment in manufacturing stood at 117, and the mid-1951 index of industrial production was 131 (1937=100).

FILMS OF 1951.—*Ageless Paris* (Films of the Nations Distributors, Inc.); *Paris 1900* (Brandon Films, Inc.). (K. SM.)

Franco, Francisco (1892–), Spanish army officer and statesman, was born at El Ferrol, Galicia, Dec. 4. He graduated from the military academy of Toledo in 1910. (For his early career, see *Encyclopædia Britannica.*) On the outbreak of civil war in July 1936 he became leader of the rebels. After a bitter three-year struggle, he emerged as the *caudillo y generalísimo* of Spain. During World War II, although his sympathies were pro-German and anti-soviet, he remained neutral. On June 7, 1947, the *cortes* passed unanimously the Succession act making Spain a nominal kingdom, confirming Franco in office as chief of the state for life and according him the right to nominate his successor.

In a Columbia Broadcasting system interview on Dec. 31, 1950, Franco asked that Spain be included in the west's plans for containing communism, and in March he told Stanton Griffis, the U.S. ambassador, that Spain was ready to send troops to serve under Gen. Dwight D. Eisenhower, supreme commander of the Allied powers in Europe. Despite opposition from Great Britain and France to Spain's inclusion in the North Atlantic Treaty organization, these approaches led in July 1951 to the exploratory mission to Franco of Adm. Forrest P. Sherman, U.S. chief of naval operations.

Franco had to deal in the spring of 1951 with strikes and riots in various parts of Spain caused by seasonal unemployment and rising living costs; penalties imposed on the strikers were remitted by him in October. (R. JAN.)

French Equatorial Africa. This federation of four colonies, described since 1946 as overseas territories of the French union, is situated in central Africa and is bounded west by the Atlantic ocean, Nigeria and French West Africa, north by Libya, east by the Anglo-Egyptian Sudan and southeast by the Belgian Congo. The southeastern part of the former German colony of Kamerun (Cameroun), under French trusteeship, is administered with French Equatorial Africa. Areas and populations (1946 census) are: Gabon, area 103,089 sq.mi., pop. 422,904; Middle Congo, area 132,046 sq.mi., pop. 631,151; Ubangi-Shari, area 238,224 sq.mi., pop. 1,065,390; Chad, area 495,752 sq.mi., pop. 2,011,494. Total area 969,111 sq.mi., pop. 4,130,939. Cameroun has an area of 170,230 sq.mi. and a pop. of 2,819,000. In 1950 the total population was estimated at 4,346,000, including 17,440 Europeans (5,825 French); the population of Cameroun was estimated at 3,011,000 including 7,536 French. The natives are mainly Bantu, but the northern savannah districts are peopled by semi-Hamitic semi-Negroid pastoralists. Religion: animism; Moslem 46%; *c.* 280,000 Christians in the Gabon and the Middle Congo. Chief towns: Brazzaville, capital of A.E.F. (Afrique Equatoriale Française) (pop., mid-1949 est., 83,579, including 4,353 Europeans); Bangui (1948 est., 41,000); Fort Lamy (18,300); Libreville (12,600); Yaoundé, capital of Cameroun (1946 est., 50,000). High commissioner in French Equatorial Africa: Governor General Paul Chauvet. Governors: Gabon, Pierre Pellieu; Middle Congo, Hippolyte Le Layec; Ubangi-Shari, Louis Grimald; Chad, Ignace Colombani. High commissioner in Cameroun: André Soucadaux.

History.—The elections of June 17, 1951, brought no important changes in representation of French Equatorial Africa in the French national assembly, except that Chad sent three Gaullist members. The double-college system was kept, with eight deputies for the natives and three for the Europeans.

The financial situation of the territories was thought so precarious as to require a limitation of expenditure. The balance of trade showed a large deficit. Gold production tended to fall because of low prices throughout the world. Cotton, constituting 40% of exports, suffered from the instability of prices; the yield was low, and cultivation impoverished the soil. Output of diamonds, sisal, coffee and tobacco increased. Fisheries provided 1,402 whales in 1950. In Gabon 221,000 metric tons of *okoumé* (light mahogany) came from the forests; but there was a shortage of labour in this territory, and the introduction of workers from Nigeria was still far from proving a success. The road-building program called for revision, as being too ambitious for so vast and so thinly populated a country (in 1950 the density was only 4.5 per square mile). Meat from Chad for Middle Congo had to be transported by air (450 metric tons in 1951).

Cameroun was smaller and development better concentrated—around the ports—so that the territory seemed markedly more prosperous. It was decided to link the western and central regions by a 1,800-m. bridge across the Vouri. At the same time work was begun on a heavy-traffic road to link Douala and Yaoundé via Edéa. The two railways were to be modernized. The Edéa dam on the Sanaga progressed. The port of Douala handled 500,000 metric tons in 1950; it was hoped, with the new quays under construction, to provide seven berths for ships and to handle 1,000,000 metric tons of merchandise.

Education.—Schools (1950) *French Equatorial Africa:* pupils, primary 67,000, secondary 1,200, technical 2,350, bursaries in France 181; *Cameroun:* pupils, primary 128,000, secondary 1,060, bursaries in France 142.

Finance.—*French Equatorial Africa:* budget (1952 est.), balanced at 8,700,000,000 fr. C.F.A. *Cameroun:* budget (1951 est.), balanced at 4,682,000,000 fr. C.F.A. Franc C.F.A. (Colonies Françaises d'Afrique) = metropolitan fr.2. Exchange rate (1951): 350 metropolitan francs = U.S. $1.

Foreign Trade.—(1950) *French Equatorial Africa:* imports 13,393,000,000 fr. C.F.A., including 9,080,000,000 fr. from the French union; exports 7,277,000,000 fr. C.F.A., including 5,340,000,000 fr. to the French union. Principal exports: cotton 2,755,000,000 fr.; timber 1,974,000,000 fr.; coffee 574,000,000 fr.; gold 346,000,000 fr.; diamonds 223,000,000 fr.; almonds and palm oil 320,000,000 fr.; cocoa 110,000,000 fr. *Cameroun:* imports 10,564,000,000 fr. C.F.A., including 8,950,000,000 fr. from the French union; exports 8,190,000,000 fr. C.F.A., including 4,969,000,000 fr. to the French union. Principal exports: cocoa 3,977,000,000 fr.; coffee 1,082,000,000 fr.; bananas 1,022,000,000 fr.; almonds and palm oil 986,000,000 fr.; timber 410,000,000 fr.; rubber 126,000,000 fr.

Transport and Communications.—(1950) *French Equatorial Africa:* railways 512 km., roads 9,000, tracks 29,000; motor vehicles 10,300; ships entered (all ports) 700; aircraft landed 1,026. *Cameroun:* railways 505 km., roads 8,000; motor vehicles 7,000; ships entered 683; aircraft landed 1,072.

See *Encyclopédie Maritime et Coloniale: Afrique Equatoriale Française* (Paris, 1951). (Hu. De.)

French Guiana.

A former French colony on the northeast coast of South America, the status of which was changed in 1946 to that of an overseas *département,* French Guiana has an area, including the territory of Inini (30,301 sq.mi.), of 34,740 sq.mi. Pop. (1946 census) 28,506, including Inini (4,993); (1950 est.) 26,000. The coastal lowland population is Negro or mixed; Inini, aboriginal Indian; Europeans are *c.* 5%. Religion: mainly Roman Catholic. Capital and chief port: Cayenne (pop., 1948 est., 10,961). Prefect: Robert Vignon.

History.—The *département* was divided into two *arrondissements:* that of Cayenne, comprising all the coastal communes; and that of Inini, covering the whole forest of the hinterland, which is almost uninhabited and requires special organization. In the 1951 elections to the national assembly in Paris, the deputy going out, a Socialist, was replaced by a Gaullist. Three Gaullists, three Radicals and one Independent were elected to the local general council. Efforts were made by France toward lifting the *département* out of its stagnation. An Institute of Tropical America was set up at Cayenne. Prospecting for gold and bauxite went on. A wharf was to be constructed. Displaced persons were established at Saint Laurent du Maroni, as well as an ethnographic and medical service responsible for the Indians. Several missions reached the Tumuc Humac region.

Education.—One school per commune; a college at Cayenne.

Finance.—The currency is the metropolitan franc. The exchange rate in 1951 was 350 metropolitan francs per U.S. $1.

Foreign Trade.—(1950): Imports 1,393,000,000 fr., including 1,070,000,000 fr. from the French union; exports 210,000,000 fr. (including gold 160,000,000 fr., timber 24,000,000 fr.).

Transport and Communications.—Roads 36 km.; motor vehicles 250. Movement is almost all by sea and by river. (Hu. De.)

French Guinea: *see* French West Africa.

French India.

This group of four settlements in India has a total area of 193 sq.mi. Pop. (1948 est.): 317,300. The Bengali-speaking Chandernagore (4 sq.mi.; pop. 44,800) was transferred to India on May 2, 1950. The four Tamil-speaking southern settlements are: Pondicherry, area 112 sq.mi., pop. (1948 est.) 222,600; Karikal, area 52 sq.mi., pop. 70,500; Mahé, area 23 sq.mi., pop. 18,300; Yanaon, area 6 sq.mi., pop. 5,900. Chief town and seat of administration, Pondicherry (pop., 1948 est., 22,572). Commissioner: André Ménard.

History.—The treaty yielding Chandernagore to India was ratified on Feb. 2, 1951. Neutral observers were sent by the International Court of Justice to inspect the conditions under which the future referendum would be held in the four settlements. They reported favourably on the French administration.

In the elections of June 17, 1951, a member who had stood for reunion with India was replaced as deputy to the French national assembly by a supporter of the policy of remaining within the French union.

Thanks to imports of rice from Indochina, French India did not suffer from food shortages as independent India did. Its balance of trade showed a surplus. The textile industry provided exports. A new electric generating station, the construction of which was subsidized by France, was opened at Pondicherry.

Education.—Schools (1950): pupils, primary 15,892; secondary 894; higher 79; bursaries in France 21.

Finance.—Budget (1951 est.) balanced at Rs. 9,000,000. Monetary unit: rupee = 73.50 metropolitan francs, or 21 cents U.S. (Hu. De.)

French Indochina: *see* Indochina.

French Literature.

The gradual drift away from the Sartrian school of "engaged" or committed literature, which began to be noticeable just before 1950, found the French literary bark of 1951 headed for the open sea, well outside the comfortable waters of dogma and schools, with no clearly defined currents in sight.

In the domain of the novel, an occasional breaker, such as Julien Gracq's political allegory *Le Rivage des syrtes* (Prix Goncourt), or Pieyre André de Mandriargue's collection of *nouvelles, Soleil des loups* (Prix des Critiques), seemed to augur a resurgence of surrealism; and the excited rediscovery of Victor Hugo by a number of younger critics was accompanied by such echoes of 19th-century romanticism as Anne de Tourville's *Jabadao* (Prix Fémina) or Marcel Schneider's *La Première île.* Quite unexpectedly (his own translation of an earlier work, *Murphy,* having attracted little attention when it had appeared a few years before), the Irishman Samuel Beckett, long a French resident, leaving well behind him the relatively indulgent "blackness" of his immediate progenitors James Joyce, Franz Kafka and Jean-Paul Sartre, made a considerable stir with two books written in French, *Malloy* and *Malone meurt.* By means of a brilliantly directed technique of assertion and retraction, these books expressed human personality in terms of semiconscious and frequently cloacal babble. There was little indication, however, despite the high praise accorded in certain critical circles to both works, that they would attract disciples among native French writers. Robert Margerit's *Le Dieu nu* (Prix Théophraste Renaudot) offered a purely psychological analysis in the 18th-century tradition. Louise de Vilmorin's two popular little tales, *Julietta* and *Madame de,* the latter high on several prize lists, were finely executed vignettes of the contemporary Parisian *mondaine.*

Even the most exacting critics conceded that there was evidence of greater attention to style, increased variety of theme and treatment and, above all, a more abundant output of well-written novels than at any time since 1945. Among more than 30 that received favourable critical attention may be mentioned: *Cherchant qui dévorer,* by Luc Estang; *Rage blanche,* the second volume of Jean Hougron's Indochinese trilogy; *Les Fruits du Congo,* a story of childhood fantasy by Alexandre Vialatte, the French translator of Franz Kafka; and *La Clé,* by Yassu Gauclère (Prix Sainte-Beuve). The year 1951 also saw the appearance of new novels by a number of representative older writers—Claude Farrère, Pierre Benoit, André Maurois, François Mauriac, Jules Romains, Georges Duhamel, Paul Morand

and others—also the publication of the complete works of Colette, Valery Larbaud, François Mauriac, André Maurois, Jacques Chardonne and Jean Genêt. A review entitled *Roman,* entirely devoted to the problems of the novel, was being edited from Vence. In other words, *roman pas mort,* despite the evident passing of the so-called *roman noir.*

For the poets, despite the unusual event of a poets' congress (held in Belgium under the auspices of the *Journal des poètes,* with Jean Cassou presiding), the year was more one of probing recapitulation than inspiration. In addition to a collection of his own prewar poems, Paul Eluard published an original *Prèmiere anthologie vivante de la poésie du passé;* Jules Supervielle in *Naissances* and René Char in *A une Sérénité crispée* sought to penetrate the secrets of poetic creation; finally, Pierre Reverdy and Pierre MacOrlan were enshrined in volumes 25 and 26 of Pierre Seghers' excellent series *Poètes d'aujourd' hui.* Under the title *Poètes contemporains,* Léon-Gabriel Gros published a volume of essays on the work of about 15 poets who may be said to have marked the second quarter of the century. Among works by the much younger poets, *Air,* by André du Bouchet, and *Langue morte,* by Alain Bosquet, revealed authentic talents.

In the French theatre 1951 seemed likely to be remembered as the year of Jean-Paul Sartre's *Diable et le Bon Dieu* and Jean Cocteau's *Bacchus,* both set in the Germany of the Reformation and both presenting, in dramatic form, the essence of these authors' philosophy. This was also true of Georges Schéhadé's tenderly poetic *Monsieur Bob'le,* with the difference that the latter play was set against a purely imaginary background. *Colombe,* by Jean Anouilh, and *Lorsque l'enfant paraît,* by André Roussin, were among the better new plays of the year.

The list of essays was not so long as in preceding years. It contained, however, a number of important titles: *Petite préface à toute critique,* by Jean Paulhan; *Les Voix du silence,* by André Malraux (a greatly revised version of his *Musée imaginaire*); Albert Camus' much discussed *L'Homme révolté,* and a posthumous study by Simone Weil, *La Condition ouvrière.* Among the philosophers, Jean Wahl published a volume of his Sorbonne lectures on *La Pensée de l'existence;* Gaston Bachelard discussed *L'Activité rationaliste de la physique contemporaine;* Louis Lavelle discussed sainthood in a volume entitled *Quatre saints,* and the German-born Eric Weil brought out an authoritative volume, *Hegel et l'état,* in addition to his doctor's thesis entitled *Logique de la philosophie.* Among the numerous works in the related fields of aesthetics, psychology, sociology, ethnology, history and the sciences, the following of immediate, topical interest were much discussed: *Visa pour Moscou,* by Michel Gordey; *Réflexions politiques* (1932–1952), by Hubert Beuve-Méry, editor of *Le Monde; La Guerre en question,* by Jules Monnerot; *Les Guerres en chaine,* by Ramond Aron; *Où va le peuple américain?* (vol. II) by Daniel Guérin; and *La Chine,* by Jean-Jacques Brieux.

The death of André Gide was marked by a special memorial issue of the former *Nouvelle revue française* (of which he was a founder), also by several other volumes of appreciation and reminiscences. His intimates could only deplore the fact that an unauthorized commercial distribution of the fragment of his *Journal* that touched upon his marriage (under the title *Nunc manet in te*), should have surrounded his death with much the same atmosphere of scandal and dissension that had so frequently surrounded him in life.

More than a dozen well-edited literary reviews and weekly newspapers continued to promote discussion and criticism. (*See* also LITERARY PRIZES.)

French Overseas Territories: *see* FRENCH UNION.

French Pacific Islands: *see* PACIFIC ISLANDS, FRENCH.

French Union.

With the establishment, by the constitution of 1946, of the French union, in which are comprised both the mother country and the former empire, the old colonial terminology was abolished and for the colonies were substituted four categories of overseas regions. The older, completely assimilated colonies claimed recognition as French *départements* administered as in the mother country; the others became overseas territories (*territoires d'outre-mer*) which henceforward would elect representatives to parliament and would have their own local assemblies possessed of wide powers; the trust territories, to be known in future as *territoires associés,* were similar in structure to the overseas territories and had the same electoral privileges; lastly, there were the former protectorates, now styled *états associés,* which could belong to the union only by an act of voluntary accession. Total area of the overseas territories of the French union: approximately 4,587,890 sq.mi.; total population (1948 est.): 78,700,000. Certain essential information on the component parts of the French union is given in the table. (*See* also separate articles.)

History.—The constitutional organs that cover at the same time the French republic and the associated states were by 1951 set up. On Nov. 29 the high council met for the first time in Paris, with Viêt-Nam, Cambodia and Laos taking part. The assembly of the union continued to demand real powers instead of the purely consultative function that it in fact had. Albert Sarraut, a former prime minister and colonial minister, became president of this assembly in the place of Jacques Fourcade, who had been elected deputy.

Tunisia and Morocco still refused to take part in these institutions, which they thought prejudicial to their independence. In Tunisia the Neo-Destour party joined the government in order to obtain reforms tending toward autonomy. In Morocco the intransigence of the Istiqlal led to conflict with the resident general, and the sultan had to disown the nationalists.

On May 24, the French national assembly (for France and the overseas *départements* and territories) voted an electoral law giving the territories the right to 43 deputies (1 for every 800,000 inhabitants) and enlarging the number of electors by admitting heads of families who pay taxes and mothers of two children. Including Algeria and the *départements,* overseas deputies in 1951 numbered 80. The elections of June 17 resulted in a strengthening of the parties of the centre and the right, as in France. The Algerian elections were contested by the nationalist parties. In French West Africa the Rassemblement Démocratique Africain lost seats and renounced its Communist affiliation.

Administration was still divided between the ministry of the interior (Algeria and the overseas *départements*), the ministry of foreign affairs (Tunisia and Morocco), the ministry for France overseas (the territories) and the ministry for associated states (Viêt-Nam, Cambodia and Laos).

*1950 est. if not otherwise stated.
†1948 est. ‡1946 census.

Considerable sums of money were assigned to industrialization and development in overseas countries, whether under the Monnet plan in the case of North Africa or by the Investment Fund for Economic and Social Development (F.I.D.E.S. or Fond d'Investissement pour le Développement Économique et Social). The latter, which was devoted to the territories, had by 1951 invested 250,000,000,000 fr., of which a large proportion was derived from France and the remainder from the territories themselves or from the European Recovery program. Two-thirds of this money went to installations: harbours (notably that at Abidjan, French West Africa, inaugurated during the year), roads, railways, electricity, town planning. A new tendency toward limiting credits for roads so as to be able to increase production was remarked. Expenditure on social services (education and health) accounted for 10% of the investments.

See H. Deschamps, *L'Union Française: histoire, institutions, réalités* (Paris, 1951–52); Ministère de la France d'Outremer, *L'Equipment des territories français d'outremer* (Paris, 1951). (Hu. De.)

French West Africa. This group of eight colonies, described since 1946 as overseas territories of the French union, is situated in western Africa and is bounded west and south by the Atlantic ocean, north by the Spanish Sahara, the southern territories of Algeria and the Fezzan, and east by Chad and Nigeria. The eastern part of the former German colony of Togo, under French trusteeship, is administered with the A.O.F. (Afrique Occidentale Française). Areas and populations are:

	Area (sq. mi.)	Population (1936 census)	(1948 est.)
Mauritania	364,092	383,000	524,000
Senegal	81,081	1,791,000	1,994,000
Sudan	461,389	3,569,000	3,137,000
Upper Volta*	121,892	—	3,044,000
Niger	493,822	1,747,000	2,041,000
Ivory Coast	129,807	3,850,000	2,031,000
French Guinea	108,455	2,011,000	2,130,000
Dahomey	44,749	1,351,000	1,474,000
Total	1,805,287	14,702,000	16,375,000
Togoland	21,235	781,000	953,000

*Territory of Upper Volta was formed on Jan. 4, 1947, from parts of Sudan, Ivory Coast and Niger.

The population is mainly Negro, but in the savannah lands there is some Arab and Berber admixture. Pop.: European (1948), 51,760 (including about 40,000 French) in the A.O.F., 841 in Togoland. Religion: animists estimated at 53.4%, Moslems 44.2% and Christians 2.4%. Chief towns (pop., 1948 est. if not otherwise stated): Dakar, capital of the A.O.F. (1951 est., 330,000); Saint Louis (62,900); Bamako (70,492); Conakry (38,000); Abidjan (36,000); Porto Novo (31,000); Lomé, capital of Togoland (30,100). High commissioner in the A.O.F.: Gov. Gen. Bernard Cornut-Gentile. Governors: Mauritania, Marie Rogué; Senegal, Camille Bailly; Sudan, Edmond Louveau; Upper Volta, Albert Mouragues; Niger, Jean Toby; Ivory Coast, Lucien Gay; French Guinea, Paul Siriex; Dahomey, Charles Bonfils; Togoland, Yves Digo.

History.—The elections on June 17, 1951, to the French national assembly in Paris were notable for an advance made by the moderate elements. Out of 21 seats, the extremists of the Rassemblement Démocratique Africain (which shortly before had renounced its Communist affiliation) got only 2; their leader, Félix Houphouet-Boigny, was re-elected in the Ivory Coast. Lamine Gueye, a Socialist deputy and the president of the French West African grand council, was thoroughly beaten in Senegal. All the deputies were natives.

In Togoland the Parti Togolais du Progrès was clearly ahead of the Comité de l'Union Togolaise, which supported Ewé autonomy. In the permanent consultative commission for Togo affairs all the delegates from French Togoland opposed the setting up of an Ewé state and the unification of the two Togolands.

On his being elected deputy, High Commissioner Paul Béchard was succeeded by Cornut-Gentile.

On Feb. 5 the harbour of Abidjan, capital of the Ivory Coast, was inaugurated. Abidjan is the terminus of the Ivory Coast and Upper Volta railway and is also the centre of the coastal lagoons which, on completion of two canals, would connect 300 km. of coast.

Town planning operations (avenues, squares, skyscrapers and water supply) changed the appearance of Dakar and prepared for the extension of the Grand Dakar. In 1951 there were 330,000 inhabitants (*cf.* 131,000 in 1939), including 30,000 Europeans. Reckoned by the number of ships entering, Dakar was the third port of the French union, after Marseilles and Le Havre.

New mineral deposits were found: copper at Akjoujt (Mauritania); high-grade iron at Fort Gouraud (Mauritanian Sahara); and tin in the Air (a Saharan region of the Niger).

Education.—*French West Africa:* Schools (1950): state, primary 827, pupils 99,000; secondary 66, pupils 6,610; technical, pupils 1,200; private 237, pupils 33,000; higher Institut des Hautes Etudes de Dakar; bursaries in France 900. *Togo:* pupils elementary 37,000, secondary 700, technical 200.

Finance.—Budget (1951 est.): *French West Africa:* balanced at 27,234,000,000 fr. C.F.A. *Togo:* balanced at 650,000,000 fr. C.F.A. Franc C.F.A. (Colonies Françaises d'Afrique) = metropolitan Fr. 2. In 1951, 350 metropolitan francs = U.S. $1.00.

Foreign Trade.—*French West Africa:* (1950): imports 42,400,000,000 fr. C.F.A., including 31,930,000,000 fr., from the French union; exports 31,000,000,000 fr. C.F.A., including 24,540,000,000 fr. to the French union. Principal exports: groundnuts, oil cake and groundnut oil 11,550,000,000 fr.; palm kernels and palm oil 3,000,000,000 fr.; coffee 7,000,000,000 fr.; cocoa 4,600,000,000 fr.; bananas 1,000,000,000 fr.; timber 650,000,000 fr. *Togo:* imports 1,600,000,000 fr. C.F.A., including 1,070,000,000 fr. from the French Union; exports 1,500,000,000 fr. C.F.A., including 860,000,000 fr. to the French union.

Transport and Communications.—*French West Africa and Togo* (1950): Railways 4,370 km.; roads 79,000 km., including only 25,000 km. passable to vehicles in all weathers. Ships entered (all ports) 3,944. (HU. DE.)

Frequency Modulation: *see* FEDERAL COMMUNICATIONS COMMISSION; RADIO.

Friends, Religious Society of.

In 1951 there were almost 180,000 Friends (Quakers) of whom considerably more than half were in the United States. According to the American Friends Fellowship council report of 1951, 100 new meetings had been established in the United States in the previous 14 years. Organized into Yearly Meetings (53 throughout the world) Friends represented somewhat varying views, but all shared a belief in "the inner Divine Light" which is in every man. During 1951 there were increasing evidences of a feeling of unity among all Friends, shown particularly by the enthusiastic preparation for a world conference of Friends to be held in Oxford, Eng., in 1952.

There were in 1951 three outstanding events that showed the Quaker concern for international peace.

In May there was published an official report of a mission of four U.S. Quakers to Yugoslavia which had taken place in Sept. and Oct. 1950. Sent by the American Friends Service committee, this delegation spent five weeks in Yugoslavia. It was an informal visit to observe social and economic conditions, to talk with government officials and ordinary citizens and to make a genuine, friendly contact between Yugoslavia and the west.

Also early in May the American Friends Service committee published a 64-pp. pamphlet, *Steps to Peace; A Quaker View of U.S. Foreign Policy,* prepared by a working committee of 15. There were 95,000 copies printed and distributed. The pamphlet offered a critical analysis of U.S. foreign policy and recommended methods other than armaments and force to resolve the east-west conflict. It specifically urged that more persistent attempts be made toward negotiating differences both within and without the United Nations; that more effort be devoted to a program of universal disarmament; and that a program of mutual economic aid under U.N. direction be developed.

In July a group of members of London Yearly Meeting visited the U.S.S.R. Responding to an invitation from the Soviet Peace committee, these Friends spent two weeks visiting Moscow, Kiev and Leningrad. On July 26 they had a three-hour interview with Jacob Malik, soviet deputy foreign minister, and presented him with a seven-point plan for peace containing suggestions for reconciliation between the Soviet Union and western governments.

During the year the American Friends Service committee received two notable gifts to aid its program, one from a private and one from a governmental agency. The Ford foundation gave the committee two substantial grants for use in its world-wide program of education and reconciliation. The Technical Cooperation administration of the U.S. department of state contributed $150,000 to help finance a "pilot project" in social and technical assistance in the state of Orissa, Ind. The Service committee would work there with the local government in carrying out a program for improved agricultural methods, public health and sanitation and village industry. (*See* also CHURCH MEMBERSHIP.) (LY. W. R.)

Fruit.

The 1951 U.S. deciduous fruit crop was 10% more than that of 1950 and 6% in excess of the 1940–49 average. Grapes and sour cherries set new production records; only peaches, prunes, sweet cherries and apricots were below average. Some commercial apples, clingstone peaches and plums were abandoned, either because of small size, market agreements or high harvest costs. A 1951–52 citrus crop of about 7,300,000 tons was indicated, a decrease in grapefruit and an increase in oranges giving a total 3% less than in 1950–51.

Canned fruit available to civilians was estimated at 6% less than in 1950, but frozen and dried fruit and canned juices, of which there was a good carry-over, were abundant. Prices, particularly for most fresh and canned fruits, tended to be higher than in 1950 by 5% or more. Exports of fruit from the U.S. in 1950–51 totalled 1,465,000,000 lb., about half to Canada and more than one-fourth to European Recovery program participating countries.

Apples.—The United States 1951 commercial apple crop of 112,935,000 bu. was 3% above average but small compared with 123,126,000 bu. in 1950 and 133,742,000 bu. in 1949. About 7% of the crop, or 8,399,000 bu., were abandoned because of small size and low prices in relation to harvesting costs.

The Delicious variety, with 16% of the total as compared with 23% in 1950, nevertheless remained the leader; other leading varieties, in order of production, were: McIntosh, Winesap, Jonathan, Rome Beauty and Stayman.

World apple production for 1951–52 was estimated at 575,000,000 bu., 15% down compared with 675,000,000 bu. in the preceding year, but above the prewar average of 498,000,000 bu. The European crop was estimated at 390,000,000 bu., compared with 480,000,000 bu. in 1950. The apple crop of Great Britain was about 40% larger than in 1950, whereas the Japanese crop was 40% less than in the preceding year.

Apricots.—The U.S. 1951 commercial apricot crop of California (168,000 tons), Washington and Utah was a small one of 180,600 tons, compared with 215,100 tons in 1950 and a 1940–49

*Boxes hold 77 lb. in California and Arizona; 90 lb. in other states.

average of 220,120 tons. Only 6,700 tons were processed as dried apricots as compared with 14,200 tons in 1950. World apricot production was 5% less than in 1950.

Avocados.—Production by new trees and more favourable weather gave a large 1951 avocado crop in California and Florida of 36,000 tons, compared with 27,900 tons in 1950 and only a 19,153-ton average for 1940–49.

Bananas.—This fruit was imported into the U.S. in 1950–51 in the amount of 50,303,000 bunches, valued at $55,553,000; comparative data for 1949–50 were 53,788,000 bunches and $55,933,000.

Cherries.—The 1951 U.S. commercial cherry crop of 235,610 tons was substantially in excess of the 1940–49 average of 185,814 tons, but slightly below the 241,730 tons of 1950. The sour cherry crop was 162,001 tons, a new high record slightly exceeding the previous (1950) record of 159,850 tons and greatly exceeding the 94,860-ton average for 1940–49. Sweet cherries, produced largely in the Pacific coast states, because of damage by late spring frost, amounted to 73,410 tons, less than the 81,880 tons of 1950 or the 1940–49 average of 90,954 tons.

The world cherry crop of 1,162,000 tons was 2% more than in 1950 and 14% above the prewar average.

Cranberries.—The 932,500-bbl. cranberry crop of 1951 was moderately smaller than the 984,300 bbl. of 1950 but exceeded the 728,200-bbl. average of the previous decade. Massachusetts produced more than 60% of the total, Wisconsin about 20%.

Dates.—The California date crop of 17,000 boxes (of 70 lb. net) in 1951 exceeded the 15,060 boxes of 1950 and was far larger than the 10,773 boxes average of 1940–49.

Figs.—The 1951 California crop amounted to 29,200 tons of dried figs and 14,000 tons for canning or preserving, both larger than the small crop of 1950, but less than the 1940–49 average of 33,150 tons dried and 16,100 tons not dried. The small Texas crop of 230 tons for preserving compared with 886 tons, the average for 1940–49.

The dried fig pack of the leading commercial producing countries was estimated at 171,500 tons, 14% below the 1940–49 average and compared with 182,200 tons in 1950. United States imports in 1950–51 of 5,000 tons were double the average.

Grapefruit.—The grapefruit crop, about seven-eighths of it from Florida, was estimated at 40,690,000 boxes, compared with 46,580,000 boxes in 1950 and the 50,852,000 boxes average for 1940–49. The Texas crop, because of a disastrous freeze in February, dropped to 250,000 boxes against 7,500,000 in 1950. The price to growers was estimated at 96 cents per box, compared with $1.09 in the preceding year.

Table III.—*U.S. Peach Production by Leading States*

(In thousands of bushels)

State	1951	1950	Average, 1940-49	State	1951	1950	Average, 1940–49
California	35,670	29,668	30,169	Ohio	1,044	927	878
South Carolina	6,474	468	3,799	Utah	983	130	763
Georgia	4,725	875	4,790	Washington	810	135	2,387
North Carolina	3,024	548	2,158	Michigan	728	4,800	3,607

New Jersey	2,116	1,810	1,498	Alabama	644	440	1,309
Virginia	1,950	837	1,572	West Virginia	607	557	539
New York	1,312	1,023	1,285	Missouri	602	950	752
Arkansas	1,296	1,980	2,206	Oregon	528	325	657
Texas	1,189	783	1,777	Oklahoma	507	378	471

Grapes.—The U.S. 1951 grape crop was the largest on record, 3,280,900 tons, compared with 2,707,400 tons in 1950 and 2,797,000 tons average in 1940–49. The record California crop of excellent quality and 3,107,000-ton size was 28% larger than the 1950 crop and 19% above average whereas the Great Lakes area output was only about half as large as in 1950. Prices were less than two-thirds those of 1950. Raisin production of 227,000 tons was 47% larger than in 1950 but 12% below average.

The indicated 1951 world grape crop of 35,300,000 tons was 2% less than in 1950 and 4% less than prewar; the European crop was 23,500,000 tons against 24,800,000 tons in 1950. Of the total, 29,000,000 tons or 82% was exported to be used for wine, 12% for table use and 6% for raisins.

Raisin production outside the U.S. was indicated as 214,600 tons, compared with 241,200 tons in 1950. Turkey and Iran were the leading producers, each with about one-fourth of the total.

Lemons.—The California lemon crop of 1951–52 was indicated at 12,900,000 boxes, approximating the average for the decade but less than the 13,400,000 boxes of 1950–51. Prices were slightly higher than in 1950.

Limes.—The Florida crop for 1951 was indicated at 260,000 boxes, compared with 280,000 boxes in 1950 and an average for 1940–49 of 184,000 boxes. Prices were up about 20%, compared with 1950.

Olives.—California in 1951 produced a large olive crop of 67,000 tons, 60% more than in 1950 and 36% above average. The Spanish pickled olive pack for export gave early indications of being a record one, about 80% above average.

Oranges.—Conditions as of early December were generally favourable and the indicated 1951–52 crop of 117,325,000 boxes was slightly more than the 116,810,000 boxes of 1950 and substantially exceeded the 1940–49 average of 99,096,000 boxes. The season average price to growers was estimated at $1.43 per box compared with $1.96 in the previous year.

The Australian 1951–52 citrus crop was forecast as smaller than the 4,002,000 boxes of the previous year.

Tangerines.—The Florida crop for 1951–52 was indicated at 5,000,000 boxes; in 1950 there were 4,800,000 boxes and the 1940–49 average was 3,890,000 boxes.

Peaches.—The 1951 U.S. peach crop of 70,265,000 bu. was 1% below the decade average but 31% larger than the small 1950 crop. However, the regional distribution was very different, the southern peach states having a crop about 300% larger than in 1950 and the north central states having a crop only one-third of that of 1950.

World production was indicated at 109,000,000 bu., 20% more than in 1950 and 25% above prewar. Dried peach production of 12,300 tons was only half as large as the 1940–49 average.

Plums and Prunes.—A 1951 plum crop of 101,800 tons was about 23% above 1950 and average; California produced 97,000 tons against 177,000 in 1950; Michigan was a low second producing area.

The prune crops of Oregon, Idaho and Washington, mostly sold fresh, canned and frozen, was 95,500 tons, compared with 45,900 tons in 1950.

Table IV.—*U.S. Pear Production by Leading States*

(In thousands of bushels)

State	1951	1950	Average, 1940–49	State	1951	1950	Average, 1940–49
California				Michigan	1,035	812	774
Bartlett	13,418	12,668	10,534	New York	1,024	1,066	850
Other	1,917	1,500	1,458	Pennsylvania	358	359	342
Washington				Georgia	355	234	375
Bartlett	4,290	3,950	5,334	Texas	312	270	385
Other	1,584	1,753	1,820	Illinois	306	244	379
Oregon				North Carolina	297	150	266
Bartlett	2,170	1,896	1,964	Virginia	292	121	297
Other	2,850	3,871	2,825	Ohio	234	205	274

The U.S. dried prune crop of 184,900 tons was slightly below average but well above the 149,000 tons of 1950; California was credited with 181,000 tons. Exports of dried prunes from the U.S. declined sharply to 26,360 tons in 1950–51 from 79,700 tons in the preceding year.

World production of plums and prunes estimated at 2,768,000 tons was 3% larger than 1950 but 2% smaller than prewar. The 1951 dried prune pack in six leading non-U.S. areas totalled 48,700 tons, compared with 38,300 tons in 1950 and an average for the decade of 30,900 tons.

Pears.—The 1951 pear crop of 32,687,000 bu. was about 5% above average and 1950 production. The important west coast crop was 2% above 1950 and 10% more than average. The production of Bosc, Comice and Hardy types increased; Anjous declined as compared with 1950.

World production was indicated at 156,000,000 bu., compared with 184,000,000 bu. in the preceding year and 131,000,000 bu. prewar. The European crop was 22% smaller than in 1950.

Pineapples.—The large 1951 Florida crop of 10,500 boxes much exceeded the 6,500 boxes of 1950 and the 1940–49 average of 8,665 boxes. However, much of the U.S. consumption continued to be imported.

Strawberries.—The strawberry crop of 11,846,000 crates substantially exceeded the 11,295,000 crates of 1950 and the 1940–49 average of 8,864,000 crates. Acreage increased more than 15%, compared with 1950, but yield and value per crate declined. (*See* also HORTICULTURE.) (J. K. R.)

Furniture Industry.

The 1951 output of the 4,000 factories in the United States making wooden and upholstered furniture totalled approximately $1,525,000,000, a gain of 1½% over the 1950 production of $1,500,000,000, the highest volume ever before attained. The 1951 unit volume, however, was 9% smaller than the 1950 output. The high production during 1951 was the result of scare buying following the outbreak of the Korean conflict, when merchants anticipated many shortages that never materialized, and were left with furniture and appliance inventories 30% above normal. This created a buying lull during the spring and early summer season when furniture production dropped from the U.S. department of commerce index figure of 198 for Oct. 1950 to 165 for Aug. 1951. Fall and holiday buying during the balance of the year, however, brought the total dollar volume above the previous year's total.

The buying lull, which lasted five months, resulted in surprisingly few failures, but there were more mergers than in any other single year. Many old, established medium and large factories were sold to syndicates operating other furniture plants. These mergers affected the upholstery as well as the case goods branch of the industry and were charged to the banking laws which made large loans for expansion purposes difficult to obtain from normal banking sources. During the year, nevertheless, there were enough small new factories entering the picture to maintain about the same total for the industry as a whole.

Comparing Oct. 1951 with Oct. 1950, unfilled orders were down 43%, new orders were 6% lower, shipments were down 11%, payrolls down 9%, the number of employees down 10% and receivables were up 3%. For the first ten months of 1951 compared with the same period of the previous year, the picture was brighter with new orders down only 1%, shipments 6% higher and payrolls 4% higher.

Plant time in 1951 averaged 44 hr. per week compared with 49 hr. in 1950, and a few plants were closed for several weeks during the summer because of lack of orders. Weekly wages averaged $52.42 for the industry. By fall, dealers had reduced their inventories from 30% above normal to 5% above normal and were again "open-to-buy." They attended the Jamestown, N.Y., and High Point, N.C., fall furniture markets in large numbers and placed the heaviest volume of orders in more than six months. From October on, the furniture industry rapidly regained its stride.

HOME FURNISHINGS featured at "Good Design," a 1951 exhibit at the Merchandise Mart, Chicago, Ill., sponsored jointly by the Mart and the Museum of Modern Art, New York city

Furniture prices advanced 12% at the manufacturers' level in 1951. Some factories received small price increases from the Office of Price Administration upon proof of higher production costs, but the majority asked for no relief, in order to remain competitive. The prices of upholstered furniture rose less than those of case goods, because of lower prices for fabrics. Lumber prices went down slightly, but this small saving was offset by reduced volume.

French Provincial furniture was the favourite style in the U.S. in 1951, especially in the costlier range. While Modern still accounted for the largest number of units produced and sold, French Provincial was rapidly approaching it and was second in demand, producing almost as much dollar volume as Modern. Colonial and Early American, in maple and cherry, also were popular, but 18th century English designs, such as Chippendale and Hepplewhite, were definitely trailing.

Indications for 1952 were that, barring unforeseen controls on lumber and labour, the industry could anticipate another good year. Few furniture factories had been granted government orders, so that most production capacity could be concentrated on household furniture, for which the demand was again increasing. (*See* also INTERIOR DECORATION.) (J. A. G.)

Furs.

Retail sales of furs in the United States continued good through the first quarter of 1951, but thereafter steadily declined, and from June onward a period of confusion and difficulty was experienced in the trade. August, the traditional opening month for retail fur sales, showed an 18.5% decline from 1950. September and October were both off about 20.4%.

Even mink, which had led in popularity for several years, became difficult to sell, mainly because it was priced too high. During the early part of the year, when business was unusually good, raw fur prices shot upward to levels 25% to 30% above those prevailing in late 1950. When manufacturers made up their new lines in May and June, they found prices higher than the consumer would pay. After months of gradual downward price adjustments, mink again began to move, especially in the mutation family of pastels, silver blues, Aleutians and others. Persian lamb also encountered price difficulty, but managed to continue among the better sellers, along with sheared raccoon, Alaska seal, mouton, muskrat, beaver, squirrel and marmot.

France, Italy, Switzerland, Belgium, west Germany and Scandinavia bought more furs than in any year since World War II. As a result, London again became the centre of world distribution of furs.

A feature of the year was the further development of blonde dye colour on many furs. Introduced on otter a few years back, it was expanded to nutria, beaver, sheared raccoon and Australian opossum, and was well received in many sections of the U.S.

Styles followed the modified pyramid, with natural shoulders and mostly small collars and turn-back, cocktail cuffs. Small fur pieces—capes, jackets, capelets, and especially stoles—proved more popular than ever, one reason being the high prices of full-length coats during the first half of the year.

Two important pieces of legislation affected the fur trade. One was the passage of the Fur Products Labeling act, which was to go into effect in Aug. 1952 and was designed to prevent deceptive and misleading fur advertising. Another was the government ban on seven types of Russian furs—ermine, kolinsky, weasel, marten, mink, muskrat and fox—effective Jan. 5, 1952. These furs were banned as being competitive with U.S. furs, but represented a total import value of only about 25% of all Russian furs brought into the country, or $10,000,000 out of $40,000,000.

Production of ranch and mutation mink continued to increase. The total world crop was estimated at 3,500,000 to 4,000,000 skins, compared with about 3,000,000 to 3,500,000 in 1950.

U.S. ranchers produced about 2,000,000 to 2,500,000 skins, Canada about 800,000 and the Scandinavian countries about 500,000. The new mutation, "Sapphire," a clear, light blue, introduced in 1950, brought as high as $350 a skin, a record for any mink. A "Sapphire" coat brought $36,000 at Neiman-Marcus, Dallas, Tex.

Fur trade insolvencies were high, numbering more than 100 for the first 10 months of the year. Gross losses were also high, about $7,500,000. Excessive credit to undercapitalized firms was blamed for the large number of failures.

According to government tax collections, total sales for the year would be from $250,000,000 to $260,000,000, or about the same as 1950, which was also a subnormal year. Four or five years earlier the total volume had been between $400,000,000 and $450,000,000.

A strike of short duration occurred in the New York market during the spring contract negotiations between the Associated Fur Manufacturers and International Fur and Leather Workers union. Unemployment was high through most of the year, many of the 15,000 workers being employed a total of less than six months.

Gas, Natural and Manufactured.

Lack of data from many of the smaller producing countries prevented the compilation of a world production table for gaseous fuels, and figures can be presented only for the larger producers.

Natural Gas.—Table I shows the outputs of countries other than the United States where the quantity is significant.

Table I.—*Natural Gas Production*

(In millions of cubic feet)

	1946	1947	1948	1949	1950
Venezuela	331,991	402,585	470,388	499,205	557,262

Coke-Oven Gas.—While much of the gas produced in the operation of by-product coke ovens is used in heating the ovens, there is a considerable surplus available for use as a commercial fuel. In the United States in 1950 the coke-oven gas output amounted to 979,592,988,000 cu.ft., an average of about 13,500 cu.ft. for each ton of coke made. Of this total, 360,583,554,000 cu.ft. was used in heating the ovens. Since much of the coke is made by iron and steel plants for their own use, the producers also used 414,127,459,000 cu.ft. in their boilers and furnaces. Of the remainder, 149,429,729,000 cu.ft. was distributed through city gas mains, 39,258,789,000 cu.ft. was sold for industrial uses and 16,193,457,000 cu.ft. was lost or wasted. (*See* also Federal Power Commission.) (G. A. Ro.)

Gasoline: *see* Petroleum.

Gasperi, Alcide de

(1881–), Italian statesman, was born on April 3 at Pieve Tesino, Trentino. He studied at the University of Vienna, in 1911 was elected to the Austrian parliament as an Italian minority representative, and after the union of his native province with Italy, he was elected deputy to the Italian parliament in 1921. He opposed Mussolini's dictatorship and in 1926 was sentenced to imprisonment for anti-fascist activities. When released in 1931, he became an official of the Vatican library. During World War II De Gasperi took part in the resistance movement in Rome and in June 1944 joined the first Ivanoe Bonomi cabinet as minister without portfolio. Minister of foreign affairs of the second Bonomi (Dec. 1944) and Ferruccio Parri (June 1945) cabinets, he was elected leader of the reconstructed Christian Democratic party and on Dec. 9, 1945, became prime minister. In July 1951 he again reconstructed his cabinet, the eighth cabinet being much similar to its predecessor, except that De Gasperi himself superseded Count Carlo Sforza at the foreign office.

In 1951 De Gasperi paid an official visit to London, Eng., from March 12 to 15, attended the Ottawa, Ont., meeting of the NATO council (Sept. 16–20), and was warmly received at Washington, D.C. (Sept. 24–26).

(*See* also Italy.)

Gas Turbine: *see* Automobile Industry.

Gem Stones.

While there is no United States output of precious stones (diamond, emerald, ruby or sapphire), there is a considerable production of semiprecious and ornamental stones, the most important being beryl, kunzite, nephrite jade, tourmaline, turquoise and various forms of silica, such as agate, rose quartz, jasper and petrified wood.

Table I shows the imports of gem stones into the United States.

Table I.—*U.S. Imports of Gem Stones*

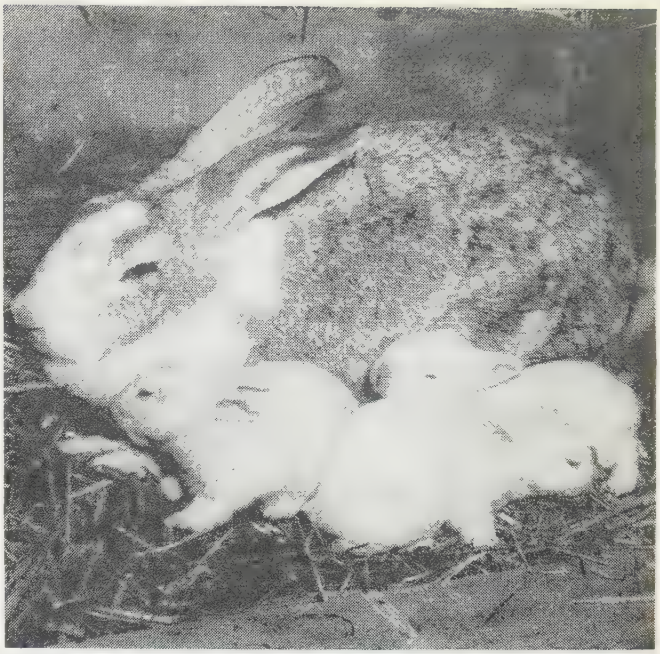
	1950		1949	
	Carats	Values	Carats	Values
Rough diamonds . . .	819,083	$44,775,769	633,731	$28,246,634
Cut diamonds	492,671	58,524,902	335,487	41,427,718
Rough emeralds . . .	12,142	7,991	80,231	226,233
Cut emeralds	9,706	237,446	13,723	284,578
Pearls, natural. . . .		410,970		532,310
Pearls, cultured . . .		3,192,334		1,733,698
Marcasites		136,768		178,207
Other varieties				
Rough		324,089		208,124
Cut		2,429,992		2,045,476
Imitation		9,601,196		9,249,488
Total.		$119,641,457		$84,132,466

The total value of imports during 1941–50 is shown in Table II.

Table II.—*Value of U.S. Imports of Gem Stones*

1941	$33,777,215	1946	$189,017,646
1942	28,520,070	1947	110,076,029
1943	72,109,788	1948	115,940,031
1944	77,529,806	1949	84,132,466
1945	114,435,231	1950	119,641,457

Of the 1950 imports, 86% of the total value was rough and cut diamonds, 10% imitation and synthetic stones, 3% pearls and 1% all other gems. (*See* also Diamonds; Mineralogy.) (G. A. Ro.)



GRAY RABBIT and her three white albino young, born after the transplantation of fertilized ova from an albino doe. The experiment was conducted at the Southwest Research institute, San Antonio, Tex., in 1951

Genetics.

A symposium on genes and mutations held at Cold Spring Harbor, Long Island, N.Y., June 7–15 included 150 workers from Europe and America. Edward D. DeLamater, reporting on the chromosome cycle of several species of bacteria, showed remarkably clear preparations of the chromosomes in all phases of cell division, both mitotic and meiotic. These preparations fully confirmed the genetic evidence presented by Joshua Lederberg that certain bacteria reproduce sexually and have chromosomes with gene loci which can be mapped in linkage experiments.

New Techniques.—Aaron Novick and Leo Szilard described a device, the chemostat, whereby a culture of bacteria could be supplied with new liquid culture medium at a measured rate. This apparatus made possible a precise quantitative study of mutation rate and selection of mutant types in bacteria. Ernst Hadorn and H. K. Mitchell applied the method of paper chromatography to the study of chemical differences in wild-type and many mutant forms of the fruit fly *Drosophila melanogaster*. The method was applicable to individuals and to different stages in development from egg to adult. The discovery of parthenogenesis in 13 species of *Drosophila* by Harrison Stalker added a new tool for the investigation of cytogenetic problems in this widely studied genus.

Human Genetics.—R. R. Race, H. A. Holt and J. S. Thompson reported that the recently discovered blood group system, termed Duffy after the patient in whom it was first found, was not linked to any of the seven blood group systems previously known. The Duffy antigen was found in about 65% of more than 400 individuals tested and thus proved to be a valuable new genetic marker. J. V. Neel and M. M. Hanig found a significant difference in the distribution of alleles at the MNS blood group locus between white and Negro populations. This locus was thus shown to have possible utility in defining human subgroups. T. C. Fang demonstrated significant differences in an inherited palm pattern of epidermal ridges in samples of three racial groups. Bentley Glass found evidence of genetic drift in the frequency of blood group and other genes in small inbred human populations, isolated for religious and cultural reasons from the general population. R. R. Race and Ruth Sanger reported a probable deletion in a human Rh chromosome, which seemed to add evidence that the Rh complex is the result of three closely linked loci.

Mammalian Genetics.—W. L. Russell studied X-ray-induced mutation rate at seven specific loci in mice. He found the rate to be on the average higher than induced mutation rates in *Drosophila.* Several new mutant types were described in mice: pintail, a dominant reducing the length of the tail, by W. F. Hollander and L. C. Strong; recessive vestigial tail by W. E. Heston; a recessive coat colour, ruby-spotted, by J. A. Weir; and a recessive lethal allele at the dilution coat colour locus by A. G. Searle. W. E. Castle reported a new allele at the hooded coat colour locus in the rat. H. P. Donald and co-workers reported the first authentic case of monozygotic (single egg) quadruplets in cattle. Clyde Stormont, R. D. Owen and M. R. Irwin described two blood group loci in the chromosomes of cattle, one with a minimum of 80 recognizable alleles and the other with 22 alleles. Stormont also demonstrated a completely recessive antigen in the blood of sheep. This antigen and the Lewis antigen in man were unique in this respect among the large number of mammalian antigens thus far tested.

Radiation Genetics.—C. P. Swanson and H. T. Yost found that the increase in X-ray-induced chromosome aberrations in the plant *Tradescantia,* brought about by pretreatment with infra-red radiation, could be eliminated by heat shocks of 48° C. for 30 seconds between infra-red and X-ray exposures. R. S. Caldecott and Luther Smith treated barley seeds with X-rays, at a heat of 75° C. for 30 minutes, and a combination of these agents. While heat treatment alone had no effect, in combination with X-rays it raised the induced mutation rate 30% to 50% and reduced chromosome aberrations 30% to 50%. H. J. Muller and J. I. Valencia found that neutrons produced visible mutations in *Drosophila* generally associated with lethal effects. They considered that the crowding of ionizations in neutron tracks resulted in these multiple effects.

Geography.

International Affairs.—The year 1951 may be described as one of detailed planning for the coming year when the geographers of the United States were to be hosts to the geographers of the world through a series of meetings, conferences and congresses to be held in New York city and Washington, D.C., during the summer of 1952. The program was to include the third consultation on geography of the Pan-American Institute of Geography and History, the annual meetings of the Association of American Geographers and the National Council of Geography Teachers, the 17th International Geographical congress and the 7th International Congress of Photogrammetry. In addition, the American Geographical society was to hold its centennial celebration in New York city.

The U.S. national committee of the International Geographical union held several important meetings with the National Research council in Washington, D.C., and with the Association of American Geographers in Chicago (March 1951) to complete plans for the summer of 1952. Numerous subcommittees of the U.S. national committee were authorized to prepare for all phases of the various meetings, including a committee to arrange for financial aid and subsistence grants to visiting geographers.

The advisory committee to the United States member of the commission on geography of the Pan-American Institute of Geography and History met a number of times and established functioning subcommittees such as the one which was preparing a detailed report on geographic activities in the United States since the last consultation was held in Santiago, Chile, in Oct. 1950. This report was to be published early in 1952.

Geographers in Government.—The influx of geographers into the various government agencies which became pronounced in 1950 continued through 1951, but less rapidly. The new positions being filled by geographers were civilian and not military and the recall of geographers to active duty status was less pronounced. Most geographers were being employed in military intelligence work on those areas of the world where there was tension. With a few exceptions, such as in the army map service or the quartermaster corps, geographers were not concentrated in any one agency but were scattered throughout government service. As of Jan. 1951, there were about 350 members of the Association of American Geographers with addresses in the general area of Washington, D.C., and most of them were in government service.

Geography in the Colleges and Universities.—The *New York Times* surveys of Dec. 1950 and June 1951 gave the impression that geography was being ignored in the colleges and universities of the United States—a picture not entirely true. The *Times* surveys did find that less than 5% of the college students were taking courses in geography, and that the misconceptions and misinformation shown on a nation-wide quiz conducted in the spring of 1951 were almost unbelievable, but the inference that the colleges and universities of the United States were ignoring geography seems an overstatement. The *Directory of College Geography of the United States,* published in Feb. 1951, showed that nearly 3,500 courses in geography were being taught in 727 institutions of higher learning in the United States. Quantitatively the *Times* survey built up a convincing case that geography was almost ignored in institutions of higher learning, but qualitatively it failed to take into consideration the number of universities with strong departments of geography that were offering curricula leading to graduate degrees and professional training. Graduates of these departments were holding important positions in government, business and industry, and on the faculties of many leading universities.

The Association of American Geographers.—The enlarged association, whose membership in 1951 numbered approximately 1,750, held its 47th annual meeting in Chicago in March, with an attendance of about 600 members. During the three days of the meeting, several symposia were held. One dealt with geographical research in northern lands, with two papers on Alaska, two on Scandinavia and two on Canada. A second symposium on urban-regional relationships had seven papers on physical geography, five on economic-regional geography and five on urban geography. A third symposium on Indonesia consisted of five papers on that region.

The final session included a panel discussion of the teaching of cartography.

The American Geographical Society.—With the centennial of the society planned for Aug. 4–6, 1952, in New York city, the director and his staff devoted their major efforts during 1951 toward planning for that event. The *Geographical Review* published four outstanding issues with articles on various areas of the world. The society's new department of medical geography issued two maps of its projected *Atlas of Disease,* showing world distribution of cholera and of malaria vectors. The new monthly publication *Focus,* launched in Oct. 1950, continued to appear on timely topics such as Viêt-Nam, Yugoslavia, outlook for steel, strategic Iran, poliomyelitis in the United States, new Israel and the changing south. The *New York Walk Book,* originally published in 1923, was completely revised and republished in 1951. A history of the society was being prepared and was expected to be ready for the centennial celebration. (*See* also CARTOGRAPHY; EXPLORATION AND DISCOVERY; NATIONAL GEOGRAPHIC SOCIETY; SOCIETIES AND ASSOCIATIONS, U.S.)

FILMS OF 1951.—*Geography of Australia* (Young America Films, Inc.); *Geography of New England, Global Concepts in Maps, Maps and Their Uses, Maps Are Fun* (Coronet Films); *Maps and Their Meaning* (Academy Films); *Physical Geography Series* (5 films), *The Earth and the Sun's Rays (Distribution of Insolation), The Seasons (Revolution of Earth around the Sun)* (United World Films). (E. J. Fo.)

Geology. The demand for well-prepared geologists remained high during 1951 and an insufficient number was trained to fill all needs. Because of the ever-increasing necessity for mineral products, search was intensified by petroleum and mining companies and by government agencies. Research also was stressed, particularly by colleges, universities and government agencies, with considerable emphasis placed on the utilization of chemical and physical principles. Academic interest in geology was evidenced by numerous articles and the number of new or revised textbooks made available in 1951.

General Geology.—Different approaches were presented in three textbooks. In *Principles of Geology*, the authors, James Gilluly, Aaron C. Waters and A. O. Woodford, gave a broad outline of the study of the earth, treating the conclusions as integral parts of a connected picture. Pictures of models were emphasized by L. Dudley Stamp in *The Earth's Crust*, to illustrate geologic phenomena. An analytical approach to general geology was given by Robert M. Garrels in *A Textbook of Geology*.

Guide to Geologic Literature by Richard M. Pearl was published, and *Lexicon of Geologic Names of the United States (including Alaska)*, compiled by M. G. Wilmarth, U.S. geological survey Bulletin 896, parts 1 and 2 (1938), was reprinted.

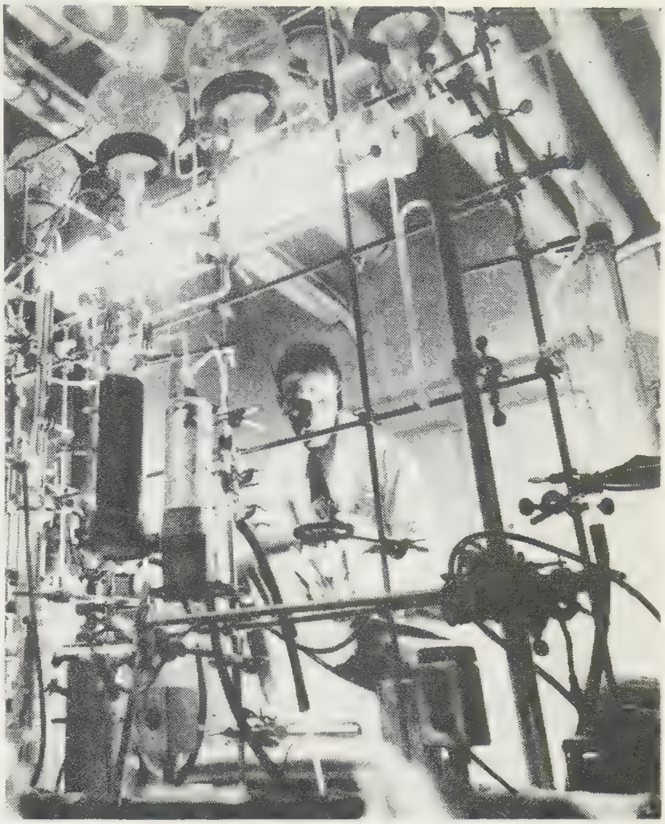
Regional Geology.—Information on regional geology of many portions of the world became accessible in various North American, South American and European journals. Of more than usual interest were "Regionalna Geologia Polski, Tom 1, Karpaty (Praca Zbiorowa) Zeszyt 1, Stratygrafia" edited by M. Ksiazkiewicz and "Descripcion Geologica de la Patagonia" by Egidiro Feruglio.

Geomorphology and Glaciology.—Principles of earth processes and forms were presented by Arthur N. Strahler in *Physical Geography*. Coloured visual aids, keyed to this text, also were made available by the publisher. L. J. Chapman and D. F. Putnam gave the results of their detailed investigation in *The Physiography of Southern Ontario*. Interest in glaciology and Pleistocene geology was evidenced by numerous papers which appeared mainly in the *Journal of Geology*.

Historical and Stratigraphic Geology.—Historical development of the earth and life on the earth was discussed in three books. In an excellently illustrated reference, *Evolution Emerging*, William K. Gregory discussed in detail the evolutionary development of modern life. Harold F. Blum in *Time's Arrow and Evolution* showed how physical and chemical laws channelled the course of evolution.

Numerous articles on local stratigraphy and sedimentation appeared in professional journals throughout the world. Of more general interest were "Studies of Devonian and Carboniferous of Western Europe and North Africa" by F. Delépine in the *Proceedings* of the Geologists' association; "Some Relations among Sedimentation, Stratigraphy, and Seismic Exploration" by W. C. Krumbein in the American Association of Petroleum Geologists' *Bulletin;* and "Tectonique et Rythmes de Sédimentation" by Albert Carozzi in *Archives des sciences*. Basic facts influencing deposition of ancient sediments were described and integrated in *Stratigraphy and Sedimentation* by W. C. Krumbein and L. L. Sloss. Marshall Kay in *North American Geosynclines* gave a classification of geosynclines and discussed the stratigraphy and sedimentation of each type.

Petrology and Petrography.—Based on field and petrographic data, and on physical and chemical behaviour as determined by experiment and deduced from thermodynamic theory, *Igneous and Metamorphic Petrology* by Francis J. Turner and Jean Verhoogen represented an advanced, unified discussion of origin and evolution of rocks.



EXPERIMENTAL LABORATORY of the Lamont Geological observatory at Palisades, N.Y., dedicated in May 1951. The observatory is part of Columbia university

Structural Geology and Field Geology.—In a large, comprehensive volume, *Structural Geology of North America*, A. J. Eardley covered in detail the post-Proterozoic structural evolution of the North American continent. The descriptive volume *The Tectonics of Middle North America* by Philip B. King could be used as an explanatory text for *Tectonic Map of the United States* (1944) and *Tectonic Map of Canada* (1950). In the *Bulletin* of the Geological Society of America also appeared "Tectonics of East Side of Cordillera of Western Canada" by A. J. Goodman.

Symphony of the Earth by J. H. F. Umbgrove correlated a variety of terrestrial processes. A paper on "Origin of Compressional Mountains and Associated Phenomena" by John L. Rich was published in the *Bulletin* of the Geological Society of America, and in the *Journal of Geology* appeared "Deep Tectonics and Isostasy" by H. D. Cizancourt.

The Elements of Field Geology, by the British authors G. W. Himus and G. S. Sweeting, became available.

Petroleum Geology.—*Petroleum Geology* by Kenneth K. Landes, *Principles of Petroleum Geology* by William L. Russell, *How Oil Is Found* by W. A. Ver Wiebe and *Practical Oil Geology*, sixth edition, by Dorsey Hager were published. *Petroleum Geology* by E. N. Tiratsoo was printed in London. Also available was *Bibliography of Stratigraphic Traps* edited by W. E. Pugh and B. G. Preston.

The February *Bulletin* of the American Association of Petroleum Geologists was devoted entirely to "Possible Future Petroleum Provinces of North America." Also of interest were: "Erdöl und Ölschiefer in Brasilien" by Erich Malzahn (1950) which appeared in *Erdöl und Kohle*, and "Types of Oil and Gas Traps in the Rocky Mountain Region" by Alex W. McCoy III, *et al.*, which appeared in the *Bulletin* of the American Association of Petroleum Geologists. As in 1950, numerous articles appeared in which the major emphasis was on the geology and oil possibilities of Canada and northwestern United States.

Mineral Deposits.—"Classification and Definitions of Textures and Mineral Structures in Ores" by G. M. Schwartz, "The Influence of Permeability on Ore Distribution in Limestone and Dolomite" by Ernest L. Ohle, "The Formation of Late Magmatic Oxide Ores" by Alan M. Bateman and "Notes on Manganese Ores of Brazil" by C. F. Park, Jr., *et al.*, as well as numerous articles on more specific areas and problems, appeared in *Economic Geology*. Also made available was *Die Erzmineralien und ihre Verwachsungen* by Paul Ramdohr (1950), a comprehensive volume on ore minerals and their intergrowth. The almost completely revised *Nonmetallic Minerals*, second edition, by Raymond B. Ladoo and W. M. Myers was an important contribution providing a comprehensive coverage of nonmetallic minerals. In *The Formation of Mineral Deposits*, Alan M. Bateman presented a nontechnical discussion of the origin of mineral deposits.

Geochemistry.—Various authors of short papers in *Economic Geology* and the *Bulletin* of the Geological Society of America emphasized theoretical and experimental geochemical studies on formation of ore deposits. Studies of methods of chemical analysis and geochemical prospecting were continued mainly by members of the U.S. geologic survey. (*See* also MINERALOGY; NATIONAL GEOGRAPHIC SOCIETY; PALAEONTOLOGY; SEISMOLOGY.)

FILMS OF 1951.—*Geysers and Hot Springs, Lassen Volcanic National Park* (Arthur Barr Productions). (T. H. K.)

George VI

(1895–1952), King of Great Britain, Ireland and the British dominions, was born at York cottage, Sandringham, Norfolk, on Dec. 14. (For his early career see *Encyclopædia Britannica.*) On Jan. 1, 1951, he broadcast to Australia on the opening of the jubilee year of the commonwealth. But his proposed tour of Australia and New Zealand in 1952 had to be cancelled after his operation in September, and it was announced that Princess Elizabeth, accompanied by the duke of Edinburgh, would carry it out in his stead.

The first report in 1951 of the king's being unwell was in March. He fulfilled a number of engagements that month and in April, however, and on May 3 opened the Festival of Britain. He received King Frederick and Queen Ingrid of Denmark on their state visit, May 8–11. Later in May he had influenza and early in June suffered from catarrhal inflammation of the lung and was ordered to take complete rest.

On Sept. 1 he was visited at Balmoral by George Cordiner, a radiologist, and Geoffrey Marshall, an authority on respiratory diseases. He visited London on Sept. 8–9 to permit further clinical investigations and on Sept. 15 returned to London from Balmoral; three days later a bulletin stated that certain structural changes had developed in the lung and that he had been advised to remain in London for further treatment. On Sept. 22 a bulletin said that he had been advised to undergo an operation. This operation for lung resection was performed at Buckingham palace on Sept. 23 by Clement Price Thomas, with seven other doctors assisting.

On Sept. 27, the king appointed five councillors of state to relieve him of formal constitutional duties; they were Queen Elizabeth, Princesses Elizabeth and Margaret, the duke of Gloucester and the princess royal. On Oct. 6 a bulletin said that the postoperative stage had passed without complication but that progress toward the convalescent stage "must necessarily be slow and gradual." After the general election he received personally, on Oct. 26, Clement Attlee and Winston S. Churchill. His recovery seemed to be proceeding satisfactorily, but on Feb. 6, 1952, he died in his sleep at Sandringham. He was buried at Windsor castle on Feb. 15. (R. JAN.)

George, Walter Franklin

(1878–), U.S. senator, was born on Jan. 29 at Preston, Ga. He took his bachelor's and law degrees from Mercer university, Macon, Ga., in 1900 and 1901 respectively and began practising law at Vienna, Ga., in the latter year. From 1907 to 1912 he was solicitor general of a state judicial circuit, and from 1912 to 1917 judge of the circuit's superior court. In 1917 he became associate justice of the supreme court of Georgia, resigning in 1922 when he was elected U.S. senator from Georgia to fill a vacancy. He was re-elected in Nov. 1950 for his sixth consecutive term (1951–57). In 1938 Pres. Franklin D. Roosevelt's attempt to purge George as a reactionary failed when the senator won the Democratic nomination easily over Roosevelt's candidate. Thereafter a prominent member of the anti-New Deal Democrats, George became known for his frequent criticism of government spending. In 1950–51 he was also a leader in senate attacks on the state department and U.S. foreign policy. He sat on the senate committee investigating the dismissal of Gen. Douglas MacArthur. George was particularly critical during 1951 of additional appropriations for foreign military and economic assistance, declaring in August that if European nations "can't stand on their own feet now, there is no use . . . thinking they will do it later."

Georgia.

Georgia, located in the south Atlantic region of the United States, is called the "empire state of the south." It has an area of 58,876 sq.mi. and a population (1950 census) of 3,444,578. Of the population, 54.7% was rural and 45.3% urban. The chief cities and their 1950 populations were: Atlanta, the capital, 331,314; Savannah, 119,638; Columbus, 79,611; Augusta, 71,508; and Macon, 70,252.

History.—The new general assembly was in session from Jan. 8 to Feb. 16, 1951. The most outstanding action was enactment of a 3% sales and use tax and a resultant appropriation of $207,000,000 for fiscal 1951–52, compared with $139,000,000 the preceding year. Much of this increase went to finance the minimum foundation program for education. The appropriation provided that funds should be cut off from any public school system or university system unit found not to be in compliance with state constitutional provisions requiring segregation of the white and coloured races. In the event a competent court found denial of funds to a single system or unit unconstitutional, all appropriations for public schools or the university system would be cut off.

Other important measures enacted were: an optional municipal home rule act; an antimask law; the Uniform Motor Vehicle Safety Responsibility act; the Uniform Support of Dependents act; and the Uniform Extradition act.

Important amendments proposed for referendum in Nov. 1952 were requirements: (1) that all political parties entering candidates in a general election for statewide offices must have nominated these candidates by means of the county unit system of voting; (2) that appropriations for highway purposes equal collections from motor fuel and licence taxes during the preceding year; (3) that constitutional amendments applying only to specified localities should be ratified or rejected solely by the voters of those localities.

Preparations were completed for the annexation by the city of Atlanta on Jan. 1, 1952, of an area which would make it three times its former size and increase its population by about 100,000.

Inaugurated in Jan. 1951 for four-year terms were: governor, Herman E. Talmadge; lieutenant governor, S. Marvin Griffin;

secretary of state, Ben W. Fortson, Jr.; comptroller general, Zach D. Cravey; attorney general, Eugene Cook; treasurer, George B. Hamilton; commissioner of agriculture, Tom Linder; commissioner of labour, Ben T. Huiet; and superintendent of schools, M. D. Collins.

Education.—During the school year 1950–51 there were 3,572 public schools in Georgia with an enrolment of 787,580 pupils and a teaching staff of 23,928, according to the state department of education. Total expenditures by all units of government for elementary and secondary education were $78,858,994 (not including capital expenditures). Of this total, $62,068,841 was expended for white schools and $16,790,153 for Negro schools.

There were 2,858 elementary schools (1,090 for white children and 1,768 for Negro children) with an enrolment of 613,791 (394,878 white children and 218,913 Negro children) and 16,678 teachers (11,101 white and 5,577 Negro). There were 714 high schools (474 for white children and 240 for Negro children) with an enrolment of 173,789 (131,363 white children and 42,426 Negro children) and 7,250 teachers (5,593 white and 1,657 Negro).

During the fall quarter of 1951 the 15 units of the state university system had an enrolment of 20,513 students, a decrease of 2,893 from the fall quarter of the preceding year. Included were 2,105 students in the three Negro colleges of the state and 1,188 students who were taking work in off-campus centres.

Total expenditures of the state government for education during the fiscal year ending June 30, 1951, were $60,170,000, compared with $59,313,940 the preceding year.

Social Insurance and Assistance, Public Welfare and Related Programs.—Public assistance payments during the fiscal year ending June 30, 1951, amounted to $40,482,863, an increase of approximately 20% over the previous year. Old age assistance amounted to $29,243,932.50; aid to the blind, $980,403.50; and aid to dependent children, $10,258,527. In Dec. 1951 a total of 95,705 persons received old age assistance with an average allowance of $31.12 (compared with 102,366 persons in Dec. 1950, with an average allowance of $23.82); 2,912 blind persons received benefits averaging $35.88 (compared with 2,825 persons in Dec. 1950, receiving benefits averaging $28.40); and 52,847 dependent children received benefits averaging $19.57 (compared with 44,130 children in Dec. 1950, receiving benefits averaging $18.22).

The U.S. bureau of labour statistics reported 15,500 persons drawing unemployment compensation in June 1951 under the Georgia program. This compared with 21,100 in June 1950.

On June 30, 1951, there were 6,407 prisoners in the state and county penal institutions under the control of the state board of corrections. Budget allotments to this board for the fiscal year were $1,054,315. On the same date there were 555 boys and girls in the state training schools.

Communications.—As of June 30, 1951, the state highway department reported that there were 92,253 mi. of public roads in Georgia. The state highway system extended 15,176 mi., and county roads extended 77,077 mi. For the fiscal year ending June 30, 1951, total expenditures for highways in Georgia amounted to $42,843,528.

On Dec. 31, 1950, there were 6,043 mi. of main-line railroad track in Georgia. As of the same date there were 585,168 telephones in the state. The Civil Aeronautics administration reported that Georgia had 1,153 mi. of airways and 112 airports as of Nov. 1, 1951 (56 municipal, 12 commercial, 10 military, 33 private and 1 intermediate).

Banking and Finance.—On June 30, 1951, there were 401 banks in Georgia with deposits of $1,724,116,000 and total resources of $1,882,794,000, according to the Federal Deposit Insurance corporation. This included savings and loan associations which accepted deposits. Of the total, 51 were national banks.

There were 72 savings and loan associations as of Dec. 1, 1951, 62 chartered by the federal government and 10 by the state. These 72 associations had resources of approximately $290,000,000.

Total receipts of the state government for the fiscal year ending June 30, 1951, were $153,338,788; budget allotments for the period were $139,195,709. On June 30, 1951, the state had a net surplus of $18,448,292.

Agriculture.—In Dec. 1951 the U.S. department of agriculture estimated the total value of field crops produced in Georgia during 1951 at $477,275,000, an increase of 19% over 1950. Cash income of farmers for 1950 was $529,991,000, an increase of 17% over the 1949 income and 45% greater than the 1940–49 average. Income from livestock and livestock products accounted for 36.3% of the total cash income.

Manufacturing.—There was an average of 296,129 persons employed in manufacturing in Georgia during 1950, according to the preliminary report on the *1950 Annual Survey of Manufactures* by the U.S. bureau of the census. This compared with an average of 268,335 persons employed in 1949. These persons received a total of $638,809,000 in salaries and wages in 1950. A value of $1,227,442,000 was added by manufacture, compared with $1,001,242,000 in 1949 and $1,015,999,000 in 1947. (M. W. H. C.)

Table I.—*Principal Crops of Georgia*

Crop	1951	1950	Average 1940–49
Cotton, bales	935,000	488,000	738,000
Cottonseed, tons	379,000	205,000	298,000
Corn, bu.	49,536,000	50,514,000	46,799,000
Peanuts, lb.	569,320,000	680,680,000	690,583,000
Tobacco, lb.	136,806,000	102,120,000	90,527,000
Potatoes (sweet), bu.	1,625,000	4,000,000	6,551,000
Hay, tons	610,000	593,000	752,000
Oats, bu.	10,296,000	12,879,000	14,113,000
Velvet beans, tons	176,000	169,000	361,000
Wheat, bu.	1,794,000	1,350,000	2,470,000
Peaches, bu.	4,725,000	975,000	4,790,000
Pecans, lb.	43,000,000	41,000,000	27,846,000
Sugarcane syrup, gal.	1,360,000	2,100,000	3,783,000
Potatoes, Irish, bu.	483,000	680,000	1,517,000
Lespedeza (seed), lb.	7,000,000	9,700,000	9,850,000
Cowpeas, bu.	341,000	336,000	655,000
Sorgo syrup, gal.	280,000	392,000	918,000

German Literature.

More than in preceding years, in 1951 the political uncertainty of European affairs affected literary production, and the controversial issues of the recent past were accentuated by the debate on rearmament. Aversion to measures likely to increase the existing tension was general, despite practical unanimity in declining the eastern type of regime, a conviction strengthened by the uninterrupted influx of political refugees. The momentous progress of economic reconstruction made with the aid of European Recovery program funds did not diminish the urgent need for international attention to the problem of expellees and refugees in western Germany. Jürgen Thorwald's *Flight in the Winter*, available in a one-volume U.S. edition, was timely reading. Reports such as the one published by the county magistrate of Wolfratshausen, Bavaria, on the community of *Geretsried* impress the reader with the ingenuity of resettling refugees in thickly populated areas. Evidence of an increasing interest in matters political was given by the content and success of Werner Weber's challenging inquiry into the constitution of the Federal Republic of Germany (*Spannungen und Kräfte im Westdeutschen Verfassungsleben*). In foreign policy the plan of a European federation was still the most popular hope and, consequently, H. Gollwitzer's *Europa-Bild und Europa-Gedanke* provided an important historical analysis. The historian Hans Rothfels set an example of sound political thinking by an essay on the interrelations between domestic and foreign policy in our time (*Gesellschaftsform und Auswärtige Politik*) and proved to be equally understanding of German as of western European and U.S. thought and conditions.

Literary and philosophic works reflected the struggle with nihilism. Ernst von Salomon's *Der Fragebogen* was the most successful exhibition of a mentality which is inevitably produced by an age of utter confusion and disorder. The clever use as a frame of reference of the questionnaire made up for the denazification procedure was bound to make an impact upon the hundreds of thousands of the author's generation who once were equally bewildered by these 131 questions yet unable to answer them with the forthright and often rather cynical brilliance of the one-time nationalistic plotter, anti-nazi and movie director. On a higher level of literary art, Ernst Jünger continued his search beyond nihilism in his *Der Waldgang*. Hans Carossa, in *Ungleiche Welten*, told his story of the nazi years, granting insight into the survival of Goethean humanity in an inhumane age but also into the helplessness of even the best-intentioned individual under collectivist despotism. In his volume *Der Unbehauste Mensch,* Hans Egon Holthusen faced squarely the challenge of modern man's unsheltered existence, coming close to T. S. Eliot in both style and convictions. The diaries of Franz Kafka (*Tagebücher*) enhanced the reading of his prose.

Among foreign authors, Antoine de St. Exupéry and Thornton Wilder attracted the widest attention.

Modern German thought was firmly linked with the past through the work of Friedrich Hölderlin. The new volumes of the *Stuttgarter Ausgabe* (edited by F. Beissner) were a triumph of philological method. They were indispensable to the interpretation of the hymnic poems which many conceived as the prophetic poetry essential to our age of world history. Ernst Beutler's well-indexed standard edition of Goethe's *Works, Letters, and Conversations* (Gedenkausgabe, Artemisverlag, Zürich) was near to completion, and Hermann Gmelin achieved a momentous task by a new translation in verse of Dante's *Göttliche Komödie.* The same devotion to the significance of literature for life was characteristic of Ernst Robert Curtius' *Kritische Essays zur Europäischen Literatur.* A second volume of prose was added to the collected works of Hugo von Hofmannsthal (*Gesammelte Werke*). Robert Boehringer, heir to George's papers, completed, on the basis of this authentic material, an authoritative account (*Mein Bild von Stefan George*).

The debate among theologians was enriched by Urs von Balthasar's book on *Karl Barth.* Josef Pieper proved a master of style and insight in an essay on Goethe's art of silence (*Uber das Schweigen Goethes*) and a philosophy of history in terms of an eschatology of hope (*Uber das Ende der Zeit*). The Protestant theologian Helmut Thielicke joined in the struggle beyond nihilism by a vigorous criticism of modern sceptics in philosophy, literature and law (*Der Nihilismus*). Even among more specialized scholars the philosophic issue was of primary significance; for example, in Helmut Coing's search into the foundations of law (*Grundzüge der Rechtsphilosophie*); in V. Achter's inquiry into the origins of punishment (*Geburt der Strafe*); in Victor von Weizsaecker's *Diesseits und Jenseits der Medizin,* where the author, through the medium of psychiatry and sociology, tackled problems decisive for modern man; and in A. E. Jensen's *Mythos und Kult bei Naturvölkern,* which was an ethnological contribution of general importance to the study of religion. Friedrich Oetinger made a forward-looking proposal for political education conceived as partnership among citizens in his *Wendepunkt der Politischen Erziehung.*

(AR. B.)

Germany.

A country of central Europe, Germany is bounded north by the North sea, Denmark and the Baltic sea, east by Poland, south by Czechoslovakia, Austria and Switzerland and west by France, Luxembourg, Belgium and the Netherlands. According to a declaration signed in Berlin on June 5, 1945, the country was under the supreme authority of the four Allied powers—the United States, Great Britain, the U.S.S.R. and France—and divided into the four following zones together with Berlin (*q.v.*):

Zones	Area (sq. mi.)	Population (1939 census)	(1946 census)
British	37,723	19,785,500	22,344,900
United States	41,506	14,257,600	17,174,400
French	15,405*	6,088,900	5,004,000*
Soviet	41,623	15,157,100	17,332,900
Berlin	344	4,321,500	3,179,200
Total	136,601†	59,610,600	65,035,400

*Excluding the Saar (area 734 sq.mi.; pop. 874,400).

†Including some small German frontier areas which, as agreed upon under the six-power agreement of March 26, 1949, were taken over by Belgium, Luxembourg, the Netherlands and the Saar respectively (total area, 52.1 sq.mi.; total pop., c. 13,500).

Before the *Anschluss* of Austria the area of Germany was 181,742 sq.mi. with a population (1939 census) of 69,317,000. The British, soviet and U.S. zones contained larger populations than in 1939; by 1946 the zonal increases were: British zone 12.9%, soviet 14.4%, U.S. 20.5%. The additional inhabitants were mainly Germans evacuated or transferred from Poland and Czechoslovakia. Only the population of the French zone was less (3.5%) than in 1938. Language (1946 est.): German with small admixture of Lusatian (260,000 in Kottbus-Bautzen area), Polish (150,000, mainly in Westphalia) and Danish (17,000). Religion (1938 est.): Protestant 62.7%; Roman Catholic 32.5%; Jewish 0.7%; others 4.1%. Chief cities (first figure, 1939 census; second, 1946 census): Berlin (4,332,242; 3,179,200); Hamburg (1,711,877; 1,406,158); Munich (829,318; 738,018); Cologne (772,221; 489,812); Leipzig (707,365; 608,111); Essen (666,743; 520,592); Dresden (630,216; 463,032); Frankfurt-on-Main (553,464; 389,097); Düsseldorf (541,410; 421,506); Dortmund (542,261; 436,198); Hanover (470,950; 347,040).

During the year 1951 Germany remained partitioned into two states with a special provisional regime for Berlin.

Western Germany.—Area, 94,634 sq.mi. Pop. (Sept. 13, 1950, census): 47,557,926 (including 25,259,619 women) which indicated an increase of 3,034,626 since Oct. 29, 1946. Capital: Bonn (pop., Dec. 1949 est., 110,000). President of the German Federal Republic: Theodor Heuss; federal chancellor: Konrad Adenauer (*q.v.*). Allied high commissioners: British, Sir Ivone Kirkpatrick; French, André François-Poncet; U.S., John J. McCloy. Allied commanders in chief in western Germany (Dec. 31, 1951): British, Gen. Sir John Harding; U.S., Lieut. Gen. Manton S. Eddy; French, Lieut. Gen. Roger Noiret.

Eastern Germany.—Capital: Berlin-Pankow. President of the German Democratic Republic: Wilhelm Pieck; prime minister: Otto Grotewohl. Soviet Control commission: Army Gen. Vasili Ivanovitch Chuikov, chairman; Ivan Fedorovich Semichastnov, deputy chairman; Vladimir Semenovich Semenov, political adviser.

History.—*International.*—The unification of Germany was still the goal for both eastern and western Germans, but no great advance in that direction was made during 1951. Grotewohl's letter of Nov. 20, 1950, proposing conversations between the two governments on the formation of an all-German constituent council, was answered by Adenauer in a broadcast on Jan. 15, 1951, in which he laid down conditions for free, secret, direct and truly democratic all-German elections. In reply to another appeal for union the federal chancellor reminded the German Democratic Republic (Feb. 10) that it had signed away a quarter of the pre-1938 territory of Germany, that since 1945 about 200,000 eastern Germans had been placed in concentration camps and 37,000 deported to the U.S.S.R. Adenauer also suggested that the release of political prisoners would be one proof of the soviet zone's sincerity. (Pieck announced the liberation of 20,000 prisoners in September, but by December it was still unclear how many of these were political prisoners or how many had been released.)

From March onward came numerous proposals and counter-proposals both from Pankow and Bonn. Then, on Sept. 27, Adenauer presented in the *bundestag* a program including the following points: in any really free elections all parties should be able to submit candidates throughout the whole country; there should be no travel restrictions from the Federal Republic into the soviet zone and into greater Berlin for at least three months before elections; freedom of political meeting and personal freedom should be guaranteed as well as international protection and supervision.

HAMBURG BUS DEPOT opened in 1951, reported to be the largest in Germany

About the same time, the Allied High commission agreed to bring the question of all-German elections before the United Nations and to request a preliminary U.N. investigation on political conditions in Germany, as to whether democratic elections could be held—a request rejected by eastern Germans as "foreign interference."

As the issue of all-German elections unfolded, it became clear that the Democratic Republic was concerned not with elections but with discussions which could drag on interminably. For the main Communist objective was to prevent western Germany from becoming an integral part of any western European community and especially to prevent its making any military contribution to the North Atlantic Treaty organization.

The Communists also wanted to discuss a German peace treaty and the withdrawal of Allied troops. The Social Democrats proposed on Sept. 25 that the federal parliament should sponsor all-German elections under international control and that elections throughout Berlin should be the first step toward achieving German unity. To a similar suggestion made earlier by the mayor of west Berlin, Ernst Reuter, Grotewohl replied that he was not interested in "parish elections."

At their Washington conference the three foreign ministers stated on Sept. 14 that their aim was "a democratic Germany, on the basis of equality, in a continental European community." Agreement along these lines was reached in Paris, on Nov. 22, between Adenauer and the foreign ministers of the United States, Great Britain and France. Four gains were registered by western Germany at that conference: complete freedom of decision for the German government; the end of economic restrictions; German control of foreign trade; and an assurance that Germany would be heard whenever its interests were involved. Many Germans were, however, sceptical because the agreement and German participation in a European army were to become effective simultaneously.

On this latter issue of rearming, differences existed not only abroad but also among the Germans themselves. The Social Democrats objected to the Pleven plan—or any other—which did not first guarantee full security to the Federal Republic against possible soviet aggression. Objections also came from neutralists like Martin Niemöller who said at Frankfurt on April 17 that Germany could best serve the cause of peace by becoming a buffer state between east and west. There was also the Emergency Committee to Save European Peace founded in November by Frau Helene Wessel, chairman of the Zentrum (Catholic) party, and counting among its leaders Gustav Heinemann, chairman of the Evangelical Church synod and former federal minister of the interior, who were opposed to German rearmament.

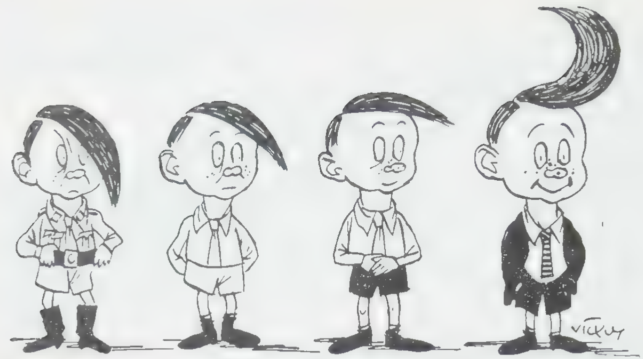
During the year the state of war between the Federal Republic and many other states was officially ended: in the United States a proclamation was issued by the president on Oct. 24, after a resolution to that effect had been adopted by the congress; with the United Kingdom this was announced on July 9 by a notice published in the *London Gazette*.

Chancellor Adenauer (also officially foreign minister since March 15) visited Paris to sign the Schuman plan (April 18) and again to sign the agreement on the new status of the Federal Republic (Nov. 22). He was in Rome from June 14 to 20 and visited London from Dec. 3 to 8.

On March 6 the Federal Republic accepted in principle responsibility for Germany's prewar and postwar debts estimated at 19,000,000,000 DM. ($4,500,000,000). Jewish claims for restitution were dealt with on Sept. 27 in a statement which promised the rapid implementation of legislation, but also stressed the limits of German capacity to pay in view of other victims' claims. The federal government expressed its readiness to discuss the issue with the representatives of world Jewry and the Israeli government.

While the Federal Republic strengthened its contacts with the west, the Democratic Republic did likewise with the east. President Pieck paid an official visit to Prague, Czech., on Oct. 23 and Pres. Bolesław Bierut of Poland visited Berlin-Pankow on April 22. Eastern and western German governments continued to be sharply divided over the frontier with Poland. The former accepted the Oder-Neisse line as the "final peace frontier" in a treaty signed at Frankfurt-on-Oder on Jan. 27. Chancellor Adenauer on the other hand declared in Berlin on Oct. 6, "For us, the territory east of the Oder-Neisse line belongs to Germany." The western Allies' point of view was that the frontiers of Germany would be finally settled by some future peace treaty.

Federal Republic.—Political battles were fought mainly about international rather than internal issues during the year: Western Germany's rearming and the Schuman and Pleven plans, with the Saar problem cropping up periodically in leading de-



"RE-EDUCATION," a cartoon by Vicky of the *News Chronicle* (London), published in 1951

bates between the government and the opposition. The Social Democrats continued to press for a new federal election (not due until 1953) because Adenauer's party, the Christian Democratic union, lost heavily in *Länder* elections and because the rearming was such a vital issue that the electorate should be consulted before any action was taken.

A special feature of the local elections in Lower Saxony, Schleswig-Holstein and Bremen, apart from the defeat of the Communists, was the increase in the support of the neonazis, the Socialist Reich party. One of its outstanding members, Otto Ernst Remer, who in the July 20, 1944, *Putsch* played an important part on the nazi side, was sentenced in May to four months' imprisonment for slandering the government. The federal government announced in November that it would seek a juridical ruling from the supreme court on banning both the Communist and neonazi parties.

The supreme court, whose function was to interpret the constitution and decide issues between federal and *Land* authorities, was officially constituted at Karlsruhe on Sept. 28. In its first case it decided in favour of a plebiscite on the creation of a southwest state out of the existing states of South Baden, Württemberg-Baden and Württemberg-Hohenzollern. Voting took place on Dec. 9. Rather less than 60% of the registered electors voted and only the South Badener provided a majority against the plan; 69.8% voted for a southwest state and 30.2% for the reconstruction of the former *Länder* of Baden and Württemberg.

One of the outstanding struggles in industry had been over *Mitbestimmung* (co-partnership) of employers and employees. This system was introduced into the coal, iron and steel industries of the Ruhr by the British occupation authorities and, by a law passed on April 11, it would be continued there. But important details as to the form of workers' representation on various committees had still to be agreed on. Meanwhile, the German trade union movement (Deutscher Gewerkschaftsbund or D.G.B.) demanded that the system be extended to other industries; *e.g.,* chemicals. Throughout the year there was only one big strike, that of the metal workers in Hesse for higher wages (Aug. 27 to Sept. 24).

Little progress was made toward a satisfactory agreement between the federal and *Länder* governments for equalizing of burdens or for the implementation of a six-year plan for resettling the 9,000,000 refugees concentrated mainly in Schleswig-Holstein and Bavaria.

Allied plans for decentralizing the iron and steel industries and for breaking up the chemical trust (Interessen-Gemeinschaft Farbenindustrie or I.G.F.) were announced on Aug. 24. A law depriving the former German owners of the legal right and title to assets abroad, thereby confirming the Allied use made of them for reparations and other claims, was promulgated on Sept. 5.

The federal budget for 1950 closed with a deficit of 256,800,000 DM. For the first six months of the financial year 1951, receipts from the ordinary and extraordinary budgets were 13,100,000 DM. less than expenditure. Germans attributed these deficits mainly to the heavy occupation costs and mandatory expenses. For the fiscal year 1951–52 these were fixed by the Allies at 6,595,000,000 DM. (1,132,000,000 DM. more than the previous year). German demands that these charges should be reduced and converted into security costs for the upkeep of Allied forces stationed in the Federal Republic and possibly later for meeting the costs of any German contingent in a European army were under consideration. The unofficial Allied estimate of 13,000,000,000 DM. as the Federal Republic's contribution for the first year of rearming was condemned as far too high by German experts. But it represented only 11% of the calculated national production for 1952, and Great Britain and France were themselves paying somewhat higher percentages for their rearming.

Western Germany received from the E.C.A. funds, from 1948 to Sept. 30, 1951, $1,317,284,000. Of this, 50% went into industry in the form of machinery and machine tools and raw materials. Most of the rest went to improve agriculture. (The 1951 harvest was a record for postwar years.) From G.A.R.I.O.A. (Government Appropriation and Releases in Aid of Occupied Areas) funds $80,340,116 was received in 1950–51. The grand total of U.S. aid amounted to about $3,500,000,000 from 1945.

Whereas in the spring the Federal Republic had an adverse balance with the European Payments union, this was later corrected through the increase of exports and restricted imports. For October the monthly surplus in trade balance was 77,000,000 DM.: exports were 1,260,000,000 DM. and imports 1,183,000,000 DM. Ludwig Erhard, the federal minister for economic affairs, announced in parliament on Oct. 11 that the German dollar reserves amounted to $950,000,000.

Production, though by Oct. 1951 only 91% per head of the 1938 figure, was phenomenal as compared with 1946 (26%). Coal was still a great problem. Daily extraction needed to be raised from 375,000 tons to 410,000 tons to be sufficient for all needs. Conditions of ownership in the industry, more houses for miners, a capital investment program to modernize equipment and the retention of the existing coal-marketing system (which the western powers rejected) were among the essential issues that the government was considering in co-operation with the German Coal board and the trade unions.

In 1950 and 1951 more than 700,000 dwellings, with accommodation for 2,500,000 persons were built.

German Democratic Republic.—Differing economic structures in western and eastern Germany presented different problems. Whereas the western republic was predominantly industrial, the eastern was mainly agricultural, but striving to become an industrial state. In 1950, western Germany imported foodstuffs to a value of 5,000,000,000 DM., whereas similar imports by eastern Germany were not 5% of that value. Production, especially in heavy industry, was the main concern of the five-year plan, 1951–55. This envisaged an annual pig iron production of 1,250,000 tons and of 3,000,000 tons of crude steel. Foreign trade increased after 1949, when it amounted to 700,000,000 DM. (East) (exports and imports, without reparations), to about 1,200,000,000 DM. (East) in 1950 and was expected to be still higher in 1951. But 90% of this trade was with the Soviet Union and the people's democracies (the U.S.S.R. led with 50%, then came Poland and Czechoslovakia). In fact, rapid strides were made toward incorporating eastern Germany into the economic bloc of eastern Europe. A five-year trade treaty extending to 1955 was signed in Moscow in September.

Eastern Germany was still dependent, however, upon western

Germany for about 50% of its machinery and raw materials, so that interzonal trade was essential for the success of its five-year plan. Yet the trade agreement signed in July was not in force by December because the eastern German government refused to remove hindrances to traffic on the international highway between west Berlin and western Germany. This agreement was for an exchange of goods valued at about 500,000,000 DM.—manufactured goods from the west and agricultural products from the east. Illegal interzonal trade was such a menace that any west Berlin firms caught engaging in it were threatened with the stoppage of E.C.A. aid. In October, in a single case before a west Berlin court, 15,000 tons of steel valued at 9,000,000 DM. were involved.

The ownership and management of industrial concerns were further concentrated in the hands of the Sowjet Aktien Gesellschaften (S.A.G.)—entered in the trade register as owned by the ministry of foreign trade in Moscow—and of the eastern German nationalized industries, the so-called *volkseigene Betriebe.* By Nov. 1951 only 26% were in private hands, and of these 2% were under trusteeship. The S.A.G. owned 66% of the chemical industry, 95% of gasoline and diesel oil, 36% of brown coal and 45% of the electrical industries.

Production in April was said to be 75% (in volume) of that for 1936. But some idea of the outlook for the individual might be gathered from the fact that Walter Ulbricht, the deputy premier and general secretary of the Sozialistische (Communist) Einheitspartei, in dealing with the five-year plan promised that in 1955 it would be possible to give every person in the soviet zone 1.24 pairs of leather shoes—a rise of 376% over 1950 supplies.

Political activities continued to concentrate upon criticism of the west. A White Book on *American-English Policy of Intervention in Western Germany and the Revival of German Imperialism* was published on Aug. 11. Party organizations were still being purged of all unreliable elements and a sharp watch was being kept on all publications. In November most of the Russian staff of the soviet-controlled newspaper *Tägliche Rundschau* was replaced as were also some of the chief German editors of the soviet-licensed press agency, A.D.N. (Allgemeiner Deutscher Nachrichtendienst). Literature was being carefully scrutinized by a new branch of the A.D.N. Every new book was judged from the standpoint of whether it fulfilled its "intended social function." Publishing firms were controlled, after some of their publications had been withdrawn because they were too "objective." (*See* also EUROPEAN UNION; NORTH ATLANTIC TREATY ORGANIZATION; REFUGEES; UNION OF SOVIET SOCIALIST REPUBLICS.) (J. E. WI.)

Education.—*Western Germany.*—Schools (May 1950): elementary 28,400, pupils 6,291,000, teachers 130,400; higher elementary 579, pupils 196,067, teachers 6,011; secondary 1,488, pupils 620,488, teachers 28,872; universities 16, students 74,258, professors and lecturers 3,450; Roman Catholic theological and philosophical faculties 10, students 3,778; technical colleges 7, students 21,640. The Free university in western Berlin had 2,000 students in 1951.

Eastern Germany.—Universities 5, students (1948) 12,269, teaching staff 671. In addition there was the University of Berlin with, in 1948, 5,634 students and 157 professors and lecturers.

Finance and Banking.—*Western Germany.*—Budget: (1950–51 est.) balanced at 13,013,600,000 DM., including occupation costs of 4,598,400,000 DM.; (1951–52 est.) balanced at 17,260,000,000 DM., including occupation costs of 7,300,000,000 DM. National income (1950): 73,400,000,000 DM. Bank deposits (May 1951): 8,200,000,000 DM. Currency circulation (June 1951): 7,550,000,000 DM. Monetary unit: deutschemark, created by the currency reform of June 20, 1948; official exchange rate (Dec. 1951): U.S. $1 = 4.20 DM.

Eastern Germany.—Budget (1950 est.): balanced at 13,500,000,000 DM.(East), including occupation costs estimated at 6,100,000,000 DM.-(East). Currency circulation (Oct. 1950): 4,169,000,000 DM.(East). Although theoretically at par with the western mark, the free exchange rate in Berlin was (Dec. 1951): 1 DM. = 5.60 DM.(East).

Foreign Trade.—Western German imports in 1951 doubled in value in comparison with 1949. As exports increased more than threefold, the adverse balance of trade was wiped out. Imports (1949) 7,332,000,000 DM., exports (1949) 3,804,000,000 DM.; imports (1951) 14,400,000,000 DM., exports (1951) 13,200,000,000 DM. Eastern German imports and exports were together estimated at 700,000,000 DM.(East) in 1949 and at 1,200,000,000 DM. (East) in 1950.

GERMAN WOMEN stencilling plastic balloons with the Polish word for "freedom" in 1951. About 2,000,000 such propaganda messages were launched from Munich to drift over Poland and Czechoslovakia in an international anti-communist campaign titled "Winds of Freedom"

Transport and Communications.—Railways (Dec. 1950): western Germany 30,734 km., eastern Germany 14,400 km. Railway traffic (western Germany, monthly average, 1950): 2,443,000,000 passenger-kilometres; goods 4,007,000,000 ton-kilometres; goods transported 19,360,000 metric tons. Roads (Dec. 1950): western Germany 127,621 km.; eastern Germany 54,900 km. Motor vehicles licensed (western Germany, Dec. 1950): 2,155,355, including 987,583 motorcycles. Cargo in western German ports in external trade (monthly average, May 1951): loaded 820,000 metric tons, unloaded 1,578,000 metric tons. Telephones (Jan. 1950): western Germany 2,112,728; eastern Germany about 300,000.

Agriculture.—*Western Germany without the Saar.*—Main crops (metric tons, 1951): wheat 2,949,000; rye 3,034,000; barley 1,688,000; oats 2,835,000; potatoes 24,103,000. Livestock (Sept. 1950): cattle 10,883,000; pigs 9,698,000; goats (includes the Saar) 1,445,000; sheep 2,020,000; horses 1,629,000; poultry 39,957,000. Food production (metric tons, 1951 est.): meat 1,212,000; butter 276,000; sugar, raw 1,085,000; milk 156,000,000 hl.

Eastern Germany.—Main crops (metric tons, 1950): wheat 815,000; rye 2,130,000; barley 515,000; oats 1,140,000; potatoes (1951) 10,890,000. Livestock (Sept. 1950): cattle 3,310,000; pigs 4,310,000; goats 1,644,000; sheep 900,000; horses 695,000; poultry 19,902,000. Food production: milk (1947) 22,220,000 hl.; butter (1949) 64,000 metric tons; meat (1949) 419,000 metric tons; sugar, raw (1951) 775,000 metric tons.

Industry.—*Western Germany.*—The index of industrial production, which stood at 89 in 1949 (1936 = 100), rose to 113 in 1950 and reached 148 in 1951. The number of persons employed in industry in Sept. 1951 was 14,884,500, but there were still 1,234,900 unemployed. Chief items of production (metric tons, 1951 est.): coal 118,900,000; lignite 80,000,000; electricity 50,400,000,000 kw.hr.; gas 10,200,000,000 cu.m.; crude oil 1,300,000; pig iron 10,300,000; steel 13,500,000; cement 12,000,000; cotton yarn 312,000; woven cotton fabrics 210,000; wool yarn 96,000; rayon filament yarn 55,000; rayon staple fibre 120,000. Motorcars produced (1951) 312,000; trucks 132,000.

Eastern Germany.—Eastern Germany produced in 1951 about 2,500,000 metric tons of coal, about 900,000 tons of crude steel and about 100,000,000 tons of lignite.

Gibraltar. A British fortress colony, Gibraltar is situated on a peninsula from the southwest coast of Spain covering the western outlet of the Mediterranean. Area: 2.12 sq.mi. (including reclamation). Pop., excluding armed forces:

(mid-1950 est.) 25,000. Governor in 1951, Lieut. Gen. Sir Kenneth Anderson.

History.—The new legislative council, which had been opened by the duke of Edinburgh on Nov. 2, 1950, got under way in 1951 and ran into no trouble until the autumn session when it was presented with bills introducing income tax and workmen's compensation, neither of which were popular. On April 27 an Admiralty supply vessel, the "Bedenham," blew up in the harbour; ten civilians were killed and extensive, though largely superficial, damage was done to the town, particularly to Government house and the secretariat. The big flat-building scheme continued to make good progress: the first part of it was completed by the end of the year. On Aug. 4 the Spanish government organized the first annual "Gibraltar day" to impress upon Spanish youth the continuing tragedy, as the Spaniards saw it, of occupation of the fortress by foreigners.

Education.—Primary and infant schools 15 (1,638 pupils), secondary schools 6 (1,013 pupils).

Finance and Trade.—Currency: pound sterling with local notes. Budget (1951 est.): revenue £819,000; expenditure (including development) £1,240,000. Foreign trade: imports (1950) £5,000,000; exports (including re-exports) £634,000. (K. G. B.)

Glass. In 1951 the U.S. glass industry continued to be prosperous. Production reached new high levels in several fields. Enough pieces of glassware were made to supply every person in the country with 115 bottles and jars, more than 4 automatically-made tumblers and 3 pieces of household glassware. Competition by foreign producers of handmade glass tableware began to be felt. Plastic substitutes for tumblers and small dishes appeared in larger numbers than formerly.

Flat-glass production ran 8% ahead of 1950, which was a record year. Automobiles required the major portion of the polished plate and a great deal of the window glass, while an expanded construction program accounted for further increases in consumption. The flat-glass industry made progress in the improvement of glass quality and in techniques such as the bending of polished plate.

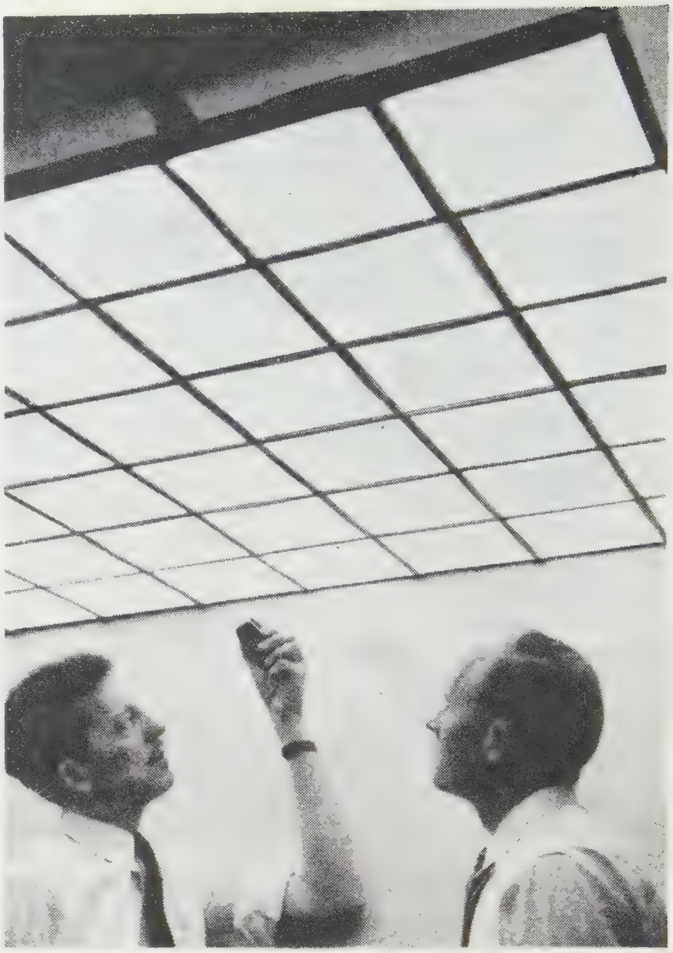
Certain of the manufacturers of flat glass established plants for making glass fibres. The combination of glass fibres and a plastic into a reenforced body with a tremendous ratio of strength to weight emerged from the experimental stage. Increasing production and widespread application of this new engineering material was expected. Numerous patents disclosing new methods of making and using glass fibres were issued during the year.

The extent of mechanization in the U.S. glass industry was emphasized by the fact that ware selling for $1,000,000,000 was produced in 1951 by 130,000 workers, earning $400,000,000.

Published studies of container-glass compositions showed that over a period of ten years the soda content diminished 0.5% to an average 15.5%, lime (including magnesia) rose as much to an average 10.5%, silica remained at about 72.5%. Among the minor constituents, fluorine appeared in place of some of the boron oxide.

Raw materials were in good supply, with the exception of selenium and cobalt oxide, both essential for making colourless glasses in tanks.

Corning Glass works celebrated its 100th anniversary by opening to the residents of Corning, N.Y., and to the public its Glass centre, a spacious building of modern design housing a museum, a library, an auditorium, recreation rooms and an actual factory, where visitors might sit to watch the blowing of fine glassware.



PHOSPHOR CEILING PANELS, a new form of lighting announced by Sylvania Electric Products Inc. in 1951. The panels consisted of sheets of glass coated with thin layers of phosphor and metal; they were plugged in like ordinary lamps and gave a dim but even glow

The International Commission on Glass met in Paris, Fr., in June, with members present representing technical societies of 11 nations, including the U.S. The societies were co-operating on testing methods, standards and definitions of terms. (*See* also CERAMIC PRODUCTS.) (S. R. S.)

Gliding. In the United States on Dec. 30, 1950, William S. Ivans, Jr., flying a 1–23 reached an absolute altitude record of 42,000 ft. and an altitude gained record of 32,000 ft. On March 5, 1951, Robert Symons and a passenger soared to an absolute altitude record for multiplace gliders of 38,305 ft., in a Pratt Read. On Aug. 5, 1951, Richard H. Johnson set a distance record of 535.169 mi. flying his RJ 5. In France on May 5, 1951, René Fonteillis flew a passenger in a Kranich at an average speed of 41 m.p.h. for a new record.

Three pilots earned the newest Fédération Aéronautique Internationale award, the Diamond C: John Robinson of the U.S., number 1; Gerard Pierre of France, number 2; and J. Shelly Charles of the U.S., number 3.

New British national records were made in England by A. W. Bedford on May 2, 1951, flying an Olympia. He flew 257 mi. to a predetermined destination to both a new distance and a new goal record. P. A. Wills set a goal and return record of 160 mi. on June 3, 1951, with his Wiehe. The British National Glider contest was held at Great Hucklow, July 21–29. There were 34 entries under two categories—24 of the entries were teams and 10 of the entries were individuals. The team championship was won by A. Goodhart and N. Goodhart flying a Meise and the individual championship was earned by R. C. Forbes in a Sky.

The French women's distance record was broken on May 11, 1951, when Mme. M. Choisnet-Gohard flew the Air 100 for 235 mi.

Western Germany was again given permission to fly gliders and held its first postwar glider meeting on Aug. 25 and 26 at the Wasserkuppe. An estimated 30,000 people attended the demonstration by 15 gliders, most of which were home built.

The 18th National Soaring contest of the Soaring Society of America was held at Elmira, N.Y., from July 4 to 12, 1951. Thirty-five pilots participated and flew 7,093 mi. The longest flight was 363 mi. by Richard H. Johnson, who earned the title of national soaring champion for the second consecutive time.

Ten pilots assembled at Odessa, Tex., for a soaring expedition. In the following five days the average distance per flight was 254.7 mi. Besides the international distance record already mentioned, W. Wiberg, on Aug. 5, 1951, flew his LK to a predetermined destination 332.903 mi. away for a new national record.

Several new gliders were designed and built. The Institute of Gliding in Poland created the I.S. 4 Jastrzab, an aerobatic glider with excellent stability characteristics, and the I.S. 6X Nietoperz, a tailless glider which was flown successfully. Fritz Raab of western Germany produced the Doppelraab, designed to serve as an inexpensive, simple intermediate two-place sailplane suitable for all aspects of glider training.

In the United States two new designs appeared—a sailplane by Kemp Trager with a pressurized cabin for high-altitude flight, and a modification of the RJ 5. (B. Sk.)

Gold.

The most notable gold development in 1951 was the reversal in international monetary gold movements. From July through Dec. 1951 the United States bought from foreign countries as a whole $1,000,000,000 worth of gold, as against net sales of $937,000,000 in the first half of the year and of $2.800,000,000 from Oct. 1949, after the world-wide currency readjustments, through June 1951. From the beginning of 1946 to the end of Sept. 1949 the United States had bought $5.400,000,000 worth of foreign-owned gold, despite large-scale U.S. financial aid (the British loan, Export-Import Bank of Washington loans, European Recovery program, etc.). These gold movements and their geographical distribution may be seen from Table I.

Table I.—*United States Gold Purchases from Other Countries*

(In millions of dollars; negative figures indicate net sales by the United States)

	Total	United Kingdom and overseas sterling area	Continental Europe*	Latin America	Asia and Oceania	All other countries†

*Almost entirely western European countries participating in the European Recovery program. †Including Canada. n.a.—not available.

Note: For more detailed and more recent data, see the *Federal Reserve Bulletin.*

The transactions in monetary gold between the United States and other countries are in turn reflected in changes in official monetary reserves; the latter also include that portion of current gold production which is neither absorbed by the arts and industry nor acquired by private hoarders. The monetary gold stock of the United States, which had declined from $24,700,000,000 in Sept. 1949 to $21,900,000,000 in June 1951, stood at $22,900,000,000 at the end of 1951. On the other hand, other countries as a whole (excluding the U.S.S.R.), whose official gold holdings increased from $9,000,000,000 in Sept. 1949 to $12,300,000,000 in June 1951, experienced a decline in the second half of 1951. The gold losses of the United Kingdom were particularly large and reflected the serious setback to the measure of internal stability and external viability that had been attained by early 1951. In Sept. 1951 total foreign official gold holdings amounted to $12,100,000,000, as against $12,300,000,000 three months earlier; they had stood at $13,700,000,000 at the end of 1945.

Together with the gold holdings of the International Monetary fund (approximately $1,500,000,000) and the Bank for International Settlements ($144,000,000), the world's monetary gold reserves (excluding the U.S.S.R.) in Sept. 1951 amounted to $36,000,000,000.

In Sept. 1951 the United States held 61% of the world monetary gold stock.

Instead of flowing almost entirely into official monetary reserves, as it had until mid-1950 and the outbreak of the Korean war, a considerable portion of current world gold production found its way in 1951 into private hoards. Some gold was also released for nonmonetary uses from official holdings. Largely because of the increased gold supply, and perhaps also because the hoarding demand for gold was less insistent at the close of 1951 than at its beginning, the premium prices apparently fell from $44 per fine ounce in Jan. 1951 to about $38.75 in December. However, at no time after the outbreak of the Korean war did the free-market gold price reach the high of $55 per ounce that had been reported in May 1949. By mid-1950 the price was approximately at $36, or very close to the United States treasury price. The gold premiums reflect political and financial uncertainties in those parts of the world where gold is traded on free and black markets.

In Sept. 1951 the International Monetary fund reaffirmed its belief that gold should be concentrated in official reserves and not allowed to leak away into private hoards. However, the fund found it impracticable to require all its member countries, in widely different situations, to apply uniform controls. Accordingly, while it urged the members to support the economic principles of its established gold policy, it left to its members—subject to the limitations imposed by the articles of agreement—the practical operating decisions to ensure that gold should be held to the maximum extent practicable in official reserves rather than be allowed to go into private hoards. (M. A. K.)

World Production.—So far as data were available at the close of 1951, Table II shows the outputs of the major producing countries, as reported by the U.S. bureau of mines. However, the world totals were uncertain, as only estimates could be used for the output of the U.S.S.R.

Table II.—*World Production of Gold (Refinery Production)*

(In thousands of fine ounces)

	1944	1945	1946	1947	1948	1949	1950
United States	1,022	929	1,462	2,165	2,025	1,922	2,289
Canada	2,923	2,697	2,833	3,070	3,530	4,124	4,431
Mexico	509	419	421	465	368	406	408

India	188	168	132	172	180	161	197
Belgian Congo	364	341	331	301	300	334	339
Gold Coast	534	475	587	558	672	677	680?
Southern Rhodesia	593	568	545	520	514	528	511
South Africa	12,280	12,225	11,927	11,200	11,584	11,705	11,664
Australia	657	657	824	938	886	889	850
Total (est.)	26,200	26,100	27,600	28,900	29,800	30,800	31,600

United States.—While domestic mine output in 1950 reached its highest level since it was cut back by war restrictions, it still fell somewhat short of the halfway mark as compared with the 1940 high of 4,869,949 oz. The monthly figures for the first three quarters of 1951 were down to about the 1949 level, totalling 1,494,073 oz. for the nine months.

Canada.—Gold production increased from 4,123,518 oz. in 1949 to 4,448,396 oz. in 1950, of which 573,873 oz. came from base metal ores and 3,874,523 oz. from gold mines and placers.

South Africa.—The world's major gold producer dropped in output from 11,705,048 oz. in 1949 to 11,663,713 oz. in 1950 and 7,673,870 oz. in the first eight months of 1951. (*See* also EXCHANGE CONTROL AND EXCHANGE RATES; MINERAL AND METAL PRODUCTION AND PRICES.) (G. A. Ro.)

Gold Coast: *see* BRITISH WEST AFRICA.

Golf.

During 1951, Ben Hogan, winner of the 1948 and 1950 United States open championships, became one of the few men in history to take the championship three times. At Oakland Hills, Detroit, Mich., Hogan was trailing by 5 strokes at the end of 36 holes in the 72-hole test, but he finished with a 35–32–67, which he styled the best round of his career. His score was 287.

Only one other man, Clayton Heafner, who was runner-up with 289, was able to break 70 at Oakland Hills.

Dorothy Kirby, Atlanta, Ga., won the women's national amateur championship by defeating Claire Doran of Cleveland, O., 2 and 1, in the 36-hole final match in St. Paul, Minn. Miss Kirby had entered her first national at 13 years of age, and had twice finished as runner-up for the title.

Sam Snead of White Sulphur Springs, W.Va., scored his third victory in national professional championship play by running away from the field in the 1951 P.G.A. at Pittsburgh's (Pa.) Oakmont club.

Richard D. Chapman of Pinehurst, N.C., a relentless seeker after the British amateur championship for half of his 41 years, finally hit when he defeated his Walker cup compatriot, Charley Coe, in the final at Porthcawl, Wales.

Lloyd Mangrum, Niles, Ill., and Billy Maxwell, Odessa, Tex., also scored firsts. Maxwell won the national amateur championship in Bethlehem, Pa., and Mangrum, who had never attained either distinction before, led all professional money winners with $26,008, and also captured the Vardon scoring trophy with an average of 70.05 strokes per round for 104 rounds.

Aside from the competitive phase of the game, golf prospered in every section of the country, notably in the open championship at Detroit's Oakland Hills club, where a record attendance revenue of $70,000 was established. A gallery of 15,000, the largest single day audience in the 51-year history of the United States Golf association's classic, witnessed the final two rounds of the tournament. (C. Bt.)

United Kingdom and Europe.—M. Faulkner, who at Portrush, N.Ire., won the first British open championship to be played in Ireland, and the masters tournament at Wentworth, was the outstanding British golfer of 1951. His open victory would have been overwhelming but for a brave last round by A. Cerda. Of the other professionals J. Panton, who won the Vardon trophy, and C. H. Ward were the most consistent. The matchplay champion hit great distances and putted ruthlessly at Hoylake, Cheshire, in beating F. van Donck, T. H. Cotton, W. D. Smithers and, in the final, J. Adams, who won the Italian open a few days later. P. Thomson, a young Australian, returned a 62 at Oakdale and created a new record for major British tournaments.

The United States retained the Walker cup at Birkdale by 6–3. The match in which C. R. Coe was beaten by R. J. White was one of the greatest within memory. J. B. Carr defeated Frank Stranahan, and A. T. Kyle, with the aid of a stymie on the last green, beat W. P. Turnesa, the U.S. captain. In the Ryder cup match at Pinehurst, N.C., the British team was defeated by 9½–2½. A. Lees became the first British professional to win both his foursome, with Ward, and his single in the U.S. F. Daly halved his single and D. J. Rees was beaten only on the last green. Faulkner and Ward played against the greatest U.S. players, Sam Snead and Ben Hogan. The remainder were outclassed.

ROBERTO DE VICENZO of Argentina, winner of the Palm Beach round-robin tournament at New Rochelle, N.Y., shooting out of a sand bunker during the final round on June 10, 1951

The Amateur championship was played in Wales for the first time, at Porthcawl, Glamorgan. Most of the leading British players did not compete and although Carr again defeated Stranahan a U.S. victory was almost inevitable. R. D. Chapman in his third final overcame Coe by 5 and 4. For the last eight holes of the game he required only 26 strokes. G. P. Roberts won the English title at Hunstanton, Norfolk, defeating H. Bennett at the 39th. The women's championship was won by an Irish golfer, Mrs. P. G. MacCann, who beat F. Stephens by 4 and 3 at Broadstone. Later in the year Miss Stephens was a member of a British team which toured the Union of South Africa. In July six leading U.S. women professionals visited England and played in two events.

F. van Donck (Belgium) was the most successful European professional. In addition to the Silver King and North British tournaments he won the Dutch and Spanish opens and was runner-up to A. Pelissier (France) in the Belgian. Several U.S. Walker cup players appeared in the French amateur championship and R. W. Knowles (U.S.) defeated H. de Lamaze, the best European amateur, in the final.

The vicomtesse de Saint-Sauveur remained the most effective woman player in Europe.

During the summer representatives of the United States Golf association visited Great Britain to confer with the Rules of Golf committee of St. Andrews and uniformity of rules between the two countries was agreed upon. The most important changes, which became effective on Jan. 1, 1952, were the abolition of the stymie, revised definitions of putting surfaces and hazards, and reversion to the increased penalty of stroke and distance for out of bounds, lost and unplayable balls. In the autumn Francis Ouimet drove himself in at St. Andrews and became the first U.S. captain of the Royal and Ancient club. (P. A. W-T.)

Gonorrhoea: *see* VENEREAL DISEASES.

Government Departments and Bureaus, U. S.

The principal departments and bureaus of the U.S. government, and their chief executive officers as of Jan. 1, 1952, were:

Department or Bureau	Name	Post
Department of State	*Acheson, Dean G.	Secretary
	Webb, James E.	Under-Sec'y
	Bohlen, Charles E.	Counselor
	McFall, Jack K.	Asst. Sec'y
	Hickerson, John D.	Asst. Sec'y
	Miller, Edward G., Jr.	Asst. Sec'y
	Perkins, George W.	Asst. Sec'y
	Rusk, Dean	Asst. Sec'y
	McGhee, George C.	Asst. Sec'y
	Thorp, Willard L.	Asst. Sec'y
	Barrett, Edward W.	Asst. Sec'y
Department of the Treasury	*Snyder, John W.	Secretary
	Foley, Edward H., Jr.	Under-Sec'y
Office of the Comptroller of the Currency	Delano, Preston	Comptroller
Office of the Treasurer of the U.S.	Clark, Mrs. Georgia Neese	Treasurer
Bureau of Customs	Dow, Frank	Commissioner
Bureau of Internal Revenue	Dunlap, John B.	Commissioner
Bureau of Narcotics	Anslinger, Harry J.	Commissioner
Bureau of the Mint	Ross, Mrs. Nellie Tayloe	Director
U.S. Savings Bonds Division	Clark, Vernon L.	Nat'l Director
*U.S. Coast Guard	O'Niell, Merlin, Vice-Adm.	Commandant
Department of Defense	*Lovett, Robert A.	Secretary
Joint Chiefs of Staff	*Bradley, Omar N., Gen. of the Army	Chairman
	*Collins, J. Lawton, Gen.	
	*Fechteler, William M., Adm.	
	*Vandenberg, Hoyt S., Gen.	
Armed Forces Policy Council	*Lovett, Robert A.	Chairman
Munitions Board	Small, John D.	Chairman
Research and Development Board	Whitman, Walter G.	Chairman
Military Liaison Committee to the Atomic Energy Commission	LeBaron, Robert	Chairman
Department of the Army	*Pace, Frank, Jr.	Secretary
	Alexander, Archibald S.	Under-Sec'y
Chief of Staff	*Collins, J. Lawton, Gen.	Chief
Women's Army Corps	Hallaren, Mary A., Col.	Director
Department of the Navy	*Kimball, Dan A.	Secretary
	Whitehair, Francis P.	Under-Sec'y
Chief of Naval Operations	*Fechteler, William M., Adm.	Chief
Asst. Chief for Women, Bureau of Naval Personnel	Hancock, Joy B., Capt.	Asst. Chief for Women
*U.S. Marine Corps	Shepherd, Lemuel C., Jr., Gen.	Commandant
Women Marines	Towle, Katherine A., Col.	Director
Department of the Air Force	*Finletter, Thomas K.	Secretary
	Gilpatric, Roswell L.	Under-Sec'y
Chief of Staff	*Vandenberg, Hoyt S., Gen.	Chief
Women in the Air Force	Shelly, Mary Jo, Col.	Director
Department of Justice	*McGrath, J. Howard	Att'y-Gen.
Solicitor General	Perlman, Philip B.	Solic. Gen.
*Federal Bureau of Investigation	Hoover, J. Edgar	Director
Bureau of Prisons	Bennett, James V.	Director
Immigration and Naturalization Service	Mackey, Argyle R.	Commissioner

Great Britain & Northern Ireland, United Kingdom of.

An independent kingdom in northwestern Europe, the United Kingdom comprises the main island of Great Britain, with numerous smaller islands off the English and Scottish coasts, and the six northeastern counties of Ireland. It is a constitutional monarchy, with a king and parliament of two houses, the house of lords which on Nov. 13, 1951, consisted of 3 peers of the blood royal, 791 hereditary peers (21 dukes, 27 marquesses, 134 earls, 93 viscounts and 516 barons), 26 spiritual peers (2 archbishops and 24 bishops), 16 Scottish representative peers, a number of Irish representative peers (in 1951, 5; vacancies no longer filled) and 9 life peers who have held high judicial office; and the house of commons, numbering 625 members, elected by universal suffrage. Table I shows areas and populations of the component parts of the United Kingdom.

Language: English is almost universally spoken, but in Wales (according to the 1931 census) 3% of the population spoke Welsh only and 31% spoke both languages; in Scotland (1951 census) 2,652 spoke Gaelic only and 91,630 spoke both languages; in the Isle of Man 528 spoke English and Manx. Religion: Church of England (nominal membership 15,000,000, effective 5,500,000); Roman Catholic Church (England, Wales, Scotland and Northern Ireland: *c.* 3,500,000); Presbyterian Established Church in Scotland (1,600,000 in 1949); Church in Wales (est. 250,000); Methodists (1,500,000 in 1949); Jews (*c.* 400,000). King (1951): George VI (*q.v.*); prime ministers in 1951: Clement Attlee (*q.v.*) and (from Oct. 26) Winston Churchill (*q.v.*).

History.—*Political.*—The main event of 1951 was that the Labour government, returned to office in Feb. 1950 by a majority of only six, was replaced by a Conservative one in October with a majority of 17, thus indicating the continuance of the almost equal division of opinion among the electorate and a further period of political stalemate. Yet, ideas of what constitutes a working majority had to be revised in view of the experience of the two years 1950–51, which showed that a government could go on surviving by only a handful of votes in the house of commons, although the strain on its members was well-nigh intolerable. In debate, speeches on both sides were

obviously actuated by electoral considerations. There were many late sittings, and a number of all-night ones when the Conservatives resorted to the practice of challenging ministerial orders and regulations, but this tactic, although it kept Labour members on tenterhooks, did not bring defeat on any major issue, because in the last resort the Liberals—or some of them—could be counted on to save the government.

The Festival of Britain (May to October), designed to commemorate the great exhibition of 1851 and sponsored by Herbert Morrison, lord president of the council, seemed rather incongruous in the straitened circumstances of the time; but it did stimulate laudable effects of various kinds throughout the country, and if in London the South Bank exhibition was only moderately successful, the Battersea park pleasure gardens and fun fair made money and so pleased the large crowds that visited it that it was decided to continue it for five years. (*See* FAIRS AND EXHIBITIONS.)

The prime minister, Clement Attlee, took the unusual course of announcing in a broadcast on Sept. 19 that he had asked and obtained the consent of the king to a dissolution of parliament on Oct. 5, which would enable a general election to take place on Oct. 25. The king's illness, to which Attlee sympathetically referred in his broadcast, had taken a more serious turn. On Sept. 18 a bulletin issued by nine doctors stated that "structural changes" had developed in one of his lungs, and on Sept. 23 it was announced that he had undergone an operation for lung resection.

Public concern about the king's illness overclouded interest in the general election campaign, at any rate in its early stage. Actually there was a sense of unreality about the campaign. Foreign affairs, particularly the debacle in Iran, figured prominently in it at first, and the Conservatives complained of Labour insinuations that a Conservative government would be less likely to maintain peace either at home or abroad. Internally, the rising cost of living was the main issue. The Labour proposal for dealing with this was an overhaul of methods of food distribution, particularly fruit and vegetables, while the Conservatives promised economy in public expenditure. But neither side emphasized sufficiently the parlous economic condition of the country, doubtless because they thought that there were no votes to be got that way.

BRITISH HOUSEWIVES after the glum news that weekly meat rations had been cut to an all-time low of about 9½ cents worth per person. The cut in rations came early in 1951 after Argentine meat imports rose in price

The reasons which induced Attlee to decide upon an election can only be surmised, but some of them were fairly obvious. In its second term of office the government had been too much preoccupied with staving off defeat to do anything to retrieve its waning popularity. A shuffle of offices in January which transferred Aneurin Bevan from the ministry of health to that of labour and national service, and another in March which made Morrison foreign minister because of the failing health of Ernest Bevin, who held the sinecure office of lord privy seal until his death on April 14, did nothing to strengthen the government, and in foreign affairs seriously weakened it. On the home front the outlook was so grim that the government would have been courting a further decline in popularity had it chosen to struggle on. Rising prices, a shortage of coal, frequent cuts in electricity, traffic congestion on the railways were pointers to a winter of discontent; and beyond and above that there was a grave worsening of the country's economic position, a growing gap in sterling as well as in dollar payments. All things considered, it was thought that Attlee probably chose what was the least unfavourable moment for his party to go to the country. If the Labour party was not returned to office, its successors would be left to shoulder a pack of troubles and would have to take unpopular measures to readjust the burden. In the election, the votes recorded constituted 82% of the electorate.

Although the announcement of the election results did not have the dramatic fascination of 1950 when the issue swayed in the balance until the last moment, it did indicate early that the Conservatives would have only a narrow majority, and even for that they were indebted considerably to the Liberals, whose own representation in the new house of commons was reduced from nine to six. While their attitude to the new government was one of benevolent support, they declined to take part in it. Churchill's choice of ministers found many of them in unexpected positions. The cabinet contained a number of co-ordinators of departments, the prime minister himself taking on the ministry of defense, although it was understood that he intended to assume this double burden only for a limited period. There was a notable development in the Scottish office with the appointment of a minister of state, mainly resident in Scotland, to act as a deputy to the secretary of state. The change was part of the unionist proposals announced in Nov. 1949 to give Scotland closer administrative control of its own affairs. When the house met on Nov. 6 after hearing the king's speech delivered in the lords by the lord chancellor, Attlee said that the opposition would not indulge in factious criticism, but it was soon evident that many of his followers were not prepared to observe this ordinance.

Finance and Economics.—In large measure the economic history of the United Kingdom in 1951 was a commentary upon the extent to which an already taut economy was able to meet the growing demands upon it. As the year advanced, the signs of strain became increasingly pronounced and this was especially the case with the balance-of-payments position. In the first two quarters of the year there was a significant slowing down in the rate of increase in the gold and dollar reserves and in the third quarter a deficit was incurred of such a magnitude that it more than offset the gains during the previous six months.

The deterioration in the balance-of-payments position became especially marked in the autumn months. It was the immediate occasion of a confidential report prepared by the treasury during the period of the general election which pointed the way to the emergency measures taken by the new government in November. Churchill told the house of commons that the position which he had inherited was worse than he had expected, the deficit being higher than during the period immediately before the devaluation of sterling. In justifying the decision of the government to cut imports by £350,000,000, R. A. Butler, the chancellor of the exchequer, said: "If we do not find a means to correct the disparity between what we earn and what we buy we shall, in fact, be bankrupt."

In part the deterioration could be attributed to the movement of the terms of trade against Britain, particularly during the first half of the year. But the chief reason seemed to have been the failure to step up exports sufficiently to keep pace with the rising value of imports. Not only did the dollar gap widen, but the United Kingdom became the largest single debtor of the European Payments union.

Until the cuts in imports were announced, the man in the street was hardly affected by accumulating foreign exchange difficulties. His main concern was with inflation and rising prices at home. That inflation would increase in severity was common knowledge, and the budget proposals in April to limit purchasing power by increasing the income tax by sixpence and the tax on distributed profits from 30% to 50% as well as by requiring payments for certain parts of the national health service were designed to be anti-inflationary. Not only did the government's estimates of the deficit in the foreign trade account prove wide of the mark, however, but the budget provisions were inadequate to control inflation. It was largely as a result of growing discontent among the trade unions that in July Hugh Gaitskell, chancellor of the exchequer, announced the intention of the Labour government to introduce in the autumn measures to limit company dividends during the three-year rearmament period and to reimpose price controls over a wide range of goods.

Only in part could the rising prices be attributed to the higher cost of imports. As a report of the Economic Commission for Europe declared, cost inflation was rampant. The abandonment of the policy of restraint by the trade unions was accompanied by a spate of wage demands, and by the end of June wage rates had risen as much as the *Economic Survey* had expected them to rise during the whole of 1951. In the first nine months of the year about 9,230,500 workers were affected by increases in wages amounting to £3,983,900 a week, as compared with 3,278,500 workers and £603,000 in the corresponding period of 1950. (*See* also BUDGET, NATIONAL; EUROPEAN RECOVERY PROGRAM; INTERNATIONAL TRADE.)

Industrial.—The performance of British industry throughout the year also bore out the verdict that the British economy was suffering from severe strain. The rate of increase in production was appreciably lower than in 1950, and labour shortage became a major industrial problem. The aggregate loss of working days during the first nine months of the year as a result of industrial disputes, although comparatively low, was higher than in the corresponding period of 1950. The number engaged in civil employment, however, was the highest in the history of the country, and toward the end of the year the number of unemployed was only about half the number of vacancies. The defense industries, notably engineering, were affected by the shortage of skilled workers. By the end of July about 600,000 workers were engaged in making equipment and supplies for the forces, but it was estimated that this number would have to rise to more than 1,000,000 if the defense program was to be completed on schedule.

Other important issues in the industrial sphere sprang from the difficulties of the fuel and power industries. Although the British Electricity authority added to its generating plant at a higher rate than in the previous year, output of electricity fell considerably short of what was necessary to satisfy requirements. In its annual report the British Electricity authority was critical of the decision of the Labour government, in apportioning national capital investment, to reduce permitted expenditure on new generating plant.

The coal situation also continued to be unsatisfactory. Although output was at a slightly higher rate than in 1950, on Nov. 1 stocks were below the target of 17,000,000 tons and the new government was obliged to issue an order restricting deliveries to domestic consumers. The reduced amounts to be supplied could be ensured only by agreeing to draw upon stocks allotted for industrial use.

Throughout the year shortage of various raw materials, notably sulphur, threatened to have serious repercussions upon industry. On the whole these were successfully overcome. In June

WINSTON CHURCHILL addressing Londoners on the eve of the British general elections of Oct. 1951. The Conservative party won an 18-seat majority in the house of commons and Churchill became prime minister on Oct. 26

the government took the decision to set up a ministry of materials. In September a conference of commonwealth ministers was held in London to discuss raw-material questions. The agreements reached by the International Materials conference in Washington, D.C., on the allocation of sulphur and nonferrous metals were of assistance to Great Britain, though complaints continued about prices. The main difficulty centred on steel supplies. Output was at a somewhat lower level than in 1950, and this was accounted for largely by the decline in the imports of scrap from Germany. In November Butler put national requirements of finished steel at 1,500,000 tons above current production and imports. Toward the end of the year the shortage resulted in the emergence of black market selling of steel at prices as much as £45 above the controlled price. (*See* also Atomic Energy; Coal; Employment; Iron and Steel; Labour Unions; Strikes; Wages and Hours.)

Foreign Policy.—Nowhere had the drifting nature of the government been more apparent than in regard to foreign policy. This lack of direction was partly caused by the illness of Bevin which forced his resignation in March when he was succeeded by Morrison as foreign secretary. The delay in making the change was the result of the prime minister's personal regard for Bevin as well as of the difficulty of finding a successor.

Dissatisfaction grew with Morrison's handling of the Iranian oil crisis. (*See* Iran.) Morrison's policy of playing for time in the hope that the Mossadegh government would fall had proved a failure. In Egypt, where the government abrogated the Anglo-Egyptian treaty of 1936 in anticipation of a four-power proposal for defense of the Canal Zone, the British government stood firm. (*See* Egypt.)

Intensification of the "cold war" by the Soviet Union compelled the British government at the end of January to accelerate the rearmament program by selective call-up of class Z reservists for 15 days' training and other measures, and by increasing expenditure on armaments in 1951–52 to around £1,300,000,000 and a total of possibly £4,700,000,000 over three years. In March a supreme headquarters, Allied powers in Europe, (SHAPE) was set up near Paris with Gen. Dwight D. Eisenhower at its head and Field Marshal Viscount Montgomery as his deputy under the North Atlantic Treaty organization (NATO). But already a dispute had arisen with that organization over the proposal to appoint a U.S. admiral as supreme naval commander in the Atlantic. Churchill claimed that this command should be in British hands, and received substantial support on both sides of the house of commons. When the Atlantic council met in November the Churchill government maintained the point, but a matter of greater disappointment to the European countries concerned was the British refusal, expressed both at the Atlantic council meeting in Rome and at the meeting of the Council of Europe at Strasbourg, Fr., to contribute to the proposed European army as well as to take part in the Schuman plan, although Great Britain was prepared to be "associated" with them. The disappointment was all the keener because a European army had been originally Churchill's proposal. Under the Pleven plan there was the prospect of a working solution to the problem of the rearmament of Germany. A state of war with Germany had been formally ended on July 9, and after the signature of the Japanese treaty at San Francisco, Calif., in September the foreign ministers of the United Kingdom, United States and France, meeting in Washington, D.C., issued a declaration stating that they aimed at "the inclusion of a democratic Germany, on a basis of equality, in a Continental European community, which itself will form part of a constantly developing Atlantic community." But the antagonism of the Soviet Union to any such proposal remained ominous and threatening. (*See* also European Union; Japanese Peace Conference; Korean War; North Atlantic Treaty Organization; United Nations.)

Commonwealth of Nations.—British policy in relation to the commonwealth continued to be concerned with the development of closer economic relations and of mutual arrangements for defense in southeast Asia and the middle east. A commonwealth prime ministers' conference took place in London in January to review the international situation and declared that it would welcome co-operation with other nations, but India and Pakistan remained estranged by the Kashmir question and neither was inclined to take part in any defense arrangements that might give offense to the Soviet Union and China. When a conference of the commonwealth defense ministers met in London in June, India and Pakistan as well as Ceylon were unrepresented. In July Australia and New Zealand concluded a Pacific defense pact with the United States, from which Britain was left out, although it was explained that it would be kept informed about it. This was a clear indication that Australia and New Zealand looked mainly to the United States for their defensive as well as their economic requirements. The Union of South Africa, where the Daniel Malan government flirted with the idea of a contingent republicanism, showed keen interest in the defense of the Suez Canal Zone. (*See* also COMMONWEALTH OF NATIONS.) (J. M. WN.)

Education.—(March 1950) *England and Wales:* nursery schools and classes, pupils 82,491; primary schools 23,113, secondary schools 4,765, pupils combined 5,926,702; special schools (for physically or mentally handicapped children) 601, pupils 47,119; further education (mainly evening institutes) 11,546, pupils 54,046 full-time and 2,175,796 part-time; full-time teachers (all schools) 230,846. *Scotland:* nursery schools and classes, pupils 4,599; primary schools 2,084, pupils 364,529, teachers 11,534; special schools, pupils 10,439; secondary schools 913, pupils 417,416, teachers 17,592; further education 1,237, pupils 237,931. *Northern Ireland:* nursery schools 6, pupils 201; primary 1,632, pupils 185,712; special, pupils 660; secondary 89, pupils 32,317. *United Kingdom:* nursery, primary, special and secondary schools, pupils combined 6,989,694.

Universities (1950–51): *England:* 17, students (full- and part-time) 76,768, teaching staff 7,421; *Scotland:* 4, students 17,121, teaching staff 1,819; *University of Wales:* students 5,017, teaching staff 531; *University of Belfast:* students 2,686, teaching staff 233. *United Kingdom:* universities 23, students 101,592, teaching staff 10,004.

Finance and Banking.—Budget: (actual 1949–50) revenue £3,924,000,000, expenditure £3,356,600,000; (est. 1950–51) revenue £3,897,800,000, expenditure £3,455,100,000. National debt (Dec. 31, 1951) £26,569,000,000. Currency circulation (Dec. 31, 1951) £1,419,000,000. Gold and dollar reserves of the sterling area (Dec. 31, 1951) U.S. $2,335,000,000. Exchange rate since Sept. 18, 1949, £1=U.S. $2.80.

Foreign Trade.—Imports (1950) £2,608,200,000, (1951) £3,916,800,000; exports including re-exports (1950) £2,256,000,000, (1951) £2,707,100,000. Main sources of imports (1950): sterling area 38%, dollar area 18.4%, nonsterling countries in the Organization for European Economic Cooperation 25.2%. Main destinations of exports (1950): sterling area 48%, dollar area 13%, nonsterling O.E.E.C. countries 25.2%.

Transport and Communications.—Railways (1949): *Great Britain:* total first track (all gauges) 19,600 mi.; *Northern Ireland:* 1,035 mi. Passenger journeys originating (British railways, monthly average, 1950) 81,800,000. Freight traffic originating (weekly average, 1950) 5,400,000 tons, net ton-miles 425,000,000. Roads (1949): *Great Britain:* 183,793 mi. Motor vehicles licensed (Dec. 1950): 4,414,000, including 2,258,000 cars. Air transport (U.K. air lines, all services, monthly average, 1950): miles flown 4,019,000, passengers carried 96,300, passenger-miles 66,100,000, freight carried 2,045,000 short ton-mi., mail carried 1,130,000 short ton-mi. Shipping: merchant vessels on the U.K. register of 500 gross tons and over (Nov. 1951): nontankers 13,338, tankers 4,190; total tonnage (Dec. 31, 1949) 19,382,000 gross tons. Number of telephones, private stations (March 31, 1950): 5,171,491 (70% with automatic dial). Radio receiving sets licensed (Nov. 1949) 11,900,200; television licenses (Nov. 1951) 958,000.

Agriculture and Fisheries.—Production (long tons, 1951 est.): wheat 2,203,000; barley 1,805,000; oats 2,484,000; rye 43,000; mixed corn 761,000; potatoes 7,972,000; sugar beets 4,625,000. Livestock (June 1951): cattle 10,473,000; sheep 19,984,000; pigs 3,891,000; poultry 94,344,000. In 1947–49 the United Kingdom was importing a yearly average of 4,400,000 tons of wheat, 764,000 tons of wheat meal and flour and 451,000 tons of barley.

Fisheries: Total catch (1950): *England and Wales:* 629,900 long tons, worth £26,299,000; *Scotland:* 252,800 long tons worth £9,405,000. This excludes shellfish, but includes gray mullet and whitebait.

Industry.—The number of industrial establishments with more than ten employees (April 1948) was 51,040. The total working population in 1951 was 23,327,000, of whom 15,952,000 were men. There were 827,000 in the armed forces, of whom 804,000 were men. There were 188,000 registered unemployed.

Industrial production (1951): coal 222,130,000 long tons; gas 556,920,000,000 cu.ft.; electricity 59,555,000,000 kw.hr.; pig iron 9,656,000 long tons; crude steel 15,787,000 long tons; tractors 140,748; motor cars 477,543; commercial vehicles 257,428; steam locomotives 726; railway coaches 2,277; freight cars 41,455; aircraft (excluding military except for export) 549; shipbuilding (completed vessels of 100 gross tons and over) 1,293,000 gross tons; cotton woven cloth 2,199,000,000 yd.; woven wool fabrics (excluding blankets) 432,000,000 sq.yd.; rayon filament yarn 221,000,000 lb.; rayon staple fibre 171,000,000 lb.

During 1951 industrial production increased by only about 4.5%, half the rate of preceding years, mainly because of shortage of steel and of various imported raw materials. Steel production was slowed down, chiefly through shortage of imported scrap and iron ore, to about 3.2% below 1950. Lack of steel caused an 8.2% decline in the production of motorcars since the preceding year. Despite a 5.6% decline in shipbuilding, 42% of the world's new merchant shipping was being built in British yards. Although 6,000,000 tons more coal was produced than in 1950, there was a roughly equivalent increase in home consumption.

Greece.

A kingdom in the southern part of the Balkan peninsula, Greece has an area of 51,182 sq.mi. including the Dodecanese Islands (1,035 sq.mi.); the mainland accounts for 41,328 sq.mi. and the islands, of which the largest is Crete (3,235 sq.mi.), for 9,854. Pop.: (1940 census without the Dodecanese) 7,344,860; (1951 census) 7,603,599. Language (1940 census): Greek 6,794,309 (93%); Turkish (Turks and Turkish-speaking Greeks from Anatolia) 222,968; Macedonian Slav 81,860; Vlach 57,263; Albanian 49,629; Bulgarian (Pomaks) 18,086, etc. Religion (1940 census): Greek Orthodox 7,090,192 (96.5%); Roman Catholic 29,136; Gregorian (Armenian) 16,350; Moslem 134,722; Jewish 53,095 (reduced to 9,000). Chief towns (1951 census, municipal area only): Athens (cap. 559,250); Piraeus (184,980); Salonika or Thessaloniki (1940, 226,147); Patras (1940, 79,570); Volos (1940, 54,919).

Ruler, King Paul I; prime ministers in 1951: Sophocles Venizelos and (from Oct. 27) Gen. Nicholas Plastiras.

History.—Except for an occasional small-scale raid on the Bulgarian frontier, there was no guerrilla activity in Greece throughout 1951. Rail communications between Greece and Yugoslavia were resumed on Feb. 12, and the Simplon Orient Express train service from Paris to Athens via Belgrade, which had been interrupted since 1940, restarted its scheduled run on March 17.

Foreign Affairs.—In the international field, the improvement of relations with Yugoslavia initiated in the previous year continued. A significant contribution in this direction was the repatriation by the Yugoslav government, in small groups, of a total of 385 of the Greek children abducted by the Communists during the civil war.

Diplomatic relations with Germany were resumed with the appointment early in the year of a German consul general, representing the Bonn government. On July 12 he was accredited as Germany's first ambassador to Greece since the end of World War II. A corresponding change was made in the status of the Greek representative on the Allied High commission, who was accredited ambassador to the German Federal Republic.

On the conclusion of its conference at Ottawa, Ont., Can., on Sept. 20, the North Atlantic Treaty council announced that it had agreed to recommend to its members that an invitation to accede to the treaty should be addressed to Greece and Turkey. The Greek contingent with the United Nations forces in Korea was maintained at a strength of about 1,000 men, together with a flight of Dakota aircraft of the royal Hellenic air force which was employed on supply and ambulance duties.

On Dec. 7 the U.N. general assembly in Paris approved, by 48 votes to 5 (with one abstention), the political committee's recommendation that the U.N. special committee on the Balkans, originally appointed in 1947 to mediate between Greece and its neighbours and watch the frontiers, should be dissolved within 60 days and replaced by a Balkan subcommission of the Peace Observation commission. Greece was a candidate for the Security council seat vacated by Yugoslavia, and after 19 ballots, in which the voting fluctuated between Greece and Byelorussia, Greece was elected by 36 votes to 20.

Politics and Elections.—The coalition government of Liberals and Democratic Socialists which took over on Nov. 3, 1950, was reshuffled on Feb. 2, the number of ministers being reduced to 15.

ROLLING MILL, built with U.S. aid, nearing completion at Piraeus, Gr., in 1951. The new plant was expected to lower finished costs of steel sheets and tinplate needed in the Greek plan for industrialization

On July 1 the Democratic Socialist leader, George Papandreou, resigned and withdrew from the government with his friends. The Liberal leader Sophocles Venizelos then formed a government consisting exclusively of members of his own party. The new government obtained a vote of confidence on July 6 after pledging itself to hold general elections as soon as the electoral reform bill had been passed. The elections were held on Sept. 9 under an amended system of proportional representation which favoured large parties or groups at the expense of small parties by a provision that no party could participate in the second distribution of seats unless it had obtained more than 17% of the total poll.

The outstanding political event of the year was the decision of Field Marshal Alexandros Papagos to relinquish the supreme command of the armed forces and enter politics as leader of a new party, the Greek Rally. This party drew its main support from the dissident Populists under Stefanos Stefanopoulos and the Unionists under Panayotis Kanellopoulos, who had already fused into the Populist-Unionist party (L.E.K.) in January.

A total number of 1,957 candidates, representing 17 parties, contested the 258 seats. The extreme left took the field under the name of Union of Democratic Left (E.D.A.), its principal candidates being internees or persons serving prison sentences for their support of the Greek Communist party during the Communist rebellion. No single party obtained an absolute majority. The Greek Rally topped the poll with 114 candidates elected, as compared with 74 for National Progressives (E.P. E.K.), 57 Liberals, 10 E.D.A., 2 Populists and 1 Agrarian.

After the announcement of the final results the king invited the three major parties to form a coalition government, but the leader of the Greek Rally refused to participate and advised the king that parliament should be immediately dissolved and fresh elections held, this time under the majority system. The king then entrusted the mandate to the E.P.E.K. leader, General Plastiras, who on Oct. 27 formed a coalition government with the Liberals, with himself as prime minister and the Liberal leader Venizelos as deputy premier and foreign minister.

On Dec. 8 the electoral court, which considered appeals against the election of the E.D.A. deputies, declared their election invalid on the grounds that, as persons serving sentences of imprisonment or internment, they were not entitled to vote according to the electoral law—a disability which under the provisions of the constitution disqualified them from standing for parliament. The court further decided that the ten seats thus vacated were to be filled by the next eligible E.D.A. candidates in the constituencies affected.

On Dec. 22 the chamber of deputies ratified the draft constitution drawn up by the all-party parliamentary committee set up in 1946 to amend the 1911 constitution. It was carried by 132 votes to 8, after the major opposition party, the Greek Rally, had withdrawn. The most important new provisions were: (1) The king could, with his ministers' approval, take emergency measures suspending the provisions of the constitution, to be ratified by parliament within ten days. (2) To settle landless peasants and others, estates could now be expropriated without previous compensation. (3) Strikes by civil servants were declared illegal. (*See* also UNITED NATIONS.) (A. A. P.)

Education.—Schools (1948–49): primary 9,986, pupils 1,218,000; secondary 507, pupils 169,836; universities 2, professors and lecturers 289, students 13,337; institutions of higher education 9. Illiteracy (1940), 27%.

Finance and Banking.—Budget (1950–51 actual): revenue dr. 4,631,000,000,000, expenditure dr. 6,192,000,000,000; (1951–52 est.) revenue dr. 5,879,000,000,000, expenditure dr. 7,459,000,000,000. Currency circulation (Aug. 1951): dr. 1,926,000,000,000. Bank deposits (Aug. 1951) dr. 2,567,000,000,000. Monetary unit: drachma with an exchange rate (Nov. 1951) of dr. 15,060 to the U.S. dollar.

Foreign Trade.—(1950) Imports dr. 2,141,000,000,000; exports dr. 452,000,000,000. Main sources of imports (1950): U.S. 32.3%; U.K. 12.3%; Germany 7.9%; Italy 6.0%. Main destinations of exports: U.K. 18.5%; U.S. 17.4%; Germany 16.4%; France 7.8%. Main exports (1950–51): tobacco 39.6%; currants 25.1%; turpentine colophony 3.5%; minerals 5.2%.

Transport and Communications.—Roads (1949): 4,189 mi. Licensed motor vehicles (Dec. 1950): cars 7,494, commercial 19,088. Railways (1949): 1,621 mi., of which state 826 mi.; number of railway locomotives 241. Shipping (merchant vessels of 100 gross tons and over, July 1950): 386; total tonnage 1,348,874. Telephone subscribers (1949): 65,078. Radio receiving sets (1949): 44.500.

Agriculture and Fisheries.—Main crops (metric tons, 1951 except where indicated): wheat 930,000; barley 230,000; oats 140,000; rye 48,000; maize (1950) 195,000; potatoes (1950) 348,000; rice 37,000; grapes 140,000; citrus fruit (1950) 119,000; tobacco (1950) 51,000; cotton 81,000; olive oil (1950) 54,000. Livestock (head, Dec. 1949): cattle 675,000; sheep 6,656,000; pigs 530,000; horses 232,000; mules 149,000; goats 3,438,000. Meat production (1950) 76,000 metric tons. Fisheries: total catch (1950) 48,000 metric tons.

Industry.—Fuel and power: lignite (1949) 131,500 metric tons; electricity (installed capacity, 1950) 245,000 kw. Raw materials (metric tons, 1950): bauxite 49,000; magnesite 25,000; iron pyrites 16,000; chromite 3,000. Index of industrial production (1950; 1948=100): 150.

FILMS OF 1951.—*Greek Children* (Encyclopædia Britannica Films Inc.).

Greenland. A large island (840,000 sq.mi., about 705,000 sq. mi. covered by an ice cap), Greenland is a Danish possession in the North Atlantic ocean, northwest of Iceland. Pop.: (1945 census) 21,412, distributed in settlements along west coast except for 1,372 on east coast; 580 Europeans (mostly Danes), the rest native Greenlanders (Eskimos); (1950 est.) 23,000. Language: Danish and Eskimo. Religion: Lutheran. Capital, Godthaab (second governor's seat, Godhavn). Governor general in 1951: Poul Hugo Lundsteen.

History.—An agreement between Denmark and the United States for the joint defense of Greenland, concluded within the framework of the North Atlantic Treaty organization (N.A.T.O.) and replacing the provisional agreement of April 9, 1941, was signed in Copenhagen, Den., on April 27, 1951, and approved by the Danish *rigsdag* early in June. Stressing Greenland's part in the N.A.T.O. defensive system, the agreement said: (1) The U.S. naval station at Grønnedal would be taken over by Denmark, but the United States and other N.A.T.O. countries would receive certain rights of access to the port. (2) As need arose, defense areas would be established for joint operation by Denmark and the United States, the nationality of the commander being decided upon periodically by agreement. (3) In the areas under U.S. command the United States would enjoy certain

GREENLAND'S ICE CAP, photographed during a flight across the north pole to acquaint airmen of Britain, Canada and New Zealand with the short-cut air route between hemispheres where a compass is useless

rights of use without impairing Danish sovereignty. (4) Denmark would be entitled to use such defense areas in co-operation with the United States, and Danish military personnel under a Danish officer would be attached to the staff of the U.S. commander. (5) Conversely, the U.S. military personnel might be sent to defense areas under Danish command. (6) All defense areas could be used by the ships, aircraft or armed forces of other N.A.T.O. countries. (7) U.S. troops would be exempt from customs duties and taxes and jurisdiction over them would be specially arranged with the Danish authorities. (8) U.S. forces in Greenland would respect Danish laws and administration concerning the indigenous population.

The modernizing of Greenland's political and social life went on during the year. In June elections for the country council took place for the first time, the polling amounting to 70%. Political parties had not yet been formed, but political tendencies were noticeable. For the first time in Greenland's history a woman was elected. From Dec. 1 all persons, both Greenlanders and Danes, were subject to the same 17 lower courts of justice with appeal to the country court of justice at Godthaab.

Education.—Schools (1948): infant and primary 175, pupils 4,200, teachers 237; postprimary 4, pupils 100, teachers 15; technical 1, pupils 50, teachers 2; institutions of higher education 2, students 45, lecturers 10.

Finance and Trade.—Budget (1950–51): expenditure 24,864,000 Kr.; revenue 16,525,000 Kr. Monetary unit: the Danish krone, with an exchange rate of 6.92 Kr. to the U.S. $1. Foreign trade (1950): imports from Denmark 23,300,000 Kr.; exports to Denmark 16,800,000 Kr.

Grenada: *see* Windward Islands.

Gromyko, Andrei A. (1909–), soviet diplomat, was born on July 5 in Starye Gromyki, Byelorussia. He graduated from the Minsk Institute of Agricultural Economics in 1934. In 1938 he was taken into the commissariat for foreign affairs, and after a year's training was sent to Washington, D.C. In Aug. 1943 he succeeded Maxim Litvinov as soviet ambassador to the U.S. and to Cuba. He headed the soviet delegation to the Dumbarton Oaks conference in 1944, attended the United Nations organization conference at San Francisco, Calif., in 1945, and was appointed chief soviet representative to the U.N. On April 10, 1946, he was freed from his duties as ambassador to become permanent soviet delegate to the U.N. Security council. On Dec. 29, 1947, it was announced that he had been promoted to deputy foreign minister, and in July 1948 he was replaced on the Security council by Jacob Malik and returned to Moscow.

In 1951 Gromyko was again chief soviet spokesman in dealings with the west. On June 27 he clarified from Moscow the Malik proposal of June 23 for cease fire and armistice talks in Korea. He was soviet spokesman at the San Francisco conference to sign the Japanese peace treaty in September, and he sought repeatedly to upset the conference schedule, first by calling for the seating of Red China, then by opposing motions that limited debate and barred soviet efforts to amend the draft of the treaty. He was finally voted out of order and silenced. He subsequently charged that the U.S. had run the conference in an "arrogant" manner.

Guadeloupe. This former French colony situated in the Lesser Antilles, the status of which was changed in 1946 to that of an overseas *département,* consists of two islands. separated by a narrow channel, and five smaller islands. Total area: 686 sq.mi. Pop.: (1936 census) 304,239; (1946 census) 278,464; (1950 est.) 289,000. Chief towns (pop., 1946 census): Basse-Terre (cap., 10,086); Pointe-à-Pitre (41,323). The inhabitants are mainly Negro or mixed, speak a French patois and are Roman Catholic. Prefect, Maurice Philipson.

History.—During 1951 work went on toward bringing uniformity to the administration and establishing the social services. The *département* sent one Gaullist, one Socialist and one Communist deputy to the national assembly in Paris. Six Gaullists, six Communists, two Socialists, three Radicals and two Independents were elected to the local general council. The slump in rum drinking in France and the restriction of the quotas of sugar and rum to be admitted into that country, together with the high cost and resulting high prices that made sales abroad difficult, gave rise to economic anxiety. A landing field for four-engined aircraft was under construction. Work on new roads was begun.

Education.—Provision is made for all children of school age. There are two *lycées.*

Finance.—Currency: metropolitan franc. In Sept. 1951 U.S. $1 = 350 fr.

Foreign Trade.—(1950) Imports 7,422,000,000 fr.; exports 6,008,000,000 fr. Principal exports: sugar 3,304,000,000 fr., rum 1,071,000,000 fr., bananas 1,352,000,000 fr. Trade is almost wholly with the French union.

Transport and Communications.—Ships entered (1950), 617.

(Hu. De.)

Guam. Guam is the largest and southernmost island of the Marianas, lying in the Pacific at 13° 26′ N. lat. and 144° 39′ E. long., about 5,100 mi. W. of San Francisco, Calif., 3,340 mi. W. of Honolulu, T.H., and 1,500 mi. E. of Manila, Phil. Area: 206 sq.mi. Population, June 30, 1951, 28,170 Guamanians and about 30,000 non-Guamanians, of whom about half were U.S. military and civil service personnel. Agaña is the capital. Other important towns are Sinajana and Inarajan. The Guamanians are Chamorros, and their religion is predominantly Roman Catholic. Governor in 1951: Carlton Skinner; secretary, R. S. Herman.

History.—Guam is an unincorporated territory of the United States and an organized sovereignty, governed under the Organic Act of Guam, passed by the U.S. congress and approved by Pres. Harry S. Truman on Aug. 1, 1950. The island was administered by the U.S. navy until this legislation was approved, at which time the U.S. department of the interior took over the administration. Under this legislation, Guamanians became citizens of the U.S., with all rights and privileges thereof, replacing their former status as citizens of the territory and nationals of the U.S.

The legislature of Guam, which replaced the Guam congress under the new legislation, is a unicameral body with not more than 21 members, popularly elected for two years by all persons 21 years of age and over who are residents of Guam for at least two years. The legislature has the power to override the governor's veto by a two-thirds vote. The judiciary consists of the district court of Guam, whose judge is appointed by the president of the U.S. for four years. Appeals from this court are heard by the ninth circuit U.S. court of appeals. There is also an island court, justice court and police court, whose judges are appointed by the governor. Each of the island's 15 municipalities is headed by a popularly elected native commissioner who serves for a four-year term.

Education.—In 1951 there were 21 public elementary and junior high schools and 1 high school with a total of 9,225 pupils and 311 teachers. There were also 4 parochial schools with 1,164 elementary and secondary school students. Instruction was given in English. About 84% of the population were literate, according to the 1940 census.

Finance.—During the fiscal year ending June 30, 1951, Guam's expenditures amounted to $5,114,405, revenues amounted to $4,168,926 and U.S. grants amounted to $1,200,000.

Industry and Trade.—The important food crops were maize, sweet potatoes, taro and cassava. In 1951 Guam had about 10,000 hogs, 4,000 cattle and 1,200 goats. In the fiscal year ending June 30, 1951, imports totalled $10,672,132 and exports $2,212,416. The major imports were foodstuffs, building materials, textiles, tobacco and liquor. The major exports were scrap metal and salvage.

Transportation and Communications.—There were about 80 mi. of paved highways in Guam and about 60 mi. of improved secondary roads. There were no railways, but there were five military airfields. Guam was the relay station for the Commercial Pacific Cable company whose service was terminated in 1951 in view of the existence of radiotelegraph and radiotelephone facilities. Radio facilities existed through the U.S. armed forces radio network and the Andersen airfield radio station. Pan American World Airways and Philippine airlines provided air service for the island.

(S. Nr.)

Guatemala.

A Central American republic, Guatemala is bounded by Mexico, British Honduras, Honduras and El Salvador. Area: 45,452 sq.mi.; pop. (preliminary figures, 1950 census of the Americas): 2,787,030. Capital: Guatemala City (1946 est. pop., 225,000). Other urban centres (1940 census) are Antigua Guatemala (12,601), Chiquimula (10,868), Comalapa (10,461), Mazatenango (14,227), Puerto Barrios (15,784), Quezaltenango (33,538) and Zacapa (14,443). Language: Spanish; religion: predominantly Roman Catholic. Presidents in 1951: Juan José Arévalo, until March 15; thereafter, Lieut. Col. Jacobo Arbenz Guzmán.

History.—During 1951 labour unrest and mounting Communist influence occupied the attention of Guatemalans. Communist leader José Manuel Fortuny announced on Jan. 23 the formation of a new leftist coalition composed of the Popular Liberation Front, the National Revolutionary, the Workers' and the Communist parties, the over-all coalition being called the National Democratic Front. President-Elect Arbenz, who had won the election held Nov. 10–12, 1950, issued a statement on Feb. 15 pledging continued Guatemalan amity with the United States and attacking "malicious rumours" that he intended to expropriate foreign and domestic capital. On March 15 Arbenz was inaugurated president of Guatemala.

Labour disorders were the first major crisis facing the new administration. Unrest among the workers resulted in April in an 11-day (April 19–29) railroad strike which ended with unions still demanding that Arbenz press for revision of all contracts with foreign firms operating in Guatemala. An estimated 2,000 Guatemalans attended on June 22 a celebration at Guatemala City of the first anniversary of the founding of *Octubre*, a Communist weekly publication. Anti-Communist riots swept Guatemala City on July 11 and 12, as demonstrators called upon President Arbenz for assurances of his anti-Communist position. Branding the disorders as the result of a subversive plot "under the pretext of combating Communist activities," Arbenz on July 12 suspended constitutional guarantees for 30 days.

Four political parties supporting Arbenz announced on July 19 the formation of a Democratic Alliance to intensify the "revolutionary process" represented by the president and former President Arévalo. The announcement said that the alliance was neither pro-Communist nor anti-Catholic; but on Aug. 31 Communists seized control of the proadministration National Renovation party, one of the components of the coalition.

With the dispute with the United Kingdom over British Honduras (Belize) apparently tapering off, Guatemala on May 18 reopened its border, closed since 1948, with the contested area.

(G. I. B.)

Education.—In 1947–48 there were 3,626 primary schools with 9,554 teachers and 195,463 pupils in attendance and 62 secondary schools with 1,139 teachers and 9,000 pupils. University education was available at the University of Guatemala. Education was scheduled to receive 12% of the 1951–52 budget.

Finance.—The monetary unit is the quetzal, at par with the U.S. dollar. The 1951–52 budget was initially placed at $59,000,000, the largest on record (1950–51 revised budget, $48,675,781). Revenue in the fiscal year 1949–50 was provisionally reported as $42,413,000; expenditure, $47,358,200. On Dec. 31, 1950, the funded internal debt was $12,780,300; floating debt to banks $3,048,000; floating debt to private entities and persons (May 30, 1950) $12,075,700; external debt (June 30, 1949) $747,551. Currency in circulation (Oct. 31, 1951) was $37,200,000; gold reserves $27,200,000; (Aug. 31, 1951) demand deposits $27,600,000; time deposits $1,300,000; government deposits $2,100,000. The cost-of-living index stood at 138 on Aug. 31, 1951 (1946 = 100).

Trade and Communications.—Exports in 1950 totalled $67,605,000; imports, $71,221,000. Leading exports were coffee (78%), bananas (11%), essential oils (2%) and chicle (2%). Leading customers were the U.S. (89%), the Netherlands (3%) and Italy, Canada and Belgium (each 2%); leading suppliers, the U.S. (68%), Mexico (6%) and the United Kingdom, Canada and Germany (each 3%).

In 1950 there were 608 mi. of railroad on which 3,826,700 passengers were carried. Highway mileage (1949) was 4,800. In 1950 there were two scheduled and three nonscheduled international air carriers and one domestic air carrier.

Agriculture.—Production of coffee in the 1950–51 season was 1,050,000 bags of 132 lb. each, of which 818,244 bags were exported (1949–50 exports, 900,277 bags). Banana exports in 1950 amounted to 6,897,061 stems. Other crops (with 1950–51 production estimates) were corn 710,000,000 lb.; beans 130,000,000 lb.; abacá 8,700,000 lb.; rice 15,000,000 lb.; and lint cotton 2,900,000 lb. In 1950 there were about 800,000 cattle, 340,000 pigs and 610,000 sheep. Essential oil exports in 1950 included citronella 1,103,000 lb. and lemon grass 177,285 lb. Chicle exports were 1,058,000 lb.

Manufactures.—The most important industries, by value of production, were beverages, foodstuffs, textiles, clothing and tobacco. Production in 1950 included cement 46,000 short tons; cigarettes 1,534,182,000; and beer 2,528,000 gal.

Mineral Production.—Lead production increased to 597,000 lb. in 1950.

Gymnastics.

Combining the men's and women's senior championships to help celebrate the 250th birthday of the city of Detroit, Mich., the Amateur Athletic union of the United States attracted a record number of entries to the Michigan State Fair Ground coliseum on May 4–5, 1951.

William Roetzheim of Florida State university, Tallahassee, won the men's national all-around crown for the third straight season, but only after the closest kind of competition from his Olympic team-mate Edward Scrobe of the American Turners of New York. Roetzheim shared first place with Eugene Rabbitt of Syracuse university, N.Y., in the side horse test and tied with

Hal S. Lewis of the U.S. Naval academy on the horizontal bar to gain the top prize with 332.9 points. Scrobe finished with 331.4 points.

Other victors follow: calisthenics, Ara Hairabedian, University of Southern California, Los Angeles; flying rings, John Miles, Florida State university, Tallahassee; Indian clubs, Edward Hennig, Cleveland Y.M.C.A.; long horse, Edward Scrobe; parallel bars, Joseph Kotys, Kent State university, Ohio; rope climb, Sanford Werner, Los Angeles State; tumbling, Dick Browning, unattached, Dallas, Tex.

Clara M. Schroth of the Philadelphia, Pa., Turners, again proved the shining star of the women's division, scoring first in the balance beam, calisthenics and the flying rings as she kept her all-around title with 289.5 points. Marian T. Barone, also of the Philadelphia Turners, was runner-up with 283.5.

Other title winners were: Indian clubs, Roberta Bonniwell, Philadelphia Turners; parallel bars, Marian Barone; side horse, Marian Barone; tumbling, Joanne Slocum, Dallas, Tex., Athletic club; team drill, Lincoln Turners, Chicago, Ill.

Roetzheim added to his collection of trophies in the National Collegiate Athletic association's annual championship tournament when he captured honours on the horizontal bar and took the all-around crown in leading Florida State to the team laurels. Other N.C.A.A. champions were: flying rings, M. Stout, Michigan State college, East Lansing; long horse, Joseph Kotys, Kent State; parallel bars, Jack Beckner, University of Southern California; rope climb, Leo Minotti, Syracuse university; side horse, Joseph Kotys; trampoline, Edsel Buchanan, University of Michigan, Ann Arbor; tumbling, R. Sullivan, University of Illinois, Urbana.

Army captured the eastern intercollegiate team title tourney, the individual all-around award being annexed by Joel Baba of Syracuse university.

FILMS OF 1951.—*Gymnastics* (Paul Hoefler Productions); *Headsprings in the Gym* (Encyclopædia Britannica Films Inc.). (T. V. H.)

Gynaecology and Obstetrics.

In 1951 the maternal death rate in the United States was the lowest reported by any large country. One maternity service had delivered approximately 70,000 women consecutively without a single death from "childbed fever" (puerperal sepsis). Twenty years before, from 20 to 25 women in every 10,000 live births had died from this condition. Deaths from toxaemia and haemorrhage had also been reduced creditably. Such conditions as heart disease and embolism had become relatively major causes of maternal death because of the reductions in infections, haemorrhage and toxaemia.

Diarrhoeal states of the newborn and infections in general were well controlled in 1951. Premature births and anomalies of vital structure remained two major conditions to be conquered. Injury to the unborn foetus by rubella (German measles) and some other infectious agents continued to leave serious injuries. The danger in rubella is greatest in the first three or four months of pregnancy. Even at this time many babies escape without damage to the eyes, ears and brain.

Another wastage in human reproduction is caused by miscarriage (accidental abortion). It was estimated that one of every four pregnancies in 1951 ended disastrously. These losses are caused by abnormalities of the product of conception and are probably the result of the union of an abnormal spermatozoon or ovum.

Moderation in analgesia and anaesthesia was emphasized by a number of authorities in 1951 because of inadvertent abuses and unfortunate results. The pregnant patient could approach labour with confidence that she would have adequate and satisfactory relief if it became necessary, and that becoming a mother is a safe and normal process. Obstetricians' instructions and special classes by nurses for prospective mothers had allayed fear and corrected misunderstandings. In these classes many everyday questions were answered for anxious women. Fathers' classes were also extremely popular and in great demand during 1951.

Early ambulation, or getting up early, had become routine in both the obstetrical and gynaecological services by 1951. The patients retain their general physical strength and are much stronger when they return home (early ambulation, however, should not be used as a means solely to effect earlier discharge from the hospital). The general well-being from being out of bed early contributes to a more normal onset of lactation. Inactivity enhances poor circulation in varicose veins, and predisposes to clot formation. When clots form (thrombosis) they endanger the patient because if one breaks loose in the circulation it may be fatal.

Rooming-in was still in the experimental stage during 1951. It requires more nurses unless the mother keeps a constant vigil. There are emotional values but the system requires special architectural arrangements of the hospital or alterations that are extremely expensive.

The acute shortage of obstetrical beds continued to be strained by the increasing demands for more women to deliver in the hospital. In large cities, such as New York city and Chicago, Ill., practically all women have their babies in hospitals except those delivered by the home service units. For the entire country between seven and eight of every ten seek hospital service.

The scope of gynaecology continued to widen. Gynaecologic surgical practice in 1951 fell into two major classifications: (1) diagnostic steps such as curettement and biopsy and (2) major procedures. Surgical repair of the birth canal tended to be less common. Because of improved care during labour and delivery there were fewer relaxations of the vaginal walls and prolapse of the uterus. Most women with relaxation deferred repair until completion of the reproductive career. Repairs on the vaginal walls during the reproductive period may be broken down in a subsequent labour or contribute to difficult labour and delivery.

Pelvic infections were usually controlled by antibiotics before pronounced damage resulted. Gonorrhoeal infection was less common; if it did spread to the tubes, early administration and adequate therapy reduced appreciably the need for surgery.

Lower abdominal pain and backache might be caused by genital tract disease but more often were the result of intestinal disorder or conditions of the spine or sacroiliac joints. Malposition of the uterus may need surgical correction but this has been indicated usually when there was associated disease with the tubes and ovaries.

During 1951 the practice of avoiding surgery upon the fallopian tubes and ovaries except for positive indications was established. Preservation of ovarian function prevailed. The one exception applies in women over the age of 40 who must have the uterus removed for benign tumours (in malignancy there can be no compromise). It was urged that the removal of the ovaries would be advisable to avoid the formation of cysts and to combat prophylactically ovarian malignancy.

In cancer diagnosis cytological or smear tests of the genitalia had a continuation of evaluation. Blood tests had false readings in too high a percentage of cases. Cancer of the female genitalia occurred most often in the cervix; the rate was higher in gentile than in Jewish women. Cancer of the body of the uterus was second in order. The first symptoms of cancer in these two sites are ordinarily bleeding between the menstrual periods and excessive or irregular bleeding. Cervical cancer is more likely to occur in women of 35 years or more. Cancer of the body of the uterus is more likely in the fifth decade. Cancer of the ovary is relatively silent until further advanced. Cancer of the tubes and external genitalia was far less common.

Treatment of cancer of the cervix was by X-rays and radium. A few institutions used lymph gland removal after the completion of irradiation, while another group of workers was doing surgical removal with and without irradiation. Cancer of the body of the uterus was best treated by radium or X-ray treatment or both, followed by complete removal of the uterus, tubes and ovaries and the upper part of the vagina. Surgical removal gives the best results for cancer of the ovaries, tubes and external genitalia if the malignancy is removed while still confined to these organs.

Management of advanced cancer of the genital tract formerly had been based on symptomatic relief of pain by drugs or severance of the nerve paths. By 1951, extensive resections (removals) of all involved tissue had been attempted by a limited number of eminent gynaecologists. In some instances this meant the removal of the bladder and sometimes resection of a portion of the bowel. When the bladder is removed the ureters are transplanted into the bowel or a portion of bowel is used as a bladder with its external opening on the abdominal wall.

Removal of all involved tissue may mean the removal of all the pelvic structures, including the vagina. The cure rate was indeed small, but without such treatment all would have died. A fair number get great relief for a variable period of time. This operation requires unusually skilled operators, special treatment, many blood transfusions, extra nursing care and prolonged hospitalization.

Hormone (endocrine products) therapy had become better evaluated by 1951. Thyroid extract had proved effective in some sterility patients. It may be valuable in some adolescents with abnormal menstrual cycles. The natural and artificial estrogens had proved to be particularly valuable in the relief of menopausal symptoms. Estrogens may be used to treat infection of the vagina before puberty or after the menopause. Other hormones have value but must be used with caution. The male hormone (androgen) may be of value in retarding some advanced breast cancers. Excessive or prolonged androgen therapy may produce masculine features such as deeper voice or hair growth upon the face.

During 1950–51, two preparations were announced as near-specific agents for monilia (candida albicans) of the vagina. One is a mixture of two proprion salts and the acid. The other is composed of riconeolic acid and oxyquinoline. Moniliasis occurs usually in pregnancies and in uncontrolled diabetic and postmenopausal patients who have been on excessive estrogenic therapy. In 1951 these fungicides stood the test of time and were well established.

(H. C. HES.)

Haiti. With an area of 10,748 sq.mi., roughly the western third of the island of Hispaniola, the Republic of Haiti has nearly 50% more population than its neighbour, the Dominican Republic, living on about 50% less territory. But the notable fertility and favourable climate of the western valleys easily support a greater density of population. The population (census of Aug. 7, 1950) was 3,111,973. Hardly 5% is of European origin, the rest Afro-American. The capital, Port-au-Prince, has a population of about 142,000, while the next three cities, Cap Haïtien, Gonaïves and Les Cayes have 25,000, 13,000 and 12,000, respectively. French is the official language. President in 1951: Paul E. Magloire.

HAITIAN WORKERS harvesting sisal crop in 1951

History.—World demand for sugar, coffee, sisal, vegetable oils, hardwoods and other products of Haiti lifted the trade balance to the best level in many years; sugar production rose to 65,000 tons, and with the prosecution of the Artibonite valley irrigation program, toward which the Export-Import bank of the United States advanced a loan of $10,000,000 in April, an expansion of sugar planting was assured.

By March the regime of President Magloire had paid off the deficit, and had a cash balance of 19,000,000 gourdes (gourde = 20 cents U.S.). By midyear, the government had reduced the public debt to less than 35,000,000 gourdes from the 43,000,000 of May 1950. But the government was also able to sustain a substantial program of road construction and irrigation projects.

Throughout 1951 agitation for an increase in the minimum legal wage limit (fixed at about 70 cents U.S. in 1948) led to no concrete step, but kept the matter in the forefront of major issues.

On Feb. 19 President Magloire had a formal meeting at the frontier with Pres. Rafael Leónidas Trujillo of the Dominican Republic, inaugurating an era of friendly co-operation between the two states after a long period of strained relations.

(C. ME.)

Education.—Haiti in 1949 had about 1,060 primary schools attended by 87,000 pupils and 6 national *lycées* and 15 private secondary schools attended by about 10,000 pupils. Higher education was available at the national law and medical schools, the Central School of Agriculture and the government-controlled University of Haiti. In the 1949–50 fiscal year 10% of government expenditures were for public education. The 13 motion picture theatres in 1951 had seating capacity of 5,150.

Finance.—The monetary unit is the gourde, valued in 1951 at 20 cents U.S. currency, official rate. Actual government expenditure in the fiscal year ended Sept. 30, 1950, was $21,382,172; revenue was $21,820,131. The ordinary budget for the fiscal year 1952 balanced expenditure and revenue at $24,884,750. The capital budget, to finance a five year plan of economic development, was placed at $40,000,000. The net public debt was $6,511,389 on Aug. 31, 1951; Haitian currency and coin in circulation amounted to 44,046,001 gourdes.

Trade and Communications.—Exports in the trade year 1950 (Oct. 1, 1949–Sept. 30, 1950) were $38,477,928; imports were $36,200,924. The chief exports were coffee (53%), sisal (24%), sugar (7%), bananas (4%) and cacao (2%); leading imports were cotton manufactures (25%), wheat flour (9%), iron and steel and products (8%) and machinery and apparatus (8%). Leading suppliers were the U.S. (77%), Canada (5%), the United Kingdom (4%) and the Netherlands Antilles (3%); leading customers, the U.S. (56%), Belgium (16%), Italy (12%) and the Netherlands (9%).

On Jan. 1, 1950, there were about 2,000 mi. of improved roads, of which only about 245 mi. were surfaced, 88 mi. of public railway and 75 mi. of industrial trackage. In 1951 there were 9 short-wave and 2 long-wave broadcasting stations, 3,683 licensed radio sets and at least as many more sets operating without license.

Agriculture.—Exports of coffee totalled 28,927 short tons in the trade year 1949–50. Other exports included sugar 34,481 short tons; sisal 36,844 short tons; cacao 2,054 short tons; and raw cotton 1,421 short tons. Exports of essential oils included vetiver 38,680 lb.; amyris 87,129 lb.; and oil of lemon 19,718 lb. Livestock (1945) included 200,250 cattle, 13,800 sheep and 1,010,000 goats.

Manufactures.—The only important sugar mill, operated by the Haitian-American Sugar Company near Port-au-Prince, produced 62,247 short tons of sugar and 3,072,625 gal. of molasses in 1951. (J. W. Mw.)

Hammer Throw: *see* TRACK AND FIELD SPORTS.

Handball. The annual National A.A.U. four-wall handball championships were held in 1951 at the Germantown, Pa., Y.M.C.A. New champions were crowned in both the singles and doubles events, with Robert Brady of the Olympic club, San Francisco, Calif., winning the singles title, and Brady, teamed with clubmate William Keays, capturing the doubles. Donald Farley of the Germantown Y.M.C.A. was runner-up in the singles, and Henry Herz and Frank Gluckler of New York second in the doubles. It should be noted that early in the year a schism was created when a large group of the leading players, including the reigning singles and doubles champions, automatically expelled themselves from A.A.U. competition by playing in an unauthorized tournament at the Town club, Chicago, Ill., during the same week that the A.A.U. championships were played. Walter Plekan of Buffalo, N.Y., won high honours in the singles. (FR. RO.)

Harness Racing: *see* HORSE RACING.

Harriman, William Averell (1891–), U.S. government official, was born on Nov. 15 in New York city. He graduated from Yale university in 1913, two years later became a vice-president of the Union Pacific Railroad company and in 1932 was named chairman of that company's board of directors. During World War I he organized a shipbuilding and operating company, and in 1920 launched W. W. Harriman Co., investment bankers, a firm that became Brown Brothers Harriman & Co. in 1931. He served as administrative officer in the National Recovery administration, and during 1940 and 1941 served with the National Defense Advisory commission and its successor, the Office of Production Management. In 1941 Pres. Franklin D. Roosevelt named him lend-lease expediter to Great Britain and later to the U.S.S.R. He was U.S. ambassador to the U.S.S.R. from Oct. 1943 to Feb. 1946, and he attended every major Allied conference during World War II. On April 1, 1946, Pres. Harry S. Truman named him ambassador to Great Britain, and on Oct. 7, 1946, secretary of commerce. In April 1948 he was named special U.S. representative abroad to supervise the administration of the European Recovery program, and he later became special presidential adviser on foreign affairs. In July 1951 President Truman named him special envoy to Iran, to try to bring about new conferences between Iran and Britain looking toward the settlement of the crisis created by Iran's nationalization of its petroleum industry and seizure of the Abadan refinery, the largest in the world.

Hawaii. The territory of Hawaii consists of a group of eight large islands and numerous islets in the Pacific ocean between latitudes 18° 55′ and 22° 15′ N. and between 154° 50′ and 160° 30′ W. longitude. The total area of the group is 6,433 sq.mi. From southeast to northwest, the islands are Hawaii, Kahoolawe, Maui, Lanai, Molokai, Oahu, Kauai and Niihau. In addition, stretching northward beyond Niihau more than 1,100 mi. is an archipelago of rocks, reefs and shoals which includes Midway (longitude 177° 22′ W.). Likewise, 960 mi. S. of Honolulu and included as part of the city and county of Honolulu lies Palmyra, a coral atoll consisting of 55 islets, 5 mi. long and 2½ mi. wide. The largest island in the territory is Hawaii, with an area of 4,021 sq.mi. The capital of the territory is Honolulu, situated on the island of Oahu. Honolulu is a modern city with a population of 230,485, exclusive of military and naval personnel.

OREN E. LONG, appointed governor of Hawaii on April 20, 1951

The population of the territory increased from 423,330 in 1940 to 499,794 in 1950. The population of the territory is cosmopolitan, the Japanese and Caucasian groups being the largest. Other groups include native Hawaiians, Filipinos, Chinese, Puerto Ricans and Koreans.

Gov. Oren E. Long took office on May 8, 1951, succeeding Gov. Ingram M. Stainback. Governor Stainback served from Aug. 24, 1942, to May 8, 1951. Governor Long was appointed by Pres. Harry S. Truman for a term of four years. Joseph R. Farrington was in 1951 serving his sixth two-year term as Hawaii's delegate to the U.S. congress.

History.—Hawaii has been a territory of the United States since 1900. Since that date the territory has made repeated petitions to congress for statehood and in a plebiscite in 1940 its electors voted in favour of statehood by a majority of more than two to one. A statehood convention was held in April 1950, with delegates from all the islands attending. The constitution drafted at this convention was approved by the voters in the general election of 1950, following approval by the territorial legislature. In Dec. 1950 copies of the constitution were formally presented to President Truman and to both houses of congress by the governor of Hawaii. A statehood enabling bill was awaiting congressional action at the close of the year 1951.

Banking and Finance.—Bank clearings in 1950–51 amounted to $1,955,417,497.87. The volume of business transacted amounted to $1,311,598,130.29. The net bonded indebtedness was $32,582,000. The net assessed valuation of real property was $340,355,058. Internal revenue collections for the fiscal year totalled $97,630,825.78, an increase of $16,567,915.29.

Production.—Hawaii's principal crops are sugar, pineapple and coffee. Production during the fiscal year 1950–51 included a total of 960,961 tons of sugar valued at approximately $115,000,000; 26,071,427 cases of pineapple and juice valued at more than $80,000,000; and 6,500,000 lb. of green coffee valued at approximately $2,700,000. In addition to export crops, field crops and miscellaneous fruits, vegetables and nuts valued at $11,000,000 were marketed. Livestock and poultry products had a value of $20,685,000. The total catch of fish during the year amounted to 7,400 tons valued at $3,547,607.51. (O. E. L.)

Hawaii has little mineral production besides building materials. In 1949 the output included 8,404 short tons of lime ($226,926), 653,890 tons of stone ($718,705) and other nonmetallics valued at $42,896; total value $988,457. In 1950 lime production was 8,141 tons ($219,861) and stone 696,310 tons ($1,554,906).

Hay. The 1951 U.S. hay crop of 108,351,000 tons was the second largest on record (102,340,000 tons in 1950 and 101,644,000 tons average in 1940–49), but the abnormally rainy early season damaged the quality of part of the harvest. The yield of 1.45 tons per acre was a record as compared with 1.38 tons in 1950 and a 1940–49 average of 1.36 tons. Acreage harvested (74,608,000) was slightly more than in 1950 but slightly below average for the decade.

The alfalfa hay crop was a record of nearly 43,000,000 tons from 19,000,000 ac., more than half of it grown in the north central states as was the nearly 32,000,000 tons of clover-timothy. Wild hay of the great plains amounted to 12,563,000 tons from 14,663,000 ac. Lespedeza production was 7,500,000 tons.

Prices, firm in spite of the large crop, were estimated at an over-all average for the season of $22.50 per ton ($21.40 in 1950), or a total value for the crop of $2,432,894,000 as compared with $2,185,766,000 in 1950.

Hayseed.—The six major hayseed crops (alfalfa, red clover, alsike clover, sweet clover, lespedeza and timothy) gave a yield of 500,000,000 lb. in 1951—about average but about one-fourth smaller than 1950. All were smaller than the 1950 crops, and alsike clover, lespedeza and timothy were below the 1940–49 average as well. Alfalfa (2,055,000 bu.) was 5% smaller than the large 1950 crop, and red clover (1,789,900 bu.) was 36% below the record 1950 crop. Nevertheless, current supplies, though about 11% below those of 1950, were well above average, because of a heavy carryover from 1950. Prices were estimated to be considerably higher on alfalfa and lower on timothy and sweet clover. (*See* also Soybeans.) (J. K. R.)

Hearing. In 1951 there were approximately 22,000,000 persons in the U.S. under 35 years of age with some form of hearing impairment; 3,000,000 were children with below-par hearing. It was variously estimated that there were approximately 100,000 people who were totally deaf. There were 73 public residential schools and 45 denominational and private schools caring for the deaf. There were 20 deaf teaching training centres and 109 speech and hearing clinics in the colleges and universities of the United States.

It had always been difficult to evaluate and diagnose deafness in children under two years of age and in young patients with psychogenic deafness. Two techniques of experimental psychology, however, had been employed to determine hearing functions by the application and observation of conditioned reflexes. The first method is primarily designed to determine if any hearing impairment exists in an infant. The basic idea is to associate the ringing of a bell with feeding. Eventually, the child with normal hearing will develop a conditioned reflex and start to suck and smack his lips when he hears the bell. The child with a hearing impairment will make no such sign, thus indicating that he cannot hear the bell.

The second method, developed by John E. Bordley and William G. Hardy, also employs the conditioned reflex but is a broader and more definitive technique. The investigators record the changes in skin resistance which follow a mild electric shock. A warning sound is produced four or five seconds before the electric shock is given. The young child may be conditioned quickly to develop skin resistance changes after the warning sound in anticipation of the coming shock. When the child begins to respond regularly to the warning signal alone, intensity of tone is gradually diminished until the threshold is reached. A child conditioned to one tone is thereafter conditioned to all tones audible to him. Therefore, it is believed that the testing of children within the age group of two who have not learned to talk can be accurately determined with the skin resistance technique.

Mothers are advised to seek medical and professional teachers' advice about early training of the prenursery or preschool deaf child (two to four years of age) so that the native intelligence of the child may not be unduly retarded. The child should be given special training in lip reading. This is preferred to "sign language," which is more or less a primitive form and can be used only by the initiated. The vocabulary is limited and not adequate for developing an educational and social program with people of normal hearing. Lip reading, on the other hand, affixes the child's attention to the natural accomplishment of speech—the movements of the mouth, teeth and tongue and the expression of the face.

Unfortunately, few training opportunities had been afforded the preschool deaf child by 1951, but there was an awakening to the importance of the problem. Several cities had introduced prenursery schools for children with hearing defects. Here parents with normal hearing were also being taught the fundamentals of lip reading so that they might assist in the teaching of the child after school hours. Two such schools were being supported by private funds—the John Tracy clinic in Los Angeles, Calif., and Friends of the Deaf in Philadelphia, Pa.

The hard of hearing can hope to be rehabilitated in one of three ways: the fenestration operation, the hearing aid and lip reading.

In light of the knowledge in 1951, no one could definitely predict the outcome of the fenestration operation as far as complete restoration of hearing was concerned. In some cases the patient's hearing had improved; in many, hearing had returned to the preoperative level; while in others, hearing retrogressed. The fenestration operation had rehabilitated great numbers of hard of hearing, but, no matter how successful, it did not re-establish normal hearing.

More than 90% of the hard of hearing had been benefited by the use of the hearing aid. Some individuals had become completely rehabilitated, while others had obtained partial improvement by means of this electronic device. The ear mould continued in vogue. Engineering innovations had made it possible for people with severe forms of deafness to become rehabilitated.

Many audiology clinics had been established in medical schools throughout the United States (Temple university, among others) to test suspected cases of deafness. A bilateral hearing loss of 30% to 35% (decibel units) had been declared a handicap loss. These patients were being tested with the various types of accredited hearing aids in an effort to select the hearing aid best suited for the individual's need. It is the audiologist's evaluation and the individual's psychological appraisal that counts most in the fitting of the hearing aid. It is essential that a perfect mould of the outer ear canal be prepared so that the sound which comes through the receiver of the hearing aid is properly transmitted. It is imperative also that a hearing aid possess a comfortable audible range of 35–45 decibels. When the instrument is set at the patient's control level, loud speech at close range must be tolerable and faint sounds at a distance should be audible without readjusting the instrument. The hearing aid, which had been more or less of a stigma in the past, was now as acceptable as eyeglasses.

Practically all accredited hearing aids in 1951 had a tonal range of 256–4,096 cycles. They weighed approximately four to five ounces and the cost varied from $75.00 to $225. The price differential may be attributed to the services rendered and other factors. The cost of a battery used on an eight- to ten-hour basis is approximately ten cents a day.

During 1951 the Committee on the Conservation of Hearing made considerable progress in the research project on noise in industry in order to prevent "occupational deafness." Many heavy industrial plants rotated their employees from noisy to quiet surroundings to prevent permanent injury to the organ of hearing. Much work had been done on new types of ear defenders both of the earplug type and of the ear muff or helmet type. (*See* also Ear, Nose and Throat, Diseases of.)

Heart and Heart Diseases.

Congenital heart disease continued to be the subject of intensive study during 1951 because of the increasing number of surgical procedures available for relief of certain types; as, for example, cutting the valve in cases of pulmonic stenosis.

A co-operative study under the auspices of the American Heart association and the National Heart institute was carried out in a selected group of clinics in the United States, England and Canada to define the usefulness and the dosage techniques in treating rheumatic fever and carditis with cortisone and ACTH. Statistically the incidence of acute rheumatic infection had been decreasing steadily in the United States for a period of about thirty years.

Research in the mechanisms of hypertension (high blood pressure) was world-wide. C. Heymans and G. van den Heuvel-Heymans suggested that decrease of resistance to stretch of the arterial wall, where the receptors of the sino-aortic nerves which moderate reflexly the general arterial pressure are situated, could be the primary mechanism of essential hypertension.

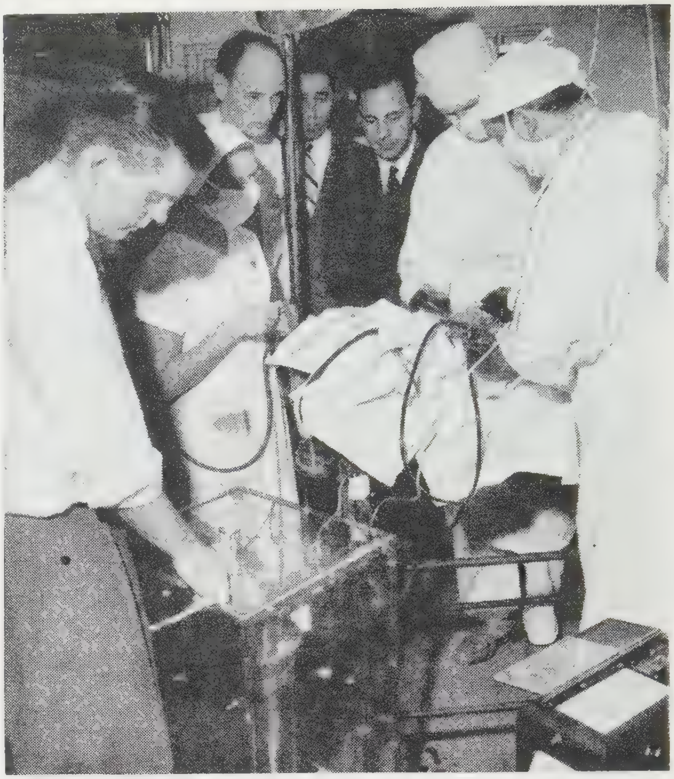
A committee of the Scientific council of the American Heart association, under the chairmanship of Carl J. Wiggers, reported its revised recommendations for human blood pressure determinations by sphygmomanometers. Among these was the contention that the disappearance point of auscultatory sounds be used as the level of diastolic pressure.

Therapeutic advances in the control of hypertension were concerned mainly with drugs, such as the veratrum alkaloids, the dehydrogenated ergot alkaloids, and other blocking or sympatholytic agents. However, John P. Merrill and his associates reported the removal of both adrenal glands in 12 patients with advanced hypertensive vascular disease.

Arteriosclerosis, and particularly coronary atherosclerosis, was subjected to wider laboratory and clinical investigation than in any previous year. The total chemical synthesis of cholesterol was accomplished for the first time. The great increase in excretion of cholesterol in the bile by hyperthyroid rats and converse reduction in hypothyroid animals was demonstrated. Observations were reported of the synthesis of cholesterol *in situ* by isolated arterial tissue and of the effect of heparin in altering the fat and protein molecules in human blood. The ultracentrifuge work of John W. Gofman was subjected to critical evaluation in several research centres. Dietary influences, protective drugs and food factors, hereditary components and hormonal relationships were some of the many areas of investigation.

The great importance of the coagulation mechanism in thrombosis was emphasized by Irving S. Wright. New anticoagulants were subjected to clinical trial in a search for a safer and more dependable agent.

The electrocardiograph became increasingly an instrument for three-dimensional analysis of the electrical activity of the heart through the growth of interest in vectorelectrocardiography. Cathode-ray instruments were used for recording the movement of the electrical vector during cardiac contraction, and high-speed motion pictures of the moving light beam were made to permit finer analysis of such motions. Another technique, developed by Stanford Goldman and his associates, used motion pictures of a multiscreen oscilloscope which measured, by the changing brightness of the screens, the course of the potential changes over the area of the exploring electrodes.



MECHANICAL HEART AND LUNG (foreground) doing the work of living organs for a dog undergoing surgery at the Hahnemann Medical college and hospital at Philadelphia, Pa., in 1951. The machine was developed by a team of engineers and surgeons

Ballistocardiography also developed in a two- and three-dimensional manner through the designing of instruments recording motions in axes other than the standard head to foot. The whole method of ballistocardiography, however, was shown to be subject to fundamental difficulties requiring further clarification before it could be applied readily to clinical research.

Surgery of the heart and blood vessels made rapid progress through its increased availability in many clinics of the world during 1951. Methods for the preservation of arterial grafts made it possible to have such material on hand when needed for such operations as coarctation (narrowing) of the aorta when the excised section was too long to permit approximation of the cut ends of the aorta.

Operations on the mitral valve, either by finger fracture or incision, increased, and considerably more than 500 such operations had been performed in the world by the middle of 1951. A method was devised by which, with the use of data derived from intracardiac catheterization, it was possible to determine before the operation the approximate size of the constricted mitral valve.

Hockey, Field. A two-month tour by a group of stars representing the Scottish Women's Hockey association featured the 1951 field hockey season, the visitors playing contests in thirteen states of the United States. Jean Torrance, captain of the Scots, and her teammates compiled a string of 21 consecutive victories before being held to a deadlock in their farewell appearance in the United States.

Competing against the American All-Stars in the concluding contest of the United States Field Hockey association's 26th annual tournament held at Wellesley, Mass., Nov. 22–25, the visitors were tied at 1–1. Each team scored its goal in the first half of the game played before 2,000 persons at Wellesley college. Louise Kerr counted for the Scots in the first three minutes of play, then, near the end of the session, Barbara Newlin of Philadelphia, Pa., tallied to knot the score.

In men's competition, the Westchester team of Rye, N.Y., carried off the top honours by halting the Mount Washington club of Baltimore, Md., 4–1, in the United States championship final on Norris field at Baltimore. (T. V. H.)

Hockey, Ice Although finishing second behind the Detroit Red Wings in the regular race of the 1951 National Hockey league, the Toronto Maple Leafs came back to capture the playoffs for the Stanley cup, symbolic of world supremacy in the sport.

The Leafs got away fast in the final series with a 3–2 victory over Montreal's Canadiens when Sid Smith tallied in 5 min. 51 sec. of the sudden-death overtime period at Toronto, Ont., Can. However, Montreal reversed the score in the second game, winning by 3–2 when Maurice Richard counted at 2 min. 55 sec. of extra play. At Montreal for a third meeting, the Leafs won, 2–1, as Ted Kennedy tallied in 4 min. 47 sec. of overtime. Two nights later, Toronto took a 3–1 lead in games by triumphing, 3–2, when Harry Watson hit the nets on a play set up by Max Bentley after 5 min. 15 sec. of the extra period. Shifting back to Toronto on April 21, the sextets continued their overtime struggling, but the Leafs clinched the cup with a 3–2 triumph. Bill Barliko scored on a 20-foot shot on an assist from Harry Meeker after 2 min. 53 sec. of extra play.

Detroit's Red Wings, after winning the National league title for the third straight season with the record total of 101 points, were eliminated by Montreal in the semifinals of the cup playoffs. The Canadiens took the first two contests, 3–2, 1–0, and Detroit won the next pair, 2–0, 4–1. Montreal then gained its place in the final round with triumphs by 5–2, 3–2. Toronto eliminated the Boston Bruins to reach the cup round after Boston had taken its opening semifinal by 2–0. The second contest ended in a 1–1 overtime tie, the game being halted by the curfew law, and then Toronto registered four successive victories, 3–0, 3–1, 4–1 and 6–0.

Gordon Howe of the Red Wings took league scoring laurels and the Art Ross trophy for the regular season with 43 goals and 43 assists for 86 points, a record high for a single season. Maurice Richard of the Canadiens was runner-up with 66. Milt Schmidt of Boston won the Hart trophy as the most valuable player and Leonard (Red) Kelly of Detroit was recipient of the Lady Byng Memorial trophy given to the player adjudged most outstanding for his playing ability combined with good sportsmanship.

The Vezina award was won by Al Rollins, Toronto's rookie goalie.

The Cleveland Barons annexed American league honours and the Omaha Knights triumphed in the United States circuit. Other major team champions were as follows: Victoria Cougars, Pacific coast; Toledo (O.) Mercurys, Amateur Hockey association, senior open; Crookston (Minn.) Pirates, Amateur Hockey association, senior; Johnstown (Pa.) Jets, Eastern league; Toledo Mercurys, International league; Canada, world amateur; Manhattan Arrows, Metropolitan (N.Y.) league; New York Metropolitans, Atlantic league.

PUCK sliding toward the Boston Bruins' net during the final game of a National Hockey league series played at Boston, Mass., in April 1951. The Toronto (Ont.) Maple Leafs defeated the Bruins 6 to 0 and won the series

Brown university's six won the Pentagonal league championship for the second straight time, but was routed by Michigan, the Big Ten leader, 7–1, in the final round of the National Collegiate Athletic association title tournament. (T. V. H.)

Hoffman, Paul Gray (1891–), president of the Ford foundation, was born on April 26 in Chicago, Ill., and studied at The University of Chicago. In 1911 he became a salesman for a Studebaker dealer in Los Angeles, Calif., and later was sales manager and then district branch manager for Studebaker in that city. After serving in World War I he purchased the Studebaker retail branch in Los Angeles, and in 1925 he went to South Bend, Ind., as vice-president of the Studebaker company. In 1933 he and Harold Vance, another vice-president, as receivers successfully reorganized the company and Hoffman served as Studebaker president from 1935 to 1948. He was an organizer of the Committee for Economic Development and chairman of its board of trustees from 1942 to 1948. On April 5, 1948, Pres. Harry S. Truman appointed Hoffman administrator of the Economic Cooperation administration. He supervised the European Recovery program (ERP) until his resignation on Sept. 30, 1950. His book, *Peace Can Be Won,* inspired by his experience as ECA administrator and the success of the recovery program, expressed his conviction that the U.S. could defeat communism by waging the peace on the military, economic, political and informational fronts.

The appointment of Hoffman as president of the Ford foundation, the largest public trust in the world, was announced on Nov. 6, 1950, and became effective on Jan. 1, 1951. He was enabled to continue his efforts for peace in his new post, since the foundation planned to concentrate initially on activities directed toward its primary objective, world peace.

Home Economics.

Membership in the American Home Economics association in 1951 included 19,590 professional memberships, 433 college clubs, 63 homemaker groups and 5 foreign associations. Permanent headquarters of the association were established in a building acquired at 1600 20th street, N.W., Washington, D.C.

Taking note of the national emergency, the association established a committee on consumers in the defense economy. As a member of the Youth Conservation Clearing House, the association co-operated in preparing legislative work sheets. The association worked for the adoption of rayon standards and requested the American Standards association to establish standards on beverage makers, pressure cookers and saucepans. The association granted three fellowships for graduate study and seven fellowships and scholarships to assist students from abroad to study home economics at United States colleges and universities.

Interest in evaluating home economics programs continued. A series of six workshops for home economics staff members was held to introduce new tools for evaluation and to assist with a critical review of the college program.

The association inaugurated a special American Home Economics association project in family life education supported by funds from the Grant foundation.

Bureau of Human Nutrition and Home Economics.—Comprehensive tables showing amounts of folic acid contained in familiar foods were prepared, based on assays for this B vitamin by the bureau and other research organizations.

To help supervisors of school lunch programs to evaluate their management practices, the bureau provided a schedule and check list of points for comparing local results with those in schools where practices had been appraised.

To aid consumer educators, the bureau began a series of semitechnical bulletins on individual foods, providing facts on such topics as nutritive value, food value for money spent in comparison with other foods and selection and use of different varieties, grades and forms.

Home Economics Extension Service.—More than 1,500,000 women reported that they had improved their families' diets by better selection, preparation and preservation of food through participation in the home demonstration program of their counties.

In addition, 11,150 schools were assisted in establishing and maintaining hot lunch programs. About 300,000 families received help on housing improvements. About 285,000 women and 36,000 men participated in child development and family relations programs. Through 4-H club programs, the service reached 1,000,000 girls. Approximately 3,400 white and 400 Negro home economists directed these county and community programs, with help from 600,000 volunteer local leaders.

Experiment Stations.—Research in home economics in the land-grant colleges is largely conducted as part of the research programs of the agricultural experiment stations established in connection with the colleges. These researches are supported in part by state and special funds and in part by federal grants administered through the office of experiment stations of the U.S. department of agriculture. During 1951 investigations were continued in the fields of family economics, family relationships, foods and nutrition, housing, home management, textiles and clothing and certain aspects of marketing.

Some of these investigations were fundamental in character; others were applied. Certain researches concerned with farm housing problems and with food consumption and nutritional status of selected population groups were conducted on the regional co-operative basis made possible through provisions of the Research and Marketing act of 1946.

Public Schools and Colleges.—Enrolment in home economics in junior and senior high schools was about 1,750,000, with some increase in the number of boys. The number of adults in federally reimbursed classes increased about 10%, raising the total to 782,000.

Membership in the Future Homemakers of America and New Homemakers of America, national organizations of high school home economics students, increased about 15% to a total of more than 354,000. Their programs emphasized improving leadership qualities.

Many home economics representatives of schools and colleges, including youth members from Future Homemakers and New Homemakers organizations, participated in the Midcentury White House Conference on Children and Youth and in a follow-up conference for home economics representatives held by the American Home Economics association and the home economics education service of the office of education.

There was a slight increase in the number of undergraduate students enrolled in home economics at the college level. A total of 646 master's degrees and 33 doctor's degrees in home economics and home economics education were granted.

Land Grant Colleges.—The home economics division in the Association of Land Grant Colleges and Universities directed its efforts during 1951 to the co-ordination of programs of resident instruction, extension and research. The resident instruction section was concerned with problems of enrolment, quality of instruction at the college level and counselling students in personal and professional development.

The extension section directed its efforts to the need of sensitizing farm women to their obligations as producers of food for the world. The research section was interested in promoting research that would improve the family and family life, in staking out areas of research in which home economics should assume leadership and in preparing these analyses in printed form.

Honduras.

A republic of Central America, Honduras is bounded by Guatemala, El Salvador and Nicaragua.

Area: 59,160 sq.mi. Pop. (preliminary figures, 1950 census of the Americas): 1,533,625, including approximately 35,000 tribal Indians. Capital: Tegucigalpa (pop. 62,263 in 1949). Other principal cities are San Pedro Sula (24,425), Comayaguela (16,907), La Ceiba (13,456), Tela (11,544) and Puerto Cortés (8,837). Language: Spanish. Religion: predominantly Roman Catholic. President in 1951: Juan Manuel Gálvez.

History.—John D. Erwin was appointed U.S. ambassador to Honduras in Jan. 1951, succeeding Herbert S. Bursley. In August the Honduran government contracted with the Tela railroad for the construction of a new dock at Puerto Cortés and the expansion of railroad facilities serving the port to alleviate congestion there. The contract provided that the work was to begin as soon as the government made the construction supplies available, and that the task would be completed within 18 months. The Tela railroad would then have the railway rights to the new dock at Puerto Cortés. (G. I. B.)

Education.—In 1951 there were 2,061 primary schools with 106,438 pupils enrolled, 21 secondary schools with 1,107 students, 24 normal schools with 1,746 students and 14 commercial schools with 2,386 students. The National university at Tegucigalpa had 796 students in 5 faculties. The 1951–52 budget allocated 3,545,695 lempiras for education.

Finance.—The monetary unit is the lempira, officially valued at 49.5 cents U.S. currency, in 1951. Governmental expenditures in the fiscal year 1949–50 totalled 32,108,374 lempiras; net revenue was 32,580,169 lempiras. The 1951–52 budget balanced revenue and expenditure at 28,904,130 lempiras. The internal debt amounted to 8,892,822 lempiras on June 30, 1950, of which 7,802,709 lempiras represented the floating debt. The external debt was 1,123,875 lempiras. Currency in circulation on Sept. 30, 1951, included 19,970,000 lempiras and $5,460,000 in U.S. coin. The cost-of-living index (Tegucigalpa) stood at 408 on Sept. 30, 1951 (1938–39=100).

Trade and Communications.—Exports during the fiscal year 1949–50 amounted to 43,486,315 lempiras, which figure was unadjusted for banana under-valuation estimated at 32,340,000 lempiras by the International Monetary fund. Imports were valued at 68,334,659 lempiras. Chief exports were bananas (31%), coffee (15%) and silver (13%). Leading customers were the U.S. (69%), El Salvador (14%) and Cuba (4%); leading suppliers, the U.S. (78%), El Salvador (5%) and the Netherlands Antilles (4%).

In 1947 there were 922 mi. of railroad, confined to the northern banana area, 1,201 mi. of highway and 63 airfields. Motor vehicles on Jan. 1, 1951, included 1,733 cars and 1,583 trucks. There were 6 broadcasting stations and about 16,500 radio sets in 1950. On June 30, 1950, 142 vessels (100 tons and over) aggregating 522,624 gross tons were registered under the Honduran flag.

Agriculture.—Coffee production in the 1950–51 season totalled about 27,000,000 lb. Banana exports in the 1949–50 fiscal year totalled 13,801,374 stems, of which 11,695,192 stems went to the U.S., 1,927,000 to Canada and 179,182 to the Netherlands. Other exports in 1949–50 were coffee 15,233,479 lb. and coconuts 7,856,128 nuts. Forest exports included 2,279,036 bd.ft. of mahogany lumber and logs and 28,901,277 bd.ft. of pine.

Minerals.—In the fiscal year 1949–50, 30,895 troy ounces of gold and 4,550,145 oz. of silver were exported. (J. W. Mw.)

Hong Kong.

This British colony on the coast of China consists of Hong Kong Island and the ceded territory of Kowloon and Stonecutter's Island. The New Territories (the remainder of the Kowloon peninsula and numerous islands) were leased from China in 1898 for 99 years. Area: colony 36.5 sq.mi., New Territories 355 sq.mi. Pop.: (1951 est.) 2,030,000. Language: Chinese (Cantonese); about 5% speak English. Capital: Victoria. Governor in 1951: Sir Alexander Grantham.

History.—Hong Kong had an uneasy year in 1951. Trade and industry suffered principally from the decision of the United States in Dec. 1950 to cut off trade with China and to ban the loading of goods for any other country when it was believed they might be destined for China. In March the government announced its intention to proceed with a five-year development scheme in spite of the scarcities likely to result from western rearmament. To control trade with China, Hong Kong was transformed in June from a free port into one with a highly controlled trade system. Steps were taken to stop smuggling and there were some large seizures of gold. In May it was estimated that trade with China (20% of Hong Kong's total in 1949 and 30% in 1950) would probably fall to 10%. By September industry had suffered from the shortage of such materials as cotton yarn and there was a falling off in production with consequent unemployment. Some alternative sources of supply were found.

Hearings continued on the claim by the Chinese Communists to the aircraft of the Chinese National Airways corporation impounded at Kaitak airport.

Hong Kong university, which had opened the first school of architecture in the far east in 1950, received in March a gift of £250,000 from Great Britain. In September it also received £1,000,000 from former Japanese assets as a scholarship endowment fund. Plans for a reservoir in the New Territories holding 1,150,000,000 gal. and costing £1,500,000 were announced in August.

Education.—Registered schools (1950): 880, with 160,000 pupils (an increase of 30,000 over 1949).

Finance and Trade.—Currency: Hong Kong dollar, valued in 1951 at 17.5 cents U.S. Budget (in Hong Kong dollars, 1950): revenue $ 274,240,876, expenditure $ 250,448,999; (1951 est.): revenue $ 247,799,850, expenditure $ 234,669,050. Foreign trade (in Hong Kong dollars, 1950): imports $ 3,787,600,000, including from China $ 857,900,000, Macao $ 104,400,000; exports $ 3,715,500,000, including to China $ 1,461,100,000, Macao $ 208,300,000.

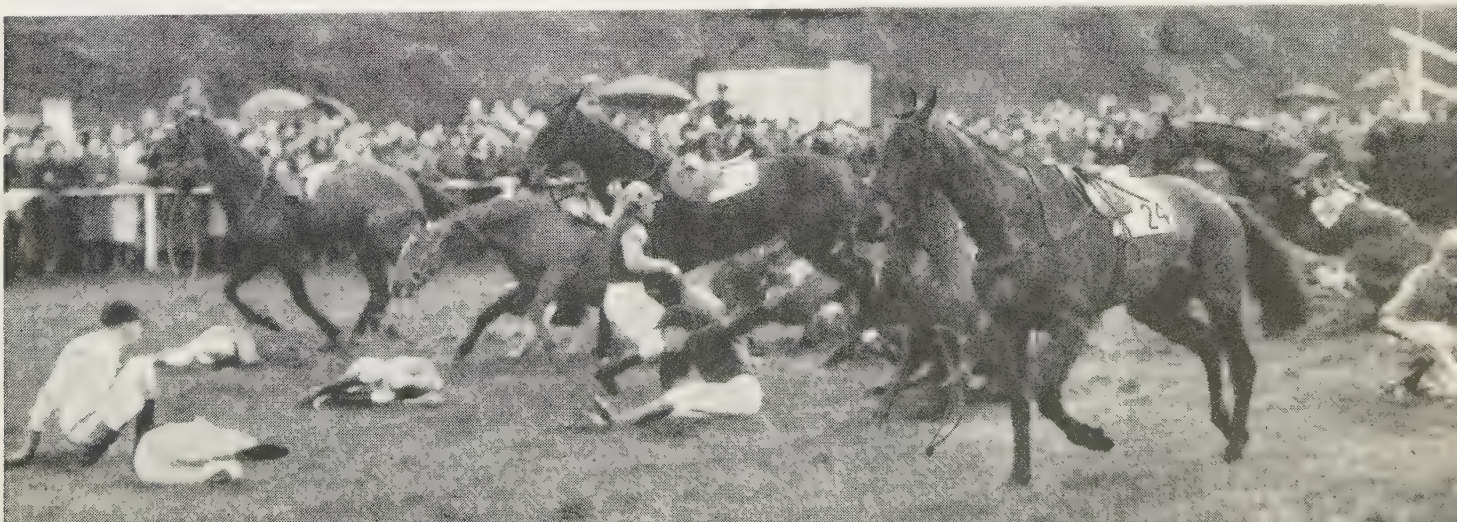
Horse Racing.

Limited to two races the year before because of an injury, Counterpoint came back to gain three-year-old laurels and recognition as the outstanding U.S. horse of 1951. The chestnut son of Count Fleet, bred and raced by C. V. Whitney, also was forced out of action by a bruised hind foot in July, but closed the campaign strongly to triumph in four successive stake races and lead in money



MASS SPILL after the first jump in the 1951 Grand National Steeplechase at Aintree, Eng. Out of a starting field of 36 horses only 3 finished the course

earnings with $250,525 for 15 starts.

Counterpoint ran with his more highly rated stablemate Mameluke in the Kentucky Derby at Louisville, Ky., on May 5 and was a disappointing 11th, with Mameluke last in the field of 20. Honours in that event, which grossed $126,100 (richest in the history of the race), went to Count Turf, who ran coupled with four rivals in the mutuel field. The winner, owned by Jack Amiel of New York, was ridden by Con McCreary and captured a record purse of $98,050. The surprise triumph returned a payoff of $31.20. A crowd of 100,000 saw Royal Mustang run second, four lengths back, with Ruhe a close third.

Eddie Arcaro scored his fourth victory in the rich Preakness at Pimlico in Baltimore, Md., on May 19 with Brookmeade stable's Bold. Arcaro got his mount in front early to win by seven lengths and this time Counterpoint ran second, with Alerted third. Bold paid his backers $10.20 and earned $83,110 first prize for his owner.

Counterpoint found himself in the Peter Pan Handicap at Belmont park on June 9 when he broke the New York track's record in defeating the heavily favoured Battlefield by two and three-quarter lengths. The Whitney entry, with Dave Gorman riding, was timed in 1 min. 47.8 sec. for a mile and an eighth and returned $33.50. Greentree's Hall of Fame, who with Battlefield was among the leading three-year-olds of the year, ran third. One week later, Counterpoint won the richest running of the Belmont Stakes, defeating Battlefield by four lengths and returning $12.30. The race grossed $118,100, of which $82,000 went to the victor.

Among Counterpoint's achievements later in the season were victories over C. T. Chenery's Hill Prince in major stake runs. On Oct. 13, Counterpoint won the Jockey Club Gold Cup at Belmont by a head to add $35,600 to his earnings. Then, on Oct. 20 at Jamaica, he led home Hill Prince by a length and a quarter in the Empire City Gold Cup race.

With Hill Prince gaining honours among colts in the handicap division, Alfred Vanderbilt's Bed o'Roses was best of the fillies and mares in that group. Walter M. Jeffords' Kiss Me Kate, winner of the Delaware Oaks, Acorn, Gazelle and Alabama stakes, was champion of the three-year-old fillies. The Maine Chance farm's Rose Jet stood out as a two-year-old filly and Greentree stable's Tom Fool was tops among the two-year-old colts although beaten by Vanderbilt's star, Cousin, in the Hopeful at Saratoga, N.Y.

Oedipus, owned by Ogden Phipps, captured honours among the steeplechasers. Greentree was the number one stable in money won, while R. H. McDaniel was leading trainer with the most winners saddled. Charley Burr took the jockey title by coming home in front with 312 mounts.

Citation became the greatest money winner of all time when he captured the Hollywood Gold Cup Handicap at Inglewood, Calif., July 14. The Calumet farm champion drew a purse of $100,000, bringing his all-time winnings to $1,085,760. Shortly after defeating his stablemate, Bewitch, Citation was retired to stud. By annexing the place at Hollywood, Bewitch set a new mark for mares, bringing her earnings up to $462,605.

A survey by the Associated Press showed that $1,629,239,777 was bet at the nation's tracks, with 24 states deriving a record revenue of $99,927,423 from the turf. Attendance gained 6.01% to 24,302,020. New York led in attendance with 4,386,315 and also in wagering, with $345,292,092.

Harness racing also enjoyed a bright season, with Pronto Don being voted outstanding horse of the year. The six-year-old trotting gelding from the Hayes Fair Acres stable in Illinois was leading money winner with earnings of $80,850, bringing his total to $170,797, an all-time high for geldings. Trained by Fay Fitzpatrick and driven by Benny Schue, Pronto Don bettered a number of world and U.S. standards. He took the $50,000 Roosevelt two-mile trot at Roosevelt raceway, Westbury, L.I., N.Y., for the second straight season, clipping six and one-fifth off the world record by covering the distance in 4 min. 10.8 sec. Among his other sparkling performances were winning races at Saratoga raceway and in the Golden West Trot at Hollywood park, Calif.

Mainliner, a brown colt owned by Ralph K. Kroening of Milwaukee and driven by the veteran Guy Crippen, took two straight heats to annex the Hambletonian at Goshen, N.Y., on Aug. 9. A field of 21, the largest in the blue-ribbon classic of harness racing, started, making for a record gross of $95,263.93. Mainliner's share, also a new high, was $51,347.26. The Hayes Fair Acres stables' Spennib took second money and Scotch Rhythm, trotting for the Two Gaits farms, gained third.

(T. V. H.)

Canada.—Pari-mutuel betting on races for running horses was in 1951 the highest on record. The 1951 statistics (with 1950 in parentheses) were: 359 (356) days of racing at the tracks of 30 (31) racing associations which held 2,764 (2,761) races, at which $60,384,287 ($53,469,032) was wagered, with $3,153,450 ($3,003,905) paid out in prize money. A scandal involving the fixing of races was laid bare in Ontario when the Ontario racing commission probed back into ten-year-old records, and handed out severe sentences, including life suspension for ten jockeys and fines for as many others. (C. Cy.)

Great Britain.—In National Hunt racing, the Cheltenham Gold Cup was won by the 12-year-old gelding Silver Fame, the oldest horse to win this race. The Grand National produced an extraordinary race. The going was apparently perfect, the field numbered only 36 as opposed to the record of 66 and yet at halfway, after one 2¼-mi. circuit, only 5 horses were left. After another mile only 2 remained, the mare Nickel Coin and the Irish gelding Royal Tan, and they finished in that order, followed at a considerable distance by Derrinstown who had been remounted after falling.

In flat racing, the first of the classic races, the Two Thousand Guineas and the One Thousand Guineas, were won by Ki Ming and Belle of All respectively. The French Two Thousand Guineas was won by Sicambre who was to prove the best of his age in France. Arctic Prince was one of the easiest winners of the Derby for many years. Belle of All finished third in the Oaks to Neasham Belle and the Grand Prix de Paris was won by Sicambre.

The King George VI and Queen Elizabeth Festival of Britain Stakes which, with its first prize of £25,322 10 s., was the most valuable race ever staged in Britain, was run at Ascot on July 21. Three-year-olds and upward were eligible and the distance was one and one-half miles. The winner was an English bred and trained three-year-old, Supreme Court, ridden by E. C. Elliott. He was sent to the stud after this race, as was Arctic Prince who broke down in running and finished lame. The last two classics, the St. Leger at Doncaster and the French equivalent, were both won for Marcel Boussac. At Doncaster the winner was Talma II and at Longchamp the same jockey, W. Johnstone, won on Stymphale.

The Prix de l'Arc de Triomphe, which had become the most valuable race in Europe, was fittingly won by Tantième, a four-year-old whose performances in France during 1950 and 1951 seemed to have established him as the best horse over one and one-half miles in Europe. He had won the same race in 1950 and did all that was asked of him in France afterward, though he had shown himself to be a poor traveller and in one of three races in England had been beaten: this was in the Festival of Britain Stakes when he could only finish third to Supreme Court.

The Ascot Gold Cup and the Goodwood Cup were won by a

French four-year-old, Pan II. Gordon Richards was the champion jockey in England once again. In France W. Johnstone and P. Blanc were among the most successful. (M. A. Md.)

Horticulture.

Unprecedented construction of new suburban and country homes in the U.S. during 1951 brought prosperity to nurseries through heavy buying of trees, shrubs and other planting stock. Seedsmen also profited by this trend. Grass seed sales were the highest since World War II. Merion grass seed, developed at the Beltsville, Md., agricultural station, was sold in limited quantities at high prices but gave promise of better lawns in sections where grass was hard to maintain. Increasing requests in funeral notices to "Please omit flowers" caused florists to collect a large fund with which to combat this tendency.

Floods in Missouri and near-by states caused heavy losses to fruit and vegetable growers. The middle west had the coolest summer on record. In some north central states the ground froze before bulbs and late vegetables had been dug.

Thousands of elm trees in New England were removed in an effort to check the spread of the Dutch elm disease. The disastrous oak wilt disease spread into North Carolina and Tennessee, and by the close of the year was found in 15 states. The European earwig was found to be spreading rapidly on both the east and west coasts. Chlordane offered the best control. The mistaken use of DDT on evergreens was partly responsible for wide-spread infestations of red spider mites by killing their parasites. New remedies for the control of this pest were offered after millions of dollars had been spent in research, but their value was not fully proved.

Progress was made in the feeding of plants through their leaves, with quicker results and with the use of less material.

The shipment of Christmas trees from Canada to the U.S. was estimated at 5,000,000, with prices higher than in previous years. The total cut for both countries was set at 25,000,000.

Increasing numbers of shipments of lily bulbs were received from Japan. There were large imports of tulips, narcissi and other bulbs from the Netherlands and France. The year's domestic narcissus crop was ample, but dry weather reduced the size of the bulbs. A new plan in the Netherlands by which inspection of the bulbs took place in the fields and in the packing sheds proved very satisfactory.

An International Plant Quarantine conference in Rome, It., in September was attended by delegates from 24 nations. The purpose was to perfect rules governing plant shipments for mutual protection. A Spanish unit of the European branch of the Florist Telegraph Delivery was formed.

Great Britain's 3,210,000-ac. project in East Africa for the production of crops to produce vegetable oil was abandoned, at least for a time, because the original plan could not be carried out. The Union of South Africa agreed to send several million cases of fruit, jams and juices to England to relieve the food shortage there. This was a sacrifice, for South Africa itself was short of food. In spite of severe restrictions in Great Britain, florists were permitted to import a limited number of glasshouse plants from Denmark to May 31, 1952. Regulations on the movements of cut flowers and foliage were eased. Healthy growth of the florist business in Germany was reported. A flower show at the Kiel industrial exhibit was visited by 90,000 persons. King George VI of Great Britain donated a large number of trees, shrubs and seedling plants to stock a typical English garden in Berlin.

High labour costs and civil disturbances reduced Indonesia's exports of pepper to less than one-tenth of prewar shipments, which were 70% of the world's total. Southern Australia suffered severely from drought. Compulsory spraying was ordered in Western Australia to combat the fruit fly. The country's pack of dried vine fruits was less than expected, but exports of quick-frozen pineapples, bananas and other tropical fruits to the United Kingdom were encouraging. There was an increased demand for canned bananas. A ban was placed on the shipment of grapes into New Zealand unless they were certified.

FIRST PRIZE display of camellias at the 1951 International Flower show held at Grand Central palace, New York city, in March 1951

Great swarms of locusts along the Persian gulf threatened the loss of all Iran's crops, but planes and pilots from the U.S., provided with ten tons of the new insecticide Aldrin, sprayed the fields, killed the locusts and saved the crops.

Labour troubles, believed to be Communist-inspired, together with heavy storm losses, led the United Fruit Company to consider the abandonment of its immense banana plantations in Guatemala. In the meantime, a new use for bananas was discovered. Corn for the feeding of cattle being scarce, feeding of bananas, including the skins, was tried with much success.

A world-wide shortage of insecticides and fungicides began to appear, mostly because much of the raw material was used for ammunition. A scarcity of metal containers for shipping pesticides was also threatened. At the same time scientists began to suspect that insects were developing some degree of immunity to DDT and other insecticides. (*See* also Fruit; Vegetables.)
(E. I. F.)

Hospitalization Insurance: *see* Insurance.

Hospitals.

In 1951 under the direction of an independent commission composed of representatives of agriculture, education, industry, labour and religion, as well as medical and hospital representatives, a two-year program was launched by the American Hospital association to study the best means of providing high quality hospital care at the lowest possible cost to the public. The study first sought to answer basic questions on how hospital care was being used and how it was paid for.

Competing with industry and with the armed forces, hospitals faced, in 1951, a personnel shortage similar to that felt during World War II. The need for nursing personnel was particularly acute, and hospitals in co-operation with other interested organizations concentrated on a nation-wide student nurse recruitment campaign.

Despite curtailed U.S. federal expenditures for nondefense needs, the Hill-Burton hospital survey and construction program proceeded without cutbacks. The program provided for carefully planned hospital expansion throughout the nation. Hospital construction grants as of Aug. 31, 1951, totalled 1,611 projects with preliminary or final approval, comparing favourably with the 1,476 projects on the books on that same date in 1950. Of the 1951 projects, 490 were in operation and the remainder under construction or approved. Completed, these hospitals would provide 77,940 hospital beds, in addition to 248 health centres.

Construction figures from a report of the hospital facilities division of the public health service were indicative of some of the 1951 trends in hospitalization. Most of the approved project applications were for general hospitals, and about three-fifths of all approved projects were for completely new facilities. The new hospitals that were built were relatively small in bed capacity, 50% having fewer than 50 beds. Most of the new projects—58%—were in communities of less than 5,000 population.

Operating costs were on the rise, and patient income lagged further behind the cost of patient care. For the general hospital, the average cost of care per patient day was $15.62, an increase of $1.29 over the previous year. Of this, patients paid $13.11, or $1.09 more than they paid the previous year.

During 1950 general hospitals needed $2.51 per patient day, or more than $341,000,000, to make up the difference between operating expenses and patient income.

More people in the United States received hospital care in 1951 than ever before. Admissions totalled 18,483,185. This meant that an average of 51,000 people passed through U.S. hospital admitting offices every day of the year. The percentage of occupancy, however, continued to be smaller than in the two previous years. The average day found 86.1% of all hospital beds occupied. Since the number of admissions increased but the per cent of hospital beds occupied did not, it was apparent that patients, on the average, did not stay in hospitals as long. The average length of patient stay in all U.S. hospitals in 1950 was 8.1 days. (*See* also VETERANS ADMINISTRATION, U.S.)

In Canada operating expenditures for hospitals increased substantially during 1951. Greater industrial activity, partly caused by defense spending, and the expansion of the armed services intensified the competition for personnel and materials. To a limited degree, the cost per unit of care was offset by the continuing high utilization of hospital accommodation.

The widening in Canada of the federal hospital construction grants program during 1951, to give financial assistance for the building of nurses' residences, outpatient departments and laboratory services, encouraged another aspect of the building program. The year was marked by a large number of hospital projects completed. Since the inception of the federal aid program, grants had been approved for 34,000 additional beds in 350 projects.

Another important development was the formation of the trans-Canada medical services which, when effected, would permit an interchange of prepaid medical care benefits between all provinces; thus a nation-wide prepaid hospital and medical care "package" would become possible under voluntary auspices.

BIBLIOGRAPHY.—"Administrators Guide," *Hospitals*, pt. 2 (June 1951); "Hospital Service in the United States, 1951," *J.A.M.A.*, 146:109–199 (May 12, 1951). (GE. BU.)

International.—The second post-World War II congress of the International Hospital federation was held in Brussels, Belg., from July 15 to July 21 under the presidency of René Sand. It was attended by 520 persons representing 25 countries. The main theme for the congress was "The Care of the Chronic Sick and the Aged." The draft constitution of the federation, prepared by the provisional executive committee, was approved by the general assembly of members on July 17, and 21 members were elected to the council of management to hold office for four years. It was also proposed that a study tour should be held in Italy, in 1952, with the Italian Hospital federation as host, and that the next congress should be held in Great Britain in 1953. A bulletin, issued four times a year, was to contain items of interest to members of the federation; the headquarters were situated at the offices of King Edward's Hospital Fund for London.

Great Britain.—It seemed probable in 1951 that the cost of the hospital service could be stabilized somewhere near the figure of £270,000,000 (the amount estimated in 1950); in fact, the sum voted in March 1951 was £285,000,000. In January Aneurin Bevan ceased to be minister of health; he was succeeded by Hilary Marquand, and the functions of the ministry of health were revised to retain hospitals and other strictly medical matters under the ministry of health, while many other functions were transferred to the ministry of local government and planning. A further change occurred in the autumn when a Conservative government came into power and H. F. C. Crookshank became minister of health. Improvements of 1950 were carried further and numbers and grading of medical appointments throughout the service were reviewed. Although few complete new hospitals were proceeded with, many old hospitals made progress with upgrading old accommodation for use as acute general hospitals, by provision of additional theatres, expansion of X-ray, physiotherapy and other departmental facilities and modernization of systems for registration of patients and keeping of medical records.

A staff college for hospital administration was opened in London in April by King Edward's Hospital Fund for London. The college undertook the systematic provision of refresher courses for hospital administrators; by the end of 1951 about 80 administrators had participated in the courses. The college also invited applications from those employed within the hospital service for a two-year training course, to begin in April 1952.

FILMS OF 1951.—*A Life in Her Hands* (British Information Services). (A. G. L. I.)

Hotels.

The U.S. hotel industry in 1951 increased its room sales between 8% and 9% over the previous year, while food and beverage sales were up 5% to 6%. Despite these rises, however, the average hotel's net income before taxes dropped between 5% and 10%, largely because of increased costs of labour and materials. Average room occupancy was off about 2% for the year, but an 8% to 9% increase in the average daily rate per occupied room yielded an almost proportionate rise in total room sales.

Probably the most significant long-term trend in the hotel industry was the progressive lengthening of the seasons at resort hotels. Many resorts which previously had remained open only for 2 months in the winter or summer were able in 1951 to maintain occupancy above the break-even point for the full 12 months of the year. This trend benefited vacationists as well as hotels, since it had the effect of increasing the physical facilities available at resorts, and also made possible significant economies in off-season vacationing. An important factor in this trend was the improvement which many resort hotels made in their bad-weather recreational facilities, as well as the improvement in their plants through the installation of air-conditioning equipment and more effective insulation.

Another trend of importance to the hotel industry was the

CHILDREN'S HOTEL in London, Eng., in its third year of operation in 1951 with accommodations for 40 children ranging from infancy to eight years of age. Bookings for guests ranged from one night to three years

continuing increase in volume of group business.

As a result of their $2,000,000,000 post-World War II modernization program, hotels had greatly improved their facilities and services for motor travellers and travelling family groups, both of which comprised increasingly greater proportions of the average hotel's guests. The improved facilities for motorists included motor entrances and special motor lobbies, attached storage garages or adjacent parking lots and travel information desks which supplied not only road maps and route information but up-to-the-minute weather reports. Special hotel services for family groups included baby-sitting services and nurseries, in some hotels, and sections of dining rooms set aside for groups which included children.

While hotels increased their rates somewhat to compensate for higher costs of labour and materials, the rate increases had not kept abreast of the cost increases. The principal reason for this was that shrinking occupancy had made competition a greater factor in the fixing of hotel rates. Most hotels depended largely on more efficient operating methods to help compensate for increased costs. (C. A. Hh.)

Great Britain and Europe.—The chief influences affecting hotels, restaurants and inns in Europe became more pronounced in 1951. These were the rising costs of operation, which, in turn, necessitated an increase in charges to the public by many establishments, and the high level of taxation in most countries, particularly in Great Britain, which reduced the spending power of the public.

The vigorous efforts, by government, public bodies and the trades directly concerned, to develop the tourist traffic continued and propaganda in this field reached a new high level by means of attractive and informative leaflets and posters in colour. In Great Britain, for the first six months of 1951, the Festival year, the latest figures issued by the British Travel and Holidays association showed an increase in the number of tourists of 8% over 1950; it was estimated that a total of 281,952 visitors arrived from overseas during that period. In the latter part of 1951, the association submitted a memorandum to the government suggesting reform of the licensing laws, insofar as they directly affected the public—in particular, visitors from overseas.

The advantages of operating establishments in continental Europe, as compared with Great Britain, became more obvious during 1951, and in the competition for tourists British managements continued to be severely handicapped at a time when the tourist trade, as a dollar-earning invisible export, was of considerable importance. Establishments were still subject to strict food rationing, and there remained the heavy purchase tax on essential articles of equipment and furnishings. Also, complications and anomalies resulting from the orders under the Catering Wages act continued to hamper establishments by their rigid application to businesses varied in character, size and appeal and offering a wide range of personal services.

A feature in all countries, particularly as regards hotels in the more important towns, was the substantial business arising from the increase in meetings and conferences of all kinds, national and local, brought about by the exigencies of modern life, on political, economic, social and practical day-to-day problems in industries and trades. In all countries, too, there was an increase in the number of persons who took advantage of improved travel facilities; air travel developed considerably. These were important factors in maintaining receipts in establishments in most parts of the world. (H. C. Ce.)

Housing.

During the first 11 months of 1951, 1,022,600 new permanent dwelling units were started in nonfarm areas of the United States, a drop of more than 20% from the comparable period of the previous year. The total number of dwellings started during the year, estimated at approximately 1,100,000 nonfarm units, was, however, one of the greatest in the history of the nation, second only to the all-time high of 1,396,000 starts in 1950. The volume of home construction was considerably in excess of expectations. It was anticipated that the curtailment of credit for the financing of housing through regulation X of the board of governors of the federal reserve system, instituted in Aug. 1950, would have a sharply restricting effect upon the ability of families to purchase homes and would result in a severe reduction in the volume of new construction. The uncertainties accompanying the outbreak of the Korean War, however, stimulated housing demand, increased inflationary pressures gave rise to expectations of further increases in costs and prices, and renewed prospects of housing shortages served to buttress demand for new construction.

Defense Housing.—In March 1951 a procedure for designating critical defense areas in which special action might be taken to assure the provision of housing and other facilities needed for military personnel or defense workers was announced by the Defense Production administration following recommendations made by Raymond M. Foley, administrator of the Housing and Home Finance agency. The procedure stipulated that relaxation of existing residential credit restrictions could be considered for localities which were designated as critical defense housing areas, in order to facilitate the construction of housing needed for military personnel or defense workers coming into the area. The first areas to benefit from this arrangement were Aiken, S.C., and Paducah, Ky., where atomic energy plants were under construction.

As the year developed, it was found that mere relaxation of regulation X was insufficient to provide for the needs of defense housing. In September congress enacted the Defense Housing and Community Facilities Services Act of 1951 (public law 139), which made provisions for special Federal Housing administration (FHA) mortgage insurance aids, federally financed defense housing, assistance to localities in the provision of community facilities and services, and acquisition and site development in connection with defense installations in isolated areas. The provisions of the act applied only to critical defense housing areas which the president might designate if all the following conditions existed: (1) expansion of defense activity either by the construction of a new defense plant or installation, reactivation of an existing plant or substantial increase in defense operations; (2) substantial in-migration to carry out the activities of such defense plants or installations; and (3) shortage of housing impeded or threatened to hamper the defense activities in the area, or community facilities or services in the area were not available or were insufficient. As in the housing program of World War II, private industry was afforded full opportunity to provide the needed defense housing wherever possible. In addition to provisions requiring publication in the *Federal Register* of information relating to the number, types, rentals and general location of the permanent dwelling units required in defense areas, residential credit restrictions were suspended on housing renting for $85 per unit per month or to be sold for $12,000 or less. The act also added new title IX to the National Housing act, making available liberal FHA mortgage insurance aids for housing which was considered to be an "acceptable risk in view of the needs of national defense."

Under section 903 of title IX, the FHA could insure mortgages on one- and two-family houses which were to be rented to defense workers or military personnel. The maximum amount of the mortgage could not exceed 90% of value and was limited to $8,100 for single-family houses or $15,000 for two-family units. Additional amounts were permitted in high-cost areas and for the third and fourth bedroom in each dwelling unit. The maximum mortgage term could not exceed 30 years and the interest rate was limited to 4½%. Section 908 provided for mortgage insurance on multifamily rental projects. The mortgage could not exceed $5,000,000 and was limited to 90% of estimated value or the actual costs of the completed physical improvements on the property. This stipulation in effect limited the builder's profit to 10% of estimated value or 11% of costs. The interest rate on section 908 mortgages was limited to 4% on the unpaid balance.

The direct provision of defense housing by the federal government could be undertaken only if private enterprise was unable to provide for the need or if the requirement was of temporary duration. The act provided that federally financed permanent housing should consist of one- to four-family structures which might be sold separately to private owners. Temporary dwellings must be of mobile or portable character so that they might be reused elsewhere to serve other temporary needs. The act authorized an appropriation of $50,000,000 for federally financed defense housing and an additional $60,000,000 for loans or grants for the provision of necessary community facilities and services needed in connection with the construction of defense housing in critical areas.

As of Dec. 29, 1951, credit restrictions had been suspended and housing programmed for private construction in 112 critical defense housing areas, involving a total of 65,295 units of which 45,770 were rental units and 19,525 were dwellings available for sale. Temporary housing to be provided with federal funds, programmed as of Dec. 27, 1951, in 22 critical defense areas, amounted to 4,575 units consisting of 2,850 trailers and 1,725 temporary portable dwelling units. All the temporary units were assigned to military bases: 1,350 to army posts, 1,790 to the air force and 1,435 to various naval establishments. Title IX did not become operative until late in November because of delays in budget authorizations and complications involved in preparing the operating rules and regulations.

An interesting aspect of the Defense Housing act was that it modified by legislation the regulations of an administrative agency. Under the act, regulation X was changed in nondefense areas to allow veterans to purchase a home costing $7,000 or less with a down payment of only 4% while nonveterans were required to place a 10% down payment. In addition, the mortgage amortization period for homes priced at $12,000 or less was extended from 20 to 25 years.

Final Liquidation of the HOLC.—The Home Owners' Loan corporation, established in 1933 for the purpose of salvaging home ownership at a time when foreclosures were taking place at the rate of 1,000 a day, liquidated its entire operation successfully in 1951. In the course of its existence the corporation refinanced more than 1,000,000 defaulted home loans, estimated to be equivalent to one out of five mortgages on owner-occupied homes in nonfarm areas at the time. In addition to aiding home owners, the HOLC provided an important prop to the entire home finance system by the purchase of $2,750,000,000 in frozen mortgages from financial institutions and individual lenders. Local cities and towns also benefited through the payment of $490,000,000 in delinquent taxes and current assessments on properties acquired by the corporation. In all, the corporation's financial commitments amounted to $3,500,000,000. According to various estimates made at the early stages of HOLC operation, a loss of $1,000,000,000 to $2,000,000,000 was anticipated. Rising incomes, responsible borrowers and efficient operations made it possible, however, for the corporation to avoid all losses and return a surplus of $14,000,000 to the U.S. treasury.

Tax Concession on Exchange Transactions.—The sharp increases in house prices in recent years had placed many families at a tax disadvantage when they sold their home to purchase a new place of residence. If their original home had been held for a period of time, it usually could be sold for an amount in excess of the purchase price. The excess was then subject to a capital gains tax regardless of whether the family purchased a new home or used the proceeds for other purposes. If a new house was acquired at an amount equal to the sale price of the old house, the house owner in effect had to pay an additional amount to the government in the form of a capital gains tax.

The Revenue Act of 1951 partially relieved the hardships which frequently resulted from these circumstances. The act exempted from taxation the excess of the sale price on the cost of the original dwelling, when the taxpayer purchased a substitute house one year prior or subsequent to the sale of the original dwelling. If the taxpayer built a new home, the benefit period was extended by 6 months to an 18-month period commencing at the date of the sale of the old dwelling. Capital gains tax was still levied, however, on the amount to which the sale price of the old residence exceeded the cost of the new purchase.

Housing Census of 1950.—The second complete census of U.S. housing was taken in April 1950, as part of the regular decennial census, and some of the more important summary data were first released in 1951.

In April 1950 there were 45,875,000 dwelling units in the United States, of which 39,390,000 were located in nonfarm areas and 6,485,000 were farm dwellings. The dwelling places included in this enumeration were of all types, ranging from luxurious penthouse apartments to shacks.

By and large, the single-family detached dwelling was shown to be the favoured residence of the U.S. family. In nonfarm areas the freestanding home accounted for 56% of all dwelling units, while only 13% of U.S. households were located in structures containing five or more apartments.

In the decade of the 1940s there was a net gain of 8,550,000 units, or 23% of the total housing stock in 1940—the greatest numerical growth in the history of the nation. This was particularly striking in light of the fact that the production of new housing was sharply restricted during the war years, almost half the decade. Nonfarm dwellings increased by approximately 10,000,000 units, an amount in excess of the total increase in stock. Only 5,700,000 of the added units were constructed between 1940 and 1950. The remainder were units created by the conversion of nonresidential properties into housing accommodations, the subdivision of large houses or apartments into smaller units or by the reclassification by the census of dwellings from the farm to nonfarm category.

Farm dwellings, on the other hand, declined in number from 7,642,000 in 1940 to 6,485,000 in 1950, a reduction of 15%, because of abandonment, the conversion of farm houses to nonfarm uses and the supersession of farms by other uses, as well as through reclassification.

Tenure.—Perhaps the most important change in the characteristics of the U.S. housing supply was manifested by the sharp increase in the proportion of dwelling units that were owned by their occupants. Mid-century found the highest proportion of owner occupancy, at least since 1890, the first year of record. In April 1950, 19,528,000, or 53.3% of all occupied nonfarm dwelling units were owner-occupied, a gain of 71% in the course of a decade. Conversely, the proportion of tenant-occupied dwellings declined from 58.9% to 46.7% of total occupied units. Although the rise in home ownership was accompanied by a sharp increase in the number of mortgaged owner-occupied structures, the proportion of homes that were encumbered by debt declined from 45.3% in 1940 to 43.6% in 1950. This meant that 56.4% of all one- to four-family owner-occupied structures in the U.S. were held free and clear of debt. (*See* also ARCHITECTURE; BUILDING AND CONSTRUCTION INDUSTRY; BUSINESS REVIEW; MUNICIPAL GOVERNMENT; TOWN AND REGIONAL PLANNING.) (CH. RA.)

Canada.—Anxiety on the part of the federal government to hold inflation in check, and the inflationary pressures of a full-scale housing program, created a strange situation during 1951. On the one hand the government admitted the great need for more houses in Canada; on the other hand the government took steps to make it increasingly difficult during most of 1951 for the average Canadian to build a house. The basis of the government's action was the feeling that it would be better to have a continuing housing shortage than to have runaway inflation because housebuilders bid too actively among themselves, and against the expanding defense program, for scarce building materials and for skilled and semiskilled labour.

Thus, in February the government withdrew the additional one-sixth loan formerly available through the Central Mortgage and Housing corporation. This had the effect of raising the down payments about $1,000 on five-room houses and $1,500 on six-room houses, and consequently of putting a brake on construction. The brake was pulled tighter when lending institutions raised their mortgage interest rates.

In June the government introduced amendments to the National Housing act which increased the mortgage interest rates on housing loans, in an effort to keep private lending institutions interested in operating under the National Housing act. But this move was not enough to keep building starts from falling. By the end of August starts on new homes declined by 16% over the similar eight-month period of 1950, while completions were 2% lower.

Disturbed by the size of the cutback in construction, and encouraged by an improvement in the supplies of various building materials, the government in October announced concessions of (1) lower mortgage down payments (10% of the ceiling price for defense workers, 20% for nondefense workers) and (2) return of the former rental insurance scheme (providing builders with 85% loans for projects that would have defense workers as tenants and 80% loans for those with nondefense workers as tenants).

MODEL of the De Soto-Carr housing project for replacing slum dwellings in St. Louis, Mo., designed by architects of the city's housing authority. Work on the first units was scheduled to begin in 1952

Slightly earlier in the year the federal government established a plan to co-operate with provinces and municipalities to build rental homes in centres with populations of 5,000 and more. The cost was to be borne 75% by the federal government, 17.5% by the province and 7.5% by the municipality. As an initial effort, 5,000 houses were scheduled for Ontario. (C. CY.)

Great Britain.—By Sept. 30, 1951, 1,456,721 new houses, flats and other units of accommodation had been provided in the United Kingdom since the end of World War II. In addition to the temporary house program, which resulted in 156,611 dwellings, 961,484 new permanent houses and flats had been built.

In the quarter ended Sept. 30, 1951, 43,902 homes were provided in England and Wales and 5,142 in Scotland, bringing the total number of new houses up to the yearly average of 200,000 houses. This was the avowed aim of the Labour government, in whose view no greater number of houses could be built without making serious inroads on the building program for factories, hospitals and schools.

At the general election the Conservative party was bound by the conference decision at Blackpool in 1950, when the delegates, in spite of advice from their leaders, insisted on naming 300,000 houses a year as the minimum target for the party. After the general election, Harold Macmillan became minister of housing and local government in succession to Hugh Dalton. He immediately announced the suspension of all new building

BRITISH DWELLING UNITS typical of the housing for which miners were given priority in 1951 in order to attract new miners to the dwindling force working the British coal mines

for three months, presumably in order to allow him to prepare a program for the disposition of building labour and materials. Shortly afterward he issued a circular permitting a ratio—which under the previous government had been one house for sale as against four to let—of one house for sale to one house to let. In the house of commons during the first important debate on the subject, the minister explained that this was not an instruction to local authorities, but that it merely increased the area of their discretion. He hoped that, if 200,000 houses were built in 1952, about 50,000 of these might be for sale.

The chief criticism of the government's policy came from the executive of the Town and Country Planning association which welcomed the intention to speed up housing but reiterated its fundamental belief that the new houses should be of the right kind and in the right places.

It was obvious that the Labour government could have achieved a greater production than 200,000 houses a year had it not adopted high standards of housing. The average prewar house had a superficial floor area of 750 sq.ft. to 850 sq.ft. The postwar house had a superficial floor space of more than 1,000 sq.ft. To revert to the prewar standards would permit of a substantial increase in the number of houses built each year. In the meantime, flats continued to be built in London providing inadequate living space of only 650-sq.ft. floor area, subsidized to the extent of £2,900 as compared with the normal subsidy of £600 on the 1,000-sq.ft. house.

Norway.—In 1950 Norway needed 123,000 additional houses to provide every family with a separate dwelling. In 1950, 22,400 homes were completed. For the year 1951 a lower target was set because of the needs of the defense program, and in the first six months 7,800 new houses were completed as compared with 10,000 in the same period of 1950.

Sweden.—At the end of World War II, Sweden aimed at producing 60,000 housing units a year of which 45,000 were to be in the cities and 15,000 in the rural areas. In 1950, 43,937 units were completed, 12,803 as houses and the rest as apartment dwellings. Loans were available to potential houseowners up to a maximum of 90% of construction cost. Community-owned blocks of flats might borrow up to 100% of the capital value. A subsidy was given to families of two or more children under 16 years of age and coming within a specified but relatively high income limit. The subsidy amounted to $36 or £9 each year for each child under 16.

France.—In France, from the end of the war up to June 1951, there had been built 174,900 houses (of which 110,245 were new houses and the rest reconditioned houses), in addition to 119,260 temporary houses.

The Netherlands.—In 1950 the Netherlands built 47,300 houses. By Aug. 31, 1951, an additional 36,324 houses had been completed and 43,109 houses were under construction.

U.S.S.R.—According to L. P. Beria in his report at the meeting of the Moscow soviet, held on Nov. 6, 1951, to celebrate the 34th anniversary of the October Revolution, during the year 270,000,000 sq.ft. of family living space (presumably 300,000 to 400,000 apartment dwellings) had been provided in cities and in industrial settlements, and 400,000 new houses were being built by collective farmers in the rural areas. Humour of 1951.

The most notable contribution to humour in the United States during 1951 was made by the nation's television performers. Not only did most of the established radio and movie comedians appear on television, but also a number of new performers were introduced.

Television being primarily a visual type of entertainment, it is natural that TV comedy leans more heavily on action than on words. Broadly speaking, television humour in 1951 was divided into five categories.

Television.—*Slapstick Humour.*—This type of comedy depends mainly on eccentricity of action. As a rule the comedian wears ludicrous costumes and takes part in sketches which require the use of such devices as comic falls, custard pies in the face, blacked-out teeth, fright wigs, wild facial contortions and destruction of scenery. The foremost exponents of slapstick in 1951 were Dean Martin and Jerry Lewis, Milton Berle, Red Skelton, Jimmy Durante and Jackie Gleason.

Situation Comedy.—In this type of TV humour, performers pretend to be characters in a story. The comedy is a combination of funny lines and amusing action resulting from the unfolding of the plot. Outstanding examples of situation comedy in 1951 television were George Burns and Gracie Allen and Amos and Andy.

Master of Ceremonies Comedian.—This type of comedian is generally the master of ceremonies for a variety program. He acts as host and gives humorous introductions to various performers who present their specialty acts. The master of ceremonies often enters into some of the sketches. Included in this category in 1951 were such performers as Arthur Godfrey, Ken Murray, Dave Garroway and Robert Q. Lewis.

Straight Humorous Commentary.—This is primarily a carry-over of radio technique and is not often used on television. It is mostly talk with little action. The performer usually wears regular business clothes, stands before the audience and recites stories and jokes. In 1951 television, Herb Shriner and Sam

Levenson used this technique.

Satire.—This type of comedy consists of broadly overexaggerated imitations of people, customs and institutions that are familiar to the audience. Nearly all television comedians included some satire in their programs during the year; the team of Sid Caesar and Imogene Coca used satirical sketches almost exclusively on their show, lampooning movies, books, dancers, singers and the noble institution of marriage.

Radio.—Few innovations were discernible in radio humour during the year. Popular comedians continued to attract large audiences with the same type of material they had used for years. The most notable new radio comic was Tallulah Bankhead, who acted as mistress of ceremonies for a variety program. Her humour technique consisted principally of exchanging insults with members of the cast.

Stage.—There were a number of humorous shows presented on the legitimate stage in 1951. *Guys and Dolls* was a musical comedy based on Broadway characters created by Damon Runyon. *Two on the Aisle* was a musical revue featuring Bert Lahr in a number of satirical sketches. *A Tree Grows in Brooklyn* was a musical adaptation of the best-selling novel of that title. Other successes were *The Moon Is Blue, Where's Charley?* and a revival of the Ben Hecht-Charles MacArthur play *Twentieth Century.*

Books.—Among the outstanding humorous books published in 1950 and 1951 were the following: *I'm a Lucky Guy,* an autobiography by Frank Gilbreth; *How to Get from January to December,* by Will Cuppy; *People Named Smith,* by H. Allen Smith; *Parents Keep Out,* humorous poetry by Ogden Nash; and *Laughter Incorporated,* a collection of jokes edited by Bennett Cerf.

Lay Humour.—American humour in 1951 was concerned mainly with making fun of people in the news and laughing at current manners, politics, fashions and eccentricities. The fighting in Korea was too new and too painful to inspire military jokes such as were heard during World War II, and humour was concentrated more on happenings at home.

There was laughter at television in its struggle to develop. The high cost of living and the rise of taxes were hard to take but there were still jokes about them. The struggle between the Yankees and the Giants for the world series baseball pennant made a good subject for jokes. The difficulty of obtaining tickets to *South Pacific* was considered funny. The usual jokes were heard about politicians, and about the singing career of the president's daughter.

After the first shock of the collegiate football and basketball scandals wore off, these too became the subjects of jokes. Sen. Estes Kefauver and his senate crime investigating committee, while greatly admired and respected, nevertheless were used as the basis for humorous remarks.

Humour in 1951 showed two general trends: a revival of rowdy old-fashioned slapstick brought back from the early days of vaudeville and burlesque, and a new kind of good-natured, gentle spoofing of present-day customs and foibles. (D. C. G.)

Hungary.

A people's republic of southeastern Europe, Hungary is bounded west by Austria, north by Czechoslovakia, east by Rumania and south by Yugoslavia. Area: 35,912 sq.mi. Pop.: (1950 est.) 9,313,000. Language: (1947 est.) Hungarian 92.9%, German 5.1%. Religion: (1947 est.) Roman Catholic 65.6%, Greek Catholic 2.5%, Calvinist 20.8%, Lutheran 6%. Chief towns: (1941 census) Budapest (cap., 1,164,963; 1948, 1,058,288); Szeged (136,752); Debrecen (125,933); Miskolc (109,433); Kecskemét (87,269); Pécs (78,512). Chairman of the presidium of the national assembly in 1951: Sándor Rónai; prime minister: István Dobi.

History.—The Hungarian five-year plan was revised in 1951. Much higher output targets were set and the pace was to be much quicker than originally intended. Official spokesmen maintained that the increase was made possible by the unexpected successes already achieved, by the toiling enthusiasm of the masses and by the exceptionally generous help of the Soviet Union and the people's democracies with which Hungary's trade was rapidly developing. Other official speeches however stressed the need to develop a heavy industry as a foundation for national defense, threatened by the western imperialists. The total value of investments under the five-year plan period was increased from 51,000,000,000 forints to 85,000,000,000 forints. The proportion allotted to industry, which was to have been 41% under the original plan, was raised to 52%. In comparison with the original plan the targets for chemical and electric power production was almost doubled, those for machine production trebled. The increase in the industrial labour force over the plan period was to be not 480,000 but 650,000.

During 1951 the only important change in leading political personnel was the replacement in April of Sándor Zold as minister of interior by Arpád Házi.

The industrial project which received most publicity was the construction of the new Danube iron works at Dunapentele on the Danube. At least some sections of this works were due to begin operating in June. In 1949 Dunapentele was only a village. By Nov. 1951 its population was 35,000 and it was a model of people's democratic town planning. On Nov. 7, the 34th anniversary of the Great October Socialist revolution, a signal honour was bestowed on Dunapentele. As the iron works, which would greatly increase the potentialities of Hungary's war industry, was "the biggest peace project of the five-year plan," it was decided to rename the new city after "the leader of the peace movement of all mankind." The city's new name was to be Sztálinváros, and the Danube works were to become the Stalin works.

Hungary suffered from labour problems: 62,000 new workers were to have been brought into industry by the end of June, but this target was far from fulfilled. The police were empowered to stop citizens in the streets and question them on their employment. One of the causes of the labour difficulties was the fact that many factory workers owned small plots of land and were more interested in cultivating them than in doing permanent jobs in industry. Government spokesmen attached great importance to increasing the number of women in industry. A government decree of June laid down that 50% of new recruits into industry as a whole, and 80% in transport, commerce and public services, should be women. The number of women in universities, technical and economic institutes must be increased. All factories employing more than 250 women must provide day nurseries. The official monthly organ of the Workers' (Communist) party, *Társadalmi Szemle,* in June welcomed the fact that women were now employed in the coal mines, electric energy production, the timber industry and printing. In building 13% of the workers were women.

Pressure on peasants to join collective farms continued. In March a ban on the formation of new collectives was imposed, but this was removed in July. At the end of October it was announced that 15% of Hungary's arable land was held by collectives—slightly more than twice as much as at the beginning of the year.

In July a new State Secrets law was introduced. It was so phrased as to make almost any conversation with a foreigner or unauthorized person capable of being interpreted as espionage. During May and June considerable numbers of persons were deported from Budapest. A ministry of interior statement declared that 918 families had been so deported and claimed that they were former aristocrats, landowners, politicians, businessmen, army and police officers. At the end of June Archbishop Josef Groesz of Kálocsa, who had signed on behalf of the Catholic episcopate the agreement of Aug. 1950 with the government, was tried for treasonable conspiracy and currency offenses and sentenced to 15 years' imprisonment. (H. S.-W.)

Education.—Schools (1950–51): elementary 6,185, pupils 1,229,957, teachers 36,819; secondary 405, pupils 95,930; universities and institutions of higher education 21, students 32,790, professors and lecturers 7,113. Illiteracy (1941) 6%.

Finance and Banking.—Budget: (1950 est.) revenue 17,537,000,000 forints, expenditure 17,454,000,000 forints; (1951 est.) revenue 29,623,000,000 forints, expenditure 29,516,000,000 forints. Currency circulation (Feb. 1950): 2,805,000,000 forints. Bank deposits (Feb. 1950): 6,914,000,000 forints. Monetary unit: forint with an official exchange rate (Nov. 1951) of 11.74 forints to the U.S. dollar.

Foreign Trade.—(1948): imports 1,975,000,000 forints; exports 2,965,000,000 forints.

Transport and Communications.—Roads (1951): 15,976 mi. Licensed motor vehicles (Dec. 1950): cars 16,000, commercial 15,500. Railways (1951): 7,100 mi.; passenger-miles (1948) 2,983,000,000; goods ton-miles (1948) 2,036,000,000. Air transport (1948): flights 4,447; miles flown 625,800 mi.; passengers carried 36,111; goods carried (metric tons) 356,000. Danube shipping (Dec. 1947): merchant vessels 514; gross tonnage 118,717. Telephones (1948): subscribers 106,768. Radio receiving set licences (1949): 525,000.

Agriculture.—Main crops (metric tons, 1948): wheat 1,583,000; maize 2,862,000; barley 692,000; oats 334,000; rye 786,000; rice 37,000; sugar, raw value (1950) 255,000; potatoes (1950) 1,224,000; tobacco 27,000; linseed (1949) 10,000; dry beans (1950) 41,000; dry peas (1949) 32,000; grapes (1949) 770,000. Livestock (Feb. 1949): cattle 1,441,000; sheep 650,000; pigs 3,250,000; horses 569,000; chickens (1950) 15,000,000. Livestock products: meat exports (1950) 3,600,000 lb.; eggs (1948) 750,000,000; milk (1948–49) 1,100,000 metric tons. Wine production (1949): 3,173,000 hl.

Industry.—Manufacturing establishments (1947): 4,342; persons employed 349,500. Fuel and power: coal and lignite (1949) 11,500,000 metric tons; electricity (1949) 2,200,000,000 kw.hr.; crude oil (1950) 500,000 metric tons; natural gas (1947) 100,700,000 cu.m. Raw materials (metric tons): iron ore, iron content (1947) 61,000; pig iron (1949) 404,000; crude steel (1949) 874,000; bauxite (1948) 374,000; gold (kilograms, 1947) 62. Manufactured goods: cement (1947) 281,000 metric tons; cotton piece goods (1947) 148,000,000 m.; woollen piece goods (1947) 13,000,000 m.; cigarettes (1949) 6,323,000,000.

Hutchins, Robert Maynard (1899–), U.S. educator, was born on Jan. 17 in Brooklyn, N.Y. He left Oberlin college, Oberlin, O., in 1917 to enlist in the U.S. ambulance corps. Entering Yale university, New Haven, Conn., in 1919, he received his A.B. in 1921 and his LL.B. (*magna cum laude*) in 1925. In 1923 he was appointed secretary of Yale university and in 1927 dean of its law school. In 1929, at the age of 30, he became the fifth president (and, in 1945, the first chancellor) of The University of Chicago.

Hutchins resigned in 1950 as chancellor of the university and as a member of its board of trustees to join the Ford foundation as an associate director. His resignation became effective at the end of the university's academic year, June 30, 1951, but he was granted a leave of absence from Jan. 1, 1951, to participate in the formulation of the foundation's policies. Lawrence A. Kimpton (*q.v.*) was appointed his successor at the university. Hutchins continued as chairman of the board of editors of Encyclopædia Britannica, Inc.

He had served as the administrative head of the university for almost 22 years, a period longer than that of any of his predecessors. He was also senior in point of service among the contemporary heads of the principal U.S. universities and colleges.

Hutchins' time was devoted during the year to planning, with the other officers, the policies and programs of the Ford foundation. He made two trips to Europe late in the year, going to Berlin, Ger., in August to give the convocation address at the Free University of Berlin in connection with a foundation grant to that institution and to Sweden late in September to give the Gottesman lectures at the University of Uppsala.

Iceland. An island republic of the north Atlantic, Iceland has an area of 39,768 sq.mi., and a population (census 1940) of 121,474 (est. 1950) 143,000. Capital: Reykjavik, the only large town (est. pop. 1949: 54,707). Religion: Lutheran Christian.

President in 1951: Sveinn Björnsson; prime minister from March 14, 1950, Steingrimur Steinthorsson.

History.—In 1951 Iceland faced again the fact that it could not live a life apart. On May 7 Brig. Gen. Edward J. McGraw led an air-transported contingent of 200 U.S. soldiers to Reykjavik and the Keflavik air base. They would presumably make preparations for more troops and radar installations to improve the defenses of this strategic northern island. This was done in accord with the North Atlantic treaty, which Iceland had signed, and with a special agreement between Iceland and the United States. The latter provided that the United States would assume the defense of Iceland, but that Iceland would determine the number of troops to be installed, and the time, and would itself control commercial operations. Prior to the May 7 landing, all the non-Communist members of the *althing* were consulted, and agreed unanimously that the time had arrived for the move.

The military establishment in Iceland was necessitated by Iceland's lack of an army, and was undertaken by the United States as part of the mutual co-operation of the two governments in the North Atlantic Treaty organization. Installations in Iceland were to be co-ordinated with those in Greenland.

The Communists, including their nine representatives in the *althing*, of course howled protests. The university students held a mass meeting but their protest had more than a negative note; the students stated the need for conscious emphasis upon Icelandic language and cultural values in order that the little

U.S. TROOPS off duty in their quonset barracks in Iceland, where a defense station was reactivated in 1951 to co-operate with Iceland in carrying out provisions of the North Atlantic treaty nation should not be swamped by the influx of foreign soldiers.

The local Communist paper complained that from Iceland bombers could strike at the industrial centres of the U.S.S.R.; an indication, thought others, that the native Communists were altogether too solicitous for the Soviet Union. The Russians on their part suddenly took an interest in Icelandic fishing grounds; a mother ship of 10,000 tons and some smaller boats were caught salting herring inside Iceland's three-mile limit and near Keflavik, although in the Baltic the Russians were preventing fishermen from coming within 12 miles of their shores. One of the Soviet ships was warned and one was fined by an Icelandic court.

The Icelanders increased their dollar exports of frozen fish and fish oil in the fiscal year of 1950–51 to $6,000,000 (from $2,500,000 in the previous year). But they still faced a serious adverse balance of trade and increasing inflation. The Economic Cooperation administration only partly met the difficulty with a total aid up to Aug. 1951 of $21,700,000. Most of the E.C.A. funds went toward the building of power plants and a fertilizer plant. Reforestation was continued vigorously; large rural areas were planted and about 500,000 small trees were sold for planting in private yards and parks. (*See* also INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT.) (F. D. S.)

Education.—Schools (1950–51): Elementary 214, pupils 16,218, teachers 690; secondary 58, pupils 4,721, teachers 298; grammar schools 2, pupils 769, teachers 48. University of Iceland, students 620, professors and lecturers 57.

Finance and Banking.—Budget (1950 actual): Revenue 306,200,000 krónur, expenditure 265,100,000 krónur; (1951 est.) revenue 298,000,000 krónur, expenditure 261,100,000 krónur. National debt (Dec. 1950): internal 218,100,000 krónur, external 107,000,000 krónur. Note circulation (Sept. 1951) 202,000,000 krónur. Deposit money (Sept. 1951) 197,000,000 krónur. Monetary unit: króna (pl. kronur) with an exchange rate (1951) of U.S. $1 = 16.32 Kr.

Foreign Trade.—(1950) Imports 543,300,000 krónur, exports 421,100,000 krónur. Main sources of imports: U.K. 22.3%, U.S. 19.7%, the Netherlands, 13.8%, Denmark 7.5%, Poland 6.1%, Italy 5.4%. Main destinations of exports: U.K. 11.9%, U.S. 13.2%, Italy 7.6%, Sweden 7.05%, Denmark 4.2%, Germany 6.8%.

Transport and Communication.—Roads (1950): 6,215 km. Motor vehicles licensed (Jan. 1951): cars 6,327, trucks 4,389. Shipping (Jan. 1951): vessels of 100 gross tons and over 130; tonnage 74,262; other registered vessels 534, tonnage 17,058. Telephones (Jan. 1951): 17,258. Radio receiving sets (Jan. 1951): 35,000.

Livestock and Fisheries.—Livestock (Jan. 1950): sheep 401,688, cattle 42,412, horses 41,735, poultry 122,725. Fisheries: total catch (1950) 323,027 metric tons.

Ice Shows: *see* SHOWS.

Ice Skating. Spinning away with the top prizes in every meet for which he was eligible Richard Button of Harvard university continued his domination in figure skating. The Englewood (N.J.) youth captured the United States senior crown for the sixth straight season at the national meet in Seattle, Wash., with James Grogan of Colorado Springs, Colo., the runner-up. Sonya Klopfer, 16-year-old star from Brooklyn, N.Y., won the women's laurels for the first time when she defeated Tenley Albright of Boston, Mass. Karol and Peter Kennedy of Colorado Springs retained the senior pairs laurels.

Other victors at Seattle were Dudley S. Richards, Boston, junior; Frances Dorsey, Seattle, junior women; Noel Ledin, Chicago, Ill., novice; Carol Heiss, New York, novice women; Mr. and Mrs. Edward Bodel, Berkeley, Calif., gold dance; Caryl Johns and Jack B. Jost, Baltimore, Md., silver dance; Caryl Johns and Jack Jost, junior pairs.

Near the end of February, Button travelled to Milan, It., where he was credited with the record total of 183.7 points as he annexed the world championship for the fourth successive season.

Button and Miss Klopfer added to their laurels late in March at Calgary, Alberta, when the former took North American honours for the third year in a row and the Brooklyn miss gained the women's title for the first time. Other winners in the North American meet were Karol and Peter Kennedy, pairs; Mr. and Mrs. Bodel, dance.

HJALMAR ANDERSEN, winner of the world speed skating title at Davos, Switz., Feb. 11, 1951

Miss Klopfer and Grogan finished first in their respective divisions in the United States Olympic trials at Indianapolis, Ind., Dec. 21–22. Button automatically qualified for a place on the team.

Although he failed to win a single event, Ken Bartholomew of Minneapolis, Minn., scored enough points to win honours for the sixth time in the national outdoor speed skating championships at St. Paul, Minn., in January. Bartholomew gained second places in the mile and 220-yard races and third place in the 880 on the seven-event program to finish with 80 points. Barbara Marchetti of Wyandotte, Mich., and Gwen DuBois of Newburgh, N.Y., shared the women's senior championship by finishing with 100 points each.

Other national winners were Dick Pelner, West Allis, Wis., junior boys; Thomas Fina, Saranac Lake, N.Y., intermediate boys; Dave Mars, Jr., St. Louis, Mo., juvenile boys; Pat Gibson, Madison, Wis., intermediate girls; Judy Kaufman, St. Paul, junior girls; Karen Smith, Minneapolis, juvenile girls. (T. V. H.)

Idaho. A state located in the northwest, one of those carved from the old Oregon territory, Idaho was admitted as a territory by Pres. Abraham Lincoln in 1863 and became a state on July 3, 1890. Idaho has 83,557 sq.mi. and is known as the "Gem state." Pop. (1950 census) 588,637, showing a gain of 12.1% over the 1940 census. Boise, the capital city, with a population of 34,393 is the largest city in the state, followed by Pocatello with 26,131; Idaho Falls 19,218; Twin Falls 17,600; Nampa 16,185; Lewiston 12,985; Coeur d'Alene 12,198; and Caldwell 10,487.

History.—In 1951 all the principal elective officers were Republicans except the secretary of state, Ira Masters, who was a Democrat. Len Jordan was governor; Edson Deal, lieutenant-governor; Robert E. Smylie, attorney general; N. P. Nielson, auditor; Lela D. Painter, treasurer. The state senate was composed of 31 Republicans and 13 Democrats. The house of representatives included 36 Republicans and 23 Democrats.

During the year the department of higher education was consolidated by the closing of the Northern Idaho College of Education at Lewiston and the Southern Idaho College of Education at Albion. The legislature refused to appropriate funds for their operation. This still left seven schools offering teacher training, including the University of Idaho at Moscow, and the College of Idaho at Pocatello. The legislature created a highway commission of three men, also enacted a ton-mile formula for licensing and taxing trucks. A lien law was passed permitting the state to place a lien against property held by recipients of public assistance. With certain exemptions, the state would recover, upon the death of the recipient, the amount of assistance granted.

Important economic developments included the installation by the Monsanto Chemical company of the electric furnace plant at Soda Springs for the manufacture of elemental phosphorus, at a cost of $12,000,000. Potlatch Forests, Inc., opened a $15,000,000 pulp and paper plant at Lewiston, the first in the state. The Idaho Power company would be producing an additional 90,000 kw. at the new C. J. Strike dam, south of Mountain Home. The cost, including transmission lines, was approximately $23,000,000.

Education.—Idaho is served by the state university and agricultural college located at Moscow and the Idaho State college at Pocatello. Junior colleges maintained by junior college districts are located at Boise and Coeur d'Alene. Private colleges are College of Idaho at Caldwell, Ricks college at Rexburg and the Northwest Nazarene college at Nampa. Public school enrolment for 1951–52 was 128,192, an increase of 8,575 in three years; 4,812 teachers were employed in them. The superintendent of public instruction in 1951 was Alton Jones.

Banking and Finance.—As of Dec. 31, 1951, there were 38 state banks and branches with deposits of $116,357,000; 59 national banks with deposits of $338,054,000. There were 11 savings and loan associations.

The state budget appropriation for the biennium 1951–52 was $38,921,000 from the general fund. Of this amount 41.80% was to go for humanitarian purposes, 46.40% for education and 11.80% for administration and all other expenses.

Idaho is one of the few states that is debt free. On Dec. 15, 1951, the last obligation of $4,000 was retired.

Communications.—Idaho had in 1951 a total of 39,742 mi. of highway with 4,827 mi. under the state highway system. The state was served by four transcontinental railroads with a mileage of 2,738. Water transportation to Lewiston was being expanded on the Columbia and Snake rivers. United and Western Air Lines maintained schedules east-west and north-south, while Empire Air Lines served southern and northern Idaho.

Agriculture.—Idaho is known for the famous Russet potatoes, which are one of the major crops. Together with hay, wheat, sugar beets, beans and fruit the income grossed $188,300,000 for 1950. Indications were that this figure would show a substantial increase for 1951.

Manufacturing.—In 1941 a little less than 10,000 employers were paying unemployment compensation taxes for slightly less than 78,000 employees on an annual pay roll of $85,600,000. In 1950, 13,000 employers had 93,500 employees and an annual pay roll of $266,585,000.

Social Insurance and Assistance, Public Welfare and Related Programs.—Idaho has two institutions for the mentally ill—one at Orofino and one at Blackfoot; a home for the feeble-minded at Nampa; a school for the deaf and blind at Gooding; an industrial school at St. Anthony; a tuberculosis hospital at Gooding; and a recreational centre at Lava Hot Springs. The state penitentiary erected a new administration building and increased its facilities by the addition of a new cell block, which allowed for 670 inmates. As of Dec. 1, 1951, there were 462 inmates. (L. B. J.)

Mineral Production.—Table II shows the tonnage and value of those minerals produced in the state in 1949 whose value exceeded $100,000, and the corresponding data for 1950, so far as they were available at the close of 1951. Idaho ranks first among the states as a producer of silver and zinc, second in lead and third in phosphate rock.

Table I.—*Principal Crops of Idaho*

Crop	1951	1950	Average 1940–49
Wheat, bu. (all)	37,968,000	37,087,000	31,154,000
Corn, bu.	1,962,000	1,680,000	1,620,000
Oats, bu.	8,022,000	9,768,000	7,377,000
Barley, bu.	10,432,000	14,840,000	11,305,000
Sugar beets, short tons	1,253,000	1,508,000	1,045,000
Dry beans, cwt.	2,502,000	2,489,000	2,213,000
All hay, tons	2,281,000	2,326,000	2,419,000
Potatoes, bu.	37,520,000	49,200,000	37,379,000
Apples, bu.	1,701,000	1,360,000	1,782,000

Idris I

(Mohammed Idris el-Mahdi es-Senussi) (1890–), first king of the United Kingdom of Libya, was the grandson of Mohammed ben Ali ben es-Senussi (1791?–1859), an Algerian from Mostaganem who from 1843 onward lived in Cyrenaica and founded a powerful Moslem fraternity known as Senussiya, and the son of Senussi el-Mahdi (1845–1902). Since Idris was a minor at the time of his father's death the chieftainship passed to his cousin Ahmed esh-Sherif who fought against Italy in the Italian-Turkish war of 1911–12 and in World War I. In 1917 Idris secured an agreement with the British and Italian governments, was recognized by the Senussi chiefs as Grand Senussi and in Nov. 1920 acknowledged Italian suzerainty over Cyrenaica. He was given the hereditary title of amir with jurisdiction over the oases of Kufra, Jaghbub, Jalo, Aujila and Jedabia. On the rise of fascism in Italy he withdrew in Jan. 1923 to Egypt with his family, while his lieutenants continued to rule in the oases. In 1940, under an agreement with the British government, he organized an auxiliary military force which fought with the British 8th army. In Nov. 1947 he returned to Cyrenaica and the following year was installed in the palace of the former Italian governor at Benghazi. On June 1, 1949, he was recognized by Great Britain as ruler of Cyrenaica. In Dec. 1950 he was chosen by the national assembly representing Cyrenaica, Tripolitania and the Fezzan to be king of Libya when that state came into being. On Dec. 24, 1951, Great Britain and France relinquished their administrative authority and Idris proclaimed the independence of the new state. (K. Sm.)

Illinois.

A north central state of the United States, admitted to the union in 1818, nicknamed the "Sucker state," Illinois is sometimes called the "Prairie state." Total area: 56,400 sq.mi., of which 55,935 sq.mi. are land. Pop. (1950 census): 8,712,176. The population increased 10.3% or 814,935 over 1940, when the official census showed 3,957,149 males and 3,940,092 females; 7,504,202 white, 393,039 nonwhite.

Population classed as urban in 1950 was 6,759,271 or 77.6%; rural was 1,952,905 or 22.4%.

Chicago (pop., 1950, 3,620,962) is the largest Illinois city followed by Peoria (111,856); Rockford (92,927); East St. Louis (82,295) and Springfield (81,628).

History.—The Illinois legislature, in its 67th biennial session which convened in Jan. 1951 and adjourned June 30, passed 1,040 bills of which 899 were approved and 141 vetoed.

Perhaps of greatest importance were two bills to finance a state-wide highway rebuilding program. One increased the state gasoline tax from three to four cents per gallon effective Aug. 1, 1951, the rate to advance automatically to five cents Jan. 1, 1953. The other bill increased truck and bus licence fees by an estimated $20,000,000 annually, effective in 1952. The schedule of fees would advance an additional $8,000,000 annually in 1954 under the terms of this measure. However, the constitutionality of the truck fee act was attacked in the courts and a decision of the circuit court of Sangamon county in November holding the law invalid was immediately appealed by the state to the Illinois supreme court.

Other major legislative enactments of the 1951 session included: an enabling law authorizing Illinois cities (except Chicago) to adopt through referendum the city-manager form of municipal government; creation of a commission to recommend improvements in municipal government financing; an increase of $26,700,000 (to $151,000,000) in state financial aid to the public schools; a series of 78 bills to reorganize the state government along lines recommended by the "Little Hoover commission"; stiffer penalties for violation of the narcotics laws and the submission to a 1952 referendum of the question of amending the revenue article of the state constitution to allow modernization and equalization of the state and local governmental tax structure.

The principal state officers in 1951 were: Adlai E. Stevenson, governor; Sherwood Dixon, lieutenant governor; Edward J. Barrett, secretary of state; William G. Stratton, treasurer; Ivan A. Elliott, attorney general; Benjamin O. Cooper, auditor of public accounts; Vernon L. Nickell, superintendent of public instruction.

Education.—Public and private elementary and high schools enrolled approximately 1,581,482 for the fall term of 1951, an increase of about 96,000 over 1950. State aid to the schools for the biennium starting July 1, 1951, was increased to $151,038,000, almost double the level of 1947–49. Under a new law effective July 1, 1952, teachers in the public schools must be paid minimum annual salaries, ranging from $1,800 for those having less than 60 semester hours of teacher training to $2,600 a year for 150 or more semester hours and the master's degree.

Social Insurance and Assistance, Public Welfare and Related Programs.—The legislature appropriated $291,556,830 for old-age pensions, aid to dependent children, blind assistance and general relief and disability assistance for the 1951–53 biennium. As of Sept. 1951 the Illinois public aid commission reported 4,154 blind receiving an average monthly grant of $52.17. There were 116,704 receiving an average monthly old-age pension of $47.96; 82,114 dependent children receiving an average of $30.66 and 58,009 persons receiving general assistance averaging $35.63 monthly. Under a new program of assistance to the permanently disabled begun July 1, 1,896 persons averaged $51.19 in monthly grants.

Public assistance rolls continued to decline during 1950. The total of 263,135 persons receiving aid under the various programs in Sept. 1951 was 12% below the level of Sept. 1950. Expenditures for Sept. 1951 amounted to $10,500,524, a drop of 1.8% below the same month in 1950. The sharpest decline took place in the general assistance program, where the number of recipients in September was 31% below the same month in 1950.

A rapid increase in employment brought unemployment compensation claims to the lowest level since World War II. This low point was reached Nov. 3, 1951, when there were 66,046 claimants on the rolls, as compared with 72,541 during the week ended Nov. 4, 1950.

Communications.—The state division of highways awarded during 1951 the largest volume of highway contracts in the state's history, $42,500,000 for construction and $20,300,000 for maintenance. This included state and federal funds. The average annual expenditure for state highways between 1945 and 1950 was about $30,000,000; it was expected to average more than $75,000,000 per year in 1951–53.

The Illinois highway system consisted of 125,000 mi. of all types of roads. There were 12,204 mi. of railroad (steam and electric) serving about 80% of the communities of the state. There were 158 commercial airports and more than 400 private-use airports certified by the state aeronautics department. The state was served by 14 scheduled air lines.

Banking and Finance.—Banking facilities were provided in Illinois by 891 banks, having on June 30, 1951, total deposits of $12,810,059,000 and total resources of $13,744,650,000. Of these, 384 were national banks and 507 were state banks.

The budget voted by the legislature to operate the state government in the biennium ending June 30, 1953, was $1,464,401,033. The governor vetoed $41,000,000 of additional appropriation bills, a new veto record. In the first 11 months of 1951 the 2% sales tax produced $172,176,063, a gain of $11,948,954 over the same period of 1950. Motor fuel taxes were up $9,351,734 and motor vehicle licences increased by $5,370,109. The cigarette tax was up $212,993. The state government closed the fiscal year 1951 with a cash balance of $279,256,929 in state funds and $471,972,951 in trust funds. As of Aug. 31, the total bonded indebtedness of the state was $390,300,900 of which $332,100,000 consisted of veterans' compensation (bonus) bonds.

Agriculture.—The production of the leading crops in Illinois for 1951, 1950 and the average for the ten-year period 1940–49 are shown in Table I.

Manufacturing.—The value added by manufacture to products in Illinois in 1949 was $6,898,990,000, and the number of employees was 1,103,973, of whom 860,475 were production workers. Total salaries and wages were $3,697,953,000, wages $2,557,792,000, number of establishments 15,988.

Table I.—*Principal Crops of Illinois*

Crop	1951	1950	Average, 1940–49

*Values for processed materials are not included in the totals.

Principal industries and values added by manufacture (1947) were meat packing $187,695,000; blast furnaces and steel mills $205,187,000; petroleum refining $101,871,000; tractors $168,844,000. (A. E. St.)

Mineral Production.—Table II shows the tonnage and value of those items of mineral production of the state in 1949 whose value exceeded $100,000, and the corresponding data for 1950, so far as they were available at the close of 1951. Illinois ranks seventh among the states in value of mineral output, the bulk of which is in the fuels group.

Illiteracy.

In 1951 it was estimated that one-half to two-thirds of the world's population could not read, write and figure well enough to satisfy their daily needs. Only about one-third of the world's children were being benefited by effective compulsory school attendance beyond four years of schooling. As a result of this, a vast new generation of illiterates was growing up.

Three principal obstacles must be overcome to solve the illiteracy problem on a large scale: the lack of trained teachers, of suitable books and of money to finance adult education programs. After experimenting in more than 238 languages over a period of 25 years, Frank C. Laubach had worked out a method by which the first two difficulties could be met. The process used to teach adult illiterates to read and write their own language must be easy and pleasant to learn; the method must be very simple to teach, so that with a minimum number of trained supervisors the "Each One Teach One" principle can be applied. The Laubach approach, tested during 1951 in the colloquial Arabic, Burmese, Persian, Pushtu, Malayan and Indonesian languages, was a judicious combination of the phonetic and sentence methods, enabling beginners to start reading simple stories right after the first lesson.

A beginning was made in the production of suitable "ladder" literature which permitted newly literate adults to progress by easy steps to permanent reading skill. The Committee on World Literacy and Christian Literature in New York city, jointly with the University of Syracuse, New York, organized a special two-year graduate journalism program for the training of writers for new literates. To meet the demand for such training abroad a parallel training program was to be organized in India during 1952–53 at the University of Nagpur.

The United Nations Educational, Scientific and Cultural organization started a regional fundamental education centre in Patzcuaro, Mex., to train adult education leaders from the Latin American republics, and to produce graded literature from the primer stage through advanced reading. Plans were made for five such centres to be established in strategic regions of the world.

By the end of the year, some encouraging progress was reported. More than 25,000 illiterates in five Arab refugee camps in the middle east had begun to read. Through the efforts of the British administration and U.N. collaboration, a colloquial Arabic primer was prepared for the use of the Libyan government. The South African Institute of Race Relations in Johannesburg was conducting literacy and adult education classes for a number of African groups in their own languages, and in English and Afrikaans.

The Republic of Liberia was working on two fronts: to establish literacy in English, the national language, and to help the vernacular-speaking tribes to gain literacy in their spoken idiom, so that they could pass more easily to the learning of English.

The government of Afghanistan initiated its first literacy program in the two important languages of the country—Persian and Pushtu. With the aid of health, agricultural and engineering experts, useful information was collected about each one of the fields in the country in which national and foreign experts were working. This material was then rewritten in simplified but interesting manner as a second-stage reader for new literates. The title of this reader was *Akbar the Wise Man.* An adaptation of this reader was being printed in Burma under the title *U Sein the Wise Man.* It contained simple lessons about rinderpest, malaria, tuberculosis, home gardens, infant care, venereal diseases, how to cultivate the mind and body, etc.

With the help of U.N.E.S.C.O., the Indian government was promoting literacy campaigns in the Hindi-speaking rural areas near Delhi. Specially equipped motor caravans conveyed trained teachers and audio-visual equipment to the villages. When the caravan moved on to another community, it left behind a team of 15 to 20 teachers. Adult students usually learned to read specially prepared newspapers and books after a month of training. When the visiting instructors departed, the local school teacher continued to supervise the education of the men and women who had learned to read. (F. J. R.)

I.L.O.: *see* INTERNATIONAL LABOUR ORGANIZATION.

Immigration and Emigration.

More than 95,000,000 aliens and citizens entered into the United States at 468 land, air and seaports during the fiscal year ending June 30, 1951. Of these entries 97% were alien and citizen border crossers who may have made numerous entries across the Canadian and Mexican borders. The others were crewmen, immigrants and aliens admitted as visitors, students, government officials and others for temporary periods.

U.S. Immigrants.—Since World War II there had been a rising trend in immigration, largely the result of the migration of war brides, political *émigrés* and displaced persons. This acceleration was sufficient to raise the number of immigrants admitted to 249,187 in the year ended June 30, 1950. In 1951 there were 205,717 immigrant admissions. The decrease was due to a 22% reduction in the number of displaced persons admitted and to a less marked decline in the number of immigrants of other classes.

Superimposed upon the qualitative restrictions to immigration are certain other restrictions applicable to immigrants. Quotas limit immigration from countries other than the independent countries of the western hemisphere. Nonquota immigrants, other than those from the western hemisphere, are exempt from quota restrictions either by reason of professional occupation of minister or teacher, or by reason of close relationship to a United States citizen.

There were 95,920 displaced persons charged to quotas, and 595 nonquota displaced persons (chiefly orphans) who were admitted to the United States in the fiscal year 1951. Other quota immigrants numbered 60,627. Thus, quota immigration in the fiscal year 1951 exceeded the annual quotas by 2,270. As a result of the provision in the Displaced Persons act authorizing the mortgaging of 50% of future quotas, more than four times as many quota immigrants came from southern and eastern Europe as were authorized under the quota of 24,719 for that region. Several countries, such as Estonia, Latvia and Lithuania, with small quotas, used up half of their quotas for many years into the future.

The 48,575 nonquota immigrants (except displaced persons) were chiefly wives of United States citizens and natives of the independent countries of the western hemisphere.

The principal countries of birth of immigrants and their class of admission under immigration laws are reported in Table I.

Nonimmigrants.—Nonimmigrants are aliens who enter the United States for temporary periods, or resident aliens of the United States returning from a temporary stay abroad. The figures in Table II do not include such special groups as agricultural labourers, border crossers and crewmen.

Emigrants and Nonemigrants.—Emigrants are, by definition, aliens who depart from the United States after residence of a year or more in the United States, with the intention of remaining abroad. During the fiscal year 1951, there were 26,174 emigrants, including 11,477 who returned to Europe, 1,902 to Asia, 3,202 to Canada, 2,897 to the West Indies and 2,817 to South America.

Nonemigrants are temporary visitors leaving the U.S. after a stay of less than a year or resident aliens leaving for a temporary visit abroad.

During the year ended June 30, 1951, 446,727 nonemigrants departed from the United States. Included were 45,444 alien residents who intended to return to the United States after temporary residence abroad; three treaty traders had return permits. The remainder, 401,280 had entered as tourists, transits, government officials and others who were leaving the United States after stays varying from a few days to a year. United States citizens leaving a domicile in the United States for periods of a year or longer abroad totalled 57,923 in the fiscal year 1951; 46,325 of these persons were native-born citizens and 11,598 were naturalized citizens. (*See* also ALIENS; CENSUS DATA, U.S.; REFUGEES.) (A. R. MY.)

Great Britain.—Influx into Great Britain was relatively small

Table II.—*Nonimmigrants Admitted to the United States, Years Ended June 30, 1949-51*

THE 100,000th displaced person to emigrate to Canada (second left) being congratulated by an official of the International Refugee organization as he and his family prepared to sail from Bremerhaven, Ger., in 1951

during the year: about 2,000 displaced persons of various nationalities were received. The outflow was, as normally, far in excess of inflow, mainly to Australia and Canada, smaller numbers to the United States, South Africa and New Zealand.

Canada.—Canada received 1,000 to 1,500 applications for entry daily, and planned to receive about 120,000 "new citizens" yearly for the next ten years. Of the ceiling set, about 80,000 arrived during the first six months of the year, consisting of persons of 40 different nationalities.

Australia.—The Australian federal government reduced the immigration ceiling from 200,000 to 150,000 of whom it was hoped 85,000 would be settlers from the home country. Food producers, rural workers and the men and women required to build up Australia's secondary industries, especially those relating to defense, were sought. About 10,000 Italians were expected during the year.

Germany.—Of the 37,000 displaced persons accepted into the economy of western Germany in 1950, about 6,500 emigrated during 1951 to the United States and more than 1,500 to Canada. The influx of about 20,000 persons a month from eastern Germany and Czechoslovakia into western Germany created great difficulties for the federal government and the *Länder*. Emigration from Germany was still difficult for several reasons, though statistics showed that unemployment, lack of housing and social conditions generally were driving many Germans to try to emigrate. During the first three months of the year there were 32,549 requests registered.

Israel.—The government of Israel decided in March 1951 to step up immigration to 25,000 persons a month. Of the first 100,000 entries 70,000 were from Iraq, 20,000 from eastern Europe, 4,000 from Persia and 6,000 from north Africa. By arrangement with the International Refugee organization Israel agreed to accept 5,200 sick, elderly and infirm Jewish refugees. (*See* also INTERNATIONAL LABOUR ORGANIZATION; REFUGEES.)

Income, Distribution of: *see* WEALTH AND INCOME, DISTRIBUTION OF.

Income and Product, U.S.

According to preliminary estimates, the U.S. national income in 1951 amounted to $276,000,000,000 and the gross national product to $327,000,000,000. Both of these comprehensive measures of the value of the nation's output were 15% above their previous highs established in 1950.

Higher prices and increased volume each accounted for roughly half of the 1950–51 rise in gross national product. The sizable (approximately 8%) increase in real output enabled the nation not only to add significantly to its military strength and to broaden productive capacity, but also to maintain the flow of consumer products at the high 1950 level. The volume of goods and services produced in the United States in 1951 was larger than in any other year.

Expanded production, employment and earnings in 1951 substantially raised the level of personal incomes. As indicated by preliminary data, personal incomes aggregated $251,000,000,000 for the year, 12% more than in 1950.

The rapid advance of national income and product during 1950—accelerated by developments following the outbreak of the Korean conflict—extended into the first quarter of 1951. It levelled off with a material slowing of the general price rise, and the economy entered a period of relative stability in overall production and prices. The annual rates of national income and gross national product in the final quarter of 1951 were only slightly higher than the totals for the calendar year.

Meaning of Income and Product Measures.—National income, as measured by the U.S. department of commerce, is the sum of the net earnings of labour and property arising from the current production of goods and services by the nation's economy. It measures, therefore, the total factor cost of the goods and services produced by the economy. It includes income in kind as well as money income, but such receipts as relief, unemployment benefits and capital gains are excluded since they do not represent earnings derived from current productive activity. The national income consists of compensation of employees, the net income of unincorporated businesses, corporate profits, net interest and the rental income of persons.

Personal income is the current income received by persons from all sources, including transfers from government and business but excluding transfers among persons. Not only individuals (including owners of unincorporated enterprises) but non-profit institutions and private trust and welfare funds are classified as persons. Personal income differs from national income by the inclusion of transfers (such as relief, veterans' pensions and government interest disbursements) which are not in return for current productive services, and by the exclusion of earnings (social insurance contributions, undistributed corporate income and corporate income taxes) which are not actually received by persons in the current period.

Gross national product or expenditure is the market value of goods and services produced by the nation's economy, before deduction of depreciation charges and other allowances for business and institutional consumption of durable capital goods. Other business products used up by business in the accounting period are excluded. The gross national product consists of consumers' purchases of goods and services; the gross output of capital goods retained by private business, including the change in inventories; net foreign investment; and the goods and services purchased by governmental entities.

Distributive Shares of the National Income.—Nearly all the increase in U.S. national income from 1950 to 1951 occurred in wages and salaries, farm income and corporate earnings. Only minor increases were recorded for nonfarm proprietors' income, rental income of persons and net interest.

Wages and salaries increased by about $24,000,000,000, or

Source: U.S. Department of Commerce (except 1951).

16% from 1950 to 1951, reaching a total of more than $169,000,000,000. (*See* Table I.) Nearly $7,000,000,000 of this rise was in government pay rolls, which advanced by more than one-third to $29,100,000,000, mainly because of the build-up of the armed forces and the sizable increase in the number of personnel of federal civilian defense agencies. The pay roll rise in the large private-industry sector, from $123,600,000,000 to $140,300,000,000, amounted to 14%.

On an over-all basis for private industries, higher average hourly earnings were the main factor in the 1950–51 expanded wage flow. Increased employment also contributed substantially to the rise, but the lengthening of the average work week had, in the aggregate, only a minor influence.

In the noncorporate business sector, the net income of farm proprietors advanced from $13,700,000,000 in 1950 to $17,000,000,000 in 1951 under the impetus of sharply higher farm prices. On the other hand, the aggregate net income of nonfarm proprietors in 1951—$23,600,000,000—was only moderately higher than in 1950, chiefly because the sluggishness of consumer spending during most of 1951 limited to small proportion the increase in the large trade sector.

The corporate profits component of national income—corporate profits and inventory valuation adjustment—was estimated at $42,800,000,000 in 1951, as compared with $36,200,000,000 in the preceding year. The increase was much larger than that shown by "corporate profits before tax." The smaller increase in this latter measure of reported, "book" profits—from $41,400,000,000 to $44,500,000,000—reflected the predominant business practice of charging inventories to cost of sales in terms of prior-period prices rather than current replacement prices.

In periods of rising prices, such as 1950 and 1951, the book cost of inventories used in production is less than the current replacement cost, and an "inventory profit" is thereby included in the reported profits figures. The inventory valuation adjustment—difference between the book cost and the current replacement cost of inventories used in production—is added to reported profits before taxes in order to eliminate inventory profits (or losses) and thus secure a measure of earnings from current production appropriate for inclusion in the national income. As indicated by data in Table I, inventory profits were about $3,500,000,000 larger in 1950 than in 1951.

Table II.—*National Income by Industrial Origin*

(In 000,000,000s of dollars)*

Industry	1951†	1950	1949	1939	1929
Total national income	275.7	239.0	216.7	72.5	87.4
Agriculture, forestry and fisheries	21.3	17.7	17.0	6.1	8.0
Mining	5.7	5.0	4.6	1.6	2.1

Government and government enterprises	30.4	23.4	21.8	8.6	5.1

*Detail will not necessarily add to totals because of rounding.
†Preliminary; estimated from data for first three quarters. Source: U.S. Department of Commerce (except 1951).

The 1950–51 increase in the profits tax liability of corporations—from $18,600,000,000 to $26,500,000,000—was much more than proportionate to their increase in profits because of the higher federal rates enacted into law during late 1950 and 1951. Profits after tax in 1951 thus amounted to $18,000,000,000, about $5,000,000,000 lower than in the preceding year but not significantly different from the 1947–49 average.

National Income by Industries.—Estimates of national income by industries are shown in Table II. By far the largest income rise among the industries, 30%, occurred in government. Relatively large gains, about 20%, were recorded also for contract construction, agriculture and manufacturing. The expansion in mining was about the same as the all-industry average, 15%, whereas below average gains (6%–8%) were registered by the other industrial divisions.

Gross National Product.—Purchases of goods and services by federal, state and local governments totalled $63,500,000,000 in 1951, half again as large as the total of $42,500,000,000 for the preceding year. (*See* Table III.) Nearly all of this increase was accounted for by federal purchases for national defense, which mounted steadily during 1951 and represented the most fundamental and dynamic element in the economic situation.

By mid-year the share of gross national product absorbed by defense purchases was about 10%, as compared with 4½% a year earlier.

Although the expansion in government purchases represented by far the largest change among the components of gross national product, there was a sizable advance also in the area of private investment. Gross private domestic investment amounted to a record $59,000,000,000 in 1951, with much of the $10,000,000,000 increase over the 1950 total occurring in the defense and defense-supporting industries. Producers' purchases of durable equipment increased from $22,500,000,000 to $27,600,000,000, and the accumulation of inventories rose from $4,300,000,000 to $9,100,000,000. Industrial and public utility construction advanced sharply, but the total value of new construction in 1951—about $22,000,000,000—was no higher than in the preceding year because of downturns in residential and commercial building stemming from the effects of mortgage credit controls by the government.

It was particularly noteworthy that inventory accumulation reached the unprecedented rate of $16,000,000,000 in the second quarter of 1951 but then fell off sharply in the latter half of the year. This decline, stimulated by the slackened rate of consumer spending, was a key factor in the easing of inflationary pressures.

Personal consumption expenditures for goods and services totalled $204,500,000,000 in 1951, about $11,000,000,000 more than in 1950. This 6% rise reflected higher prices, but it is nonetheless significant that the actual flow of consumer products matched the high 1950 volume despite expanding rearmament and the increasing diversion of productive resources to the program of national defense.

In the first quarter of 1951 consumer expenditures were stepped up sharply, to an annual rate of $204,000,000,000, on the strength of the resumed buying wave that followed the Chinese Communist intervention in Korea. They declined by $6,000,000,000 in the second quarter and then, in the aggregate, substantially levelled off despite the continued moderate rise in personal incomes. This letdown of consumer demand was an important counterbalance to the inflationary pressures stemming from the rapid advance of federal defense expenditures and the continued buoyancy of business investment demand for plant and equipment.

Net foreign investment was approximately zero in 1951, as compared with a negative $2,300,000,000 in 1950, when imports exceeded exports not financed directly or indirectly by grants from the United States. From the fourth quarter of 1950 to the fourth quarter of 1951, there was a shift from a negative to positive balance amounting, at annual rates, to a sizable $4,000,000,000. It resulted primarily from a large increase in goods and services bought from the United States by foreign countries.

Table IV.—*Personal Income and Disposition of Income*

(In 000,000,000s of dollars)*

Item	1951†	1950	1949	1939
Personal Income	251.3	224.7	205.1	72.6
Wage and salary receipts	165.9	142.9	131.2	45.1

Disposition of Personal Income.—Estimates of personal income and its disposition among taxes, consumer spending and personal saving are provided in Table IV. As already noted, personal income increased 12% from 1950 to 1951. The rise in disposable income, 9%, was smaller because personal taxes rose more than proportionately as a result to the imposition of higher federal rates.

Because of the buying restraint on the part of consumers in the last nine months of the year, the rate of personal saving in 1951 was relatively high. It amounted to roughly 10% of disposable income, as compared with an average of 4% for the period 1947–49. This sharp step-up was an important influence in mitigating inflationary pressures and in stemming the rapid post-Korean price rise. Source: *India Record* (London, April 25, 1951): provisional totals for the census held on March 1, 1951. No census was ever taken in Kashmir (*q.v.*), because of special conditions prevailing there, and in the part B tribal areas of Assam, which were not included in any former census and whose population was estimated as 560,000. Sikkim, an Indian protectorate, was included in former censuses and was also included in the 1951 census.

Language: two main groups, Aryan or northern (including Hindi used by approximately 47% of the total population, Bengali 8%, Marathi 7% and Gujarati 5%) and Dravidian or southern (including Telugu 9%, Tamil 7.5% and Kanarese 4.4%). English is the official language of the union, to be displaced by Hindi in the Devanagari script by 1964. Religion: Hindu (about 80%), Moslem, Christian, Sikh, Buddhist, Parsee, Jewish, etc. Chief towns (pop.: first figure, 1941 census; second figure, 1951 census): New Delhi* (cap., 93,960; 279,063); Delhi* (521,849; 914,634); Calcutta† (2,108,891; 2,549,790); Bombay (1,489,883; 2,840,011); Madras (777,481; 1,429,985); Hyderabad (739,159; 1,085,074); Ahmedabad (591,267; 788,310); Kanpur or Cawnpore (487,324; 704,536); Amritsar (391,010; 320,465); Lucknow (387,177; 497,594); Nagpur (301,957; 449,441). President: Rajendra Prasad; prime minister: Jawaharlal Nehru (*q.v.*).

History.—The year 1951 dawned with the spectre of famine darkening the horizon. This was the result of a variety of causes. The fertile province of Assam, with its extensive rice fields, had been devastated by a series of disastrous earthquakes, and northern India and Pakistan were visited by a plague of locusts. For three years in succession, the monsoon had failed over wide areas of central and southern India. The ensuing scarcity was worst in north Bihar, though many areas in Madras, Hyderabad, Gujarat, Cochin and Travancore were also affected, and there were no reserves to meet it. Food grains in the rationed areas were cut down from 12 oz. to 9 oz. a day, and it was estimated that 6,000,000 tons of food from outside would be necessary to cope with the situation if disaster was to be averted. Offers of help poured in from all sides. The British government at once released consignments of Australian wheat and made arrangements for shipping to convey 90% of the 4,000,000 tons that were being imported from outside. There was still, however, a deficit of 2,000,000 tons, and this the government of the United States offered to supply at the cost of $190,000,000, the Indian government being responsible for ocean freight expenses. The government of Pakistan arranged for grain steamers to bring supplies down the Brahmaputra river to Assam, and the Indian Tea association of Calcutta flew in 10,000 tons by air. This greatly eased the situation and, despite bottlenecks and other transport difficulties, the supply of grain to the stricken areas rose from 36,000 tons in February to 112,000 tons in May. The Bihar government opened relief works in the shape of road and tank construction and the sinking of wells, but many of the villagers, because of prolonged malnutrition, were incapable of undertaking hard manual work. A further complication arose from the fact that the supplies arriving from outside were mainly wheat, whereas the staple food of south India was rice, only obtainable in limited quantities from Burma, Thailand and China.

---

*New Delhi and Delhi are counted as two cities. Put together they had in 1951 a total population of 1,193,697 and ranked as the fourth largest urban agglomeration of India.

†Greater Calcutta, including Howrah and suburbs, had in 1951 a total population of 3,490,281.

It was realized, however, that these measures were only palliatives: the real remedy lay in pushing on with projects like the Damodar Valley scheme, and by bringing into cultivation large undeveloped areas by co-operative tractor ploughing, the use of fertilizers and other modern methods of cultivation. The population was fast outrunning the available supplies, and this could be met only by the limitation of families. Another problem arose from the distribution of land: despite the abolition of landlords, 50% of the 15,000,000 peasants in north Bihar were still landless. The Nation Planning commission's first five-year plan envisaged an expenditure of Rs. 17,930,000,000, of which Rs. 1,910,000,000 would go on agriculture and Rs. 3,880,000,000 on transport and communications. It included a program involving the irrigation of 8,000,000 ac. by major works, 7,000,000 ac. by minor works, and the restoration of 4,500,000 ac. by restoring fallow lands to cultivation through a central tractor organization. This scheme, which would not come into operation before 1955–56 at the earliest, would, it was estimated, increase the production of food grains by 7,000,000 tons, besides large quantities of jute, cotton oilseeds, sugar and other consumer goods. Unfortunately the monsoon of 1951 showed little improvement on those of previous years.

The Rift in the Congress.—Up to 1950, the Indian National Congress had been able to present a united front, mainly on the prestige it had won as the organizer of liberation from British rule, and Jawaharlal Nehru was regarded as the unquestioned leader of the nation by all but a small body of irreconcilables on the extreme right and left. But toward the end of that year, rifts began to appear. The first indication of these was the election as president of the working committee of Purshottamdas Tandon, an outspoken critic of Nehru's policy. The death on Dec. 15, 1950, of V. J. Patel had been a disastrous blow. He was a man of outstanding character, who had great influence among the millowners and the members of the orthodox right wing. J. B. Kripilani, who had been defeated by Tandon, broke away from Congress altogether and was joined by R. A. Kidwai, minister of communications. They and their colleagues determined to form a new party styling itself the Kisan Mazdoor Praja. Their main objects were a sweeping overhaul of the administration, the abolition of corruption, profiteering and food hoarding, a drive for ending illiteracy and a return to the principles of Mohandas K. Gandhi. In addition to this, there were sharp criticisms of Nehru's actions in tightening up control over the press and his temporary suspension of constitutional government in the Punjab. Many Hindus, as Mrs. Vijayalakshmi Pandit herself acknowledged in Washington, D.C., had never really reconciled themselves to the two-nation theory or the idea of a secular state, and were deeply suspicious of any appearance of appeasement in dealings with Pakistan.

The upshot was that Nehru decided to resign from the working committee. The triumph of the dissidents was, however, short lived. On Sept. 8 it was announced that Tandon had resigned and that the working committee had re-elected Nehru by an overwhelming majority. This left him with the leadership of the party as well as the government, with a free hand to choose his own executive. Among these he included his opponent Tandon; the veteran Chakravarti Rajagopalachari, the former governor general, resigned for reasons of health. Nehru appealed to all to forget the past and build for the future, and invited the return of all former colleagues who through disillusionment had lately seceded. He exhorted them to rid the country of faction and cultivate a spirit of fair dealing and integrity.

Ambedkar's Resignation.—The most prominent dissentient was the law minister, Bhimrao Ramji Ambedkar, who had played a leading part in framing the Indian constitution. He resigned in September by way of protest against the policy of the high-caste Hindus who composed the right wing of the Congress party and had shelved the Hindu Code bill, the object of which was to abolish caste and reform Hindu society on Gandhian lines. He painted a distressing picture of the disabilities of the scheduled classes, of which he was a member, and particularly of women, under the existing regime. He denounced the government's attitude toward Pakistan, which had resulted in vast expenditure on armaments and had brought both countries to the verge of war; he suggested that the Kashmir dispute, root of all the trouble, could be settled by the partition of the country on the lines proposed by Sir Owen Dixon. He urged that the funds required for nation-building projects could be raised by reduction of armaments, the abolition of prohibition, the nationalization of insurance and the reimposition of the salt tax. He declared that the foreign policy of the government had alienated all India's friends, particularly the United States, whose financial support was indispensable. (*See* also KASHMIR; PAKISTAN; KOREAN WAR; TIBET; UNITED NATIONS.)

The General Election.—Meanwhile preparations were being made for holding the first general election for the central and state legislatures. The task was one of great complexity, as with universal adult suffrage 175,000,000 men and women would be going to the polls. As most of them were illiterate, appropriate symbols were chosen to represent the various parties, to be posted on their respective ballot boxes and exhibited at the polling booths. Polling began in November in the Himalayan border states before winter made the roads impassable.

(H. G. RN.)

Finance and Banking.—Budget: (1950–51 est.) revenue Rs. 3,872,100,000, expenditure Rs. 3,792,800,000; (1951–52 est.) revenue Rs. 4,011,400,000, expenditure Rs. 3,754,300,000. National debt (March 1952) Rs. 25,874,000,000. Currency circulation (Aug. 1951): Rs. 12,600,000,000. Bank deposits (Aug. 1951): Rs. 7,100,000,000. Gold and foreign exchange (Sept. 1951) U.S. $1,961,000,000. Monetary unit: rupee, with an exchange rate of Rs. 13.33 to £1 and Rs. 4.775 to U.S. $1.

Foreign Trade.—(1950): imports Rs. 5,051,000,000; exports Rs. 5,432,000,000. Main sources of imports (1950–51): U.K. 21.7%; U.S. 20.5%; Iran 6.5%; Australia 5.9%. Main destinations of exports: U.K. 23.2%; U.S. 19.0%; Singapore 5.4%; Australia 5.3%. Main imports: grains, pulses and flour 17.5%; raw cotton and waste 17.1%; machinery 14.0%. Main exports: cotton yarns and manufactures 24.0%; jute yarns and manufactures 20.4%; tea 14.0%.

Transport and Communications.—Roads (1950): 245,000 mi. Licensed motor vehicles (Dec. 1950): cars 132,000; commercial 112,000. Railways (1950): 33,086 mi. Traffic (1950): passenger-miles 39,722,000,000; goods, ton-miles 26,546,000,000. Shipping (merchant vessels of 100 gross tons and over, July 1950): 180; total tonnage 421,267; vessels with cargo in external trade (net registered tons, 1950): entrances 7,692,000; clearances 6,936,000. Air transport (1950): passenger-miles 233,400,000; cargo ton-miles 13,900,000; mail carried 3,800 metric tons. Telephones (1949): 113,466. Radio receiving set licenses (1949): 299,000.

Agriculture.—Main crops (metric tons, 1950): wheat 6,390,000; barley 2,246,000; maize 1,925,000; rice 32,000,000; tea 275,000; cotton, ginned, 580,000; potatoes 1,500,000; peanuts 3,384,000; rapeseed and mustard

INDIANS on hand to greet Jawaharlal Nehru as he arrived to inspect famine areas in central Bihar. India's 1951 food reserves were almost exhausted as a result of crop failures in 1950 caused by drought and earthquakes

839,000; cottonseed 1,265,000; linseed 391,000; sesame seed 428,000; jute 610,000; coffee 20,000; tobacco 250,000; wool, greasy basis 23,000; sugar, raw value, 3,738,000; citrus fruit production (1948) 505,000. Livestock (1950–51): cattle 180,200,000; sheep 38,900,000; pigs 3,700,000; horses 1,550,000; (1945) mules 45,000; asses 1,131,000; buffaloes 40,732,000; camels 656,000; goats 46,302,000; chickens 54,666,000. Fisheries: total catch (1949) 513,764 metric tons.

Industry.—Industrial establishments (1945): 103,400; persons employed 1,843,797. Persons employed in factories (1949): 2,413,000. Number of trade disputes (1949) 914; number of workers involved 684,188; number of days lost 6,560,887. Fuel and power (1950): coal 32,820,000 metric tons; electricity 5,100,000,000 kw.hr.; crude oil 252,000 metric tons. Raw materials (metric tons, 1950): pig iron 1,704,000; steel ingots and castings 1,464,000; copper, refined, 6,720; lead, smelter basis, 600; aluminum 3,600; manganese ore (1949) 656,000; asbestos 100; rubber 15,800; super phosphates 52,000; mica (1949) 7,700; ilmenite (1949) 254,000; salt 2,600,000; gold (fine oz.) 188,000. Manufactured goods (1950): cement 2,652,000 metric tons; cotton yarn 525,600,000 m.; cotton piece goods 3,300,000,000 m.; jute manufactures 850,000 metric tons; sheet glass 9,600,000 sq.ft.; paper and board 111,000 metric tons; cars and trucks 14,600; bicycles 104,000; radio receivers 44,500.

Indiana. An east north central state of the United States, popular name, "Hoosier," Indiana was admitted to the union Dec. 11, 1816, as the 19th state. Total area of the state is 36,291 sq.mi., including 86 sq.mi. of inland lakes and rivers. The population of the state according to the 1950 census was 3,934,224, a gain of 14.8% from 1940; 59.9% of the population was defined as urban. Capital: Indianapolis (pop. 1950 census, 427,173), the largest city. Other cities: Fort Wayne (133,607); Gary (133,911); South Bend (115,911); Evansville (128,636); Hammond (87,594); Terre Haute (64,214); Muncie (58,479); East Chicago (54,263); Anderson (46,820).

History.—The general assembly met Jan. 4, 1951, in its 86th regular session. Strong partisanship characterized the session in which several important measures were enacted into law and others failed of passage. Both houses were organized and controlled by the Republican party. The newly elected administrative officers were of the same party, but the governor, Henry F. Schricker, and the lieutenant governor, John A. Watkins, were Democrats. The budget was the largest in the history of the state, $546,880,504, although both parties promised economy. The passage of two welfare acts was the most controversial action of the session, one providing an investigation of the administration of public welfare, the other ending the secrecy of welfare records. The latter resulted in the temporary withholding of federal funds until congress legalized the procedure. A civil defense act, the ratification of a constitutional amendment limiting the president of the United States to two terms, a new truck-weight measure and a partial merit system for the highway department were adopted. A dozen committees were appointed to conduct investigations of a wide variety of subjects. A strong anti-Communist act was passed, the immediate payment of the World War II bonus to the disabled and to the next of kin of those killed was ordered, but an antilottery measure was defeated before the antigambling movement in the nation at large became popular.

Education.—The number of public schools in the state in 1951 was approximately 2,550. Enrolment in the elementary schools was 392,902, with 13,329 teachers. Enrolment in the junior high schools was 105,196, with 1,047 teachers. Enrolment in the high schools (grades 9–12) was 165,007, with 8,718 teachers. Parochial schools had an enrolment of 68,822. For the year 1950–51 the state appropriated $58,000,000 for the support of schools, in addition to the sums provided by local units of government. The state provided $17,406,827 for the operating expenses of the four state colleges. Thirty-three Indiana colleges and universities enrolled 61,824 students. Deane E. Walker was superintendent of public instruction in 1951.

Social Insurance and Assistance, Public Welfare and Related Programs.—In 1950–51 the state's welfare program cost $42,998,083.59 of which $20,933,670.93 was furnished by federal funds, $10,745,335.85 by state funds and $11,319,076.81 by county funds. Old-age assistance cost $23,786,547.50, blind assistance $886,959.77, and aid to dependent children $9,075,851.49. In addition, child welfare cost $2,440,415.69 from state and county funds. Receipts of the state for unemployment insurance for the year ending June 30, 1951, were $30,149,546.80. Benefits paid out were $9,029,596.81.

In 1951 the state maintained nine institutions for mental patients including an epileptic village; ten homes, hospitals and schools and four penal and correctional institutions. As of June 30, 1951, inmates of mental institutions totalled 13,961 and of penal correctional institutions, 6,722.

Table I.—*Principal Crops of Indiana*

	1951	1950	Average 1940–49
Corn, bu.	241,415,000	212,430,000	212,069,000

Printing	17,537	16,836	59,211	104,087	98,035
Chemicals	17,231	17,637	72,211	268,653	231,957
Petroleum and coal products	17,733	17,370	69,681	167,695	141,299
Rubber	14,733	13,638	49,033	83,056	67,271
Stone	20,180	19,049	62,989	136,673	99,387

Communications.—The total mileage of state highways in 1951 was 10,587, with county roads totalling 74,499 mi. The state highway expenditure for roads amounted to $40,741,832.37 during the fiscal year 1950–51. Steam railroad first-line trackage measured approximately 6,600 mi. There were 90 mi. of electric railways. The estimated number of telephones in the state on Dec. 1, 1950, was 1,172,000. There were 119 commercial airports, 1 military airport, 94 personal landing fields and 1 seaplane base in the state as of July 1, 1950.

Banking and Finance.—On Dec. 1, 1951, there were 361 state banks and trust companies with 76 branches. On June 30, 1951, the total resources of these banks were $1,575,321,583.02. Deposits totalled $1,467,693,753.80. There were 125 national banks and 36 branches on Dec. 1, 1951. Their mid-year resources amounted to $1,949,061,000 and deposits totalled $1,827,154,000. State savings and loan companies numbered 163 and their assets were $229,264,531.29 as of Dec. 31, 1950. The state's 70 federal savings and loan associations listed assets amounting to $356,868,642.87 as of Nov. 30, 1951.

Agriculture.—The year 1951 was a better than average year for several important crops: corn, oats, soybeans, hay and apples. (*See* Table I.)

Manufacturing.—Table II shows data of employment, wages and value added by manufacturing for the principal products in Indiana during 1950 and 1951. (J. D. Bt.)

Mineral Production.—Table III shows the tonnage and value of those mineral commodities whose values in 1949 exceeded $100,000, and the corresponding data for 1950, so far as they were available at the close of 1951.

Table III.—*Mineral Production of Indiana*

(Short tons, except as noted)

	1949		1950	
Mineral	Quantity	Value	Quantity	Value
Clays	1,022,699	$ 1,197,982	1,159,257	$ 1,395,662
Coal	16,549,756	66,988,237	19,957,029	79,301,847
Coke*	7,533,290	122,527,744	8,255,622	138,880,962

Petroleum (bbl.)	9,696,000	26,860,000	9,942,000	27,440,000
Sand and gravel	8,887,231	6,695,426	9,723,033	7,516,509
Stone	6,332,360	15,227,818	6,994,670	20,686,160
Other minerals		24,096,944		
Total		$141,066,407		

***Values for processed materials are not included in the totals.**

Indians, American.

By unofficial estimate, the Indian population in 1951 numbered 400,000 in the United States and 35,000 (Indians, Eskimos and Aleuts) in Alaska. These figures represented persons of Indian descent under the general administrative care of the bureau of Indian affairs of the United States department of the interior, and did not necessarily correspond with the population count of the United States bureau of the census.

The trend in the administration of Indian affairs during the year was to reduce the scope and variety of the services and duties performed by the federal government. By contractual arrangement between the government and the several states in which Indian reservation lands were located, more than one-half of all Indian children attending school were in local public schools. The arrangement with the government provided for tuition payments in lieu of tax revenue from Indian lands. Such contracts were in force with 14 states, and the contribution from the federal government amounted to about $2,500,000. Each of the states by its contract furnished a substantial amount of financial assistance to the local school districts in which Indians were in attendance.

KORCZAK ZIOLKOWSKI, U.S. sculptor, who was at work on a 563-ft. mountain memorial in 1951 representing the Sioux leader who fought Gen. G. A. Custer at Little Big Horn river, Mont., in 1876 (model of memorial in background). With him is a survivor of the battle

In the health field, likewise, contractual arrangements were made with private or public institutions wherever Indians resided in communities interspersed with non-Indians, and full-time health facilities were available. Many Indians participated in health services available on a pay basis to the general population. The facilities provided by the bureau of Indian affairs for specific Indian use consisted of 62 hospitals, staffed by 130 medical officers and 700 nurses; 28 field medical officers separate from hospital stations; 58 public health nurses; 35 dentists; and 5 sanitation experts. A 200-bed addition was completed at the Mount Edgecumbe Medical centre at Sitka, Alsk., for the care of natives suffering from tuberculosis, and a 400-bed hospital was building at Anchorage, Alsk., which would provide 100 beds for general medical care and 300 for tuberculosis care. The incidence of this disease among the Indians of the United States and Alaska continued at a rate many times that for the general population. Additional facilities were being constructed at Galen, Mont., to be operated in connection with the Montana state tuberculosis hospital. In Dec. 1951 announcement was made that the president had authorized the transfer to the bureau of Indian affairs of the 300-bed Veterans administration hospital at Fort Logan, Colo. The facility would be operated as a sanatorium for Indians living on reservations in Arizona, New Mexico, Utah, Wyoming and South Dakota.

The policy of transferring authority and responsibility to other agencies included similar transfers to the Indians. Revised regulations issued during the year 1951 removed supervision over the funds deposited to the account of individual Indians as income from trust property, except in the case of minors and mental incompetents. About 80,000 individual Indian money accounts, having an average balance of $700, were affected by the new order.

In 1948 a comprehensive program aimed at off-reservation employment of Indians was initiated on the economically depressed Navajo and Hopi reservations in Arizona and New Mexico. The initial success of this program resulted in 1950 in the establishment of a placement program for other areas, and by Dec. 1951 offices had been opened in the 11 administrative areas of the bureau and in several cities. The program was designed to assist Indians in finding off-reservation employment and permanent resettlement for those Indians desiring it, with emphasis on relieving population pressures on those reservations where the population growth had exceeded available resources.

The Ute Indians of the Uintah and Ouray reservation in Utah and the Southern Ute and Ute Mountain reservations in Colorado were awarded a judgment in a total amount of $31,750,000 for lands previously taken from them by the United States without adequate compensation. The Unitah and Ouray Indians then developed a plan for the use of their share of the award. This plan was subsequently approved by congress and funds were appropriated to carry it out. The other Ute tribes were working on similar plans at the end of the year. (D'A. Mc.)

Indochina.

Until 1946 this name covered four French protectorates and the colony of Cochin-China, bounded north by China, west by Burma and Thailand and south and east by the South China sea. From 1949 Indochina had no legal existence, being replaced by the three associated states of the French union. Areas and populations are listed in the table.

	Area (sq.mi.)	Population (1936 census)	Population (1950 est.)
Viêt-Nam	126,608	18,972,000	3,093,000
Tonkin (Bac-Ky)	44,660	8,700,000	9,851,000*
Annam (Trung-Ky)	56,974	5,656,000	7,184,000*
Cochin-China (Nam-Ky)	24,974	4,616,000	5,628,000†
Cambodia	69,866	3,046,000	3,296,000
Laos	89,320	1,012,000	1,214,000
Total	285,794	23,030,000	27,603,000

*1943 estimates. †1947 estimate.

Three-quarters of the population lives on the coastal plain, on one-tenth of the total area. Annamites of Viêt-Nam speak Annamese and are Confucians; Cambodians (or Khmers) are Buddhist and Hindu-influenced; the Mois of the southern highlands of Annam and Laos are mostly Indonesian, akin to the Dayaks of Borneo, and are pagan; Laotians are Thais, speaking a dialect different from Siamese. In the northern highlands of Laos and Tonkin there are tribes of different origins (Man, Meo, Kha). In 1936 the population of Indochina included 326,000 Chinese and 42,000 Europeans; in 1946 there were only 26,000 Europeans, including 23,000 French or *assimilés*. Chief towns (pop., 1949 est.): Saigon, capital of Viêt-Nam, with the seaport of Cholon (1,700,000); Hanoi (166,000); Haiphong (92,000); Pnom-Penh, capital of Cambodia (128,950); Vientiane or Vienchan, capital of Laos (13,700).

Rulers and commissioners (1951): Viêt-Nam: ruler, Bao Dai; high commissioner and commander in chief, Gen. Jean de Lattre de Tassigny. Cambodia: ruler, King Norodom Sihanouk; commissioner, vacant. Laos: ruler, King Sisavang Vong; commissioner, Miguel de Pereira.

History.—The situation in Viêt-Nam during 1951 remained dominated by the war against Viêt-Minh. Combatant forces were increased in March to 51,000 French troops, 18,000 foreign legionaires, 25,000 North Africans and 35,000 Viêt-Namese. By this time 30,000 people had been killed and more than 20,000 seriously wounded since the beginning of hostilities. The Viêt-Minh offensives, to the north of Hanoi in January, to the east in March and to the southwest in May, collapsed. In the last of these battles, around Ninh Binh, Lieut. Bernard de Lattre de Tassigny, son of the high commissioner, was killed. Viêt-Minh could not invade the agricultural areas of the delta. A Franco-Viêt-Namian offensive, by taking Hoa-Binh (to the southwest of Hanoi) in November, made Viêt-Minh communications between upper Tonkin and northern Annam difficult. Viêt-Minh offensives in December failed to retake it. In the mountainous Thai country of the northwest further Viêt-Minh attacks were stopped.

The Viêt-Nam government remained provisional, with Bao Dai chief of state and Tran Van Huu prime minister, yet without any elected assembly but supported by various semi-independent religious feudalities (Cao-Dai, Hoa-Hao and the Catholic bishoprics). The Dai-Viêt party, mainly Tonkinese, refused to collaborate, and 8 of the 11 ministers were from Cochin-China. France handed the police and all administrative services over to the Viêt-Namese authorities. Life in the towns was rather more secure, though the large record of assassinations included that of the French commissioner for southern Viêt-Nam. Excursions into the bush country were always accompanied by armed escorts.

Viêt-Nam sent 19 delegates to the assembly of the French union and appointed an ambassador to Thailand. In August Bao Dai announced a census for purposes of mobilization. A school for Viêt-Namese officers was set up.

In May General de Lattre de Tassigny took part in the Singapore conference on the defense of southeast Asia. In October he went to the United States to obtain the dispatch of war material: his contention was that the operations in Viêt-Nam constituted not a colonial war but a vital aspect of world defense against communism.

In the Viêt-Minh zone a reform of the currency was set in motion. This gave rise to discontent, and there was a shortage of agricultural resources. Nevertheless the number of new adherents to Bao Dai was slight.

In Cambodia elections for the new assembly took place in September. The Democrats got 53 seats, the Liberals 19 and the smaller parties 6. Half of the electorate did not vote. In November Jean de Raymond, the French commissioner, was murdered in his sleep by a Viêt-Namese servant boy. The Cambodian insurgent movement (Issarak) seemed in decline.

In Laos elections were held in August and resulted in a majority for the Progressives (14) and the Independents (17); the opposition got only 3 seats. In the mountains security had been threatened by Viêt-Minh infiltrations but was gradually being restored.

In accordance with the decisions of the Pau conference (Dec. 1950) the economic services were transferred to the three associated states. The French interest was maintained, however, in the Scientific Research committee, in the Plan d'Equipment (Monnet plan) committee, in the Rice office and the Bank of Issue with the three states' joint participation.

The three states took part in the San Francisco conference for the Japanese peace treaty. The United States signed an agreement for economic co-operation with Viêt-Nam and Cambodia.

Paddy production increased, thanks to the improvement in the military situation; in Tonkin there were 250,000 ha. under cultivation in 1950 as against 86,000 in 1949; and in Cambodia output rose from 900 to 1,200 metric tons. There were 52,000 ha. under rubber, output being 47,780 metric tons in 1950 as against 42,000 tons in 1949. The revival of business was mainly discernible in the increased number of imports for war purposes and in the fresh accumulation of stocks. (*See* also PRISONERS OF WAR.)

Education.—Schools (1945): elementary, pupils 830,000; *lycées* and *collèges* 8, pupils 6,000; University of Hanoi, students (1948) 753.

Finance.—Budget (1950 actual): expenditure, excluding the cost of military operations, 2,385,000,000 piastres. Monetary unit common to the three states: piastre, equivalent to 17 metropolitan francs. U.S. $1=350 metropolitan francs (Sept. 1951).

Foreign Trade.—(1950) Imports 73,761,000,000 fr., 59,000,000,000 from the French union; exports 25,887,000,000 fr. Principal exports: rubber 13,197,000,000 fr.; rice 5,143,000,000 fr.; pepper and pimentos 1,676,000,000 fr.; maize 946,000,000 fr.; kapok 525,000,000 fr.; coal 429,000,000 fr.

Transport and Communications.—(1950) Serviceable roads, 7,000 km.; motor vehicles, 29,700. Ships entered (Saigon-Cholon), 854. Aircraft landed, 822. (Hu. De.)

Indonesia. The independence of Indonesia was proclaimed at Jakarta (Batavia) on Aug. 17, 1945, but the republic of the United States of Indonesia came into being on Dec. 27, 1949, when Queen Juliana of the Netherlands signed the charter transferring to the Indonesian people the sovereignty of the territories of the Netherlands Indies—with the exception of Irian or Dutch New Guinea (see Netherlands Overseas Territories). The provisional constitution of 1949 stipulated that the republic was to be a federation of seven states and nine autonomous territories. On Aug. 14, 1950, the parliament of the republic decided that the principle of federalism should be abandoned and that Indonesia should be a unitary nation-state divided into ten provinces. Total area (excluding Dutch New Guinea): 583,479 sq.mi. Total pop.: (1930 census) 60,727,000, including 1,238,000 Chinese; (mid-1951 est.) 80,000,000; two-thirds of the total population lives on Java. Language: Bahasa Indonesia, a scientifically adapted version of Malay, was being propagated as the official language; 25 major languages and about 250 dialects are spoken by the different racial groups scattered over the archipelago. Religion: Moslem about 90%, Christian 3.4%, Hindu 1.4%. Chief towns (pop., 1951 est.): Jakarta (cap., 2,800,000); Jokjakarta (1,848,886); Surabaya (714,898); Bandung (659,213); Semarang (310,942); Surakarta or Solo (266,365). President of the republic: Sukarno; prime ministers in 1951: Mohammed Natsir and (from April 20) Sukiman Wirjosandjojo.

History.—In 1951, the second year of its existence as an independent state, the republic of Indonesia made some progress in consolidating its position internally as well as in its international relations.

Two main political groups, competing for popular support with an eye to electoral favour in the future, coalesced in the Masjumi (Moslem) party and the Partai Nasionalis Indonesia (Nationalist party). The Natsir cabinet was supported by the former. A few smaller groups, among them the Socialists, appealed mainly to parts of the intelligentsia.

A political group of the Communist persuasion constituted an increasing threat to the political stability and economic rehabilitation of the country, especially through its affiliation with a Communist-led labour union federation (Sentral Organisasi Buruh Seluruh Indonesia, or S.O.B.S.I.). The latter kept going a systematic country-wide campaign of excessive labour demands and strikes, designed to paralyze the ports and the agricultural and industrial enterprises. In February the government countered this by proclaiming a strike ban, on the basis of martial law, combined with compulsory mediation of official committees in labour disputes.

Resentment on the extreme left caused by this drastic measure, and certain grievances of the Nationalist party against the cabinet controlled by its Masjumi rivals, brought together an *ad hoc* majority against Natsir, who in March was forced to resign. Not until April did a new cabinet emerge, led by Sukiman as premier and Suwirjo (then mayor of Jakarta), of the Nationalist party, as vice-premier. The new administration was based on a working agreement between the rival parties which was attractive to neither of them and did not appease their growing mutual dislike.

In August evidence came to hand of the Communist plans to exploit the national Independence day celebrations (Aug. 17) for widespread agitation and subversive actions. The government thereupon ordered extensive preventive arrests of Communist party leaders and S.O.B.S.I. officials, including a number of members of parliament. In October a motion tabled in parliament to censure this action was defeated; the inherently weak coalition cabinet thereby gained a further lease of life.

Like its predecessor, the Sukiman-Suwirjo administration steered Indonesia along a course of neutrality between the two opposed power blocs, but circumstances gradually caused it to lean slightly toward the western democracies. In May the government adhered, though reluctantly, to the embargo recommended by the U.N. against the "aggressor" countries in the Korean conflict, and later in the year Indonesia appeared in San Francisco, Calif., among the signatories of the Japanese peace treaty. In the relations with the Netherlands the lingering instinct yet to lay the blame for disappointments and reverses at the door of the former colonial power remained a political factor of considerable significance. The wish to replace the Netherlands-Indonesia union, concluded at the round-table conference in 1949, by a less intimate treaty of the customary international pattern was more or less actively supported in various sectors of articulate opinion. The Netherlands government declared itself willing to go along with such a revision, provided it would not harm co-operation in practical matters to mutual advantage, and a date was set for a conference in November to begin negotiations. Then, however, the dispute over New Guinea once more became acute, in connection with proposed constitutional reforms in the Netherlands involving this remnant of Netherlands territory in the Pacific. Though the reforms would not prejudice the possibility of a change of status of New Guinea, misunderstanding of their purport caused commotion in some Indonesian circles and the Jakarta government felt compelled to insist that the New Guinea problem should be included on the agenda of the conference. The Netherlands government raised no objection.

Throughout the first half of 1951 the Indonesian economy benefited from high prices on world markets for its export products, especially rubber, tin and copra. This type of boom was not a stable foundation for prosperity, as appeared later in the year when strategic stock-piling in the United States diminished and prices began to drop. Moreover the total export values at the prevailing high prices did not yet exceed 65% of the prewar level, nor the total volume 47% of the prewar average. Imports at 54% of the prewar level, low labour productivity and increasing labour unrest indicated that the economic and social situation was still far from satisfactory. A huge and inefficient bureaucracy and excessive numbers of former guerrillas incorporated in an unwieldy army constituted a heavy drain on the revenues of the government, which consequently was forced to continue a policy of deficit spending. In a determined effort to forestall runaway inflation the government, however, used the largest available part of its increased current revenues during the boom period to redeem part of its swollen indebtedness to the central Java bank, and purchased gold bullion in the United States to back the paper money in circulation. The latter did not increase disruptively during the year. In a realistic appreciation of the prerequisites for a more lasting economic improvement, strong measures for the restoration of law, order and security, longer working hours and higher labour efficiency were advocated in ever-widening Indonesian circles. Execution of the principles was slow. (W. G. P.)

Education.—Schools (1950): primary 23,700, pupils 4,174,031, teachers 72,891; secondary 1,250, pupils 165,399, teachers 7,500; teachers' colleges 397, pupils 21,023. Universities: faculties 14, students 3,238. Chinese schools 681, pupils 162,315, teachers 3,421.

Finance and Banking.—Budget: (1950 est.) ordinary revenue 6,414,000,000 rupiah, ordinary expenditure 7,798,000,000 rupiah; (1951 est.) ordinary revenue 7,530,000,000 rupiah, ordinary expenditure 7,806,000,000 rupiah. Short-term national debt (Aug. 1951) 2,100,000,000 rupiah. Total national debt (Dec. 1950) 6,086,000,000 rupiah. Currency circulation (May 1951) 3,137,000,000 rupiah. Gold reserves (Sept. 1951) U.S. $229,000,000. Bank deposits (May 1951) 2,514,000,000 rupiah. Monetary unit: rupiah, with a basic selling exchange rate (Dec. 1951) of 3.81 rupiah to the U.S. $1.

Foreign Trade.—(1950) Imports 1,527,000,000 rupiah; exports 2,742,000,000 rupiah. Main sources of imports (1950): U.S. 21%; Netherlands 17%; Japan 10%. Main destinations of exports: Malaya and Singapore 36%; Netherlands 24%; U.S. 16%; U.K. 4%. Main imports: textiles 28%; rice 9%; machinery 7%; petroleum and products 7%. Main exports: rubber 42%; petroleum and products 20%; copra 8%; tin 7%. Volume of exports (1950; 1937=100): rubber 142; tin 79; copra 61.

Transport and Communications.—Main roads (1948) 2,400 mi. Licensed motor vehicles (Dec. 1950): cars 20,000, commercial 19,000. Railways (1950): 3,960 mi.; passengers 105,000,000; freight carried 5,316,000 metric tons. Shipping regularly serving Indonesia (1947): merchant vessels 154, gross tonnage 757,000. Air transport (1950): passenger-miles 92,000,000; cargo net ton-miles 4,000,000. Telephones (1940): subscribers 51,606. Radio receiving sets (1951): 150,000.

Agriculture.—Main crops (metric tons): rice, paddy (1950) 9,867,000; maize (Java and Madura only, 1949–50) 1,850,000; sweet potatoes (Java and Madura only, 1948–49) 1,140,000; cassava (Java and Madura only, 1948–49) 6,067,000; sugar, raw value (Java and Madura only, 1950) 277,000; peanuts (1949) 382,000; palm kernels (exports, 1950) 24,100; soybeans (1950) 274,000; copra (exports, 1950) 287,000; palm oil (exports, 1950) 97,000; tobacco (Java and Madura estates only, 1949) 10,000; tea (1950) 35,300; coffee (estates only, 1950) 10,600. Index of agricultural production (1949; 1934–38=100): 83. Livestock (1950): sheep 2,334,000; cattle 3,618,000; pigs 1,254,000; horses 616,000; buffaloes 2,773,000; goats 7,474,000. Fisheries: total landings (1948) 472,000 metric tons; men employed 258,000; boats 25,000.

Industry.—Fuel and power (metric tons, 1950): coal 799,000; crude petroleum 6,408,000. Raw materials (metric tons, 1950): tin 32,600; natural rubber 698,000; bauxite 678,000.

Industrial Health.

Because of increasing tightness in the United States labour market during 1951, the Office of Defense Mobilization through its health resources advisory committee undertook to determine measures to extend industrial health services. A committee with representatives from the public health service and the departments of labour and commerce was instructed to formulate minimum standards of health and safety under which federal contracts must be performed and to develop guide lines for industrial health throughout the nation. In its report the committee mentioned the necessity for convincing both management and labour of the need for conserving the country's work force through the application of industrial health measures, and for making these avenues of service more attractive to physicians and nurses. Meanwhile, the Council on Industrial Health of the American Medical association prepared a report on manpower conservation which inquired into the sources of additional production workers and attempted to estimate the demands that the special needs of women, older workers and the handicapped might place on the medical profession. It also recommended methods for the recruitment and training of additional industrial health personnel needed to maintain workers at peak production.

As the year closed plans were effectuated for wide distribution of these reports. As the tempo of defense production increased, critical areas of worker concentration appeared with associated shortages in housing and in medical-health organization. The placement services of the American Medical association and its constituent state medical societies were alerted and machinery was set in motion to recruit and relocate physicians where their services were needed.

Because of its expanded objectives, the name of the division of industrial hygiene in the public health service, Federal Security agency, was changed to the division of occupational health. The Association of Industrial Physicians and Surgeons was renamed the Industrial Medical association. This latter association assumed the inspection and approval of industrial medical departments according to standards previously administered by the American College of Surgeons. Steps were also taken to create an American Board of Occupational Medicine to promote improved educational opportunities for eligible physicians and to certify them as qualified on the basis of training, experience and examination.

During the year the American Academy of General Practice pointed out the importance of the general practitioner to the small-plant health program. To improve the general practitioners' contribution, a plan of training was set in motion through the postgraduate education machinery of the academy.

Noise in industry and associated acoustical trauma continued to attract interest. Several conferences were jointly sponsored by the American Academy of Otolaryngology and Ophthalmology, the American Medical association and the Acoustical Society of America to improve the understanding of the measurement of noise, the determination of its harmful effects, the treatment of hearing loss and rehabilitation. These same organizations began basic studies to revise procedures for evaluating percentage hearing loss in medico-legal cases.

There was expanding interest in human relations in industry with better *rapprochement* between the several scientific disciplines involved. It became clear that final solutions depended upon teamwork between the social, engineering and biological sciences and that progress would depend upon the removal of interprofessional barriers.

During the year the International Congress of Industrial Medicine met in Lisbon, Port. Representatives from most of the countries of western Europe and North and South America participated. (C. M. Pn.)

Canada.—Throughout the year the medical, nursing and laboratory staffs of the industrial health division of the federal department of national health and welfare actively co-operated with provincial departments of health in improving and promoting factory medical programs, conducting researches into industrial health hazards and increasing the workers' awareness of their individual responsibilities. Special attention, in the latter field, was given to the 1,100,000 women workers in Canadian industry. A study of, and warning against, radioisotope health hazards was made; there were investigations into heat sickness, industrial fatigue and neurotic illnesses among industrial workers; and air pollution was examined.

The blindness control division of the department of national health and welfare undertook a study of and published a report on colour blindness in industry; and a toxicology laboratory was organized for the department of agriculture to evaluate the health hazards of the new insecticides. A gymometer, designed by the defense research board medical laboratories and the royal Canadian air force institute of aviation medicine, was used to record the movements of Avro jet aircraft during flight, in the hope that new means of increasing air line passenger comfort would be discovered. (C. Cy.)

Great Britain.—On June 1, 1949, the prime minister (then Clement Attlee) announced the appointment of a committee to examine the public and industrial health services in Great Britain. The report of this committee, known as the Dale committee, was presented by the prime minister to parliament in Feb. 1951.

The report of the Medical Research council, for the years 1948 to 1950, was published in July 1951. Among the important subjects dealt with in the field of occupational health were minor injuries and skin diseases and toxic chemicals used in agriculture. The vast problem of pneumoconiosis received due attention and there was no doubt that the council was exercising every effort to solve this grave problem.

The term "stress diseases" had come to be used with increasing frequency and, among these, peptic ulcer had been assumed to occupy a place of some importance. The occupational factors in the aetiology of gastric and duodenal ulcers were investigated by the Medical Research council. The report stressed the very considerable incidence of gastric and duodenal ulcers among the population and it was estimated that of the persons living in Great Britain approximately 1,500,000 had or had had peptic ulcers, and that 638,000 men complained of symptoms each year. Significantly high incidences were found among members of the medical profession and in a residual group of unskilled workers. High incidences were also found among foremen and business executives, both groups composed of workers in responsible positions in industry. Duodenal ulcers occurred commonly between the ages of 20 and 64 and their incidence was directly related to responsibility and anxiety over work. Gastric ulcers, on the other hand, although uncommon before the age of 35, were less frequent among the wealthy.

The possibility of ill health arising from welding was considered in many quarters and the chief inspector of factories decided that the matter should be investigated by his department. Those chosen for this work were A. T. Doig and L. N. Duguid and their report, *The Health of Welders,* was published by the factory department of the ministry of labour and national service. In general, the report concluded that the health of welders was little different from the rest of the general population. There was no evidence to show that the liver was damaged in any way or that endocrine disturbances were more frequent in welders than in other workers. Infantile Paralysis.

Incomplete data from the World Health organization indicated an unusually high incidence of poliomyelitis (infantile paralysis) during 1951 in Australia, Austria, the Belgian Congo, the Netherlands, Norway, Switzerland and the United States. The United States had a high incidence of the disease for the fourth year in succession, although the number of cases (27,593 through Dec. 1) was slightly below that reported for 1950 (33,351) and considerably below the total of 42,173 in 1949.

A critical field trial with human beings was begun in 1951 to determine whether a concentrate from pooled human blood is capable of preventing or of ameliorating the paralysis that sometimes follows a natural infection with the virus. This study was scheduled for completion during 1952. The blood concentrate is capable of inactivating in the test tube the three known types of the virus of poliomyelitis. Laboratory experiments showed that this concentrate can protect monkeys from the paralytic disease that usually follows an experimental infection with the virus. Such protection was found to be of relatively short duration. However, an injection of this substance in monkeys did not interfere with the immunization process that normally follows an infection with virus.

Additional reports appeared on the relation of paralytic poliomyelitis to recent injections given to immunize against whooping cough, diphtheria and tetanus. The tendency for paralysis to occur more often in the limb inoculated with the immunizing substance was confirmed, but the evidence was not adequate to prove that the incidence of paralytic poliomyelitis is any higher in recently immunized persons than in the general population. Similar studies attempting to show a relationship between paralytic poliomyelitis and injections of other biological and medicinal substances were not convincing.

Prior treatment with cortisone was reported to accelerate the development of poliomyelitis in mice, hamsters and monkeys.

The co-operative program of typing of the viruses of poliomyelitis in the United States was concluded. Only three different immunologic types of the virus had been discovered. A preliminary report of this study indicated that 85% of the viruses typed were found to be of the Brunhilde group, 12% Lansing and 3% Leon. Further studies were being carried out to determine the relative importance of each of these types in the production of human disease. The use of the tissue culture method for propagation of the virus of poliomyelitis made possible an expansion of research on poliomyelitis. This method was being employed for the isolation and typing of the virus, the characterization of specific antiserums obtained from human beings and for studies designed to attenuate the virus. This new technique could materially decrease the need for monkeys in research on poliomyelitis.

An encouraging report was received on a new complement-fixation test in poliomyelitis making use of a modified poliomyelitis virus grown in the brains of newborn mice. At its 1951 stage of development this test was capable of identifying approximately 50% of known cases of poliomyelitis.

Work on the Coxsackie group of viruses continued. An unusual feature of this family of viruses was that most of the human diseases which they cause remained unnamed, although it is known to be the aetiologic agent of Bornholm disease or epidemic pleurodynia, of herpangina and of a symptom-complex indistinguishable clinically from that of nonparalytic poliomyelitis. The Coxsackie viruses are known to be "camp followers" of the poliomyelitis viruses. Human beings may suffer concurrently from a dual infection with one of the poliomyelitis viruses and one of the Coxsackie viruses. The significance, if any, of this latter observation remained unknown. The greatest number of strains obtained from nonfatal cases had turned out to be of the Brunhilde type, whereas strains of the Lansing type had been largely isolated from scattered fatal cases. Strains of the Lansing type appeared to produce relatively less paralytic poliomyelitis per person immunized than was the case with other strains. This result might be due to essential differences between these virus types, or to the fact that the monkey is a particularly suitable instrument for isolating strains of the Brunhilde type of the virus but not an equally good menstruum for isolating strains of the Lansing and Leon types. For example, one investigator found that 11 of 12 strains of poliomyelitis virus isolated by direct inoculation of human stools into tissue culture, without resort to monkeys, were of the Leon type. In view of this observation there was hesitancy in concluding that strains of the Brunhilde type are responsible for the vast majority of cases of human poliomyelitis.

There were some promising developments in a comprehensive attempt to prevent the development of the chronic respirator case. This effort revolved about new equipment and new methods of treatment. The rocking bed had apparently found a definite field of usefulness as a substitute for the tank respirator, especially in those early convalescent cases having the ability to supply a part of their required lung ventilation by natural breathing. The rocking bed had also been found useful in training patients to leave the tank respirator and to dispense with this aid. Electrophrenic respiration, which involves direct stimulation of the phrenic nerve, although having a limited field of usefulness, did appear to be an effective means of artificial respiration for cases with such a degree of circulatory instability that it was not safe to use the tank respirator. It had also been found useful in cases with adequate muscle power, but with irregularities of respiratory rhythm resulting from viral damage to the higher centres of respiration. The mechanical cough machine, still under experimental development, also promised to be a useful and perhaps a lifesaving device in certain situa-

INOCULATION WARD during the first mass test of a serum which might prove to offer partial temporary resistance to the polio virus. The serum was gamma globulin, a human blood extract, and was administered in Utah county, Utah, in 1951, with the aid of March of Dimes funds

tions. (*See* also BACTERIOLOGY; EPIDEMICS AND PUBLIC HEALTH SERVICES; MEDICINE.)

Infant Mortality.

The world-wide downward trend in infant mortality continued in 1951 practically without interruption. Provisional indications gathered from reports for the United States during the first nine months of 1951 pointed to a reduction of 1.7% from the corresponding record for the like period of 1950. During the whole of 1950, the United States had a total of 3,548,000 births and 103,700 deaths under one year of age (both figures preliminary), so that the infant mortality rate was only 29.2 per 1,000 live births. Almost a decade earlier, in 1940, the rate was more than 50% greater, namely 47 per 1,000 live births. An idea of the rapid reduction may be gained from the fact that infant mortality in 1930, namely 64.6 per 1,000, was more than double the 1950 figure, while in 1920 infant mortality was as high as 85.8 per 1,000 live births. Only a very few countries with available records were at a lower level in their infant mortality than the United States, and most of them had much smaller populations. For example, Sweden had a rate of only 20 infant deaths per 1,000 live births in 1950, while the Netherlands recorded a rate of 25 per 1,000. In the same year, for the European population of New Zealand, the infant mortality rate was down to 23 per 1,000, and the rate for Australia was 24 per 1,000. In contrast to these very favourable records, many countries were still experiencing unusually high infant mortality rates. Thus, Chile recorded a rate of 153 deaths under one year of age per 1,000 live births in 1950; nevertheless, even this bad showing was a substantial improvement over the pre-World War II situation, 1936–40, when the rate was as high as 234 per 1,000. Mexico had an infant mortality rate of 107 per 1,000 in 1949; for the same year, India showed a rate of 123 per 1,000. Among the European countries with available figures, high rates for 1950 were shown for Portugal (94 per 1,000), Spain (69), Austria (64), Italy (63) and Belgium (59). Unusually high rates for European countries were also experienced by Czechoslovakia (82 per 1,000 in 1949), Hungary (100 per

1,000 in 1948) and Rumania (199 per 1,000 in 1947).

Infant mortality in England and Wales during 1951 was about on the level of that for 1950, according to provisional urban data covering the first ten months of both years. For the entire year 1950, England and Wales recorded 691,752 births and 20,816 deaths under one year of age, so that the infant mortality rate came to 29.8 per 1,000 live births; this was only 2% higher than the corresponding rate for the United States in 1950. Canada had an appreciably higher infant mortality rate than either the United States or England and Wales in 1950; with 15,289 deaths under one year of age and 370,578 births, the infant mortality rate was 41.3 per 1,000 live births. Inside the United States, the white population had an infant mortality rate of 28.9 per 1,000 live births in 1949, while the rate for the nonwhite population was as high as 47.3 per 1,000.

A review of the factors in the decline in infant mortality in the United States (*Statistical Bulletin* of the Metropolitan Life Insurance company, Aug. 1951) showed the greatest reductions in the infectious diseases. For example, from 1933–34 to 1948 the infant mortality rate from the principal communicable diseases of childhood, which include measles, scarlet fever, whooping cough and diphtheria, fell by almost 90%; syphilis deaths decreased by the same extent. There was a drop of 75% in the rate for tuberculosis, 69% for diarrhoea and enteritis and 61% for pneumonia and influenza. These conditions, which arise principally from the postnatal environment, had been brought largely under control not only by the widespread use of chemotherapeutic substances, antibiotics, immunization and other preventive steps, but also by better infant care and feeding, by a greater proportion of births in hospitals, the increasing use of hospitals for sickness and the upward trend in the standard of living. Reductions in the rates from other causes of infant mortality resulted from the improved health status of mothers and from the better care given babies immediately after birth. Thus, for the period under review, the infant mortality rate for premature birth was reduced by 31%, for congenital debility and associated conditions by 33%, for injury at birth by 26% and for congenital malformations by 13%. However, the rate for accidents remained unchanged. Further improvement was said to depend on more adequate prenatal care, including proper nutrition of the mother, and advances in obstetrical practices and training.

A survey was made of the causes of accidental death among infants from the records of those with industrial insurance in the Metropolitan Life Insurance company for 1945–49 (*Statistical Bulletin,* Feb. 1951). One-half of these deaths were reported to be caused by mechanical suffocation, such as by bedclothes and pillows. However, many of such deaths were actually believed to be caused by acute respiratory infection. Almost one-fifth of the deaths were caused by ingested objects which resulted in puncture, obstruction or suffocation. More than one-tenth of the fatal accidents among infants were attributed to conflagrations and burns. Other causes of accidental death were falls, strangulation, ingestion of poisons, drowning and excessive heat. About 4% of the accidents involved motor vehicles. Insurance.

Life Insurance.—During 1951 the legal reserve life insurance companies of the United States and Canada paid more than $4,000,000,000 in benefits to policyholders or beneficiaries, the largest amount ever paid. Including with the above payments the increases in reserves held to assure payment of future benefits, the amount paid or credited in 1951 was more than $8,000,000,000.

Although new life insurance issued by the companies of the United States and Canada during 1951 exceeded $30,000,000,000, it was somewhat less than in 1950. At the end of the year, the insurance owned by the 91,000,000 policyholders amounted to approximately $270,000,000,000. However, this sum was equivalent to only about a year's income of all the people in the two countries. During the year, the premiums paid for life insurance and annuities totalled about $8,000,000,000 or about 3% of the income of these people.

The assets of United States and Canadian legal reserve life insurance companies increased by $4,800,000,000 during 1951 to reach $73,400,000,000.

During 1951 the life insurance companies in the United States continued to add substantially to their mortgage portfolio. As a result their mortgage holdings increased by $3,400,000,000 and attained a total of $19,500,000,000. Corporate securities of all kinds owned by the companies also increased, largely by acquisitions of industrial bonds and notes, and aggregated $28,300,000,000 at the year end. Purchases of common stocks were small despite the fact that New York state enacted a law in March 1951 permitting life insurance companies to acquire such stocks. Portfolios of United States government securities were reduced. However, the holdings of United States securities still amounted to $11,000,000,000 at the end of the year. There were heavy demands for loans which arose, in many cases, because of the country's preparations for defense.

The interest rate earned by the United States companies in 1951 on their total assets was expected to be slightly higher than the 1950 rate (3.09%). During the year, interest rates obtainable on new investments continued to improve.

Because of the unsettled state of international relationships, life insurance companies generally continued the precautionary measures they had taken in 1950. Thus, some companies inserted war clauses in policies issued to military personnel or to young men, while others placed restrictions on the amount of insurance issued to any person subject to military service.

In the United States at the end of 1951, members of the armed forces and veterans held about $50,000,000,000 of United States government and National Service life insurance. This did not include the gratuitous indemnity granted to beneficiaries of persons dying in the armed forces after June 27, 1950. There was also about $10,000,000,000 of life insurance in force in fraternal organizations, assessment associations, etc. Furthermore, the survivorship benefits provided under the Social Security act were the equivalent of an amount of life insurance which approached in magnitude that in force in United States legal reserve companies.

For many years a few life insurance companies had also sold accident and health policies. However, during 1951 a considerable number of companies entered this field as a means of broadening their insurance services to the public. (*See* also SOCIAL SECURITY.)

(L. A. L.)

Casualty and Fire Insurance.—The year 1951 witnessed the greatest volume of premium income ever produced in the history of casualty and fire insurance in the U.S. Estimates for 1951 indicated a 10%–15% premium increase over 1950. Inflation, high levels of industrial employment and activity, greater insurance consciousness and the pressure of additional state automobile financial responsibility measures contributed to this result. It was also a year of heavy losses in certain of the major casualty lines, particularly automobile insurance. There were further developments in the trend toward all-risk insurance coverage.

Automobile Liability.—Premium income and loss expenditures reached new heights in this area of casualty insurance. There were more cars on the road, more of them were insured and more of them were involved in accidents than ever before. Estimated average paid claim costs for bodily injury in 1951 showed an increase of almost 70% over 1941. For property damage claims, the average increase over the decade approximated 150%. Judgments for claimants were almost doubled. Hospital and medical fees had jumped considerably in this period. Automobile repair costs, including parts and labour, had risen 134% in the decade.

To offset the heavy drain of losses, premium rates were increased during the year. The average country-wide rate increase for bodily injury was 14.4%; for property damage, 11%.

Workmen's Compensation.—During 1951, premium volume reversed the slight downward trend of the previous two years. Increased employment, fewer lost days because of strikes, higher wages and upward rate adjustments produced this result.

Claim experience kept pace with the premium increase. Hospital and medical costs continued their upward spiral. Further, in 1951, 28 states raised the benefits for injured employees.

The year 1948 was the turning point in the loss experience. From then to 1950 the incurred loss ratio rose from 60.9% to 70.9%. Premium rates lagged behind these adverse loss results, but in 1951 there were upward rate revisions throughout the country.

General Liability Insurance.—Until 1949 this line was profitable. After that year the experience had been growing poorer. It was expected that 1951 would show a small loss.

Burglary Insurance.—This line, unprofitable in 1946, turned toward the profit side for the following five years. Premiums had increased approximately 35% from 1946.

Glass Insurance.—Premiums increased moderately in this line in 1951. The losses produced by the Nov. 1950 windstorm, coupled with rising repair and replacement costs, made this line unprofitable. Rate increases of approximately 5.3% were promulgated in 1951, and it was expected that the industry would break even for the year in glass insurance.

Boiler and Machinery Insurance.—Premiums rose substantially in this line for 1951. Loss experience was good in the indirect damage coverages such as use and occupancy insurance. It was poor for the direct damage coverage on boilers, pressure vessels and machinery, because of increased inspection and repair costs.

Fidelity and Surety.—Fidelity insurance premiums jumped tremendously in 1951, principally because a considerable portion of the business is written for a three-year period and 1951 happened to be a large renewal year. There was expected to be a profit for the year, but a smaller one than in previous years. Surety bond premiums held a steady course. Losses were slightly higher.

Accident and Health Insurance.—Loss ratios were rising in this field, but it continued to be a profitable line. Premiums for 1951 were estimated to show a 20% increase over the previous year. The premium volume in this field had surpassed that of straight fire insurance coverage. A significant innovation was the catastrophe insurance coverage for extraordinary medical and hospital expense.

Fire and Marine Insurance.—Fire and marine premiums for 1951 were expected to establish a new record volume, with an approximate increase of 15% over the previous year. Losses, however, reached their highest point. A substantial portion of the premium volume in the fire and marine field comes from automobile physical damage coverage; *i.e.* automobile fire, theft, collision and comprehensive. The rise in accident frequency and in repair costs made the experience in this line increasingly unfavourable. (*See* also FIRES AND FIRE LOSSES; VETERANS ADMINISTRATION, U.S.)

Hospital, Medical and Surgical.—The year 1951 was noteworthy for: (1) lack of serious congressional consideration of national health service proposals; (2) more attention by carriers to variety and scope of offerings; (3) an increasing number of broad-scale studies of health and health services.

In mid-year, the subcommittee on health, senate committee on labour and public welfare, published its report on health insurance plans, prepared under the direction of Dean A. Clark, director, Massachusetts General hospital. The subcommittee put aside consideration of health insurance proposals while the report was in preparation, and brought no proposals forward after its presentation.

Simultaneously, long-term studies were under way by the Brookings institution, the Health Information foundation and an independent commission on the financing of hospital care organized by the American Hospital association. The Research Council for Economic Security began an exhaustive study of the economic effect of long-term illness on the industrial worker. And, at year's end, Pres. Harry S. Truman appointed an independent commission to study the health needs of the nation.

Increasing attention was given to such problems as health insurance for the aged and coverage of dependents of members of the armed forces. So-called "catastrophic illness coverage" policies were offered for the first time by major group-writing insurance companies and by nonprofit plans.

Blue Cross hospital service plans had passed 41,000,000 members by year's end, nearly matched by unduplicated commercial group and individual insurance; an estimated 81,000,000 persons had some form of hospitalization coverage. An estimated 57,500,000 persons held some form of surgical coverage, of whom 21,500,000 were enrolled in Blue Shield or other nonprofit plans. An estimated 23,000,000 persons held some form of medical protection, about 11,000,000 of them through Blue Shield-type plans. According to the Clark report, only about 4,000,000 persons held "fully comprehensive" coverage, however.

In Canada, the Liberal party was severely defeated in Ontario over the health insurance issue, but the tax-supported municipal scheme spread rapidly among Alberta taxpayers on the heels of rising mining-oil tax income to the province. It was not expected that the Conservative victory in Britain would greatly affect that country's health insurance program. (A. G. S.)

Great Britain.—The combined fire and accident premium income of 24 representative British offices rose in 1950 by £35,156,000 to £321,231,000 and resulted in an underwriting surplus of £23,132,000 or 7.2% of the premiums, compared with £25,350,000, or 8.9% in 1949. Marine premiums in 1950 were higher by £2,002,000, at £40,248,000, and provided a surplus greater by £808,000, at £3,854,000, while the total marine funds were advanced by £3,307,000 to the new high level of £63,434,000.

New ordinary life sums assured expanded in 1950 by £60,000,000 to a record total of £600,000,000, and an increase of £1,213,000 took the total new industrial life sums assured of eight leading industrial life companies to £172,204,000, the average sum assured per policy being £43.8 against £39.5 in 1949. The aggregate industrial life premium income of the eight leading companies was advanced by £2,883,000 to £98,295,000 and the total industrial life funds were £679,371,000, showing an increase on the year of £30,122,000.

The big inflow of new life business continued throughout

1951. There was a sustained demand for endowment assurance plans for executive and noncontrolling directors and much new business took the form of income assurance. Educational and children's assurances were again sought, but life assurance in connection with house purchase plans was restricted by increased selectivity in the granting of loans by the companies. Deferred annuities were effected as provision for individual retirement. There was a tendency among managements toward a broader investment policy, and the higher level of interest earnings on invested funds, combined with continued favourable mortality experience, enabled many companies to announce reductions in premium rates for certain businesses.

Losses on the fire account remained heavy throughout the year, and included many important industrial fires. The claims experience was also noticeably affected by a considerable volume of belated claims from the 1950 windstorm in the eastern states of the U.S. The acute underwriting difficulty presented by insurance against windstorm was further emphasized by the Jamaican hurricane in mid-1951. Tension in the middle east emphasized another peril, from riot insurance. The British fire and marine markets were also heavily involved, as a result of a fire in unginned cotton at Hassa Heisa, Sudan. The insurance loss was estimated at £2,000,000.

The over-all result of the accident departments was again dominated by a world-wide unsatisfactory underwriting experience in the automobile section; the increase in U.K. premium rates at midyear was generally considered inadequate. Workmen's compensation business transacted overseas continued costly to underwriters. Group accident and sickness insurance for employees met with increased demand. Burglary, fidelity, surety and plate glass insurance and a number of risks associated with machinery were again sought and underwriting proved profitable.

Heavily increased values of hulls and enhanced cargo values were a feature in the marine insurance market. Rates for cargo business were highly competitive and were a matter of underwriting concern. Risks on land, prior to delivery of goods, showed improved results. (*See* also LAW.) (P. Ss.)

Interior Decoration.

Emerging from the multitude of new designs, new materials and combinations of materials that were introduced in 1950 were two definite trends in the 1951 furniture picture.

The most important was the tremendous renewal of interest in French Provincial furnishings which was apparent in all segments of home furnishings including furniture, floor coverings, fabrics and accessories. Formerly available only in the higher-priced merchandise, consumer demand brought it down to the moderate-price level during the year.

The small scaling, warm finishes and simple graceful lines of this style, when combined with typical Provincial fabrics, make it ideally adaptable to the smaller, informal homes of today. Conversely, when used with handsome brocades, velvets or metallic textures, this same design becomes formal enough for the most sophisticated city apartment. Blending equally well with both 18th-century and 20th-century designs, French Provincial pieces are often used as accents in an otherwise traditional or contemporary room.

The other important trend in furniture design during 1951 was the development of finishes that clearly show the grain and texture of the wood. To accomplish this, dark mahogany and walnut were finished a few shades lighter but still retained the mellow tone of a traditional finish. The bleached finishes, on the other hand, were softened to permit the natural wood colour to show through, and depended upon the figurations and the texture of the wood for decorative interest.

INTERIOR by Alexander Girard, one of a series of model rooms designed by members of the American Institute of Decorators for exhibit at the Grand Rapids (Mich.) Furniture museum in 1951. The paper montage mural was Girard's own design; the furnishings, from Herman Miller

Traditional woods such as cherry, walnut and maple, usually associated with Early American and French Provincial designs, appeared in several contemporary lines which marked another new departure.

Of significant importance was the professional acceptance of blending traditional styles with current ones that were being created in the U.S. and Europe. When both are of fundamentally good design and used well together, the result is an interesting room characterized by great individuality.

In view of the Korean war, there was a trend away from combining strategic metals such as steel, copper and brass with wood, and manufacturers concentrated on new finishes and plastics to make their table tops stainproof and burnproof. In a great many of the 1951 furniture lines, metal hardware was completely eliminated, with wood drawer pulls or louvred drawers taking its place.

Fabrics followed the general trend to informality, and adaptations of authentic Provincial patterns in modern colourings were greatly in demand. Many of these designs were based on French Provincial motifs, while others took their inspiration from the early days of rural U.S. or from the American southwest. Damasks, antique satins and textures, interwoven with nontarnishable metallic threads, were foremost in the more formal styles. The year 1951 also witnessed a revival of fabric design of Italian Classic, Directoire and Greek origin. Shown in black or other dark colours on white grounds, they were used mainly in combination with elaborate wrought-iron furniture.

Sheer casement cloths that permit privacy and at the same time allow the daylight to filter through were noted in many new weaves and textures. Some of these were shown in all-cotton, sheer linen, rayon and cotton or cottons and combination weaves interwoven with washable metallic yarns. Nylon, orlon and other synthetics in both upholstery and drapery fabrics were much in evidence. In contemporary designs, the trend was to smaller patterns, and the earth tones, greens, browns and russets, were predominant.

Floor coverings kept pace with the furniture trend to informality, with designs leaning heavily toward casual patterns, long-wearing sturdy textures and small, unobtrusive abstracts. Colourwise, tones of green, beige, gray and cocoa were most in demand.

Because of the shortage and high price of raw wool, most of the manufacturers introduced carpeting in a combination of wool and carpet rayon or in all rayon. Textured cottons in wall-to-wall carpeting also made important news on the fashion front. Shown in a wide range of dark and light colours, the 1951 crop of cottons won well-deserved popularity in the moderate-price brackets. Available in sculptured patterns as well as pile effects, these cottons were claimed to be as long wearing as all wool. (*See* also FURNITURE INDUSTRY.) (G. M. J.)

International Bank for Reconstruction and Development.

The International Bank for Reconstruction and Development, established under articles of agreement drawn up at the Bretton Woods conference in 1944, began active operations in Washington, D.C., in June 1946.

During 1951 the bank continued to focus its attention on underdeveloped areas of the world both through its loans and through technical assistance. From the time of its inception to Dec. 7, 1951, 58 loans totalling $1,231,783,000 had been made in 24 of its 50 member countries. The year was marked by many new developments: For the first time some loans were made entirely in nondollar currencies; the bank participated with private investors in financing a development project; bank bonds were publicly offered and sold in European markets; a sizable loan was made for the development of an overseas territory of a member country; and various new techniques were employed in giving technical aid to member countries.

Lending Operations.—From Jan. 1, 1951, to Dec. 7, 1951, the bank made 17 loans amounting to $208,408,000. Where the government of a member country was not itself the borrower, it guaranteed the loan.

Iceland was the first borrower to receive a loan entirely in nondollar currencies. A loan consisting of European currencies amounting to the equivalent of £875,000 ($2,450,000) was made to help finance two hydroelectric power projects, which were expected to relieve the country's critical shortage of power. A loan of £360,000 ($1,008,000) was also made to further Iceland's program for increasing agricultural production by financing the import of materials to build or modernize farms and farm buildings and to improve grasslands.

Another nondollar loan amounting to the equivalent of $28,000,000 was made to Yugoslavia. It was expected to benefit all sectors of the economy by providing equipment for electric power distribution, coal mining, extraction and processing of nonferrous metals, manufacturing industries, use of forest resources, farm and fisheries production and transportation.

Two loans totalling $50,000,000 were made for development projects in South Africa. The sum of $30,000,000 was loaned to the Electricity Supply commission, an agency of the government of the Union of South Africa, for development of electric power; and the Union government borrowed $20,000,000 for the development of transport. The transport loan had particular significance in that it illustrated the bank's policy of co-operation with private investors. Simultaneously with the bank loan, private banks in the U.S. also extended a $10,000,000 credit to the Union government for transport purposes. The bank's loan and the private bank credit constituted, in effect, a single credit transaction.

Loans amounting to $70,000,000 were made to aid in carrying out the ten-year development plan of the Belgian Congo. A loan of $40,000,000 to the Congo was the first the bank made to an overseas territory of a member country. The loan would cover the foreign-exchange costs of capital goods needed for the development plan and of raw materials and consumer imports needed in the Congo as a result of higher employment resulting from the plan. At the same time the bank made a loan of $30,000,000 to Belgium to help finance imports of raw materials and consumer goods which the country needed as a result of its increased production of goods for the Congo.

The bank made a loan of $10,000,000 to Cassa per il Mezzogiorno to aid in the development of southern Italy. The dollars provided by the loan would make it possible for Italy to pay for additional dollar imports necessitated by the greater economic activity and employment resulting from the ten-year plan for development of southern Italy. The lira equivalent of the loan would be used to finance industrial projects related to the plan.

A loan of $1,500,000 was made to Ethiopia to improve telecommunications as an aid to production, commerce and government administration.

Two loans were made for development purposes in Colombia: $16,500,000 for highway construction and rehabilitation in order to provide the country with a continuous network of all-weather roads in good condition serving the more important business and agricultural centres; and $2,400,000 for the Lebrija hydroelectric power project to relieve the acute power shortage in Bucaramanga, one of the country's fastest-growing cities.

Nicaragua received three loans during the year: $3,500,000 for highway construction to improve communications between major centres of production, consumption and export and to open up new lands for cultivation; $1,200,000 for the purchase of agricultural machinery; and $550,000 for the construction of a grain-storage plant.

A loan of $1,300,000 was made for the exploration and use of underground water resources of the Rio Elqui valley in Chile. If the supply of water in northern Chile were increased, presently cultivated lands could be made more productive, and more land could be brought into production.

A loan of $5,000,000 was made to Paraguay to help increase agricultural production by providing equipment and supplies to improve cultivation methods and farm-to-market transportation.

The loan of $75,000,000 to the Brazilian Traction Light & Power Co., Ltd., made in 1949, was increased by $15,000,000, permitting the further expansion of electric power in Brazil.

Technical Assistance.—The bank continued to send general survey missions to member countries to assess their total economic resources, to determine the direction of development and to establish priorities among various development projects. Missions of this type went to Iraq, Ceylon and Surinam in 1951. The reports of previous survey missions—to Colombia, Turkey, Guatemala and Cuba—were published. During 1951 the Economic Development committee, a nonpartisan committee appointed by the Colombian government, made recommendations for a development program based on the recommendations of the bank mission. Committees were appointed in Guatemala and Turkey in order to carry out the recommendations of the bank missions.

During the year the bank increasingly interested itself in furnishing technical aid to its member countries. Various new methods were used to meet particular needs of individual countries. Among them were specialized missions to study and make recommendations on specific aspects of a country's development program; seminars in which representatives from member countries exchanged views with bank staff on specific problems; the assignment of bank officers to member countries for protracted periods as government advisers; and bank participation in institutes for training in techniques of development programming and project control.

Other Operations.—The bank's subscribed capital was increased to $8,438,500,000 by the admission of Sweden to membership in the bank on Aug. 31.

To augment its lending resources, the bank in 1951 sold its bonds in the financial markets of the United States, the United Kingdom and Switzerland in amounts equivalent to $175,634,671, bringing total borrowings to the equivalent of $436,222,222. The U.S. sales were $50,000,000 of 25-year 3% bonds and $100,000,000 of 30-year 3¼% bonds. The Swiss issue was 50,000,000 fr. ($11,634,671) 12-year 3½% bonds; the sterling issue was £5,000,000 ($14,000,000) 20-year 3½% stock. First full repayment of loans occurred during the year when loans totalling $5,000,000 to Yugoslavia and Finland were repaid. Total funds available to the bank, which had not been committed on loans, amounted to about $85,000,000 at the end of the year.

The bank's net income for the fiscal year ended June 30, 1951, was $15,156,947. This amount was allocated to a general reserve, increasing it to $42,155,217. Total reserves, including a statutory reserve to protect investors in the bank's market obligations, amounted to $62,280,965 on June 30, 1951. International Labour Organization.

The International Labour conference and the Migration conference, convened by the I.L.O., were the chief events of 1951.

The 34th session of the Labour conference met in Geneva, Switz., June 6–29, with 60 of its 65 member states represented. Delegates and advisers totalled 603, and included representatives of the United Nations and its other specialized agencies.

The report of the director-general gave the usual world-wide review of economic and social policies affecting labour and industry. The question of wage policy in conditions of full employment was emphasized and discussed by 109 speakers from 52 countries at 12 of the 26 plenary sessions. Many other topics were discussed, and there was general agreement that wages under full employment must permit raising living standards. The director in his reply said that some part of increased productivity should be reserved to reduce prices for those whose incomes were relatively stable in terms of money; also that I.L.O. legislative work, its technical assistance and operational activities must be kept at a high level in order to achieve the indirect as well as the direct benefits of the international labour code. Universality, implying universal service to undeveloped countries as well as to highly industrial ones, enabled the I.L.O. to make a positive contribution to world peace.

The conference voted a budget for 1952 of $6,224,922; elected the governing body for a three-year term; and adopted 2 new conventions, bringing the total to 100, and four new recommendations. Equal pay for women for work of equal value and minimum wage-fixing machinery for agricultural workers were the new conventions. Two of the recommendations were supplementary to the conventions, and two dealt with voluntary conciliation of industrial disputes and collective bargaining machinery, bringing the total of recommendations to 92.

The Migration conference met at Naples, It., Oct. 2–16, with less satisfactory results. The United Nations asked it to prepare a comprehensive plan for carrying on migration work after the International Refugee organization terminated its operations on Jan. 31, 1952. To discuss a modest, well-adapted plan was the chief reason for convening the Migration conference. The plan proposed moving 1,700,000 of Europe's excess population in the next five years. It suggested a migration administration within the framework of the I.L.O., under a migration council composed of the countries interested in immigration and emigration, who would contribute to a budget for this purpose.

The United States was expected to share largely in this contribution but unfortunately the only funds available from that source were the $10,000,000 for migration purposes provided by the Mutual Security act signed by Pres. Harry S. Truman on Oct. 17, 1951, and with the proviso that no funds should be made available to any international organization with Communist members. The I.L.O. had six Communist members, though none attended the Naples conference or was a member of the governing body or any other policy-making I.L.O. authority. Yet the U.S. delegates to the Migration conference were instructed to oppose the I.L.O. plan, and even abstained from voting, as did also Canada and Australia on the substitute plan adopted. This plan set up a consultative council on European migration to advise governments what to do.

International Law.

The consequences of the conventional outlawry of aggressive war were subjected to much juristic comment during the year 1951, especially in connection with the Korean operations of the United Nations. It was pointed out that rapid decision by a competent international agency to distinguish the aggressor from the defender is essential and that this involves ready availability of the facts and also general criteria for determining aggression. Jurists emphasized particularly the necessity of confining the concept of aggression to the initiation of hostilities for objects other than necessary defense or international policing. If a government initiating hostilities is permitted to plead moral, political, economic, legal or other grievances as justification for its action, as was the case with the mediaeval distinction between just and unjust war, the determination of the aggressor becomes practically impossible. The International Law Commission of the United Nations, in a proposed code of offenses against the peace and security of mankind submitted to the general assembly in 1951, while declining to define aggression, declared that it includes "the employment by the authorities of a State of armed force against another State for any purpose other than national or collective self-defense or in pursuance of a decision or recommendation by a competent organ of the United Nations." This draft also included, among offenses against the peace and security of mankind, threat to resort to acts of aggression, preparation for such acts, incursion of armed bands acting for political purposes across national frontiers, encouragement by a government of activities calculated to foment civil strife or terrorism in another state, the toleration of such acts committed by individuals within its jurisdiction, violation of armament limitation obligations and illegal annexation of territory. While not characterized as aggression the commentary suggested that some of these acts might be included in that category. There was renewed interest among jurists in the law concerning the conduct of war. It was pointed out that even if hostilities originate in illegal aggression and, therefore, are not war in the sense of a state of hostility in which the belligerents have an equal status under international law, this by no means implies that limitations on the conduct of hostilities in the interest of humanity are unimportant. The United Nations, for example, recognized that the hostilities it was conducting in Korea were limited by rules of war even though in a legal sense these hostilities were not war. The Geneva conventions of 1949, in extending the guarantees of previous Geneva conventions in respect to prisoners of war, the sick and wounded and Red Cross agencies, and in providing new guarantees for civilians in belligerent countries, accepted this position. It was clear that detailed reconsideration of the rules of war and neutrality were called for. The rights of humanity to be observed by all belligerents, whether in legal war, in operations of collective security or in civil strife should be distinguished from the powers of lawful belligerents, such as maritime capture, occupation of enemy territory and confiscation of enemy property, which might be denied to aggressors and other unlawful belligerents. Furthermore, the changing technology of war and the extension of the concept of reprisals, which were invoked to justify departure from traditional rules, doubtless required that the rules be adjusted to a new balance between military necessities and humanitarian considerations (J. Kunz, *American Journal of International Law,* vol. 45, p. 37).

The problem of regulating hostilities was also involved in proposals for limitation of armament. Official discussion of this topic was renewed in the general assembly in 1951 by a broadcast by Pres. Harry S. Truman and presentation of a detailed project by the United States, Great Britain and France. The latter proposed unified consideration of atomic and conventional armaments and progressive restrictions as systems of inspection and control were established. This project was accepted as a basis for further discussion in a resolution of the assembly. The Soviet Union voted against this proposal and presented a counterproposal looking toward extensive prohibitions of the use and manufacture of atomic weapons, and limitation of other armaments to be followed by the establishment of inspection systems.

The Individual and International Law.—The United Nations charter in demanding respect for human rights and fundamental freedom, and the Nuremberg charter in providing for the punishment of offenses against peace, humanity and the law of war, implied that in principle the individual was a subject of international law with rights and duties defined by that law, irrespective of the law of his own state. The action of the general assembly in proclaiming the Universal Declaration of Human Rights and a convention defining the crime of genocide in Dec. 1948, and the action of the International Law commission in submitting to the general assembly in 1951 a draft code of offenses against the peace and security of mankind were steps toward implementing this concept. The critical problem in making the individual a subject of international law concerns his capacity, irrespective of his state, to initiate an international procedure to protect his human rights, and the capacity of an international authority, irrespective of the attitude of any state, to initiate prosecutions of individuals accused of international crimes. In the solution of these problems progress was slow. There was still at the close of 1951 a considerable opinion which believed the state should be the only subject of international law.

The proposed Covenant of Human Rights as submitted by the Human Rights commission to the Economic and Social council which transmitted it to the general assembly in 1951, though defining many of these rights and obliging parties to the covenant to respect them, did not give the right of petition to individuals or nongovernmental agencies, nor did it provide an international court with competence to declare national action violative of human rights null and void. Such provisions were indeed proposed to the Council of Europe, but the Convention for the Protection of Human Rights and Fundamental Freedom, signed at Rome, It., in Nov. 1950 under the auspices of that council, did not provide automatically for individual petition to a European commission nor for consideration of cases by the European Court of Human Rights. These procedures were, however, provided in optional clauses applicable to states which accepted them. The declaration concerning human rights approved at the Bogotá (Colom.) International Conference of American States in 1948 also left implementation to the states themselves.

While national courts sometimes apply international standards of human rights, especially when incorporated in treaties (*Fujii* v. *California,* 217 Pac. [2nd] 481), they are more likely to be guided by standards of national law. The United States circuit court of appeals applied the latter standards in a claim of a Puerto Rican to be exempted from the draft on the ground, among others, that military conscription was contrary to the rights assured to peoples of nonself-governing territories by article 73 of the United Nations charter. In denying the application, the court expressed the opinion that the armed forces of the United States were necessary for the protection of Puerto Rico as well as continental United States and consequently it was not unjust to expect the Puerto Ricans to contribute to that effort. (*Ruiz Alicea* v. *U.S.,* 180 Fed. [2nd] 870.)

There was also hesitancy to establish a direct responsibility of the individual to the world community in the field of international crime. The Genocide convention, though alluding to the possibility of an international criminal court, only requires states to punish the offense in the exercise of their own jurisdiction. A special conference which met at Geneva in Aug. 1951 under the auspices of the United Nations did, however, draw up a convention for the establishment of an international criminal court. The jurisdiction of this court over a particular offense was, however, contingent upon consent of the state of which the accused was a national, the state in whose territory the crime was committed and the state in which the accused was seeking asylum. This draft was submitted to the states for consideration by the general assembly in 1952.

Economic and Social Objectives.—The development of international law to meet the demands for higher economic standards, especially in underdeveloped areas, proceeded through the specialized agencies of the United Nations and through recommendations of the Trusteeship council and of the general assembly concerning nonself-governing territories and technical aid to underdeveloped areas. A demand for the formulation and acceptance of broad principles in this field through the incorporation of economic and social rights in the Covenant of Human Rights was pressed by the soviet group of states and, in lesser degree, by underdeveloped states. This movement was resisted by the United States and in lesser degree by the states of western Europe on the ground that social and economic rights can not be implemented by the same methods as other human rights. Civil liberties are susceptible of judicial application, but social and economic progress involves the development of practical institutions and the making of appropriations to facilitate action of the type undertaken by national, educational and social security systems and by the specialized agencies of the United Nations. Both types of rights were included in the Universal Declaration of Human Rights but the Human Rights commission proposed that the Covenant of Human Rights should exclude the economic and social rights. The general assembly in 1950 asked for reconsideration of this decision. The covenant presented to the Economic and Social council and to the general assembly in 1951 by the commission included both types of rights but with such diverse obligation in respect to implementation that it amounted in effect to two conventions.

The Recognition of States and Governments.—The issue of "What is a state?" is to be distinguished from the issue of "What is the government of a state?" The latter issue continued to occupy the attention of the United Nations during 1951 in connection with China. The general assembly rejected efforts to establish criteria for deciding between contending governments, leaving the matter to the political judgment of the general assembly, giving due consideration to the purposes and principles of the charter. It continued to recognize the national government in Formosa as the representative of China. However, it conducted negotiations for an armistice in Korea with the government of the People's Republic of China.

Debate on the legal status of Germany continued among jurists, though the admission of the Federal Republic of Germany to the Food and Agricultural organization appeared to amount to a recognition that it was a state for United Nations purposes. The United States terminated the state of war with Germany on Oct. 24, 1951, by presidential proclamation based upon a congressional resolution, and the western allies proceeded with the negotiation of contracts to convert the warlike occupation into a peaceful military assistance. Jurists expressed differing opinions on the status of Germany from the time of its unconditional surrender in May 1945 to the recognition of the statehood of the federal republic in 1951. Discussion of the topic during the year suggested general acceptance of the opinion that Germany continued as a state during this period, but with its sovereignty vested temporarily in the four powers to which it had surrendered unconditionally. These powers operating, at first actually and later theoretically, through the Control council constituted the government of Germany. This government was justified in exercising powers far beyond those of a military occupant because the powers' "completed conquest" of Germany established a situation in which their occupation was no longer precarious and consequently, apart from such limitations as might be deduced from the Kellogg-Briand pact and the Atlantic charter, they would have been free to declare its annexation. They could, therefore, take the lesser step, as they did on June 5, 1945, of declaring that they would for the time exercise German sovereignty but not annex the country. The subsequent disagreement of the Soviet Union and the western allies resulted in the *de facto* transfer of German sovereignty to rival governments in east and west Germany, the latter being recognized as the government of Germany by the United Nations.

Privileges and Immunities of Governments.—A number of national court cases during the year clarified the law concerning diplomatic and consular immunities, and the opinion of the International Court of Justice in the case concerning asylum given by the Colombian embassy in Peru to Haya de la Torre threw some light on this problem. In its third judgment in this case handed down in June 1951 the court held that Colombia was not obliged to surrender the refugee but that his asylum should terminate. Reconciliation of these apparently inconsistent conclusions was to be sought by diplomacy which presumably might result in an agreement by which Haya de la Torre could leave the country under Colombian auspices or by which Peru might withdraw its charges against him (I.C.J. *Reports*, 1951, 71).

Procedures of International Legislation.—The United Nations had increasingly utilized the general assembly as an agency of international legislation through its drafting of general treaties or passing resolutions, and in their respective technical fields similar action proceeded in the technical agencies of the United Nations. The process of developing international law and adapting it to changed conditions was, however, greatly assisted by the activities of private international organizations such as the Institute of International Law which met at Bath, Eng., in Sept. 1950, and the International Law association which met at Copenhagen, Den., in Aug. 1950. National associations such as the American Society of International Law which met in Washington, D.C., in April 1951 and the writings of individual jurists also contributed to this process although binding rules of law are contingent upon the express or tacit consent of the states to be bound. The Human Rights commission of the United Nations had prime responsibility for developing international law in this field, and submitted a draft Covenant of Human Rights to the general assembly. Its work led to special conferences which drafted conventions on freedom of communications.

The most important instrument in this process, however, was the International Law commission of the United Nations which functioned under the authority of the general assembly both to codify and to develop international law. This commission submitted to the general assembly in 1951 draft articles on offenses against the peace and security of mankind, and on the continental shelf and related subjects. It also codified the Nuremberg principles and made reports on the sources of customary international law, the regime of the high seas and reservations to multilateral treaties. Its discussions of an international criminal court led to a conference in Geneva in Aug. 1951, which submitted a draft on this subject to be considered by the states and eventually by the general assembly. It had subcommittees at work on the law of treaties and the law of arbitral procedure. It initiated studies on the law of the nationality and statelessness, and the regime of territorial waters.

An important problem connected with the conclusion of general treaties of international legislation was the problem of reservations. The International Court of Justice gave an advisory opinion at the request of the general assembly to the effect that states making reservations to the Genocide convention were to be considered parties if their reservations were compatible with the object and purpose of the convention. Any other party to the treaty could, however, if it thought that a reservation was incompatible with that object and purpose, consider that the reserving state was not a party to the convention. The International Law commission thought this conclusion too vague for general application and proposed more definite rules on the subject.

Limitation of the use of reservations and the tendency of the general assembly to develop international law by resolutions tended to mitigate the influence of the veto which had hampered progress in international legislation. Furthermore, the tendency of the International Court of Justice and of the organs of the United Nations to interpret legal provisions, especially those of the charter, "effectively" rather than "restrictively" facilitated the adaptation of international law to changing conditions.

Procedures of International Adjudication.—The International Court of Justice dealt with an unusual number of cases during the year 1951. Especially important was its order enjoining action by Iran which would deteriorate the position of the Anglo-Iranian Oil company while the case of Great Britain in behalf of the company opposing Iranian nationalization was pending. The Iranian government ignored the order, claiming it encroached upon its domestic jurisdiction. Other world court opinions given during the year concerned reservations to the Genocide convention and the asylum given to Haya de la Torre by the Colombian embassy in Peru (*see* above). At the end of the year four cases were pending: the Ambatielos case between Greece and the United Kingdom, the case concerning rights of United States nationals in Morocco, the Anglo-Iranian Oil company case, and the Anglo-Norwegian fisheries case.

Regional Differences in International Law.—The modern system of international law, although it originated as the law of the community of Christian states of Europe in the 16th century, expanded throughout the world by a process involving the recognition by the original members of non-European and non-Christian states as members of the international community. By the beginning of the 20th century international law had come to be considered a universal system. There were claims by some United States jurists of a special American international law and some jurists detected a difference between interpretations of international law by common law countries and civil law countries. Some German jurists asserted novel principles during the regime of the Nazis. More serious attacks upon the universality of international law arose because of the peculiar positions taken by the Soviet Union and its satellites. They tended to reject obligations of international law except insofar as included in treaties to which they were parties. They also sought to relate the principles of international law which bind them to Marxist theory and to distinguish these principles from the "imperialistic" international law which they asserted was practised by other states. Jurists of non-soviet states, on the other hand, tended to interpret Communist international law as a flexible body of doctrine utilized as propaganda to forward policies at the moment pursued by the Soviet Union. This differentiation was made manifest by letters from two leading soviet jurists, R. Trainin and E. Korovin, who, declaring themselves supporters of "the Soviet conception of international law," resigned from the American Society of International Law on the ground that through its journal it supported incompatible principles (*American Journal of International Law,* vol. 45, p. 779).

These developments led western jurists to raise the question whether international law might not cease to be a universal system (K. Wilk, *American Journal of International Law,* vol. 45, p. 648). Undoubtedly, division of the community of nations by the "iron curtain" militated against the development of a universal society and a universal law. Nevertheless the Soviet Union and some of its satellites continued to be members of the United Nations and to appeal to the principles of the charter and, on occasion, to those of general international law both in diplomatic discussions and in the organs of the United Nations. The principle of the sovereign equality of states was regarded as the foundation of universal international law and was also stated to be the basic principle of the United Nations to which the Soviet Union subscribed. It appeared, therefore, in principle that international law continued as a universal system. (*See* also TRUST TERRITORIES; UNITED NATIONS.) (Q. W.)

International Monetary Fund.

During 1951 the International Monetary fund carried forward its work in the field of international consultation and co-operation on the monetary and exchange problems of its 50 member countries. The fund conferred with its members on questions of exchange rates, multiple currency practices, exchange restrictions and discrimination and international transactions in gold. It devoted its attention to general problems such as inflationary pressures in its member countries and the use of the fund's resources to help member countries in achieving the fund's objectives. The fund continued and extended its program of technical assistance to its members through staff missions and studies. It also continued its program of collecting and analyzing statistical information on international trade and payments and monetary reserves, and conducted training programs for officials of central banks and ministries of finance on the work of the fund, balance of payments techniques and on general monetary and economic problems. Close contacts and working relations were maintained with the International Bank for Reconstruction and Development, the contracting parties to the General Agreement on Tariffs and Trade (to which the fund served as financial adviser), the Economic and Social council of the United Nations, and the United Nations economic commissions for Asia and the far east, for Latin America and for Europe.

Admission of Sweden in Aug. 1951 brought the fund's membership to 50 countries and members' quotas to a total of $8,136,000,000. Major asset items consisted of approximately $1,529,000,000 in gold, $5,732,000,000 in members' currencies and $859,000,000 in capital receivable from members whose par values had not yet been established.

As of Jan. 1, 1951, the par values expressed in gold and U.S. dollars had been established for the currencies of 37 of the fund's members. This number increased during the year as a result of the establishment with the fund of initial par values for the Pakistani rupee (March 19), the Finnish markka (June 27) and the Swedish krona (Nov. 5). The executive board concurred in a devaluation of the Paraguayan guaraní (March 5), accompanied by measures to simplify the country's exchange system. Approval was given (March 20) to a proposal by the government of Colombia to reduce restrictions on imports and to establish a new buying rate to apply to all exchange receipts except those from coffee exports. Later there was agreement to a plan for unifying the exchange structure by gradually bringing the coffee rate, too, into line.

The fund continued to send missions of staff officials to its member countries and to provide individual consultants for members seeking special technical advice for longer periods. Among the countries which it was able to serve in this way during 1951 were Brazil, Colombia, Costa Rica, Ecuador, El Salvador, Greece, Iceland, Panamá, Paraguay, the Republic of the Philippines and Yugoslavia. In response to a request from the United Nations, staff officials were also made available for studies of Libya's currency, banking and financial problems.

From the start of fund operations in March 1947 through Dec. 14, 1951, 20 member countries had obtained short-term financial assistance by purchasing foreign exchange from the fund with corresponding amounts of their own currencies. These transactions reached a total of $814,000,000 on Nov. 13, when the government of Iran arranged to purchase U.S. $8,750,000 against Iranian rials. The government of Brazil purchased 10,000,000 British pounds sterling on Jan. 9, 1951, in exchange for cruzeiros. The following countries repurchased amounts of their own currencies from the fund during 1951 with payments of gold or dollars or both: South Africa $9,985,000; Ethiopia $300,000; Mexico $22,498,000; Chile $3,434,000; Lebanon $855,800; and Norway $9,560,948. With these payments, repurchases totalled $80,650,000.

The fund's board of governors held its sixth annual meeting in Washington, D.C., Sept. 10–14, 1951. At that time the executive board, in reporting on the fund's activities, noted that development of policy on use of the fund's resources had been affected by the distorted and confused postwar payments situation. It outlined, however, a program under which the fund's resources might be made available to members willing to undertake agreed, practical programs to make more rapid and significant progress toward the achievement of the fund's objectives, which included the achievement of monetary stability, the adoption of realistic rates of exchange, the relaxation and removal of restrictions and discrimination and the simplification of multiple currency practices.

In urging reduction of exchange restrictions and discrimination wherever possible, the board pointed out that the fund would soon begin a new period of work in this field. It referred to provisions in the articles of agreement under which members still retaining such restrictions should consult the fund in March 1952 and each year thereafter as to their further retention.

The fund's views on international gold sales at premium prices were first expressed in a policy statement sent to members in June 1947, when the executive board held that these transactions diverted gold from central monetary reserves into private hoards and tended to undermine exchange stability. In a statement published in March 1951, the board said gold sales at prices above the official $35 an ounce appeared to be increasing. The staff was directed to consult with the members concerned and suggest corrective measures. After receiving the staff's report, the board concluded that it was impracticable to expect all members to take uniform measures to achieve the objectives of the fund's premium gold policy. The fund reaffirmed its belief in the principles involved and urged members to support them, but added in its decision of Sept. 28 that it would leave to its members the practical operating decisions involved in their implementation.

A new schedule of charges on the fund's currency transactions was adopted in November for use during the period from Dec. 1, 1951, to Dec. 31, 1952. Its continuance thereafter would depend on further decision of the executive board. Charges for longer term transactions were raised and those for shorter terms lowered, the purpose being to make it more expensive for members to make extended use of the fund's resources and to encourage use for short periods.

On April 10, 1951, the executive board announced the appointment of a new managing director, Ivar Rooth, head of the Central Bank of Sweden (Sveriges Riksbank) from 1929 to 1948. He assumed his new duties on Aug. 3, 1951, succeeding Camille Gutt of Belgium, the fund's first managing director, who served a full five-year term from May 6, 1946, to May 5, 1951. International Trade.

The value of world exports in the first half of 1951 rose to approximately $77,000,000,000 at an annual rate. This was about a 35% increase over the value of exports in 1950 when they totalled $56,000,000,000. Because of substantially higher prices for many commodities, the volume of world trade did not rise nearly so sharply, but there probably was an increase in volume of from 10%–15% in the first half of 1951 over the preceding year.

As the war in Korea continued throughout 1951, the North Atlantic Treaty organization increased its efforts to build western Europe's defenses, and many other nations began to strengthen their programs for defense. All countries tried to replenish depleted stock piles against an emergency. A wide demand was created in world markets for grain, fibres and textiles, and for all kinds of metals, metal manufactures and machinery. Prices of many strategic raw materials, which had already risen sharply in 1950, continued to increase in the first quarter of the year, and then declined toward more reasonable levels. The latter part of 1951 saw new price increases, although rarely to the levels of earlier in the year.

The progress which had been achieved toward a dollar balance between the United States and the rest of the world was inevitably stopped, as the United States increased its exports at a much faster rate than its imports. Based on the first ten months of the year, the United States trade surplus was running at approximately $3,300,000,000, compared with $1,300,000,000 in 1950. United States military and economic assistance together with U.S. capital investment enabled other countries to increase their gold reserves between June 30, 1950, and March 31, 1951, by an estimated $3,000,000,000. On the latter date, they stood at $19,630,000,000, or at about the same level as in June 1945.

Restrictions on world trade tended to increase as export and import controls were reintroduced or extended. The tense international situation was responsible for expanded controls by many of the free nations on trade in strategic commodities with the soviet bloc. The volume of trade between the free world and the soviet bloc declined significantly during 1951. United States trade with China was completely cut off, following a presidential order issued at the end of 1950. Some nations, including Canada, western Germany and Pakistan, relaxed certain import restrictions, but others felt compelled to tighten controls over less essential imports. The closing months of the year brought a serious decline in the gold and dollar reserves of the United Kingdom and a new government program was instituted to reduce imports.

The negotiations at Torquay, Eng., on tariff reductions under the auspices of the General Agreement on Tariffs and Trade, which were begun in Sept. 1950, ended in a new agreement between the participants in the late spring, and provided for certain new reductions in tariff barriers. (*See* also TARIFFS.)

United States.—United States trade values in the first nine months of 1951 continued the upward trend which had characterized them in the last half of 1950. International tensions stimulated demands for larger exports from the United States, particularly by western European nations, and also greatly increased U.S. imports of certain types of goods. These demands led to substantial price rises for many commodities.

*Grand total and group totals include "special category" exports; country figures exclude them.

†Total includes United Kingdom and dependencies and Ireland.

Total United States exports between Jan. 1951 and Sept. 1951 were $11,037,700,000, approximately a 50% increase over the comparable period of 1950. In terms of volume it was estimated that exports of United States merchandise were about 30% greater than in 1950.

United States general imports likewise showed substantial increases in value, rising in the nine months of 1950 and 1951 from $6,207,700,000 to $8,503,500,000, or about 35%. This rise in value was almost entirely accounted for by increases in the prices of imported goods. The index of the quantity of goods imported for consumption rose only about 3%.

The countries in the western hemisphere received about 45% of the total United States exports in Jan.–Sept. 1951, a slightly smaller percentage than in the first nine months of 1950. The countries participating in the European Recovery program and their dependencies took about one-third of U.S. exports, or nearly $4,000,000,000, compared with $2,600,000,000 in Jan.–Sept. 1950.

The western hemisphere was the source of 50% of United States imports in the first nine months of 1951, a little less than in Jan.–Sept. 1950. ERP countries and their dependencies were supplying the United States with 5% more of its imports in 1951 than in 1950. About 27% came from these countries in Jan.–Sept. 1951.

In 1950 the values of U.S. imports and exports were more nearly in balance than in any year since 1940. In the second quarter of 1951 the trend toward a balanced United States trade reversed itself and, by the end of the third quarter, exports had already exceeded imports by $2,500,000,000. The only major area which was selling to the United States more than it was buying was the sterling area. In the first nine months of 1951, sterling area net dollar earnings from trade were $310,000,000.

Table II.—*Selected Principal Commodities Traded by the United States, in Quantity*

Commodity	Unit of quantity	Jan.–Sept. 1950	Jan.–Sept. 1951

Ethyl alcohol	thousand gal.	5,964	110,615

Canada.—Canada's foreign trade reached new high levels during the first nine months of 1951. Total imports for Jan.–Sept. 1951 were $3,142,000,000 (in terms of Canadian dollars, used throughout this section) and exceeded exports and re-exports by $324,000,000. This was a reversal of the 1950 trade picture when exports for the year slightly exceeded imports. Canada's trade imbalance with the United States for the nine-month period rose to $430,000,000, or nearly six times the 1950 nine-month figure of $71,000,000, but this was little more than half the record $718,000,000 accumulated during the first nine months of 1947. Large United States investments in Canadian industry and United States government defense and military expenditures in Canada more or less offset the trade account drain on foreign exchange reserves.

Canada's other principal trading partner, the United Kingdom, increased the magnitude of its imbalance during 1951. The nine months' excess of Canadian exports to the United Kingdom over its imports was $112,000,000 compared with $56,000,000 for Jan.–Sept. 1950. Canada's exports to Britain were still limited to such essential commodities as wheat, metals, iron ore and lumber. Despite Britain's economic crisis toward the end of 1951, the Canadian government expressed confidence that these traditional exports would be maintained.

JAPANESE COTTON MILL worker watching for breaks in the thread on a warping machine. Cotton goods, manufactured with low-wage labour, were a leading Japanese export in 1951

Official reserves of gold and United States dollars had declined somewhat from their high levels of a year earlier but were still large at U.S. $1,610,000,000 on Sept. 30, 1951. The Canadian dollar, which in the autumn of 1950 was freed from a pegged relationship to the United States dollar, fluctuated at around 95 cents in terms of United States currency, and, at certain times late in 1951, was quoted on the New York market at only a fraction of a cent below par with the U.S. dollar.

Canada's commodity imports from Europe (excluding the United Kingdom) doubled during Jan.–Sept. 1951 over the same period a year before, rising from $68,000,000 to $130,000,000. Exports to Europe, however, rose by 80% this period, so that the favourable trade balance for Canada with continental Europe was more than $100,000,000.

Latin America.—The foreign trade of the Latin-American republics continued to show a surplus in the first six months of 1951 of about $1,000,000,000 at an annual rate. The value of both exports and imports increased, but imports rose somewhat more rapidly so that the favourable trade balance was less than in 1950. Prices of major export commodities from this area, which began to rise after the start of the Korean war, continued at high levels as world demand remained strong. Cacao, coffee, sugar, cotton and copper prices were at record postwar levels.

Latin-American imports from the United States in the first six months of 1951 rose by 46% from the level of January-June 1950. Purchases by one of the largest markets of the group, Brazil, were more than twice as great in 1951, as were those of the smaller markets of Chile and Uruguay. Leading imports into Latin America from the United States showed the following in-

Table III.—*Percentage Distribution of Latin-American Imports from Selected Areas*

Source of imports		Latin-American dollar area* (per cent)	Latin-American nondollar area† (per cent)	Total Latin America (per cent)
Sterling area	1948	5.5	16.5	11.3

*Central American republics, Colombia, Ecuador, Bolivia, Mexico, Venezuela.
†Argentina, Brazil, Chile, Paraguay, Peru, Uruguay.

creases in value between the periods January–June 1950 and January–June 1951: machinery 47%; automobiles and parts 122%; chemicals 59%; and iron and steel mill products 39%.

United States imports from these countries in January–June 1951 showed widely varying rates of increase from the like period in 1950. United States imports of coffee from Brazil in January–June 1951 totalled 741,000,000 lb. compared with 498,000,000 lb. in six months of 1950. United States imports from Argentina increased by 62%, while those from Venezuela were up only 4%.

Incomplete data for the early months of 1951 indicated that the trend, already noted in 1950, for western Europe to become a more important supplier for the Latin-American countries was continuing, primarily at the expense of the United States. This represented a return toward a pre-World War II pattern of trade. Latin-American imports from the Federal Republic of Germany rose spectacularly from early 1950, increasing from $44,000,000 in January–June 1950 to $162,000,000 in January–June 1951. This change in trade patterns was more marked in the case of Latin-American countries which were not included in the dollar area and with whom European countries did not need to make settlements in dollars.

Western Europe.—Both the value and volume of the combined foreign trade of the western European countries comprising the Organization for European Economic Cooperation (O.E.E.C.) rose to record levels in the first seven months of 1951. The value of exports averaged $2,200,000,000 per month compared with $1,644,000,000 per month in 1950. The value of imports was about $2,800,000,000 per month in those months of 1951 compared with $2,013,000,000 on the average per month in 1950. These export value figures for 1951 represented an export volume 50% above the pre-World War II level and about 12% above the average 1950 export level. Imports were still being kept down by controls, but the volume of goods imported by the group as a whole rose during the first seven months of 1951 to 14% above prewar. This represented an increase in volume of about 6% above the 1950 average.

*Based on January-September trade.

About three-fifths of western Europe's exports moved to countries within the O.E.E.C. during the months of 1951 for which data were available at the close of the year. Of the remainder, approximately 7% was sent to the United States and 7% to Latin America. A larger percentage of the O.E.E.C. countries' imports came from nonparticipating countries. A little over half represented intra-European (O.E.E.C.) trade, and about 48% came from other areas. The United States was the source of 12% of western Europe's supplies in January–July 1951, a slightly smaller percentage than in 1950.

There were many variations in the positions of individual countries. Between April and September 1951, western German exports rose above the value of its imports for the first time since World War II. However, a liberalization of import quotas by the Federal Republic of Germany caused a sharp rise in imports in September, and the favourable balance was reversed. Western German exports made great strides upward during 1951, however, and by the middle of the year were more than 40% above prewar in volume, compared with an average of 10% below prewar in 1950. The foreign trade of France which was in balance in 1950 showed a small excess of imports over exports in the first eight months of 1951, as France built up its defense program. Belgian exports in 1951 continued to rise steadily over those of 1950, especially to other O.E.E.C. participants. They were not compensated for by imports, so that Belgium built up a substantial trade surplus during the second and third quarters of 1951. The trade position of the Netherlands and Norway tended to improve in the latter part of 1951; increased exports and reduced imports brought about reductions in their trade deficits.

Changes in the patterns of trade among the O.E.E.C. partners and with the rest of the world combined with capital movements and payments for invisibles to bring about considerable adjustment during 1951 in gold and dollar holdings and in European Payments union (E.P.U.) holdings. By the end of the third quarter of 1951 persistent surpluses had exhausted Belgium's quota and had almost exhausted the Italian quota in the E.P.U. France showed a substantial continuing deficit, but Germany's surpluses in the second and third quarters reduced that country's deficit in the E.P.U. substantially.

Gold and dollar holdings of the participating countries at the end of Sept. 1951 totalled $7,600,000,000, which was about $900,000,000 above Sept. 1950 and almost $2,600,000,000 above Sept. 1949. (*See* EUROPEAN RECOVERY PROGRAM.)

United Kingdom.—A sharp deterioration in the terms of trade of the United Kingdom during the first nine months of 1951 helped to bring on a third serious post-World War II financial crisis. The value of total imports for Jan.–Sept. 1951, at £2,919,000,000, was 53% above the average for the same period of 1950. Against this, United Kingdom exports, at £1,896,000,000, increased by only 21% between January and September. This left an excess of exports over imports of £1,023,000,000, compared with £341,000,000 in Jan.–Sept. 1950, to be paid for by other earnings and withdrawals from reserves. The large increase in import values represented only a 14% increase in the volume. The remainder was accounted for by higher prices. Prices of raw materials imported by the United Kingdom increased by nearly 90% between June 1950 and June 1951. These increases were primarily responsible for the fact that the index of total import prices in June 1951 was 43% higher than the average for 1950. The export price index for June was 20% above the 1950 average.

In an effort to improve Britain's economic position, the chancellor of the exchequer announced in Nov. 1951 that certain measures were to be taken which would effect savings of £350,000,000 on external payments. Chief among these measures were new import restrictions, tightening controls over certain commodities, particularly unrationed food and semiluxury items. The principal countries concerned by this action were O.E.E.C. countries, their dependencies and other nonsterling areas. These measures were instituted to reduce the loss of gold reserves through further substantial deficits in the European Payments union such as occurred in the third quarter of 1951.

Britain's unfavourable balance of trade with the O.E.E.C. countries and their dependencies, which in 1950 averaged about £5,500,000 per month, was running in the first nine months of 1951 at £26,800,000 per month. As a result of the continued dollar drive, exports to the United States and Canada were increasing and reached in Jan.–Sept. 1951 an annual rate 19% higher than in 1950. Imports from North America, however, were rising even faster. Britain's trade deficit with the entire western hemisphere rose from £19,000,000 per month in 1950 to about £40,000,000 monthly in the January–September period of 1951. Britain's trade with the rest of the sterling area, which in 1950 showed a surplus of about £5,000,000 per month, changed in the first nine months of 1951 to a monthly average deficit of nearly £14,000,000.

Near East.—Incomplete data for the first half of 1951 indicated that the value of trade for countries in the near east was expanding.

Egypt's trade increased steadily in value through the first three quarters of 1951. The world shortage of cotton, which accounts for 85% of Egypt's export trade, brought increased demand for that Egyptian product. Israel's imports in the first six months of 1951 showed little change from their 1950 level, but the value of exports increased about one-third. Nevertheless, strict controls over imports continued to be maintained because collections available from abroad declined from levels of earlier years. Turkey's exports rose sharply in the last quarter of 1950 and the first quarter of 1951, while imports also rose, but only slightly, leaving Turkey with a favourable trade balance. After the dissolution of the customs union between Syria and Lebanon in March 1950, these countries established trade restrictions, but each remained the major trading partner of the other. Both countries independently withdrew from the General Agreement on Tariffs and Trade in 1951 in order to have complete freedom of action to negotiate trade agreements.

Union of South Africa.—The Union of South Africa's trade in 1951 was being sustained at levels substantially higher than in 1950. For the first six months of 1951, imports totalled £(S.A.) 229,000,000 compared with £(S.A.) 128,000,000 for the corresponding period of 1950. Exports, including open market sales of gold, amounted to £(S.A.) 180,000,000, compared with £(S.A.) 93,000,000 in the same period of 1950. Imports from the dollar area rose from £(S.A.) 38,000,000 in January–June 1950 to £(S.A.) 56,000,000 in January–June 1951, and sterling area imports for the same period increased from £(S.A.) 83,000,000 to £(S.A.) 145,000,000.

Far East.—The far eastern trade situation was characterized in 1951 by further steps toward correcting the serious trade imbalance of the early postwar years; by booming export demands for raw materials as a result of the defense programs of all the major nations of the world; by fluctuating prices for important materials; by the further emergence of Japan as a major supplier, supplanting to some extent both the United States and the United Kingdom; and by new controls on trade with the soviet bloc, including Communist China.

Japan's trade soared above 1950 in value during the first nine months of 1951, despite a decline in the third quarter. Preliminary estimates for Jan.–Sept. 1951 showed exports of $972,000,000 compared with $533,000,000 for a like period of 1950, and imports of $1,688,000,000 compared with $695,000,000. The relatively slow movement of imports in the third quarter was attributable to internal difficulties in financing and to earlier overstocking by traders. Japan's heavy postwar dependence on the United States for imports continued to decline, until in 1951 the proportion purchased from the U.S. was roughly equivalent to that before World War II, or about 33%.

The foreign trade of the Philippines during the first six months of 1951 climbed significantly over that of January–June 1950. Imports totalled 410,000,000 pesos in 1951 compared with 380,000,000 pesos in 1950. Of the 1951 six-month total, 279,000,000 pesos, or 68%, came from the United States. Exports increased by 72% between these two periods, rising from 282,000,000 pesos in January–June 1950 to 484,000,000 pesos in the like period of 1951. The United States took 67% of Philippine exports, the major part of which was copra and cocoanut oil.

The tremendous increase in export values, which had characterized Malaya's trade since the beginning of the war in Korea, was checked after the price of rubber, which had more than quadrupled since 1949, began to fall in April 1951. Malaya's export totals for the first six months of 1951 were, however, nearly three times those of January–June 1950. The country's favourable trade balance rose from Mal. $95,000,000 in the first half of 1950 to Mal. $981,000,000 in the first six months of 1951.

Indonesia, likewise influenced by the boom in rubber, reported exports and imports for the first nine months of approximately the same volume as in 1950, but exceeding that year in value by 60% to 65%.

Burma, Ceylon and Thailand were all running substantial trade surpluses in the months of 1951 for which data were available. The trade of Hong Kong declined greatly in the third quarter of 1951, as a result of the colony's anti-Communist trading controls. Trade with China was drastically reduced, exports falling to H.K.$89,000,000 in September from a high of H.K.$245,000,000 in March 1951. Trade with the United States continued despite the existence of stringent United States controls. Nevertheless, exports to the U.S. during the summer months (latest available at the close of the year) averaged no more than one-third the 1950 average.

India's trade in 1951 was influenced particularly by the strong world demand for raw materials and by generally higher prices for both imports and exports. Increased grain imports were responsible for substantial increases in import totals in the second quarter of the year. As the political differences between India and Pakistan over Kashmir remained unsolved, trade between these countries remained relatively limited. India's traditional exports of jute manufactures were therefore sharply reduced as a result. India's trade controls continued to restrict imports of manufactured goods, of which the United Kingdom had long been the principal supplier.

Pakistan continued during the first nine months of 1951 to run a sizable surplus trade balance. Exports of raw jute and raw cotton, both in short world supply, provided the major part of Pakistan's incoming revenue, and cotton manufactures were again the major import. Trade agreements were negotiated during the year with western Germany, Iraq and Australia. An agreement was signed with Canada in September whereby Pakistan received a gift of $10,000,000 of capital equipment and essential goods and services toward its six-year development program under the commonwealth Colombo plan for underdeveloped areas. In the middle of 1951 Pakistan enlarged the list of commodities which could be imported under open general licence from the sterling area and, in certain cases, from Japan.

Australia, New Zealand.—The value of Australian exports in the first three quarters of 1951—$1,655,000,000—was more than 50% above the comparable period in 1950, and reflected the spectacular rise in wool prices in Australian markets late in 1950. The value of imports rose steadily throughout January-June 1951, and very sharply during the third quarter. The adverse trade balance for July-September of $250,000,000 was larger than any previous deficit for an entire year.

New Zealand's trade continued through the first six months of 1951 to show a surplus with the world. Exports were valued at £N.Z.130,000,000 and imports at £N.Z.82,000,000 from January to June 1951. This was a substantial rise over the period of 1950, particularly on the export side. At that time exports were £N.Z.108,000,000 and imports £N.Z.74,000,000. Imports from both hard and soft currency sources were kept down by strict licensing controls. Interstate Commerce Commission.

The duties and powers of the Interstate Commerce commission are set forth in the Interstate Commerce act, originally passed in 1887 and later amended in many important particulars. The act is divided into four parts and deals with the regulation of railroads, oil pipe lines, motor and water carriers, as well as freight forwarders. The regulatory powers of the commission extend, among other things, to the charges made by these carriers for transportation services; to the filing of periodic reports; to questions involving the valuation and financial reorganization of railroads; to the issuance of securities; to the acquisition of control of these various carriers by other carriers or persons; to their accounting practices; and to matters involving the determination of whether public convenience and necessity require the institution of new services by motor and water carriers or by freight forwarders, or for the construction, abandonment or operation of lines of railway.

There was no substantial change in the statutory authority of the commission during 1951. Commissioners Hugh W. Cross and John L. Rogers were reappointed for full terms of seven years to expire Dec. 31, 1957. Commissioner Walter M. W. Splawn was appointed chairman in lieu of Commissioner J. Monroe Johnson. Commissioner James K. Knudson also acted as administrator of the Defense Transport administration, dealing with phases of domestic transportation, storage and port facilities, or the use thereof, but excluding air transport, coastwise, intercoastal and overseas shipping.

The carriers subject to the jurisdiction of the commission were confronted with numerous and difficult problems during the year, including the rising costs of labour and materials, shifts in the movement of commodities because of change in the location of plants and substitution of commodities, changes in commodities handled and movement of traffic because of increased defense activities, and changes in competitive advantages brought about by differences in technological improvements between the different agencies of transportation.

Because of mounting costs, the commission on Aug. 2, 1951, after full hearings, authorized an increase in freight charges for the railroads of 9% within eastern territory, except that on iron ore, coal and coke, and grain and grain products the increase authorized was 6%, and 6% within southern and western territories and on all interterritorial traffic, with certain limitations, above basic rates and charges in effect on Jan. 16, 1951.

The effect of an increase in private transportation was particularly felt in the passenger field. (W. M. W. S.)

Intestinal Disorders: *see* STOMACH AND INTESTINES, DISEASES OF.

Intoxication, Alcoholic.

The year 1950 was noteworthy in that the greatest advance in the study and treatment of alcoholic intoxication was in public education while 1951 was a period of holding these gains and consolidating them with an active program that emphasized prevention.

The American Medical association, at a national convention, passed a resolution designating alcoholism as a chronic illness and recommending that the medical profession initiate a program of prevention.

A subcommittee on alcoholism was established by the Massachusetts Medical society. The Alcoholism subcommittee of the Expert Committee on Mental Health of the World Health organization held its first session in Geneva, Switz., Dec. 11–16, 1950, and presented its formal report of this session in *World Health Organization Technical Report,* series no. 42, Sept. 1951. This pamphlet gave information on such topics as general consideration, definition of the problem, treatment facilities, means of treatment, education and training, conclusions, recommendations, etc.

The second session of this group was held in Copenhagen, Den., in 1951.

In the sphere of community action, more local citizens' committees were established; by the close of 1951 these numbered 58. One important result of these committees was the acceptance for treatment by more general hospitals of alcoholics in the acute phase. It was still difficult in some communities, however, to procure adequate hospital treatment for acutely intoxicated individuals. There were 36 out-patient clinics for exclusive service to alcoholics which had been established by community programs and by state legislative action. The Massachusetts General hospital opened its first out-patient clinic for the treatment of alcoholism in 1951. Thirty-one states had programs established by acts of their legislatures with a variety of activity ranging from simple surveys to programs of broad rehabilitation. Their results were reported at the National Conference of State Programs on Alcoholism, whose annual meeting was held in New York city Aug. 5–8, 1951.

The Yale Center of Alcohol Studies, a part of the Laboratory of Applied Physiology, has several sections, among which are the Yale Plan clinic, Summer School of Alcohol Studies and the publications division which produces the *Quarterly Journal of Studies on Alcohol.* The staff of the Yale Center of Alcohol Studies gave a large share of their attention during the year to the public health aspects of alcoholism. One study pointed out that the alcoholic is very often a skilled and responsible worker in industry in contrast to the popular idea of the skid-row derelict. This fact led to the formation of the National Medical Advisory council to the Yale Center of Alcohol Studies, made

DEMONSTRATING one of a variety of chemical tests of motorists' sobriety used in 29 U.S. states in 1951. In the "intoximeter" test (above), the presence of alcohol in the breath causes a substance in the vial to change colour

up of doctors responsible for health programs in leading industrial concerns throughout the country.

Tetraethylthiuram disulphide (Antabuse) was being widely used and investigated. By the end of the year, the bibliography on this one drug totalled 200 items, many of which were of primary scientific importance. It was clearly shown, however, that the drug is not a specific remedy, that it is useless without psychotherapy and that its most important function is as an adjunct in psychiatric treatment.

Some physicians believed that the relief given by adrenal cortex extract in severe acute intoxication provided more fundamental treatment of the disease than any other drug. ACTH and cortisone approached the effectiveness of adrenal cortex but some observers concluded that the effects were not identical with those of adrenal cortex extract.

Whereas formerly sedatives were greatly emphasized in treating the alcoholic personality, there was a strong tendency toward caution in regard to the use of sedation, especially with respect to barbiturates. Basic sedative drugs such as the bromides and the analgesic commonly called aspirin continued to be the most practical and simple remedies for the symptoms of the hang-over.

Myanesin, an antispasmodic drug, continued to receive favourable response during the year.

Iowa. Iowa, popularly known as the "Hawkeye state," was admitted to the Union in 1846. Located in the north central region, it comprises 56,290 sq.mi., of which 245 sq.mi. are inland water surface. The census figures for 1950 showed a population of 2,621,073, an increase of 3.3% over the 1940 figures. The capital and largest city is Des Moines, with a 1950 population of 177,965. Other chief cities are Sioux City, 83,991; Davenport, 74,549; Cedar Rapids, 72,296; Waterloo, 65,198; Dubuque, 49,671; and Council Bluffs, 45,429. According to the new census definition Iowa had 1,250,938 persons living in urban territory. This was 47.7% of the total population. Although Iowa is primarily an agricultural state, the percentage of rural over urban population declined steadily after 1910.

History.—In 1951 Iowa's state officers, all Republicans, were: governor, William S. Beardsley; lieutenant governor, W. H. Nicholas; secretary of state, Melvin D. Synhorst; auditor, Chet B. Akers; treasurer, M. L. Abrahamson; secretary of agriculture, Clyde Spry; attorney general, Robert L. Larson; superintendent of public instruction, Jessie M. Parker. Biennial elections for these offices would be held in 1952. Iowa's United States senators were: Bourke B. Hickenlooper (Republican, re-elected 1950) and Guy M. Gillette (Democrat, elected 1948). Iowa's eight representatives in congress were all Republicans.

The general assembly met in biennial session on Jan. 8, 1951, and adjourned April 20. The senate was composed of 50 members, 41 Republicans and 9 Democrats; the house, with 108 members, had 93 Republicans and 15 Democrats. William S. Lynes of Waverly was elected speaker of the house. Of the 272 bills passed during the session, only two were vetoed by the governor. The appropriation bill provided for an expenditure of $107,170,370 per year for the next biennium, an increase of about $5,000,000 over the yearly appropriations made for the 1949–51 biennium. No bills were passed increasing state taxes. Iowa had a reserve fund of $30,000,000.

Education.—During the 1950–51 school year Iowa had 3,812 public elementary school districts; 835 public high school districts; and 19 junior colleges. The elementary schools in the 1949–50 school year had 364,942 students; the high schools, 112,778. The junior colleges, in 1950–51, had 1,524 students. The number of teachers and superintendents in the public schools in 1950–51 was 23,145.

There were 26 colleges and universities in the state, the majority of the colleges privately endowed or supported by various church organizations. The state supports three institutions: The State University of Iowa, at Iowa City; the Iowa State college of Agriculture and Mechanic Arts, at Ames; and the Iowa State Teachers college, at Cedar Falls. Enrolment at these three schools for 1951 was 17,256, a decrease from 1950 of 2,684; of this number, 2,910 were veterans, a decrease of 1,980 from 1950.

Social Insurance and Assistance, Public Welfare and Related Programs.—The 1951–52 state appropriation for old age assistance was $14,500,000; for aid to dependent children, $2,175,000; for child welfare, $220,000; for emergency relief, $40,000; and for aid to the blind, $275,000. The total of these appropriations was an increase of $2,035,000 over the funds voted in the 1949–51 period. Contributions to the state unemployment insurance fund as of June 30, 1951, totalled $5,515,556.63; during the fiscal year 1950–51, $1,407,973.98 was paid out of this fund in benefit payments. The reserve fund, as of June 30, 1951, totalled $22,023,546.50.

Iowa's five penal and correctional institutions had 2,447 inmates as of Oct. 1, 1951. The four hospitals for the insane had 5,806 patients; two homes for the feeble-minded had 3,530 patients. The state orphanage at Davenport, the Iowa Annie Wittenmyer Home, cared for 325 children; while the State Juvenile home at Toledo cared for 201 dependent, neglected or destitute children. There were 412 residents of the Old Soldiers home at Marshalltown.

Communications.—Iowa had a total of 5,838 mi. of paved highway and 61,755 mi. of gravel roads; the state ranked fourth in the nation in concrete paved road mileage. During the 1951 calendar year the state spent $24,000,000 on primary road construction and $8,090,728 on maintaining these primary roads.

The state is served by twelve major railroads. Class I roads have a total of 8,576.26 mi. of track. In 1950 these roads carried 4,551,371 passengers and 97,237,995 tons of freight. There are 355 mi. of electric interurban roads in the state; during 1950 they carried 464,797 passengers and 4,325,126 tons of freight. The number of passengers carried by motorbus during 1950 was 19,170,286. There were, in 1950, 109 mi. of oil pipe line, 1,632 mi. of gasoline pipe line and 2,683 mi. of natural gas pipe line in Iowa. During the first nine months of 1951, 1,172,553 automobiles were registered in Iowa, an increase of about 30,000 over the figure for 1950.

Iowa is served by three national airlines. There were ten major airports in the state in 1951.

There were about 800,000 telephones in Iowa in 1951. More than 87% of all farms had telephones. There were 50 radio stations in 27 cities, most of the larger cities having at least two, representing the larger networks. There were television stations in Davenport and in Ames—the latter in connection with Iowa State college. In addition, television relay towers had been built across the state. There were about 70,000 mi. of electric

transmission lines in Iowa, and 86.2% of all farms were electrified.

Iowa had more than 500 newspapers in 1951, of which 46 were published daily, the rest weekly.

Banking and Finance.—There were, as of June 30, 1951, 556 state banks. In addition, there were 164 bank offices, 212 small loan licensees and 213 credit unions under the supervision of the state banking department. Total assets of the state banks on June 30, 1951, were $1,656,042,937 (an increase of $67,575,923 over the 1950 figure); total deposits were $1,536,614,982 (an increase of $57,658,139 over 1950). As of April 9, 1951, there were 97 national banks in Iowa with total deposits of $808,506,000 and total resources of $860,076,000.

The revenue received from all special taxes in Iowa for the fiscal year ending June 30, 1951, was $172,915,486, compared with $151,153,737 for 1949–50. Of this total, 30% came from the state's 2% sales tax; 18% from motor vehicle licence fees; 17% from the gasoline tax; 13% from individual and corporation income taxes; 5% from state liquor store profits and the beer tax; 2% from use taxes assessed on articles purchased outside the state; and the remainder from miscellaneous taxes. In addition, real estate and personal property taxes for 1951 amounted to $188,964,442. These property taxes were assessed locally, not having been assessed by the state since 1942. Iowa has no state debt.

Agriculture.—Agriculture is Iowa's most important industry. The state has 25% of all the grade A farmland in the nation and produces more than 10% of the nation's food. There were 200,401 farms in Iowa in 1950, compared with 200,679 in 1949. These farms had a total acreage of 34,710,424 ac.; the average size of the farms was 173.2 ac. Of the total, 49.6% were owner-operated and 50.4% tenant-operated. The state ranked first in corn, hogs, oats, poultry, eggs, finished cattle for market and in total production of combined grain crops. Of Iowa's 35,000,000 ac., 96.2% were in farms.

The total cash income of Iowa farmers for 1950 was $2,114,869,000; of this total, $1,734,188,000 was from livestock, $380,681,000 from crops and $10,920,000 from government payments. On Jan. 1, 1951, there were 44,344 trucks on Iowa farms; 239,022 tractors, and 92,881 mechanical corn pickers; all figures showing an increase over the 1950 figures.

Manufacturing.—There were 3,865 manufacturing plants in Iowa in 1951, employing approximately 166,250 persons. The average weekly wage in 1951 was $64.69. compared with $59.26 for October of 1950. (M. Te.)

Mineral Production.—Table III shows the tonnage and value of those mineral commodities whose values in 1949 exceeded $100,000 and the corresponding data for 1950, so far as they were available at the close of 1951.

Iran.

(Persia). An independent kingdom of western Asia, Iran is bounded east by Pakistan and Afghanistan, north by the U.S.S.R., west by Turkey and Iraq and south by the Persian gulf and Arabian sea. Area: 634,413 sq.mi. Pop. (no census ever taken, 1950 est.): 18,772,000. Language: mainly Persian, but Turki and Armenian in the northwest, Kurd in the west, Arabic in the south and Pashtu in the east. Religion: Moslem, mainly Shia but the Kurds (750,000) are Sunni; Christian (there are *c.* 50,000 Gregorian Armenians, a few thousand Catholic Armenians and 40,000 Nestorians); Jewish 80,000; and *c.* 10,000 Zoroastrian Parsees. Chief towns (1948 est.): Tehran (cap., 850,000); Meshed (250,000); Tabriz (214,000); Isfahan (205,000); Abadan (150,000); Shiraz (129,000); Resht (122,000); Hamadan (104,000). Ruler: Shahanshah Mohammed Riza Pahlavi; prime ministers in 1951: Gen. Ali Razmara, Hussein Ala and (from April 29) Mohammed Mossadegh (*q.v.*).

History.—In 1951 Iran moved suddenly forward from the background of world affairs into the fullest prominence. The occasion was the dispute between the Iranian and British governments over the position of the Anglo-Iranian Oil company (A.I.O.C.), which occupied the centre of the stage in Iran to the exclusion of practically every other matter throughout 1951.

The dispute was already in progress, though little noticed in the world outside, when the year began. At the instigation of the National Front party (whose leader, Mohammed Mossadegh, was one of the deputies for Tehran in the *majlis*), the special parliamentary commission set up to consider the new supplementary oil agreement, which had been signed by a previous government with the A.I.O.C., had already decided to reject it before the end of 1950. Mossadegh continued his campaign relentlessly against the A.I.O.C. in 1951. Having first shaken the government of General Razmara in January by successfully agitating against the press law of March 1949, which was duly repealed, the National Front next attacked the finance minister Hosain Furuhar for having spoken in support of the supplementary oil agreement and forced his resignation. In Feb. 1951 the government reached an arrangement with the A.I.O.C. by which advances were provisionally to be made to Iran at approximately the same rate as if the supplementary oil agreement were in force; and Mossadegh retaliated on Feb. 19 by demanding outright the nationalization of oil throughout Iran. The shah had so far taken little part in the dispute, being preoccupied first with the philanthropic task of transferring his father's estates to the peasants who worked on them; and later by his marriage, on Feb. 12, to his second wife, Suraya Isfandiari, a connection of the tribal family of the Bakhtiari.

The dangers arising from the oil dispute grew more severe when General Razmara, the prime minister, was assassinated on March 7 by Abdullah Rastigar, a member of the fanatical Fadayian Islam (Devotees of Islam). Both the National Front and the Communist Tudeh parties were accused of having instigated the assassination. After a brief interval during which Hussein Ala reluctantly became prime minister, the shah appointed Mossadegh prime minister on April 30, after the latter had successfully forced through the parliamentary oil commission, against Ala's opposition, a motion providing for the immediate taking over of the A.I.O.C.'s assets by a new National Iran Oil company (N.I.O.C.). Since Mossadegh had become the personal symbol of the move for nationalization, in which he was backed by the religious leader Ayatollah Kashani and the clandestine intervention of the Tudeh party, it was perhaps inevitable that he should be nominated once Razmara was removed.

The nationalization law was promulgated on May 2. Its validity was disputed by the British government in a series of notes, which had no effect. A request by the A.I.O.C. for arbitration was also rejected. Disturbances and anti-British demonstrations took place both in the capital and in the oil area of southern Iran. A generally antiwestern character was added to the nationalism when other European countries and the United States appeared inclined to support the British case. When the British government referred the case in May to the International Court of Justice at The Hague and obtained an injunction on July 5 to restrain both governments from further action to alter the *status quo*, the court's competence was denied by the Iranians. A delegation sent out from Great Britain in June by the A.I.O.C. to negotiate was invited either to accept the nationalization law or to leave; and a temporary board of the new N.I.O.C. was established on Abadan Island to take charge of the oil industry. Gradually the work of the A.I.O.C. began to close down and its staff to withdraw.

On July 15 W. Averell Harriman, sent specially by U.S. Pres. Harry S. Truman as a neutral mediator to bring the parties

Below: PREMIER MOHAMMED MOSSADEGH (second from left, front) with delegates to the British-Iranian oil conferences at Tehran. Negotiations broke down on Aug. 22, 1951, when Mossadegh refused all proposals for leaving the technology or marketing of Iranian oil in British hands

Below: IRANIAN NATIONALISTS during an anti-British demonstration in the summer of 1951

together, arrived in Tehran. Thanks to his efforts, the atmosphere improved somewhat, and the British government sent out a new negotiating mission, headed by the lord privy seal, Richard Stokes, who reached Tehran on Aug. 4. Although warmly received at first, he was unable to achieve any real progress in the tangled negotiations and left Tehran for England on Aug. 23; Harriman left on the following day. Relations steadily deteriorated thereafter, until in September the Iranian government finally announced the impending cancellation of the residence permits of all the A.I.O.C.'s British staff remaining in Abadan. The British government appealed to the Security council of the United Nations but, rather than precipitate violence, agreed to the withdrawal of the British staff from Abadan on Oct. 3. Thereafter the Iranians were in sole control of the oil industry, but production was negligible.

Mossadegh flew personally to New York to conduct Iran's case before the Security council. He persuaded the council to adjourn all discussion of the dispute, instead of accepting a British motion condemning Iran's action against the A.I.O.C.; but despite a prolonged stay in the United States he failed to persuade the U.S. government either to grant Iran the considerable economic help needed in place of the revenues formerly received from the A.I.O.C., or to induce the British government to renew negotiation on Iran's terms. He arrived in Tehran on Nov. 23, after flying by way of Cairo in order to demonstrate solidarity with the Egyptian government (which was similarly involved in a dispute with the British government), and was welcomed with a nationalistic fervour which served temporarily to conceal the desperate condition of Iran's economy. Administration by the cabinet was almost in abeyance; the cost of living was rapidly rising; the oil industry was barely functioning; the seven-year plan of economic reconstruction was largely neglected; and the Tudeh party, outlawed since 1949, was nevertheless openly active.

Shortly after Mossadegh's return to Tehran, he was accorded an unexpected vote of confidence in the *majlis,* in spite of the growing vigour of the opposition, and he took advantage of the opportunity to announce the long-awaited elections to the *majlis* before the end of the year. The electoral period, always protracted and varied in different parts of the country, began in the capital and northern provinces on Dec. 18. It was still in progress, with no indication of the likely result, when the year ended.

Education.—Schools (1942–43): elementary 2,401, pupils 244,315, teachers 9,748. There were two universities (Tehran and Tabriz) and three university colleges (1949), students 5,919.

Finance and Banking.—Budget: (1950–51 est.) revenue 8,950,000,000 rials; expenditure 11,470,000,000 rials; (1951–52 est.) revenue 9,553,000,000 rials; expenditure 9,550,000,000 rials. Internal national debt: (Dec. 1949) 5,668,000,000 rials. Currency circulation: (March 1950) 6,030,000,000 rials. Bank deposits: (March 1950) 6,200,000,000 rials. Gold reserve and foreign exchange: (Aug. 1951) U.S. $220,000,000. Monetary unit: *rial,* with an exchange rate of 91 rials to the English pound and 32.50 rials to the U.S. dollar.

Foreign Trade.—Imports (1950) 8,403,000,000 rials, including imports of concession holders 2,190,000,000 rials; exports 22,562,000,000 rials, including exports of concession holders 19,600,000,000 rials. Main sources of imports, excluding imports of concession holders (1950): U.S. 33.7%; U.K. 27.0%; India 8.6%; U.S.S.R. 5.1%. Main destinations of total exports (1950): U.K. 16.4%; India 9.7%; France 4.0%; Australia 3.7%. Principal imports, excluding imports of concession holders (1949–50): cotton piece goods 18.7%; cereals 9.8%; sugar 9.4%; tea 7.5%. Principal exports, excluding exports of concession holders (1949–50): carpets 26.1%; dried fruits 15.5%; gums 10.2%; skins and furs 7.9%.

Transport and Communications.—Roads (1949): 17,000 mi., of which 8,000 mi. were suitable for vehicles. Licensed motor vehicles (Dec. 1950): cars 12,000, commercial 12,000. Railways: (1948) 1,750 mi.; passengers carried (1947) 1,600,000; freight carried (1948) *c.* 1,000,000 metric tons. Iranian airways: unduplicated route miles (1950) 5,077. Radio receiving set licences (1949): 60,000.

Agriculture and Fisheries.—Main crops (metric tons 1950): wheat 2,150,000; barley 800,000; ginned cotton 24,000; jute 4,000; sesame seed (1949) 10,000; cottonseed 35,000; rice (1949) 480,000; sugar, raw value, 62,000; tea (1949) 7,600; tobacco (1949) 17,000; oranges and tangerines 45,000; olives 12,000; olive oil 1,000. Livestock (1948–49): cattle 2,500,000; sheep 13,000,000; horses 365,000; mules 42,000; buffaloes 10,000; camels 600,000; goats 7,000,000; chickens 13,000,000. Livestock products (metric tons): wool, greasy basis (1950) 16,000; butter (1949) 40,000. Fisheries: approximate catch of sturgeon (1949) 5,000 tons, from which 30 tons of caviar were extracted.

Industry.—Fuel and power: coal (1948) 150,000 metric tons; crude petroleum production of the Anglo-Iranian Oil company, (1950) 32,256,000 metric tons; electricity (1948) 200,000,000 kw.hr. Raw materials (metric tons, estimated annual production): copper ore 1,000; sulphur 600; red oxide 10,000; arsenic ore 500. Manufactures: cotton yarn (1949) 12,000 metric tons; cotton piece goods (1949) 30,000,000 m.; cigarettes (1948) 4,350,000,000; tobacco (1947) 8,700 metric tons; cement (1948) 58,000 metric tons.

FILMS OF 1951.—*Struggle for Oil* (British Information Services).

Iraq.

An independent Arab kingdom of Mesopotamia, Iraq is bounded by Syria, Turkey, Iran, the Persian gulf, Saudi Arabia and Jordan. Area: 116,600 sq.mi. Pop.: (1949 est.) 4,990,000. Languages: Arabic 67%, Kurdish 25%, others 8%. Religions: Moslem 91%; Christian 5%; by the end of 1951 all 107,000 Jews had left for Israel. The Sunni Arabs are the ruling class. Chief towns (pop., est. 1947): Baghdad (cap., 552,000), Mosul (279,400), Basra (206,000), Kirkuk (148,300). Ruler: King Feisal II (born May 2, 1935); regent: Crown Prince Abdul-Ilah; prime minister in 1951: Nuri Pasha es-Said.

History.—At the Jan. 1951 meeting of the Arab league in Egypt, Iraq qualified its acceptance of the league security pact by maintaining its independence in financial matters. During the Israeli-Syrian conflict on the upper Jordan the Iraqi government announced its support of Syria and published a decree which deprived emigrating Jews of their remaining property. In the following month Iraqi aircraft, anti-aircraft units and troops were dispatched to Damascus at the request of the Syrian government. In May the regent, Crown Prince Abdul-Ilah, accompanied by Nuri Pasha es-Said, the prime minister, visited Jordan.

On March 20 a law was published authorizing the building of a state oil refinery near Baghdad, and in July an Iraqi Development board was appointed. Its five-year plan included projects for the reclamation (with U.S. Point Four program assistance) of land in the Tigris and Euphrates valley, and the completion of the Wadi Tartar scheme for control of the annual Tigris floods.

On Aug. 13, after several months' negotiations, the government reached agreement with the Iraq Petroleum company and its subsidiaries, the Mosul Petroleum company and the Basra Petroleum company, for revision of their existing concessions. The agreement stipulated that the government would receive half of the three companies' profits (before the payment of foreign taxes) which were derived from their operations in Iraq. Part of this 50% of the profits would be paid in crude oil for local purposes. It was also agreed that if at any later date a neighbouring government should receive under a subsequent arrangement a higher revenue per ton of oil than that received by Iraq, the Iraqi government would have the right to demand a similar increase from all three companies. Further clauses laid down that the boards of the three companies should be reinforced by a number of Iraqi directors and that the three companies would themselves finance the organization of facilities for Iraqis to study oil subjects both in Iraq and Great Britain; that in future no foreigners would be employed if suitable Iraqis were available; and that the agreement was subject to ratification by the Iraqi parliament. In September it was announced that another new oil refinery with a capacity of 100,000 tons would be built south of Basra. Meanwhile the Basra Petroleum company had brought a new oil field into production, from which a pipe line had been laid to the Iraqi port of Fao at the mouth of the Shatt-al-Arab on the Persian gulf where there was deep-sea anchorage for tankers.

The four powers (Great Britain, France, Turkey and the United States) whose invitation to Egypt to participate in the organization of a joint middle east defense command had been refused by Egypt, informed Iraq and the other members of the

ULSTER'S farmstead of 100 years ago and its farmhouse of the future, on view at the Exhibition of Farm and Factory in Northern Ireland. The exhibition was Ulster's contribution to the 1951 Festival of Britain

Arab league and Israel in October that these plans would be proceeded with irrespective of their rejection by Egypt.

On Oct. 31 the leaders of the People's Socialist party (Salih Jabr), of the United Popular Front party (Gen. Taha al-Hashimi) and of the National Democratic party (Kamil Chadirchi) made a joint announcement which, after expressing full support for Egypt, asserted that the Anglo-Iraqi treaty of 1930 had been signed under duress, was outdated and should be abrogated.

On Nov. 21 the soviet government warned Iraq—and the other members of the Arab league and Israel—that they would forfeit soviet good will if they accepted the proposed defense scheme, which would only rob them of their independence.

A new agreement was signed in Baghdad on Dec. 25 between the government and the Anglo-Iranian Oil company's two Iraqi subsidiaries. The government purchased distribution facilities in Iraq and the Alwand refinery. The Khanaqin Oil company was to be the distributing agent for the government until 1961 and would also operate the Alwand refinery until the proposed government refinery at Baghdad was erected. (O. M. T.)

Education.—Schools (1949–50): primary 1,194, pupils 196,336, teachers 6,740; intermediate 133, pupils 22,899, teachers 492; secondary 71, pupils 7,222, teachers 983; vocational 10, students 1,275, teachers 64. Institutions of higher education 10, students 5,200, lecturers 124.

Finance and Banking.—Budget (1949–50): revenue 27,000,000 Iraqi dinars, expenditure 32,000,000 Iraqi dinars; (1950–51 est.) revenue 27,000,000 Iraqi dinars, expenditure 28,000,000 Iraqi dinars. Currency circulation (Aug. 1951) 31,700,000 Iraqi dinars. Bank deposits (April 1951) 13,000,000 Iraqi dinars. Monetary unit: Iraqi dinar, at par with the pound sterling and with an exchange rate of 0.357 dinars to the U.S. dollar.

Foreign Trade.—(1950) Imports 40,600,000 Iraqi dinars; exports, excluding oil 22,600,000 Iraqi dinars, including oil 44,600,000 Iraqi dinars. Main sources of imports (1949): U.K. 43.2%; U.S. 11.4%; Italy 7.6%; Ceylon 6.3%. Main destinations of exports, excluding oil (1948): India 19.2%; U.K. 17.1%; U.S. 13.4%; Egypt 7.7%. Main imports (1949): textiles 18.0%; tea and sugar 12.6%; iron and steel 12.1%; boilers 11.1%. Main exports, excluding oil (1949): cereals 45.5%; dates 22.4%; wool 3.7%.

Transport and Communication.—Roads (1949): 4,500 mi. Licensed motor vehicles (Dec. 1950): cars 8,789; commercial 10,292. Railways (July 1949) 1,027 mi.; traffic (1947–48): passenger-miles 329,000,000, ton-miles 367,000,000. Air transport (1949): passenger-miles 5,861,000, cargo net ton-miles 118,600. Telephones (March 1949): 14,595. Radio receiving sets (1950): 30,000.

Agriculture.—Main crops (metric tons, 1950): barley 900,000; wheat 600,000; rice 250,000; dates (1949) 170,000; tobacco 8,000; cotton, ginned, 8,000; cottonseed 10,000; wool, greasy basis, 13,000. Livestock (1948–49): sheep 7,055,000; goats 1,849,000; cattle 822,000; buffaloes 130,000; camels 291,000; horses (1950) 184,000; mules 52,000; donkeys 413,000.

Industry.—Industrial establishments (1948) 1,762; persons employed 27,246. Fuel and power: crude oil production (1950) 6,480,000 metric tons; electricity (1948) 69,000,000 kw.hr.

See Majid Khadduri, *Independent Iraq* (London, 1951).

Ireland, Northern.

The six counties of Antrim, Armagh, Down, Fermanagh, Londonderry and Tyrone together form a part of the United Kingdom of Great Britain and Northern Ireland. Northern Ireland has its own parliament and executive (with limited powers for local purposes) and is represented in the United Kingdom parliament by 12 members. Area: 5,451 sq.mi. Pop. (1951 census) 1,370,709. Language: English. Religion (1951 census): Roman Catholic 471,329 (34.39%), Presbyterian 410,259 (29.93%), Episcopalian 353,025 (25.75%), Methodist 66,544 (4.86%), other (or not stated) denominations 69,552 (5.07%). Chief towns (pop., 1951 census): Belfast (cap., 443,670); Londonderry (50,099); Bangor (20,615). Governor in 1951: the Earl Granville; prime minister: Sir Basil Brooke.

History.—Except for the United Kingdom general election on Oct. 25, 1951, politics were uneventful. The Unionists lost West Belfast to the Irish Labour by 25 votes but retained 9 other seats, 4 without opposition. The antipartitionists held mid-Ulster and Fermanagh-South Tyrone without ending their policy of abstention. The return of the Conservative party put in abeyance the campaign led by W. F. McCoy for wider anti-Socialist powers for the Northern Ireland parliament. In his May budget J. M. Sinclair, the minister of finance, reduced from five to three years before death the period in which gifts *inter vivos* were free of estate duty. This concession was offset by a tax on pool betting. Revenue at £69,711,000 and expenditure at £50,633,000 left an increased imperial contribution of £19,000,000 as a token payment toward cost of rearmament. The passing of the Public Order act in June was followed by the revoking of a number of regulations under the Civil Authorities (Special Powers) acts. The Irish republican army raided in May a military armoury at Londonderry, capturing some weapons. The education (Miscellaneous Provisions) act of February resolved a controversy in the Unionist party on state aid to voluntary schools.

Capital investment for 1951–52 was estimated at £47,000,000, including £12,000,000 devoted to new housing, but warning was given of cuts in the program for 1952–53. The housing trust announced a plan for a town of 10,000 people at Carnmoney, near Belfast.

New factories with floor space of 373,000 sq.ft. built by the government were occupied. Despite rearmament, unemployment rose to 32,482 (November); this was chiefly because of the falling-off in demand for textiles, notably shirts. The prime minister, Sir Basil Brooke, with the minister of finance and minister of commerce (W. V. McCleery), went to London in November to seek more rearmament contracts. The rearmament work handled was not extensive except for a Belfast aircraft factory which began production of the Canberra jet bomber. The Belfast shipyards remained in full production, launching 10 ships of 120,000 tons gross. The principal deliveries were the aircraft carrier "Eagle," the Argentine whale factory ship "Juan Perón" (23,000 tons) and the liner "Rhodesia Castle" (17,300 tons). However, by the end of the year the output began to be restricted because of a steel shortage.

In agriculture the number of acres tilled and the livestock population (save pigs) fell because of the higher costs of feeding stuffs, fertilizers and wages. The government ordered an inquiry into the Ulster Transport authority, which reported a loss of £400,000 in the year ending Sept. 30. In November the authority raised freight rates and season ticket charges. An agreement was reached in October between Northern Ireland and the Republic of Ireland for the purchase of the Great Northern railway for £450,000 and its transfer to a joint board. The offer was accepted by the stockholders. (J. E. Ss.)

Education.—Schools (1950): nursery 21, pupils 609; primary 1,631, pupils 187,991; secondary intermediate 12, pupils 6,696; secondary grammar 79, pupils 28,386; technical intermediate 28, pupils 4,529; institutions of further education 114, students 26,312; Queen's university of Belfast, students 2,686.

Finance and Banking.—Budget: (1950–51 actual) revenue £64,153,051 excluding £2,000,000 from U.K. exchequer, expenditure £48,168,439 excluding contribution of £16,000,000 to U.K. exchequer; (1951–52 est.) revenue £67,071,000 excluding £2,700,000 from U.K. exchequer, expenditure £50,633,000 excluding contribution of £19,000,000 to U.K. exchequer. National debt (March 1951): £25,962,007.

Foreign Trade.—(Estimates compiled from the returns of the harbour authorities and the board of customs and excise, 1950): imports £219,300,000, of which £175,700,000 from and through Great Britain; exports £183,000,000 of which £172,600,000 to and through Great Britain. Main direct sources of imports, excluding Great Britain (1950): Irish republic 26.2%; Canada 11.2%; Belgium 14.6%; U.S.S.R. 6%. Main direct destinations of exports, excluding Great Britain: Irish republic 51.3%; U.S. 14.4%; Italy 6.1%; Norway 5%. Main imports (1950): cotton goods, including goods sent for finishing, etc., 8.5%; machinery 6.7%; coal 5.8%; tobacco 3.9%. Main exports: linen and rayon piece goods 19.1%; apparel 8%; cotton goods, including goods sent for finishing etc., 7.9%; livestock 6.7%.

Transport and Communications.—Roads (1950) 13,254 mi. Licensed motor vehicles (Dec. 1949): cars 47,618, commercial 22,663. Railways: (1950) 743 mi; passengers carried (1948–49) 9,092,564; livestock transported (1948–49) 141,830 head; merchandise carried (1948–49) 405,063 tons. Telephones (Oct. 1950): subscribers 42,838.

Agriculture.—Main crops (metric tons, 1951 est.): oats 297,300; potatoes 1,214,900; wheat 1,300; barley 3,300; dredge corn 4,500; hay 757,800; turnips 188,500; mangels 14,700; flax fibre 3,600. Livestock (mid-1951): cattle 941,000; sheep 563,000; pigs 578,000; goats and kids 8,000; horses 42,000; asses 4,900; poultry 17,808,000. Food sales (1950–51): milk 84,000,000 gal.; eggs 56,000,00 doz.; pork 788,934 cwt. Number of animals sold to ministry for slaughter: cattle 278,000; sheep and lambs 313,000. Shipments of food to Great Britain (1951): milk 6,000,000 gal.; eggs 43,000,000 doz.; poultry 5,893 tons; bacon and ham 18,550 tons.

Industry.—Electricity sales (1950) 609,000,000 kw.hr. Merchant vessels launched (1950): 11; gross tonnage 130,720. Exports of yarns (cwt., 1950): linen 90,000; woollen 30,000; cotton 8,000; hemp 9,000.

Ireland, Republic of. An independent republic on an island west of Great Britain, Ireland has an area of 26,602 sq.mi. Pop.: (1946 census) 2,955,107; (1951 census) 2,958,878. The increase in population between 1946 and 1951 of 3,771, when deducted from the natural increase of 125,402, gives a figure of 121,631 for the net emigration. Language: English *c.* 76%, Erse (Gaelic) *c.* 24%. Religion (1936 census): Roman Catholic 93.4%, Episcopalian 4.9%, Presbyterian 1%, Methodist 0.3%, Jewish 0.1%. Chief towns (pop. 1951 census): Dublin (cap., 521,322), Cork (74,577), Limerick (50,823), Dun Laoghaire (47,963), Waterford (28,689). President: Séan Thomas O'Kelly; prime ministers (1951): John A. Costello and (from June 13) Eamon de Valera (*q.v.*).

History.—Ever since the Anglo-Irish treaty of 1921 the only real issue separating the two main political parties had been tempo. At what speed should political separation from Britain proceed? The year 1950 had seen all that settled, and the matter of leaving the commonwealth as well, John Costello's interparty government having adroitly stolen Eamon de Valera's clothes. But in 1951 De Valera had his (very limited) revenge. The interparty government, which seemed to be running its full term to 1952, suddenly began to disintegrate, largely through internal disruption in Séan MacBride's Clann na Poblachta (party of the republic). The crisis arose, in a manner too complicated to be briefly explained, over the Catholic hierarchy's objections to a medical welfare scheme proposed by the minister of health, Noel Browne, a member of Clann na Poblachta and supposedly MacBride's right-hand man. Browne broke with MacBride, the equilibrium of the interparty government was destroyed and in the election that followed, De Valera's Fianna Fáil party was returned as the strongest single party. The results were, with the seats held at the dissolution in parentheses: Fianna Fáil 69 (67), Fine Gael 40 (30), Labour 16 (20), Clann na Poblachta 2 (6), Clann na Talhman (Farmers') 6 (5) and Independents 14 (17).

The new government, however, depended for its painfully small working majority in the *dail eireann* on almost exactly the same set of independents who before the election had sided with Costello; the cost of living, with which De Valera's ministers had made great play in opposition, went on rising obstinately and the balance of payments tilted further against the republic. In such circumstances it was difficult for the new government to be strikingly different from that of Costello.

The year 1951 provided a partial fore-shadowing of the issue which seemed likely to divide the Irish liberals and conservatives. The agency behind this possible regrouping of Irish politics might prove to be the report of the central bank, issued in the autumn. The report called upon the Irish people to produce more, save more and generally to conduct themselves according to the ethos of central banks everywhere. At first the government looked like it would accept the bank's advice, but in the end it weakened and washed its hands of the report. Meanwhile MacBride, whose battered Republican party had advocated a new financial deal as its central policy, came back into the limelight and looked, moreover, like he would carry a section of the once supposedly conservative Fine Gael party with him. His main point was that the rate of the Irish pound against the British should be variable, as it was right up to the third decade of the 19th century. The historical departure was that Irish politicians had at last begun to face the issues of the 20th century and had ceased to carry on a protracted post mortem on the Anglo-Irish treaty and the civil war.

Trade returns issued by the central statistics office reflected the adverse conditions common to much of western Europe. For the first nine months they showed an adverse balance on merchandise trade of £97,000,000 as compared with £65,000,000 for the same period of 1950. Imports for the nine months were valued at £150,000,000 and exports at £53,000,000. More than £2,000,000 worth of meat, fresh, chilled, frozen or canned, was exported in the same period. Most of the chilled and frozen meat went to the United States and a contract for 4,000,000 lb. of frozen beef for U.S. forces in Germany was secured by a Waterford firm. The year 1951 saw agreement on the joint purchase of the Great Northern railway by the governments of the Republic of Ireland and of Northern Ireland. Each government contributed an equal share of the purchase price, and a joint board was to be responsible for operating the undertaking.

The United States and Great Britain sent new ambassadors: Francis P. Matthews, from the United States, was secretary of the navy before his appointment to Ireland; Sir Walter Hankinson, from Great Britain, had already served as a diplomatist in Dublin. Ireland continued to play its part both in the council of ministers and the consultative assembly of the Council of Europe, and in the Organization for European Economic Cooperation. (D. L. I.)

Education.—Schools (1949–50): elementary 4,896, pupils 445,183, teachers 12,821; secondary 416, pupils 47,065. Universities 2, (the National university has 3 constituent colleges) students 7,448, professors and lecturers 499.

Finance and Banking.—Budget: (1950–51 est.) revenue £77,400,000, expenditure £85,400,000; (1951–52 est.) revenue £80,500,000, expenditure £81,600,000. National debt (March 1950) £130,600,000. Currency circulation (Sept. 1951): £57,400,000. Bank deposits (quarterly average, July–Sept. 1951) £252,700,000. Gold and foreign exchange (Sept. 1951) = U.S. $204.000,000. Monetary unit: Irish pound at par with the pound sterling and with an exchange rate of £1 = U.S. $2.80.

Foreign Trade.—(1950) Imports £159,600,000, exports £72,400,000. Main sources of imports (1950): Great Britain 51.3%; U.S. 13.2%; Canada 3.7%; India 3.0%. Main destinations of exports: Great Britain 74.0%; Northern Ireland 11.5%; Netherlands 2.5%; Germany 2.0%. Main imports (1950): food, drink and tobacco 24.2%; textiles, excluding apparel 13.7%; machinery and vehicles 15.6%; nonmetalliferous mine and quarry goods 8.2%. Main exports: live animals 40.4%; food, drink and tobacco 40.6%. Index of volume of trade (on basis of 1937 = 100, 1950): imports 134, exports 94.

Transport and Communications.—Roads (1950): 49,170 mi. Licensed motor vehicles (Dec. 1950): cars 85,140, trucks 40.748. Railways, two principal railways including cross-border operations (1950): 2,460 mi.; passengers carried 21,000,000; freight carried 4,476,000 metric tons; freight net ton-miles 327,000,000. Air transport (1950): passenger-miles 50,000,000; cargo net ton-miles 495,000. Inland waterways: 566 mi. Telephones (1950): subscribers 49,429. Radio receiving sets (1950): 296,388.

Agriculture and Fisheries.—Main crops (metric tons, 1950): wheat 333,000; oats 537,000; barley 121,000; rye 3,000; potatoes 2,920,000; sugar, raw value 100,000; flax fibre 1,400. Livestock (June 1951): cattle 4,381,000; sheep 2,702,000; pigs 548,000; goats 50,000; horses (1949) 402,000; mules (1949) 5,000; poultry 18,570,000. Wool production (greasy basis, 1950) 6,000 metric tons. Food production (metric tons, 1950) meat 148,000, of which beef and veal 62,000, pork 71,000, mutton and lamb 15,000; butter from co-operative creameries 37,400; cheese 3,200. Fisheries (wet fish, 1950): 9,415 metric tons; value, including shell fish £436,901.

Industry.—Persons employed in industrial establishments (1948) 197,550. Fuel and power (1950): coal 169,200 metric tons; manufactured gas 153,600,000 cu.m.; electricity 903,600,000 kw.hr. New houses constructed under state aid (1950) 12,048. Index of industrial production (1950) 162 (1937 = 100).

Iron and Steel.

For convenience in coverage, this subject is subdivided into three major parts: iron ore, pig iron and steel.

While conditions varied in different producing countries, the iron and steel industry as a whole attained production levels far above any previous records. The 1950 increases over 1949 were 11% for iron ore, 15% for pig iron and 17% for steel, and most of the producers showed further sharp advances in 1951.

Iron Ore.—World output made a new record high in 1950, and preliminary data on 1951 indicated further increases. Table I shows the outputs of countries which had prewar or war records of 1,000,000 tons or more a year. The countries listed usually account for 80%–85% of the world total.

Table VI.—*Steel Industry in the U.S.*

(In thousands of short tons)

	1945	1946	1947	1948	1949	1950
Capacity	95,505	91,891	91,241	94,233	96,121	104,230
Production	79,702	66,603	84,894	88,640	77,978	96,836
Basic open-hearth	71,070	60,112	76,209	78,715	70,249	86,263
Acid open-hearth	870	600	665	625		4,535
Bessemer	4,305	3,328	4,233	4,248	3,947	6,039
Electric	3,557	2,563	3,788	5,057	3,783	
Shipments	57,242	48,776	63,057	65,973	58,104	
Domestic	53,449	45,749	58,850	62,728	54,586	
Exports	3,793	3,027	4,207	3,245	3,518	

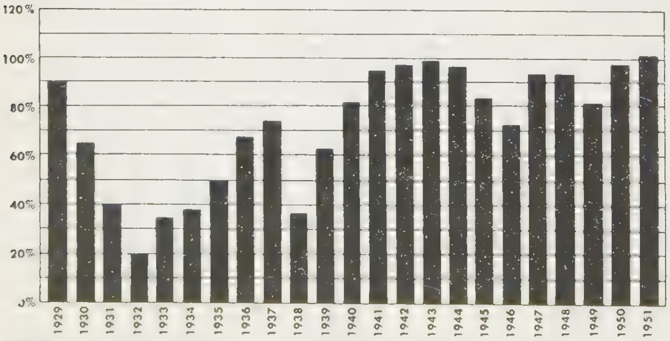
Production in the first ten months of 1951 totalled 121,227,000 short tons, as compared with 109,810,000 tons in the full year 1950.

Pig Iron.—Blast-furnace output of pig iron and ferroalloys in countries producing 1,000,000 tons or more annually are shown in Table III. The countries listed usually account for about 95% of the world total.

While there were small reductions in output by a number of minor producers, France and Belgium were the only major producers to show declines in 1950; of the total increase, 60% was in the United States.

The more important data on pig iron and ferroalloys in the United States are shown in Table IV, as reported by the U.S. bureau of mines.

Blast-furnace production in 1951 was 71,232,761 tons, of which 70,847,380 tons was pig iron and 745,381 tons was ferroalloys.



STEEL PRODUCTION in the United States, 1929-51; monthly average percentage of capacity (figures compiled by American Iron and Steel Institute)

Steel.—The countries listed in Table V, having normal outputs of 1,000,000 tons a year, usually account for 95%–98% of the world total.

The 1950 world total was a new record high; for the first time, steel output exceeded 200,000,000 tons. As with pig iron, France and Belgium were the only major producers to show declines, and 63% of the increase in the world total was made in the United States.

The outstanding features of the steel industry in the United States are shown in Table VI, as reported by the American Iron and Steel institute.

With a steel output of 96,240,773 tons through November, 1951 would be the first calendar year in which output exceeded 100,000,000 tons. (*See* also BUSINESS REVIEW; METALLURGY.)

Irrigation. **United States.**—Supplies of water for irrigation during 1951 were about as forecast by snow surveys, being sufficient or ample except in the southwest. In Arizona the long drought was broken briefly in August by storms which, in limited areas, built up soil moisture and the stored water that normally meets irrigation needs. However, storage was brought up to only about 12% of reservoir capacities or 350,000 ac.-ft. Thus the carry-over into 1952 was sure again to be meagre. In New Mexico, by October, storage in main reservoirs sank almost to zero; six with capacity of 3,630,000 ac.-ft. held only about 250,000. There also, unless winter snows should be unusually heavy, another year of shortages appeared likely. Since irrigation reservoirs in southern California are few and small, heavy pumping further depleted the ground water. The year thus ended with reserves very low throughout the southwest, especially in Arizona and New Mexico. They were average or better in central and northern California, Utah, Nevada and Washington; excellent in Idaho, Montana and Wyoming; varied in Colorado.

Notwithstanding widespread concern over depletion of reserves in the southwest, changing crop patterns brought about a marked increase in water use. In California the cotton acreage more than doubled, partly by reduction of alfalfa but also by the irrigation of acreages previously dry, and this, with other shifts, resulted in use of perhaps 1,500,000 ac.-ft. of water more than in 1950, much of it ground water. A similar cotton increase in Arizona—289,000 ac. in 1950, 559,000 in 1951—was somewhat offset by reduction in alfalfa, a heavier water user.

These pumping increases were brought about mainly by individual farmers, the federal bureau of reclamation still being the principal constructor of large-area systems. The 1950–51 program was one of its most comprehensive, served acreage increasing 346,000 ac. over the previous year and bringing total service, full and supplemental, to almost 6,000,000 ac. in more than 100,000 farms. The major achievements were the completion of canals and pumping plants ensuring the first integrated operation of the Central valley project in California where supplemental water was delivered to districts in which 172,000 ac. had been irrigated in 1950, and the making of water available for the first 87,000 ac. of the Columbia basin project in Washington. Installed nameplate capacity of 3,939,500 kw. in the 23 operated power plants increased 771,100 over the previous year. Sales of electric energy approximated 21,000,000,000 kw.hr. and produced revenue of about $35,000,000. At year's end, construction was under way in 13 storage dams, 2 diversion dams, 10 power plants, 6 pumping plants, 360 mi. of main canals, 28 mi. of tunnels, 2,200 mi. of transmission lines, and lateral systems for 17 separate areas.

Consciousness of water shortages in southern California led the state legislature to approve plans long under consideration by federal and state agencies for the largest and most expensive irrigation project in the United States. This project would divert water from Feather river to the southernmost counties of the state, through many shortage areas. The ultimate cost to the state would exceed $1,000,000,000.

The first announcements of returns from the federal census of irrigation of 1950 were made late in 1951 by the bureau of the census. Of chief significance were the figures (preliminary and subject to revision) showing acres irrigated in the 17 westernmost states in 1949, as follows: Arizona, 979,014; California, 6,618,595; Colorado, 2,940,502; Idaho, 2,168,323; Kansas, 140,992; Montana, 1,809,908; Nebraska 887,505; Nevada, 722,-896; New Mexico, 691,429; North Dakota, 35,759; Oklahoma, 44,189; Oregon, 1,338,226; South Dakota, 84,356; Texas, 3,148,-115; Utah, 1,166,659; Washington, 617,362; Wyoming, 1,475,-069. The total, 24,868,899 ac., was an increase of 4,473,856 over the 1939 total, which was accounted for largely by California and Texas, the latter state superseding Colorado in second place. For California the acreage reported as irrigated by water pumped from wells (3,350,543 ac.) was more than half the state total; this was true also of the figures for Texas (1,856,642), Arizona (524,335) and Kansas (92,171). The 72,163 pumped wells in California were three-fifths of the 116,080 in the entire group, Texas with 15,065 being in second place. California reported 1,687 reservoirs and Colorado 1,182 of the total of 7,411. Investment in irrigation works and water rights increased by $798,522,870 during the decade, bringing the total to $1,833,-239,633 as of Jan. 1, 1950. California was again in the lead, increasing its investment of $321,172,287 to $640,061,505. Washington was in second place, increasing $122,061,268 to $178,476,464.

Australia.—A compilation by the bureau of investigation, Queensland, 1951, reported on 37 reservoirs in Queensland, New South Wales, Victoria and Tasmania. Of these, 13 were already in existence, 8 under construction and 16 proposed; total capacity, 25,890,000 ac.-ft. The largest, of about 7,000,000 ac.-ft., was proposed at Burdekin falls, Queensland. The Burdekin river authority had arranged, as the first step, for a temporary weir and simultaneous construction of the dam with the early objective of pumping from the river to irrigate about 800 farms and to generate electric power. In Queensland about 100,000 ac. were being irrigated, but water for 2,000,000 ac. was available for development. From Burdekin river the ultimate irrigation of 350,000 ac. was expected in tobacco, sugar cane and pastures.

India.—Bhakra-Nangal, involving a reservoir on Sutlej river in the Punjab, was to store 7,200,000 ac.-ft., provide 400,000 kw. of firm power and irrigate 6,600,000 ac. Completion goal, 1955 or 1956. Damodar valley (province of West Bengal), India's first venture into the valley authority type of administration, involved dams and canals for power and navigation as well as eventual irrigation of nearly 1,000,000 ac. Completion goal, 1954–55. Hirakud dam (province of Orissa), which would form a reservoir, store 6,000,000 ac.-ft., irrigate 1,000,000 ac. and provide power, flood control and navigation facilities, was behind schedule but going forward. Tungabhadra project, on the boundary of Madras and Hyderabad provinces and being built by them jointly, was scheduled for completion by 1954. Involved were a reservoir of 2,500,000 ac.-ft. effective capacity and eventual irrigation of nearly 1,000,000 ac., as well as power development. In Madras province the Kistna Pennar project, still in the planning stage, would, if built as planned, irrigate 3,200,000 ac.

Thailand.—Fifteen projects were planned or in construction stages. An emergency enterprise, financed with Economic Co-operation administration funds, comprised diesel pumps mounted on trucks which would move from place to place to pump additional water to rice paddies. Construction of a canal system on Mool river, begun in 1939 but suspended during the war years, had been resumed. About 40,000 ac. of paddy lands in a food deficiency area were involved. Islam.

The drive for literacy made considerable progress in most Islamic countries in 1951. The two most important cultural events were the world Moslem conference at Karachi, Pak., in February and the 21st Congress of Orientalists at Istanbul, Turk., during September. For the first time in the long history of the congress the eastern Moslem orientalists banded themselves together into an independent congress of their own. Everywhere in the Islamic sphere of influence there was a craving for knowledge and an immense amount of journalistic activity often combined with a striving toward political unity and social equality.

In Egypt steps were taken toward implementing the ministry of education's promise of free education for all. Thus, the budget for education was raised from £E 23,000,000 in 1950 to £E 30,000,000 in 1951. Of this £E 3,457,205 was spent on school meals. Apart from education of the young, a literacy campaign drove for more than 400,000 students. The Egyptian government opened an institute of Islamic studies in Madrid, Sp., and aimed at opening another at Tangier. Syria devoted £S 30,000,-000, 20% of its budget, to education; the number of elementary schools had risen from 658 in 1946 to 1,576 in 1951. In Iraq part of 12,618,000 dinars allocated for the school building program was expended, and it was hoped that the University of Baghdad would at last become a reality. In Kuwait and Saudi Arabia, education received a great stimulus as a result of increased oil revenues. The Palestine Arabs with their high standard of education played a large part in helping Jordan evolve toward a constitutional monarchy: King Talal (*q.v.*) made a promising start to his reign and his friendly attitude towards Egypt gave a tremendous stimulus to the Arab cultural ties. Lack of revenue, because of the oil crisis, prevented expansion of education in Iran.

In the French-administered north African states, there was great enthusiasm for publications in Arabic and for information about the Islamic world, particularly about the new independent Islamic countries. North African Arabs under French rule continued their struggle to get recognition of their right to education in their native tongue. In Algeria, the 'Ulamas, continuing the work of the Sheikh 'Abd al-Hamid bin Badis, played an important part in keeping education in Arabic alive. In Nigeria, where the bulk of the 11,000,000 population in the northern provinces are Moslem, and in Senegal, Mauritania, Zanzibar, Oman and Aden there was increasing demand for Arabic literature.

Pakistan added a university to its already existing four when parliament passed an act to establish a federal university at Karachi. A stimulus was also given to education in east Pakistan whose government set up a committee to advise on reorganization of the educational system. Free primary education, formerly provided in at least 14 districts, was extended to the whole of east Pakistan. U.N.E.S.C.O. officials carried out a three-year survey of education in Afghanistan, and published the first detailed account of education in that country. An intensive campaign was carried out to educate the nomadic Afghan tribes.

In Indonesia, where six years previously 93% of the population was illiterate, an active campaign was pursued to wipe out illiteracy. In 1949, 513,626 people had been taught to read and write. The universities of Jakarta and Jokjakarta were enlarged to 14 faculties and English was substituted for Dutch as the compulsory second language. In the Malay states cultural activities were restricted by the war against the terrorists.

Israel. Israel is a republic, proclaimed on May 14, 1948, at Tel Aviv, bounded north by Lebanon, east by Syria and Jordan, south by Egypt and west by the Mediterranean sea. According to a partition plan adopted on Nov. 29, 1947, by the general assembly of the United Nations, the state of Israel was to cover 5,579 sq.mi. (with Negeb); after armistices concluded with all the neighbours during 1949 the official area of Israel was estimated to be 8,084 sq.mi. Pop.: (Nov. 1948 census) 782,000, including 713,000 Jews; (Sept. 1951 est.) 1,555,000, including 1,383,000 Jews. Religion: mainly Jewish, but by 1951 there were 125,000 Moslems and 46,300 Christians, mainly Arabs (Roman Catholic rites: Graeco-Melchite 20,000, Latin 5,100, Maronite 1,200, Armenian 1,200; Greek Orthodox 17,000; Protestant denominations 1,500; Copts 300). Chief towns (pop., Dec. 1949 est.): Jaffa-Tel Aviv (more than 300,000); Haifa (more than 150,000). President of the republic in 1951: Chaim Weizmann; prime minister: David Ben-Gurion.

History.—Although immigration and development projects continued to make progress in 1951, the enormous disparity in the balance of trade brought increasing hardship on the population. In the field of foreign relations, while Israel was able to improve its friendly relations with the western powers, the "cold war" with the surrounding Arab states grew more bitter.

The number of immigrants during the year totalled 174,000, of whom the greatest number (87,916) came from Iraq; Rumania provided more than 37,000, Iran 9,000 and the Moslem countries of Africa 13,000. The influx of this large number of new arrivals increased the strain on the country's economy. The weakness of the Israeli currency, principally a result of the disequilibrium in the country's economy, was illustrated by the fact that the Israel pound, nominally equivalent to the pound sterling, was quoted in Dec. 1951 on the free market in Tel Aviv at one-fifth its official value. The cost-of-living index (100 in 1939), which was 319 in May 1950, stood at 388 in Oct. 1951. The problem of maintaining an adequate food ration, in view of the fact that the bulk of supplies had to be imported, caused grave concern, and the shortage of consumer goods placed an increasing strain on the population.

Dissatisfaction with the Ben-Gurion government's handling of the economic problem was again, as on Oct. 15, 1950, the underlying cause of his second resignation when, on Feb. 14, 1951, he was defeated in the *knesset* on a motion dealing with religious education in immigrant camps. As no alternative government could be found after a fortnight of strenuous negotiations between the parties, Ben-Gurion announced that his government would remain in office until fresh elections could be held. These took place on July 30 and resulted in a loss of 1 seat by the prime minister's Mapai (Labour) party and a gain of 13 seats by the General Zionists, a centre party, which thus became the second largest party in the *knesset*. The General Zionists offered to join Mapai in forming a coalition, but it was found impossible to achieve a common program. Negotiations between the parties continued for many weeks, but it was not until Oct. 7 that Ben-Gurion, as leader of the largest party, was able to form his new coalition cabinet. For his third administration Ben-Gurion relied upon a combination of his own party with the religious parties which had been immediately responsible for his two parliamentary defeats. His supporters in the *knesset* numbered only 65 of a total of 120 and included 5 representatives of Arab parties affiliated to Mapai.

Chaim Weizmann, whose failing health gave cause for serious anxiety at the beginning of December, was re-elected president on Nov. 19 by 85 votes to 11 in the *knesset*.

The 23rd World Zionist congress met in Jerusalem from Aug. 14 to 30. The meeting was principally notable for the lively discussion on the position and functions of the Zionist organization in relation to the state of Israel, which was not in existence at the time of the previous congress. The attempt to enunciate a new program, comparable with that laid down by the first congress in Basle in 1897, failed for lack of agreement among the 480 or so delegates, and a new formula was adopted which stated that the task of Zionism was to strengthen the state of Israel, to gather in the exiles in Israel and to foster the unity of the Jewish people. Disagreement showed itself most strongly when the Israeli delegate tried to insist that it was the duty of all Jews to come to Israel, an exhortation which was strongly resented by the U.S. delegates in particular, who claimed that their obligations did not extend beyond assisting the state by all means in their power from the other side of the Atlantic.

In foreign affairs the outstanding feature was the continued tension between Israel and the Arab states. Minor border incidents between Israel and Jordan were frequent. Between Israel and Syria a serious situation arose toward the end of March as a result of the latter's objection to Israel's drainage works at Lake Hulah. In retaliation for the shooting of seven Israeli policemen in the area on April 4, the Israeli air force the following day bombed a Syrian position at El Hamma. The matter was referred to the U.N. Security council and in May both parties agreed to accept the council's cease-fire resolution. Another dispute which came before the Security council concerned the Egyptian embargo on all shipping in the Suez canal which carried goods destined for Israel. This led to the adoption on Sept. 1 by the council of a resolution condemning Egypt's action, but the latter, supported by the states of the Arab League, declared its refusal to execute the decision. In a further endeavour to improve relations between Israel and the Arab states the U.N. Palestine Conciliation commission convened a conference in Paris, which opened in September. These efforts proved abortive and the conference closed on Nov. 21.

Israel's relations with the western powers continued to be friendly. On Aug. 23 Israel signed a treaty of friendship with the United States, and trade agreements were concluded with a number of countries including Poland, Yugoslavia and Finland. In May the prime minister paid a three weeks' visit to the United States to help the campaign for selling Israeli bonds. Israel's position in relation to the U.S.S.R. remained delicate in view of the fact that Israel strove not to be implicated in the east-west diplomatic struggle and that it strongly desired to obtain facilities for Jewish immigration from the Soviet Union, a matter which was discussed by the foreign minister, Moshe Sharett, with Andrei Vishinsky in Paris in December. (*See* also IMMIGRATION AND EMIGRATION.) (D. F. K.)

Education.—(1950–51) Government schools: kindergartens 1,325, pupils 51,485, teachers 1,748; elementary 703, pupils 130,721, teachers 6,175; secondary 113, pupils 12,923, teachers 1,234; vocational 37, pupils 4,027, teachers 390; agricultural 31, pupils 4,425, teachers 344; teachers' train-

SURVEYOR calculating the dividing line between Israel and Jordan in March 1951

ing colleges 16; theological schools 135, pupils 7,337. Arab schools 97, pupils 24,240, teachers 536. Nongovernment schools: Jewish religious schools 37, pupils 4,300; secondary 2; teachers' training college 1; trade schools 8. Institutions of higher education 4; Hebrew university (Jerusalem), students 1,862, professors and lecturers 290.

Finance and Banking.—Budget: (April 1950–March 1951) balanced at IL.59,500,000; (1951–52) balanced at IL.198,500,000, including IL.85,000,000 for development and IL.38,000,000 for defense. Currency circulation (July 1951): IL.87,500,000. Bank deposits (Nov. 1950): IL.133,800,000. Foreign exchange (July 1951): U.S. $7,700,000. Monetary unit: Israel pound, theoretically at par with the pound sterling.

Foreign Trade.—(1950): imports IL.102,600,000; exports IL.13,200,000. Main sources of imports (1951, six months): U.S. 34.5%; U.K. 9.3%; France 5.1%; Union of South Africa 4.7%. Main destinations of exports: U.K. 39.8%; U.S. 17.8%; Denmark 6.7%; the Netherlands 5.0%. Main imports: machinery, grain and flour, vehicles, iron and steel manufactures, fuel. Main exports: food, drink and tobacco (62% in first half 1951).

Transport and Communications.—Roads (1951): 2,126 mi. Licensed motor vehicles (Dec. 1950): cars 9,300, commercial 15,200. Railways (1950): 260 mi.; freight net ton-miles 43,900,000; freight carried 708,000 metric tons. Shipping (Dec. 1949): merchant vessels 27; total tonnage 78,649; passengers transported by merchant vessels (1950) 80,000; cargo carried (1950) *c.* 200,000 tons. Air transport (1950): passengers carried *c.* 100,000. Telephones (1950): 24,984. Radio receiving set licences (1949): 143,907.

Agriculture.—Main crops (metric tons, 1949): wheat 22,000; barley 20,000; maize and durra 10,000; oats 1,000; potatoes (1950) 40,000; sesame (1950) 600; grapes (1948) 18,000; olives (1948) 11,000; olive oil 3,000; oranges and tangerines (1950) 173,000; grapefruit (1950) 36,000; lemons (1950) 4,000; plums and prunes (1950) 2,300; apricots (1951) 5,000; bananas (1949) 4,000. Wine production (1949) 7,000 hl. Livestock (1949): cattle 33,000; sheep and goats 70,000; horses and mules 8,000; asses 2,000; chickens (1950) 4,750,000. Fisheries, total catch (1948–49): weight 3,500 metric tons; value IL.1,583,900.

Industry.—Electricity sales (1950) 460,800,000 kw.hr. Manufactured goods (metric tons): cement (1950) 380,400,000; margarine (1949) 7,400,000; wheat flour (1949) 98,700; soap (1949) 5,400; beer (1949) 8,936,000 l.; cigarettes (1949) 1,031,000,000.

Italian Literature.

There was strong evidence in the literary production of the year 1951 that Italian novelists were definitely breaking away from the subject of World War II and its immediate effects upon the people, to concern themselves chiefly with man in his relation to society and to the world in general. Combining great sensitivity to the life and problems of their country with a profound sentiment of human sympathy, a yearning for love, justice, peace and understanding among men, they delved in man's heart and mind to discover and analyze the evils afflicting him. A considerable number of works dealt with the spiritual tragedy of Italy's youth, scarred by inhuman experiences during the fascist wars, and now entering a world filled with fear, hatred and insecurity. Some of these young men, still in their early twenties, described the illusions and disillusionments of their own generation with staggering stoicism, maturity, simplicity and humility. They belonged to no literary movement. Their school had been life, their models stark reality. A cogent analysis of the historical background of this state of mind was furnished by the eminent liberal Catholic historian, Arturo Carlo Jemolo, in his volume of essays, *Italia tormentata.*

The dilemma of guilt or nonguilt, of good or evil and of "choice" was investigated by Eugenio Vaquer (*Settanta volte sette*) in the case of a German girl who, having been the mistress of a Jew, had to join the gestapo in order to redeem herself. While lacking action, the novel was captivating for the vivid characterization of its heroine and for its implication that forgiveness pays better dividends than the accumulation of hatred. Dante Arfulli (*La quinta generazione*) developed the theme of man's struggle for fair play in the story of two fathers and then of their two sons who grow up together through fascism, the war and liberation until they separate when one acquires great wealth and power and the other the conviction that hard work and grief are the inevitable price of honesty. The same theme but with a different solution was elaborated by Libero Bigiaretti (*Carlone*) in his account of the life of a common man who strives to be good in a society which is not good and who, after a half-century of disappointments, still clings to his faith in humanity. The fear of loneliness and ennui, the danger of drifting in the vacuum created by our civilization were treated in the beautifully written pages of Giorgio Soave (*Le spalle coperte*). An attempt to mitigate man's self-inflicted unhappiness was made by Roberto Papi (*Piccolo giudizio universale*) who suggested that we ban lofty and unattainable illusions to appreciate and enjoy what is real: youth, love, nature and the eternal truths. Rita Ferroni, in the story of a schoolmistress and one of her boy students (*Aiutiamoci a vivere*) finds that life as it is commonly conceived brings nothing but sorrow and misery whereas the only life that can give genuine satisfaction is that of the soul, and that true happiness consists in loving our fellow men, particularly those who suffer more than we do. Vice and innocence, sin and purification, as seen through the vicissitudes of a factory girl were carefully examined by Armando Meoni in *La ragazza di fabbrica.*

The surprise of the year was an incredibly skilful short novel by 20-year-old G. Parise (*Il ragazzo morto e la cometa*), whose story of an adolescent fused life and death, heaven and earth, reality and fantasy in such a manner as to make of the boy a symbol of his anguished generation. The temptation to escape from man's chaotic existence was handled brilliantly by Tommaso Landolfi in *Cancroregina,* an account of a tired man's flight to the moon with a mad companion. Some authors extended their human sympathy even to their fellow animals as did Eva Quajotto in *Bestie e noi* and Giuseppe Toma in *Le bestie parlano* in which the sensibilities of the animals, the mystery of their lives, their labour and tasks in common with man are so cleverly brought out that their story becomes our own. Bino Samminiatelli returned to the literary scene with four short novels, *Gente in famiglia,* in which he probes the multiple and conflicting human passions in that smallest of all social units, the family, between World Wars I and II. Alberto Moravia added another portrait to his growing gallery with the penetrating though unconvincing study of a young man who, in his overpowering drive to conform, annihilated his own personality (*Il conformista*).

The three most coveted prizes of the year went to Domenico Rea's *Gesù, fate luce* (Viareggio prize), a charming collection of picaresque stories about girls, Allied soldiers, convicts, beggars, hack drivers and black marketeers in and around Naples during World War II; to Giuseppe Berto's *Il brigante* (Valdagno prize), a novel about love and hate, the land reform, brigantism and Marxism in Calabria; and to Corrado Alvaro's *Quasi una vita* (Strega prize), the author's notebook from 1927 to 1947, containing his inner thoughts, sketches of well-known personalities and his impressions of his European travels. Restful and diverting reading was provided by Luigi Bartolini's *Il mezzano Alipio*, a narration of the fantastic deeds and misdeeds of a village go-between and a jealous city gentleman; and by Francesco Serantini's *L'osteria del gatto parlante,* a collection of short stories brimming with the lust and pathos of a little world whose capital was a wine shop in the rich land of Romagna.

Most of the poetry was concerned with themes of human suffering and loneliness, melancholy, peace, death and the tragic sense of life. Representative of this trend were Attilio Bertolucci's *La capanna indiana* (Versilia prize), Ugo Fasolo's *Accettazione della notte,* M. Saba's *La serena disperazione,* Luigi Fiorentino's *Basalto del tuo corpo* and Cesare Pavese's posthumous lyrics *Verrà la morte e avrà i tuoi occhi.* A panorama of recent poetic production was offered in the *Prima antologia di poeti nuovi.* (M. F. C.)

Italy.

A republic of southern Europe, bounded on land northwest by France, north by Switzerland and Austria and northeast by Yugoslavia. The country includes not only the whole of the Apennine peninsula, but also the large Mediterranean islands of Sicily and Sardinia and a number of smaller islands. Area: 116,224 sq.mi., excluding Venezia Giulia, Zara and the islands (2,843 sq.mi.) ceded to Yugoslavia, the five small areas in the Alps ceded to France (273 sq.mi.) and the Free Territory of Trieste (*q.v.*). Pop.: (1936 census) 42,444,588, in the territory of the date of census; (Nov. 4, 1951 census) 47,020,536. Language: mainly Italian, but in Venezia Tridentina there were *c.* 210,000 German-speaking Tyrolese, and *c.* 10,000 Romansch-speaking Ladins; in the area east of Udine there were *c.* 11,200 Slovenes and the population of Val d'Aosta (*c.* 6,600) was French-speaking. Religion: mainly Roman Catholic (99.6%). Chief towns (pop. 1951 census): Rome (cap., 1,606,739); Milan (1,264,402); Naples (1,003,815); Turin (711,492); Genoa (678,200); Palermo (482,594); Florence (375,392); Bologna (338,710); Venice (315,291); Catania (297,773); Bari (267,726); Messina (218,593). President, Luigi Einaudi; prime minister, Alcide de Gasperi (*q.v.*).

History.—Italy was the scene of much political excitement during 1951. Late in January the still powerful Italian Communist party witnessed the defection of two former partisan leaders, Valdo Magnani and Aldo Cucchi, active and respected members of the party in the region of Emilia and both deputies. The ground for their action was provided by the dictation of Moscow against which they were determined to protest. Public opinion expected something like a landslide to follow, and many people hoped that the splintered anti-Communist Socialist party would reap the benefit. The permanent Socialist crisis in Italy became more than usually acute in the next few months, in the course of fresh efforts to reunite the party. The left-wing groups led by Ignazio Silone and Giuseppe Romita made it the condition of their co-operation with the right wing led by Giuseppe Saragat that the latter, together with his following, should resign from the government, which was, except for three Republican ministers, Christian Democratic and anti-Socialist; in return Silone and Romita were prepared to abandon their opposition to the North Atlantic treaty. On this basis the anti-Communist Socialist party theoretically reunited on May 1. This reunion was, however, obviously brittle as the local elections in May and June were to prove.

The last elections in the more than 8,000 communes of Italy had been held in 1946 and had placed local authority under Communist or pro-Communist control in many of Italy's most important cities. De Gasperi's government naturally wished to alter this situation. For this purpose a new electoral law was made according to which, in communes with more than 10,000 inhabitants, party lists could be linked; further, whichever group of lists gained the majority was to be awarded at least two-thirds of the seats on the communal *giunta* or council. These local or, as the Italians call them, administrative elections, which included the election of provincial authorities, were to be held in three rounds, the first taking place on May 27 and the second on June 10. On June 3 the autonomous region of Sicily elected its legislative assembly.

The results of the voting brought above all Christian Democratic losses, heavy by comparison with the general election of 1948. The old Liberal party made slight but noticeable gains in cities like Milan and Turin, but scored less than the neofascists of the Movimento Sociale Italiano, which increased sharply, especially in the south and in Sicily where Communist and anti-Communist extremists polled equally well, leaving a centre composed of about one-third of the deputies. On the other side the Communists, to everyone's surprise, stood firm, and the pro-Communist Socialists led by Pietro Nenni made gains while the anti-Communist Socialists made no headway in spite of "reunion." Thus, while the control of many big communes—thanks to the list linking system—passed to the progovernment parties, the Communists and their allies held the chief Emilian cities with a two-thirds majority on the town councils; the actual voting figures showed a swingback toward those of 1946 as compared with 1948. The government decided to postpone the third round of local elections until the following year.

On July 15 the minister of the treasury, Giuseppe Pella, who had successfully steadied the lira but had long been criticized from all sides for his policy of restricting credit, resigned suddenly. This brought about the resignation of the cabinet. By July 26, however, De Gasperi had formed his eighth government which in fact differed little from its predecessor, consisting again of a large majority of Christian Democrats with three Republicans, and with Pella as minister of the budget. The Republicans now carried even less weight than before, for De Gasperi himself superseded Count Carlo Sforza (Republican) at the foreign office, with Paolo Emilio Taviani practically in charge. Though Sforza remained as a minister without portfolio it was felt by many that the rising nationalist outcry against him had succeeded and that De Gasperi would find it necessary to give more weight to nationalist demands.

Foreign Affairs.—After De Gasperi's and Sforza's meeting with their French counterparts at Santa Margherita in February they both paid what was considered a successful visit to London from March 12 to 16. The Italian sense of grievance was, however, not relieved, the feeling of having no real voice in world affairs taking the form of an exaggerated indignation against the Italian peace treaty which Sforza found it necessary to declare "morally extinct" in a speech at Genoa on May 20. Italy's entry into the North Atlantic Treaty organization made the treaty, with its restrictions upon the armed forces and its encroachments upon Italian sovereignty, a complete anachronism. Further, the Soviet Union had consistently vetoed what was to have followed upon the treaty—Italian membership of the United Nations. Finally the peace treaty had outraged Italian sentiment by the creation of the Free Territory of Trieste which on March 20, 1948, the United States, Great Britain and France had suggested should be restored to Italy unconditionally. Since then, as the Italians saw it, Yugoslavia had become important to the three powers in their "cold war" with the U.S.S.R., and Italy's claims had been forgotten.

On Sept. 26 the three western powers again issued a statement condemning the Italian peace treaty and advocating Italian membership of the United Nations. To this the U.S.S.R. responded on Oct. 11 by saying that it was willing for the treaty to be revised provided that Italy left the North Atlantic Treaty organization; if Italy were admitted to the U.N. then Bulgaria, Finland, Hungary and Rumania should receive the same treatment. On Dec. 8 the Italian government published its request to the 21 signatories of the peace treaty for its revision.

Agrarian Reform.—The problem of southern Italy overlapped largely with the problem of agrarian reform which, however, in varying degrees affected the whole country. In spite of much grumbling and opposition real progress was made with the settling of landless peasants in southern Italy on land of their own with decent housing and access to implements and advice. The 30 families who were settled on the Sila plateau in Calabria in Sept. 1950 were increased to about 8,500 by Oct. 1951, according to a speech made by the minister of agriculture in the chamber on Oct. 26, and plans for the expropriation of about 800,000 ac. in the other backward areas were worked out during the year, nearly 1,500 ac. near Rome being distributed to 156 peasants on Dec. 2. At the same time a good deal of preparatory work on roads, drainage and the clearance of stony tracts was carried out and some tractor centres established (a great novelty in southern Italy), while in Lucania, the most derelict region of all, the foundations of three model villages were laid—the first at the beginning of September. On Oct. 11 the International bank, two weeks after De Gasperi's visit to the United States, announced a loan of $10,000,000 to promote the work of developing southern Italy. It should on the other hand be noted that the third and more ambitious of the agrarian reforms, which was to have affected the whole country, was by common consent considered to have been dropped, as was also the special program for the Po delta. Near here, especially in the province of Rovigo, catastrophic floods toward the end of November ruined about 301,000 ac. of cultivable land apart from grave losses of life and house property.

GLASS-WALLED ticket hall of the railway terminus in Rome, It., photographed in 1951 several months after its official dedication. About 320 scheduled trains operated from the station daily

Economic Position.—It cannot be said that the Italian industrial situation changed much in 1951. Government boring for oil continued with reasonable success but without sensational results. The substitution of the use of natural gas for that of coal was extended to include Novara and Turin in Piedmont in the network centred on Milan and spread over Lombardy. But apart from this the difficulties of scarce raw materials and too many hands combined with bad management involving obsolete plant equipment (for which industrialists were inclined to blame Pella's short credit policy) remained. They involved permanent tension between employers and employees, especially in the mechanical industries.

Overpopulation leading to unemployment and above all to underemployment and inadequate pay was equally apparent among white collar workers. Throughout the year the inflated and underpaid civil service was extremely restive. On May 8 there was a one-day strike of civil servants throughout the country, a strike which was backed by all the trade unions—Communist, Catholic and Socialist alike—and which was observed by large numbers. Later in May and in June there were teachers' strikes, so that in May, for instance, many secondary schools were closed for half a week. (It should be emphasized that Italian teachers of all kinds were particularly badly paid.)

On Sept. 19 there was another 24-hour strike of civil servants in which, this time, the railwaymen but not the teachers participated. Toward the end of the year the government completed the draft of a bill intended to restrict drastically the right to strike.

Another much-talked-of reform matured in October. Tax evasion, especially by large concerns but also by individuals, had long been a crying abuse; moreover, it resulted in exorbitant demands from the inevitably suspicious authorities. Ezio Vanoni, minister of finance (and Pella's successor at the treasury in July), decided to try to create a hitherto unknown confidence between the government and the public by asking for honest individual declarations of income by Oct. 10 in return for which he undertook to overlook past evasion and to reduce the rate of taxation; dishonest statements were to lead to great severity. It was too early by the end of 1951 to judge the success of this measure. (*See* also ERITREA; INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT; LIBYA; SOMALILAND, ITALIAN.) (E. WI.)

Education.—Schools (1948–49): elementary 38,766, pupils 4,878,149, teachers 165,399; secondary 1,192, pupils 374,616 (boys 207,302, girls 167,314), teachers 31,668; technical secondary 2,161, pupils 342,706 (boys 242,103, girls 100,603), teachers 30,312; schools of art and academies of music 93, pupils 11,562 (boys 8,205, girls 3,357), teachers 1,734; universities and institutions of higher education 27, students 167,978, lecturers 3,890.

Finance and Banking.—Budget: (1950–51 est.) revenue 1,227,000,000,000 lire, expenditure 1,397,000,000,000 lire; (1951–52 est.) revenue 1,455,000,000,000 lire, expenditure 1,824,000,000,000 lire. Internal national debt (Aug. 1951): 2,820,000,000,000 lire. Currency circulation (Aug. 1951): 1,090,000,000,000 lire. Bank deposits (Aug. 1951): 1,433,000,000,000 lire. Gold and foreign exchange (June 1951): U.S. $765,000,000. Monetary unit: lira (pl. lire) with an exchange rate of 1,750 lire to the pound and 625 lire to the U.S. dollar.

Foreign Trade.—(1950): Imports 897,648,000,000 lire; exports 746,328,000,000 lire. Main sources of imports (1950): U.S. 13.4%; Germany 8.3%; U.K. 5.6%; Argentina 5.4%; France 4.6%. Main destinations of exports: U.K. 11.5%; Germany 9.8%; France 8.7%; Switzerland 6.4%; U.S. 6.4%. Main imports (July–Dec. 1950): raw cotton and waste 10.1%; petroleum and products 6.9%; coal 6.8%; raw wool and waste 6.0%; wheat and flour 5.5%. Main exports: fresh and dried fruit 11.0%; artificial fibres and fabrics 10.2%; cotton yarn and fabrics 9.7%; machinery 7.5%; wool yarn and fabrics 5.3%.

Transport and Communications.—Roads (June 1950): 108,237 mi. Licensed motor vehicles (Dec. 1950): cars 342,021, commercial 229,277. Railways (1950): 13,449 mi., of which state railways 10,137 mi. Traffic on state railways (1950): passenger-miles 12,643,000,000; goods, ton-miles 24,314,000,000. Shipping (merchant vessels of 100 gross tons and over, July 1950): 1,070; total tonnage 2,582,547. Air transport (1950): passenger-miles 94,300,000; cargo, ton-miles 1,900,000; mail, ton-miles 600,000. Telephones (1949): 831,434 subscribers. Radio receiving set licences (1949): 2,543,000.

Agriculture.—Main crop (metric tons, 1951): wheat 6,736,000; maize 2,583,000; barley 268,000; oats 526,000; rye 123,000; potatoes 3,342,000; (1950): rice 690,000; sugar, raw value 610,000; dry beans 118,000; cotton, ginned 3,000; cottonseed 7,000; flax fibre 4,800; linseed 12,000; hemp fibre 63,500; rapeseed 6,000; ground nuts 7,000; tobacco 67,000; olives 898,000; olive oil 150,000; oranges and tangerines 578,000; lemons, limes and other citrus fruits 332,000; grapes 5,990,000. Wine production (1950) 35,790,000 hl. Livestock (1949–50): cattle 8,331,000; sheep 10,376,000; pigs 4,375,000; horses 791,000; mules 391,000; goats 2,592,000; buffaloes 12,000. Livestock products (metric tons, 1950): wool, greasy basis 16,000; meat (1949) 511,000, including beef and veal 266,000, pork 197,000, mutton and lamb 48,000; butter 54,000; cheese 261,000; eggs (5,000,000,000). Fisheries, total catch (1949): 152,000 metric tons.

Industry.—Index numbers of employment in manufacturing (1947 = 100, 1950): 97. Fuel and power (1950): coal (metric tons) 1,031,000; lignite 780,000; gas: natural 504,000,000 cu.m., manufactured 1,584,000,000 cu.m.; electricity 24,684,000,000 kw.hr.; crude oil 8,200 metric tons. Raw materials (metric tons, 1950): iron ore 442,000; pig iron 572,000; steel ingots and castings 2,364,000; lead ore 63,000; lead, smelter production 37,400; zinc ore 180,000; zinc, smelter production 38,200; bauxite 153,000; aluminum 37,000; manganese ore 16,000; raw marble 247,000. Manufactured goods (metric tons, 1950): cement 5,504,000; cotton yarn 180,000; cotton piece goods 118,100; rayon filament yarn 50,300; rayon staple fibre 52,900; paper 538,000, including newsprint 92,000; motor cars 115,000 and commercial vehicles 13,400. Index numbers of industrial production (1938 = 100, 1950): general index 120; mining 101, of which solid fuels 199; manufacturing 115, of which food 134; textile 103; timber 58; paper 106; rubber 132; chemicals 121; oil and coal by-products 208; metallurgy 104; electricity and gas 159.

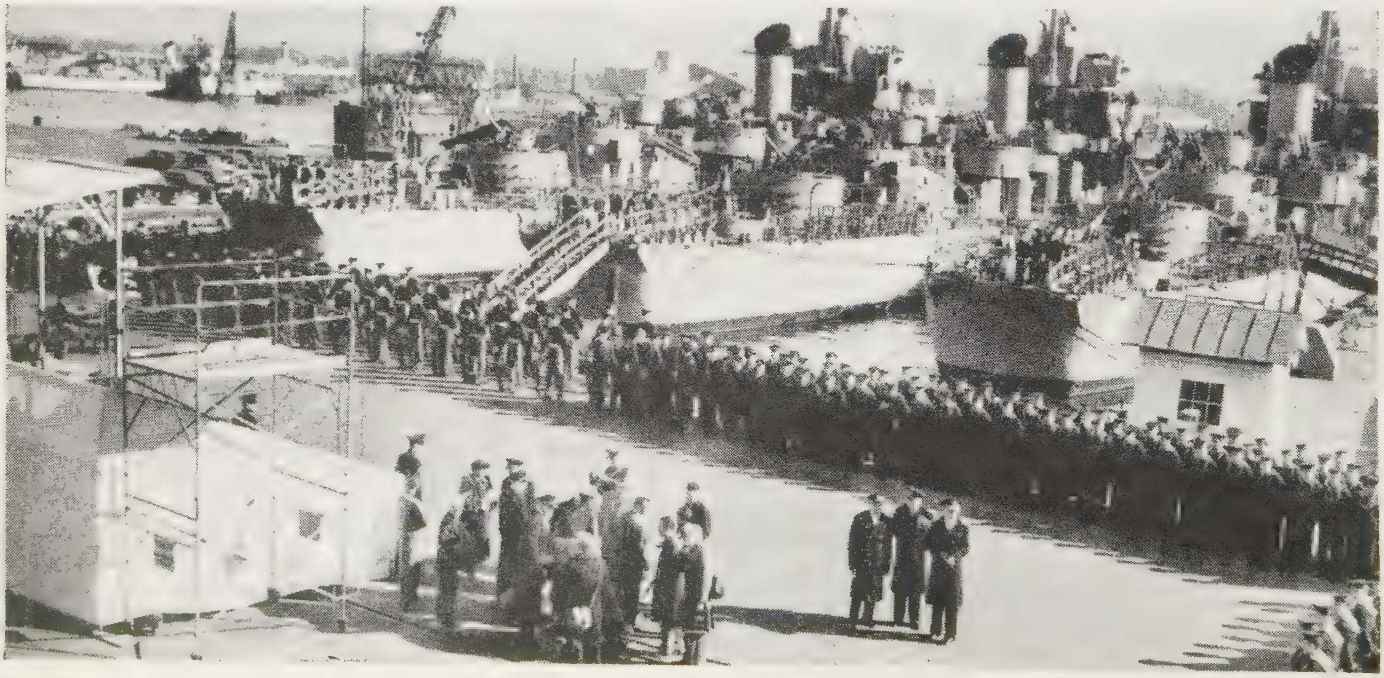
Jamaica. A British colony and dependencies in the Caribbean sea. Dependencies: Cayman Islands (100 sq.mi.; pop. 7,000) and Turks and Caicos Islands (166 sq.mi.; pop. 7,000), with local legislatures and a large degree of internal autonomy. Area (colony): 4,411 sq.mi. Pop.: (1943 census) 1,237,063; (1950 est.) 1,396,000, mainly of African descent. Chief towns (pop., 1943 census): Kingston (cap., 201,911); Spanish Town (12,007); Montego Bay (11,547). Governors (1951): Sir John Huggins and (from April) Sir Hugh Mackintosh Foot.

History.—A severe hurricane struck the island in Aug. 1951 killing 168 persons and doing damage to property estimated conservatively at £15,000,000. Emergency relief measures were put in hand on the following day, and the royal Welch fusiliers



TRANSFERRING three U.S. destroyer escorts to the Italian navy, under the terms of the Military Aid program. The ceremony took place at the naval shipyard in Norfolk, Va., early in 1951

GEN. MATTHEW B. RIDGWAY leaving his Tokyo headquarters three steps at a time after early staff discussions on the proposal for a truce in Korea. Ridgway succeeded Gen. Douglas MacArthur as Allied commander in Japan on April 11, 1951

gave assistance in feeding the destitute and opening communications to parts of the island which had become isolated. The British government gave £250,000 to the governor's relief fund which eventually exceeded £600,000 and included subscriptions from many colonial governments. Later, the British government gave £3,100,000 and a loan of £1,500,000 to assist in agricultural and housing reconstruction.

Sir Hugh Foot, the new governor, announced in opening the legislature in May that the government intended to establish agricultural and industrial development corporations. He emphasized that industrial harmony was required if the external capital that Jamaica needed for its development was to be attracted.

The Labour party, led by W. A. Bustamante, retained its working majority in the house of representatives. The legislature affirmed its acceptance of the desirability of federation of the British West Indies and recommended that a conference be held early in 1952 in London to examine financial and other implications. It also appointed a joint committee of both chambers to advise on the extent to which the federal form of government recommended by the standing closer association committee should be accepted. The governor held discussions with representatives of political interests on further constitutional changes in the colony.

Development of the bauxite industry proceeded. A third company, the Permanente Metals Incorporated, representing United States interests, made plans for extensive construction.

Education.—*Colony:* schools in 1950, 425 denominational and 253 government primary (208,500 pupils); 25 secondary (5,800 pupils). *Cayman Islands:* 13 primary (952 pupils). *Turks and Caicos Islands:* 12 primary (964 pupils); 1 government senior school.

Finance and Trade.—Currency: pound sterling with local notes. Budget (1951–52 est.): *Colony:* revenue £10,462,286; expenditure £10,049,129. *Dependencies:* revenue £85,000; expenditure £95,000. Foreign trade (colony, 1950): imports £20,813,000; exports £16,424,000. Principal exports: sugar, bananas, rum, cigars, pimento, ginger, coffee, citrus and cocoa. Sugar crop (1951) 268,000 tons; bananas 5,773,000 stems for export, rum 2,219,000 gal. Export from Turks and Caicos Islands, salt. (P. H-My.)

Japan. An island nation in the western Pacific, Japan was occupied by the Allied powers after its defeat in 1945, and was to resume full sovereignty when the peace treaty signed in 1951 should come into force. Japan consists of four principal islands, Honshu, Kyushu, Hokkaido and Shikoku (total area: 146,690 sq.mi.), and minor adjacent islands. Total population: (census, Oct. 1, 1950) 83,199,637; (Aug. 1951 est.) 84,400,000. Chief cities (1950 census): Tokyo (cap., 5,385,071); Osaka (1,956,136); Kyoto (1,101,854); Nagoya (1,030,635); Yokohama (951,189); Kobe (765,435). Principal religions: Buddhism, Shintoism. Emperor: Hirohito; prime minister in 1951: Shigeru Yoshida.

History.—*Inter-Allied Policies.*—During 1951 Japan continued under Allied military occupation. In April Gen. Douglas MacArthur, supreme commander for the Allied powers, was relieved by Pres. Harry S. Truman and replaced by Lieut. Gen. Matthew B. Ridgway. This step caused some initial uneasiness in Japan, which was later allayed by assurances that no changes in U.S. policies toward Japan were contemplated.

The signature of a Japanese peace treaty on Sept. 8 at San Francisco, Calif., represented the climax of a year of diplomatic effort by the United States. The terms of the treaty had been worked out by consultation with the United States' allies and with the Japanese government, during which Ambassador John Foster Dulles visited Japan, the Philippines, Australia, New Zealand, Great Britain and France. The United States sought a treaty of reconciliation, minimizing punitive and restrictive features, which would encourage Japan to make a positive and voluntary contribution to the strength of the non-Communist world. Many of Japan's neighbours were, however, concerned over the possible revival of Japanese militarism, aggression and economic competition. Agreement was eventually reached on a treaty which in general was satisfactory to the United States. Although denounced by the soviet delegate at San Francisco as a U.S. attempt to "enslave" Japan economically and to draw it into "aggressive military coalitions" directed against the U.S.S.R. and China, the treaty was signed by Japan and 48 other nations. The U.S.S.R., Czechoslovakia and Poland attended the San Francisco conference but did not sign the treaty. India and Burma declined to attend the conference, but were expected to conclude separate treaties with Japan. Because of disagreement among the other Allied powers, some of which recognized the nationalist government of China and some the Communist, neither Chinese government was invited to sign the treaty, in which, however, provision was made for protection of China's interests. (For an account of the conference and the full text of the treaty, *see* JAPANESE PEACE CONFERENCE.)

All occupation forces were to be withdrawn from Japan within 90 days after the treaty came into force. However, a supplementary treaty between Japan and the United States, also signed on Sept. 8, permitted U.S. forces to be stationed in Japan after this date, as a provisional measure for Japan's protection, with the expectation that Japan itself would increasingly assume responsibility for its own defense. The treaty contained no restrictions on Japan's domestic political institutions, economy or military establishment (though the maintenance of armed forces was still prohibited by the constitution of 1947). The treaty would come into force when ratified by Japan and by a majority, including the United States, of 11 principal Pacific countries.

On Aug. 30 the United States concluded a mutual defense treaty with the Philippines, and on Sept. 1 a similar treaty was signed with Australia and New Zealand. These served to allay apprehensions in these countries over a possible future threat by Japan to their security.

During 1951 the occupation continued its policy of gradually turning over more authority to the Japanese in preparation for the impending treaty, though it still kept close watch on Japanese government policies. This was especially true in the economic field, where the occupation urged the adoption of sound policies to curb inflation. During the year a number of Japanese trade and other missions visited various countries, and Japan became a member of the International Labour organization, the World Health organization and the United Nations Educational, Scientific and Cultural organization. United States economic aid to Japan, which since 1945 had totalled about $1,800,000,000, was terminated on June 30. The resulting strain on Japan's balance of payments was largely offset by the United States' assumption of part of the occupation forces' expenses in Japan, previously borne by the Japanese government. However, the cessation of direct U.S. aid precluded further additions to the Japanese counterpart fund, which had been set up with the proceeds from sales of goods supplied by the United States and used to finance long-term industrial development. It also meant that Japan would have to purchase materials on its own behalf, possibly on less favourable terms.

Domestic Affairs.—The Liberal party government headed by Prime Minister Shigeru Yoshida continued in office throughout the year, although the cabinet was reorganized in July and December. In November party strength in the lower house of the diet was: Liberal 284, People's Democratic 63, Right Socialist 29, Communist 22, Left Socialist 16, Farmers' Cooperative 8, Daisan club 7, Labour-Farmer 4, Social Democratic 4, Independent 4, with 25 vacancies. In local elections held in April the Liberal party gained at the expense of the Socialists, polling 25% of the vote for prefectural assemblymen against 15% for the Socialists. Although the Communist party was not formally outlawed, continuing arrests of its members diminished its strength and forced it to operate largely underground.

In May General Ridgway authorized the Japanese government to review ordinances issued by it since 1945 to carry out occupation directives. This aroused wide interest as it seemed to permit the termination or modification of various reform programs introduced by the occupation. The Japanese government acted promptly to review the "purge" orders, under which nearly 200,000 "militarists and ultranationalists" had been barred from positions in government, politics, business, labour and the press. By the end of the year about 160,000 of these had been "depurged," including Ichiro Hatoyama, former head of the Liberal party. Their re-entry into politics was expected to strengthen the forces of conservatism. The government was also working on new legislation to modify other measures inspired by the occupation. Reports that it intended to institute stricter control over labour unions and the press, to lower labour standards and to modify laws designed to prevent monopoly and assure free competition led to widespread public comment, both favourable and unfavourable. In October a United States official, while indicating that some occupation measures had served their purpose or proved impracticable, warned that the Japanese government should "proceed with the utmost care" in the economic field. During the year about 80% of the town and village police forces, set up under an occupation-sponsored reform in the interests of decentralization, were absorbed into the centrally controlled rural police force.

JAPANESE CHILDREN bowing low as the funeral cortege of the dowager empress Sadako, mother of Emperor Hirohito, passed by. The empress died in Tokyo on May 17, 1951

On Oct. 26 the Japanese house of representatives voted to ratify the peace treaty by 307 to 47, and the Japanese-U.S. security pact by 289 to 71. No Liberals, and very few Democrats, opposed either treaty. The Socialists were almost solidly against the security pact, but their vote on the peace treaty was divided; this issue, in fact, caused a formal split in the party. The somewhat smaller majority favouring the security pact reflected uncertainty as to whether the conditions on which U.S. troops would remain in Japan would be such as to impair Japan's sovereignty. The question of rearmament was much debated, some Democratic party leaders demanding an army of 200,000 or more, while Socialist and labour spokesmen opposed rearmament. The Liberals took no clear position, but Prime Minister Yoshida expressed the opinion that Japan could not under existing conditions afford to maintain armed forces, and stated in November that the government was not considering rearmament at that time.

Under the stimulus provided by the Korean war, industrial activity expanded rapidly in 1951, especially in metals and machinery; textiles remained below pre-World War II levels. The resulting inflationary pressures were only partially curbed by government measures. Demands for higher wages led to strikes in coal, electric power and other industries. Imports more than doubled during the first eight months of the year, as Japan had to purchase raw materials from abroad at prices inflated by world rearmament. Exports increased much more slowly, leaving a large passive balance of merchandise trade. The cessation of U.S. economic aid was cushioned in 1951 by dollar payments for maintenance of the occupation forces and by procurement orders for the Korean war, but United States advisers warned that Japan could compete successfully in world markets only by adjusting its domestic prices downward to international levels.

Education.—Nearly all Japanese adults are literate. Nine years of schooling are compulsory and free for boys and girls. Under the Allied occupation the schools were reorganized on the six-three-three system; *i.e.*, six years of primary school, three of junior high and three of senior high school. Above these are a four-year university course as well as various colleges and vocational schools. In 1948–49 expenditures on education were: national and local governments, 78,307,896,877 yen; private, 6,917,291,278 yen; total, 85,225,188,155 yen. In April 1951 there were 21,313 elementary schools, with 315,216 teachers and 11,419,267 pupils; 14,301 secondary schools, with 302,191 teachers and 7,319,978 pupils; 422 colleges and universities, with 44,570 teachers and 420,634 students.

Finance.—National government expenditures (general account) were budgeted for 1951–52 at 657,400,000,000 yen, a decrease of 7,200,000,000 yen from the previous year. The principal items, aside from general administration, were 110,000,000,000 yen for local government, 102,700,000,000 yen for war termination expenses and 100,100,000,000 yen for public works. Revenues were expected to balance expenditures, with 444,500,000,000 yen coming from taxes and stamp revenues and 151,500,000,000 yen from government enterprises. Total expenditures including the special accounts (government enterprises, etc.) were set at 1,506.300,000,000 yen, against 2,070,000,000,000 yen in the previous year. Supplementary appropriations later in the year brought the total ordinary budget up to 793,700,000,000 yen.

The Bank of Japan's outstanding note issue at the end of Aug. 1951 stood at 414,706,000,000 yen against 324,618,000,000 yen a year earlier. In the same period the bank's holdings of government securities decreased from 203,828,000,000 yen to 172,258,000,000 yen, while total deposits of commercial banks rose from 817,293,000,000 yen to 1,184,680,000,000 yen. The official value of the yen continued at 360 to the U.S. $1. Both prices and wages advanced during the year, as shown in Table I.

Trade and Transport.—Japanese imports shot upward in the first eight months of 1951, while exports rose more slowly, bringing the unfavourable trade balance to an unprecedented height. The position was eased somewhat, however, by United States procurement orders for the Korean war, which were paid for in dollars, and which from January through mid-Sept. 1951 amounted to about $258,000,000. The volume of Japanese exports was still far below prewar. In 1950 the United States provided 44% of Japan's imports, against 62% in 1949. Other leading suppliers in 1950, in order of importance, were Australia (8%), China (including Formosa), Malaya, the Philippines, India, Korea, Canada and Indonesia. Exports were more widely distributed, with the United States taking 22% of the total (against 15% in 1949); China (including Formosa) and Indonesia each 6%; the United Kingdom and Australia each 3%; and India, the Philippines, Korea and Malaya each 2%. Imports consisted chiefly of food and raw materials, notably textile fibres, while exports were mainly manufactured products, with textiles forming nearly half of the total.

Traffic on Japanese government railways was as follows in 1950 (monthly averages): passenger-kilometres, 5,750,295,000; revenue freight ton-kilometres, 2,559,582,000. Corresponding monthly averages for Jan.–Aug. 1951 were 6,264,062,000 and 2,869,738,000, respectively. In addition, private railways carried a monthly average of 40,586,000 ton-km. of freight in 1950 and 47,756,000 ton-km. in Jan.–Aug. 1951. Japan's merchant fleet was about half its prewar size, though it had increased by 53% since 1945. In Aug. 1951 the country had 2,338,693 gross tons of steel vessels of 100 tons or more. In the first eight months of 1951 approximately 30% of Japan's imports and 16% of its exports were carried in Japanese vessels.

Food and Agriculture.—Crops were good in 1951, although the output of staple foods was slightly below that of 1950. Production of staple foods in 1951 exceeded by nearly 10% the 1931–41 average, but population had increased by about 15% since 1940, and even before the war Japan produced only about 80% of its own food requirements. Food imports since the war accounted for a large part of its trade deficit (25% of total imports in the first half of 1951).

Table I.—*Price and Wage Indexes in Japan*

	Wholesale prices (1934–36 = 100)	Consumer prices (1948 = 100)	Wages in manufacturing (1934-36 = 100)
1948	12,790	104.5	9,200
1949	20,880	137.9	14,770
1950	24,550	128.4	17,940
1951, Jan.-Aug.	33,870	148.2	21,560

Table II.—*Japanese Trade*

(In thousands of U.S. dollars)

	Imports	Exports	Balance
1948	684,220	258,271	−425,948
1949	904,844	509,700	−395,144
1950	974,188	820,055	−154,133
1951, Jan.-Aug.	1,637,851	877,627	−760,224

Table III.—*Agricultural Production in Japan*

	Area (in hectares)		Production (in metric tons)	
	1951*	1950	1951*	1950
Rice	3,012,000	2,994,000	9,435,000	9,652,000
Wheat	735,000	764,000	1,487,000	1,338,000
Barley	420,000	429,000	896,000	1,053,000

Table IV.—*Industrial Production in Japan*

Monthly Average	1951 Jan.–Aug.	1950	1949
Coal (thousand metric tons)	3,449	3,205	3,172
Crude petroleum (kl.)	32,182	27,372	18,129
Gas (million cu. m.)	120.4	95.5	80.9
Electricity (million kw.hr.)	4,000	3,741	3,415
Pig iron (metric tons)	246,451	186,075	129,057
Steel ingots and castings (metric tons)	537,387	403,210	259,284
Refined copper (metric tons)	7,451	7,062	6,170
Cement (thousand metric tons)	520.4	371.9	273.1
Motor vehicles (units)	8,763	6,265	5,538
Ships (gross tons)	27,647	19,674	14,639
Cotton yarn (metric tons)	27,347	19,861	13,124
Rayon staple fibre (metric tons)	8,868	5,658	2,253
Cotton fabrics (thousand sq. m.)	148,801	107,425	68,611
Raw silk (kg.)	809,040	752,501	819,341
Wheat flour (metric tons)	113,408	140,622	146,434

Manufacturing and Mining.—Industrial activity continued to expand in 1951. By Aug. 1951 the index of industrial activity (utilities, mining and manufacturing), based on 1932–36 as 100, stood at 146.9, against 109.7 in Aug. 1950. Other Aug. 1951 indexes, on the same base, were as follows (Aug. 1950 figures given in parentheses): utilities 187.3 (175.7), mining 124.2 (106.0), all manufacturing 140.2 (94.6), metals 185.3 (132.4), machinery 216.2 (110.3), textiles 54.0 (43.3), chemicals 148.4 (122.4), food, beverages and tobacco 100.0 (90.7). Nonagricultural employment in Aug. 1951 was 20,120,000, a gain of 2,200,000 over Aug. 1950. In the same period the number of persons reported as totally unemployed decreased from 200,000 to 150,000. Average monthly wages in manufacturing, after dropping from an unusually high seasonal peak in Dec. 1950, rose to 12,257 yen in June 1951, then fell to 11,572 yen in August.

Japanese Peace Conference.

In formal ceremonies on Sept. 8, 1951, concluding the Japanese Peace conference in San Francisco, Calif., 48 Allied powers and Japan signed the 27-article treaty designed to terminate the state of war in the Pacific and to restore to Japan that country's full sovereignty. The Japanese Peace conference (Sept. 4–8, 1951) was convened by the United States, as co-sponsor with the United Kingdom, on the basis of invitations circulated to 54 Allied powers (excluding China) on July 20, 1951. Three invited states (Burma, India and Yugoslavia) declined the invitation. Of the states actually participating, only the Soviet Union, Czechoslovakia and Poland refused to accept the Anglo-American draft laid before the conference. The failure to invite China was explained by special circumstances, but Japan was left free to conclude separate bilateral treaties on substantially the same terms as the basic multilateral treaty with any Allied power nonsignatory to the San Francisco treaty.

On Aug. 13, 1951, the United States and the United Kingdom circulated the final text of a draft treaty of peace with Japan which reflected the results of extensive diplomatic negotiations conducted, on the initiative of the United States, by John Foster Dulles. The invitation extended by the United States stipulated that the conference in San Francisco was being convened "for Conclusion and Signature of a Treaty of Peace with Japan *on the terms of that text*" (italics supplied). The significance of this restricted definition of the purpose of the Japanese Peace conference was clarified when the Soviet Union unexpectedly accepted the invitation to attend. In a note to the Soviet Union on Aug. 16, the United States welcomed the Soviet participation, but "that there should be no possibility of subsequent misunderstanding," the note recalled the terms of the invitation and categorically declared: "The San Francisco Conference is not a Conference to reopen negotiations on the terms of peace. The terms of the prospective treaty have been arrived at by intensive multi-partite negotiations which, in effect, have constituted an eleven-month peace conference which began in mid-September 1950. . . . The Soviet Union has participated in this process both through oral exchanges of views and through the exchange between our Governments of not less than ten drafts or memoranda. . . . [It] has had an equal opportunity with the other Allies to shape the various revisions which have now resulted in the final August 13, 1951 text. . . . The United States will welcome the opportunity to explain fully at San Francisco the nature of the Treaty, and every nation represented will have opportunity for exposition and statement." The rules of procedure of the conference, drafted jointly by the United States and the United Kingdom, and formally adopted by the conference in its first plenary session on Sept. 5, 1951, were designed to ensure that its purposes and objectives as thus defined would not be nullified in the course of the deliberations.

The Japanese Peace conference was opened in the San Francisco Opera House on Tuesday evening, Sept. 4, 1951, with welcoming ceremonies during which Pres. Harry S. Truman delivered the principal address. Eight plenary sessions were held in the next three days, during which the conference (1) adopted its rules of procedure; (2) elected its officers: Dean G. Acheson (United States), president, and P. C. Spender (Australia), vice-president; and (3) heard statements on the treaty from the chief delegates of all but two of the participating states. A final signature ceremony concluded the deliberations of the conference on Saturday morning, Sept. 8. All conference proceedings were televised over a national television network inaugurated on that occasion, and were widely viewed throughout the United States.

The principal activities of the conference centred around the effort of the Soviet Union, supported by Czechoslovakia and Poland, (1) to prevent or delay adoption of the draft rules of procedure; and, when this effort failed, (2) to disrupt the conference order of business defined in article 17 of the rules. In challenging the draft rules of procedure, Andrei A. Gromyko, the chief Soviet delegate, (1) attempted to debate the propriety of excluding the Chinese People's republic from the conference, and (2) proposed the appointment of a conference committee to draft an alternate set of rules. These manoeuvres were defeated principally by rulings of the chair which were frequently challenged but sustained by overwhelming majorities. Subsequently, Gromyko attempted to force the conference to consider 13 specific Soviet amendments relating to the substantive terms of the draft treaty. This tactic, which would have reopened the preliminary diplomatic negotiations and might well have endangered the progress already attained, was defeated by the unwavering enforcement by the chair of article 17 of the rules. When the conference supported the chair by an overwhelming vote (46–3) on this critical issue, the last obstacle to the signature of the treaty was removed.

"JOE DECIDED TO ATTEND THE PARTY AFTER ALL," a 1951 cartoon by Justus of the *Minneapolis Star* (Minn.)

The Japanese Peace conference was doubly significant. Substantively, its endorsement of a treaty of peace with Japan recognized the postwar progress of that country, acknowledged its silent contribution to the United Nations efforts in Korea and opened the way to the establishment of a new political dispensation in the western Pacific. Procedurally, the unique and imaginative departure from the standard practices of conference diplomacy demonstrated that countries desiring to concert their political action in the face of Soviet opposition were entirely capable of devising suitable methods and measures.

(H. A. St.)

Japanese Peace Treaty.—The official text of the Treaty of Peace with Japan is set out below.

Treaty of Peace with Japan

Whereas the Allied Powers and Japan are resolved that henceforth their relations shall be those of nations which, as sovereign equals, cooperate in friendly association to promote their common welfare and to maintain international peace and security, and are therefore desirous of concluding a Treaty of Peace which will settle questions still outstanding as a result of the existence of a state of war between them;

Whereas Japan for its part declares its intention to apply for membership in the United Nations and in all circumstances to conform to the principles of the Charter of the United Nations; to strive to realize the objectives of the Universal Declaration of Human Rights; to seek to create within Japan conditions of stability and well-being as defined in Articles 55 and 56 of the Charter of the United Nations and already initiated by post-surrender Japanese legislation; and in public and private trade and commerce to conform to internationally accepted fair practices;

Whereas the Allied Powers welcome the intentions of Japan set out in the foregoing paragraph;

The Allied Powers and Japan have therefore determined to conclude the present Treaty of Peace, and have accordingly appointed the undersigned Plenipotentiaries, who, after presentation of their full powers, found in good and due form, have agreed on the following provisions:

Chapter I
PEACE
Article 1

(a) The state of war between Japan and each of the Allied Powers is terminated as from the date on which the present Treaty comes into force between Japan and the Allied Power concerned as provided for in Article 23.

(b) The Allied Powers recognize the full sovereignty of the Japanese people over Japan and its territorial waters.

Chapter II
TERRITORY
Article 2

(a) Japan, recognizing the independence of Korea, renounces all right, title and claim to Korea, including the islands of Quelpart, Port Hamilton and Dagelet.

(b) Japan renounces all right, title and claim to Formosa and the Pescadores.

(c) Japan renounces all right, title and claim to the Kurile Islands, and to that portion of Sakhalin and the islands adjacent to it over which Japan acquired sovereignty as a consequence of the Treaty of Portsmouth of September 5, 1905.

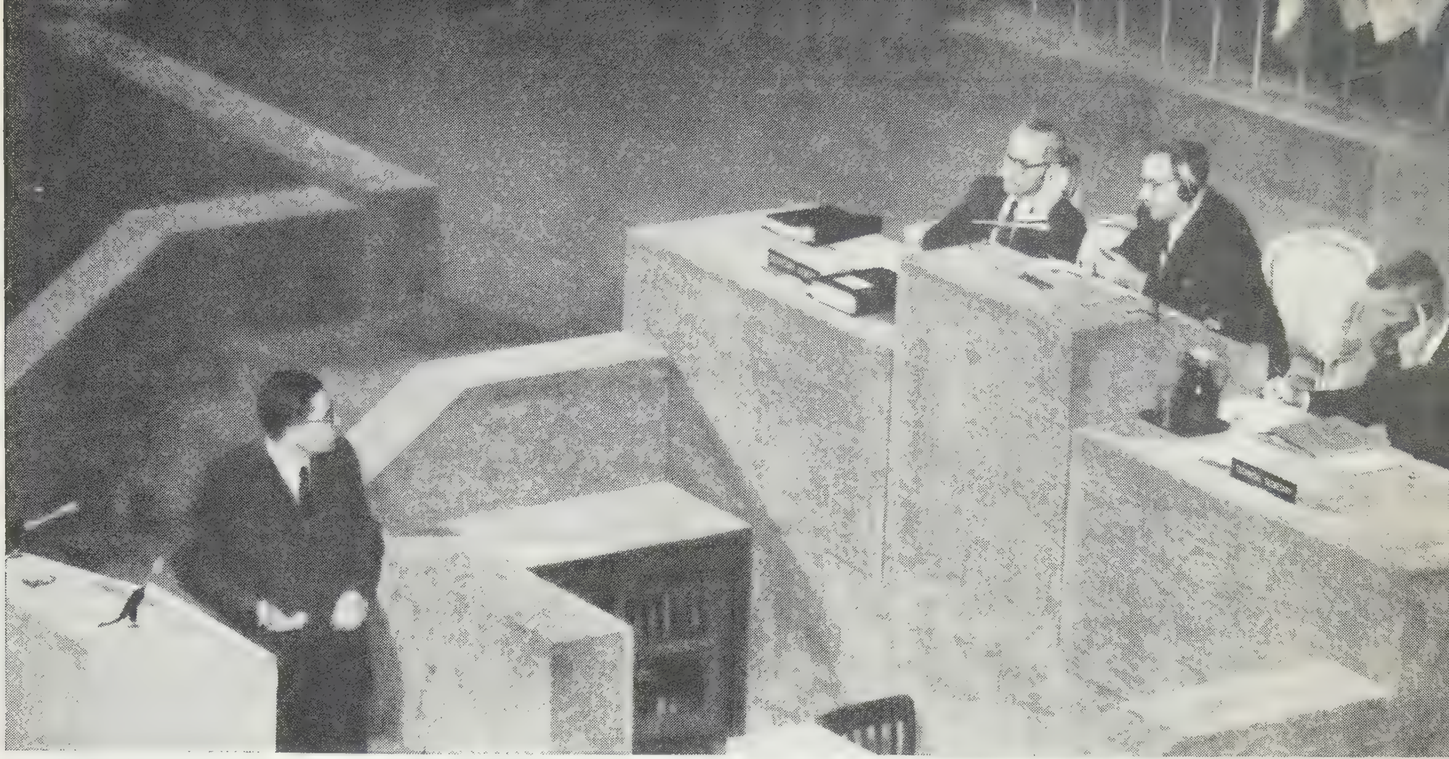
(d) Japan renounces all right, title and claim in connection with the League of Nations Mandate System, and accepts the action of the United Nations Security Council of April 2, 1947, extending the trusteeship system to the Pacific Islands formerly under mandate to Japan.

(e) Japan renounces all claim to any right or title to or interest in connection with any part of the Antarctic area, whether deriving from the activities of Japanese nationals or otherwise.

(f) Japan renounces all right, title and claim to the Spratly Islands and to the Paracel Islands.

Article 3

Japan will concur in any proposal of the United States to the United Nations to place under its trusteeship system, with the United States as the sole administering authority, Nansei Shoto south of 29° north latitude (including the Ryukyu Islands and the Daito Islands), Nanpo Shoto south of Sofu Gan (including the Bonin Islands, Rosario Island and the



ANDREI GROMYKO, soviet delegate to the Japanese Peace conference, clarifying a point with the chairman during his main address. The conference was held in San Francisco, Calif., in Sept. 1951

Volcano Islands) and Parece Vela and Marcus Island. Pending the making of such a proposal and affirmative action thereon, the United States will have the right to exercise all and any powers of administration, legislation and jurisdiction over the territory and inhabitants of these islands, including their territorial waters.

Article 4

(a) Subject to the provisions of paragraph (b) of this Article, the disposition of property of Japan and of its nationals in the areas referred to in Article 2, and their claims, including debts, against the authorities presently administering such areas and the residents (including juridical persons) thereof, and the disposition in Japan of property of such authorities and residents, and of claims, including debts, of such authorities and residents against Japan and its nationals, shall be the subject of special arrangements between Japan and such authorities. The property of any of the Allied Powers or its nationals in the areas referred to in Article 2 shall, insofar as this has not already been done, be returned by the administering authority in the condition in which it now exists. (The term nationals whenever used in the present Treaty includes juridical persons.)

(b) Japan recognizes the validity of dispositions of property of Japan and Japanese nationals made by or pursuant to directives of the United States Military Government in any of the areas referred to in Articles 2 and 3.

(c) Japanese owned submarine cables connecting Japan with territory removed from Japanese control pursuant to the present Treaty shall be equally divided, Japan retaining the Japanese terminal and adjoining half of the cable, and the detached territory the remainder of the cable and connecting terminal facilities.

Chapter III
SECURITY

Article 5

(a) Japan accepts the obligations set forth in Article 2 of the Charter of the United Nations, and in particular the obligations

(i) to settle its international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered;

(ii) to refrain in its international relations from the threat or use of force against the territorial integrity or political independence of any State or in any other manner inconsistent with the Purposes of the United Nations;

(iii) to give the United Nations every assistance in any action it takes in accordance with the Charter and to refrain from giving assistance to any State against which the United Nations may take preventive or enforcement action.

(b) The Allied Powers confirm that they will be guided by the principles of Article 2 of the Charter of the United Nations in their relations with Japan.

(c) The Allied Powers for their part recognize that Japan as a sovereign nation possesses the inherent right of individual or collective self-defense referred to in Article 51 of the Charter of the United Nations and that Japan may voluntarily enter into collective security arrangements.

Article 6

(a) All occupation forces of the Allied Powers shall be withdrawn from Japan as soon as possible after the coming into force of the present Treaty, and in any case not later than 90 days thereafter. Nothing in this provision shall, however, prevent the stationing or retention of foreign armed forces in Japanese territory under or in consequence of any bilateral or multilateral agreements which have been or may be made between one or more of the Allied Powers, on the one hand, and Japan on the other.

(b) The provisions of Article 9 of the Potsdam Proclamation of July 26, 1945, dealing with the return of Japanese military forces to their homes, to the extent not already completed, will be carried out.

(c) All Japanese property for which compensation has not already been paid, which was supplied for the use of the occupation forces and which remains in the possession of those forces at the time of the coming into force of the present Treaty, shall be returned to the Japanese Government within the same 90 days unless other arrangements are made by mutual agreement.

Chapter IV
POLITICAL AND ECONOMIC CLAUSES

Article 7

(a) Each of the Allied Powers, within one year after the present Treaty has come into force between it and Japan, will notify Japan which of its prewar bilateral treaties or conventions with Japan it wishes to continue in force or revive, and any treaties or conventions so notified shall continue in force or be revived subject only to such amendments as may be necessary to ensure conformity with the present Treaty. The treaties and conventions so notified shall be considered as having been continued in force or revived three months after the date of notification and shall be registered with the Secretariat of the United Nations. All such treaties and conventions as to which Japan is not so notified shall be regarded as abrogated.

(b) Any notification made under paragraph (a) of this Article may except from the operation or revival of a treaty or convention any territory for the international relations of which the notifying Power is responsible, until three months after the date on which notice is given to Japan that such exception shall cease to apply.

Article 8

(a) Japan will recognize the full force of all treaties now or hereafter concluded by the Allied Powers for terminating the state of war initiated on September 1, 1939, as well as any other arrangements by the Allied Powers for or in connection with the restoration of peace. Japan also accepts the arrangements made for terminating the former League of Nations and Permanent Court of International Justice.

(b) Japan renounces all such rights and interests as it may derive from being a signatory power of the Conventions of St. Germain-en-Laye of September 10, 1919, and the Straits Agreement of Montreux of July 20, 1936, and from Article 16 of the Treaty of Peace with Turkey signed at Lausanne on July 24, 1923.

(c) Japan renounces all rights, title and interests acquired under, and is discharged from all obligations resulting from, the Agreement between Germany and the Creditor Powers of January 20, 1930, and its Annexes, including the Trust Agreement, dated May 17, 1930; the Convention of January 20, 1930, respecting the Bank for International Settlements; and the Statutes of the Bank for International Settlements. Japan will notify to the Ministry of Foreign Affairs in Paris within six months of the first coming into force of the present Treaty its renunciation of the rights, title and interests referred to in this paragraph.

Article 9

Japan will enter promptly into negotiations with the Allied Powers so desiring for the conclusion of bilateral and multilateral agreements providing for the regulation or limitation of fishing and the conservation and development of fisheries on the high seas.

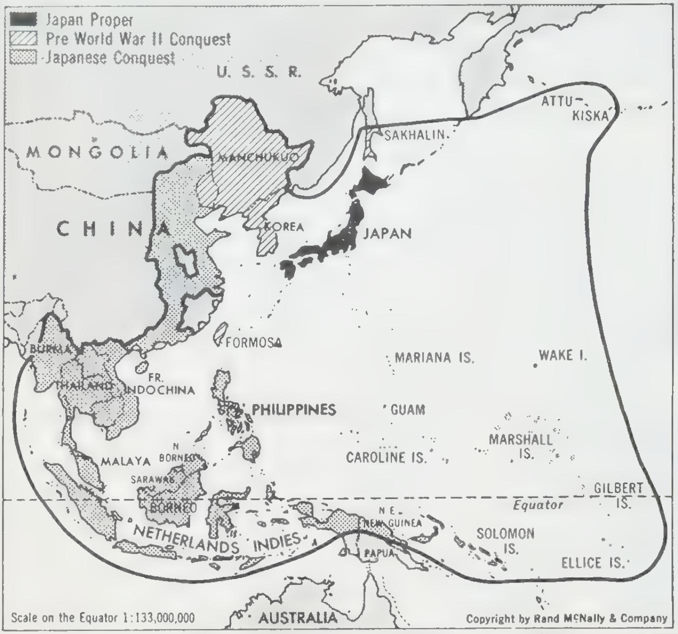
Article 10

Japan renounces all special rights and interests in China, including all benefits and privileges resulting from the provisions of the final Protocol signed at Peking on September 7, 1901, and all annexes, notes and documents supplementary thereto, and agrees to the abrogation in respect to Japan of the said protocol, annexes, notes and documents.

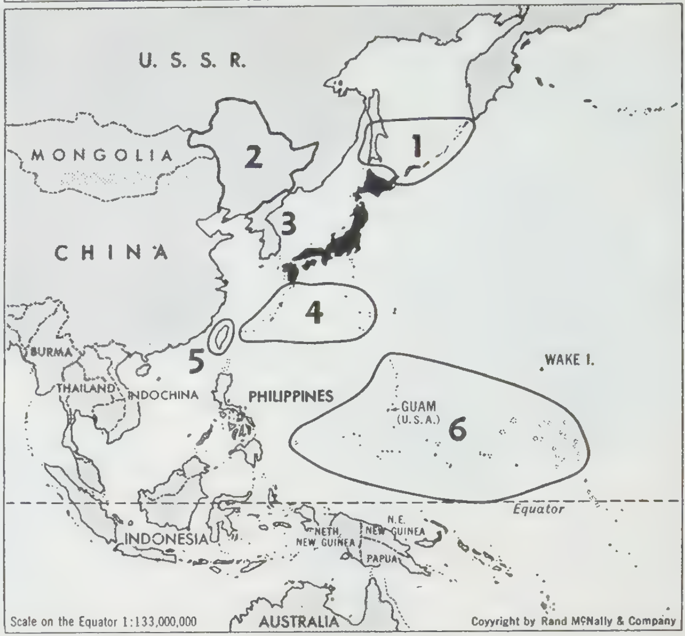
Article 11

Japan accepts the judgments of the International Military Tribunal for the Far East and of other Allied War Crimes Courts both within and outside Japan, and will carry out the sentences imposed thereby upon Japan-

JAPANESE EMPIRE & WORLD WAR II CONQUESTS



JAPAN UNDER THE PEACE TREATY-1951



DISPOSITION OF FORMER JAPANESE EMPIRE

1. Southern Sakhalin and Kuril Islands to U. S. S. R.
2. Manchuria to China (Communist)
3. Korea—Site of 1950-51 Conflict, to be unified, Independent State.
4. Ryuku and Bonin Islands to be under U. N. Trusteeship, administered by the United States.
5. Formosa, occupied by Chinese Nationalists, future undetermined.
6. Former Japanese mandate of Marianas and Marshall islands to be under U. N. Trusteeship, administered by the United States.

ese nationals imprisoned in Japan. The power to grant clemency, to reduce sentences and to parole with respect to such prisoners may not be exercised except on the decision of the Government or Governments which imposed the sentence in each instance, and on the recommendation of Japan. In the case of persons sentenced by the International Military Tribunal for the Far East, such power may not be exercised except on the decision of a majority of the Governments represented on the Tribunal, and on the recommendation of Japan.

Article 12

(a) Japan declares its readiness promptly to enter into negotiations for the conclusion with each of the Allied Powers of treaties or agreements to place their trading, maritime and other commercial relations on a stable and friendly basis.

(b) Pending the conclusion of the relevant treaty or agreement, Japan will, during a period of four years from the first coming into force of the present Treaty

(1) accord to each of the Allied Powers, its nationals, products and vessels

(i) most-favored-nation treatment with respect to customs duties, charges, restrictions and other regulations on or in connection with the importation and exportation of goods;

(ii) national treatment with respect to shipping, navigation and imported goods, and with respect to natural and juridical persons and their interests—such treatment to include all matters pertaining to the levying and collection of taxes, access to the courts, the making and performance of contracts, rights to property (tangible and intangible), participation in juridical entities constituted under Japanese law, and generally the conduct of all kinds of business and professional activities;

(2) ensure that external purchases and sales of Japanese state trading enterprises shall be based solely on commercial considerations.

(c) In respect to any matter, however, Japan shall be obliged to accord to an Allied Power national treatment, or most-favored-nation treatment, only to the extent that the Allied Power concerned accords Japan national treatment or most-favored-nation treatment, as the case may be, in respect of the same matter. The reciprocity envisaged in the foregoing sentence shall be determined, in the case of products, vessels and juridical entities of, and persons domiciled in, any non-metropolitan territory of an Allied Power, and in the case of juridical entities of, and persons domiciled in, any state or province of an Allied Power having a federal government, by reference to the treatment accorded to Japan in such territory, state or province.

(d) In the application of this Article, a discriminatory measure shall not be considered to derogate from the grant of national or most-favored-nation treatment, as the case may be, if such measure is based on an exception customarily provided for in the commercial treaties of the party applying it, or on the need to safeguard that party's external financial position or balance of payments (except in respect to shipping and navigation), or on the need to maintain its essential security interests, and provided such measure is proportionate to the circumstances and not applied in an arbitrary or unreasonable manner.

(e) Japan's obligations under this Article shall not be affected by the exercise of any Allied rights under Article 14 of the present Treaty; nor shall the provisions of this Article be understood as limiting the undertakings assumed by Japan by virtue of Article 15 of the Treaty.

Article 13

(a) Japan will enter into negotiations with any of the Allied Powers, promptly upon the request of such Power or Powers, for the conclusion of bilateral or multilateral agreements relating to international civil air transport.

(b) Pending the conclusion of such agreement or agreements, Japan will, during a period of four years from the first coming into force of the present Treaty, extend to such Power treatment not less favorable with respect to air-traffic rights and privileges than those exercised by any such Powers at the date of such coming into force, and will accord complete equality of opportunity in respect to the operation and development of air services.

(c) Pending its becoming a party to the Convention on International Civil Aviation in accordance with Article 93 thereof, Japan will give effect to the provisions of that Convention applicable to the international navigation of aircraft, and will give effect to the standards, practices and procedures adopted as annexes to the Convention in accordance with the terms of the Convention.

CHAPTER V

CLAIMS AND PROPERTY

Article 14

(a) It is recognized that Japan should pay reparations to the Allied Powers for the damage and suffering caused by it during the war. Nevertheless it is also recognized that the resources of Japan are not presently sufficient, if it is to maintain a viable economy, to make complete reparation for all such damage and suffering and at the same time meet its other obligations.

Therefore,

1. Japan will promptly enter into negotiations with Allied Powers so desiring, whose present territories were occupied by Japanese forces and damaged by Japan, with a view to assisting to compensate those countries for the cost of repairing the damage done, by making available the services of the Japanese people in production, salvaging and other work for the Allied Powers in question. Such arrangements shall avoid the imposition of additional liabilities on other Allied Powers, and, where the manufacturing of raw materials is called for, they shall be supplied by the Allied Powers in question, so as not to throw any foreign exchange burden upon Japan.

2. (I) Subject to the provisions of sub-paragraph (II) below, each of the Allied Powers shall have the right to seize, retain, liquidate or otherwise dispose of all property, rights and interests of

(a) Japan and Japanese nationals,

(b) persons acting for or on behalf of Japan or Japanese nationals, and

(c) entities owned or controlled by Japan or Japanese nationals, which on the first coming into force of the present Treaty were subject to its jurisdiction. The property, rights and interests specified in this subparagraph shall include those now blocked, vested or in the possession or under the control of enemy property authorities of Allied Powers, which belonged to, or were held or managed on behalf of, any of the persons or entities mentioned in (a), (b) or (c) above at the time such assets came under the controls of such authorities.

(II) The following shall be excepted from the right specified in subparagraph (I) above:

(i) property of Japanese natural persons who during the war resided with the permission of the Government concerned in the territory of one of the Allied Powers, other than territory occupied by Japan, except property subjected to restrictions during the war and not released from such restrictions as of the date of the first coming into force of the present Treaty;

(ii) all real property, furniture and fixtures owned by the Government of Japan and used for diplomatic or consular purposes, and all personal furniture and furnishings and other private property not of an investment nature which was normally necessary for the carrying out of diplomatic and consular functions, owned by Japanese diplomatic and consular personnel;

(iii) property belonging to religious bodies or private charitable institutions and used exclusively for religious or charitable purposes;

(iv) property, rights and interests which have come within its jurisdiction in consequence of the resumption of trade and financial relations subsequent to September 2, 1945, between the country concerned and Japan, except such as have resulted from transactions contrary to the laws of the Allied Power concerned;

(v) obligations of Japan or Japanese nationals, any right, title or interest in tangible property located in Japan, interests in enterprises organized under the laws of Japan, or any paper evidence thereof; provided that this exception shall only apply to obligations of Japan and its nationals expressed in Japanese currency.

(III) Property referred to in exceptions (i) through (v) above shall be returned subject to reasonable expenses for its preservation and administration. If any such property has been liquidated the proceeds shall be returned instead.

(IV) The right to seize, retain, liquidate or otherwise dispose of property as provided in sub-paragraph (I) above shall be exercised in accordance with the laws of the Allied Power concerned, and the owner shall have only such rights as may be given him by those laws.

(V) The Allied Powers agree to deal with Japanese trademarks and literary and artistic property rights on a basis as favorable to Japan as circumstances ruling in each country will permit.

(b) Except as otherwise provided in the present Treaty, the Allied Powers waive all reparations claims of the Allied Powers, other claims of the Allied Powers and their nationals arising out of any actions taken by Japan and its nationals in the course of the prosecution of the war, and claims of the Allied Powers for direct military costs of occupation.

Article 15

(a) Upon application made within nine months of the coming into force of the present Treaty between Japan and the Allied Power concerned, Japan will, within six months of the date of such application, return the property, tangible and intangible, and all rights or interests of any kind in Japan of each Allied Power and its nationals which was within Japan at any time between December 7, 1941, and September 2, 1945, unless the owner has freely disposed thereof without duress or fraud. Such property shall be returned free of all encumbrances and charges to which it may have become subject because of the war, and without any charges for its return. Property whose return is not applied for by or on behalf of the owner or by his Government within the prescribed period may be disposed of by the Japanese Government as it may determine. In cases where such property was within Japan on December 7, 1941, and cannot be returned or has suffered injury or damage as a result of the war, compensation will be made on terms not less favorable than the terms provided in the draft Allied Powers Property Compensation Law approved by the Japanese Cabinet on July 13, 1951.

(b) With respect to industrial property rights impaired during the war, Japan will continue to accord to the Allied Powers and their nationals benefits no less than those heretofore accorded by Cabinet Orders No. 309 effective September 1, 1949, No. 12 effective January 28, 1950, and No. 9 effective February 1, 1950, all as now amended, provided such nationals have applied for such benefits within the time limits prescribed therein.

(c) (i) Japan acknowledges that the literary and artistic property rights which existed in Japan on December 6, 1941, in respect to the published and unpublished works of the Allied Powers and their nationals have continued in force since that date, and recognizes those rights which have arisen, or but for the war would have arisen, in Japan since that date, by the operation of any conventions and agreements to which Japan was a party on that date, irrespective of whether or not such conventions or agreements were abrogated or suspended upon or since the outbreak of war by the domestic law of Japan or of the Allied Power concerned.

(ii) Without the need for application by the proprietor of the right and without the payment of any fee or compliance with any other formality, the period from December 7, 1941, until the coming into force of the present Treaty between Japan and the Allied Power concerned shall be excluded from the running of the normal term of such rights; and such period, with an additional period of six months, shall be excluded from the time within which a literary work must be translated into Japanese in order to obtain translating rights in Japan.

Article 16

As an expression of its desire to indemnify those members of the armed forces of the Allied Powers who suffered undue hardships while prisoners of war of Japan, Japan will transfer its assets and those of its nationals in countries which were neutral during the war, or which were at war with any of the Allied Powers, or, at its option, the equivalent of such assets, to the International Committee of the Red Cross which shall liquidate such assets and distribute the resultant fund to appropriate national agencies, for the benefit of former prisoners of war and their families on such basis as it may determine to be equitable. The categories of assets described in Article 14 (a) 2 (II) (ii) through (v) of the present Treaty shall be excepted from transfer, as well as assets of Japanese natural persons not residents of Japan on the first coming into force of the Treaty. It is equally understood that the transfer provision of this Article has no application to the 19,770 shares in the Bank for International Settlements presently owned by Japanese financial institutions.

Article 17

(a) Upon the request of any of the Allied Powers, the Japanese Government shall review and revise in conformity with international law any decision or order of the Japanese Prize Courts in cases involving ownership rights of nationals of that Allied Power and shall supply copies of all documents comprising the records of these cases, including the decisions taken and orders issued. In any case in which such review or revision shows that restoration is due, the provisions of Article 15 shall apply to the property concerned.

(b) The Japanese Government shall take the necessary measures to enable nationals of any of the Allied Powers at any time within one year from the coming into force of the present Treaty between Japan and the Allied Power concerned to submit to the appropriate Japanese authorities for review any judgment given by a Japanese court between December 7, 1941, and such coming into force, in any proceedings in which any such national was unable to make adequate presentation of his case either as plaintiff or defendant. The Japanese Government shall provide that, where the national has suffered injury by reason of any such judgment, he shall be restored in the position in which he was before the judgment was given or shall be afforded such relief as may be just and equitable in the circumstances.

Article 18

(a) It is recognized that the intervention of the state of war has not affected the obligation to pay pecuniary debts arising out of obligations and contracts (including those in respect of bonds) which existed and rights which were acquired before the existence of a state of war, and which are due by the Government or nationals of Japan to the Government or nationals of one of the Allied Powers, or are due by the Government or nationals of one of the Allied Powers to the Government or nationals of Japan. The intervention of a state of war shall equally not be regarded as affecting the obligation to consider on their merits claims for loss or damage to property or for personal injury or death which arose before the existence of a state of war, and which may be presented or re-presented by the Government of one of the Allied Powers to the Government of Japan, or by the Government of Japan to any of the Governments of the Allied Powers. The provisions of this paragraph are without prejudice to the rights conferred by Article 14.

(b) Japan affirms its liability for the prewar external debt of the Japanese State and for debts of corporate bodies subsequently declared to be liabilities of the Japanese State, and expresses its intention to enter into negotiations at an early date with its creditors with respect to the resumption of payments on those debts; to encourage negotiations in respect to other prewar claims and obligations; and to facilitate the transfer of sums accordingly.

Article 19

(a) Japan waives all claims of Japan and its nationals against the Allied Powers and their nationals arising out of the war or out of actions taken because of the existence of a state of war, and waives all claims arising from the presence, operations or actions of forces or authorities of any of the Allied Powers in Japanese territory prior to the coming into force of the present Treaty.

(b) The foregoing waiver includes any claims arising out of actions taken by any of the Allied Powers with respect to Japanese ships between September 1, 1939, and the coming into force of the present Treaty, as well as any claims and debts arising in respect to Japanese prisoners of war and civilian internees in the hands of the Allied Powers, but does not include Japanese claims specifically recognized in the laws of any Allied Power enacted since September 2, 1945.

(c) Subject to reciprocal renunciation, the Japanese Government also renounces all claims (including debts) against Germany and German nationals on behalf of the Japanese Government and Japanese nationals, including intergovernmental claims and claims for loss or damage sustained during the war, but excepting (a) claims in respect of contracts entered into and rights acquired before September 1, 1939, and (b) claims arising out of trade and financial relations between Japan and Germany after September 2, 1945. Such renunciation shall not prejudice actions taken in accordance with Articles 16 and 20 of the present Treaty.

(d) Japan recognizes the validity of all acts and omissions done during the period of occupation under or in consequence of directives of the occupation authorities or authorized by Japanese law at that time, and will take no action subjecting Allied nationals to civil or criminal liability arising out of such acts or omissions.

Article 20

Japan will take all necessary measures to ensure such disposition of German assets in Japan as has been or may be determined by those powers entitled under the Protocol of the proceedings of the Berlin Conference of 1945 to dispose of those assets, and pending the final disposition of such assets will be responsible for the conservation and administration thereof.

Article 21

Notwithstanding the provisions of Article 25 of the present Treaty, China shall be entitled to the benefits of Articles 10 and 14(a)2; and Korea to the benefits of Articles 2, 4, 9 and 12 of the present Treaty.

Chapter VI

SETTLEMENT OF DISPUTES

Article 22

If in the opinion of any Party to the present Treaty there has arisen a dispute concerning the interpretation or execution of the Treaty, which is not settled by reference to a special claims tribunal or by other agreed means, the dispute shall, at the request of any party thereto, be referred for decision to the International Court of Justice. Japan and those Allied Powers which are not already parties to the Statute of the International Court of Justice will deposit with the Registrar of the Court, at the time of their respective ratifications of the present Treaty, and in conformity with the resolution of the United Nations Security Council, dated October 15, 1946, a general declaration accepting the jurisdiction, without special agreement, of the Court generally in respect to all disputes of the character referred to in this Article.

CHAPTER VII

FINAL CLAUSES

Article 23

(a) The present Treaty shall be ratified by the States which sign it, including Japan, and will come into force for all the States which have then ratified it, when instruments of ratification have been deposited by Japan and by a majority, including the United States of America as the principal occupying Power, of the following States, namely Australia, Canada, Ceylon, France, Indonesia, the Kingdom of the Netherlands, New Zealand, Pakistan, the Republic of the Philippines, the United Kingdom of Great Britain and Northern Ireland, and the United States of America. The present Treaty shall come into force for each State which subsequently ratifies it, on the date of the deposit of its instrument of ratification.

(b) If the Treaty has not come into force within nine months after the date of the deposit of Japan's ratification, any State which has ratified it may bring the Treaty into force between itself and Japan by a notification to that effect given to the Governments of Japan and the United States of America not later than three years after the date of deposit of Japan's ratification.

Article 24

All instruments of ratification shall be deposited with the Government of the United States of America which will notify all the signatory States of each such deposit, of the date of the coming into force of the Treaty under paragraph (a) of Article 23, and of any notifications made under paragraph (b) of Article 23.

Article 25

For the purposes of the present Treaty the Allied Powers shall be the States at war with Japan, or any State which previously formed a part of the territory of a State named in Article 23, provided that in each case the State concerned has signed and ratified the Treaty. Subject to the provisions of Article 21, the present Treaty shall not confer any rights, titles or benefits on any State which is not an Allied Power as herein defined; nor shall any right, title or interest of Japan be deemed to be diminished or prejudiced by any provision of the Treaty in favor of a State which is not an Allied Power as so defined.

Article 26

Japan will be prepared to conclude with any State which signed or adhered to the United Nations Declaration of January 1, 1942, and which is at war with Japan, or with any State which previously formed a part of the territory of a State named in Article 23, which is not a signatory of the present Treaty, a bilateral Treaty of Peace on the same or substantially the same terms as are provided for in the present Treaty, but this obligation on the part of Japan will expire three years after the first coming into force of the present Treaty. Should Japan make a peace settlement or war claims settlement with any State granting that State greater advantages than those provided by the present Treaty, those same advantages shall be extended to the parties to the present Treaty.

Article 27

The present Treaty shall be deposited in the archives of the Government of the United States of America which shall furnish each signatory State with a certified copy thereof.

IN FAITH WHEREOF the undersigned Plenipotentiaries have signed the present Treaty.

DONE at the city of San Francisco this eighth day of September, 1951, in the English, French and Spanish languages, all being equally authentic, and in the Japanese language.

(There follow the signatures of the plenipotentiaries of these states):

Jerusalem. The capital of former Palestine, revered as a Holy City by Christians, Moslems and Jews alike, was divided by a demarcation line established in the Israel-Jordan armistice agreement of April 3, 1949. Pop. (1950 est.): Israel-held new city, 130,000; Arab-held old city, 30,000.

The two cities of Jerusalem, Arab and Jewish, remained rigidly divided in 1951. The growth of Jewish Jerusalem, outside the walls of the old city, proceeded rapidly. New quarters were springing up on the west and northwest and on the south, and by August the Jewish population was nearly double the number after the first cease-fire in 1948. The main immigration during the year was of oriental Jews from Iraq, Yemen and North Africa, and they were being settled in the former Arab and the new suburbs.

The Israeli government and the national bodies promoted a Jerusalem Economic corporation for the development of industries. New factories were erected in the Sanhedria quarter on the northwest. The most important of them was a shoe factory which would provide the needs of the country and also produce for export.

In Arab Jerusalem the most notable event was the murder in July of King Abdullah of Jordan in the Haram, the Moslem sacred area, as he was entering the mosque for prayers. The acting mayor of the Arab city in 1951 was Anton Atallah, a Christian Arab.

The 23rd Zionist congress, the first held in Jerusalem, gathered in August, and was attended by more than 300 delegates from all parts of the world. It took place in an assembly hall which was provisionally completed for the congress and became part of a convention centre for international gatherings.

The Zionist congress had as its main topic a fresh program for the world movement, proposing to define the aim as the ingathering of the exiled Jewish people in the land of Israel. The U.S. Zionists, who were second in number of delegates, objected, because they did not regard American Jews as in exile. In the end the resolution about aims was dropped. But it was agreed that the practical task of Zionism was to bring into Israel all those Jews who wished to live there.

Municipal elections were held in Jewish Jerusalem in Dec. 1950. They were fought with fierce party feeling. The system of proportional representation by lists, used for the election to the Israel parliament, was adopted and each of the chief parliamentary parties had its list. The election showed a swing to the right. The General Zionists (conservatives), the more right-wing Freedom party (Herut) and the Religious party gained at the expense of the Labour and Progressive parties. Daniel Auster, who had been mayor since 1949 and acting mayor for many years, elected as a Progressive, was unable to form a coalition; a new combination of General Zionists and the religious bloc elected as mayor S. Z. Shragai, an Orthodox Jew.

Jet Propulsion. Ten years of jet progress was marked on May 15, 1951, a decade having elapsed since the Gloster E28/39 experimental fighter type aircraft took to the air for 17 min. powered by the Whittle W1 turbine jet engine. At that time only a handful of men realized the tremendous implications involved in this technical revolution. By the end of World War II considerable headway had been gained for the new type of aircraft propulsion, but the great majority of experts still felt that the jet turbine engine was only suitable for high-speed, relatively short-range fighter aircraft. During 1951, however, a wide variety of jet-powered aircraft types were in operational service, quantity production or advanced development by the major air forces of the world. These included more than a dozen types of interceptor-fighters and fighter-bombers, several radar-equipped all-weather fighters, a medium-range bomber escort fighter, a high-speed four-engine reconnaissance bomber, a twin-engine attack bomber, several medium-range high-altitude four- or six-engine bombers, two eight-engine long-range strategic bombers and a large cargo plane. In the civil field, Oct. 19, 1951, saw the conclusion of a six-month program of proving flights of the de Havilland Ghost-powered Comet air liner by the British Overseas Airways corporation.

Turbojets.—In late 1949 the U.S. air force expressed a requirement for axial-flow turbojet engines of much greater thrust but with the same over-all dimensions as the engines it was then using. These included various models ("dash numbers") of the Allison J-35 and General Electric J-47, in the 5,000- to 6,000-lb. thrust bracket. The first to be completed was the Allison J35-AL-23 (actually planned by the company in 1948), which had the same diameter as earlier models, but was longer and weighed 50% more. Thrust was in the 9,000- to 10,000-lb. class, and designation was changed to J-71. The G.E. "advanced" J47-GE-21 was also accepted by the air force during 1951, and was designated J-73. Although the length was kept practically the same as in the earlier J-47s, the thrust was increased to more than 9,000 lb.

Definitely larger turbojets in the 9,000- to 12,000-lb. class were in limited production during 1951. These included the Westinghouse J40-WE-6 Goliath and the Pratt and Whitney J-57, power plant for two U.S. air force strategic bombers, the Boeing B-52, which had its first engine run-ups in late 1951, and the Consolidated Vultee YB-60. The J-40 appeared to be a scaled-up version of the efficient Westinghouse J-34 engine which powered several navy and air force fighters, a more powerful version of which was the J-46. Another big engine in this class was the General Electric XJ-53 which was under advanced test in 1951. In general, it represented a scaled-up version of the J-47. This ability to scale up turbojets is a unique feature of gas turbine power plants. Wright Aeronautical corporation went into limited production of the 7,200-lb. thrust J-65, its version of the Metro-Vick/Armstrong Siddeley Sapphire, to power the F-84F version of the Thunderjet and other air force fighters and bombers.

Avro Canada's Orenda axial-flow jet engine in the 7,000-lb. thrust class was test-flown in a North American F-86E Sabre, a considerable number of which were being built in Canada. Solar Aircraft of California developed an afterburner for the Orenda to give it increased bursts of power for take-off and combat. The Orenda also powered the Avro Canada CF-100 high-speed twin-jet fighter, and a modified version of the C-102 Jetliner civil transport.

In Great Britain turbojets in the 3,500- to 4,000-lb. thrust class (Goblin and Derwent) and 5,000- to 6,250-lb. class (Ghost, Nene and Tay, the latter similar to the Pratt and Whitney J-48) were in production for military and naval aircraft. The 7,000- to 7,500-lb. thrust Rolls Royce Avon and Armstrong Siddeley Sapphire were being prepared for large-scale production in several plants. Larger turbojets in the 10,000- to 15,000-lb. thrust bracket were in advanced development, including the Bristol Olympus, a new Rolls Royce "river-named" model, and a reported new axial-type jet engine by the de Havilland enterprises.

At the 1951 Farnborough display three small, high-speed Delta-wing experimental jets were shown, the Avro 707, Boulton Paul P-111 and Fairey FD-1. This configuration was expected to be used on most of the next crop of supersonic fighters, and on one large bomber. In November the world's first twin-jet Delta-wing fighter, the Gloster GA-5 powered by two Sapphires, made an initial flight of 35 min. It was an all-weather day and night fighter, similar in mission to the de Havilland 110 twin-jet, twin-boom fighter (two Avons), also unveiled during 1951.

CAMERA PATTERN made by a Hiller-Hornet as it rose in the air after dark. The two-passenger jet helicopter had two hand controls and required no foot pedals; top speed was 80 m.p.h. and the ceiling 12,000 ft.

Despite its late start, France became in 1951 the fourth largest producer of jet engines in the world (U.S., the U.S.S.R. and England were the first three, probably in that order). These engines included the Hispano-Suiza Nene 104 (quantity production) and more powerful Tay in limited production, both under Rolls Royce licence. In service tests were the French designed ATAR 101, Rateau SRA-101 and TGAR 1008—all in the 5,000- to 7,000-lb. thrust class. Much smaller engines (250- to 750-lb. thrust) were the Turbomeca ducted fan type units, some of which would be produced in the U.S. by Fairchild and Continental Motors.

During 1951 the U.S.S.R. had three turbojets in their production program—the M-45 Chelomey-Nene (based on the 25 Nene 1's sold by England to the Soviet Union in 1947), the M-012 (based on the Junkers Jumo 012) and the M-018 (based on the BMW 018). These latter two were advanced German projects taken over in 1945, and during the following six years soviet and German engineers had made considerable progress with them. The Chelomey-Nene went into production in 1949 and by 1950 was rated at 5,000-lb. thrust; during 1951 it reached 5,500 lb. It was the power plant of the fleet of several hundred MIG-15s in North Korea, and technical intelligence reports indicated that it was as good as British and U.S. developed Nenes (J-42). Later modifications were reported to bring the M-45 to 6,000- to 6,500-lb. thrust, similar to the Rolls Royce Tay (J-48). The M-012 had a rating of 6,500-lb. thrust and powered the Lavochkin twin-jet night fighter (La-16 or La-15 bis); with afterburner, thrust might be around 9,000 lb. The M-018 was a still larger engine, probably approaching 8,000-lb. thrust, and was the ultimate power plant of the first soviet jet bomber, the Tu-10, identified as in service in east Germany, and powered by two M-45 Chelomey-Nenes. By concentrating on these three basic jet engines the Russians were getting results far quicker than if they scattered their efforts over a dozen models or more in various power brackets.

Turboprops.—Steady, if not spectacular progress was made in the turbine-propeller field during 1951. Tests continued on the navy R3Y flying boat with two Allison T-40 (5,500 h.p.) units, the Convair-Allison Turboliner with two Allison T-38s (2,750 h.p.), and the Douglas A2D Skyshark (one T-40). The U.S. air force ordered a number of turboprop versions of the Convair T-29 navigation trainer, to be powered by a more advanced T-38 (two units at 3,000 h.p. each). Development continued on the turboprop Lockheed R70 Super-Constellation for the navy, to be powered by four Pratt and Whitney T-34 engines rated at 5,700 h.p., but expected to produce 6,000 h.p. by the time the R70 was in operation. The navy's Douglas R6D (DC-6A type) development was continued (four T-38s) and the air force Douglas C-124A strategic cargo plane, with four Pratt and Whitney T-34s. In the small turboprop field the 175-h.p. Boeing 502 (T-50) was the power plant of a Kaman helicopter which was under development.

In England the Vickers Dart-Viscount 700 continued its operational service tests in preparation for air line service during 1952. Development of the coupled Bristol Proteus (6,400 h.p.) continued. Eight of these units were scheduled for the huge Saunders-Roe Princess flying boat, which in October was moved outside her hangar to be finished—three were being built for the royal air force for strategic troop carrier service.

Compound Engines.—Installations of the Wright Turbo-Cyclone 18 R-3350 equipped with auxiliary gas turbines were made in the latest Lockheed Neptune P2V-5 antisubmarine patrol bomber, and were scheduled for some commercial Super-Constellation 1049s and the navy version, R-70-1. Maximum rating on this compound or "power recovery" engine was 3,750 h.p.

In England, the Napier Nomad composite engine was shown at Farnborough 1951 and marked another milestone in the development of aircraft power plants. The lower part of the Nomad comprised a gas turbine unit with axial and centrifugal compressors, and the upper part consisted of a 12-cylinder horizontally-opposed diesel engine. Its specific fuel consumption of 0.36 lb. was very low, making it highly suitable for long range civil and military aircraft. Its rating was 3,000 h.p. plus 320 lb. of jet thrust.

Nonturbine-Type Jet Engines.—The Curtiss-Wright propeller division's rocket section developed a satisfactory set of controls for the XLR-25 rocket engine, power plant for the Bell X-2 special research plane project, and also specified as the tail booster unit for the Republic high altitude interceptor, XF-91. The XLR-25 was the first rocket engine capable of being throttled like a jet. Thrust of the earlier plane-powering rocket engine, Reaction Motors model 6000-C4, was controlled by the number of cylinders fired. This unit was the power plant of the Bell X-1, first supersonic aircraft, and of the second version of the Douglas D-558-2, which also exceeded the speed of sound and which in Aug. 1951 attained a new high altitude record for all types of aircraft. The figure was believed to be above 77,000 ft. (more than 14 mi.), exceeding the previous official record of 72,394 ft. set by a man-carrying balloon in 1935.

Armstrong Siddeley revealed details on the new Snarler liquid propellent rocket motor, which weighed 215 lb. and developed a 2,000-lb. thrust at sea level. Like the Curtiss XLR-25, it could be switched on or off at will, and was used for ultra-rapid climbing or for performance boosts in combat or pursuit, doubling the power of the fastest jet fighters at high altitude. It was extensively tested on the Hawker experimental P-1072. The de Havilland Sprite, jet booster unit for the Comet, continued in production.

Large, very high power ramjets for guided missiles continued in development for the U.S. air force and navy. Small ramjets were installed in helicopters, one by McDonnell Aircraft for the navy and the other, the Hiller-Hornet, described as the first practical, low-cost helicopter. Jordan.

An independent Arab kingdom of the middle east, Jordan is bounded west by Israel, north by Syria, east by Iraq and southeast and south by Saudi Arabia. Area (including Arab Palestine): about 37,110 sq.mi. Pop. (1950 est.): 500,000. Capital: Amman (pop., 1951 est., 200,000). Language: mainly Arabic. Religion: Moslem (chiefly Sunni), Christian about 8% (chiefly Arab-speaking Greek Orthodox). Kings in 1951: Abdullah ibn Hussein and, from Sept. 6, Talal I (*q.v.*); prime ministers in 1951: Samir Pasha el Rifai and, from July 25, Tewfik Pasha Abu-Huda.

History.—During 1951 there were a series of sporadic incidents between Jordan and Israeli forces up and down the armistice frontier; and on July 11 the Jordan government protested to the United Nations alleging that the Israeli authorities were damaging Jordan economy by reducing the supply of water in the Jordan valley by pumping schemes in the upper reaches of the river. In August the Israeli government expressed its readiness to the British and the U.S. governments to negotiate an agreement with Jordan to regulate the water of the River Jordan.

In September the Jordan government was represented in Paris at a meeting to discuss the proposals of the Palestine conciliation committee for a settlement. The proposals were rejected by the Arab delegates and in November the commission announced the failure of its efforts.

On March 3 an agreement was reached between the British and the Jordan governments on a series of financial questions connected with the termination of the Palestine mandate. By it £2,500,000 were released from the Jordan account; and in November a financial and economic mission from Jordan visited London to discuss the possibilities of financing certain projects in Jordan which would create employment for the thousands of Arab refugees still in exile there.

These projects included the development of Aqaba port and its road and air communications with the interior; the erection of an oil refinery at Amman and the development of cotton cultivation in northern Jordan and of rice in the larger desert oases. In April Jordan became the second Arab country (the first was Egypt) to respond to the U.S. Point Four offer of financial and technical assistance for local developments; and in June a trade agreement was signed with Egypt for an exchange of goods between the two countries via Aqaba.

From May 15 to 27 King Abdullah visited the Turkish government at Ankara to strengthen the friendship between the two countries and on May 31 the Amir Abdul-Ilah, regent of Iraq, accompanied by the Iraqi prime minister, Nuri Pasha es Said, visited Amman.

On July 16 Riad es-Solh, a former prime minister of the Lebanon, was assassinated in Amman; and on July 20 King Abdullah himself was shot dead by an assassin when entering a mosque in the old city of Jerusalem. The murderer was shot dead and subsequently a series of arrests were made and the prisoners brought to trial by military court. Four were con-

ARAB LEGIONNAIRE weeping at the funeral of King Abdullah ibn Hussein of Jordan, who was assassinated in Jerusalem on July 20, 1951

demned to death and executed. Two more were also sentenced to the death penalty in their absence in Egypt; but subsequently the Egyptian government refused their extradition. After the king's murder, his younger son, the Amir Naif, in the absence in Switzerland of his elder brother, the Amir Talal, was proclaimed regent, and the cabinet of Samir Pasha el Rifai was replaced by a new government under Tewfik Pasha Abu-Huda. At the end of August there were new elections and on September 6 the Amir Talal returned from Switzerland and was proclaimed king in succession to his father. On Oct. 29 a new senate was appointed by royal decree; and in his speech from the throne, on Nov. 1, King Talal announced his country's absolute support of and sincere sympathy with the national aspirations of the Arab states. On Nov. 7 the new parliament unanimously approved the amendations of the constitution whereby the cabinet became responsible to parliament. On Nov. 10 King Talal went to Saudi Arabia on a state visit to King Ibn Saud. On Nov. 16 there were large demonstrations in Amman in sympathy with Egypt's independence day ceremonies. (*See* also ISRAEL; UNITED NATIONS.) (O. M. T.)

Education.—Government schools (1950) 328, pupils 56,425, teachers 1,462.

Finance and Banking.—Budget: (1949–50) balanced at 3,400,000 dinars; (1950–51 est.) revenue 3,300,000 dinars, expenditure 3,800,000 dinars. Monetary unit: Jordan dinar at par with the pound sterling and with an exchange rate of 0.357 dinars to the U.S. dollar.

Foreign Trade.—(1950) Imports 10,767,000 dinars; exports, including re-exports, 1,982,000 dinars. Export figures include bullion (silver coins exported to the United Kingdom amounting to 409,650 dinars in 1950). Main sources of imports (1950): U.K. 26.1%; Syria and Lebanon 12.3%; Italy 8.7%; Iran 8.0%. Main destinations of exports (excluding bullion): Syria 95.3%; Egypt 2.1%. Main imports: textiles 11.3%; sugar 6.9%; building materials 5.9%; motor vehicles and spare parts 3.5%. Main exports (excluding bullion): cereals 29.3%; raw wool 14.1%; vegetables 13.6%; olive oil 9.9%; fruits 7.8%.

Transport and Communications.—Roads (on eastern bank of the Jordan, all-weather, 1950): 395 mi. Licensed motor vehicles (Dec. 1950): cars 2,150; commercial 1,800. Railways (1950): 280 mi. There were two air transport companies, Arab Airways association and the Air Jordan. Miles scheduled per week by Arab Airways association (1950): 5,268.

Agriculture.—Main crops (metric tons, 1950): wheat 106,000; barley 41,000; millet 14,000; lentils 8,100; kersennah 8,200; tobacco 200; dry beans 2,000. Livestock (1949): goats 332,000; sheep 113,000; horses 3,000; asses 26,000; cattle 64,000; mules 2,000; camels 4,000.

Jouhaux, Léon (1879–), French trade union leader, was born at Paris, July 1. He started work at the age of 16 in a match factory at Pantin-Aubervilliers where his father was employed. In 1906 the Matchworkers' union selected him as delegate to the Confédération Générale du Travail (C.G.T.). In 1909 he was elected the C.G.T.'s treasurer and a few months later secretary general. From an ardent revolutionary he changed during World War I into a supporter of evolutionary socialism. In May, 1920 he organized a general strike aiming at the nationalization of industry and banking but failed. In 1936 Jouhaux declined a portfolio in the first Blum cabinet but joined the board of directors of the nationalized Bank of France. He was removed from this post by Edouard Daladier in 1938 because as secretary general of the C.G.T. he was responsible for a 24-hr. general strike organized against the introducing of the 48-hr. week in factories necessary for national defense. After the 1940 capitulation the Vichy government dissolved the C.G.T. and Jouhaux was interned at Evaux-les-Bains (Creuse) in Dec. 1941; later he was handed over to the Germans and interned at the Buchenwald concentration camp. He returned to France in May 1945 and became one of the secretaries general of the C.G.T., the other being Benoit Frachon, a Communist. In Dec. 1947 an anti-Communist C.G.T.-F.O. (Force Ouvrière) was formed and Jouhaux became its leader. From its inception he was a member of the administrative council of the International Labour office and from 1945 to 1948 vice chairman of its governing body. He was also active in the international trade union movement. After the schism within the Communist-led World Federation of Trade Unions, he was one of the founders of the International Confederation of Free Trade Unions (London, Nov. 1949). On Nov. 5, 1951, the Nobel committee of the Norwegian parliament awarded him the Nobel Peace prize.

Joy, Charles Turner (1895–), U.S. naval officer, was born in St. Louis, Mo., on Feb. 17. He graduated from the U.S. naval academy, Annapolis, Md., in 1916, and served throughout World War I on the battleship "Pennsylvania," flagship of the U.S. Atlantic fleet. He studied ordnance engineering at the University of Michigan, Ann Arbor, for two years ending in 1922. In 1937 he returned to the naval academy, first as executive officer and later as head of the ordnance and gunnery department.

Adm. Joy saw active service in the Pacific during most of World War II, ending as senior officer present afloat in Buckner bay in the Okinawa landings, March 25–June 8, 1945. He was made a rear admiral in 1944 and vice admiral in Aug. 1949, at which time he was assigned to command of the U.S. naval forces in the far east. He was senior member of the United Nations delegation that during the last half of 1951 engaged in negotiations with the Communists for a truce in the Korean fighting. (*See* KOREAN WAR.)

Judaism. The outstanding event in Orthodox circles in the United States during 1951 was the announcement of a $60,000,000 medical school of the Yeshiva university, New York, N.Y., which was to be integrated with the city's hospitals. Its significance religiously was that it would enable its students and teaching personnel to observe the Sabbath, the festivals and the practices of Judaism, and would foster in them an appreciation for religious values.

The erection and dedication of the House of Living Judaism in New York city spelled the intensification and expansion of the religious and educational program of liberal Judaism.

The favourable response of the World Union for Progressive Judaism to the request of the liberal Jews of Bombay, Ind., for rabbinical assistance for a brief period was noteworthy. It indicated a sense of obligation which groups of Jews were beginning to show for the spiritual development of their less fortunate kin.

In Israel the High Synod (Beth Din Hagadol) was named and was attempting to deduce how particular actions made necessary by contemporary life and conditions could be brought within the scope of biblical and talmudic stipulations and succeeding rabbinic authorities.

There was not much change in the over-all picture of the status of Jewish religious life and thought in various countries. In the western hemisphere and in Europe progress was reported by all groups. The evidence, however, was inconclusive. The criteria used were membership increases, greater contributions and the erection of more and costlier edifices for worship. A measurement of religious traits, such as the genuineness of articulated religious beliefs, the extent of one's awareness of the presence of the Divine in life, and the feeling of at-homeness in a cosmos which scientists aver is indifferent to man's fate and destiny had not only not been devised but was not even envisaged.

In European lands the fear of an outbreak of war and the past experience of the added impact which it always had on the Jewish minority was so disturbing to the Jews of all countries (except Switzerland) that whatever time and thought could be spared by the multitudes from their preoccupation with earning a livelihood was given to the speculation of discovering a haven should the storm break out. The reaction of others to such a possibility was to live in and enjoy the present.

In Israel was observed a notable manifestation of prophetic religion. It was evidenced not in punctilious observance of rites and ceremonies, but in willingness to share the little which the inhabitants had, shelter and food, with coreligionists, no matter from what backward countries they hailed, how broken in body they were or how different their colour and culture were from those of the older inhabitants. Juvenile Delinquency.

The significant fact in the field of treatment of the child delinquent in 1951 was the lowered population in correctional institutions for both girls and boys. Massachusetts reported for girls a decrease of 40%. New Jersey closed two cottages in the Trenton State Home for Girls. California's decrease for its institution for delinquent girls at Ventura was 17%. The New England states and New York and Pennsylvania showed similar decreases for boys. As the number appearing before juvenile courts in 1951 was approximately the same as for 1950, the rate of lowered commitments to state institutions must be explained by change of policy and the increased activity of voluntary community agencies for the care of wayward youth.

The outstanding event of the year for consideration of the treatment of juvenile delinquents was the Berkshire International forum held in Canaan, N.Y. Fifty specialists in child welfare met for a week in June, under the chairmanship of Leonard W. May. Twelve members of the United Nations secretariat took part. The conference represented the approaches of psychiatry, case work, sociology, education, juvenile court, the law and institutional and government administration. A statement of policy and principles was formulated as "a progressive guide to the development of treatment practice by institutions for juvenile delinquents." The complete text was published in *Focus,* the magazine of the National Probation and Parole association, Nov. 1951. Professionally skilled diagnostic study of the needs and nature of the individual child was declared essential. "We unanimously condemn any philosophy of taking social vengeance upon delinquent children, as any reliance upon a philosophy of punishment." Research and public information were stressed.

The National Council of Juvenile Court Judges in 1951 presented in their *Year Book* a 47-page review of the significant decision affecting juvenile courts by Judge Bernard J. Roetzel of Akron, O.

Reviewing the regional conferences of probation officers held throughout the country, in Virginia, Connecticut, Michigan and other places, the significant trend was the use of scientific method and trained personnel to solve the problems of child behaviour. (*See* also RELIGIOUS EDUCATION.)

FILMS OF 1951.—*Crossroads of Life* (United Nations, Film Division). (M. V. W.)

Kansas.

Kansas was admitted to the union as the 34th state on Jan. 29, 1861. It is frequently called the "Sunflower state." The total area is 82,276 sq.mi. of which 82,108 sq.mi. are land. Kansas is located in the geographical centre of the continental United States and is the geodetic centre of the North American continent, from which all geodetic surveys are made. The population was estimated by the U.S. census bureau in 1951 at 1,942,060, the highest ever recorded in the state. The 1950 census showed a population of 1,905,229. The population was about equally divided between urban and rural. Capital: Topeka, pop. 78,791 (1950). The two largest cities in 1951 were Wichita, 168,279 and Kansas City, 129,553.

History.—The principal state officials in 1951 were: Edward F. Arn, governor; Fred Hall, lieutenant governor; Paul R. Shanahan, secretary of state; George Robb, auditor; Adel Throckmorton, superintendent of public instruction; Frank Sullivan, insurance commissioner; Harold R. Fatzer, attorney general; Ferdinand Voiland, state printer; Richard Fadely, treasurer. The 1951 legislature provided for a new commission to reorganize the fiscal policies of the state budget.

Education.—As of Sept. 30, 1950, there were 2,558 one-teacher schools in operation with an enrolment of 28,046. The enrolment (1950) in elementary and secondary schools was 336,871 (90,018 in secondary schools). There were 17,563 teachers employed in the state. The combined enrolment of the four state colleges and one university was 15,181. The populations of other state institutions were as follows: school for the blind 85; school for the deaf 238; Kansas technical institute (Negro) 208.

Social Insurance and Assistance, Public Welfare and Related Programs.—The populations of the state's welfare institutions in 1951 were as follows: hospitals for epileptics 721; state training school 1,401; hospitals for tuberculars 373; orphans and receiving home 165; hospitals for insane 4,703; industrial school for girls 99; industrial school for boys 135; state penitentiary 1,418; industrial farm for women 41; reformatory for boys 428. The 1951 legislature appropriated approximately $21,263,000 for public welfare institutions and correctional institutions. Public assistance expenditures of all types in 1950 totalled $33,290,248.44 including old-age assistance $24,233,894; needy blind $427,949; dependent children $5,178,762. There were 41,188 persons receiving public welfare assistance in 1950.

Communications.—As of June 30, 1951, the total length of primary and secondary roads in the state was 133,197 mi. The state maintained 9,425 mi. of rural and 512 mi. of urban highways, the remainder being controlled by the respective municipalities. The total highway expense for 1950 was $34,864,674 and highway expenditures to Sept. 1951 totalled $22,601,915. Kansas had 8,415 mi. of railroads. There were 74 privately owned and 1 Civil Aviation administration airports.

Banking and Finance.—The budget for the biennium 1952 and 1953 to-

GAS COMPANY EMPLOYEE at Kansas City, Kan., after diving in flood waters in an attempt to reach a shut-off valve in July 1951. Partial gas service could not be restored without endangering flooded areas unless the valves for those areas were first shut off

talled $65,167,483, an increase of $7,124,677 over the previous budget of 1950 and 1951. Sales tax (2%) collected for 1951 fiscal year totalled $44,813,256. The income tax for 1951 totalled $13,946,274. The bonded indebtedness (soldier's bonus) totalled $3,250,000 as of June 30, 1951.

At the same period of the year there were 174 national banks, 437 state banks and 3 trust companies. The deposits in the national banks and insured state banks totalled $1,447,813,334.11 as of that date.

Agriculture.—Kansas agricultural production during 1951 was below that of 1950 and below the average of recent years. Livestock production, particularly meat animals, was higher than in 1950, but aggregate crop production was sharply less than a year earlier. The wheat crop was the poorest in more than a decade, and the corn, oats and barley crops were also below average. The livestock inventory numbers on Jan. 1, 1951, were: cattle and calves 3,917,000; hogs 1,504,000; sheep and lambs 694,000; chickens 14,749,000.

Manufacturing.—In 1951 there were nearly 3,000 manufacturing and processing plants engaged in the production of more than 1,000 items. The total value added by the manufacturer was approximately $500,000,000.

(Ed. F. A.)

Mineral Production.—Table II shows the tonnage and value of those minerals produced in the state in 1949 whose values exceeded $100,000, and the corresponding data for 1950, so far as they were available.

Table I.—*Principal Crops of Kansas*

Crop	1951	1950	Average 1940–49
Wheat, bu	126,113,000	178,060,000	193,512,000
Corn, bu.	58,296,000	89,495,000	68,239,000
Sorghum grain, bu.	57,310,000	44,689,000	22,479,000
Oats, bu.	14,346,000	20,160,000	34,735,000
Barley, bu.	1,547,000	3,683,000	12,132,000

Kashmir.

Kashmir is a native state in the Indian subcontinent, bounded northwest, northeast and east by Afghanistan, Sinkiang province of China and Tibet respectively. Area (including Jammu and frontier districts): 82,258 sq.mi. Pop.: (1941 census) 4,021,616; (1950 est.) 4,370,000. Ruler, Lieut. Gen. Maharaja Sir Hari Singh.

History.—The endeavours of Sir Owen Dixon in 1950 to arrive at an agreed settlement over Kashmir between India and Pakistan had met with the same fate as those of his predecessors. The United Nations security council, however, was determined not to give up the attempt without a further effort, and it appointed in his place Frank Graham, who had been in charge of defense and manpower in the U.S. department of labour during World War II. His instructions were "to proceed to the subcontinent and after consultation with the governments of India and Pakistan to effect the demilitarization of Kashmir on the basis of the U.N. Commission for India and Pakistan resolutions of Aug. 13, 1948, and Jan. 1949."

Meanwhile, Sheikh Abdullah, the *de facto* prime minister of Kashmir, was acting as though the ultimate fate of the country was already a *fait accompli.* A drive for the expropriation of feudal holdings had resulted in the confiscation of about 9,000 landlord's estates without compensation. In the future no individual was to hold more than 22½ ac., to be cultivated in person, and in this way about 30,000 peasants obtained titles to their lands. In October orders were issued for convening a constituent assembly of 74 members, which claimed to be a sovereign body representing the people of Kashmir. Its primary duty would be to draw up a constitution, though Jawaharlal Nehru declared that it would not be competent to make a valid decision on the question of accession to the Indian union. These proceedings aroused intense resentment in Pakistan; in the words of the foreign minister, Zafrullah Khan, "the proposal to convene a constituent assembly was not only a prejudicial act, but it was deliberately designed to bypass the United Nations and to prevent the holding of a free and impartial plebiscite." As a preliminary to the holding of a plebiscite, Sheikh Abdullah demanded the evacuation of the whole of the Pakistan army of occupation and the liquidation of the Azad Kashmir forces; only after this had been done would the bulk of the Indian troops be withdrawn, the minimum necessary to maintain order and ward off invasion being retained.

Under the circumstances, there was little that Graham could do, and he returned about a month before the time originally fixed to report upon the situation to the security council. The council, however, instructed him to continue his efforts, and it was understood that he would make a further endeavour to bring them together during the forthcoming meeting of the United Nations. Both sides agreed that the question of the future of Kashmir was one that could only be settled by the people of that country themselves; the difference of opinion between them was upon the question of the procedure to be adopted in order that these views might be impartially ascertained.

(H. G. Rn.)

Kefauver, Estes

(1903–), U.S. senator, was born on July 26 in Madisonville, Tenn. He attended the University of Tennessee, Knoxville, and Yale law school, where he received a law degree in 1927. He practised law in Chattanooga for about ten years, and in 1939 was appointed state commissioner of finance and taxation. In May of that year he was elected to fill out an unexpired term in the U.S. congress, left vacant by a death, and he eventually served five terms in the house of representatives. In congress he was increasingly concerned with modernizing the machinery of government. He introduced measures to curb monopoly, and in foreign affairs was generally an administration supporter. He campaigned for the U.S. senate in 1948 in spite of opposition from the regular Democrats under "Boss" E. H. Crump, and won the Democratic nomination and the election.

Senator Kefauver gained unusual attention during 1951 as chairman of the U.S. senate crime investigation committee, whose hearings, which were televised, attracted such huge metropolitan audiences that the daily routines of whole cities were affected. The committee's reports gave detailed evidence of political-criminal alliances reaching into city, state and federal offices; described gambling as a $20,000,000,000-a-year industry; urged laws to curb rackets; and asked for a permanent nonpartisan commission to police the crime-corruption situation. Senator Kefauver himself, however, indicated a desire to turn from this investigation to devote more attention to foreign affairs. He was mentioned from time to time as a possible presidential candidate for 1952.

Kentucky. An east south-central state of the United States admitted to the union on June 1, 1792, Kentucky is popularly called the "Blue Grass state." Area: 40,395 sq.mi., of which 531 sq.mi. are water. The population by the 1950 official census was 2,944,806, a gain of 3.5% in a decade. The per cent urban in 1950 was 33.5 by the old definition and 36.8 by the new definition. The capital, Frankfort, had a population of 11,916. Other large cities included: Louisville (369,129), Covington (64,452), Lexington (55,534), Owensboro (33,651), Paducah (32,828), Ashland (31,131), Newport (31,044).

History.—As a result of the election of Nov. 6, 1951, Gov. Lawrence W. Wetherby scored a decisive victory over his opponent, Republican Eugene Siler. The Democrats also won all other state-wide races and clinched a three to one majority for the 1952 general assembly. The state officers elected in 1951 for four-year terms, in addition to Governor Wetherby, were: lieutenant governor, Emerson Beauchamp; secretary of state, Charles K. O'Connell; attorney general, J. D. Buckman; auditor, T. Herbert Tinsley; treasurer, Pearl F. Runyon; superintendent of public instruction, Wendell P. Butler; commissioner of agriculture, Ben S. Adams; and clerk, court of appeals, Acree Austin. In the 1951 election the voters overwhelmingly defeated an amendment providing that more than two amendments could be submitted at any one election.

Education.—Public schools in 1950–51 numbered 4,550 elementary schools, 113 high schools and 427 combined elementary and high schools. Total public-school pupils numbered 563,398, and full-time teachers, exclusive of principals, supervisors, helping teachers, etc., numbered 18,000. The state per capita fund was $20,212,500 and the equalization fund was $4,287,500. The per capita expenditure was $152 for all purposes per pupil in average daily attendance.

Social Insurance and Assistance, Public Welfare and Related Programs.—Unemployment insurance paid for the 1951 fiscal year amounted to $10,568,314, or an average of $16.05 for 666,462 weeks. Old-age assistance went to an average of 67,689 monthly for a yearly total of $16,709,771. Aid to dependent children amounted to $10,756,152 for an average monthly number of 60,952. Aid to the blind amounted to $693,160 for a monthly average of 2,438 recipients. The population of the correctional institutions on Sept. 30, 1951, was: reformatory, 1,917; penitentiary, 1,046; women's prison, 64; houses of reform: boys, 305, girls, 75.

Communications.—As of June 30, 1951, the Kentucky department of highways had under maintenance 14,192 mi. of road. During the fiscal year it placed 87 new bridges costing $6,780,000 under contract. On June 30 two toll bridges—Owensboro and Newport—were operated by public authority. Four other toll bridges over the Ohio river—Louisville, Covington, Portsmouth and Greenup—were privately owned. Road fund receipts for the fiscal year ending June 30, 1951, amounted to $61,977,840. Expenditures for that period amounted to $63,674,440. The surplus as of June 30, 1951, was $2,157,608.

Table I.—*Principal Crops of Kentucky*

	1951	1950	Average 1940–49
Corn, bu.	80,662,000	78,810,000	76,584,000

Source: U.S. Department of Agriculture.

Banking and Finance.—On June 30, 1951, there were 92 national banks in Kentucky with total assets of $660,272,000 and 293 state banks and trust companies with resources of $1,002,285,106.04. Preliminary returns indicated a total tax revenue for the fiscal year ending June 30, 1951, of $121,943,904.96, and a nontax revenue of $58,086,997.68. The general fund increased about 17% over the previous year and the road fund increased 11.9%. The individual income tax yielded $14,789,331 and the corporation income tax brought $9,399,527. The distilled spirits production tax revealed the highest increase over the previous year, 66%, and amounted to $6,282,752. The two-cent a pack levy on cigarettes brought $5,110,037. The seven-cent a gallon tax on motor fuels yielded $39,568,059; of that amount $11,314,441 went to the rural-road program. The governor's budget recommendation assigned 54.5% of the general fund for 1950–51 to education, 31.5% to welfare and 12.4% to general government, including 3.9% to the judicial system.

Agriculture.—Preliminary reports indicated that Kentucky farms totalled 218,513 in 1950 as compared with 238,501 in 1945. With 1935–39 as a base Kentucky farms increased 222% in value, the highest increase in the country.

Manufactures.—From April 1, 1950, to March 31, 1951, 40 new industries were located or started construction of new plants. In a year, according to the state chamber of commerce, $1,054,059,404 were added to the industrial investment. In 1947 2,244 establishments averaged 129,504 employees who received $304,668,000 in salaries and wages. The value added by their efforts was $740,772,000. The leading groups in value added were: food and kindred products ($288,814,000), metals, lumber, machinery, chemicals, tobacco, apparel, printing, publishing and paper, petroleum and coal, stone, clay and glass and textile-mill products ($12,774,000). (W. W. Js.)

Mineral Production.—Table II shows the tonnage and value of those mineral commodities produced in the state in 1949 whose values exceeded $100,000, and the corresponding data for 1950, so far as they were available at the close of 1951.

Table II.—*Mineral Production of Kentucky*

Kimball, Dan A. (1896–), U.S. secretary of the navy, was born on March 1 in St. Louis, Mo. He served as an army air pilot in World War I, and in 1920 went to California where he joined the General Tire and Rubber company. He supervised that company's contracts for such aviation auxiliary material as life rafts and essentials in the field of rocket and jet propulsion. In 1942 he was made director of the Aerojet Engineering corporation at Azusa, Calif., a General Tire subsidiary; the firm manufactured JATO (jet-assisted take-off) equipment and helped develop high-altitude research rockets, and Kimball was in charge of the development program.

He was named assistant secretary of the navy for air on Feb. 11, 1949, a few months later became undersecretary, and on June 28, 1951, Pres. Harry S. Truman nominated him to be secretary of the navy. He succeeded Francis P. Matthews, who had been made ambassador to Ireland. The appointment was confirmed by the senate on July 27 and on July 31 he was sworn into office.

Kimpton, Lawrence Alpheus

(1910–), chancellor of The University of Chicago and sixth of its chief executives, was elected April 12, 1951, to succeed Robert Maynard Hutchins, who had resigned, effective upon the election of a successor, to become associate director of the Ford Foundation.

Kimpton was born on Oct. 7 in Kansas City, Mo. He attended public schools in Kansas City, entered Stanford university, Stanford, Calif., in 1927, where he made a distinguished academic record, and took his Ph.D. degree at Cornell university, Ithaca, N.Y., in 1935.

He was appointed a teacher of philosophy, English and German at Deep Springs (Calif.) school, and in 1936 was named dean and director, his responsibilities including management of the school's large ranch.

In the autumn of 1942, Kimpton became dean of the college of liberal arts and professor of mathematics and philosophy at the University of Kansas City, and in 1943 he joined the Metallurgical laboratory, atomic bomb project at The University of Chicago, as associate chief administrative officer, shortly thereafter being appointed chief. In 1944 he became dean of students and professor of philosophy and education at The University of Chicago, and on July 1, 1946, he was elected vice-president and dean of faculties. He accepted an appointment as dean of students, Stanford university, in 1947, returning to The University of Chicago on Aug. 1, 1950, as vice-president in charge of development, the position he held when elected chancellor. He was formally inaugurated as chancellor on Oct. 18, 1951.

Koerner, Theodor

(1873–), Austrian army officer and statesman, was born at Komárno, Hung. (now Czechoslovakia), April 24. He was a colonel on the general staff of the Austro-Hungarian army when World War I started. In May 1915, when Italy declared war on Austria-Hungary, he was appointed chief of staff and later commander of the Isonzo (Soča) army and was successful in stemming the Italian offensives. After the dissolution of Austria-Hungary in Nov. 1918 he was appointed inspector general of the new Austrian army. He retired in 1920, joined the Social Democratic party and sat from 1925 to 1934 as a delegate for Vienna in the *bundesrat* (upper chamber of the federal diet). After the *Anschluss* the nazis tried vainly to enlist his support; they arrested him twice. He reappeared on the political scene after World War II and in Aug. 1945 the soviet military authorities appointed him burgomaster of Vienna. However, he made clear that he was strongly opposed to communism. As Socialist candidate for the presidency of the republic Koerner was elected on May 27, 1951, by 2,172,806 votes to the 2,004,290 which went to Heinrich Gleissner, his Christian Democratic opponent.

Korea.

Korea is a peninsula extending from Manchuria and the U.S.S.R. southward, 525 mi. long and from 125 to 200 mi. wide. It is bounded on the north by the Yalu and Tumen rivers, on the south by the Straits of Korea, on the east by the Yellow sea, and on the west by the Sea of Japan. Area: 85,225 sq.mi. Population (1950 est.), 29,000,000, of which 20,000,000 were in South Korea (below the 38th parallel) and 9,000,000 in North Korea. In Aug. 1951 about 3,700,000 South Koreans were refugees, having left their homes because of the hostilities which began on June 25, 1950, with the invasion of South Korea by North Korean troops.

"RED TAPE," a 1951 cartoon by Justus of the *Minneapolis Star* (Minn.)

The Republic of Korea was established on Aug. 15, 1948, and assumed authority in the southern zone while the Democratic People's Republic of Korea was established on Sept. 9, 1948, in the northern zone.

The president of the Republic of Korea in 1951 was Syngman Rhee, who was chairman of the national assembly before being elected president by the national assembly on July 20, 1948; the vice-president was Kim Sung Soo, elected on May 16, 1951; and the prime minister was John Myun Chang, former Korean ambassador to the U.S., who was appointed on Nov. 23, 1950. Kim Il Sung was the head of the North Korean government.

The capital of South Korea is Seoul, population (1950 est.) 2,000,000; as a result of hostilities, Pusan, with population of about 500,000, became the temporary capital. The capital of North Korea is Pyongyang with population of about 500,000. Major religions: Buddhism, Confucianism and a native religion, Tonghak. There were about 500,000 Christians in Korea before the war.

History.—The intervention of Communist China on the side of the North Koreans toward the close of 1950 resulted in the United Nations general assembly declaring Communist China as an aggressor on Feb. 1, 1951, by a vote of 44–7 with 9 abstentions. The United Nations had established the United Nations Commission for the Unification and Rehabilitation of Korea on Oct. 7, 1950, to represent the U.N. in bringing about "the establishment of a unified, independent, and democratic government of all Korea." The U.N. had also established the United Nations Korean Reconstruction agency on Dec. 1, 1950, to provide for rehabilitation and relief in Korea. J. Donald Kingsley was appointed director-general of the agency on Feb. 7, 1951.

The inflationary situation that had plagued the Republic of Korea from its inception was aggravated by the conflict in Korea, which necessitated the financing of war expenditures and caused a shortage of goods. The index of retail prices for all commodities in Pusan (1947=100) rose from 329 on June 23, 1950, to 2,974 on Nov. 23, 1951.

The Joint Korean-American Economic Stabilization committee, established in 1950 to help stabilize the economy, helped the Republic of Korea to prepare a budget for the 1951–52 fiscal year that provided for increased revenue through increased taxes, and for reduced government expenditures.

Economic assistance was furnished to South Korea by the U.S. government beginning in 1945. The program was the responsibility of the department of the army until Jan. 1, 1949, when responsibility was transferred to the Economic Cooperation administration. On April 7, 1951, ECA disestablished its Korean mission and temporarily transferred its supply functions to the department of the army. The amount of economic aid which the United States made available through the army and ECA to the Republic of Korea totalled about $500,000,000 for the six years ending Aug. 31, 1951. The Republic of Korea was required to establish a counterpart fund to reflect U.S. aid that totalled $172,000,000 (126,000,000,000 won) in August. 1951. (*See* also UNITED NATIONS.)

Education.—In South Korea, 12 years of elementary and secondary education are offered, with entrance to secondary education based on competitive examinations. Seoul National university and several other universities and colleges offer courses in higher education. Under the educational exchange provisions of the Fulbright act and the Smith-Mundt act, the U.S. and the Republic of Korea signed an agreement in April 1950 providing for the training of Koreans in the U.S. The literacy rate for the native Korean script was about 25%–30% in 1951; for Chinese ideographs, substantially less.

Finance.—The budget of the Republic of Korea for the fiscal year ending March 31, 1951, was approximately balanced when originally adopted with 317,000,000,000 won in expenditures and the same amount in anticipated revenues. However, with the outbreak of hostilities, six supplementary budgets caused actual expenditures to total about 612,000,000,000 won and revenues to total about 472,000,000,000 won. Currency in circulation increased from 60,000,000 won at the end of May 1950 to 229,000,000 won at the end of Dec. 1950 and 496,000,000 won at the end of Oct. 1951. The official foreign exchange rate was 2,500 won = U.S. $1 in March 1951; the black market rate at the same time was 7,600 won = U.S. $1.

Trade.—In 1949 South Korea had imports valued at $109,000,000 and exports at $14,000,000. In the first quarter of 1950, imports totalled $26,000,000 and exports $7,000,000. Most imports came from the U.S. with Japan the second most important supplier; the major destination of South Korea's exports was Hong Kong, with Japan of secondary importance. Eighty-five per cent of South Korea's imports were financed through U.S. aid. Chief imports were fertilizer, cotton and cotton products and fuel; chief exports were foodstuffs and ores and minerals. North Korea's trade is chiefly with Communist China and the Soviet Union.

Transportation and Communications.—Korea had about 3,500 mi. of railroads, with the principal line extending from Pusan to Sinuiju at the Manchurian border, connecting Seoul and Pyongyang. Gross tonnage hauled by the South Korean railroads totalled 5,700,000 metric tons in 1949. There are about 21,000 mi. of roads. On Jan. 1, 1950, South Korea had 9,700 trucks, 1,000 buses, 2,600 passenger vehicles and 1,500 taxicabs. Korean National Airways began operations in Nov. 1949. Northwest Airlines provided international air service to Seoul before the Korean conflict began in June 1950, and in 1951 was serving Pusan. In 1949 there were about 38,000 telephone lines, 50,000 telephone stations and 175 telegraph offices in South Korea. Submarine cables connect Korea with Japan, and international radiotelegraph and radiotelephone service, originally operated by the Radio Corporation of America, was purchased by the Republic of Korea in Dec. 1948.

Agriculture.—The Korean economy is basically agricultural with more than two-thirds of the population depending upon farming for their livelihood. Two of the major factors adversely affecting 1951 food production were a shortage of commercial fertilizers and a loss of farm animals. Agricultural production in 1949 included rice (brown) 81,600,000 bu.; barley 24,600,000 bu.; wheat 4,200,000 bu.; naked barley 9,400,000 bu.; rye 1,200,000 bu.; millet 5,800,000 bu.; sorghum 600,000 bu.; corn 900,000 bu.; buckwheat 1,900,000 bu.; soybeans 7,200,000 bu.; tobacco 13,600,000 lb.; cotton (unginned) 184,000,000 lb.; silk cocoons, 14,000,000 lb. Fish and marine production totalled 299,964 metric tons. In 1951 South Korea had an estimated 350,000 work cattle, 250,000 hogs, 15,000 horses, 30,000 goats and 800,000 chickens.

Manufacturing.—North Korea is more predominantly industrial than South Korea with important chemicals, textile, iron and steel, machinery and cement facilities. The ravages of war had caused damage to much of these industries. South Korea's manufacturing industries were primarily for the production of consumers' goods. Industrial production in South Korea in 1949 included (in metric tons): paper 8,419; cement 24,132; bricks 112,800; pottery and porcelain 20,936; cotton cloth 58,218 m.; cotton yarn 12,900; and rubber shoes 29,000,000 pairs. Electric power output in 1951, which had been a factor limiting industrial output in South Korea from the end of World War II, was only about 40% of the preinvasion level. Electric power output in South Korea in 1949 totalled 660,000,000 kw. hr. South Korean electric power capacity in 1951 totalled 230,000 kw., much of which was not in operating condition.

Mining.—The major mineral resources of Korea are found north of the 38th parallel where there are important iron ore, copper, lead, zinc, pyrites, coal and magnesite deposits. South Korea has coal, tungsten, copper, lead, zinc, molybdenum and amorphous graphite deposits. Mineral production in South Korea in 1949 included (in metric tons): anthracite coal and lignite 1,128,000; tungsten 1,342; amorphous graphite 39,863; electrolytic copper 308; lead (metal content) 80; salt 189,900; gold (metal content) 106 kg.; and silver 589 kg.

Korean War.

When Lieut. Gen. Matthew B. Ridgway assumed command of the U.S. 8th army as a result of the death of Gen. Walton H. Walker on Dec. 23, 1950, the military situation looked grim for the United Nations.

United Nations forces were engaged in reorganizing in defensive positions near the 38th parallel in preparation for an anticipated enemy attack. At the end of the year 1950, it was evident that the Communist forces were preparing for an all-out assault against United Nations positions.

On Jan. 1, 1951, a Communist offensive directed toward Seoul in the west, and Wonju in the centre, achieved penetrations of 10 to 12 mi., forcing a United Nations withdrawal. By Jan. 4 Seoul was occupied by the Communist forces and United Nations forces were organized on a line south of the Han river. The Wonju salient made the Han river line untenable, and on Jan. 7 new defensive positions were established on a line extending from Pyongtaek northeast to Wonju. About Jan. 12 United Nations lines were generally stabilized. For the remainder of 1951, U.N. front lines were to the north of this line which ran generally from the west coast at Pyongtaek northeast to Wonju, southeast to Chechon, east to Yongwal, northeast to Chongson and to Samchok on the east coast.

With the final stabilization of the front line about Jan. 24, the third phase of the Korean war, which had begun with the Chinese Communists' intervention in force on Nov. 3, 1950, came to a close.

During the period, United Nations naval forces conducted constant patrolling and reconnaissance operations, denying Korean waters to Communist warships and shipping. Surface units executed gunfire missions in support of troops, especially along the east coast and in the Inchon area. Minesweeping operations continued, mostly in the areas in which gunfire support ships were operated.

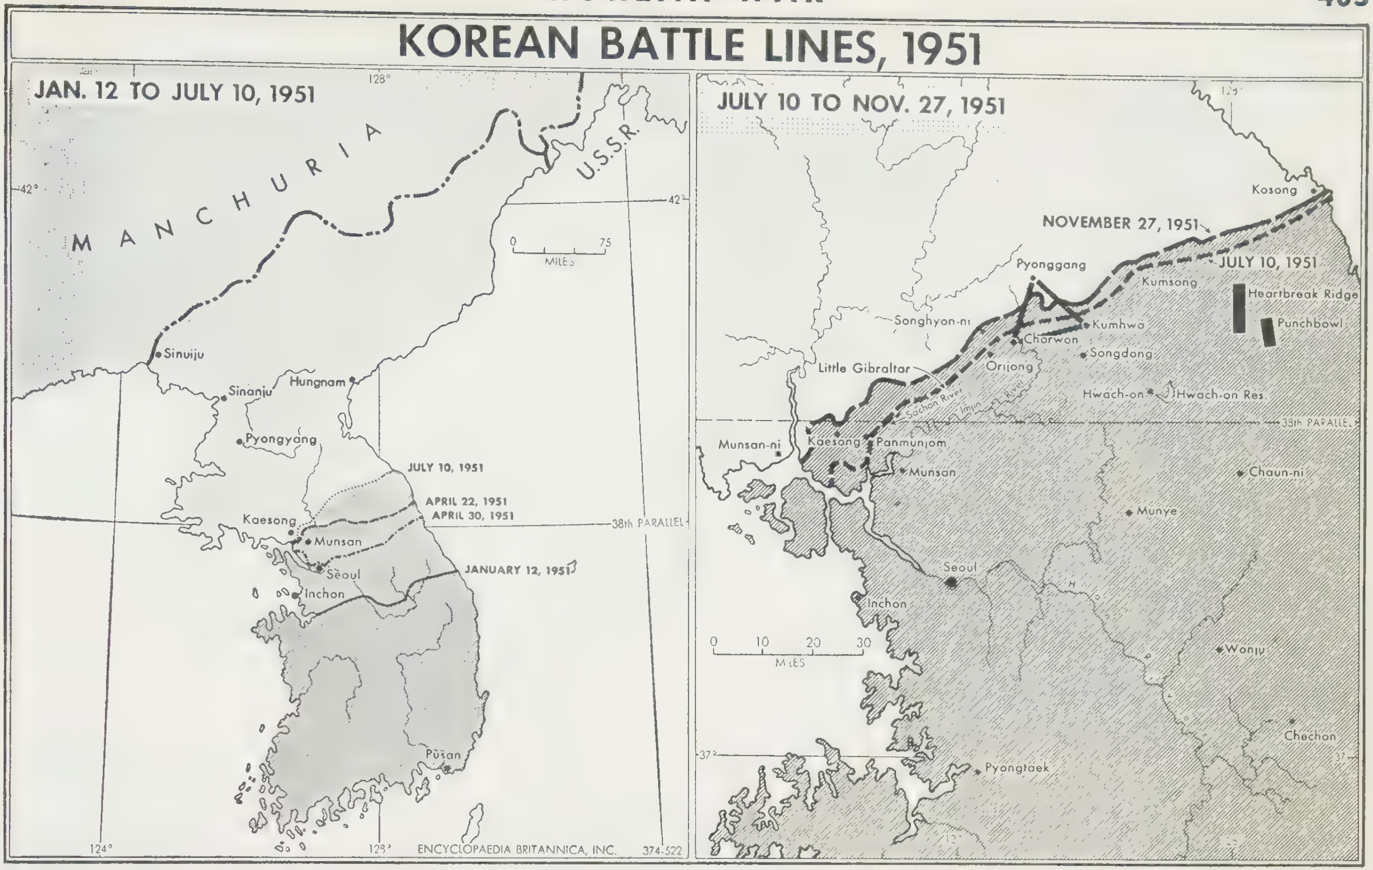
On Jan. 13, 1951, units of the United Nations air forces completed 200 consecutive days of operation and 100,000 sorties. Troops, tanks and artillery were the primary targets of aircraft in close support. Armed reconnaissance and night intruder missions comprised the bulk of the other flights. North of the battle area, communication centres and airfields were continually attacked. Limited objective attacks and reconnaissance in force by United Nations ground forces forced Communist troops into the open, and United Nations ground support aircraft inflicted heavy casualties on them.

United Nations Counteroffensive—Jan. 25 to April 22, 1951.—During this period, United Nations forces in a series of limited objective attacks moved northward from the Jan. 12 line to positions across the 38th parallel and approximately 50 mi. N. of the stabilized January line. Seoul was retaken by United Nations forces on March 14. U.N. units crossed the 38th parallel in force on April 3.

During this phase, United Nations efforts were directed toward "killing Chinese," as General Ridgway put it; the United Nations was not so interested in gaining ground as it was in local counteroffensives and air punishment aimed at prevention of the build-up for large-scale Communist offensive action.

The U.N. plan consisted of constant movement, keeping the enemy off balance and limiting his initiative.

Intelligence reports indicated that Chinese units on the cen-



Left: Battle lines at significant stages: Jan. 12, 1951—end of Chinese Communist offensive which began Nov. 3, 1950; April 22—end of United Nations offensive which began Jan. 25; April 30—end of Chinese Communist offensive which began April 22; July 10—battle line on which United Nations offered to settle as cease-fire position. Right: Armistice line of Nov. 27 was agreed to by both sides. Area between lines was lost by Communists through failure to agree to U.N. offer of July 10. Truce talks were held in neutral zones at Kaesong, later at Panmunjom

tral front had been relieved and replaced by at least three refurbished armies. At the same time, a powerful reserve force was built up including 12 fresh North Korean divisions plus 15 Chinese Communist divisions and 12 additional Chinese Communist divisions recently withdrawn from combat. Thus, total Communist forces deployed on the front, plus reserve forces, totalled more than 60 divisions.

Communist resistance throughout the period had been strong in most areas and was characterized by greater use of artillery and the construction of strong entrenchments. At the close of the period, marked increase in activity in the Communist rear, accompanied by a continued deployment of combat forces into forward areas, gave warning of an imminent attack.

United Nations air dominance continued despite challenges by an increasing number of soviet-built MIG jet aircraft. The first big air battle took place on April 12 when approximately 220 United Nations and Communist planes clashed near Sinuiju, on the Manchurian border.

Both sea forces and air forces concentrated on an interdiction program designed to prevent the Communist forces from building up sufficient personnel and matériel for a large-scale attack. In this program, bombardment from the sea and the air intercepted supplies and men on the long trip from the Manchurian border to the front lines. Rail traffic was bombed and shelled, forcing the Communists to rely upon truck transport which was then taken under fire by U.N. aircraft.

On April 11, 1951, Gen. Douglas MacArthur was relieved by U.S. Pres. Harry S. Truman as United Nations commander and replaced by Gen. Matthew B. Ridgway. (*See* also MACARTHUR INVESTIGATION.)

Chinese Spring Offensive—April 22 to 30.—Chinese Communist forces, composed primarily of fresh troops massed along the western half of the front, launched the initial assault of a general offensive on April 22. By April 25 they had launched heavy attacks along the entire front from the Hwach-on reservoir west to Munsan-ni in a large-scale offensive effort designed primarily to pinch off Seoul in the west and in the centre to sever the east-west road from Seoul to Kansong, on the east coast.

U.N. ground forces with the assistance of ground support aircraft fought a determined defensive battle for the city of Seoul. By the end of April, the Communist thrust had been halted, and the U.N. line had been pushed back from 10 to 35 mi. on various parts of the front. Approximately 600,000 North Korean and Chinese soldiers had been employed by the Communists in the west, the maximum forces available to them in Korea.

The front lines at the end of April ran almost due east from the Han river, passing 3 mi. N. of Seoul to Munye and northeast through Chaun-ni and Sori to Habond near the east coast.

Operations from May 1 to End of Year.—On May 9 more than 300 United Nations fighters and bombers delivered the most concentrated attack of the war on air installations at Sinuiju on the south bank of the Yalu river.

On May 16, 21 Chinese Communist divisions launched an attack down the centre of the peninsula on a 75-mi. front. United Nations forces withdrew 12 mi., but by May 20 the attack had been contained with the Communists suffering heavy casualties.

A powerful counteroffensive was launched by the United Nations forces on May 19 on the left side of the line, and on May 21 on the right. By the end of the month Communist forces were driven 20 mi. to the north. The front lines again approximated those of Jan. 1, 1951, near the 38th parallel.

In the period from May 15 to 30 the Communists suffered more than 100,000 casualties, and lost 12,000 prisoners. Their forces available for combat were reduced from 80 infantry divisions to less than 70, of which 16 were seriously depleted.

In the first two weeks in June, U.N. pressure forced the slow withdrawal of Communist forces. Heavy resistance in the "iron triangle" area (Kumhwa-Chorwon-Pyonggang) caused severe fighting, but by June 12 U.N. forces had seized the southern portion of the area. All along the line Chinese Communist forces gave up ground, varying from 5 to 12 mi. in different sectors. On June 13 U.N. forces entered Pyonggang, the northern tip of the "iron triangle."

On June 23 Jacob Malik's surprise "peace feeler" alerted the world to the possibility of an end to the fighting. From this point on until the end of the year, truce negotiations and combat shared the headlines. The ground fighting, though very heavy in such places as Heartbreak ridge, Little Gibraltar and the Punchbowl, was conducted mainly, so far as the U.N. was concerned, to secure dominating terrain features and to make the battle line as defensible as possible.

In August, though the front was only moderately active, U.N. patrols and front lines again felt the impact of an increased strength in hostile artillery and mortars. By the end of the month, front lines remained virtually unchanged.

September's action was largely vigorous patrolling with a short aggressive drive by the Communist forces from Sept. 6 to 9. In October the Communists continued on the defensive with aggressive U.N. attacks centred in the western part of the front. Bitter fighting for high ground took place south and east of Orijong as commanding hills became of greater importance.

Front lines changed only slightly during November, and on Nov. 27 both sides ratified an agreement on the establishment of a demilitarized zone, providing for a definite demilitarized zone if the armistice were signed within 30 days.

Ground action in December followed the pattern of October and November, with few engagements larger than company size. Patrol action was continuous, and probing attacks by the Communists and U.N. forces met with sharp resistance in all sectors.

The 30-day deadline, which had been agreed to by both sides, passed on Dec. 27 without either side attempting any significant offensive. Front lines at the close of 1951 remained at the same position agreed to on Nov. 27.

Table I.—*U.S. Battle Casualties in the Korean War through Dec. 28, 1951*

	Total	Army	Navy	Marine corps	Air force
1. Total casualties (sum of items 3, 4 and 5)	103,739	85,101	1,193	16,490	955
2. Total deaths (sum of items 3, 4a and 5a)	17,754	14,944	230	2,260	320
3. Killed in action—total	15,879	13,498	171	1,907	303
4. Wounded in action—total	75,080	59,836	926	14,274	44
a. Died of wounds	1,688	1,314	12	353	9
b. Other (current wounded, returned to duty, evacuated to the U.S., etc.)	73,392	58,522	914	13,921	35
5. Missing in action—total	12,780	11,767	96	309	608
a. Died	187	132	47	0	8
b. Returned to military control	1,392	1,330	2	20	40
c. Current captured	174	171	0	0	3
d. Current missing	11,027	10,134	47	289	557

Peace Negotiations.—At the conclusion of a U.N. radio address in New York city on June 23, 1951, Jacob Malik made the statement ". . . the Soviet people believe that, as a first step, discussions should be started between the belligerents for a cease-fire and an armistice providing for the mutual withdrawal of forces from the 38th parallel . . ." Adm. Alan G. Kirk, U.S. ambassador to the U.S.S.R., after a conference with soviet deputy Foreign Minister Andrei Gromyko in Moscow, cabled the state department that the peace feeler seemed authentic. President Truman instructed General Ridgway to make preliminary arrangements for the talks.

On June 30 General Ridgway repeatedly broadcasted the following radio message to the Communists: "As Commander in Chief of the United Nations Command, I have been instructed to communicate to you the following: I am informed that you may wish a meeting to discuss an armistice providing for the cessation of hostilities and all acts of armed force in Korea, with adequate guarantee for the maintenance of such armistice.

"Upon receipt of word from you that such a meeting is desired, I shall be prepared to name my representative. I would also at that time suggest a date at which he could meet with your representative. I propose that such a meeting could take place aboard a Danish hospital ship in Wonsan Harbor."

On July 1 Peking radio broadcasted a reply to General Ridgway's message from Gen. Kim Il Sung of the North Korean army and Gen. Peng Teh-huai of the Chinese Communist army, stating that the Communist representatives would meet with United Nations representatives for the conduct of talks concerning the cessation of military action. After a number of messages back and forth regarding details of the site, liaison officers of the two forces met at Kaesong on July 8 to discuss arrangements for the first conference to be held on July 10. The United Nations delegation included Vice Adm. C. Turner Joy (*q.v.*), Maj. Gen. L. C. Craigie, Maj. Gen. Henry I. Hodes, Rear Adm. A. A. Burke and Republic of Korea Maj. Gen. Paik Sun Yup. The chief negotiator for the Communists was Lieut. Gen. Nam Il, North Korean army chief of staff.

In the opening talks the U.N. delegation stressed that it was empowered to discuss only military matters, and no political or economic matters or military matters unrelated to Korea.

When the Communists refused to allow U.N. newsmen at the conference, Admiral Joy announced that 20 newsmen would henceforth be part of the U.N. delegation. On July 12, however, Communist guards refused to allow newsmen to proceed into Kaesong with the U.N. convoy.

The conference was recessed by the U.N. delegation, and the Communists were informed that talks would remain in recess until assurances were received (1) that restrictions would be lifted on the movement of U.N. delegates, including newsmen, and (2) that Communist guards would be kept out of the neutral zone around Kaesong.

This assurance was received on July 14, and on July 15 talks were resumed.

The Communist delegation insisted upon including an item in the agenda calling for the withdrawal of foreign troops from Korea. After Admiral Joy indicated that this was a political matter and not appropriate to a military conference, the Communists asked for a four-day adjournment.

On July 25 Gen. Nam Il submitted a new agenda which was agreed to by both parties. It included: (1) adoption of agenda; (2) fixing a military demarcation line between both sides so as to establish a demilitarized zone as a basic condition for a cessation of hostilities in Korea; (3) concrete arrangements for the realization of a ceasefire and armistice in Korea, including the composition, authority and functions of a supervising organization for carrying out the terms of a cease-fire and armistice; (4) arrangements relating to prisoners of war; (5) recommendations to the governments of the countries concerned on both sides.

Once the agenda had been agreed upon, the discussions turned to the second point and immediate disagreement resulted on the question of fixing a military demarcation line for a neutral zone. The point of issue became the 38th parallel. The United Nations delegation proposed a buffer zone 20 mi. deep in front of the Allied line, while the reds proposed a buffer zone 10 km. wide on each side of the 38th parallel. United Nations insistence upon a line based on the existing battle positions was based primarily on the lack of military significance of the 38th parallel, the greater length of the line required if the 38th parallel was used (210 mi. as opposed to 125 mi.), the fact that acceptance of the 38th parallel would have required a major withdrawal by U.N. forces and South Korean opposition to permanent use of a line originally adopted only for the surrender of Japanese forces.

The negotiations remained stalled for the entire month of August on this question, since the Communists would consider no other item on the agenda until a line of demarcation had been agreed upon.

A company of armed Communist infantry was observed by the United Nations delegation not more than 100 yd. from the conference room. General Ridgway immediately protested this violation of the conference zone neutrality agreement and, after investigation, the Communists admitted the violation and promised to adhere to the original neutrality agreement. In the succeeding days United Nations liaison officers were called upon to investigate alleged violations by the United Nations of the neutrality area. In each of these particular instances the investigation proved to the satisfaction of the United Nations commander that the charges were false, and that evidence of violation had been manufactured by the Communists.

Six subcommittee meetings of lower-ranking officers of both sides were held between Aug. 17 and 22, but no progress was made. More alleged violations of the neutral zone were put forth by the Communists without substantiation, and on Aug. 23 the Communists suspended negotiations entirely.

On Sept. 6 General Ridgway proposed that liaison officers of the two forces meet at Panmunjom to discuss the selection of a new site where negotiations could be continued without interruption. After several exchanges concerning alleged violations of the neutral zone, General Ridgway proposed that both delegations meet approximately midway between the battle lines in the vicinity of Songhyon-ni.

One United Nations violation of the neutral zone occurred on Sept. 10 when a B-26 strafed in the neutral zone. United Nations regrets were immediately published. On Oct. 12 a United Nations jet aircraft made two ground strafing attacks in the Kaesong area. General Ridgway apologized for the attacks and the United Nations command accepted responsibility.

On Oct. 22 liaison officers of the two forces signed an agreement specifying terms for the resumption of armistice negotiations. Ratification of the agreement followed by senior delegates on both sides. The conference site was a circular area with a radius of 1,000 yd. in the vicinity of Panmunjom. No armed personnel except designated military police of either side were permitted in the conference site area, nor were hostile acts of any kind to be carried out within the conference area. Both delegations and their parties had free entrance to and free movement within the conference area. The Communists were responsible for suitable joint facilities for a meeting place of the delegation. Except for this installation, each delegation provided its own facilities.

The meeting of the complete delegation on Oct. 25 was the first since the Communists suspended the negotiations on Aug. 23. Agreement was soon reached to resume regular delegation meetings for the purpose of

France	Unit of ground forces
Greece	Unit of ground forces 6 transport aircraft with crews
India	Field ambulance unit
Italy	100-bed field hospital unit
Luxembourg	Infantry unit
Netherlands	Army contingent of 2 to 3 infantry companies One destroyer
New Zealand	One artillery unit Two frigates
Norway	Merchant ship tonnage 100-bed mobile surgical hospital
Philippines	Regimental combat team of 5,000 officers and men 17 Sherman tanks, 1 tank destroyer
Sweden	Field hospital unit
Thailand	Regimental combat team Two corvettes and navy transport 3 C-47 aircraft and 4 crews
Turkey	Combat force of 4,500 men
Union of South Africa	Fighter squadron
United Kingdom	Infantry brigade and other ground units Naval forces in Japanese waters

discussing agenda item (2), the demilitarized zone.

The controversy which arose in subsequent meetings centred about a fundamental divergence of views as to whether the cease-fire should be put into effect immediately or whether it should wait until agreement had been reached on other items of the agenda.

The United Nations position was that a cease-fire should not go into effect until all items on the agenda had been agreed to by both sides. This position was based primarily on possible jeopardy to the United Nations efforts in the event of long drawn-out peace conferences, giving the Communists an opportunity to build up ground and air strength in close proximity to the battle line under protection of a cease-fire. Further, it was considered necessary to continue pressure upon the Communists in order to maintain a willingness on their part to conclude an early acceptable armistice.

On Nov. 27 both delegations ratified an agreement on the establishment of a demilitarized zone.

"1. The principle is accepted that the actual line of contact between both sides will be made the military demarcation line and that at the time specified in the signed armistice agreement both sides will withdraw 2 kilometers from this line so as to establish the demilitarized zone for the duration of the military armistice.

"2. If the military armistice agreement is signed within 30 days after the 2 delegations approve in the plenary session this agreement and the specific location of the military demarcation line and demilitarized zone determined by the sub-delegations on the basis of the above stated principle and in accordance with the present line of contact, the military demarcation line and demilitarized zone shall not be changed, regardless of whatever changes may occur in the actual line of contact between both sides.

"3. In view of the fact that hostilities will continue until the signing of the armistice agreement, if the military armistice agreement is not signed within 30 days after the 2 delegations approve in the plenary session this agreement and the specific location of the military demarcation line and the demilitarized zone as determined in paragraph 2 above, the sub-delegations shall revise, immediately prior to the signing of the military armistice agreement the above military demarcation line and the demilitarized zone in accordance with the changes which have occurred in the actual line of contact between both sides, so that the revised military demarcation line will coincide exactly with the line of contact between both sides immediately prior to the signing of the military armistice agreement and will constitute the military demarcation line for the duration of the military armistice."

The agreed line of the contact ran in general from the Sachon river on the west, northeast to a point about 6 mi. N. of Chorwon, then generally east to a point north of Kumhwa, northeast to Kumsong, then generally east to a point north of the Punchbowl region, then northeast to a point on the coast a few miles south of Kosong.

By dropping their insistence upon the 38th parallel as an armistice line, the Communists gave U.N. negotiators a real indication that an armistice could be achieved by agreement. Thus, with the 30-day agreement, negotiations could turn to the next item on the agenda.

On Nov. 30 discussions began on agenda item (3), and controversy arose about the composition, authority and functions of a supervising organization for carrying out the terms of a cease-fire and armistice. The U.N. command proposed that:

"A. Both sides shall designate an equal number of members to form a Military Armistice Commission which shall be responsible for supervising the execution of an adherence to the whole armistice agreement. The Military Armistice Commission shall be provided with, and assisted by, observer teams which shall be responsible to, shall report to, and shall be subject to the direction and supervision of the Military Armistice Commission only. The observer teams shall be composed of representatives of nations neutral in the Korean War, such nations to be mutually agreed to by both sides.

"B. Observation outside the Demilitarized Zone will be performed only by neutral observer teams. Observation within the Demilitarized Zone may be performed by neutral teams, by joint teams selected by the Military Armistice Commission, or by the Military Armistice Commission itself.

"C. Neutral observer teams shall be located at such land, sea, and air ports of entry and communication centers as are mutually agreed to by both sides. These observer teams shall be permitted freedom of movement over principal lines of communication throughout all of Korea and each side shall afford these teams full assistance in the execution of the duties assigned them by the Armistice Commission. In addition, such periodic aerial reconnaissance and observation and photographic flights as are mutually agreed to by both sides will be performed by neutral teams.

"D. Neither side shall increase the level of military units, military personnel, war equipment, or war material existing in Korea at the time the armistice becomes effective. The rehabilitation, expansion, and improvement of existing airfields and aviation facilities and construction of new airfields and new aviation facilities shall not be permitted."

On Dec. 3 two proposals were submitted by the Communists on agenda item (3):

"1. In order to ensure the stability of the military armistice so as to facilitate the holding by both sides of a political conference of a higher level, both sides shall undertake not to introduce into Korea any military forces, weapons and ammunition under any pretext.

"2. In order to supervise the strict implementation of the stipulation of Paragraph (1), both sides agree to invite representatives of nations neutral in the Korean War to form a supervisory organ to be responsible for conducting necessary inspection, beyond the Demilitarized Zone, of such ports of entry in the rear as mutually agreed upon by both sides, and to report to the Joint Armistice Commission the result of inspection."

The Communist proposals would have stopped the U.N. rotation program, stopped training programs for lack of equipment and ammunition replacement, and, with respect to the second proposal, would have confined inspection to the demilitarized zones and "ports of entry" (not to include airfields).

In submitting a new "end of the year" proposal, the U.N. made several important concessions.

1. The behind-the-lines inspection after the armistice would be by teams of neutrals instead of the U.N.-red teams originally proposed.
2. There would be limited, rather than unlimited, troop rotation.
3. There would be two groups for inspection purposes, one in the demilitarized area, another behind the lines.
4. There would be no U.N. air observation of North Korea.
5. Certain North Korean airfields could be rehabilitated for civilian use. In return, the Communists were asked to agree not to construct or use North Korean airfields for military purposes.

On agenda item (4), arrangements pertaining to prisoners of war, the Communists agreed, after continued U.N. recommendations, to open negotiations before item (3) had been agreed upon. Consequently, from Dec. 11 when discussions on item (4) started until the end of the year, two items were being discussed concurrently.

On Dec. 18, after a Communist concession, prisoner lists were exchanged—names of 132,474 Communists and 11,559 U.N. troops. The U.N. protested the small number of names in view of the 88,000 South Korean and 11,000 U.S. troops carried as "missing in action," but the Communists would permit no inspection of their prison camps by the Red Cross, and no other means for verifying names or numbers of U.N. prisoners until after an armistice had been signed.

The negotiations for the exchange of prisoners, on an "all-for-all" basis as proposed by the Communists or "one-for-one" basis with voluntary repatriation as proposed by the U.N., continued to be argued for the remainder of the year.

At the year's end, the following points of controversy were still unresolved: on agenda item (3), the rehabilitation of certain North Korean airfields for civilian use (U.N.) *v.* no control of airfields in North Korea; and the replacement of matériel (U.N.) *v.* no replenishment of matériel. On agenda item (4), the exchange of prisoners on a one-for-one basis with right of individual choice regarding repatriation (U.N.) *v.* exchange on an all-for-all basis.

The Emergence of a Powerful Chinese Air Force.—The most significant development in air warfare in Korea during 1951 was the threat of the Chinese Communists' achieving air supremacy. Two things were making this possible: the superiority in certain respects of the MIG-15 over U.N. jets, principally the U.S. F-86; and the fact that the soviet planes were being distributed in quantity to the Chinese Communist air force.

On Nov. 1, 1950, in "MIG alley" between Sinanju and the Yalu river, U.N. pilots encountered soviet-built MIG-15 jet aircraft for the first time. In the succeeding months, it became necessary to escort B-29 aircraft on their bombing runs against bridges and rail facilities on the Yalu river because the MIG-15, capable of speeds up to and surpassing the speed of sound, could intercept and knock out unescorted B-29s.

The success of Operation "Strangle," the U.N. air interdiction program designed to prevent or delay the movement of Communist reinforcements and supplies, brought forth a violent reaction from the Chinese, and they rushed jet aircraft into action.

Intelligence reported that the Chinese Communist air force had more than 1,400 aeroplanes in north China and Manchuria of which approximately half were MIG-15s.

On the sea, the Communists had no real capability because of the tremendous superiority of the U.N. sea forces. On the ground, superior numbers of Communist troops were countered by U.N. fire power. In the air only was the Communists' numerical superiority accompanied by a corresponding advantage in fire power. A serious challenge to U.N. air supremacy had arisen—a challenge which could well affect the fortunes of the United Nations command. Labour Unions.

All branches of organized labour in the United States were concerned throughout 1951 with the operation of the defense mobilization program and with their share in its administration. From the beginning of the emergency created by the war in Korea, the spokesmen for union labour pressed for an extensive and effective system of economic controls to be exercised by the federal government. They wanted severe price and rent controls, but flexible wage regulation; they demanded increased taxes on business and the higher incomes; they opposed compulsory allocation of manpower; and they insisted on full, or equal, representation of organized labour on the government's emergency regulatory agencies. To make their influence felt, the American Federation of Labor (A.F. of L.), the Congress of Industrial Organizations (C.I.O.), the Railway Labor Executive association and the International Association of Machinists set up in Dec. 1950 the United Labor Policy committee.

By the turn of the year, the union representatives had decided that mobilization policies and administration were working against their interests. Their principal grievances appeared to be that an excessive share of the burden of rearmament was being imposed on labour, that price control was lax while wage control was firm and that unions were not adequately represented in making and applying mobilization policies. These issues were brought to a head in February by the mass resignation of labour representatives from all mobilization agencies. In March the United Labor Policy committee called a meeting of 1,000 union leaders in Washington, D.C., which devoted itself to strong public attacks on the handling of practically the entire program of rearmament.

This episode naturally proved most embarrassing to Pres. Harry S. Truman and his administration and steps were promptly taken to devise some means of conciliating the leaders of organized labour. The form conciliation finally took was the creation by the president of the National Advisory Board on Mobilization Policy, composed of representatives of farmers, business, labour and the public. This new agency, answerable directly to the president, initiated several of the reforms demanded by the unions and, more important, enhanced the prestige of organized labour. Consequently the representatives of labour returned to the agencies they had left a few months before. In addition they were granted a concession of considerable practical importance. The reconstituted Wage Stabilization board which was originally charged solely with making and interpreting wage policy was empowered to settle labour disputes and thus became an arbitration as well as a stabilization agency.

In view of the policy of the administration to restrain the inflationary influences of large and expanding military expenditures by preventing excessive increases in wages and prices, it was to be expected that public policy toward wages would become the leading labour issue of the year. It was, in fact, the attempt of organized labour to make wage control more flexible that led to its revolt against the Wage Stabilization board and other agencies. The upshot was that wage increases equal to the rise in living costs and an annual increase in productivity of roughly 2.5% were allowed. Wages went up during the year and by Nov. 1951 factory hourly earnings were 11 cents greater than in Nov. 1950—a rise not very different from that of the year before. In Dec. 1951, when the steel contract ended, the wage and related demands of the United Steel Workers, estimated to cost from 30 to 40 cents an hour, made the future of wage stabilization uncertain. This issue was, at the end of the year, in the hands of the Wage Stabilization board, from which no decision was expected until March 1952.

The second important issue was the union shop—a condition under which all employees of a shop, factory or company are required, after a specified lapse of time, to join the union. This issue rose to importance because of an amendment to the Railway Labor act, which for the first time in the history of that statute made it lawful for railway employees to bargain for the union shop, and an amendment to the Taft-Hartley act which removed the requirement of a poll of employees as a prerequisite to a union-shop demand. The result was a wave of union-shop negotiations, an increase in the number of such shops, a probable growth in membership and greater union security.

Of the two federations of labour, the A.F. of L. and the C.I.O., the A.F. of L. remained by a substantial margin the larger organization. Aside from a small growth in the membership of its affiliated unions, it gained 600,000 members by the reaffiliation of the machinists' union. The C.I.O., on the other hand, was still trying to recoup the heavy losses in membership it experienced from the expulsion in the past several years of about ten Communist-dominated organizations. It was most successful in the electrical manufacturing and farm implement industries, but elsewhere its progress was slow.

Throughout most of 1951, the C.I.O. and the A.F. of L. appeared to be harmonious with respect to both economic and political policies. They exhibited consistent unity in the affairs of the United Labor Policy committee and apparently entertained common political views. So close together did these federations seem that many observers were predicting their actual merger. In August, however, the A.F. of L., without previous notice, withdrew from the United Labor Policy committee. The only reasons it gave for this action were that the committee had served its purpose and that enduring and effective unity could be achieved only through outright merger of the two organizations.

It was clear, of course, that what the A.F. of L. called organic unity was faced with formidable, if not insuperable, difficulties. The effect of its action was to cause these organizations to drift apart. However, there was little in their behaviour to suggest that they would pursue radically different policies on wages and other labour questions, on the actions of the federal government or on the issues of the presidential

campaign of 1952.

On balance, organized labour fortified its position in 1951. In its fight against wage stabilization policies, it won the support of the president and succeeded in minimizing the effects of existing wage controls. It stood to derive substantial gains from the decision which converted the Wage Stabilization board into a disputes board. The greater ease with which unions could demand and bargain for the union shop assured them a larger and more stable membership and more effective control over their members and over labour relations. (*See* also AUTOMOBILE INDUSTRY; LAW; NATIONAL LABOR RELATIONS BOARD; STRIKES.)
(L. Wo.)

Canada.—In August the federal government announced that on Jan. 1, 1951, there were 1,028,521 labour unionists in Canada (1949, 1,005,639) out of a labour force of about 5,000,000. The Trades and Labour congress had a membership of 470,926; the Canadian Congress of Labour, 312,532; the Canadian and Catholic Confederation of Labour, 86,164; the International Railroad Brotherhoods, 40,459. For the first time in Canadian labour history, representatives of those four largest union groups met (Jan. 1951) to formulate a common program on matters of mutual concern, out of which came a joint brief asking the federal government to reinstitute price controls and to retain rent controls (but the government turned down both proposals).

At its 66th annual convention in September the Trades and Labour congress decided to discontinue such co-operation with other labour organization. Other resolutions advocated a "determined and unremitting" drive for wage increases, demanded closed shop and checkoff of dues, urged higher income tax exemptions and called for contributory national health insurance. On the other hand, the Canadian Congress of Labour at its 11th annual convention decided to continue to work for a single organization for all Canadian workers. Other C.C.L. resolutions advocated that Canadian prices be fixed at the Jan. 1951 level, that locals seek wage increases and that federal action be taken to meet the housing shortage. The 30th annual convention of the Canadian Catholic Confederation of Labour issued a 16-point statement of principles, and adopted, as an article of its new constitution, the social doctrine of the Roman Catholic Church.

The fight to remove Communist elements from the large union congresses continued. The Canadian Congress of Labour expelled the international fur and leather workers' union, and the United Garment Workers' International (Trades and Labour Congress) threw out the leftist leadership of the 800-member Toronto local.
(C. Cy.)

International Movement.—Tension between the rival trade union internationals—the Communist-dominated World Federation of Trade Unions (W.F.T.U.) and the western-dominated International Confederation of Free Trade Unions (I.C.F.T.U.) increased during the year. In Europe there was little change in the relative strength of the rivals. The W.F.T.U. maintained its hold on the main bodies of French and Italian trade unionists, and the only notable change was the disaffiliation from it of the Finnish Trade Union federation, which sent observers to the Milan, It., conference of the I.C.F.T.U. in July 1951. In Jan. 1951 the French government decided to expel the headquarters organization of the W.F.T.U. from Paris; and in April new headquarters were opened in Vienna, Aus., in buildings requisitioned by the soviet military government, and without any consent being asked of the Austrian government or of the other occupying powers. It was announced that the move to Vienna had been made at the request of the Austrian workers but the Austrian Trade Union federation belonged to the I.C.F.T.U. In Feb. 1951 the Belgian government expelled the officials of the Miners' International attached to the W.F.T.U., and this body also moved its headquarters.

During 1951 the main fields of struggle between the W.F.T.U. and the I.C.F.T.U. were outside Europe; they lay especially in Asia and in the African colonial countries and among the transport workers in Australia, New Zealand and some of the American countries. In the middle of 1951 the W.F.T.U. claimed an affiliated membership of 78,000,000 in 56 countries, the great majority being in the Soviet Union and in China. To these must be added the trade unions in the soviet-controlled countries of eastern and central Europe, including eastern Germany, the French Confédération Générale du Travail (C.G.T.) and the Italian Confederazione Generale Italiana del Lavoro (C.G.I.L.), as well as a number of bodies of uncertain membership in a number of non-European countries.

The I.C.F.T.U. claimed at its Milan congress a membership of 52,000,000 in 66 countries, including the main bodies in the United States (both the American Federation of Labor and the Congress of Industrial Organizations), Great Britain, the Scandinavian countries, the Netherlands, Belgium, western Germany, Greece, India, Pakistan, Canada, New Zealand, South Africa, most of the Latin American countries except Argentina and a number of colonial countries. The Swiss and the Australian Trade Union federations joined the I.C.F.T.U. during 1951, as well as those of Iceland, Malaya, Thailand, Bolivia, Tunis, the Gold Coast, the Philippines, Libya, the Cameroons and certain other colonial areas.

The I.C.F.T.U. was engaged during 1951 in building up a series of regional federations in the main divisions of the world and in extending help to the growing trade unions of the less developed countries, both for their own benefit and in an attempt to detach them from connections with the W.F.T.U., which continued to appeal to colonial nationalism to shake off the yoke of "Anglo-American imperialism." In Europe the I.C.F.T.U. set up in Nov. 1950 a European regional organization with 20,000,000 affiliated members and with a regional secretariat in Brussels, Belg.

An Asiatic regional trade union conference was held under I.C.F.T.U. auspices at Karachi, Pakistan, in May 1951, and an Asiatic regional organization was set up. Twelve countries were represented.

In North Africa, attention was concentrated in the first instance on the French overseas territories. An I.C.F.T.U. delegation visited Tunisia, Morocco and Algeria in Dec. 1950 and helped to reorganize the trade unions in these areas. As a result the General Workers' union of Tunisia left the W.F.T.U. and joined the I.C.F.T.U. A similar delegation to western Africa in January-April 1951 visited Nigeria, the Gold Coast, Gambia, Sierra Leone, French Equatorial Africa and French West Africa. The West African Regional conference held at Douala, in the French Cameroun, in April 1951 called for the establishment of an African regional organization of the I.C.F.T.U., and a provisional regional organization was set up.

In the Americas, an Inter-American regional trade union conference was held in Mexico City, Mex., in Jan. 1951, and a regional organization representing 21,000,000 trade unionists in 21 countries was formally constituted (Organización Regional Interamericana de Trabajadores). Havana, Cuba, was chosen as the office centre. The conference was largely concerned with organizing opposition to totalitarian tendencies in Latin American countries, especially Argentina.

Great Britain.—For the second year in succession there was a small decrease in the affiliated membership of the British Trades Union congress—from 7,833,000 in 1950 to 7,827,000 in 1951. The fall was entirely in male membership, from 6,666,000 to 6,608,000, the number of women rising from 1,217,000 to 1,220,000.

The most important trade union event of 1951 was the abrogation of the system of compulsory arbitration that had been in force since World War II. The National Arbitration order (order 1305) was withdrawn on Aug. 2, 1951, and was replaced by a new Industrial Disputes order under which arbitration became entirely voluntary. An Industrial Disputes tribunal replaced the National Arbitration tribunal, but the minister of labour might not refer any dispute to it unless he was satisfied that full use had been made of any existing machinery for negotiation and conciliation. Awards of the tribunal became implied terms of contract between employer and workmen; but there was no prohibition of strikes or lockouts and no criminal penalty for disobeying an award.

The trade unions also ceased to accept any general responsibility for "wage restraint"; and many applications for wage advances to meet the increased cost of living were put forward during 1951.

The annual Trades Union congress, which met at Blackpool Sept. 3–7, was chiefly concerned with questions of defense policy and with wages and cost of living. The congress carried a resolution demanding more effective price control, reconsideration of the government's refusal to spend more on subsidies to keep down living costs, enquiry into costs and methods of distribution, stricter limitation of profits and removal of purchase tax from household necessities. It also demanded a more comprehensive system of government purchase and marketing of essential goods. A resolution moved by the Electrical Trades union deploring the rise in profits and demanding all-round wage increases at the expense of profits was defeated by 5,284,000 votes to 2,199,000. This was the principal trial of strength between the general council and its left-wing critics. A proposal to reduce the compensation paid to former owners of nationalized property was defeated by a similar majority. (*See* also STRIKES; WAGES AND HOURS.) (G. D. H. C.)

Lacrosse. Finishing the 1951 season with only one defeat each in intercollegiate competition, Princeton and Army were rated as co-champions of the United States Intercollegiate Lacrosse association, with the University of Virginia and Duke sharing the next place in the national rankings. Army ruined the Tigers' hopes for an undefeated season on May 19 at West Point when it surprised highly-favoured Princeton, 15–12. Another feature of the campaign was provided by the Old Nassau team on April 21 at Baltimore, Md., where Princeton upset Johns Hopkins, 13–11, to end the defending titleholders' winning streak against college opposition in 31 games. Earlier in the campaign the Tigers had halted the Mount Washington Lacrosse club, the national open champions, who had not suffered defeat at home in ten seasons.

High scoring marked the tenth annual battle of the north and south all-stars at Troy, N.Y., on June 9, with the north coming from behind in the last period to gain a 12–11 decision. Tallies by Bob de Muth, Clint Gilbert and John Podbielski, all coming after 7 min. 20 sec. of the final quarter, brought victory to the north. Podbielski accounted for the deciding goal after 11 minutes of action in the session.

A squad of American stars visited the British Isles to provide the year's highlight in women's competition. The United States women, with Mrs. Bruce M. Donaldson of Unionville, Pa., as their captain, compiled a record of 20 victories in 27 contests. (T. V. H.)

Lagerkvist, Pär Fabien (1891–), Swedish writer was born at Växjö, May 23. After studying at the University of Uppsala, he went abroad for many years, but after 1930 lived outside Stockholm. The devout religious background of his childhood made a deep and lasting impression on him, and it remained the source of the naïve sincerity which, together with a neoplatonic humanism, characterized his work. An early contact with modern expressionistic art made him try to realize its parallel in literature, and his early writings were created in this vein. More deeply than any other Swedish writer he felt the tragedy of World War I; works from this period are *Ångest* (Anguish) and *Kaos* (Chaos). Very early his interest turned also toward dramatic art, and his plays, through their symbolism, linked up with the "dream plays" of Strindberg and decisively influenced Swedish drama.

In the early 1930s, when new creeds of violence were proclaimed, Pär Lagerkvist immediately realized their danger, and his writings from this period (an important work being *Bödeln* [The Hangman] 1939) showed a firm resistance to evil. In 1944 he published his first full-length novel, *Dvärgen* (The Dwarf), a story with a Renaissance setting, dealing with the evil in man. *Barabbas,* published in Sweden in 1950, also appeared in translation in Denmark, Norway, Finland, France, Germany, Switzerland, the Netherlands, England and the U.S. In 1951 Pär Lagerkvist was awarded the Nobel prize for literature. (A. L. BR.)

Latin-American Literature. With the death of the Argentine writer and diplomat Manuel Ugarte in Dec. 1951 one of the last representatives of modernism passed away. That Ugarte's "modernist" world had become far, far removed from our modern world was clearly evidenced by the symbolic fact that throughout 1951 writers all over Latin America had been celebrating with a wide profusion of tributes and honours the 80th anniversary of Enrique González Martínez, the great Mexican poet who, as early as 1911, by making a strong plea for simplicity and sincerity in poetry, exposed all the artificialities and banalities of modernism.

The greatest surprise of the year was perhaps *Los pies descalzos,* a first novel by a renowned astronomer, 54-year-old Luis Enrique Erro of Mexico. Formerly a Harvard university research fellow, Erro was hitherto known among specialists for such treatises as *Variable Stars in High Latitude Fields* and for his activities in founding and organizing the Astrophysical observatory of Tenotzintla. In *Los pies descalzos* he emerged as a mature, extremely gifted novelist. In retelling the life story of a "barefooted" Indian girl, a mother at 20, and later wet nurse to a wealthy Spanish family, Erro presents a realistic picture of the exploitation of the underprivileged in the sugar cane plantations during Porfirio Díaz's regime. The "barefooted" girl becomes a real mother to the rich white boy, but when he grows older he leaves her and ignores her while she goes on seeking him, helplessly and hopelessly. The novel is dedicated to Emiliano Zapata whom, with the exception of José María Morelos, Erro considers the only genuine Mexican revolutionist.

Among other memorable works of fiction for 1951: a revised edition of the Venezuelan Antonio Arraiz's *Dámaso Velázquez,* retitled *El mar es como un potro* and published in Buenos Aires; *La Torre,* the last novel in one of Eduardo Mallea's brilliant cycles about life in Argentina today; and two posthumous Ecuadorian works: Miguel Angel Corral's *Las cosechas* and José de la Cuadra's *Los monos enloquecidos.* Dangling between the world of reality and the world of fiction, J. S. González Vera gave us a series of delightful autobiographical vignettes in *Cuando era muchacho,* all of them couched in that exquisite and flavoursome style which made him an undisputed master of prose and won for him Chile's National prize.

A Mexican young woman named Evelina Bobes Ortega was awarded the Lanz Duret prize for her warm and beautifully conceived *Otoño estéril,* a first novel. Since she was the fifth woman to have received that coveted award within recent years, this might prove to be symptomatic of the increasingly significant role that the feminine sex was playing in Mexican letters—or, rather, in Latin-American letters—for the authors of many of the most impressive works of fiction of 1951 were women. From Argentina came *La rosa no debe morir* by María de Villarino, and *Los espejos,* a first novel by the promising short story writer Carmen Gandara; from Uruguay, *Un jardín para la muerte,* by Paulina Medeiros; from Brazil, *O barco de tres lugares,* by María de Lourdes Teixeira; and from Mexico, *Retrato de una niña triste,* which won for Olivia Zúñiga, a newcomer, the State of Jalisco prize given by a distinguished awarding committee of three ranking writers: Mariano Azuela, Agustín Yañez and Enrique González Martínez.

In *Los que viven por sus manos,* published in Santiago, Chile, the Ecuadorian Jorge Fernández draws with almost clinical precision a picture of middle-class life; in *Espiridião,* the Brazilian Benedeto Valadares mirrors the political turbulence of Minas Gerais with a main character reminiscent of the leader Melo Viana; and in *Carnaval en Huchuetlán,* the Mexican Carlos Merino Fernández contrives to evoke with verve and Rabelaisian wit a rural community of his native country. The promising Antonio Magaña Esquivel (*El ventrílocuo,* 1944) fulfilled his promise with *La tierra enrojecida,* a colourful, panoramic fresco of insurrection-torn Yucatan. In his characteristically terse and brilliant style he unfolds a lusty saga of fast-moving action and volcanic passions. *La tierra enrojecida* won the Ciudad de Mexico yearly award. But it may be justly claimed that none of these novels surpassed in pathos and poignant intensity Juan R. Campuzano's *La sombra íntima,* portraying the trials and tribulations of a rural schoolteacher in a remote community somewhere by the Mexican gulf.

To the prose fiction crop the poetry output bears no comparison for either variety, or scope or depth. However, there were at least three notable exceptions: the forever fresh and exciting Jorge Carrera Andrade who in *Lugar de origen* produced a paean of beauty to his native country, Ecuador; the *Elegía a Jesús Menéndez,* by the great Cuban poet Nicolás Guillén, a deeply felt elegy to the murdered Negro labour leader; and *El hijo del guardabosque,* by Juvencio Valle, intense lyrical evocation of the Chilean landscape.

The most ambitious biography of the year was the 1,400-page, two-volume *Bolívar,* by the veteran Spanish critic and historian Salvador de Madariaga. W. H. Hudson was the subject chosen by Ezequiel Martínez Estrada for a keen appreciation of the Anglo-Argentine naturalist and writer. Among other noteworthy biocritical studies there were an *Oswaldo Cruz,* by Renato Sêneca Fleury, detailing the medical achievements of the great Brazilian physician; a colourful *San Martín,* by the Argentine Carlos Alberto Larumbe; and a rather perceptive *Eça de Queiroz,* by the Brazilian essayist Berilo Neves.

The major contributions in the field of literary history were *La novela mexicana,* a survey of 19th-century Mexican fiction, by the Cuban professor Pedro Manuel González; *El nuevo relato ecuatoriano,* by Benjamin Carrión, an authoritative study of the short story renascence in Ecuador during the 1930s; *Literaturas aborígenes,* anthology and commentary of America's earliest literature, by the Peruvian critic Abraham Arias Larreta; and, finally, *Los primeros cuentos de Rubén Darío,* a Ph.D. dissertation by Ernesto Mejía Sánchez analyzing the experiences of the great poet in using the short story as a medium of expression.

Among the most interesting works of 1951 were the *Memorias de un estudiante soldado,* in which Roberto Esquinazi Mayo, of Cuba, retells his parachutist adventures during World War II; the best seller *Pensamiento y dinamismo de la Revolución Mexicana,* by the statesman and political leader Ramón Beteta; and, finally, the ten-volume *Diccionario Enciclopédico Uteha,* the first encyclopaedic dictionary in the Spanish language produced in Latin America. The articles which fill its 13,000 pages were written by leading authorities and contain up-to-date information, enhanced by the extensive use of graphic material: 20,000 pictures, 400 maps, 400 colour plates. New definitive editions of classics published during 1951 were volume 1 of the *Obras completas de Sor Juana Inés de la Cruz,* in four volumes, edited and annotated by the Mexican scholar Alfonso Méndez Plancarte (1951 was the 300th anniversary of Sor Juana's birth); Fray Bartolomé de las Casas' three-volume *Historia de las Indias,* edited by the Mexican historian Agustín Millares Carlo, with a pithy critical introduction by Lewis Hanke of the University of Texas; and the most widely read sentimental novel of the 19th century, *María,* by the Colombian Jorge Isaacs (1837–95), edited by the Argentine critic Enrique Anderson Imbert. (A. FLO.)

Latter Day Saints: *see* MORMONS.

Latvia. From Nov. 18, 1918, to Aug. 5, 1940, when it was annexed by the U.S.S.R., Latvia, one of the Baltic states of northeastern Europe, was an independent republic. Area: 25,395 sq.mi. Pop.: (1939 est.) 1,994,500; (1950 est.) 2,100,000, but according to reliable estimates the purely Latvian population declined from 1,496,000 (75%) to 1,222,000 (58%) between 1940 and 1950. Chief towns (pop., 1935 census): Riga (cap., 1939 est., 393,211), Liepaja (57,098), Daugavpils (45,160). Language: Latvian and Russian. Religion: Lutheran, Roman Catholic and Greek Orthodox. Chairman of the presidium of the supreme soviet of the Latvian S.S.R. in 1951: August M. Kirchensteins; chairman of the council of ministers: Vilis T. Lacis.

History.—At the election on Feb. 18, 1951, of a new supreme soviet there were 38,639 more voters than in 1947, when the electorate amounted to 1,326,289, and the proportion of votes against official candidates was reduced between 1947 and 1951 from 0.87% to 0.05%. Although Communist party officials predominated, elected members included also a number of military personalities, headed by Gen. Ivan Khristoforovich Bagramian, commander of the Baltic military area (Latvia, Lithuania and the soviet part of former East Prussia).

The 750th anniversary of the foundation of Riga was celebrated on Nov. 24.

Many members of the government were dismissed during 1951 either for inefficiency or for employing "unreliable elements." In January Albert Sieks replaced August Eglits as minister of the interior and Zelma Chabe was appointed minister of light industry in place of Karlis Shics; in February Janis Vanags, deputy premier and minister of agriculture, was superseded as head of the ministry by Aleksandr Nikonov but retained his deputy premiership; in March Andrejs Jablonskis, minister of justice, was replaced by Mme. Emilia Veinberga and in May Fricis Deglavs was dismissed from his post of chairman of the State Planning commission. All the dismissed ministers were old Latvian Communists, while the newly appointed ministers were

Russians or Russified Latvians.

At the plenary session of the central committee of the Latvian Communist party, held in Riga on April 14–15, J. E. Kalnberzins, first secretary, reported that in six years the party had admitted 25,000 new members, including 5,000 from the ranks of the Youth (Komsomol) organization whose membership was about 85,000; grave mistakes, however, had been made in admitting new members.

Speaking in Moscow on March 9, at a session of the soviet of the union, Kalnberzins stated that Latvia had completed the industrial part of the postwar five-year plan in three years and ten months, and at the end of 1950 industrial output was more than double that of 1940. Agricultural production, however, was seriously in arrears and for four or five years Latvia would be unable to cover its grain needs. The merging of smaller *kolkhozy* or collective farms into bigger ones continued throughout the year and it was believed that by the end of 1951 there were fewer than 1,400 *kolkhozy* against 4,115 in March 1950.

At a "peace conference" at Riga in September, G. G. Turs, archbishop of the Latvian Lutheran Church, Mgr. Peter Strods, described by the soviet press as Catholic "deputy metropolitan" of Riga, and Philaret, Orthodox archbishop of Riga and all Latvia, signed the World Peace council's appeal for a five-power pact.

Broadcasts in Latvian begun on June 3 by the Voice of America aroused speculation as to the fate of such national heroes as Karlis Ulmanis, former president of the republic, and Gen. Janis Balodis, former commander in chief of the Latvian army, who with hundreds of others had been arrested and deported in June 1940. On July 26, however, *Izvestia* published a report from Riga that in the state archives of the Latvian republic documents had been found to prove that Ulmanis, Balodis and other Latvian politicians and army officers were mercenaries in the pay of "Anglo-American imperialists." (*See* also ESTONIA; LITHUANIA.)

Education.—In 1950 there were 282,000 pupils in elementary and secondary schools and 27,000 students in 66 technical schools and 10 institutions of higher education.

Finance.—Budget: (1951 est.) revenue 1,451,300,000 roubles; expenditure 1,405,700,000 roubles. (K. SM.)

Law.

The bulk of legislation enacted by the United States 82nd congress in 1951 was directed toward organizing the nation's economy and manpower for defense against Russian communism. Congress extended Selective Service, took the first step toward establishing universal military training, provided a system of civil defense, authorized a limited program of price, rent and wage control, provided free life insurance for all members of the armed forces, declared the war with Germany to be at an end on Oct. 19, appropriated more than $7,000,000,000 for military, economic and technical assistance to friendly nations and enacted a new revenue act which was expected to increase collections by $5,600,000,000.

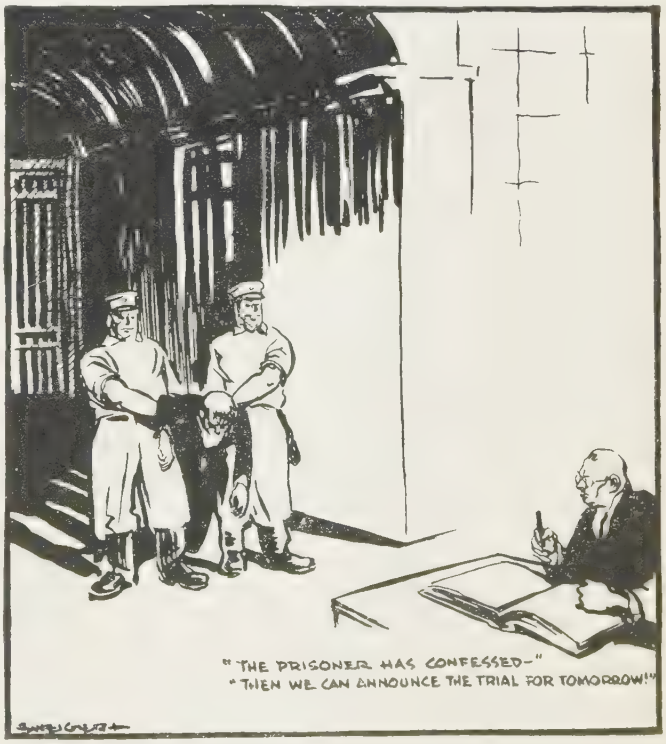
Nevada was the 36th state to ratify the 22nd amendment which thereby became part of the constitution of the United States. The amendment provided that no person may serve as president more than two elective terms, nor may a person who has held the office of president for more than two years of another president's unexpired term be elected president more than once. A special provision in effect exempted Pres. Harry S. Truman from the application of the amendment.

Only the more important legal developments of general interest are reported in this article.

Administrative Law.—Federal administrative law took a new turn in a supreme court decision which broadened the scope of judicial review of agency decisions. The court accepted what Justice Felix Frankfurter called a "mood" of congress in holding that the standard of proof required to support a National Labor Relations board decision under the Taft-Hartley act is the same as that which courts must exact in reviewing the rulings of other agencies under the Administrative Procedure act. Reviewing courts must take more responsibility for the reasonableness of NLRB decisions than some had done in the past. The test to be used is "whether on the record as a whole there is substantial evidence to support agency findings." The court, however, gave notice that it would not interfere with agency rulings except in rare instances where the standard seemed to have been grossly misapplied (*Universal Camera Corp.* v. *Labor Board,* 340 U.S. 474). The court, in fact, showed its reluctance to disturb agency findings by affirming decisions of the Federal Communications commission, the Securities and Exchange commission, the Interstate Commerce commission and of the NLRB in several other cases. Nevertheless the views expressed by the supreme court in the Universal Camera case broadened the scope of judicial review sufficiently to have far-reaching effects on administrative agency proceedings.

Aliens and Citizenship.—The supreme court approved the deportation of an alien who had twice been convicted of conspiring to defraud the United States of taxes on distilled spirits, which was a crime "involving moral turpitude" within the exclusion provisions of the Immigration act (*Jordan* v. *DeGeorge,* 341 U.S. 223).

Congress amended the Displaced Persons act of 1948 by providing that during the four fiscal years ending June 30, 1952, eligible displaced orphans, seeking to enter the United States as immigrants, may be issued visas without regard to the quota limitations for these years. Not more than 341,000 such visas may be issued, including those heretofore issued under the Displaced Persons act of 1948. Another amendment enabled former U.S. citizens who had lost their citizenship by voting in certain Italian elections to regain such status by taking an oath that they had done nothing to promote communism. Congress also tried to clarify the status of certain aliens whose legal position had been in doubt since the passage of the Internal Security act of 1950. Persons who nominally belonged to nazi or fascist groups before attaining the age of 16 years, or who had



"THE PRISONER HAS CONFESSED-"
"THEN WE CAN ANNOUNCE THE TRIAL FOR TOMORROW!"
SWEIGERT

"JUSTICE IN THE SATELLITES," a 1951 cartoon by Sweigert of the *San Francisco Chronicle* (Calif.)

been forced to join such organizations, were enabled to enter the United States upon a satisfactory showing of their present state of mind.

Armed Forces.—Congress enacted the Universal Military Training and Service act as an amendment to the Selective Service act of 1948. The new law required the registration of all males, citizen and alien, between the ages of 18 and 26, lowered the draft age from 19 years to 18½, increased the length of service from 21 months to 24 and set a ceiling of 5,000,000 persons in the armed forces until Jan. 31, 1954. Local draft boards were directed to exhaust the supply of eligible men in the 19- to 26-year-old bracket before taking any under 19. The act also contained elaborate provisions relating to deferment, exemption, re-employment rights after separation from service, reserves, enlistments and liquor control, and established a national security training commission composed of five members to be appointed by the president. The new commission was directed to report its recommendations for a program of universal military training to congress.

Congress authorized the issuance of free life insurance of $10,000 to every member of the armed forces, retroactive to June 27, 1950. The proceeds of such insurance are exempt from claims of creditors and from taxation. Beneficiaries are limited to the immediate family and a monthly installment plan of payment was set up.

Business Regulation.—In a decision of nation-wide interest the supreme court declined to interfere with an order of the Federal Communications commission approving a method of colour television transmission developed by Columbia Broadcasting system (CBS) and excluding the use of other systems. The court ruled that the FCC had not been arbitrary in finding that the CBS method was the best presently available, although its colour telecasts could not be received either in colour or in black and white on existing receivers without expensive changes, and in spite of the fact that the Radio Corporation of America (RCA) claimed to have a method of colour television transmission which could be received on existing receivers without any adaptation. In so technical a controversy the justices agreed to defer to the commission's special familiarity with the problem involved (*RCA* v. *U.S.*, 341 U.S. 412).

Another drastic decision of the high court whittled down the effectiveness of state "fair-trade" laws which authorize the fixing of minimum resale prices by agreement between producers and retailers. The court upheld the right of a New Orleans, La., liquor dealer to cut prices since he had not signed any price-fixing agreement. The Louisiana statute in so far as it purported to bind nonsigners was illegal. The Miller-Tydings act authorized the enactment of state laws which permit "price-fixing by contract but not price-fixing by compulsion" (*Schwegmann Bros.* v. *Calvert*, 341 U.S. 384). The supreme court also knocked out an agreement between affiliated corporations to fix maximum resale prices of their products. The fixing of maximum prices is a violation of the antitrust laws. "Such agreements . . . cripple the freedom of traders," the court said (*Kiefer-Stewart Co.* v. *Seagram*, 340 U.S. 211). The high court, however, upheld a price-fixing arrangement between an oil company and four Detroit jobbers by which they obtained gas at one and one-half cents a gallon lower than other filling stations in the same area. A showing that the price cut was made in good faith to meet the equally low price offered by a competitor was a complete defense against the charge of price discrimination in violation of the Robinson-Patman act (*Standard Oil Co.* v. *FTC*, 340 U.S. 231).

In two cases the supreme court approved injunctions restraining violations of the Sherman act. The refusal of an Ohio newspaper to accept advertising from merchants who sponsored programs on a local radio station was held to be an attempt to monopolize interstate commerce. A court order enjoining the continuance of this practice did not violate the freedom of the press (*Lorain Journal Co.* v. *U.S.*, 342 U.S. 143). The court also affirmed a lower court order directing a United States company and its foreign subsidiaries to terminate an agreement to allocate trade areas, fix prices and participate in cartels restricting imports to and exports from the United States, as a violation of the Sherman act (*Timken Co.* v. *U.S.*, 341 U.S. 593).

Civil Rights.—A young college student who made a rabble-rousing speech to a mixed crowd of Negroes and whites on a Syracuse, N.Y., street corner, urging the Negroes to "rise up in arms and fight for your rights," was properly arrested and convicted of disorderly conduct for refusing to stop when requested to do so by police (*Feiner* v. *N.Y.*, 340 U.S. 315). The high court, however, reversed the conviction of a Baptist minister for preaching on the streets of New York city without a police permit. The ordinance requiring police approval for street preachers was a violation of the first amendment, which forbids prior restraints on freedom of religion and speech. The right to speak on religious subjects on the city streets could not be controlled by officials without "appropriate standards" to guide them (*Kunz* v. *N.Y.*, 340 U.S. 290). The court also upheld an ordinance passed by the city of Alexandria, La., forbidding solicitors, pedlars and transient vendors from calling upon the occupants of private residences unless invited or requested by the occupant. Such ordinances (known as Green River ordinances because they originated in Green River, Wyo.) do not violate the constitutional guarantees of freedom of press, speech, religion or due process of law, nor do they unlawfully burden interstate commerce. A municipality has the legal right to defend "the tranquility of the fireside" against doorbell-ringing sellers of magazine subscriptions (*Breard* v. *Alexandria*, 341 U.S. 622). The conviction of two members of Jehovah's Witnesses for disorderly conduct in using a city park in Havre de Grace, Md., for religious meetings without a permit from the city council was set aside by the supreme court as a denial of the equal protection of the laws in the exercise of freedom of speech and religion. There was no ordinance regulating the use of the parks nor any standards for granting permits (*Niemotko* v. *Maryland*, 340 U.S. 268).

The supreme court affirmed the conviction of a private detective, who carried a police card, for depriving a victim of his civil rights by extracting a confession from him through third-degree methods. Since he acted "under colour of law," he was guilty of violating the federal civil rights acts (*Williams* v. *U.S.*, 341 U.S. 97). But the court showed no inclination to broaden the scope of these laws. It held that they had not abolished the immunity of state legislators from liability for acts done in "the uninhibited discharge of their legislative duty." A lower court was right in throwing out a suit brought against members of the un-American activities committee of the California legislature for $250,000 damages for violating the plaintiff's civil rights by smearing his reputation (*Tenney* v. *Brandhove*, 341 U.S. 367). Nor did the federal civil rights laws authorize a suit for damages against private individuals for breaking up a meeting of citizens who intended to adopt resolutions opposing the European Recovery program. Since the defendants had not been acting under colour of state law, they did not come within the category specified in the statute. Other remedies were, however, available to them (*Collins* v. *Hardyman*, 341 U.S. 651). By a four-to-four vote, the court in effect approved the dismissal of a government employee, suspected of disloyalty, without giving her a chance to confront and cross-examine her accusers. But by a shift of one vote the justices ruled five to three that listing of organizations by the attorney

OPENING CEREMONIES at the legal centre of Southern Methodist university, Dallas, Tex., in 1951. Modelled on the British Inns of Court, it was to be a legal laboratory where students would mingle with practising lawyers doing research at the centre

general as subversive, without a hearing, was an arbitrary abuse of power (*Joint Anti-Fascist Refugee Committee* v. *McGrath,* 341 U.S. 56).

In two cases the supreme court sanctioned state loyalty oath laws. It sustained the right of the Maryland legislature, under the state's subversive activities law, to require candidates for state offices to file affidavits as to their loyalty (*Gerende* v. *Board of Supervisors,* 341 U.S. 56). In a second decision the court upheld a Los Angeles, Calif., ordinance requiring all city office-holders and employees to sign affidavits disclaiming support of or participation in subversive activities, not only at the date of the affidavit but during the five years last past. Failure to sign would result in dismissal. The court termed this "No more than an employment requirement of loyalty to the state and the United States." The ordinance did not violate the constitutional provisions against bills of attainder and ex post facto laws, nor deprive employees of freedom of speech or assembly (*Garner* v. *Board of Public Works,* 341 U.S. 716). A different view was taken by the California district court of appeals, which invalidated a directive of the regents of the University of California requiring all faculty members to take a loyalty oath. Such a requirement violated several provisions of the state constitution, including one that the university should be entirely independent of political or sectarian influence (*Tolman* v. *Underhill,* 229 P.2d 447). The U.S. high court declined to disturb lower court decisions holding that a zoning ordinance was invalid which limited the use or occupancy of buildings in districts assigned to use solely by white or Negro persons; that segregation of Negro passengers in "Jim Crow" cars was against the constitutional bans on discrimination; that Louisiana State university must admit a Negro student to its law school, even though there was a Negro university to which such students could go; that the University of Maryland nursing school must admit a qualified Negro student even though the state offered to send her to a superior Tennessee nursing school; and that the Florida supreme court should reconsider its opinion upholding a Miami municipal golf course in limiting the use of the course by Negroes to Monday of each week.

Criminal Law.—The supreme court affirmed the 1949 conviction of 11 leaders of the Communist party for conspiring to advocate the overthrow of the U.S. government by force in violation of the Smith Sedition act. Chief Justice Frederick M. Vinson, speaking for himself and three other justices, said that the 16,000-page record of the trial showed that the defendants planned to overthrow the U.S. government by force as soon as possible. Their conspiracy to teach and advocate that objective constituted a clear and present danger to the government. The courts in such cases must ask "whether the gravity of the 'evil,' discounted by its improbability, justifies such invasion of free speech as is necessary to avoid the danger," which was the rule laid down by Judge Learned Hand in affirming the conviction in the circuit court of appeals. Justice Frankfurter in a long concurring opinion advocated the exercise of "judicial self-restraint" in dealing with legislation. Justice Robert H. Jackson, also concurring, believed that it was not realistic to try to apply the "clear and present danger" test to this sort of case. Justice William O. Douglas, dissenting, favoured the Brandeis view that a clear and present danger threatens only "when conditions are so critical that there will be no time to avoid the evil that the speech threatens." Justice Hugo L. Black, the other dissenter, termed the conviction of the Communists for conspiring to teach and advocate the violent revolution was "a virulent form of prior censorship of speech and press, which I believe the First Amendment forbids" (*Dennis* v. *U.S.,* 341 U.S. 494).

The high court also passed upon another aspect of the government's fight against Communists. A witness, who had admitted before a grand jury that she had been treasurer of the Denver Communist party, thereby waived her privilege against self-incrimination. She was properly held guilty of contempt of court when she refused to name the person to whom she had delivered the party books and records. Once she had admitted her party membership, further answers could not incriminate her further (*Rogers* v. *U.S.,* 340 U.S. 367). On the other hand, a witness who consistently refused to answer any questions as to her employment by the Communist party, on the ground that it might incriminate her, was not guilty of contempt. Answers to such questions might have been used effectively in a subsequent prosecution for violating the Smith Sedition act (*Blau* v. *U.S.,* 340 U.S. 159). The supreme court also reversed a contempt sentence imposed on a Philadelphia, Pa., gangster, tagged by the police as an "underworld character and racketeer," for refusing to answer questions relating to his connections with and the whereabouts of a fugitive witness in the same inquiry. As in the Blau case, the court said that "the privilege against self-incrimination guaranteed by the Fifth Amendment extends not only to answers that would in themselves support a conviction . . . but also to those which would furnish a link in the chain of evidence needed to prosecute" the witness for a federal crime (*Hoffman* v. *U.S.,* 341 U.S. 479).

The high court also dealt with aspects of due process in several other cases. It reversed the conviction of two Florida Negroes for rape on the sole ground that Negroes had been discriminated against in selecting the jury. Justice Jackson chided the majority of the court for relying on a technical point when the case should have been reversed because the inflamed state of public opinion, whipped up by newspaper and radio comment, had made a fair trial impossible (*Shepherd* v. *Florida*, 341 U.S. 50).

In two cases the supreme court considered the application of the McNabb rule, which makes a confession inadmissible in evidence if obtained during illegal detention of the defendant. The court held that this rule did not bar the use of a confession of murder made before a prisoner had been booked on that charge but while he was lawfully detained on another charge (*Garignan* v. *U.S.*, 342 U.S. 36). Nor is the McNabb rule applicable to proceedings in state courts (*Gallegos* v. *U.S.*, 342 US. 55).

Narcotics seized by officers without a search warrant should not have been admitted in evidence in a trial for violation of the federal Narcotics act. The fact that the seized property was contraband in which no legal property right existed and that the search was not made in defendant's own quarters but in a hotel room occupied by his aunt, where it had been stored by the defendant without her knowledge, made no difference (*U.S.* v. *Jeffers*, 342 U.S. 48). The supreme court also upheld an FBI agent who had refused to obey a subpoena directing him to deliver to the court records belonging to the department of justice (*Touhy, U.S. ex rel* v. *Ragan*, 340 U.S. 462). In an antitrust violation case the supreme court upheld the right of defendants to access to books, documents and papers obtained by the government by solicitation from a third person (*Bowman Co.* v. *U.S.*, 341 U.S. 214). The high court, however, would not intervene in state criminal proceedings to suppress evidence alleged to have been secured by unlawful search and seizure (*Stefanelli* v. *Minard*, 342 U.S. 117).

Labour.—In three companion cases the supreme court sustained orders of the National Labor Relations board directing unions to end "secondary boycotts," which were in violation of Sec. 8(a) (4) (A) of the Labor-Management Relations act. This provision declares it to be an unfair practice for a union to engage in a strike where an object thereof is forcing any employer or other person to cease doing business with any other person. The sponsors of this legislation considered such action to be a secondary boycott, although that term is not used in the text of the labour act. In each case a union had tried to force a building contractor to break his contract with a subcontractor who employed nonunion labour. The pressure used in the so-called Denver case (341 U.S. 675) was a strike; in the Greenwich case (341 U.S. 694) it was peaceful picketing; and in the Chattanooga case (341 U.S. 741) it was a work stoppage. In none of these cases did the high court find that the NLRB's cease and desist order amounted to an abridgment of freedom of expression guaranteed under Sec. 8(c) of the Taft-Hartley act and the federal constitution. In a fourth case the court ruled that the action of pickets on strike at a Louisiana rice mill in forcing a truck driver for a neutral customer to turn away without picking up a load of merchandise did not amount to a secondary boycott within the prohibition of the labour laws (*Labor Board* v. *Rice Milling Co.*, 34 U.S. 665).

Failure of the officers of the Congress of Industrial Organizations (C.I.O.) to file non-Communist affidavits with the NLRB barred one of its affiliates, the Textile Workers Union of America, from a hearing before the board. The Taft-Hartley act provides that no complaint can be heard by the labour board unless there is on file "an affidavit executed . . . by each officer of such labor organization and officers of any national or international labor organization of which it is an affiliate or constituent unit that he is not a member of the Communist Party. . . ." The supreme court held that the C.I.O. was "a national or international labor organization" subject to the affidavit requirement, brushing aside the contention that the C.I.O. was merely a federation of unions rather than a national or international union (*Labor Board* v. *Highland Park Mfg. Co.*, 341 U.S. 322). Subsequently the officers of the C.I.O. filed affidavits.

The Wisconsin Public Utility Anti-Strike law was nullified by the U.S. supreme court on the ground that it was in direct conflict with federal laws regulating labour-management relations. The Wisconsin law banned strikes and substituted compulsory arbitration whenever an impasse in collective bargaining was likely to cause an interruption in service. Such provisions were void, the high court said, because they abrogated the right of employees to strike, which is guaranteed under federal statutes (*Bus Employees* v. *Wisconsin Board*, 340 U.S. 383).

States' Rights.—The U.S. supreme court approved a Michigan regulation requiring a gas company engaged in interstate commerce to obtain a certificate of public convenience and necessity from the state's public service commission before selling gas directly to the consumers within the state (*Panhandle Eastern Pipeline Co.* v. *Michigan Public Service Comm.*, 341 U.S. 329); a compact between West Virginia and other states for the control of river pollution in the Ohio river basin (*Dyer* v. *Sims*, 34 U.S. 22); a New Jersey statute which provided that shares of stock in a domestic corporation and unpaid dividends declared thereon should escheat to the state against owners who had made no claims to such property within a period of 14 years (*Standard Oil Co.* v. *N.J.*, 341 U.S. 428); a 1951 amendment to the Florida "blue laws" which exempted from Sunday closing certain businesses including filling stations, restaurants, hotels, tourist attractions, drug stores, etc.; and an antipeddling ordinance of the city of Alexandria, La. (noted above).

The high court, however, held invalid an ordinance of the city of Madison, Wis., prohibiting the sale of milk unless it is processed and bottled within five miles of the city square. An out-of-state milk dealer, whose pasteurization plants were more than five miles away, could not be lawfully barred from selling his milk in the city. The ordinance placed an undue burden on interstate commerce (*Dean Milk Co.* v. *Madison*, 340 U.S. 349). The court settled another conflict of laws problem by ruling that the full faith and credit clause of the federal statutes required the courts of Wisconsin to recognize a law founded upon the Illinois wrongful death statutes where the death occurred in Illinois (*Hughes* v. *Fetter*, 341 U.S. 609).

The supreme court also applied the full faith and credit provision of the constitution in another decision which upheld a Florida divorce decree against contest in Vermont. A decree which is valid in the state where it was rendered cannot be collaterally attacked in another state (*Johnson* v. *Muelberger*, 340 U.S. 581).

A decision which would affect the tax laws of about 30 states was finally rendered by the supreme court. As Justice Tom C. Clark, who dissented, remarked, "It has taken eight years and eight courts to bring this battered litigation to an end." The majority of the judges rendered an opinion which knocked out a Connecticut tax on corporations "for the privilege of carrying on or doing business within the state." A state cannot tax the privilege of doing exclusively interstate commerce (*Spector Motor Service, Inc.* v. *McLaughlin*, 340 U.S. 602).

Taxation.—Employees felt the impact of the new Revenue Act of 1951 upon receipt of their first instalment of wages on or after Nov. 1, when the withholding rate went up from 18% to 20%. The new law increased individual income taxes by amounts that averaged 11.75% of the previous rates, as shown on new surtax tables. The new rates applied to tax years beginning after Oct. 31. About one-sixth of the increase affected 1951 income.

Some relief was given taxpayers in certain categories. Gains on the sale of homes were made not taxable, if the taxpayer, within a year before or after the sale, buys and uses another residence, unless the selling price of the old home exceeds that of the new, in which case he would have to report as a capital gain the difference between the two prices. A similar provision applied to the cost of building a new home, if the taxpayer moves in within one year before or within 18 months after the sale of the old one. All medical expenses were made fully deductible, if the taxpayer or his or her spouse is over 65 years old.

A new character known as "head of household" was created in an attempt to cure an apparent injustice. The head of household was granted about one-half the benefits formerly available to married couples by splitting their incomes in joint returns. To be classified as head of household, a taxpayer must be widowed, unmarried, divorced or legally separated. He must also have an unmarried child, stepchild or blood descendant or dependent (married or not) living with him, and he must furnish more than one-half the expense of maintaining the household. Another benefit to many taxpayers was an increase from $499.99 to $599.99 in the amount a dependent might earn and still be claimed as an exemption.

Changes in the capital gains provisions put a ceiling on long-term capital gains amounting to 26% effective for taxable years beginning after March 31, 1951, in the case of corporations and after Oct. 31, 1951, for other taxpayers.

The new Revenue act also contained provisions requiring professional gamblers (that is, persons engaged in the business of accepting wagers) to register with their local collector of internal revenue, keep books open for inspection, pay a tax of $50 per year and another tax of 10% of their gross receipts.

Excise tax changes included increases on cigarettes from 7 cents to 8 cents per package, on gasoline from 1½ cents to 2 cents a gallon, on automobiles from 7% to 10% of the manufacturer's price, on beer of $1 per barrel and on whiskey 30 cents per fifth.

(*See* also EDUCATION; NATIONAL LABOR RELATIONS BOARD; TAXATION; UNITED STATES.) (M. DN.)

United Kingdom Legislation.—Three examples of legislation to deal with the international crisis were the Reserve and Auxiliary Forces (Training) act, the Supplies and Services (Defense Purposes) act, and the Home Guard act. The first provided authority and laid down the broad administrative arrangements for the recall for short periods of certain classes of reservists, of which the most important in numbers was the army's Z reserve. The second extended the Supplies and Services (Transitional Powers) act, 1945, and defense regulations having effect by virtue of that act, by providing that the act should be deemed to include, and always to have included, powers for providing or securing supplies and services required for overseas defense, and for preventing supplies or services from being disposed of in a manner prejudicial to overseas defense. The retrospective aspect of this measure was strongly criticized on constitutional grounds by the Conservative opposition. Finally the Home Guard act, brought in by the new Conservative government, provided for the reconstitution of the home guard.

The British North America act amended the act of 1867 with the same title by authorizing the federal parliament of Canada to legislate on the provision of old-age pensions.

A measure which aroused a good deal of controversy was the National Health Service act of 1951, which authorized the making of charges for dentures and spectacles provided under the 1946 act.

The Fraudulent Mediums act, which repealed the Witchcraft act of 1735, provided for the punishment of fraudulent mediums.

The Leasehold Property (Temporary Provisions) act reflected both the differences of view which had been exposed by an inquiry into the future of leasehold property and the narrow majority in the house of commons by which Clement Attlee's government held power. Its main effects were, as to residential property, to prolong until two years from June 24, 1951, leases expiring during that period and, as to shops, to authorize tenants to apply to county courts for new tenancies where their old tenancies expired immediately before or during this period.

Two measures of considerable legal interest were the Courts Martial (Appeals) act and the Common Informers act. The former gave effect to one of the main recommendations of a strong committee appointed shortly after the end of World War II and put an end to an anomalous state of affairs wherein, while in civilian courts appeals from highly qualified judges of the high court and chairmen of quarter sessions lay to the court of criminal appeal, there was no appeal from courts-martial, much less expert tribunals, except by review (in effect, by the department of the judge advocate general). The courts-martial appeal court would consist of the English high court judges and their Scottish and Northern Ireland equivalents and of other persons appointed by the lord chancellor. The court might sit either in or outside the United Kingdom.

The effect of the Common Informers act was to abolish the common informer procedure under a number of specified acts, including the Sunday Observance acts.

Commonwealth Legislation.—*Canada.*—Among the measures framed to meet the international crisis was the Essential Materials (Defense) act, authorizing the governor general to make regulations in regard to the production, supply, distribution, use and prices of essential materials and services. The Defense Production act created a department of defense production under a minister to mobilize, conserve and co-ordinate Canada's economic and industrial resources to provide supplies and further projects for defense. The Emergency Powers act conferred on the government wide powers, notably in relation to the control of communications, trade and manufacture, in order to carry out defense preparations and to stabilize the economy of the country.

The Consumer Credit (Temporary Provisions) act was passed in the autumn of 1950 to empower the government to check inflation by limiting the amount of credit available to consumers. The Criminal Code Amendment act, passed in June 1951, related especially to the offenses of treason, sedition and sabotage; one of its most interesting provisions was to make it an indictable offense to advise or in any manner to cause insubordination, disloyalty, mutiny or refusal of duty by members not only of the royal Canadian mounted police or of the Canadian forces, but also of the naval, army or air forces of a state other than Canada that were lawfully present in Canada. This illustrated the importance attached to arrangements made or likely to be made for stationing the forces of one country on the territory of another.

The Petition of Right Amendment act abolished the necessity of securing the governor general's fiat before proceeding with a petition of right, making it possible to sue the crown in Canada for a breach of contract without obtaining leave, though the crown still could not be sued in respect of a civil wrong. In two of the provinces, Nova Scotia and Manitoba, legislation was passed that had broadly the effect of making it possible for the subject to sue the crown both in respect of civil wrongs and contracts.

Australia.—The Defense Preparations act, giving the commonwealth government powers in peace covering all aspects of preparation for defense, both military and economic, was yet another exemplification of the preparation for war which so many governments thought necessary; and the Constitution

PLAQUES of 4 of the 23 great lawgivers decorating the congressional chambers of the U.S. capitol, as they were remodeled for occupancy in Jan. 1951. Left to right: Jefferson, Moses, Solon and Justinian

Alteration (Powers to Deal with Communists and Communism) act, providing for a referendum to make a law in the terms of the Communist Party Dissolution act of 1950, which had been declared invalid by the high court of Australia, was another example of the tendency to make stringent laws against sedition that was a feature of the year. The subsequent referendum resulted in the rejection of the proposed change in the constitution.

The Commonwealth Bank act repealed much banking legislation, including the Bank Nationalization act, declared invalid by the high court and the judicial committee of the privy council. The main effect of the new act was to restore control of the Commonwealth bank to a board of ten members, in place of a governor responsible to parliament. The main objects of the Conciliation and Arbitration act, No. 2, were to strengthen the injunction powers of the arbitration court and to provide for secret ballots in trade unions.

New Zealand.—On Jan. 1, 1951, the Legislative Council Abolition act came into force, thus substituting a unicameral for a bicameral parliamentary system.

The Joint Family Homes act provided for the establishment of a matrimonial home owned by either spouse as a joint family home until both husband and wife died, unless both agreed to cancel the arrangement or the court so ordered, as on a divorce or separation; neither spouse could sell or mortgage the home without the consent of the other, and limited exemption from the claims of creditors was conferred. The Gaming Amendment act legalized off-course betting, eliminated bookmakers, prohibited credit betting and confined racing to Saturdays and public holidays. The Capital Punishment act restored capital punishment for murder, though exempting pregnant women and boys and girls under 18.

Union of South Africa.—The principal issue with which the legislature had to deal was one of the aspects of the perennial problem of colour, in the Separate Representation of Voters act. When this was first presented as a bill, J. G. N. Strauss, the leader of the opposition, argued that it had to be submitted to a joint sitting of both houses under sections 35 and 152 of the United Kingdom's South Africa act of 1909, but the speaker overruled this contention on the grounds of the legislative sovereignty of the Union parliament under the Statute of Westminster of 1931. The measure as finally enacted provided for the separate representation in parliament and in the provincial council of the Cape of Good Hope of Europeans and non-Europeans in that province; for the amendment of the law relating to the registration of Europeans and non-Europeans as voters for parliament and for the provincial council of Natal; and for the establishment of a board of coloured affairs.

India.—The main legislation arose from the need to amend some of the measures enacted in the first phase following the end of British rule. The Preventive Detention Amendment act liberalized the principal preventive detention act by providing that the cases of all *detenus* were to be referred to an advisory board within ten weeks of the persons' being detained. The Constitution (First Amendment) bill set out to qualify certain fundamental rights of the citizens of India, including freedom of speech and of the press; to further the educational, economic and social advancement of the backward classes; and to remove the questions of *zamindari* (system of land tenure) and land reforms from the purview of the courts. Examples of the kinds of problem with which this measure was intended to deal were that the citizen's right to freedom of speech and expression, guaranteed by article 19 (1) (a) of the constitution, had been held by some courts to be so comprehensive as not to render a person culpable even if he should advocate murder and other crimes of violence; and that the validity of measures of agrarian reform passed by the state legislatures had formed the subject matter of time-consuming litigation.

United Kingdom Case Law.—In the field of common law there were two interesting decisions by the house of lords in *Paris* v. *Stepney Borough Council* (1951 1 Times Law Reports 25) and *British Movietonews* v. *London and District Cinemas* (1951 Weekly Notes 451). In the first of these a one-eyed workman had lost the sight of his remaining eye and sued his employers for damages. The action resolved itself into deciding whether the employers owed a higher duty of care to protect the single eye of a one-eyed man than to protect either eye of a man enjoying the use of both eyes. The court of appeal had ruled that the duty was the same in each case. The house of lords, taking the view that the risk, involving total loss of sight, was essentially different, overruled this decision. *British Movietonews* v. *London and District Cinemas* was a case where the court of appeal, and especially Lord Justice Denning, had attempted to extend the accepted doctrine of the discharge of a contract by its frustration by holding it to apply where an unforeseen circumstance had come into being by the continuance of emergency regulations during peacetime. The house of lords, especially through Lord Simonds, restated the doctrine of frustration in its previously accepted terms and rejected the view that a mere mutually unforeseen circumstance could bring this doctrine into operation.

Cassidy v. *the Ministry of Health* (1951 1 All England Reports 574) decided that a patient in a hospital administered under the National Health Service acts could sue the ministry for the negligence of a surgeon and a nurse who were both on the salaried staff of the hospital.

Forbes v. *Kemsley Newspapers Limited* (1951 2 Times Law Reports 656) produced a decision on the law of copyright, the effect of which was that the property in a journalist's pseudonym vests in himself even where he has used it only in his contributions to one newspaper.

In the chancery division there were, as usual, a number of decisions on what constitutes a charity, perhaps the most notable of which was *Re Bland-Sutton's Will Trusts* (1951 1 All

England Reports 496), where a previous decision in this division that the Royal College of Surgeons was not a charity was held to bind the court. An appeal from the divorce division that aroused general interest was *Preston-Jones* v. *Preston-Jones* (1951 1 Times Law Reports 8), where the house of lords ruled that where an interval of 360 days had elapsed between the date when husband and wife had had intercourse and the birth of a child, the burden of satisfying the court that the child was conceived outside marriage was a light one. (*See* also AGRICULTURE; BANKING; BUSINESS REVIEW; CONSUMER CREDIT; EDUCATION; INTERNATIONAL COURT OF JUSTICE; INTERNATIONAL LAW; PATENTS; PUBLIC UTILITIES; RELIEF; TAXATION.)

(W. T. WE.)

Lawn Bowling.

The American Lawn Bowling association held its national tournament in Hartford, Conn., Aug. 6–10, 1951. The playing was of three types; viz., four-men teams or "rinks," doubles and singles.

In rinks, first place (Rettie Memorial trophy) was won by the team from the Fernleigh club of Hartford, Conn., skipped by Clinton Deming, with David Kidd as lead, John McNeil, second, and James Donaldson, third. Second place (Chicago trophy): Thistle club of Hartford; Robert Dickson, skip, Dave Ferguson, lead, Stewart Tulloch, second, and Robert Barclay, third. Third place (Wisconsin trophy): New York Lawn Bowling club, New York, N.Y.; John McPolland, skip, Percy Brearley, lead, Thomas Fairbain, second, and Herbert Howarth, third.

In the doubles, winners were: first place (California trophy), Hyde Park club, Niagara Falls, N.Y., team of Richard Auld and Thomas Stirrat; second place (Lakeside trophy), New York Lawn Bowling club, Herbert Howarth and John McPolland; third place (Western New York trophy), Essex County club, Bloomfield, N.J., James Wilson and Andrew Hood.

Singles winners were: first place (National Singles trophy), George Robbins, Thames Ford club, Thames Ford, Ont.; second place (Metropolitan New York trophy), Thomas Stirrat, Hyde Park club, Niagara Falls, N.Y.

The 1952 tournament was to be held at Seattle, Wash., July 28, 1952.

Lead.

In 1950 the world lead production exceeded the 1940 peak for a new record high. The outputs of the major producing countries, as reported by the U.S. bureau of mines and listed in Table I, ordinarily account for about 90% of the world total.

United States.—The domestic mine output increased by 5%, refinery output by 7%, secondary recovery by 17% and imports by 11%, giving a total supply sufficient to cover a record consumption with only a minor drain on stocks.

Mine production in the first three quarters of 1951 was down to 295,078 tons, with progressive decreases each quarter.

Canada.—Lead in ores increased from 159,775 short tons in 1949 to 166,766 tons in 1950, and refined lead from 146,149 tons to 170,364 tons. Exports in 1950 included 115,167 tons of pig lead and 19,276 tons in ore. (*See* also MINERAL AND METAL PRODUCTION AND PRICES.)

League of Women Voters of the United States: *see* SOCIETIES AND ASSOCIATIONS, U.S.

Leather.

Leather production in the U.S. declined appreciably in 1951, with a levelling off of postwar demands, continued acceptance of substitute materials for many purposes, and virtual elimination of the long-held prewar favourable net import position of the U.S. industry. The attention of U.S. tanners was focused sharply on world trade developments throughout the year. The industry had always depended heavily upon imports of raw hides and skins and certain important tanning materials, domestic supplies being inadequate for the industry's needs. On the other hand, the U.S. had traditionally been a heavy exporter of finished leather to world markets.

Adverse world trade trends which began shortly before World War II developed in intensity after the close of the war. Some countries which were formerly important suppliers of raw stock to the U.S. developed tanning industries of their own, and much previously imported raw stock was diverted to those domestic industries.

In other countries, leather production had regained its prewar or higher levels.

With accumulated demands for finished leather pressing on all tanners in the years immediately following the war, there developed a scramble for world raw stock supplies, with U.S. tanners seriously hampered in this competition. Argentina is generally regarded as the most important supplier of raw stock and tanning materials imports to the U.S. leather industry, and before the war the U.S. was the leading market for Argentine exports.

For the first ten months of 1951 exports of hides and kips from Argentina were 5,577,000 pieces, a drop of 40.4% from the same period of 1950. Much of this export loss was absorbed by the Argentine leather industry, which before the war had been a relatively negligible consumer. October figures on Argentine exports reveal how small a proportion of Argentine hides and kips was going to the U.S. Scandinavia received 176,000 pieces from Argentina; Germany, 84,000; the Netherlands, 84,000; and Hungary, 66,000. The United States received only 18,000 pieces.

Raw material import conditions were similar in relation to many other important producing countries. The Tanners Council of America reported in one complaint that imported raw materials received in the U.S. still had tags attached indicating that they were originally purchased under the Marshall plan

Average U.S. Monthly Leather Production

(000's omitted)

	1951	1950	1949	1948	1947	1931–39 inclusive
All cattle hides (including kips for side leather)	1,947	2,032	1,994	2,173	2,402	1,628
Calf and whole kip	655	888	847	873	1,039	1,070
Goat and kid	2,790	3,100	2,898	3,164	3,099	4,000
All sheep and lamb.	2,157	2,617	2,387	2,794	3,045	2,800

1951 figures are based on an average of the first nine months' production. Compiled from data of the Tanners Council of America and the U.S. Bureau of the Census.

with funds provided by the U.S. to further economic recovery abroad.

Domestic hide and skin production increased through 1951, though not enough to offset the situation created by import declines. At the end of the year it was estimated that domestic supplies would be heavier in 1952, and it was hoped that foreign supplies would at least be equal to those of 1951.

Heavy demands for leather for military use during 1951, principally for footwear, were somewhat offset by a slow season in the civilian footwear industry. At the end of the year, shoe buying indicated a strong demand for shoe leathers (representing about 90% of leather production) in early 1952, with a possible tightening of supply if military requirements were increased.

Leather prices generally remained firm through 1951, with little change expected in the market in early 1952. (*See* also SHOE INDUSTRY.) (R. B. B.)

Lebanon.

An independent Arab republic, formerly under French mandate, Lebanon is situated on the eastern Mediterranean, bounded by Syria and Israel. Area: 3,470 sq.mi. Pop. (1950 est.) 1,257,000. Language: Arabic (90%), but Armenian, Greek and other languages are also spoken. Religion: Christian 52.8%; Moslem 45.3%. Chief towns (pop. 1948 est.): Beirut (cap., 247,000); Tripoli (86,400); Saida or Sidon (78,800); Zahle (78,000). President of the republic, Sheikh Bishari al-Khuri; prime ministers in 1951: Riad es Solh, (from Feb. 14) Hussein al-Oueni and (from June 7) Abdullah al-Yafi.

History.—On April 15, 1951, elections were held and returned the government Constitutionalist party (led by Selim al-Khuri, brother of the president) with a diminished though substantial majority; and on June 7 Abdullah al-Yafi became prime minister. On July 16, while on a visit to Amman, Jordan, Riad es Solh, a former prime minister, was assassinated. Demonstrations followed in Beirut, resulting in some casualties.

On Oct. 11 the chamber of deputies unanimously approved the Egyptian abrogation of the Anglo-Egyptian treaty and the Sudan Condominium agreement; but on Oct. 23 pro-Egyptian demonstrators were fired upon by the police in Beirut. On Oct. 29 the Lebanese national congress met and passed a resolution that the four powers' middle east defense proposals were contrary to international law. On the same day the Lebanese government was informed that the establishment of a middle east command would proceed irrespective of Egypt's action.

On Jan. 3 the projects for the improvement of the port of Tripoli and the harnessing of the Litani river for agricultural developments were reviewed. Both had been recommended by the Clapp commission of 1950 and later in the year a U.S. mission reported favourably on the Litani scheme.

On Jan. 1 the Trans-Arabian pipeline from the Saudi Arabian oil fields to Sidon, 30 mi. south of Beirut, was opened. By an agreement with the Lebanese government, its U.S. proprietors paid $126,000 for its police protection and $112,000 for transit rights; oil delivered at Sidon became subject to a Lebanese export tax of 3% and the government might purchase at cost price 200,000 tons of oil annually to be either exported or refined locally. However on Oct. 30 the chamber of deputies returned to committee a bill already ratified by it to create a reserve zone for the pipeline port, and also unanimously urged the revision of existing oil agreements as being contrary to Lebanese interests.

In June negotiations to resume the Lebanese-Syrian customs union (denounced by Syria in 1950) broke down, although in January there had been a temporary interchange of agricultural products. However in April during the Israeli-Syrian clashes on the upper Jordan, Lebanon offered its help to Syria and the marshal of the Lebanese army visited Damascus to discuss co-operation. (O. M. T.)

Education.—Schools (1949): primary 734, pupils 60,019; private 808, pupils 75,475; foreign 279, pupils 53,208; technical and trade 5, pupils 456; universities 2, students 2,147.

Finance and Banking.—Budget: (1950 est.) balanced at L.L.85,300,000; (1951 est.) balanced at L.L.85,300,000. Currency circulation (July 1951): L.L.210,000,000. Bank and government deposits (May 1951) L.L.198,000,000. Monetary unit: Lebanese pound, with an exchange rate (Nov. 1951) of L.L.2.21 to the U.S. dollar.

Foreign Trade.—Lebanese-Syrian customs union ended March 1950. (April-Dec. 1950): imports L.L.245,900,000; exports L.L.67,200,000. Main sources of imports (1950, including Lebanese-Syrian customs union in first quarter): France 20%; U.S. 13%; U.K. 13%. Main destinations of exports: France 13%; Saudi Arabia 13%; U.K. 7%; U.S. 7%.

Transport and Communications.—Roads (1949): 1,540 mi. Licensed motor vehicles (Dec. 1950): cars 10,723, commercial 3,698. Railways (1949): 475 mi. Telephones (Jan. 1949): 13,125. Radio receiving sets (1949) 31,000.

Agriculture.—Main crops (metric tons, 1949): wheat 50,000; barley 27,000; maize 13,000; oats 2,000; potatoes 40,000. Fruit production (metric tons, 1950): grapes (1949) 90,000; olives 5,000; olive oil 1,000; oranges and tangerines 39,000; lemons 13,000. Livestock (1949 est.): goats 400,000; sheep 25,000; cattle 20,000; horses 10,000; donkeys 20,000; mules 5,000. Wool production (including Syria, greasy basis, 1950) 6,000 metric tons.

Industry.—Production (metric tons, 1949): cotton yarn 6,800; cotton textiles 6,000; silk and rayon textiles 2,600; leather hides and skins 2,700; cement (1950) 262,800.

Leeward Islands.

This British colony is composed of four presidencies, a group of islands forming the northern part of the Lesser Antilles in the Caribbean: Antigua (with Barbuda), area 171 sq.mi., pop. (1950 est.) 45,611; St. Christopher-Nevis and Anguilla, 152 sq.mi., pop. 48,501; Montserrat, 32 sq.mi., pop. 13,535; Virgin Islands, 67 sq.mi., pop. 7,000; total area 422 sq.mi., total pop. 114,647. Population, mainly Negro. Religion: Christian. Principal towns: St. John's, Antigua (cap., 10,962), Basseterre, St. Christopher (12,201). Governor in 1951, K. W. Blackburne.

History.—The following constitutional changes in Antigua, St. Kitts-Nevis-Anguilla and Montserrat were announced in July 1951: the establishment of electoral districts, a majority of elected members in the legislatures, the election by unofficial members of the legislatures of members to serve on executive councils, and the introduction of a committee system in Antigua and St. Kitts of which the elected members on the executive councils would be chairmen. There would also be a majority of elected members on the general legislative council, the unofficial members of which would elect members to the federal executive council. The lives of the three presidency legislatures had to be extended for varying periods beyond Oct. 31 to permit the preparation and introduction of the necessary legislation. There was some opposition in St. Kitts to the proposed changes, which were not considered to go far enough.

Despite severe earthquakes in St. Kitts and Nevis, causing damage to government buildings amounting to £100,000, and despite serious labour troubles in Antigua, the year was one of consolidation and progress in planning and economic development. St. Kitts produced another record sugar crop (44,272 tons) though that of Antigua fell to only 18,511 tons. Cotton crops in Antigua and Montserrat were excellent. The development plans of St. Kitts and Montserrat were approved and a number of works undertaken. A development plan for the Virgin

	Budget (1951 est.)		Foreign trade, 1950

Islands was prepared.

Education.—The number of pupils enrolled in the public schools, and the government expenditure were as follows:

	Pupils, 1950		Government expenditure
	Primary	Secondary	
Antigua	8,656	908	B.W.I. $177,760
St. Kitts-Nevis	10,440	610	B.W.I. $246,480
Montserrat	3,246	158	B.W.I. $ 80,673
Virgin Islands	1,460	58	B.W.I. $ 67,214

Finance and Trade.—Currency: British Caribbean or British West Indian dollar, valued at 58.33 cents U.S. (B.W.I. $4.80=£1 sterling).

Principal exports: sugar, cotton (sea island). Production: sugar (1951) 62,783 tons; cotton exports (1950) 12,790 cwt. (P. H-My.)

Liberia.

Liberia, on the great western bulge of Africa, immediately north of the equator and adjacent to the great rain forests, is the only republic in Africa. It has an area of 43,000 sq.mi. and a population (est. 1950) of about 1,350,000.

Monrovia, the seaport capital (est. 1950 pop., 12,000) is the republic's only town with a population greater than 4,000.

The religion is preponderantly native tribal, with a total of 23 native tribes and clans represented. In addition, 18 Christian denominations were active in missionary work in Liberia during 1951, and the proportion of Christian converts was believed to total about 25% of the native population.

President in 1951: William V. S. Tubman.

History.—In Jan. 1951 an agreement was signed in Washington, D.C., under which a United States military mission was to be sent to help train a Liberian army. The following month the U.S. granted Liberia a loan of $5,000,000 to be used for building roads. In April the United Nations Educational, Scientific and Cultural organization sent a group of science instructors to establish a science faculty at Liberia college, in Monrovia.

President Tubman was re-elected to the presidency in May, in the first election in which Liberian women and aboriginal property owners were allowed to vote. Under the election laws, only Tubman's True Whig party qualified for the ballot. It was reported that the leaders of an aboriginal Reformation party, who were said to have requested supervision of the elections by the United Nations, were arrested, and that their party chief, Dihdwo Twe, was sought on charges of sedition.

The Liberia Institute of the American Foundation for Tropical Medicine, an international research centre, was formally opened Jan. 11, 1951.

Education.—In 1951 Liberia had 89 government schools, 71 mission schools and 29 tribal schools, with the latter showing the greatest increase. Institutions for advanced education included the College of West Africa and Liberia college, both of Monrovia, and the Booker T. Washington institute, at Kakata, for the agricultural and basic industrial training of sons of native chiefs and other tribespeople.

Finance and Trade.—The U.S. dollar is the official monetary unit and is supplemented by Liberian fractional coins with the dollar base freely negotiable and at par. Revenue receipts for the year ending Aug. 31, 1951, were estimated as $4,851,899; the total external debt was approximately $611,000. There was no internal debt. Exports for the 12 months prior to Aug. 31, 1951, were estimated as $33,391,000, and imports as $11,306,000, with the United States supplying about 93% of the latter and purchasing about 91% of the former.

Industry and Agriculture.—For 1951, industrial employment was estimated at 57,200. Firestone Plantations company remained the largest employer with approximately 62% of the total, and Firestone's rubber production for the year ending Oct. 31, 1951, was estimated at 66,700,000 lb. Subsistence agriculture is the preponderant source of employment, with rice the principal subsistence crop and African oil palm the largest food export. Rubber is the preponderant export item, with iron ore, gold, palm oils, piassava fibres and kola nuts following in that order. The 1951 production of high content iron ore from the new mines in the Bomi hills area was reported at 152,000 tons, with exports to U.S. mills.

(C. M. Wi.; X.)

Libraries.

The findings of the Public Library inquiry, Robert D. Leigh, director, continued to dominate the attention of public librarians in professional meetings, journal articles and symposia during the year 1951. The consensus appeared to be settling around a realization that although the public library had not been a major factor in the intellectual life of the typical U.S. community, it was fast preparing itself to occupy that position.

The celebration of the American Library association's 75th anniversary around the theme, "The Heritage of the U.S. in Time of Crisis," accented the librarians' growing realization that public libraries, as centres for adult discussion and systematic learning, are needed in a society whose communication facilities swamp the citizen with a mass of undigested information and propaganda. During 1951 the rapid acceptance of television brought this issue to a head.

As a means of extending and improving library services to the point where they could be used by the citizen to sharpen his understanding of the terms of the debates on the major questions that face him as a citizen, the American Library association undertook a series of projects for the year.

First, aided by a grant of $10,000 from Gardner Cowles, three books were initiated. Gerald W. Johnson wrote *This American People* as a fresh interpretation of the intent of the Founding fathers on the major problems that faced them and of the applicability of their wisdom to those same problems as they appear today. Henry Steele Commager completed a source book to accompany the Johnson volume, entitled *Living Ideas in America*. Genevieve Foster wrote *Mileposts of Freedom* with the same intent for children.

In order to stimulate a wide audience for these books, the American Library association enlisted the help of about 40 national organizations that had chapters in most U.S. cities and towns and that engaged in study programs. The national officers of these organizations publicized the American Library association program through their national publications and through state and local officers. In some cases, notably the General Federation of Women's Clubs under the leadership of Mrs. Hiram Houghton, Jr., special study guides were prepared.

The Ford foundation recognized the possibilities of the American Library association's program in adult education by offering a $150,000 grant to enable the A.L.A. to experiment in training librarians as discussion leaders on the theme, "The Heritage of the U.S. in Time of Crisis." Six pilot demonstration projects were started in the New York Public library; Denver (Colo.) Public library; Regional library at Athens, Ga.; Los Angeles (Calif.) County library; Vermont Free Public Library commission; and LaCrosse (Wis.) Public library.

The new regional library in Yakima valley in Washington represented the latest merger of a city and county library service unit. Two appointments in the public library field were of major importance: L. Quincy Mumford as director of the Cleveland (O.) Public library and Emerson Greenaway to the Free Library of Philadelphia. School librarians held their first meeting as a new division of the American Library association (American Association of School Librarians). The graduate library school of The University of Chicago celebrated its 25th anniversary, and the University of North Carolina school of library science began giving a master of science degree. The University of California's school of librarianship moved into new quarters.

The Library of Congress published an unusually large number of scholarly publications during 1951 and placed the Declaration of Independence and the constitution in helium-filled cases.

The American Library association accepted the resignation of John Cory as executive secretary and appointed David Clift as his successor. Its annual conference in July presented a national book fair and a series of distinguished speakers at its general sessions—Walter Laves, Jacques Maritain, Margaret Mead, Sen. Ralph Flanders and John A. Wilson, all of whom read papers on some phase of the "heritage" theme.

At least three new micropublication projects were announced. Towsley Microcards Inc. began publishing the U.S. patents on microcards, and the Theatre Library association announced its intention to publish a microprint edition of about 5,000 early English plays. The Association of Research Libraries began exploring the possibilities of publishing doctoral dissertations in micro form and of expanding *Microfilm Abstracts* into an inclusive abstracting journal. All the editorial work and composition for a new edition of the *Union List of Microfilms* was completed; it would include 25,000 entries.

Audiovisual aids continued to claim a place in the library scene. The George Peabody award was given to the Louisville (Ky.) Public Library FM radio station for best public service by a local station. The university libraries were designated as the campus centres for audiovisual aids at Stanford, Purdue, and Oregon universities.

The *London Library of Recorded English,* an anthology of English literature on phonograph records, represented a new venture in publishing.

In the area of bibliography, the Vatican started to microfilm its 41,000 manuscripts at a cost of $160,000. A set of positives was to be kept in the U.S. The first edition of the Army Medical library classification appeared, and the New York Public library began to microfilm its catalogue as a safety measure.

On the international scene, the Association of Research Libraries expanded the Farmington plan to include Australia, Austria, Germany, Portugal and Spain. The first International Congress of Archivists was held in Paris. Luther Evans, librarian of congress, became vice-chairman of the U.S. National Commission for the United Nations Educational, Scientific and Cultural organization (U.N.E.S.C.O.). Lawrence Powell wrote of his impression of England in the Gissing essay style.

The University of Pennsylvania library celebrated its bicentennial anniversary with notable exhibits of the works of Benjamin Franklin and Winston Churchill, plus a series of papers on scholarly problems of modern libraries.

Princeton acquired manuscripts of Booth Tarkington novels, and the Russell Sage library went to New York university. The Spinoza collection of A. Wolf and the papers of Franz Werfel were acquired by the University of California at Los Angeles. George Washington university, Washington, D.C., received the library of the Carnegie Endowment for International Peace, valued at $250,000. The library of the American Mathematical society was purchased by the University of Georgia, Athens, and Harvard purchased a library of 3,000 Hebrew books on history and literature. The University of California purchased from Japan 100,000 books in the Japanese, Chinese and Korean languages. The Library of Congress was given a fund for a poetry collection by Mrs. Gertrude C. Whittall. The Old Dominion fund gave Trinity college, Hartford, Conn., $650,000 to purchase the Watkinson library. The A. W. Stern collection of Lincolniana went to the Library of Congress, and the State University of Iowa, Iowa City, dedicated its James Bollinger Lincoln collection.

Fire destroyed the library of the College of Mt. St. Vincent, New York city, and the Michigan State library, Lansing, spent the year salvaging its losses from fire. The State University of Iowa finished its modular building in April. The Midwest Inter-Library centre, Chicago, was formally dedicated and put into operation Oct. 5, and the Mills Memorial library was given to the New York University Law centre.

The University of Wisconsin, Madison, started its new mammoth library and had the unusual experience of having the first part of its steel framing collapse.

Two major university libraries acquired new directors: Arthur McAnally went to the University of Oklahoma, Norman, and Wyman Parker to the University of Cincinnati. The University of Minnesota's librarian, E. W. McDiarmid, was appointed dean of its liberal arts college. Karl Brown retired as editor of the *Library Journal,* most widely circulated of library journals, and was succeeded by Helen Wessells.

The activities of the American Book Publishers council, under the able stimulation of Theodore Waller, continued to play an increasingly important role. Its conference on reading development produced a volume of important research that librarians studied, with booksellers, in a joint attempt to induce the general public to read more books. (*See* also AMERICAN LIBRARY ASSOCIATION; SOCIETIES AND ASSOCIATIONS, U.S.)

(R. E. EL.)

Great Britain and Ireland.—Statistics collected by the Library association showed that in the financial year 1950–51 £2,305,000, or 11*d.* per head of the population, was spent on books for public libraries and that the total cost of the service was £9,130,000, or 3*s.* 7¾*d.* a head—an increase of about £500,000. The population served totalled 50,100,000 and the number of books lent for home reading rose to 314,100,000. The total number of staff employed was 11,300 (exclusive of part-time staff). The treasury grant to the National Central library was increased from £22,000 to £25,000; the Carnegie United Kingdom trust made its final donation of £1,000. The benefactions of the trust amounted since 1916 to £165,000 and in addition it gave nearly £129,000 in grants to the regional library systems and outlier libraries.

The annual conference of the Library association was held in Edinburgh in June.

The British museum reopened the King's library, damaged by a bomb in Sept. 1940, and set up in it an important display of books and manuscripts from 25 libraries illustrating the achievements of the Friends of the National Libraries during the preceding 20 years. Many libraries arranged special exhibitions and displays in connection with the Festival of Britain, to which must be added the book exhibition illustrating five centuries of English literature arranged by the National Book league in the Victoria and Albert museum, London.

India.—Statistics of library services in India showed a total of 350 libraries of all kinds. Madras was the only state which had enacted a public libraries act, though Bombay was promoting through its department of libraries the development of public libraries by administrative rather than legislative action. But the ninth All-India Library conference, held at Indore in May, passed resolutions urging the central government to make it compulsory for local authorities to provide free public libraries throughout India. Other resolutions adopted by the same conference urged the prompt establishment of the Indian National library and requested the library profession in each of the Asiatic countries not possessing a library association to form one, with the ultimate establishment of an Asian federation of library associations in view.

International.—The papers of the U.N.E.S.C.O. seminar held at Malmö, Sweden, in 1950, were published under the title *The Role of Libraries in Adult Education and Fundamental Education* (U.N.E.S.C.O. Public Library manual, No. 4, Paris, 1951). A beginning was made, jointly with the Fédération Internationale de Documentation, of a new edition of the *Index Bibliographicus,* last published in 1931, and a further volume of the *Index Translationum* was published. *A Guide to the Libraries of the Near and Middle East,* compiled by Joseph Dagher, keeper of

SALVAGE WORK on books which became waterlogged after a fire at the Michigan State library in Lansing early in Feb. 1951. Books are shown drying under hot-air blowers at a near-by field house

the National Library of Beirut, contained detailed information on about 250 libraries in ten territories. In April the first meeting was held in London of an international advisory committee on bibliographical planning, to act as a consultative council to U.N.E.S.C.O. in the carrying out of the recommendations of the Conference on the Improvement of Bibliographical Services held in Paris in Nov. 1950.

Among the first visible fruits of this program were the bibliographical or documentation centres set up in Mexico and India within the framework of the technical assistance program of the United Nations.

Control of the Delhi Public library, established under the auspices of U.N.E.S.C.O. to serve as a pilot project for the whole of southeast Asia, was taken over by an Indian librarian in June 1951.

A brief account of the progress achieved in the improvement of national bibliographical services appeared in the *UNESCO Bulletin for Libraries,* vol. 5, No. 10, pp. 341–345 (Paris, 1951), and a list of more than 40 bibliographical working groups in the next issue (*ibid.,* No. 11, pp. 404–407). The first issue of a new abstracting periodical, *International Political Science Abstracts,* appeared in May.

An important series of conferences was held in Rome in September. At a meeting between representatives of U.N.E.S.C.O., the International Federation of Library Associations, the Fédération Internationale de Documentation and the International Council of Archives, the problem of a joint council of librarianship, archives and documentation was further studied and much progress toward co-operation made. At the 17th meeting of the international library committee of the International Federation of Library Associations, which followed, Pierre Bourgeois, director of the Swiss National library, Berne, was elected president of the federation.

Among the many problems studied were the cost of periodical publications and the protection of libraries and their collections in wartime. The 18th international congress of the Fédération Internationale de Documentation studied documentary reproduction methods, the use of the universal decimal classification, particularly in industrial libraries, and a wide variety of other problems. The most important business was the reorganization of the federation itself in order to ensure the closest possible co-operation with other bodies and the minimum overlapping of work.

Arne Møller, director of Danmarks Tekniske Bibliotek, Copenhagen, was elected president.

Europe.—The Bibliothèque Nationale, Paris, arranged some outstanding exhibitions during the year, among them a historical display of the work of the Imprimerie nationale, and an exhibition "Mille ans de livres anglais," opened on Nov. 15. The first issues appeared of *A.B.C.D.* (*Archives, Bibliothèques, Collections, Documentation*), a new French bimonthly periodical replacing the old *Archives et Bibliothèques,* which ceased publication in 1939.

The Verein Deutscher Bibliothekare held a conference at Münster, Westphalia, in May, which was notable in that it was the first combined gathering of German librarians representing all types of libraries. Some 250 librarians attended, and particular attention was given in the papers read to the progress of reconstruction in German libraries.

The rebuilding of Vienna University library was completed during the year. Lucerne, in Switzerland, opened a new central library, amalgamating the former cantonal and municipal libraries.

Details of a six-year plan for Polish libraries were published in the *Zentralblatt für Bibliothekswesen,* vol. 65, no. 5/6, pp. 208–212 (Berlin, May–June 1951). The number of "library

LIBYAN NATIONAL ASSEMBLY meeting on March 29, 1951, as a resolution was approved establishing a provisional federal government. Libya became an independent, constitutional monarchy in Dec. 1951

points," including presumably service points for travelling libraries, was to be raised from 19,800 in 1949 to 22,300 at the beginning of 1951 and 33,200 by the end of 1955.

Libya. An independent kingdom in North Africa, Libya is bounded north by the Mediterranean, west by Tunisia and Algeria, south by French West Africa and French Equatorial Africa and east by Egypt and Sudan. Area: 679,340 sq.mi. Pop. (1950 est.): *c.* 1,191,000 (incl. 46,400 Italians); Berbers, with Arab admixture. Chief towns: Tripoli (pop. 144,616); Bengasi (59,087). Language: Arabic. Religion: mostly Moslem. Ruler: King Idris I (*q.v.*); prime minister in 1951, Mahmud Bey Muntasser.

History.—The process of shaping Libya, a former Italian colony, into an independent state began with a United Nations resolution of Nov. 21, 1949, which set the time limit for complete independence at Jan. 1, 1952; the territory had, from 1943, been administered in three parts, Tripolitania and Cyrenaica by Great Britain and the Fezzan by France.

At the beginning of 1951 Cyrenaica had an elected government, semiautonomous in internal affairs, and the Fezzan an assembly of notables with rather similar powers. In Tripolitania it had proved impracticable because of local political feeling to hold elections and the British administration retained full powers. A Libyan national assembly, comprised of an equal number of representatives from each area, had already decided that Libya should be a federal, democratic kingdom and that its king should be the Amir Idris of Cyrenaica.

During 1951 this assembly drafted, with the assistance of Adrian Pelt, the United Nations high commissioner, his advisory council and other experts, a Libyan constitution and finally adopted it in October. It provided for a bicameral parliament. Each of the three areas would have equal representation in the upper house, which would be partly nominated by the king. The lower house would be elected on a proportional representation basis. The federal government would be responsible to parliament and would have exclusive powers over foreign affairs, defense, currency and certain other matters and overriding legislative power over shipping, subsoil wealth and foreign trade. Each area would be designated a province, under a *wali* (governor) representing the king. Elections to the Libyan parliament would be held early in 1952.

A Tripolitanian council (government) had been nominated in March 1951 and later in the same month a provisional government for Libya had been appointed by the national assembly. It was nominated and not elected, but in recognition of the numerical preponderance of the Tripolitanians, the prime minister (Mahmud Bey Muntasser) and two of the five ministers were chosen from that province. To provide Libya, which had a deficit economy, with financial support after independence, Great Britain undertook to back a new Libyan currency, to provide annual grants and to cover the Libyan budget deficit. A financial agreement to give effect to these undertakings to March 31, 1953, was concluded.

Other offers of finance for special purposes were made by France, the United States and Italy.

Great Britain and France, who had progressively passed authority to the embryo state, transferred on Dec. 24 all power remaining to them and the Amir Idris became king and formally declared the independence of the new state in a broadcast from Bengasi on the same day. Objections to the procedure adopted in the formation of Libya and to its form of government were voiced, mainly by the Arab states and Egypt. By the end of the year there had been no decision on the respective claims of Bengasi and Tripoli to be the capital. (F. E. ST.)

Lie, Trygve (1896–), Norwegian diplomat and United Nations official, was born on July 16 in Oslo. Between 1922 and 1940 he was identified with the Norwegian Labour party as its legal adviser and later as a member of its national council. From 1935 to June 1939 he was minister of justice, then minister of commerce, and after the German invasion of Norway, he went with the exile government to London, serving as its minister of foreign affairs. He was reappointed minister of foreign affairs of Norway in 1945. He served as chairman of the commission that drafted the charter for the Security council at the United Nations organization conference at San Francisco, Calif., and at the London meeting of the U.N. general assembly he was elected secretary-general on Feb. 1, 1946.

In his capacity as top U.N. administrative official Lie sought constantly to steer a neutral course between the aims of the U.S.S.R. and its satellites and those of the western nations. He was instrumental in the application of U.N. sanctions against the North Koreans when they invaded South Korea, but in 1951 his principal U.N. role was that of mediator in the effort to bring about peace in Korea. He had been one of 28 persons nominated for the Nobel peace prize by the Nobel committee of the Norwegian parliament, but in August he asked that the committee not consider his name, on the grounds that his regular position with the U.N. was dedicated to the interests of peace. In Feb. 1951 Lie began serving a three-year extension of his original five-year term as secretary-general of the U.N. In his annual report to the general assembly Lie said that the U.N. must be prepared to resist aggression, but that regional military alliances, such as the North Atlantic treaty, could provide only a "precarious balance of power" and not lasting security.

Liechtenstein.

A small independent principality between Switzerland and Austria, Liechtenstein has an area of 61.4 sq.mi. Pop. (Dec. 1950 est.): 13,800. Language: German. Religion: Roman Catholic. An elected *landtag* of 15 members appoints the government. Capital: Vaduz (pop., Dec. 1950, 2,700). Ruler, Landesfürst (sovereign prince) Franz Josef II; prime minister in 1951, Alexander Frick.

History.—In a press interview in July 1951 Prince Franz Josef expressed his gratitude to Switzerland for the disinterested manner in which its diplomatic missions abroad represented and protected Liechtenstein's interests. The prince also called for foreign investments in his country where the income tax was from 2% to 9%.

Education.—Schools (Nov. 1950): primary 14, pupils 1,658, teachers 50; secondary 2, pupils 156, teachers 8.

Finance.—Budget (1950 est.): revenue 4,451,200 fr.; expenditure 5,071,893 fr. Included since 1924 in the Swiss customs and monetary union, Liechtenstein uses Swiss currency. The exchange rate in Nov. 1951 was 4.369 Swiss francs per U.S. dollar. (A. Fk.)

Linen and Flax.

Exports of Irish linen totalled 51,400,000 yd. in 1951, compared with 49,300,000 yd. in 1950. This was the highest total since 1939. Of this, linen cloth represented approximately 69.7%, damask 6.7%, threads 5.8%, handkerchiefs 2.3% and other linen manufactures about 15.5%. The United States took 22,200,000 yd. of the linen cloth, or about 40%, at an average price per square yard of 63 cents, compared with an average price in 1950 of 59 cents per square yard.

While buyer pressure, reflecting the general downward trend in textile prices during 1951, asked for lower prices in 1952, relatively small stocks and high costs indicated that Irish mills would have to ask for increases. The Belfast spinners and weavers depend largely on Belgium for their flax, prices for which were increasing in 1951 at the same time that buyer pressure was forcing down the prices of finished linen products. At the close of the year, U.S. buyers were said to be looking toward the continent for finished linens, because of more favourable prices.

In Belgium the linen weavers were busy supplying linen sheets, pillowcases and towels for the army. The fabric was a rough, cheaper quality which, while more expensive than comparable cotton items, was more economical because of its longer wearing and easier washing qualities, and its ability to take rough treatment. Orders were on hand for 234,000 sheets, 145,000 mattress covers, 100,000 provision bags and 98,000 pillowcases, all for the government. Flax prices in Belgium rose sharply after the outbreak of war in Korea, from about 73 cents per kilogram to $1 in Jan. 1951 and to $1.40 in June 1951. Great Britain takes 50% of the Belgian export. Belgian flax plantings in 1951 were 50% more than in 1950.

The production of fine linen cloth in all countries was handicapped by the high prices. In Belgium as well as in Great Britain and France buyers refused to accept the goods at the prices offered. Even South American buyers, who had placed large orders with Belgian producers for the finer types, cancelled them during 1951.

In the United States, while the traditional linen fabrics were being by-passed because of price, a new trend in linen was the blending of linen yarns with silk, rayon and some of the newer synthetic fibres.

The promotion of linen fabrics was continued in 1951, not only through the long-established Irish Linen guild, but also through a group of Belgian firms.

Liquors, Alcoholic.

Developments in the distilled spirits industry in the U.S. during 1951 were strongly influenced by world conditions and their political ramifications, most particularly the war in Korea. Early in the year the government announced, through the department of agriculture, contemplated restrictions in the use of grain. The results were not only a speeding up of buying and an abnormal increase in inventories of distributors and wholesalers, but also a considerable acceleration in production. However, prospects for a good crop improved, and no production restrictions were imposed. Since over-all consumption did not increase, the result was a swelling of total inventories in the warehouses to an unprecedentedly high figure of 901,000,000 gal.

Although the originally proposed $3.00 per gallon tax increase recommended by the treasury was cut down to an increase of $1.50 per gallon, the new federal tax of $10.50 per gallon, which took effect Nov. 1, 1951, added to high state excises, placed such a heavy burden on the purchaser of alcoholic liquors that there was an appreciable slowing down of retail purchasing.

Distilled spirits production for the fiscal year ending June 30, 1951, totalled 401,452,796 tax gallons compared with 208,235,050 tax gallons for the previous fiscal year. Whisky (205,702,460 tax gallons) and spirits (173,025,280 tax gallons) accounted for nine tenths of the production with brandy (11,584,486 tax gallons), rum (2,030,180 tax gallons), gin (8,962,289 tax gallons) and a small amount of vodka accounting for the balance.

In addition to providing beverage alcohol, the distillers furnished about 45,000,000 gal. of industrial alcohol to the government during the latter months of 1950 and the early months of 1951. This was made available on the open market, not purchased by contract.

Government original entry gauge figures representing barrelled whisky aging in warehouses at the end of June 1951 stood at 751,000,000 gal. After allowance for evaporation and leakage this netted about 632,575,000 gal. At the end of September there was little change in these figures. Only a small portion (156,000,000 gal.) of this inventory was more than 4 years old, as of June 30, 1951. The balance was all new or young whisky which would come of age during succeeding years. No unbottled 8-year old whisky remained in warehouses.

Distilled spirits of all types withdrawn from internal revenue bonded warehouses during the fiscal year 1951 increased 21% over 1950, from 144,000,000 gal. to 175,000,000. Withdrawals of whisky alone increased 16,000,000 gal. or 26% over 1950, continuing the consumer preference trend toward bonded and straight whiskies, and high quality blends.

Whisky of all types represented 86% of total distilled liquors bottled in 1951; gin 9%; brandy $1\frac{1}{2}$%; cordials and liqueurs, over $2\frac{1}{2}$%; and small quantities of vodka, specialties and rum made up the remainder.

Most of the rum consumed in the U.S. is imported, mainly from Puerto Rico. Imports of this commodity in 1951 were around 1,500,000 gal., about 1,200,000 gal. coming from Puerto Rico alone. Other important imports were Scotch and Canadian whisky, which account for 99% of the 10,000,000 to 12,000,000 gal. of whisky imported yearly into the U.S. At the end of the first 8 months of 1951, more than 4,000,000 gal. had been shipped from Canada and almost 7,000,000 from the U.K.

Table I.—*U.S. Fermented Liquor Consumption for Year Ending June 30, 1951*

	Distilled Spirits (tax gal.)	Wines (gal.)	Fermented Malt Liquors (gal.)
Total domestic output for continental U.S. consumption	166,174,487	127,323,035*	2,582,613,119
Imported and offshore	21,039,663	5,267,244	3,577,537
Total	187,214,150	132,590,279	2,586,190,656
Per capita consumption—domestic	1.09	.84	16.95
Imported and offshore	.14	.03	.02
Total	1.23	.87	16.97

*Net domestic withdrawals for consumption.

Source: Prepared by Licensed Beverage Industries, Inc., from statistics released by U.S. department of commerce, office of international trade, food branch. Per capita figures based on U.S. census bureau population estimates of Jan. 1, 1950: 150,161,000, and Jan. 1, 1951: 152,365,000. (A. J. Li.)

Liquor Control.—Developments in liquor control in the United States in 1951 were also closely tied up with the economic effects of the Korean war. Illegal distillations became more profitable as a result of the tax increase on liquor, wine and beer, and in spite of the vigorous efforts of the Alcohol Tax unit, the enforcement arm of the FAA (Federal Alcohol administration), liquor escaping payment of taxes ran into the millions of gallons.

The most dramatic and perhaps far-reaching development in liquor control came as a result of the televised hearings of the Kefauver committee. Much of the testimony revealed that the men who were active in illegal gambling and political fix were also engaged in liquor operation, particularly in night spots. In its report the Kefauver committee proposed annual application for renewal of basic permits. (A wholesaler must secure a federal basic permit, as well as a state licence, where required, before beginning operation. Once acquired the federal permit is good unless and until it is revoked or suspended for cause.) This proposal did not pass.

In the early part of the year, the economic stabilizer, Eric Johnston, ordered a price freeze, which included alcoholic beverages. In the closing months of the year, the Office of Price Stabilization put restrictions on markups of alcoholic beverages, both at the wholesale and retail level.

The supreme court in the so-called New Orleans Schwegman case held that a manufacturer of alcoholic beverages could enforce a fair trade price (minimum price at which a retailer may sell a specific product to a customer) only if he had a contract with that retailer; he could not, by a contract with one or a few retailers, force all retailers to accept the minimum price to consumers just as though they had been made parties to the contract. This decision nullified many of the fair trade laws passed by states, except in those states which had no provision concerning contracts in conflict with the terms of the court decision. New York state, for example, compels every brand owner to register with the state control authority his minimum fair trade price to the consumer, and the state agency then enforces that minimum.

Congressional efforts to limit liquor and beer advertising did not succeed. However, the television and radio broadcasting industry adopted a code which excluded hard liquor from the list of products which might be advertised over radio or television. This did not include beer and wine. Efforts to stop the sale of beer near army camps failed.

The Alcohol Tax unit, as well as some of the states concerned, interested themselves in stopping the flow of hard liquor into dry or partially dry states, such as Oklahoma, Mississippi and Georgia. In a number of cases this involved litigation, still pending in the courts at the end of the year. On the whole, however, the interstate flow of liquor from wet states into dry areas was greatly diminished. (*See* also BREWING AND BEER; INTOXICATION, ALCOHOLIC; WINES.) (M. LB.)

Table II.—*Federal Internal Revenue Bureau Collections from Alcoholic Beverages*

Calendar Year	Distilled Spirits	Beer	Wine	Total
1946	$1,972,860,338	$642,224,380	$75,898,249	$2,690,982,967
1947	1,578,195,476	702,059,301	49,905,396	2,330,160,173
1948	1,427,017,216	684,570,490	65,016,303	2,176,604,009
1949	1,455,650,625	679,227,856	79,511,340	2,204,389,821
1950	1,679,371,598	666,658,732	72,988,974	2,419,019,304
1st 8 months, 1950	1,067,161,982	461,591,104	46,932,051	1,575,685,137
1st 8 months, 1951	1,027,536,311	467,109,319	39,739,652	1,534,385,282

Literary Prizes.

The following is a selected list of literary prizes awarded during the year of 1951:

United States.—American Academy of Arts and Letters, Award of Merit Medal.—Medal and cash prize of $1,000 given annually to an outstanding person in arts and letters, living in the United States and not a member of the academy or institute, to Sidney Kingsley, dramatist.

American Academy of Arts and Letters Fellowship.—At American academy in Rome, It., to Anthony Hecht, poet.

American Historical Association, Albert J. Beveridge Memorial Fellowship.—A grant of $1,500 to Reynold M. Wick for his manuscript *The Application of Steam Power to American Agriculture.*

American Political Science Association, Woodrow Wilson Foundation.—Honorary award for the best book of the year in the field of government and democracy, to Stephen K. Bailey for *Congress Makes a Law.*

American Political Science Association, Franklin D. Roosevelt Foundation Award.—Honorary award for the best book in the field of government and human welfare, to Arthur N. Holcombe for *Our More Perfect Union.*

American Political Science Association, Willkie Memorial Building Award.—Honorary award for the best book in the field on international relations, to John B. Condliffe for *The Commerce of Nations.*

Anisfield-Wolf Awards.—Two awards of $1,000 each, administered by the *Saturday Review of Literature,* for books which most contribute "to the understanding and solution of racial problems," to John Hersey for *The Wall* (fiction) and to Henry Gibbs for *Twilight in South Africa* (nonfiction).

Author Meets the Critics Literary Awards.—Honorary awards given by the radio program for outstanding American fiction and nonfiction, to John Hersey for *The Wall* (fiction) and to Marchette Chute for *Shakespeare of London* (nonfiction).

Bancroft Prizes.—$2,000 each annually for the best two books published in American history, American diplomacy or American international relations, to Arthur N. Holcombe for *Our More Perfect Union* and to Henry Nash Smith for *Virgin Land.*

Bollingen Prize in Poetry of the Yale University Library.—$1,000 to John Crowe Ransom for his contribution to American poetry.

Carey-Thomas Award.—Annual award, sponsored by *Publishers' Weekly,* for the most distinguished publishing achievement of the year. Certificate to Princeton University press for *The Papers of Thomas Jefferson,* edited by Julian P. Boyd.

Cervantes Medal.—Given annually by Hispanic institute in Florida for contribution to Latin-American relations, to Leonard Bacon for his translation of Camoens' poetry.

Friends of American Writers Award.—$1,000 for the encouragement of young authors from the midwest and those who use midwestern locales in their stories, to Leon Statham for *Welcome, Darkness.*

Guggenheim Fellowships.—154 fellowship awards, totalling $568,000, of which 16 went to writers: Samuel Konefsky, Edwin G. Nourse, Conyers Read, Horace Gregory, Francis Harper, Dumas Malone, Willard M. Wallace, Elizabeth Stevenson, George Woodcock, E. E. Cummings, Rosalie Moore, William Goyen, Charles E. Butler, John Cheever, Arnold O. Sundgaard, Benjamin Botkin.

O. Henry Memorial Award Prize Stories.—$300 first prize to Harris Downey for *The Hunters;* $200 second prize to Eudora Welty for *The Burning;* $100 third prize to Truman Capote for *The House of Flowers.*

Houghton Mifflin Literary Fellowship.—$2,400 for financial assistance to promising writers to Siegle Fleisher for a first novel.

Sidney Howard Memorial Award.—$1,500 given annually by the Playwrights company for new talent in playwriting on Broadway, to the New Dramatists committee.

Jewish Book Council of America Award.—Harry Kovner $100 poetry awards to Judah Stampfer, Aaron Zeitlin, Ben Lappin; $250 Samuel H. Daroff fiction award to Soma Morgenstern for *The Testament of the Lost Son.*

Alfred A. Knopf, Inc.—Furioso Fiction Contest.—$400 for a short story or a part of a longer work of fiction, to William Berge for a short story.

Modern Language Association.—Macmillan Award.—$1,000 award for a book of significant contribution to general understanding of English and American literature, to Alfred B. Harbage for *Shakespearean Setting.*

Modern Language Association.—Oxford Award.—$1,000 award for a book of significant contribution to general understanding of foreign literature, to Warren Ramsey for *Jules Laforgue and the Ironic Inheritance.*

Mystery Writers of America Awards.—Honorary "Edgars," busts of Edgar Allan Poe, awarded for mystery writing: for the best first mystery novel, to Thomas Walsh for *Nightmare in Manhattan;* for the best mystery short story, to Lawrence G. Blochman for *Diagnosis: Homicide;* for fact crime writing, to Edward D. Radin for *Twelve Against Crime* and for his editorship of *Detective* magazine.

National Book Awards.—Gold medals awarded by the entire book industry for distinguished fiction, to William Faulkner for *Collected Stories of William Faulkner;* special citation, to Brendan Gill for *The Trouble of One House;* for distinguished nonfiction, to Newton Arvin for *Herman Melville;* for the most distinguished book of poetry, to Wallace Stevens for *The Auroras of Autumn.*

National Institute of Arts and Letters.—Russel Loines Award for Poetry, to recognize the value of some American or English poet, to John Crowe Ransom.

NATIONAL INSTITUTE OF ARTS AND LETTERS GRANTS.—$1,000 each to six nonmember writers for encouragement to young artists of ability and as practical recognition for more established authors: Newton Arvin, Brendan Gill, Elizabeth Bishop, Louise Bogan, Randall Jarrell, Vladimir Nabokov.

NEW YORK DRAMA CRITICS CIRCLE AWARD.—Honorary awards given by the New York metropolitan critics for the best play produced in New York city, to Sidney Kingsley for *Darkness at Noon* (based on the novel by Arthur Koestler); for the best foreign play, to Christopher Fry for *The Lady's Not for Burning;* for the best musical, to Abe Burrows, Jo Swerling and Frank Loesser for *Guys and Dolls.*

NEW YORK UNIVERSITY'S SOCIETY OF THE LIBRARIES GOLD MEDAL.—To "an American scholar who reveals in his writings accurate scholarship and effectiveness of presentation," to Crane Brinton for *Ideas and Men.*

PARENTS' MAGAZINE MEDAL.—For the outstanding book of service to parents, to Mary and Lawrence K. Frank for *How to Help Your Child in School.*

PHI BETA KAPPA PRIZE.—$1,000 to the author of the best book of the year published by a university press in the field of literary scholarship or criticism, to Ruth Wallerstein for *Studies in 17th Century Poetic.*

POETRY AWARDS.—Given by Poetry Awards of Pasadena, Calif., in co-operation with the Poetry Society of America. $1,250 major award divided between Rolfe Humphries and Hyam Plutzik. $1,000 prize for a long theme poem, to Mark Van Doren for *Mortal Summer.*

POETRY SOCIETY OF AMERICA GOLD MEDAL.—To Wallace Stevens.

TAMIMENT INSTITUTE 1951 BOOK AWARD.—$500 for the best biography written by an American, to Ethel Waters for *His Eye is On the Sparrow.*

WESTMINSTER FICTION CONTEST.—$7,500 to C. E. L'Ami of St. James, B.C., for a novel, *The Green Madonna.*

YALE SERIES OF YOUNGER POETS.—Award to William S. Merwin for *A Mask for Janus.*

ZONDERVAN CHRISTIAN FICTION PRIZE.—$4,000 to James H. Hunter for *Thine is the Kingdom.*

NOBEL PRIZE FOR LITERATURE.—(*See* article NOBEL PRIZES.)

PULITZER PRIZES.—(*See* article PULITZER PRIZES.)

U.S. Children's Books.—CALDECOTT MEDAL.—For the year's most distinguished American picture book for children, to Katherine Milhous for *The Egg Tree.*

CHILD STUDY AWARD.—Honorary award of the Child Study Association of America for the book for young people which deals realistically with problems in their world today, to Mrs. Eleanor Roosevelt and Helen Ferris, joint authors of *Partners, the United Nations and Youth.*

DODD, MEAD—AMERICAN GIRL PRIZE COMPETITION.—$1,500 prize contest sponsored by Dodd, Mead publishing house and *American Girl* magazine for a book-length story appealing to Girl Scouts. To Loula Grace Erdman for *The Wind Blows Free.*

DODD, MEAD—BOYS' LIFE PRIZE COMPETITION.—$2,000 prize contest sponsored by Dodd, Mead publishing house and *Boys' Life* magazine for a book-length story appealing to Boy Scouts. To John Scott Douglas for *The Secret of the Undersea Bell.*

CHARLES W. FOLLETT AWARD.—A prize of $3,000 given by Wilcox and Follett, publishing company, for a worthy contribution to children's literature, to Sydney Taylor for *All-of-a-Kind Family.*

HERALD TRIBUNE (NEW YORK) SPRING BOOK FESTIVAL AWARDS.—Three prizes of $200 each: for the best picture book for younger children, to Françoise for *Jeanne-Marie Counts her Sheep;* for the best book for children from 8 to 12, to Eleanor Estes for *Ginger Pye;* for the best book for older boys and girls, to Elizabeth Baity for *Americans Before Columbus.*

JUNIOR BOOK AWARDS.—Presented by the Boys' Clubs of America to authors of books which were favourites of boys in Boys' clubs throughout the United States. Medals to Ronald Syme for *Bay of the North;* to J. Frank Dobie for *The Ben Lilley Legend;* to A. B. Guthrie, Jr., for *The Big Sky;* to Henry Gregor Felsen for *Hot Rod;* to Glen Balch for *Lost Horse;* to Catherine Owens Peare for *Mahatma Gandhi;* to Marion Renick for *The Shining Shooter;* to Chang Fa-Shun for *The Sky River;* to Thomas H. Raddall for *Son of the Hawk.* Certificates to Frank O'Rourke for *Bonus Rookie;* to Frank Waldman for *Giant Quarterback;* to May Justus for *Luck for Little Lihu;* to Duff McCoy for *The Mystery at Robbers' Rock;* to Donald Barr Chidsey for *Rod Rides High;* to Hazel Wilson for *Thad Owen;* to Eleanor Clymer for *Treasure at First Base.*

JOHN NEWBERY MEDAL.—For the year's most distinguished contribution to American literature for children, to Elizabeth Yates for *Amos Fortune: Free Man.*

PACIFIC NORTHWEST YOUNG READER'S CHOICE AWARD.—Honorary award to the author of the book most popular with children in grades four to eight, to Marguerite Henry for *King of the Wind.*

Canada.—GOVERNOR-GENERAL'S AWARDS.—Silver medals awarded to Germaine Guevremont for *The Outlander* (fiction); to Marjorie Wilkins Campbell for *The Saskatchewan* (creative nonfiction); to W. L. Morton for *The Progressive Party in Canada* (academic nonfiction); to James Wreford for *Of Time and the Lover* (poetry); to Donalda Dickie for *The Great Adventure* (juvenile).

LEACOCK MEDAL FOR HUMOUR.—To Eric Nicol for *The Roving I.*

LORNE PIERCE MEDAL.—Awarded by the Royal Society of Canada for achievement of special significance and conspicuous merit in imaginative or critical literature, to Edward Killoran Brown (posthumous).

TYRRELL MEDAL.—Awarded by the Royal Society of Canada for research in Canadian history, to Jean Bruchesi and to Donald Grant Creighton.

UNIVERSITY NATIONAL AWARD MEDAL.—Established by the University of Alberta for Canadians who have made signal contribution to letters, printing and music, to Mazo de la Roche. (R. E. Bs.)

Great Britain.—Among the awards during the year were: the JAMES TAIT BLACK MEMORIAL PRIZES (about £250 each) to Mrs. Cecil Woodham-Smith for *Florence Nightingale* (the biography prize) and to Robert Henriques for *Through the Valley* (the fiction prize); from the WILLIAM HEINEMANN FOUNDATION (up to £200) to Patrick Leigh-Fermor for *The Traveller's Tree* and to Mervyn Peake for his volume of poetry, *The Glass-blowers* and for his novel *Gormenghast;* the CARNEGIE MEDAL (awarded by the Library association for an outstanding book for children) to Elfrida Vipont for *The Lark on the Wing;* the ROSE MARY CRAWSHAY PRIZE (£100, for a critical or historical work on English literature by a woman) to Rosemary Freeman for *English Emblem Books;* the JOHN LLEWELLYN RHYS MEMORIAL PRIZE to Elizabeth Jane Howard for her novel, *The Beautiful Visit;* the SOMERSET MAUGHAM AWARD (about £250 for a British writer under 30, to be used mainly for foreign travel) to Roland Camberton (Henry Cohen) for his novel, *Scamp;* the DENYSE CLAIROUIN MEMORIAL PRIZE for the year's best translation from the French, to Alan Pryce-Jones for his translation, entitled *The Colonel's Children,* of Jules Supervielle's *Le Voleur d'Enfants.* The SUNDAY TIMES £1,000 prize for literature was awarded to Arthur Bryant for *The Age of Elegance,* and two special awards of £100 each were made to younger authors for books of outstanding merit produced during the year; Jacquetta Hawkes for *A Land,* and Patrick Leigh-Fermor for *The Traveller's Tree.* The *Observer* offered a prize of £250 for a short story, which was awarded to Muriel Spark for a story entitled *The Seraph and the Zambesi.*

The Arts council offered a prize of £500 for a long poem in connection with the Festival of Britain, but the judges decided that they could not award the prize for any single long poem. Instead, three prizes of £200 each were awarded for the following three long poems: *The Impertinent Friends* by Gerald Bromhead Walker; *The Witnesses* by Clive Sansom; and *Unprofitable Journey?* by J. P. Fletcher. In addition, awards of £100 each were made to the following for groups of short poems: Jack R. Clemo, Robert Conquest, J. C. Grant, Theodore Nicholl, L. A. Redford. (E. SE.)

France.—ACADÉMIE GONCOURT PRIZE to Julien Gracq (Louis Poirier), who rejected the award, for *Le Rivage des syrtes;* THÉOPHRASTE RENAUDOT PRIZE to Robert Margerit for *Le Dieu nu;* FÉMINA PRIZE to Anne de Tourville for *Jabadao;* ACADÉMIE FRANÇAISE PRIZE (novel) to Bernard Barbey for *Chevaux abandonnés sur le champ de bataille;* INTERALLIÉ PRIZE to Jacques Perret for *Bande à part;* CRITIQUES PRIZE (essay) to Pierre de Boisdeffre for *Métamorphose de la littérature,* (novelettes) to André Pierre de Mandiargues for *Soleil des loups;* SAINTE-BEUVE PRIZE (novel) to Yassu Gauclère for *La Clé,* (essay) to Jean Fretet for *La Folie parmi nous;* GENS DE LETTRES PRIZE to Maurice Toesca for *Le Scandale;* SOCIÉTÉ DES AUTEURS to Odette Joyeux for *Le Château du carrefour.* Alain (Emile Chartier), Paul Gilson, Julian Green, René Laporte, Henri Martineau and Vincent Muselli received, respectively, the GRAND PRIX NATIONAL DES LETTRES, GUILLAUME APPOLINAIRE, MONACO, AMBASSADORS, ACADÉMIE FRANÇAISE (Grand Prix des Lettres) and CRITIQUES awards, for the sum of their works. (M. JOL.)

JACKET DESIGN for *The Egg Tree*, by Katherine Milhous, winner of the Caldecott award in 1951 for the most distinguished American picture book for children published during the previous year

Lithuania. From Feb. 16, 1918, to Aug. 3, 1940, when it was annexed by the U.S.S.R., Lithuania, one of the Baltic states of northeastern Europe, was an independent republic. Area (including Klaipeda or Memel and Vilnius or Wilno territories): 25,173 sq.mi. Pop.: (Oct. 1939 est., including Vilnius but excluding Klaipeda) 2,970,000; (1950 est., including Klaipeda) 3,000,000, but according to reliable estimates the purely Lithuanian population declined from 2,084,000 (66%) to 1,645,000 (55%) between 1940 and 1950. Chief towns (pop., 1938 census): Vilnius (cap., Oct. 1939 est., 207,800), Kaunas (152,365), Klaipeda (47,189), Siauliai (31,299). Languages: Lithuanian and Russian. Religion: Roman Catholic and Greek Orthodox. Chairman of the presidium of the supreme soviet of the Lithuanian S.S.R. in 1951, Justas I. Paleckis; chairman of the council of ministers, Mečislovas A. Gedvilas.

History.—A new supreme soviet was elected on Feb. 18, 1951, among newly returned members being Lieut. Gen. V. R. Vashkevich and Maj. Gen. P. A. Lapkin, respectively chief of staff and chief of the political section of the Baltic military area of which the headquarters were at Riga (*see* also LATVIA). There were 91,530 more voters than in 1947, when the electorate amounted to 1,509,365; but whereas in that year 1.95% of votes were said to have been cast against the official candidates, in 1951 the "opposition" was reduced to 0.09%.

Addressing the soviet of nationalities in Moscow on March 10, 1951, K. F. Liaudis said that more than 90% of peasant farms had been collectivized. No figures were published concerning the merger of smaller collective farms (*kolkhozy*), of which there were 6,549 in July 1950, but their number was thought to have been reduced by two-thirds. In their report to Joseph Stalin on Oct. 7 on the amalgamation, it was admitted by A. Sniečkus, first secretary of the central committee of the Lithuanian Communist party, M. Gedvilas, the premier, A. Andreyev, minister of agricultural stocks, V. Augustinaitis, minister of agriculture, and D. Mamayev, minister of state farms (*sovkhozy*), that there had been serious shortcomings in the work of improving the operation of new *kolkhozy* and of expanding agricultural production.

Great discrepancy between controlled and so-called free prices was caused by low agricultural production. State collecting centres were paying 4.50 roubles per 100 kg. of rye and for wheat 0.6 roubles per 100 kg., while on the free market the respective prices were 160 roubles and 120 roubles. The official price of butter was 1.30 roubles per kilogram compared with 25 roubles on the free market.

Information obtained from Lithuania during 1951 revealed that the Roman Catholic Church was no longer represented in the country by archbishop or bishop, and the 1940 hierarchy of 12 was now dispersed by exile in western Europe, forced labour in soviet camps and death, while only 400 remained of the 1,646 clergy there had been in 1940. The two theological faculties and four seminaries were closed, as were also the majority of churches, including Kaunas cathedral. None of the 52 religious periodicals with a combined circulation of 7,030,200 was permitted to appear, and no religious organization existed.

On Feb. 16, 1951, Lithuanian Independence day, the Voice of America started daily transmissions in Lithuanian, the broadcasts being inaugurated by Edward W. Barrett, assistant secretary of state, who pointed out that U.S. concern for the position of the Lithuanian people was not new. He read the statement of the U.S. government of July 23, 1940, protesting against the annihilation of the three Baltic republics by the Soviet Union, and added that the United States continued to adhere to the fundamental principles expressed at that time. The first program also included speeches by Stasys Lozoraitis, chief of the Lithuanian diplomatic corps abroad, and Mgr. M. Krupavicius, president of the Supreme Lithuanian Committee of Liberation. (*See* also ESTONIA.)

Education.—According to an article by J. Paleckis published in *Izvestia* on Feb. 7, 1951, there were 459,000 pupils in primary schools, the number of pupils in secondary schools had increased fivefold and there were three times as many students in 12 institutions of higher education as in 1939.

Finance.—Budget (1951 est.): revenue 1,530,500,000 roubles; expenditure 1,462,000,000 roubles. (K. SM.)

Liver Disorders: *see* STOMACH AND INTESTINES, DISEASES OF.

Livestock. Hogs and cattle on U.S. farms continued to increase rapidly in numbers in 1951, though there were initial signs that the less abundant corn crop of 1951 would turn hog numbers down in 1952 after five years of expansion. Sheep numbers began to increase after an eight-year-long decline to record low levels. Chickens and turkeys were slightly less numerous, and horses and mules continued their trend toward extinction.

Cattle increased by more than 4,000,000 head between Jan. 1, 1950, and Jan. 1, 1951. The 84,179,000 head had a farm value of $160 per head, or a total value of $13,441,384,000, as compared with $123 a year before and a total value of $9,847,676,000. A fundamental question facing the livestock and meat industries was that of when herd build-up or inventory accumulation of beef animals would cease, releasing new production and some of the accumulation to the market. After some hesitation, because the record cost for feeder cattle during much of 1951 was so uncommonly close to the price of finished cattle, making the business a high-risk one, corn belt farmers did put record numbers of cattle into their feed lots for finishing. During part of the year the movement of slaughter cattle to market apparently was somewhat disorganized by restrictions, existing and anticipated, resulting from ceiling prices on beef at wholesale and retail and maximum drove cost. Rollbacks anticipated for Aug. 1 and Oct. 1 were cancelled when amendments to the Defense Production act became law. Record high prices were set for lambs and prime steers during the year, but late in the year even the better grades of beef cattle dropped moderately below ceiling price levels.

The spring pig crop of 1951 was 61,957,000 head, as compared with 55,407,000 head average for 1940–49. The fall pig crop was 40,182,000 head, only 2% larger than in 1950 and comparable with 35,400,000 head average for 1940–49. Thus the pig crop of 1951 totalled 102,139,000 head, or 5% more than in 1950 and substantially above the 1940–49 average of 90,807,000 head. Indications were that sows farrowing in the spring of 1952 would be only 8,794,000 head, 8% less than the 9,581,000 sows farrowed in the spring of 1951; this indicated a probable spring pig crop 9% smaller than the previous one.

Table I.—*Livestock on U.S. Farms*

(In 000 head)

	Jan. 1, 1951	Jan. 1, 1950	Average 1940-49
Horses	4,763	5,274	8,581
Mules	1,990	2,149	3,268
Cattle (including calves)	84,179	80,052	78,826
Milk cows	24,579	24,573	26,157
Sheep	31,505	30,743	46,143
Hogs	65,028	60,502	62,346
Chickens	466,686	480,834	489,368
Turkeys	5,975	5,986	6,961

Table II.—*Number of Livestock in Specified Areas*

(in 000 head at beginning of year)

Areas	Cattle		Hogs		Sheep	
	1951	1950	1951	1950	1951	1950
North America	118,300	113,800	81,000	76,600	39,000	38,200
Europe	101,700	99,500	71,200	66,700	118,100	113,600
U.S.S.R.	57,200	56,000	24,100	19,000	86,000	78,000
Asia	289,100	289,000	79,900	78,600	147,800	146,300
South America	129,500	128,900	35,000	34,200	124,300	120,000
Africa	90,300	84,000	4,200	3,800	93,700	91,000
Oceania	20,200	19,700	1,800	1,800	152,800	146,800
Estimated world total	806,300	790,900	297,200	280,700	761,700	733,900

U.S. sheep numbers on Jan. 1 were about 4% above the record low of the previous year and more ewe lambs were held back for replacement or expansion, indicating probably further gain in spite of the fact that more sheep and lambs were being fattened for market in Nov. 1951 than a year previously.

Partly as a result of an abundant supply of feed grains, Canadian cattle numbers again increased after six years of decline. Slaughter of most kinds of livestock declined. Live cattle exports to the U.S. declined and restrictions on export of live hogs from Canada to the U.S. were removed.

World cattle numbers in 1951 were preliminarily estimated at 806,300,000 head, a record, about 2% higher than in 1950 and 8% above the prewar average. Leading countries were India (180,200,000), the U.S. (84,179,000), the U.S.S.R. (57,200,000), Brazil (46,400,000) and Argentina (43,000,000). Several western European countries experienced serious outbreaks of hoof-and-mouth disease during the year.

World hog numbers of Jan. 1, 1951, hence not including many farrowed and marketed during the year, were estimated at 297,200,000 head, a record total, 6% more than a year earlier and 2% more than prewar.

Herdsmen in many parts of the world, encouraged by favourable prices for wool and mutton and good grazing, increased their sheep flocks to a total of 761,700,000 head, 4% more than in 1950 and 2% more than prewar.

World horse numbers declined slightly in 1951 to 74,900,000, as compared with 75,000,000 in 1950 and 95,800,000 prewar. (*See* also Agriculture; Meat.) (J. K. R.)

London.

London in 1951 was dominated by the Festival of Britain. The South Bank exhibition and the Battersea pleasure gardens formed the centre of a decorative and festive effort spreading all over London from May to October. The South Bank exhibition closed on Sept. 30 and the pleasure gardens on Oct. 20. It was proposed to reopen the pleasure gardens in summer for a maximum of five years. In July the queen laid the foundation stone of a national theatre which would eventually be built between the Royal Festival hall and Waterloo bridge. (*See* Fairs and Exhibitions.)

Many places of importance which had remained closed or had been closed for other purposes resulting from the war were restored or reopened during the year. In May the house of lords resumed the use of its own chamber which had been lent to the commons from the later years of World War II until the completion of the new chamber in 1950. The chapter house at Westminster abbey was reopened with new commemorative windows to replace those (1881) destroyed in the war. The Rubens ceiling paintings were replaced in the banqueting hall in Whitehall. The London museum reopened in its new, somewhat restricted quarters at Kensington palace. The assembly hall at Church house, wrecked in 1941, was reopened by Queen Mary in June. The decorations of the Soane museum were restored in their original style (1812), and Gray's Inn hall, reconstructed after damages received in 1941, was reopened in December.

In housing in the County of London, an outstanding development was the Lansbury estate in Poplar on a bombed site of about 30 ac., where the London County council, in conjunction with the Poplar Borough council, was creating a complete civic unit. A large part of the construction was already finished and in occupation. A U.S. gift to the east end of London was Winant house, a block of 12 well-designed flats in Poplar High street, erected as a memorial to Gilbert John Winant, U.S. ambassador to London during World War II. With about 200,000 families still on the waiting list for homes, more than 60,000 of them urgent cases, the L.C.C. estimated an expenditure of £20,500,000 for capital outlay on housing in 1951–52.

DRAGGING SERPENTINE LAKE in Hyde Park, London, Eng., as police searched for the Stone of Scone stolen from beneath the coronation chair in Westminster abbey. The Stone, taken by Scottish nationalists, was returned in April 1951

In October, the conversion of London tram routes (street car routes) to trolley-bus routes reached the halfway mark with the withdrawal of 56 mi. of tram routes affecting about 100,000 travellers in south London.

London was visited in May and June successively by King Frederick and Queen Astrid of Denmark and by King Haakon of Norway, the arrival of the latter being marked by one of the noblest pieces of river pagentry of recent times, when the Norwegian royal yacht "Norge" sailed up the Thames to the Pool of London. But the royal occasion which most delighted Londoners was the drive of the duke and duchess of Edinburgh on their return from their tour in Canada and visit to the United States, when they proceeded from Buckingham palace to Westminster, where they lunched at the Guildhall with the lord mayor. In April the venerable Stone of Scone, which was stolen on Christmas eve, 1950, was returned in custody of the police to Westminster abbey, having been found in the ruins of Arbroath abbey. (D. Nn.)

Lopes, Francisco Higino Craveiro

(1894–). Portuguese president, was born at Lisbon, Port., on April 12, the son of Gen. João Carlos Craveiro Lopes. He joined a regiment of horse on July 23, 1911, attended the cavalry course of the army school and was appointed ensign in 1915. He took part in the Mozambique campaign against the Germans, then attended a military aviation school at Chartres, Fr., and in 1918 joined the Portuguese army air force on the western front; he served in the army air force until 1929. In that year he became aide-de-camp to his father, then governor general of Portuguese India. Returning to Portugal after nine years he was appointed commander of an air base. In 1941, as a colonel, he became commander of the air force. Two years later he attended the high-command course at Caxias and in 1944 was appointed commander of the Portuguese legion (a voluntary force formed in 1936, during the Spanish civil war) and professor at the high-command course. In Jan. 1951, as a general, he was appointed commander of the 3rd military region at Tomar and withdrew from the command of the Portuguese legion. In 1945 and 1949 he was elected deputy to the national assembly. On July 22 he was the only candidate to the presidency and polled 896,379 votes out of a total of 1,334,000 electors.

Lords, House of: *see* PARLIAMENT, BRITISH.

Los Angeles. Los Angeles, the fourth largest city in the United States with a population of 1,970,358 by the 1950 census, continued to have an average monthly population influx of 11,000 people during 1951. Of these newcomers, an estimated 6,000 monthly were job seekers. Los Angeles is the largest city in the United States in area with 453.47 sq.mi. The 1950 census gave Los Angeles county a population of 4,151,687. County population was up 49%, and that of the city up 31% over 1940.

With more than $300,000,000 invested in new plants and expansion of existing facilities, Los Angeles county industry in 1951 more than doubled the previous yearly record of 1943, and trebled the year-end investment totals of 1950. More than 36,000 new job opportunities were created by the year's industrial activity.

Construction slacked off somewhat during the year because of government restrictions and mobilization allocations of material. Commercial and residential construction was down 19% from 1950's record but stayed ahead of average years. Permits were issued in 1951 for enough dwelling units to house nearly 200.000 persons.

Despite continuing inroads of industrial and residential subdivisions on farmlands, agriculture in Los Angeles county continued to be a potent factor in the area's economy. In 1950 the county had agriculture production valuations of $206,883,600.

Substantial parts of the Hollywood freeway (downtown Los Angeles to North Hollywood), Santa Ana freeway (downtown to Santa Ana) and Ramona freeway (downtown to Orange county) were made operative. Los Angeles television receivers went above the 1,000,000-set mark, placing the area second only to New York city.

A public-school scandal precipitated an almost complete turnover of school board members. Los Angeles public housing became the centre of a heated controversy with the city council after weeks of debate voting 8–7 to abrogate its contract with the federally subsidized city housing authority for 10,000 housing units estimated to cost $110,000,000. Mayor Fletcher Bowron opposed the council on this matter, whereupon the council voted to bring the entire housing program issue to a vote of the electorate in June 1952. Meanwhile the city housing authority filed suit against the city and specifically its councilmen in the California supreme court. (T. C. D.)

Louisiana. One of the west south central states of the United States, admitted to the union in 1812 as the 18th state, Louisiana is popularly known as the "Pelican state," "Creole state" or "Bayou state." Area 48,523 sq.mi., of which 45,162 sq.mi. are land. Pop.: (1950 census) 2,683,516, of which 1,796,548 or 67% were white and 886,968 or 33% nonwhite; 1,471,696 or 54.8% urban and 1,211,820 or 45.2% rural. Capital, Baton Rouge (125,629). Other important cities: New Orleans (570,445), Shreveport (127,206), Lake Charles (41,272), Monroe (38,572), Alexandria (34,913), Lafayette (33,541).

History.—The legislature did not meet in regular session during 1951, but a special session was called to enact some emergency legislation, June 18–29. A surplus of about $17,000,000 had accumulated in the state treasury, and the chief work of this special session was the appropriation of this surplus to certain state departments, agencies and institutions. A total of $16,150,600 was appropriated; the most important appropriations were: $14,000,000 to the highway department to repair an estimated $10,000,000 damage caused by the severe winter of 1950–51 and to meet the rising cost of maintenance and construction; $1,204,000 to charity and mental hospitals to cover increased cost of operation; $420,000 to finance the state civil defense program; $250,000 to construct a new home for the school for spastic children; $150,000 to aid certain parishes; and $61,000 to reimburse farmers for losses caused by enforced nonplanting of cotton in 1951 to eradicate the pink bollworm. The only other important measure was a provision for more severe penalties for violation of the narcotics laws.

The most important political event of the year was the state Democratic primary campaign, with eight candidates seeking the nomination for governor. Three interesting points of the campaign were: the entry of a Negro candidate for governor, for the first time since Reconstruction days; the appearance of a woman in the gubernatorial race for the first time in Louisiana; and the split in the "Long" ranks, with Gov. Earl K. Long supporting one candidate and his nephew, United States Senator Russell B. Long, supporting another. The main issues in the campaign were: the restoration of a state civil service system, which had been established in 1942 by the anti-Long regime and abandoned in 1948 by the Earl K. Long administration; high taxes and economy and efficiency in state administration; continuation of the expensive social security program; reform of the state penitentiary, at which a scandal had developed earlier in the year; and state rights versus Trumanism. The state Democratic primary election was scheduled for Jan. 15, 1952.

State officers in 1951 were: Earl K. Long, governor; William J. Dodd, lieutenant governor; Wade O. Martin, Jr., secretary of state; A. P. Tugwell, treasurer; L. B. Baynard, auditor; Bolivar E. Kemp, Jr., attorney general; Shelby M. Jackson, superintendent of education; Lucile May Grace, register of land office; W. E. Anderson, commissioner of agriculture and immigration.

Education.—In 1951 the 797 public schools for whites enrolled 236,249 elementary and 72,862 high school pupils and employed 11,984 teachers; the 1,151 public schools for Negroes enrolled 168,388 elementary and 25,173 high school pupils and employed 5,577 teachers. The 173 private schools for whites enrolled 48,371 elementary and 10,824 high school pupils and employed 1,847 teachers; the 93 private schools for Negroes enrolled 18,448 elementary and 1,986 high school pupils and employed 493 teachers. The state maintained 14 public trade schools, and 11 new ones established by the 1950 legislature were under construction. Total state expenditures for public education for the fiscal year 1950–51 were $98,316,490, of which $17,498,229 were for institutions of higher learning; federal grants-in-aid for education were $6,943,776 for the 1950–51 fiscal year.

Social Insurance and Assistance, Public Welfare and Related Programs.—Total benefit payments under the Louisiana unemployment compensation law were only $13,650,000 in 1951, as compared with $21,000,000 in 1950, the decrease resulting from a higher level of employment, despite the increase in numbers covered by insurance.

Louisiana expended less than $92,000,000 on public welfare in 1951, compared with $100,000,000 in 1950, the decrease being attributed to stricter requirements for aid in some categories.

In 1951 the state maintained eight charity hospitals, in addition to rental of beds in several private hospitals; three hospitals for mental patients; three tuberculosis sanitariums; a school for white deaf, a school for white blind and a school for Negro deaf and blind; a training school for spastic children; a training school for the feeble-minded.

The state maintained two prison farms for its 2,500 adult offenders, separate training institutes for about 200 delinquent white boys and girls and a training institute for about 100 delinquent Negro boys. The training in-

stitute for delinquent Negro girls authorized by the 1950 legislature was under construction.

State expenditures for maintenance, expansion and improvement of charitable and correctional institutions were about $22,000,000 for the 1950–51 fiscal year, $19,585,107 of which was expended on the charity hospitals and mental institutions.

Communications.—In 1951 Louisiana had 18,200 mi. of public highways, 14,800 mi. of which were state-maintained, 4,800 mi. paved with concrete or black top and the remainder gravelled. Total state expenditures for highway maintenance and new construction for the 1950–51 fiscal year were $58,194,215, divided as follows: new construction, $36,960,363; maintenance, $12,098,242; new equipment, $3,114,431; state aid to parishes, $2,125,542.

There were 4,400 mi. of railways and 4,800 mi. of navigable waterways. About 100 land airports and 10 seaplane bases were in operation in 1951. Nearly 540,000 telephones were in service at the end of the year.

Banking and Finance.—Louisiana had 36 national banks on July 1, 1951, with total deposits of $1,200,000,000 and resources of $1,279,000,000; and 130 state banks, with total deposits of $534,000,000 and resources of $573,000,000. There were 62 savings and loan associations, with total assets of $220,000,000. Total state income for the 1950–51 fiscal year, including $77,070,282 in federal grants-in-aid, was $361,770,538; expenditures for the same period were $336,417,406. The state bonded debt on July 1, 1951, was $218,557,000.

Agriculture.—The total value of agricultural and truck crops in 1951 was about $309,000,000, compared with $270,000,000 in 1950; total acreage harvested was 3,300,000, compared with 3,100,000 in 1950. The total cash income from crops, livestock and poultry and their products was about $445,000,000 in 1951, compared with $400,000,000 in 1950; from government payments $10,000,000, compared with $10,300,000 in 1950.

Manufacturing.—More than 2,400 industrial establishments, employing 160,000 workers and paying $350,000,000 in wages and salaries, produced finished products worth $1,500,000,000 in 1951, compared with $1,300,000,000 in 1950. During the year about $200,000,000 of capital investments in new plants and expansions of existing ones was made, under the state law exempting new industrial plants from taxation for ten years.

Forest Products, Furs, Fisheries.—Louisiana forests produced $1,160,940,914 bd.ft. of lumber and 941,754 cords of pulpwood in the 1950–51 fiscal year, compared with 961,962,000 bd.ft. and 941,151 cords in 1949–50 fiscal year.

The Louisiana fur harvest for the 1950-51 season was valued at $5,957,248, compared with $2,956,478 for the 1949–50 season.

The total catch of Louisiana commercial fisheries—fish, oysters, shrimp, crabs and frogs—was valued at $30,000,000 in 1951, compared with $28,000,000 in 1950. It provided employment for about 30,000 men, and approximately 115,000 persons were dependent on the industry for a livelihood. (W. Pr.)

Mineral Production.—Table III shows the tonnage and value of those minerals produced in the state in 1949 whose values exceeded $100,000, and the corresponding data for 1950, so far as they were available at the close of 1951. Louisiana ranks fifth among the states in value of mineral production, second in natural gas and sulphur and third in petroleum.

Table III.—*Mineral Production of Louisiana*

(Short tons, except as noted)

Mineral	1950 Quantity	1950 Value	1949 Quantity	1949 Value
Clays.	209,433	$ 184,890	134,366	$ 106,841
Natural gas (000,000 cu.ft.)	1,050,000,000	48,300,000	732,845,000	32,025,000

Films of 1951.—*New Orleans, The Gay City* (Cornell Film Co.).

Lovett, Robert Abercrombie

(1895–), U.S. government official, was born on Sept. 14 in Huntsville, Tex. He studied at Yale and at Harvard, served in the naval air arm during World War I and afterward became a partner in the banking firm of Brown Brothers, Harriman & Co. He was appointed special assistant to the secretary of war in Dec. 1940, and assistant secretary of war for air in April 1941. He returned to private business in 1945, but in May 1947 was appointed undersecretary of state to help implement U.S. policies of frustrating soviet interference with European recovery. During absences of State Secretary George C. Marshall in 1947 and 1948, he was acting secretary of state, and as such helped further co-ordination of western Europe's political and economic activities. His resignation from the department was accepted along with Marshall's on Jan. 7, 1949. On Sept. 28, 1950, however, he was appointed deputy secretary of defense.

Lovett was one of the first to take a firm stand against Gen. Douglas MacArthur in 1951, declaring that the general was serving under adequate military directives and that political issues were "beyond his responsibility as a field commander." Upon the resignation of Marshall as defense secretary, Lovett was elevated to that position, being unanimously confirmed in that post by the senate on Sept. 14 and sworn in on Sept. 17.

Lumber.

Lumber production in the United States continued at a relatively high level during the year 1951, about the same as for 1950. Douglas fir had displaced southern pine as the leading species. Southern pine was second in importance, followed by ponderosa pine. The two first-named species comprised about 54% of the total lumber production of the United States, and the three leading species comprised about 65% of the total production. The fourth most important species was oak, which continued to be produced at an annual rate of about 4,500,000,000 bd.ft.

In addition to the above species, the leading softwoods produced were hemlock, eastern white pine, spruce, redwood, sugar pine, cypress, white and noble firs, western larch and lodgepole pine. Among the hardwoods, in addition to oak, the leading species were yellow poplar, red gum and maple. Other fairly important hardwoods were tupelo or black gum, cottonwood and aspen, beech, birch, elm and ash, while less important in volume were basswood, hickory, cherry, black walnut, sycamore, alder, locust and pecan. In lumber values, walnut, cherry, birch, hard maple and oak commanded the highest prices.

Oregon remained the leading lumber-producing state, while California supplanted Washington as the second largest producer. The other important lumber-producing states in order of national importance were North Carolina, Georgia, Alabama, Florida, Mississippi and Texas. Other important states in the south were Arkansas, South Carolina and Virginia. Idaho, Pennsylvania and West Virginia continued as fairly important lumber contributors, and New York state produced more than 300,000,000 bd.ft. in 1951.

The strong demand for lumber for war purposes, particularly for shipping containers, as well as for barracks, docks, wharves, ships and other construction operations, and the demand for new housing, kept lumber prices high. Imports and exports of lumber also continued to be large. There was an increasing interest in foreign woods, particularly Obeche, Corina, Okume and Paraná pine, which was shipped from Brazil to the eastern seaboard. These relatively new species were of interest to furniture and cabinet manufacturers. Importations of mahogany from Africa, Central America and the Philippines also remained large.

Prices for the better grades of lumber continued to be exceedingly high. However, they were in general somewhat below the all-time peak levels that prevailed in 1950. The demand for, and therefore the prices of, flooring, doors, veneers and plywood and finishing forms of lumber continued to be strong until the summer of 1951. Thereafter, the demand slackened for hardwoods for furniture and radio and television cabinets, but continued very strong for construction lumber for housing and war operations.

The large number of small sawmills, cutting around 10,000 bd.ft. per day, came more prominently into lumber production. In fact, total production from the small mills exceeded that from the big mills which each cut from 50,000 to 1,000,000 bd.ft. per day. There were estimated to be about 60,000 small sawmills operating in the United States during 1951.

Stumpage prices continued high. For prime white oak, from $50 to $80 or more per 1,000 bd.ft. was paid, especially for cooperage stock in Arkansas. Douglas fir commanded prices of $20 to $30 or more, with peeler logs in demand for veneer bringing $50 to $60 per 1,000 bd.ft. Southern pine stumpage prices reached $20 to $30 or more per 1,000 bd.ft., and white pine in New England and the middle Atlantic states was also sold for $20 to $30 per 1,000 bd.ft., particularly in the better stands. Ash, black cherry, basswood and hard maple sold for $25 to $40 per 1,000 bd.ft. The lower-valued hardwoods, such as elm, beech and tupelo gum, sold for $5 to $20 per 1,000 bd.ft., depending upon location, size, quality and particularly on grade outturn.

The year was notable for the development of the tree farm program sponsored by the American Forest Products Industries of Washington, D.C. Tree farms are areas of privately owned land dedicated to the continuous growth of forest crops for commercial purposes. In 1951, 24,000,000 ac. in 29 states were devoted to tree farms. The leading states in this movement were Texas, Arkansas, Washington and Oregon. (N. C. B.)

British Commonwealth and Europe.—Rearmament dominated the timber trade of Great Britain, the commonwealth and Europe during 1951. Not only did the free-on-board value of wood rise in practically every species, but there was also a continued rise in freight rates. From April onward, the British government permitted private traders to import softwoods from Sweden, Finland, France and a number of other countries outside the dollar area. This greatly influenced the Baltic markets.

Prices in Great Britain rose steadily, and by midsummer the price of good unsorted Swedish deals had risen to £88 per standard, f.o.b. This buying was pursued on such a scale that, aided by large government purchases of softwoods from Canada and the United States, it was estimated that the total stock of softwoods in the United Kingdom at the close of 1951 would be in the neighbourhood of 750,000 standards, compared with approximately 250,000 standards at the end of 1950. In the autumn this heavy initial buying by private importers in Great Britain had run its course and there was some easing in shippers' quotations and in freight rates. The outlook for the new buying season of 1951–52 was most uncertain because, during the autumn, an increased dollar stringency and a fall in the balance of payments compelled Great Britain to curtail its prospective purchases of softwoods in the dollar area. During 1951 the British government also signed a contract with the U.S.S.R. for 100,000 standards of softwoods. Imports of Yugoslavian softwoods amounted to about 70,000 standards. In the early part of 1951 the British government made extensive contracts in Canada for British Columbian pine, western hemlock and spruce from the eastern provinces. Deliveries in all were said to have amounted to about 300,000 standards for the year.

The French timber trade in softwoods was much hampered by the refusal of the French government to grant export licences on the scale which it had previously done; this restricted the export of oak, beech and poplar. The export of hardwoods, both in the form of logs and lumber, from the west coast of Africa on an increasing scale was a feature of the year. The actual shipment of this material was, however, restricted temporarily because of a shortage of freighters, and a considerable tonnage piled up in the ports and on the seaboard. By autumn, however, a large increase in the number of ships plying to the west coast of Africa occurred and a far greater weight of timber was moved. Much of this went to the U.K., and the fact that some of the parcels had been overlying through lack of ships for some months, as well as the fact that the demand in the U.K. for furniture had eased, led to a break in prices. U.S. buyers of mahogany and other choice woods, who had been active in the west coast of Africa since World War II, restricted their activities somewhat during the summer, but it was noticed that toward the end of the year they resumed their buying. It was thought that the action of these U.S. buyers would stiffen the market.

Shipments of hardwood timbers from Yugoslavia consisting of oak, beech and ash were well maintained. The United Kingdom was the principal buyer, but parcels also went to Belgium, the Netherlands and France. Prices showed an increase of 33⅓%—50% over 1950 levels. During the year, Austria kept up its timber production and sold both softwoods and hardwoods. Czechoslovakia and Rumania both exported small quantities. Poland, however, which used to be a large exporter of timber before World War II, was disappointing.

The production of hardwoods in a number of South American countries such as Brazil, Chile, Ecuador and Colombia was well maintained, but their exports diminished considerably because of a rise in the internal consumption and currency difficulties. A feature of the hardwood market was the arrival in the U.K., after an absence of many years, of shipments of excellent Japanese lumber, both oak and beech. It was expected that plywood imports into the U.K. for 1951 would amount to about 200,000 tons. The year 1951 also saw an increase in the number of shipments of plywood from newly established factories in such tropical countries as Nigeria, the Gold Coast, French Equatorial Africa and the Belgian Congo. Lutherans.

In 1951, 50 member churches in 24 countries were preparing for the Lutheran World federation assembly to be held in Hannover, Ger., in the summer of 1952. Anders Nygren was president of the Lutheran World federation. The permanent office of the federation is in Geneva, Switz.

Of the more than 60,000,000 Lutherans in the world during 1951, 1 out of 10 was a refugee. Service of physical relief and spiritual ministry to these refugees, mainly in central Europe, the middle east and Asia, continued to be a major part of the work of the Lutheran World federation. More than 90,000 had been re-settled, mostly in the United States, Canada, Australia and Great Britain.

From the United States alone there was raised in Lutheran World Action since 1939 a sum of more than $47,000,000. In addition, $19,000,000 worth of food and clothing was sent in the program known as Lutheran World Relief, in part to Korea. The Lutheran churches of Finland, Norway, Sweden and Denmark also participated in this program.

Lutheran churches over the world were co-operating in Latin American missions in a program that was launched at a conference in Brazil in Sept. 1951. Younger Lutheran churches in Africa, Indonesia, India, Palestine and New Guinea were supported both by money and manpower from older Lutheran churches.

Fifty Lutheran One-Day Seminars in 1951 drew Lutheran groups together in the United States. Speakers drawn from all bodies spoke on the general subject "A United Lutheran Front in American Life."

Plans were completed for a first-rank full-length feature film on the life of Martin Luther.

Newly elected presidents were Oscar A. Benson of Augustana Lutheran Church, Hans C. Jersild of United Evangelical Church and John E. Wargelin of the Suomi Synod. Bishop Ilmari Johannes Salomies was the new primate of the Church of Finland.

Lutheran membership in the United States exceeded 6,000,000 for the first time. The annual survey of the National Lutheran council's division of public relations revealed 6,301,948 Lutherans in 16 bodies in the United States and Canada, 198,164 of these in Canada. Luxembourg.

An independent grand duchy in western Europe, Luxembourg is bounded south by France, northwest by Belgium and northeast by Germany. Area: 1,010 sq.mi. Pop.: (Dec. 31, 1947, census) 290,992; (July 1, 1950, est.) 298,600. Language: Luxembourgian (idiomatic) and (officially) French. Religion: Roman Catholic 98%. Capital, Luxembourg (pop., Aug. 1949 est., 62,000). Ruler: Grand Duchess Charlotte; prime minister in 1951: Pierre Dupong.

History.—The main feature of 1951 was the parliamentary election of June 3 after which the Christian Social party still maintained its lead (with 21 out of 52 seats) but was closely followed by the Socialists (19 seats), while the Liberals and the Communists (with 8 and 4 seats respectively) suffered losses. The Dupong cabinet resigned, but instead of the former coalition of Christian Socialists and Liberals a new government was based on the collaboration of the Christian Social and Socialist parties. Pierre Dupong remained prime minister and minister of finance and Joseph Bech minister of foreign affairs. The three Socialist ministers were Victor Bodson, Nicolas Biever and Michel Rasquin. The Communists lost the right to introduce legislation since five parliamentary representatives of a party were constitutionally required in order to present bills. The losses of the Communists were even heavier in the communal elections.

In January it was announced that the Luxembourg government had agreed to increase its armed forces from two to four battalions.

Queen Juliana paid from June 19 to 21 the first Dutch royal state visit to Luxembourg since the advent of the Nassau dynasty in 1890.

There was a strongly increased output of iron ore and a postwar record was reached with 484,000 metric tons in July. The steel plants also reached record figures (266,000 tons in August) and there was no unemployment. (*See* also BELGIUM.)

(H. R. Ml.)

Education.—Schools (1948): elementary 966, secondary 7, technical 3.

Finance.—Budget: (1950 est.) revenue 2,996,300,000 fr., expenditure 3,890,930,000 fr.; (1951 est.) revenue 3,477,700,000 fr., expenditure 3,446,200,000 fr. Monetary unit: Luxembourg franc, at par with the Belgian franc, with an exchange rate of 50.50 fr. to the U.S. dollar.

Industry.—Production (in metric tons, 1950): iron ore (metal content, 30%) 3,828,000; pig iron 2,496,000; crude steel 2,448,000; gas 17,300,000 cu.m.; electricity 697,200,000 kw.hr.

MacArthur, Douglas

(1880–), U.S. general of the army, was born on Jan. 26 at Little Rock barracks, Ark. (For his early career, see *Encyclopædia Britannica.*) After the Japanese attack on Pearl Harbor, MacArthur led U.S. and Filipino forces in defense of the Philippines until March 17, 1942, when Pres. F. D. Roosevelt ordered him to Australia. From this point he led the combined United Nations drive that ultimately led to a successful reinvasion of the Philippines. MacArthur himself accepted the Japanese surrender in Tokyo bay on Sept. 2, 1945, and as supreme commander of the Allied powers in Japan he carried out the occupation policies determined by the 11-nation far eastern commission. When the North Koreans invaded South Korea in June 1950, MacArthur was placed in charge of the United Nations forces opposing the aggression, and by late Oct. 1950, had taken his command almost to the Manchurian border. When the Chinese Communists entered the war, MacArthur promptly informed the world that it was confronted by a new war, not a development of the earlier one.

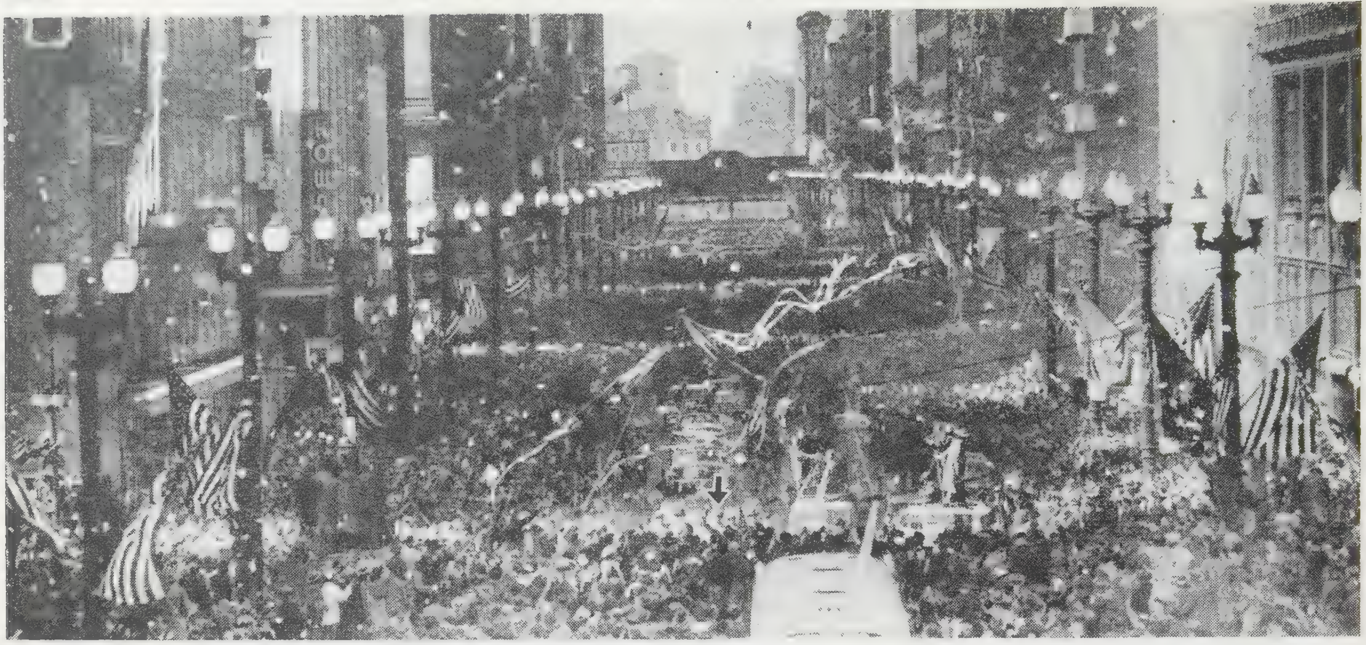
When in March 1951 General MacArthur by implication threatened to bomb and blockade red China, in calling upon the red field commanders to discuss armistice terms, the first of a series of disagreements on policy with officials in Washington, D.C., emerged. The eventual outcome was MacArthur's removal by Pres. Harry S. Truman, an action taken on April 11. In an address before a joint session of congress in Washington on April 19 MacArthur launched a "great debate" over U.S. foreign policy. His thesis was that the Korean war must be won, not stalemated; that bombing Communist air bases in Manchuria, blockading the Chinese coast, and using Chinese Nationalist forces would not necessarily bring the U.S.S.R. into the war; that Formosa was essential to U.S. defense plans in the Pacific; that Japan could be relied on to proceed with the democratic countries; and that for himself he would "just fade away, an old soldier who tried to do his duty as God gave him the light to see that duty." MacArthur was given tumultuous welcomes in San Francisco, Calif., Washington, New York city, Chicago, Ill., and other cities. (For an account of the U.S. senate investigation of the dismissal of General MacArthur and of U.S. foreign policy, *see* MACARTHUR INVESTIGATION.)

MacArthur Investigation.

Following the recall of Gen. Douglas MacArthur by Pres. Harry S. Truman on April 11, 1951, hearings to investigate the background of such action were instituted by the U.S. senate in response to a proposal of the armed services committee and the foreign relations committee acting jointly. As "An Inquiry into the Military Situation in the Far East and the Facts Surrounding the Relief of General of the Army Douglas MacArthur from His Assignments in That Area," these hearings ranged far afield and comprised more than 3,000 pages of proceedings for the period May 3–June 27.

Origin of the Controversy.—The origin of the controversy which led to this investigation is deeply embedded in the events of the years following the end of the war with Japan. In Japan the policies of the United States were represented by Gen. Douglas MacArthur as supreme commander for the Allied powers in occupation of Japan preliminary to a peace treaty. In China the policies of the United States had passed through a series of stages which had begun with the recognition of Chiang Kai-shek and support of his armies, followed by withdrawal of military aid in the years following the end of World War II. In Korea the interests of the United States had assumed those previously held by Japan in South Korea, inasmuch as the portion north of the 38th parallel by a military decision reached at Potsdam came under soviet direction. It was on this "frontier" line between U.S. and soviet influence in the far east that war had broken out in June 1950, and General MacArthur had been placed by President Truman in charge of the operations of United Nations forces resisting the aggression of the North Korean Communist forces against South Korea.

Immediate Events Leading to the Recall of MacArthur.—With the entry of the Chinese Communists in overwhelming numbers into North Korea late in 1950, General MacArthur's victorious campaign against the North Korean army was turned into a rapid though orderly withdrawal of the United Nations forces south of the 38th parallel. By Jan. 7, 1951, the Communist forces were 45 mi. S. of the parallel and the drive continued with diminished force. During the next few weeks the United Nations forces regained the initiative, but on Feb. 14 General



RECEPTION for Gen. Douglas MacArthur (indicated by arrow) in Chicago, Ill., after his return to the United States in April 1951

MacArthur, visiting the front, stated that any talk now of crossing the 38th parallel was "purely academic." Throughout the balance of February, the Communist forces were in retreat. By the end of the first week in March, General MacArthur stated that battle lines would soon "reach a point of theoretical military stalemate." He added that the United Nations could not hope to win as long as the Chinese Communists operated from "sanctuary" bases in Manchuria. The Communists continued to retreat, and on March 14 the United Nations forces re-entered Seoul.

On March 24 General MacArthur issued a statement in Tokyo offering "at any time to confer in the field with the commander in chief of the enemy forces in an earnest effort to find any military means whereby the realization of the political objectives of the United Nations in Korea, to which no nation may justly take exceptions, might be accomplished without further bloodshed." He had included in this statement an implied psychological threat that "the decision of the United Nations to depart from its tolerant effort to contain the war to the area of Korea through expansion of our military operations to his coastal areas and interior bases would doom Red China to the risk of imminent military collapse."

Before this offer of armistice in the field was issued, apparently without clearance in Washington, the government had handed to its allies in the United Nations maintaining forces in Korea a proposed statement of war aims. It was said to be the purpose of this statement to bring about a new approach to the question of a cease-fire in Korea. And it was reported late in March that in the United Nations general assembly there was vigorous debate of a proposal to discuss all far eastern problems with Communist China after an armistice in Korea. It was reported that the British expressed the wish that the United Nations forces should stop at the 38th parallel. In early April United Nations troops continued to cross the parallel and on April 5 Speaker Sam Rayburn told the U.S. house of representatives, "We are in greater danger of an expanded war today than at any time since 1945 and maybe the beginning of World War III."

On the same day, Minority Leader of the House, Joseph W. Martin of Massachusetts, introduced into a speech lashing the administration a letter addressed to him from General MacArthur, saying: "It seems strangely difficult for some to realize that here in Asia is where the Communist conspirators have elected to make their play for global conquest, and that we have joined the issue thus raised on the battlefield; that here we fight Europe's war with arms while the diplomats there still fight it with words; that if we lose the war to communism in Asia the fall of Europe is inevitable; win it and Europe most probably would avoid war and yet preserve freedom. . . . We must win. There is no substitute for victory." Representative Martin's proposal that the Chinese Nationalist forces on Formosa be utilized against the Chinese Communists on the mainland of China, MacArthur had said in his letter, "is in conflict with neither logic nor this tradition," and this appeared in the press as a sharp digression from U.S. policy.

Rumours of disciplinary action against General MacArthur for publicly disputing administration policies abroad began to circulate, and on April 11 President Truman issued an order directed to General MacArthur stating: "I deeply regret that it becomes my duty as President and Commander in Chief of the United States military forces to replace you as Supreme Commander, Allied Powers; Commander in Chief, United Nations Command; Commander in Chief, Far East; and Commanding General, United States Army, Far East," and accompanied this with a statement to the public: "With deep regret I have concluded that General of the Army Douglas MacArthur is unable to give his wholehearted support to the policies of the United States Government and of the United Nations in matters pertaining to his official duties. . . . Full and vigorous debate on matters of national policy is a vital element in the constitutional system of our free democracy. It is fundamental, however, that military commanders must be governed by the policies and directives issued to them in the manner provided by our laws and Constitution. In time of crisis, this consideration is particularly compelling. General MacArthur's place in history as one of our greatest commanders is fully established. The Nation owes him a debt of gratitude for the distinguished and exceptional service which he has rendered his country in posts of great responsibility. For that reason I repeat my regret at the necessity for the action I feel compelled to take in his case."

MacArthur's Views on Policy in the Far East.—General MacArthur had indicated the direction of his thinking as early as Aug. 1950, in his letter to the Veterans of Foreign Wars, in which he stated: "In view of misconceptions currently being voiced concerning the relationship of Formosa to our strategic potential in the Pacific, I believe it in the public interest to avail myself of this opportunity to state my views thereon. . . . Any appraisal of that strategic potential requires an appreciation of the changes wrought in the course of the past war. . . . Our strategic frontier then shifted to embrace the entire Pacific Ocean, which has become a vast moat to protect us as long as we hold it. . . . Our line of defense is a natural one. . . . It envisions no attack against anyone nor does it provide the bastions essential for offensive operations. . . . The geographic location of Formosa is such that in the hands of a power unfriendly to the United States it constitutes an enemy salient. . . . At the present time there is on Formosa a concentration of operational air and naval bases. . . . An enemy force utilizing those installations currently available could increase by 100 per cent the air effort. . . . Historically, Formosa has been used as a springboard for . . . military aggression directed against areas to the south. . . . Should Formosa fall into the hands of a hostile power, history would repeat itself. . . . Nothing could be more fallacious than the threadbare argument by those who advocate appeasement and defeatism in the Pacific that if we defend Formosa we alienate continental Asia. . . . To pursue any other course would be to turn over the fruits of our Pacific victory to a potential enemy. It would shift any future battle area 5,000 miles eastward to the coasts of the American continents. . . ."

The Clash Between MacArthur and the Administration.—The events in Korea in the first three months of 1951, together with the movements of that period in the United Nations, had made it abundantly clear that the clash between MacArthur and the administration was inevitable. It may have been evident to MacArthur himself that his thinking in terms of world statesmanship had completely submerged his thinking in terms of purely military objectives in the Korean war. Yet he said later in the hearings, "I resent . . . any inference that can be drawn that I have been, in any degree, insubordinate or disrespectful of the President of the United States, or the policies of this country, or even the policies and directives of the United Nations." That General MacArthur had taken an unprecedented position, in publicly expressing views which appeared to be in opposition to the policy of his commander-in-chief, the president of the United States, was maintained by sections of the United States public as a reason for discrediting those views. Others held that in thus expressing positive views, he sacrificed himself to the welfare of his country. The evidence of the hearings suggests that MacArthur had endeavoured to persuade his military advisers and the president of the dangers he saw in U.S. military policy in the far east and that he had not been fully aware of the trend of policy in Washington. At no point in the hearings was there any doubt of a general agreement that the military should be subject to civilian control. Thus a point so vigorously discussed by "constitutional theorists" did not become an issue in the hearings. MacArthur himself testified: "At no time in our system of government is there any question of the civilian administration being in complete control."

General MacArthur returned to the United States on April 17 and two days later appeared before congress in joint session and stated his view of the needed policies for the United States in the far east.

It should be noted that General MacArthur had first of all asserted the importance of the war in Korea; that he had called for decisive action there leading to victory for the United Nations forces; and that he had deprecated yielding to the "compromise" attitude of allies of the United States, in particular on the disposition of Formosa.

The Hearings Before the Joint Committee.—Beginning on May 3, the hearings were conducted by the following members of the senate: committee on armed services—Richard B. Russell, Georgia, chairman (presiding); Harry Flood Byrd, Virginia; Lyndon B. Johnson, Texas; Estes Kefauver, Tennessee; Lester C. Hunt, Wyoming; John C. Stennis, Mississippi; Russell B. Long, Louisiana; Styles Bridges, New Hampshire; Leverett Saltonstall, Massachusetts; Wayne Morse, Oregon; William F. Knowland, California; Harry P. Cain, Washington; Ralph E. Flanders, Vermont. Committee on foreign relations—Tom Connally, Texas, chairman; Walter F. George, Georgia; Theodore Francis Green, Rhode Island; Brien McMahon, Connecticut; J. W. Fulbright, Arkansas; John J. Sparkman, Alabama; Guy M. Gillette, Iowa; Alexander Wiley, Wisconsin; H. Alexander Smith, New Jersey; Bourke B. Hickenlooper, Iowa; Henry Cabot Lodge, Jr., Massachusetts; Charles W. Tobey, New Hampshire; Owen Brewster, Maine.

Three points must be stressed because of widespread misconceptions of the nature of the hearings and of the findings of the committees at the end: (1) The hearings were not public. Republicans in the senate had attempted to provide this but were defeated by a vote of 40 to 37. (2) The testimony as published in the press or in the report issued later was not complete, because of deletions from the oral record for security reasons. (3) The questions asked the witnesses were many times not answered, even in the privacy of the hearings; in particular was this true in the case of Gen. Omar N. Bradley.

A summary of the voluminous testimony is not possible in brief scope. The witnesses who gave testimony under oath before the joint committee, in order of their appearance, were: General of the Army Douglas MacArthur; Secretary of Defense George C. Marshall; General of the Army Omar N. Bradley, chairman of the joint chiefs of staff; Gen. J. Lawton Collins, chief of staff, United States army; Gen. Hoyt S. Vandenberg, chief of staff, United States air force; Adm. Forrest P. Sherman, chief of naval operations; Adrian S. Fisher, legal adviser, department of state; Secretary of State Dean G. Acheson; Lieut. Gen. Albert C. Wedemeyer, United States army; former Secretary of Defense Louis A. Johnson; Vice Adm. Oscar C. Badger, United States navy, commander, eastern sea frontier; Maj. Gen. Patrick J. Hurley, honorary reserve, United States army, former secretary of war and ambassador to China from Nov. 30, 1944, to Nov. 27, 1945; Maj. Gen. David G. Barr, United States army, chief of the army advisory commission in Nanking, China, from Jan. 1948 until May 1949; Maj. Gen. Emmett O'Donnell, Jr., United States air force, in command of the far eastern air force bomber command from July 8, 1950, until Jan. 10, 1951.

General MacArthur testified for three days. The position of MacArthur was revealed, under questioning, in this reply: "I do not know why I was recalled. . . . So far as I know, I have completely implemented, to the best of my ability, every directive, every policy that was given me. . . . I can only interpret that order that the Administration, knowing the views that I held, was going to act in a very contrary way, and believed that it was advisable not to place any strain upon my loyalty, if you might put it in that way, and relieved me of the command."

Under questioning, the details of MacArthur's view of the far eastern situation revealed by the basic propositions outlined in his address to congress remained unchanged. He said: ". . . in the Far East the integration of the three fighting services has been as complete as I could possibly imagine. . . . It has been the integration of the forces of a number of nations, all of which had various components there. I would rate it as 100 per cent. . . . My connection with the United Nations was largely nominal. [It should be noted that he made semimonthly reports to the United Nations.] There were provisions made that the entire control of my command and everything I did came from our own Chiefs of Staff and my channel of communication was defined as the Army Chief of Staff. Even the reports which were normally made by me to the United Nations were subject to censorship by our State and Defense Departments. I had no direct connection with the United Nations whatsoever. The controls over me were exactly the same as though the forces under me were all American. . . . For 5½ years . . . I have had to govern Japan. I was provided, by the nations concerned—I, as the sole executive authority for Japan; so naturally the scope of my duties were complete and enveloping, as far as the Far East was concerned and, to some extent, involved the entire world. . . . I was more than the Governor of Japan. I was the sole executive authority for administration and execution in Japan. . . . I had not only the normal executive authorities such as our own President has in this country, but I had legislative authority. . . . I was required to carry out and implement the policies of the Far Eastern Commission, but in the gaps that existed where those policies did not apply, my own authority was complete. . . . I believe that everything possible should be done to cement the international feature of the United Nations' effort there. I would say not only that the idea should be deprecated of their pulling out, but it should be emphasized extraordinarily that they should send much larger forces, and that those nations which have not contributed anything, should contribute. On the contrary one of the great weaknesses of the United Nations' effort as a United Nations' effort there is that it is not well balanced. Almost the entire burden of blood and effort and money is confined to two countries, the native country of the Koreans, and ourselves. . . . The relativity of authority in making international decisions should be based in some degree upon the responsibilities of the agents that carry it out. And if one nation carries 90 per cent of the effort, it's quite inappropriate that nations that only carry a small fraction of the efforts and the responsibility should exercise undue authority upon the decisions that are made."

On the whole, there was agreement on the part of all the witnesses that followed MacArthur, as far as their testimony considered the matter, as to the steps in the development of United States diplomatic and military policies and as to the events that resulted in the recall of MacArthur. The disagreements and divergences in points of view were much more evident and arose out of different positions taken, not on military policy but on the foreign policy of the United States.

The position of Secretary Acheson was revealed again and again in the eight days of questioning. It appears in the following: "The foreign policy of the United States has a central and dominant objective—to protect the Nation and to safeguard the future of its people. . . . But we seek to deter war if we can. . . . The best way to protect the security of our nation and of our people was to prevent war; . . . the way to go about it was through an international system of collective security." And again, "The whole basis of the United Nations has been, and our policy in connection with it has been, to attain universality. We would like all nations to be members of the United Nations." And again, "Our attitude toward Korea was fundamentally based on the charter of the United Nations." He stated on June 7 that an armistice at the 38th parallel would fulfil United Nations pledges. These were not to unify Korea by force. When pressed upon the question of the possible recognition of Communist China, he preferred to reply as if to a larger question, "We are part of a larger organization which determines what government can represent a country in the United Nations."

In Acheson's view the objectives in Korea were to end aggression, to safeguard against its renewal and to restore peace. This did not mean destruction or unconditional surrender of the aggressor, and above all, it meant holding the members of the United Nations together in a common purpose. It is apparent that in the secretary's view, the United Nations sphere of interest had transcended the national sphere of interest.

General Marshall's testimony, covering more than six days, dealt with every phase of military policy not only in Korea but in China and at times as far as it related to Europe. But it was clear that he was in basic agreement with Secretary Acheson in point of view on foreign policy when he said: "The policies involved here related to the conduct of the operations in Korea, our relations with the United Nations in the responsibility of the Chief Executive of this country as the commander of those units, the resolutions of the United Nations in relation to the matters in Korea, over which General MacArthur was the United Nations commander. . . . In the first place, the policies were determined by the resolutions of the United Nations Security Council. The further development in connection with the orders from the Chief Executive acting for the United Nations—that is, the President—were based on the original resolutions and were based on the continual contact with the representatives of the nations who were involved in that fight and those pertained to the restrictions on bombing, those pertained to the blockade of the China coast, and those pertained to the use of the troops from Formosa of the Government of China. . . . He [MacArthur] carried out the military directives, which is quite a different thing from the discussion of the limitations, as they were related to our allies, all of our allies, in the conduct of that campaign." And again, the inescapable conclusion: "By his [MacArthur's] public statement or statements that were made public in the ordinary press, he set up a very serious reaction among our allies, which threatened our collective action with them, and which threatened our position in the world in relation to this great crisis, and which threatened to leave us in a situation of going it alone." General Marshall contended that the Soviet Union was the real opponent in Korea. On this point, as on others, the disagreement with General MacArthur was revealed. In response to the question "Who is overwhelmingly the enemy?" MacArthur had said, "Communism. . . . I mean all over the world," and when Senator Fulbright had suggested that it was "imperialist Russia," MacArthur had replied, "I disagree with you completely—if you think communism is limited to Russia. . . ."

The testimony of General Bradley and of the joint chiefs of staff, Vandenberg, Collins and Sherman, revealed that they had accepted the administration's basic premise as to the meaning and needs of U.S. foreign policy, and had concurred in the relief of MacArthur inasmuch as he was not in sympathy with the policy of the administration. It is to be noted that frequently General Bradley refused to testify as to discussions with the president. This led to acrimonious demand that the president instruct him to reply. But in the end he maintained his silence.

The testimony of former Secretary of Defense Louis Johnson, in emphasizing the necessary interrelations of military and diplomatic policy, was not in agreement with the fundamental approach of Secretary Acheson. Apart from the facts revealed in his testimony as to the differences within the administration during his period of service, Johnson's response to questioning brought out clearly the leadership of the department of state in the formulation of the president's policies.

The testimony offered by General Wedemeyer was, on the whole, in support of the position taken by General MacArthur, inasmuch as Wedemeyer's basic proposition was that formulation of foreign policy was the point at issue, and not a disagreement among military commanders as to the best means of attaining military objectives. That he was taking this approach was recognized by the committee, and in response to a question, he answered: "In my judgment, if our country recognized Red China, the Chinese Red government, as either the de facto or de jure government, it would be tantamount to a refutation of our traditional American friendship for those people. It also would be an abrogation of treaties that had their initiation at the time of John Hay, and following right through; a complete abrogation of our open door policy and of our co-operative attitude that we have with great credit maintained in that area—great credit, I think, to our policy formulators. . . . It would be a victory for the Communist movement in China, in the Far East, and in the world."

The testimony of General Hurley stood apart from most of that offered by other witnesses in that it dealt for the most part with the basic causes for the impasse in China since the end of World War II.

MacArthur's view at the close of the testimony may be seen in his reply to an invitation to reappear: ". . . in view of the voluminous record which has already been taken wherein is included my own personal views in most complete detail, I do not believe it in the public interest for me to do so. . . . certain of the testimony which was given by some of the subsequent witnesses did not coincide with my own recollection and record of the events. . . . I especially take sharp exception to interpretations of events of campaign given with little local knowledge thereof by those thousands of miles away from the scene of action. . . . I suggest that the bi-monthly official reports to the United Nations be incorporated into the committees' proceedings as they represent factually the views of the Commanders on the spot at the time of the actual occurrence of events, entirely uninfluenced by any extraneous issues or pressures. Much opinion testimony was given of a nature which was never either by word or deed communicated to me and of which I had no slightest inkling. . . . In so far as the investigation dealt with my relief from the Far East Command, I feel that the full facts have not been elucidated due to the orders of the President silencing the pertinent witnesses as to his own part in the action."

On Aug. 17, eight members of the joint committee—Styles Bridges, Alexander Wiley, H. Alexander Smith, Bourke B. Hickenlooper, William F. Knowland, Harry P. Cain, Owen Brewster, Ralph E. Flanders—signed a report of their findings which appears as an appendix to the testimony. Pertinent portions of their conclusions include: "The conviction that the Administration's Far East policy was one of appeasement toward communism was proven to be fact as a result of the investigation. Some significant reversals of this policy are directly attributable to the inquiry; for example, the Administration's categorical statements regarding China and Formosa. . . . Why was there a major shift by the State Department in its foreign policy? The reasons are several. One, the State Department found itself unable to defend policies in the face of questions which were propounded to it. Two, the march of events in Korea itself has proven the wisdom of policies which the Department had previously for so long scorned. And, three, the ground swell of American public opinion, which expressed itself in one of the greatest floods of spontaneous correspondence which has ever descended upon the legislative and executive branch of the Government, required the State Department to alter policies which were disapproved by the public, which had been ill-informed and misinformed by the State Department on far-eastern affairs."

In summary, it may be said that the value of the hearings appears to have been great. Enlightenment was given to an interested public, and the attention of the American people was concentrated, not on Korea, not on military policy, but upon the foreign policy of the United States, which, the hearings revealed, had been motivated in recent years by opposition to "aggression" rather than by opposition to "communism." The hearings revealed, as nothing else had done, the nature of the crisis symbolized in dramatic terms by the recall of General MacArthur. The fact that as a whole the committees did not make a report to the congress indicates the tentative nature of all conclusions as to the wisdom of MacArthur's leadership, as to the soundness of U.S. military policies in the far east, and as to the function of the United States in the United Nations.

McCarran, Patrick Anthony (1876–), U.S. senator, was born at Reno, Nev., on Aug. 8. He graduated from the University of Nevada, Reno, in 1901 and was admitted to the state bar in 1905, meanwhile (1903) serving in the Nevada legislature. At Tonopah, Goldfield and Reno he built a lucrative law practice, particularly during mining booms. From 1913 to 1917 he was associate justice of the Nevada supreme court and in 1917–18 chief justice.

He resumed his law practice thereafter until 1932, when he was elected U.S. senator from Nevada on the Democratic ticket. He was re-elected for his fourth consecutive term (1951–57) in Nov. 1950.

As chairman of the senate judiciary committee and the joint congressional ("watchdog") committee on foreign aid, McCarran wielded considerable influence in 1950–51 on domestic and foreign policy. He helped write the Internal Security (McCarran) act of 1950, and on Jan. 18, 1951, became chairman of a senate subcommittee appointed to investigate administration of the act.

The subcommittee later became a focus of national attention when it conducted hearings on U.S. policy in the far east. During these hearings McCarran became increasingly alarmed at the administration's methods for safeguarding internal security. On Aug. 5 he charged that Communist agents and sympathizers had ready access to top U.S. defense secrets. On Aug. 20 he said that from 3,000,000 to 5,000,000 Communists and other aliens had entered the U.S. illegally and were "potentially more dangerous than . . . an armed force."

McCarthy, Joseph R. (1909–), U.S. senator, was born Nov. 14 in Grand Chute, Wis. He graduated from Marquette university, Milwaukee, Wis., and practised law until 1939 when he was elected circuit judge. From 1942 to 1945 he served overseas with the U.S. marines, and during this time his name was put up by friends for nomination to the U.S. senate. Although he received 100,000 votes, he ran second. In 1945 he was re-elected circuit judge, and in 1946 he was elected to the U.S. senate. In the senate he was especially known for his investigations of communism in high places in government, and his frequent sweeping accusations caused his enemies to use the word "McCarthyism" to describe his type of investigations. In 1951 he repeatedly scored the Truman administration for what he termed the failure of its policy in Asia, and called the ouster of Gen. Douglas MacArthur "perhaps the greatest victory the Communists have ever won." Sen. William Benton (*q.v.*) (D., Conn.) in August introduced a resolution calling for investigation of McCarthy's activities to decide whether he should be expelled from the senate. Senator Benton termed "McCarthyism" unjust and dangerous, and on Sept. 28 told the senate privileges and elections subcommittee that McCarthy should be ousted on the basis of ten charges that Benton detailed.

McCloy, John Jay (1895–), U.S. high commissioner in occupied Germany, was born on March 31 in Philadelphia, Pa. He studied at Amherst college, Amherst, Mass., and Harvard university and served in World War I and in the occupation forces in Germany after that war. He later practised law in New York city, specializing in corporation law and foreign litigation. In Oct. 1940 he was appointed expert consultant to the secretary of war, and, in April 1941, assistant secretary of war. He became president of the International Bank for Reconstruction and Development in Feb. 1947. In May 1949 he was appointed first civilian U.S. high commissioner for occupied Germany by Pres. Harry S. Truman.

In Jan. 1951 he ordered a number of German prisoners convicted of war crimes released for clemency, an action that created mixed comment internationally. He was instrumental in promoting the adoption in March of the Schuman plan for a partial pooling of natural resources and industrial might in western Europe. In July he punctured German hopes for large, independent units in a west European army by reporting it was the U.S. intention that German units should be incorporated into this force in small elements. In his regular report to the state department, he reported that Communists were losing ground in west Germany but that a new threat was arising in the form of neonaziism.

McCormack, John William (1891–), U.S. congressman, was born on Dec. 21 at Boston, Mass., and was educated in the public schools of Boston. He studied law in a private law office, was admitted to the Massachusetts bar in 1913 and began practice in Boston. He was a member of the Massachusetts constitutional convention in 1917–18, a member of the state house of representatives from 1920 to 1922, and state senator from 1923 to 1926, serving as Democratic floor leader for the last two years of his term. He was elected U.S. congressman from the 12th Massachusetts district as a Democrat in 1928 to fill a vacancy in the 70th congress (1927–29), and was returned to the house in each succeeding election. McCormack served as majority floor leader of the house from 1940 to 1947 and as minority whip from 1947 to 1949, when the Republicans controlled congress. After the Democratic victory in the national elections of 1948, McCormack was again elected majority leader (1949) and was re-elected to that post on Jan. 2, 1951.

Macedonia: *see* GREECE; YUGOSLAVIA.

McFarland, Ernest William

(1894–), U.S. senator, was born at Earlsboro, Okla., on Oct. 9. He graduated from the University of Oklahoma, Norman, in 1917 and took his law degree (1921) and master's degree (1922) at Stanford university, Stanford, Calif. During World War I he served in the U.S. navy. Admitted to the Arizona bar in 1920, he established a law practice at Casa Grande and was assistant attorney general of Arizona in 1923–24. Later, as attorney for the San Carlos irrigation and drainage district in Arizona, he became known as a legal authority on irrigation and other water uses.

McFarland was elected U.S. senator from Arizona as a Democrat in 1940 for the term 1941–47 and was re-elected in 1946 for the term 1947–53.

In the senate he supported most of his party's legislation, but was known also as a moderate, acceptable to the southern Democrats (particularly because of his reluctance to support civil rights legislation). With their backing, he was elected senate majority floor leader by a 30–19 vote over Sen. Joseph C. O'Mahoney of Wyoming on Jan. 2, 1951. In this key post McFarland allowed the "great debate" on U.S. foreign policy to run its full course in 1951, saying that "this clash of honest judgment and conviction . . . results in sounder policy." McFarland departed temporarily from administration ranks on June 29, 1951, when he voted for the stopgap price control bill which eliminated Pres. Harry S. Truman's request for authority to roll back prices.

McGrath, James Howard

(1903–), U.S. attorney general, was born on Nov. 28 in Woonsocket, R.I., graduated from Providence college, Providence, R.I., in 1926 and received a law degree from Boston (Mass.) university in 1929. He was city solicitor of Central Falls, R.I., 1930–34; U.S. district attorney, 1935–40, and governor of Rhode Island, 1940–45. Appointed U.S. solicitor general in 1945, he served until the next year, when he was elected U.S. senator from Rhode Island. From Oct. 1947 to Aug. 1949 he was chairman of the Democratic national committee, and on Aug. 24, 1949, was sworn in as attorney general of the U.S. He was especially active in promoting a national conference on organized crime, which in Sept. 1951 formed a nine-man committee to investigate gambling in sports. He also actively prosecuted the top members of the Communist party in the U.S., whose conviction on charges of conspiracy to overthrow the U.S. government by violence was upheld by the U.S. supreme court in June 1951.

Machinery, Farm: *see* AGRICULTURE.

Machinery and Machine Tools.

Machine tools were the focal point in the defense program of the United States during 1951. It was mainly a year of tooling up for production of armament—planes, tanks and guns. The result was that the machine tool industry had thrust upon it a volume of orders bigger than any time since World War II. As the year progressed, the backlog of machine tool orders became larger, and at the year's end the pile-up was equal to almost two years of production. During 1951 the industry booked a total of more than $1,700,000,000 worth of machine tools, and it had shipped only $620,000,000 worth.

The federal authorities recognized the critical importance of machine tools as the year moved along. On July 10, 1951, Defense Mobilizer Charles E. Wilson issued a sweeping directive to all defense agencies to give extraordinary help to machine tool builders in expanding output. Builders were granted a reasonably satisfactory price formula and, in December, a superpriority on materials not given to any other industry. At the same time, the industry was requested to double its production rate by mid-1952, increasing production to an annual level of $1,400,000,000. In response, builders enlarged their subcontracting of parts, subassemblies and complete machines, added to their plant facilities and increased their work forces and work week. The National Production authority gave a rating to defense and defense-supporting orders for machine tools; instructed the machine tool industry to ship 70% of its output to the armed services; and, late in the year, forbade delivery after Feb. 1, 1952, of unrated orders.

Defense officials made clear to the machine tool industry that the entire armament load upon builders would be in excess of $3,000,000,000. On top of that the British were seeking at least $150,000,000 of machine tools from the United States for their defense production program.

A giant 200-ton aircraft-skin milling machine was built during the year for the manufacture of a self-reinforced "skin" for near-sonic jet aircraft. This machine automatically cut, edged and shaped a desired pattern in three dimensions on the surface of a metal sheet. Chips were removed automatically. Virtually push-button controlled, the machine would mill integral rib skin panels from solid or rough-forged aluminum-alloy plate. It operated in three dimensions, with two feed motions and a range of infinite intermediate speeds between $\frac{3}{4}$ and 150 i.p.m. Longitudinal and lateral cutting motions were guided simultaneously from a master pattern by an electronic tracer control.

The machine used 12-drive motors totalling 350 h.p., exclusive of 18 motors and generators delivering the power supply, which added up to 1,400 h.p.

The air matériel command of the United States air force made public in 1951 a second report on the machinability of various steels. It was shown that tool life varies with microstructure of the steel and that tremendous improvement was possible in tool life by heat treatment prior to machining. Whatever the steel in question, air force research proved that any given structure would machine like the same structure of other steels. Along with the air force's data in timing was the revelation by researchers of the Cincinnati Milling Machine company that radioactive tracers were being used to measure the rate of tool wear. The method consisted of machining with a cutting tool rendered radioactive by neutron irradiation in a nuclear reactor and measuring the radioactivity of the collected particles worn from the tool during a few seconds of cutting. Measurement of tool life had formerly been mostly by laboratory tests.

Method X for producing holes and other openings of any shape electrically in sintered carbides and other hard metals to fine tolerances was announced during the year. It consisted of "machining" metallic parts by shaping them in a dielectric fluid by a spark discharge of controlled intensity and duration. The method could be used for almost any operation, such as boring, threading, tapping, turning and drilling. It was used experimentally to hollow out titanium turbine-blade forgings. As high as 50 lb. of metal per minute could be removed by this process. The dielectric fluid could be fuel oil, kerosene or a special compound. Cutting rates depended upon the density of the material.

The setup on the machine was similar to that required for a jig borer. Its operation was almost completely automatic.

Cold extrusion as a process got much attention during 1951. Steel cartridge cases were cold-extruded successfully and the method was being applied more and more in the civilian-goods field. For military-security reasons, the details about cold extrusion were withheld. The building of giant hydraulic presses for aircraft parts, such as spar cap forgings, was begun by several United States press companies. The United States air force was pushing the development of presses up to 75,000 tons in capacity. Parts could be forged in these presses and almost all the machining work eliminated thereby. One-piece hollow-steel propeller blades were extruded successfully in air force experiments.

Lubricants in press work attracted much experimentation during the year. One aircraft maker found that blends of specially processed waxes dispersed in naphtha or water solved a number of difficult drawing and forming operations on stainless steel, aluminum alloy and magnesium sheet parts. These wax emulsion lubricants were applied by swabbing, roller coating or spraying. They did not rub off when dry, but were removed from formed parts by conventional degreasing methods. They were proved particularly good for lubricating dies in hot-stretch-forming magnesium sheets. (B. Fy.)

McKellar, Kenneth Douglas (1869–), U.S. senator, was born on Jan. 29 at Richmond, Ala. He received his bachelor's and master's degrees from the University of Alabama at University, Ala., in 1891 and his law degree the next year. Shortly thereafter he moved to Memphis, Tenn., where he established a prosperous law practice and became active in Democratic politics, serving as a presidential elector in 1904 and as a delegate to the Democratic national convention in 1908. He was elected to the U.S. house of representatives in 1911 to fill an unexpired term and was re-elected, with the help of Democratic boss Edward H. Crump of Memphis, to the 63rd and 64th congresses (1913–17). He was first elected U.S. senator from Tennessee in 1916 and was re-elected for his sixth successive full term in 1946. After Harry S. Truman took office as president upon the death of Franklin D. Roosevelt in April 1945, McKellar, as president pro tem of the senate, became presiding officer of the upper house. In May 1946 he was appointed chairman of the senate appropriations committee.

McMahon, Brien (1903–), U.S. senator, was born at Norwalk, Conn., on Oct. 6. He received his A.B. degree from Fordham university, New York city, in 1924 and his LL.B. degree from Yale in 1927. Admitted to the Connecticut bar in the latter year, he practised law in Norwalk and in 1933 became judge of the Norwalk city court. Later that year he was appointed special assistant to the U.S. attorney general, and in 1936–39 he was assistant attorney general in charge of the department of justice criminal division. From 1939 to 1944 he again practised law; in the latter year he was elected U.S. senator from Connecticut on the Democratic ticket. In 1950 he was re-elected for the term 1951–57.

During his freshman year in the senate McMahon introduced the first act for the control of atomic energy, and in Oct. 1945 he was named chairman of the special congressional committee on atomic energy. Generally a loyal supporter of the Truman administration, McMahon thereafter spent much of his time in the senate on work of his committee. On Feb. 2, 1950, he proposed a 5-year, $50,000,000,000 plan whereby the U.S. would extend economic aid to other countries, including the U.S.S.R., in exchange for total atomic disarmament. Throughout 1950–51 he repeated his warnings that the alternative to control of atomic weapons was the destruction of civilization. On May 4, 1951, the senate unanimously passed a resolution proposed by McMahon expressing friendship for the Russian people and inviting the Kremlin to circulate the resolution freely. On Sept. 18 he introduced a senate resolution calling for an increase in expenditures on U.S. atomic weapons from $1,000,000,000 to $6,000,000,000 annually.

McMillan, Edwin Mattison (1907–), U.S. physicist, was born at Redondo Beach, Calif., on Sept. 18. He received his B.S. (1928) and M.S. (1929) degrees from the California Institute of Technology, Pasadena, and his Ph.D. from Princeton university in 1932. In the latter year he was appointed a research fellow at the University of California, Berkeley. Named instructor in physics there in 1935, he advanced to a full professorship in 1946. In May 1940, with the collaboration of P. H. Abelson at the University of California, McMillan discovered the first transuranium element, neptunium (element 93). With Glenn T. Seaborg (*q.v.*) McMillan also conducted the basic research that led to discovery of plutonium, element 94, later in 1940. This work helped lead directly to development of the atom bomb. During World War II, however, McMillan worked primarily with sonar and microwave radar, although he later joined the staff of the Los Alamos, N.M., atom bomb laboratory. In recognition of his work in nuclear chemistry and physics, McMillan on Nov. 15, 1951, was named with Seaborg as co-winner of the 1951 Nobel prize in chemistry.

Madagascar. The fourth largest island of the world, situated off the southeast coast of Africa, Madagascar is a French overseas territory. Its area and estimated 1950 population (including dependencies and also including the Comoro archipelago, 849 sq.mi., pop. 142,000) were 229,438 sq.mi. and 4,430,000 persons. From 1946 the Comoro archipelago was administered as a separate territory. The Merina are the most numerous indigenous people (*c.* 900,000); in 1948 there were 31,171 French, including 15,638 from metropolitan France; Hindus, Chinese and Arabs constituted small racial minorities. Language: Malagasy, related to Malay. Religion: Madagascar, Christian and pagan; Comoro archipelago, Moslem. Chief towns (pop., 1948 est.): Antananarivo or Tananarive (cap., 171,052); Tamatave (28,194); Majunga (27,181); Antsirane or Diégo-Suarez (25,287). High commissioner in 1951: Governor General Robert Bargues. Comoros administrator, Pierre Coudert.

History.—In the elections of June 17, 1951, the Malagasy chose three moderates. Experiments on the communal organization of villages were pursued in several areas of the island.

Output of sisal, cloves and mica increased. There was a crisis in the meat industry, and some factories closed. The F.I.D.E.S. (Fonds d'Investissement pour le Développement Économique et Social) set up a state company to exploit the coal of the Sakoa (in the southwest), which would involve building a railway and a harbour and extracting 300,000 to 600,000 metric tons a year. Work on the plain around Lake Alaotra continued, with a view to growing rice and peanuts. Six groups of internal air lines not only catered for passengers but also transported tobacco, vanilla, cayman skins for export, fruit and vegetables (grown on the plateaus) for consumption on the coast and sea fish for consumption on the plateaus.

Extended antimalarial spraying reduced the death rate in Antananarivo very considerably. As a result of vaccination there were no plague cases. The incidence of births over deaths had grown from 12,000 in 1947 to 50,000 in 1950.

Education.—Schools (1950): pupils, primary 229,000, secondary 2,560, technical 3,140; bursaries in France, 140.

Finance.—Budget (1952 est.): 5,165,000,000 fr. C.F.A. Monetary unit: franc C.F.A. (Colonies Françaises d'Afrique) = 2 metropolitan francs. Metropolitan franc = .2857 cents U.S. in Sept. 1951.

Foreign Trade.—(1950) Imports 15,073,000,000 fr. C.F.A., including 12,200,000,000 from the French union; exports 12,431,000,000 fr. C.F.A., including 10,600,000,000 to the French union. Principal exports: coffee 6,561,000,000 fr.; hides and skins 751,000,000 fr.; vanilla 631,000,000 fr.; cloves 574,000,000 fr.; meat 396,000,000 fr.; perfume 366,000,000 fr.; graphite 305,000,000 fr.; mica 187,000,000 fr.; dry vegetables 192,000,000 fr.

Maine. The extreme northeastern state of the United States, Maine was admitted as the 23rd state in 1820, and is popularly known as the "Pine Tree state." Land area 31,040 sq.mi.; water area 2,175 sq.mi.; population (1950 census) 913,774, an increase of 7.9% over 1940. The population of the principal cities (1950 census) was: Augusta (cap.) 20,913; Portland 77,634; Lewiston 40,974; Bangor 31,558; Auburn 23,134; South Portland 21,866; Biddeford 20,836; Waterville 18,287.

History.—Gov. Frederick G. Payne (Rep.) proposed to the Republican controlled 95th Maine legislature during 1951 that it enact a 2% sales tax with food exempt, and scrap the state property tax. It did so, and the enacted bill was promptly challenged in the courts, but was upheld. The sales tax yield, starting July 1, 1951, amounted to $1,000,000 a month, and the state would lose property tax revenue in 1952 and thereafter, of $5,000,000 a year. Most of the increase in revenue was to go into welfare and education. The legislature also approved a codification of the 1820 constitution of Maine, and a new classification and salary schedule for state employees. It proposed eight constitutional amendments, of which six were approved by the voters on Sept. 10.

Governor Payne initiated investigations of the state prison, mental institutions and the three state Indian reservations. No serious conditions were noted except on two of the Indian reservations, where a legislative committee made findings similar to those of the governor concerning poor educational facilities, immorality and deplorable living conditions. A campaign against illegal gambling in various sections of the state brought about numerous convictions including 15 prison sentences, 10 of which were upset on technicalities. The Great Northern Paper company announced in March 1951 that it would build a $6,000,000 hydroelectric plant on the Penobscot river above Millinocket.

The chief officers of Maine during 1951 were: governor, Frederick G. Payne; secretary of state, Harold I. Goss; attorney general, Alexander A. LaFleur; treasurer, Frank S. Carpenter; auditor, Fred M. Berry; commissioner of education, Harland A. Ladd.

Education.—The net enrolment in the public schools April 1, 1950, was 158,247 compared with 162,821 in 1949, and 160,191 in 1948. There were 6,323 teaching positions in 1949–50 compared with 6,211 in 1948–49. The state maintained the University of Maine at Orono, and five teacher training institutions. The combined enrolments at these schools in 1951 was 4,121.

Social Insurance and Assistance, Public Welfare and Related Programs.—As of Nov. 30, 1951, there was a balance in the Maine employment security fund for unemployment benefits of $39,478,382 compared with $37,143,182 a year earlier. Total estimated benefits for 1951 were $5,725,000 compared with payments of $9,125,833 in 1950 and a record $11,392,398 in 1949. The state expended for health, welfare and charities for the fiscal years ending June 30, 1951, and June 30, 1950, $16,862,438 and $15,155,290 respectively. Thirteen state institutions (correctional, hospitals for the insane, sanatoria) as of Nov. 30, 1951, had a total inmate population of 5,616 and 1,459 employees; the total expended for the fiscal years 1951 and 1950 was $5,080,811 and $4,550,030, respectively.

Table I.—*Principal Crops of Maine*

Crop	1951	1950	Average 1940–49
Corn, bu.	540,000	510,000	481,000
Oats, bu.	5,016,000	4,464,000	3,281,000
Barley, bu.	192,000	204,000	118,000
Buckwheat, bu.	63,000	88,000	123,000
Hay, tons	796,000	661,000	856,000
Potatoes, bu.	45,835,000	63,360,000	59,654,000
Apples, bu.	1,154,000	1,391,000	788,000
Beans (dry), 100-lb. bags	80,000	63,000	64,000

Source: U.S. Department of Agriculture.

Table II.—*Principal Industries of Maine, 1950*

Type of industry	Value of product	Employees	Wages
Textile-mill products	$241,766,824	26,208	$68,818,228
Paper and allied products	236,684,185	16,920	53,400,293
Leather and leather products	129,559,772	19,116	37,436,498
Food and kindred products	119,593,289	18,987	19,735,250
Lumber and wood products	75,205,172	12,582	23,225,305
Machinery	37,636,567	4,928	15,792,393
Transportation equipment	30,076,393	6,594	21,224,522
Fabricated metal products	25,730,712	2,022	4,979,361
Chemicals and allied products	11,517,609	676	1,318,111
Printing and publishing	11,339,049	1,667	4,560,602
Apparel	10,134,462	1,645	2,781,270
Stone, clay and glass products	7,048,117	1,078	2,667,109
Miscellaneous manufacturing industries	5,191,896	788	1,105,770
Furniture and fixtures	3,674,564	556	1,171,323
Primary metal industries	1,837,823	217	523,030
Rubber products	746,699	99	181,629
Optical goods	667,600	78	198,929
Not elsewhere shown	457,326	102	131,853
Total	$948,868,059	114,263	$259,251,476

Communications.—Highways of the state (March 1, 1951) were: state highway system, 3,148 mi.; state-aid system, 7,825 mi.; local system, 10,849 mi.; total 21,822 mi. In the year ended June 30, 1951, the state expended for highway and bridge purposes, exclusive of debt and interest charges, $21,085,465 compared with $20,376,606 for 1950. Steam railway mileage (Jan. 1, 1950) was 2,004 mi. on eight railroads. Maine had 38 licensed commercial airports in 1950, of which 20 had paved runways.

There were an estimated 308,145 motor vehicle registrations in Maine for 1951 and 349,500 operator's licences; for 1950 there were 303,719 registrations and 338,371 operator's licences. As of Dec. 1951 the New England Telephone and Telegraph company reported 167,913 principal telephones divided as follows: business 26,305, residential 141,608.

Banking and Finance.—During 1951 the Maine banking department supervised 32 savings banks, 30 trust companies, and 30 loan and building and savings and loan associations, the same as in 1950. The following figures are for June 30, 1951: deposits of savings banks $240,407,000, total assets $277,223,000; trust company deposits $232,142,000, total assets $256,242,000; building and loan and savings and loan associations, total assets $37,851,000. There were 33 national banks in the state. State receipts, expenditures and bonded debt for the fiscal year ending June 30, 1951, were, respectively: $64,759,415, $65,451,911, $6,973,500. For the year ending June 30, 1950, they were, respectively: $61,210,062, $61,811,434, $8,517,500.

Agriculture.—Rainfall throughout most of the state was considerably above normal during 1951 after four subnormal seasons. Apple, hay and potato crops were injured by excessive precipitation, while forest fire damage was at a minimum. Federal support prices were removed from potatoes grown in 1951, but a light crop nation-wide resulted in high prices for the Maine growers' crop estimated at 45,835,000 bu., compared with 63,360,000 bu. in 1950. The legal deer kill of 41,645 set a new record for the state.

Fisheries.—During 1950 there were 353,279,886 lb. of fish and shellfish landed at Maine ports, valued at $14,688,742 to the fishermen. Corresponding figures for 1949 were 292,203,570 lb. and $14,998,040, respectively; thus there was an increase in volume of 21% in 1950 but a decrease of 2% in value.

Manufacturing.—The average weekly hours worked in manufacturing by production workers (Oct. 1951) was 38.5 and average hourly earnings were $1.329. There were 1,325 manufacturing firms in Maine in 1950, with production valued at $948,868,059 and 114,263 employees, of whom 75,950 were men and 38,313 were women. (E. F. D.)

Mineral Production.—Table III shows the tonnage and value of mineral production in the state in 1949 for commodities having a value in excess of $100,000, and corresponding data for 1950, so far as they were available at the close of 1951.

Table III.—*Mineral Production of Maine, 1949–50*

(Short tons)

Mineral	1949		1950	
	Quantity	Value	Quantity	Value
Cement	1,057,413	$2,526,182	1,127,220	$2,705,034
Feldspar	20,480	130,275	19,585	124,821
Sand and gravel	4,605,172	1,393,676	4,897,143	1,726,217
Stone	258,810	2,025,870	309,740	2,214,164
Other Minerals		666,223		—
Total		6,742,226		—

Malaria. The use of halogenated hydrocarbons, especially DDT, introduced in 1945, tremendously simplified the eradication of Anopheles mosquitoes, which transmit malaria. These insecticides were most effective when used as residual sprays on walls of habitations. By 1951 their use had become world-wide. In Venezuela, Brazil, British Guiana, Argentina, Italy, Cyprus, Corsica, Greece, Turkey, Egypt, Sardinia, Yugoslavia, Portugal, Israel, Mauritius, Ceylon and parts of India, malaria was checked and in some places had a phenomenally low incidence. But sobering facts warning against sole reliance on

DDT-SPRAYING TEAM at work in Terai, India, in 1951, as part of a World Health organization program for malaria and insect control

DDT became evident. Residual spraying was not successful in the Philippines. Evidence indicated that it would be less effective in large sections of Africa. Laboratory experiments demonstrated the theoretical possibility that Anopheles could gradually develop tolerance to DDT. These considerations increased interest in environmental sanitation which had seriously lagged since the beginning of the DDT era.

Indigenous malaria approached the vanishing point in the United States. Only two proven new cases contracted within the country were reported during the first nine months of 1951. The precipitous drop since 1948 was attributed primarily to improved living conditions, but DDT might have played a role.

Malaria and the Korean War.—Malaria was successfully suppressed in United States military personnel stationed in Korea by chloroquine, which was administered once each week except during the winter months. The forces of the British Commonwealth suppressed malaria by uninterrupted daily administration of paludrine. The incidence of malaria in United Nations troops was kept low compared with World War II rates. (Suppressive drugs act on the parasites in the blood but do not eradicate the parasites hidden in the tissues of the body and, therefore, they do not prevent nor effect permanent cure of vivax malaria.)

Korean malaria had almost exclusively been benign tertian or vivax. Temperate zone vivax infections, in contrast to those found in the tropics, characteristically have long initial latent or symptom free periods. During this time, which generally corresponds with the winter months, the parasites are absent from the blood but lie dormant in the liver or other organs. The first (delayed primary) clinical attack frequently occurs eight to ten months after infection, particularly if the individual was on suppressive treatment when bitten by infected mosquitoes. Attacks of Korean malaria were, therefore, usually seen in the late spring and summer.

The incidence of malaria in the army personnel stationed in the United States was low from the beginning of the Korean conflict until March 1951. But with the return of a large number of troops from Korea on a rotation program which began early in May, the malaria rate in the army started to soar, reaching a peak of 629 new cases per week in August, then gradually decreased. More than 10,000 malaria hospital admissions were reported by the army before the close of the year. An additional large number of Korean veterans was treated by civilian physicians. A high percentage of the attacks which occurred in the summer of 1951 represented the first symptoms of a disease acquired during suppressive treatment the previous year.

To explore the practicability of treating all men returning from Korea with a new curative antimalarial drug, the army began large-scale evaluation of primaquine in the spring of 1951. The program was initiated by clinical investigations at the Illinois state penitentiary in co-operation with The University of Chicago and by field trials at a Moravian medical mission in the jungle of Nicaragua. Tests were also conducted at the federal penitentiary in Atlanta under the direction of the public health service. Toxicity trials were next performed on men engaged in heavy activity at Fort Knox, Ky., and Fort Benning, Ga. The final trial, conducted in co-operation with navy physicians of the military sea transport service, consisted of drug administration to 2,700 soldiers returning from Korean duty on two transports. No toxicity was revealed during this program, which involved treatment of more than 5,000 individuals.

After the successful completion of these tests early in October, the army announced that all servicemen rotating from Korea would receive primaquine for 14 days prior to debarkation at Pacific coast ports. The plan called for the administration of the curative drug while chloroquine suppression was still effective. It was expected that most individuals who had been infected with malaria would be cured before an attack occurred.

Malaya (Federation of) and Singapore.

The Federation of Malaya consists of two British settlements, Malacca and Penang, and nine protected states, Johore, Kedah, Kelantan, Negri Sembilan, Pahang, Perak, Perlis, Selangor and Trengganu. Area: 50,850 sq.mi. Pop.: (mid-1951 est.) 5,337,222. Singapore is a British island colony off the southern extremity of the Malay peninsula with the dependency of Christmas Island in the Indian ocean. Area: Singapore and adjacent islets 220 sq.mi.; Christmas Island *c.* 60 sq.mi. Population: Singapore Island (mid-1951 est.) 1,041,933; Christmas Island (mid-1951 est.) 1,522.

High commissioner for the federation: Sir Henry Gurney (assassinated Oct. 6, 1951); appointment vacant at Dec. 31, 1951. Governor of Singapore: Sir Franklin Gimson; United Kingdom commissioner-general in southeast Asia: Malcolm John MacDonald.

History.—In 1951 both the Communist guerrilla warfare and the military and police countermeasures increased in intensity. Although 1,130 terrorists surrendered or were killed or captured in the first ten months of 1951 compared with 935 during the whole of 1950, the security forces suffered more casualties, 1,047

(Jan.–Oct.) against 889 in the whole of 1950, and there were 5,087 "incidents" (Jan.–Oct.) against 4,739 in the whole of 1950. On Oct. 6 Sir Henry Gurney, the high commissioner, was ambushed and assassinated in the Pahang hills.

Terrorist slashing of rubber trees and intimidation of plantation workers was one of the factors contributing to a decrease in rubber output to 506,000 tons for Jan.–Oct. as compared with 564,000 in the same period in 1950.

World economic conditions maintained the prices of Malaya's products, chiefly rubber and tin, at a high level. Out of a record federal revenue of Malayan $579,546,000 during 1951, the export duty on rubber produced Malayan $216,000,000. Although Malayan $249,000,000, about 55%, of the total federal expenditure was spent on combating the insurrection, there was nevertheless a surplus of about Malayan $127,000,000. The Malayan six-year plan for economic and social development, which had been launched in 1950, was appreciably retarded—particularly the school-building and housing programs—by a shortage of building material and technical personnel.

A slow legislative process of extending nationality rights to the non-Malay population was set in motion. A draft nationality bill (formulated by representatives of all racial communities during 1950) was agreed to by the nine rulers of the Malay states in March. By the end of the year it was still under examination in the various state councils. A supplementary federal citizenship bill which accorded federal citizenship on a similar basis to the state nationality bills was given a second reading in the legislative council in July. It was clear from utterances by leaders of the Malayan Chinese association that these new measures did not satisfy them. In implementation of British policy of helping Malaya toward self-government the experiment was launched in March of appointing five unofficial Asians (three Malays, a Chinese and a Ceylonese) as members (virtually ministers) responsible to the high commissioner for home affairs, agriculture, health, education, and land, mines and communications. The experiment worked well throughout the year.

Singapore experienced a record trade boom in 1951, chiefly as a result of rearmament and world demand for raw materials. The high revenue of the colony during the year, Malayan $168,000,000, was the result mainly of larger yields from income tax and from customs and excise. The estimated surplus was about Malayan $45,000,000.

Paradoxically the trade boom arrested Singapore's program of economic and social development. The government suspended capital expenditure contracts during several months of the year to avoid contributing to inflation. Only Malayan $750,000 were spent on expanding medical services instead of a budgeted Malayan $4,000,000 and only 11 new schools were built instead of a projected 23. Singapore Improvement trust constructed only about 800 dwellings compared with their target of 2,790.

Elections for the nine elective seats in the legislative council took place in April; the Progressive party won six seats, the Labour party two and one was won by an independent. About 50% of electors voted. In December elections for six seats in the Singapore city council were held with the following results: Labour party three, Progressive party two, independent one; 58% of the electors voted.

In September, the newly formed trade union council held its first congress; 30 unions and 50,000 workers were represented.

In December it was announced that a knowledge of English would no longer be required from Singapore Chinese who wished to become British subjects.

RUBBER PLANTERS meeting in Bentong in 1951 to discuss mutual defense against terrorism in Malaya, where a state of emergency had existed since 1948. Weapons carried to the meeting are shown in the foreground

It was announced on June 22 that the Cocos-Keeling Islands, which had been administered by Singapore, had been transferred to the control of the Commonwealth of Australia; the commonwealth government intended to develop a wartime airstrip for use by commercial aircraft.

Finance and Trade.—Currency: Malayan dollar linked with sterling (Malayan $1 = 32.67 cents U.S.). Budgets (1951 est.): (federation) revenue Malayan $473,025,781, expenditure Malayan $334,988,121; (Singapore) revenue Malayan $124,734,668; expenditure Malayan $111,156,650. Foreign trade (1950, trade between the federation and Singapore excluded): (federation) imports Malayan $770,000,000, exports Malayan $1,481,000,000; (Singapore) imports Malayan $2,145,000,000, exports Malayan $2,535,000,000. Principal exports: rubber, tin, coconut oil, copra, palm oil, canned pineapples and spices.

FILMS OF 1951.—*The Fight in Malaya* (British Information Services).
(D. A. SN.)

Malik, Jacob A. (1906–), soviet diplomat, was born at Kharkov, Ukraine. After graduating from the Soviet Institute of Foreign Affairs, he was appointed assistant chief of the press section at the people's commissariat of foreign affairs in 1937. He served as counsellor of the soviet embassy in Japan, beginning in 1939, and was made ambassador to Japan in 1942. In Jan. 1946 he was named political adviser to the soviet member of the Allied Council for Japan, and in August of that year he was appointed deputy minister of foreign affairs in charge of the far eastern department. In May 1948 he became chief soviet representative to the United Nations. It was Malik who advanced the soviet proposal for the initiation of truce discussions between U.N. and Communist leaders in Korea.

He did this in a speech on June 23, 1951. He returned to the U.S.S.R. from New York city in July, and en route, in Sweden, stated that he was "almost sure" there would be a truce in Korea.

Malta. This British colony consists of a group of Mediterranean islands about 58 mi. south of Sicily; only Malta and Gozo are of importance. Area: Malta 94.9 sq.mi., Gozo 25.9 sq.mi. Pop. (1951 est.): 315,000. Principal towns (1948): Valletta (cap., 18,666), Sliema (24,294), Hamrun (17,124), Birkirkara (16,070).

Governor in 1951, Sir Gerald Creasy; prime minister, G. Borg Olivier.

History.—In 1951 the minority Nationalist government of Borg Olivier was defeated. Parliament was dissolved in February, and a general election took place in May. Once more no party gained a clear majority; Olivier was given the support of Paul Boffa's Workers' party and took office with a coalition majority of 2 in a house of 40 members. Unfortunately this political instability prevented much being done to overcome the serious economic problems of the island on the lines recommended by Sir George Schuster in 1950, and there was even a falling off in the flow of emigration. From the end of World War II to May 1951, 20,000 emigrated, of whom 12,000 went to Australia. On the other hand, the birth rate was high and the net reduction in population over this period was only a little more than 1,000. Princess Elizabeth (*q.v.*) was in Malta in the early part of the year and in April presented a new king's colour to the Mediterranean fleet.

When parliament was opened in October it was announced that a ministerial delegation would go to London to discuss economic problems with the new British government.

Education.—Primary schools (1949) 114 (attendance 38,677); secondary 6 (attendance 1,780); technical 3 (attendance 357); private elementary and secondary 63 (attendance 12,079); university, 300 students.

Finance and Trade.—Currency: pound sterling. Budget (1950): revenue £5,750,000; expenditure £6,240,000. Foreign trade (1950): imports £14,500,000; exports £1,400,000.

Mandates: *see* TRUST TERRITORIES.

Manganese. About 50 countries reported production of manganese ores for 1950, but the 11 listed in Table I account for more than 90% of the world total, according to data of the U.S. bureau of mines.

Table I.—*World Production of Manganese Ore*

(In thousands of short tons)

	1944	1945	1946	1947	1948	1949	1950
Brazil	162.0	269.7	164.4	156.7	155.7	165.2	179.2

South Africa	41.4	62.0	243.7	192.9	283.4	275.6	510.0
U.S.S.R.	—	151.3	241.9	289.0	384.1	151.0	65.6
Consumption	1,593.1	1,485.9	1,136.7	1,419.1	1,538.4	1,360.0	1,650.4

Mine production through July 1951 declined to 66,000 tons, but general imports were 1,012,165 tons and imports for consumption 1,114,864 tons; current consumption was 1,099,469 tons.
(G. A. Ro.)

Manitoba. Central province of Canada, Manitoba was established as a province on July 15, 1870; area 246,512 sq.mi. (26,789 sq.mi. water); pop. (1951 census), 776,541, an increase of 6.4% over 1941; approximately 52% rural. Capital: Winnipeg, 233,617. Other cities: St. Boniface, 26,218; Brandon, 20,484; Flin Flon, 9,858; Portage la Prairie, 8,463.

History.—The Liberal-Progressive government of Douglas Lloyd Campbell appointed a representative committee in 1951 to study and report upon all aspects of provincial-municipal relations, including administration, jurisdiction, boundaries and finance. Education was also being studied. A Manitoba hydro board was appointed to make effective a provincial power system, take measures to meet the power need, and supervise the development of the Pine Falls development which delivered a portion of its energy in December. A highway dike was constructed around greater Winnipeg as a defense against further Red river floods. A joint Canadian-Manitoba body was studying the problems of permanent Red river flood control.

Education.—Public school enrolment for the year ending June 1951, was 128,868, of whom 20,243 were in the secondary grades. The university registration for 1951–1952 dropped to 4,603, but was above the pre-World War II average of 2,800.

The city of Winnipeg, with provincial and federal support, opened a vocational-technical high school, with 50% of the teaching being in academic subjects. Alcohol education was added to the public school curriculum, under the direction of John Brown.

Public Health and Welfare.—Under the Manitoba health plan, in 1951, 11 health units were in operation, 2 regional diagnostic units and 5 medical nursing unit districts. As at April 1, 1950, the prisons of the province, located at Winnipeg, Brandon, Dauphin and (for women) at Portage la Prairie, reported admissions for the year, respectively, of 1,920, 563, 234 and 204.

Communications.—The 99-mi. Pas-Flin Flon highway was opened in

July, 41 mi. of paving were completed on the Trans-Canada road, and at the end of the year there was a total of 9,244 mi. of all-weather roads, of which 8,345 mi. were gravelled, 851 mi. bituminous and 98 mi. concrete. There were 4,837 mi. of railway track. A 155-mi. railway was started from the Hudson's Bay line to Lynn Lake mining area during the year. There were eight stations operating. At Stevenson air field, at Winnipeg, a large expansion development started in 1951. The Manitoba government telephone system had a wire mileage of 483,544 in 1951, with 153,260 subscriber stations of its own and 4,109 of connecting companies.

Finance.—The gross debt of the province on March 31, 1951, totalled $135,978,452. Of this, $72,367,359 was self-sustaining and was further offset by a sinking fund of $16,843,590. Revenue for the fiscal year was $55,481,556, which included a payment of $12,500,000 from the government of Canada on account of the Red river flood of 1950. Expenditures amounted to $53,721,626, which included payments of $15,463,950 on account of the flood.

Agriculture.—Unfavorable weather again affected the harvesting of an otherwise above-average crop. Total agricultural production was estimated at $292,000,000 (to be enhanced by anticipated payments from the Canadian Wheat board, based on its sales operations for the crop year 1951–52). Estimated production of sugar beets was 178,000 tons, a record for the province. Livestock increased in value to $64,000,000. Coarse grain producers, by government referendum of Nov. 24, voted to continue compulsory marketing of their products through the Canadian Wheat board.

Fishing and Fur.—Commercial fishermen numbered 5,904 in 1950–51, catching 31,467,800 lb. valued at $3,879,757 (market value $6,599,474). Fur trappers numbered 9,756 of whom 2,640 operated registered trap lines; the wild catch was valued at $3,393,412. Furs valued at $1,976,922 (110,712 skins) were produced on 531 fur farms.

Manufacturing.—The gross production of 1951 totalled an estimated $596,000,000. Industrial pay-rolls approximated $100,000,000, and 44,000 employees in manufacturing represented a record. The tourist industry reached a record with an estimate of 710,026 visitors, who spent an estimated $23,742,555. The interprovincial oil pipe line from Alberta resulted in the completion of a $10,000,000 oil refinery in the greater Winnipeg area.

Mineral Production.—New mining areas at Lynn lake produced nickel, copper and zinc; and, at Snow lake, gold. Production in 1950 totalled $33,146,629, of which metals represented $25,045,000. Other products were silver, cadmium, silenium and tellurium, as well as clay products, structural materials, peat moss and salt. (J. L. J.)

Mao Tse-tung (1893–), chairman of the Chinese Communist party and of the Chinese People's Republic, was born in Shao Shan, Hunan province, and educated in Changsha. He helped found the Chinese Communist party in Shanghai in 1921; became political commissar of the 4th Red army in 1931; and in 1934 at the second All-China Soviet congress became the unchallenged leader of the Chinese Communists. He led his forces into northwest China to escape the Chiang Kai-shek "annihilation campaigns" in 1934–35. Between 1937 and 1943 he led his forces against the invading Japanese, but after the Japanese surrender in 1945 supervised the Communist armies that drove Chiang's nationalists back until, by the autumn of 1949, the Communists were strong enough to launch their People's regime. Early in 1951 Mao was quoted by the Indian delegate to the United Nations as threatening an irreconcilable break with the west if the Chinese should be branded aggressors in Korea. Subsequent to the beginning of the extended truce negotiations in Korea, however, Mao was repeatedly pictured in western press dispatches as being the centre of a rift with the U.S.S.R., brought about by charges that the Russians had not adequately supported the Chinese intervention in Korea. Marine Biology. An important development in marine investigation during 1951 was the increased attention accorded open ocean populations, both pelagic and benthonic. In the central Pacific the exploratory vessels "John R. Manning" and "Hugh M. Smith," operating for the Pacific Oceanic Fishery investigations, found a remarkable correlation between the upwelling of nutrient rich water, the abundance of zooplankton and the prevalence of fish populations in a biologically rich zone extending east and west between the equator and about 6° N. latitude. Here the inorganic phosphate concentration was about double that of the neighbouring ocean, the zooplankton two to three times as abundant and the numbers of tuna at depths of 30 to 70 fathoms extraordinary. Similar exploration throughout the North Atlantic was initiated by the French fisheries vessel "President Theodore Tissier" of the Office Scientifique et Technique des Pêches.

PLANKTON (many times enlarged), the minute drifting organisms as vital to fish as grasses are to land animals. Their role in the ocean's economy was the subject of joint research by the National Geographic society and the University of Miami, Fla., in 1951

United Nations weather station vessels provided the first opportunity to record the annual cycle of pelagic animal and plant populations in the open ocean. Weekly zooplankton collections and data from two locations, one in the Labrador sea and the other in the central Atlantic, were under investigation at the Narragansett Marine laboratory. Results of the first year provided biological supporting evidence for the theory that the Labrador sea forms an important source of North Atlantic bottom water. Principal production was found to occur in late summer. Phytoplankton from the two areas was being analyzed at the Bingham Oceanographic laboratory and the University of Oslo. Workers at the latter institution had also completed a study of the first year-round weather ship collections of oceanic phytoplankton in the Norwegian sea. These revealed a spring flowering in April which was retarded for a time by plankton animal grazers. Later, when these declined, the plants increased rapidly in June and July to an August peak.

In the North sea a phytoplankton survey completed during 1951 by the International Council for the Exploration of the Sea demonstrated that the mosaic of different pelagic plant communities could be explained in terms of the differences in the origin of the water masses in which they occur. The stability factor appeared to be of predominating importance.

Oceanographers from the Woods Hole Oceanographic institution on Project "Skijump" cut holes in the thick ice of the polar sea with a chain saw in latitude 76° 10′ N. in April and obtained biological samples from depths of 2,000 ft.

The most outstanding ocean bottom studies during the year were reported by the Danish Deep Sea expedition vessel "Galathea," which dredged in depths of more than six and one-half miles in the Philippine Deep. The hauls yielded living bacteria and a variety of deep-sea animals including coelenterates, mollusca, echinoderms and crustacea which had existed under a pressure of more than 1,000 times that at the surface. The "Galathea's" collections were from depths more than 1,360 fathoms below any previously taken. According to a bacteriologist from the Scripps Institution of Oceanography who was aboard at the time, the first link in the food chain in great depths seems to be bacteria which feed on dissolved organic matter and in this manner provide sustenance for other bottom dwellers. Other studies on the influence of organic matter in marine sediments on the distribution and density of the deep benthonic fauna were conducted by the French Institut Océanographique.

The "phantom bottoms" or "scattering layers" in the ocean from which aggregates of marine organisms return a measurable echo when an echo-sounding machine is used were attracting widespread attention of physicists and biologists. Concurrent echo-sounder records and biological collections in the Bering sea and California waters indicated that the phenomena are probably caused by a heterogeneous population in which fishes appear to dominate in the deeper more intense scattering layer and crustacea in an upper layer in which scattering is less intense. A worker in the British Museum of Natural History compiled a list of fish residents of the scattering zone and found that the three major families possess air bladders which would significantly increase their effectiveness as sound scatterers. It was expected that a new midwater trawl tested at the Scripps Institution of Oceanography would make possible more efficient sampling of this population.

Important progress was also being made in research on the character and significance of underwater sounds produced by marine animals. During the year the Narragansett Marine laboratory obtained 106 recordings and analyses, representing 19 species of fish found to be sonic. The toadfish (*Opsanus tau*) produced what was believed to be a mating call during the breeding season and a quite different noise at all other times. Sounds emanating from different individuals of a single species varied markedly according to size and age. Noises produced by several hitherto unsuspected species, in some instances by means not fully determined, indicated that almost every species of marine fish must be considered a potential sound maker until proved otherwise.

Coastal ecological surveys were completed in several little-known areas. In the Pacific, members of the Hawaii Marine laboratory investigated Onotoa atoll in the central Gilbert Islands under the auspices of the Pacific Science board. In the Atlantic workers from University College of Wales, having traversed much of the coast of Wales, extended their survey in 1951 to the north of Scotland. Similar studies on the algae and invertebrates of the Moroccan coast were carried out by representatives of the Institut Scientifique Cherifien, and on the biology of lagoon waters and of the exchange between lagoons and the open sea by the Hydrobiological station of Chioggia, It.

Continued exploration was revealing extensive hitherto unknown populations of shrimp off the American coasts. The research vessel "N. B. Scofield" located very large ones in central and northern California waters. Large numbers were also found in the Gulf of Mexico at depths exceeding 25 fathoms.

The importance of disease in controlling benthonic invertebrate populations was demonstrated in oysters by the Agricultural and Mechanical College of Texas division of oceanography in Louisiana and by clam investigators of the United States fish and wildlife service on the New England coast. This was believed to be a frequent cause of depletion in shellfish which are commonly characterized by large fluctuations in abundance. In Chesapeake bay a particularly large set of oysters in 1951 was being studied by biologists of the Chesapeake Biological laboratory.

A scientist working at the Seto Marine laboratory in Japan found evidence that in *Euchlora rubra*, long considered to be the only ctenophore with sting cells, these cells are of foreign origin, probably being derived from small jellyfish eaten by the ctenophore.

In Norway phototaxis was observed in several marine dinoflagellates, some of which migrate toward the surface during the daylight hours while others move downward. (*See* also OCEANOGRAPHY; ZOOLOGY.)

FILMS OF 1951.—*Salmon, Life Cycle of the Sockeye* (Paul Hoefler Productions). (CH. J. F.)

Marine Corps, U.S.

The United States marine corps is a separate organization within the department of the navy whose primary mission is service with the fleets. It was established on Nov. 10, 1775, by a resolution of the Continental Congress.

There are two fleet marine forces (Atlantic and Pacific), each containing an infantry division and an aircraft wing, together with supporting and service elements. The third marine brigade, an additional unit, was organized in the summer of 1951 at Camp Pendleton, Calif.

During the year, two marine corps air facilities were established to house the increasing number of helicopter transport squadrons. These bases were located at Santa Ana, Calif., and Camp Lejeune, N.C.

The marine corps is commanded by a full general appointed by the president to a four-year term. The 19th marine commandant, Gen. Clifton B. Cates, assumed office Jan. 1, 1948. He was succeeded on Jan. 1, 1952, by Lieut. Gen. Lemuel C. Shepherd, Jr., who during most of 1951 was commanding general of the Pacific fleet marine force.

Although the marine corps' first duties are with the fleet, the National Security act of 1947 also provides that it develop "in coordination with the Army and Air Force, those phases of amphibious operations which pertain to the tactics, technique, and equipment employed by landing forces." Marines also "perform such other duties as the President may direct provided that such additional duties shall not detract from or interfere with the operations for which the Marine Corps is primarily organized."

During 1951 the 1st marine division on land and the 1st marine aircraft wing in the air continued to play an important part in the United Nations' battle up the Korean peninsula against the Communist forces. The previous year had ended with the marines' dramatic breakout to the sea from the Chosin reservoir.

On Oct. 11, 1951, marines introduced an important new tactic in modern warfare when they transported a full battle-equipped battalion to the front lines by helicopter. This vertical envelopment manoeuvre followed several years of study and experimentation.

In June 1951 the marine corps began releasing to civilian life reservists called to active military service as a result of the Korean emergency. Marine plans called for all reservists to be released to inactive duty by June 1952. (C. B. Cs.)

Marriage and Divorce.

With few exceptions, marriage and divorce rates during 1951 remained at much the same levels that prevailed in the previous year. Although a significant increase in the marriage rate did

LAST COUPLE to be married under public law 717, which made possible more than 1,300 G.I.-Japanese marriages. The bride and groom are shown at the U.S. consulate in Tokyo on Feb. 10, 1951, the day the law expired

occur in some countries during the latter half of 1950, a corresponding decline began in the second quarter of 1951. Birth rates showed little decrease from postwar peaks and, in fact, in many countries affected by the Korean crisis, the figures were nearing the record totals set in 1947.

United States.—With a marriage rate estimated at not more than 10.6 per 1,000 population, a provisional total of 1,650,000 marriages was expected for 1951, a decrease of almost 3% from the preliminary total of 1,693,257 marriages for 1950, but a certain gain over the final total of 1,608,180 marriages for 1949. It was believed that about 3,750,000 births would be recorded, representing an increase of about 6% over the 3,548,000 births of 1950. Including annulments, the number of divorces was estimated at 375,000—decreases of 2% and 5% respectively from the 385,000 divorces of 1950 and 397,000 divorces of 1949.

25 yr.	22.03 yr.	34 yr.	28.52 yr.

*Computed from Table 4, "Marriages, Age of Bride by Age of Groom, By Single Age to Age 34 and 5-Year Intervals Thereafter: 16 States Combined, 1949," *Vital Statistics—Special Reports* (July 17, 1951), U.S. Public Health Service. (Specified states: Connecticut, Delaware, Idaho, Iowa, Kansas, Louisiana exclusive of 10 parishes, Maine, Mississippi, Montana, New Hampshire, New York exclusive of marriage licences issued in New York City, North Dakota, Oregon, South Dakota, Tennessee, and Vermont.)

Among the findings from various studies were that, as of 1950, of the 42,500,000 homes in the United States, about 23,400,000 were owner-occupied; that, according to the National Desertion bureau, more than 1,000,000 women and children were victims of family desertions, most of which occurred within the first few years of marriage; that 1,526 persons were sterilized in 27 states in 1950; that, in the age range 14–17 years, there were more widowed and divorced among males than among females but that, in the age range 18–20 years, the ratio of widowed and divorced females to males was nearly four to one; that, in more than one out of every six families, either husband or wife had been previously married; that, compared with 40,523,000 children living with both parents, 674,000 children lived with the father only and 3,426,000 lived with the mother only; that, in three generations, the median difference in ages of mates at marriage had decreased from four to about one and one-half years; that better-educated women were less likely to marry and were more likely to seek divorce; and that, although nearly one-half of all wives were in the labour force during the first year of marriage, less than one-fifth worked after five years of marriage.

Great Britain.—Immediately following World War II, the birth rate in the British Isles climbed at a rapid rate, reaching a peak of 20.7 per 1,000 population in 1947. By 1949, the rate had receded from 20.5 to 16.7 in England and Wales, from 23.3 to 21.3 in Northern Ireland, and from 22.0 to 18.5 in Scotland. With a birth rate already much below most European countries, it was not expected that the figure for 1951 would greatly exceed 17.5. However, the infant and maternal mortality rates were among the lowest in the world. The marriage rate in England and Wales remained relatively unchanged from the 8.3 per 1,000 population estimated for 1950.

The National Marriage Guidance council of London reported that it had selected 255 marriage counsellors, of whom 119 had completed training and 88 were receiving training. Of 68 local marriage councils reporting, 52 were carrying on educational programs. Collaborating with the Family Welfare association, the Tavistock Institute of Human Relations (London) established a family discussion bureau to offer preventive and therapeutic services in the field of family problems; its research program on family life was supported by the Nuffield foundation.

Canada.—Marriage, birth and divorce rates in the provinces showed little change in general from those of the previous year, for which the estimated marriage rate was 9.0, a decrease of only 16% from the peak rate of 10.9 set in 1946. In Ontario, where for more than a century only marriage by a religious ceremony had been allowed by law, considerable interest was evinced in the new law, effective Oct. 2, 1950, permitting civil marriages. Plans were under way for supplementing the rural adult program in family life education with the film, "Family Circles," a National Film board production, already viewed by more than 500,000 persons in commercial motion picture theatres.

Other Countries.—In July, the International Union of Family Organizations met in Brussels, Belg. An allocation up to 15,000 levas (about U.S. $53) was made available in Bulgaria to couples desiring to marry, with subsequent allotments for childbirth and graduated monthly allowances for offspring. In Czechoslovakia, where a civil marriage ceremony had been legally required since Jan. 1, 1950, the municipal government of Prague established a loan of approximately $720 to each marrying couple, one-sixth of which was to be cancelled with the birth of each child. The birth rate in France rose to a peak of 21.3 per 1,000 population in 1947 (an increase of 43% over the prewar level of 14.9), and little decline was expected from the estimated rate of 20 per 1,000 population in 1950. An international study conference on family allowance problems was held in Paris, Fr., in July. Birth rates in western Germany and Italy continued to be below prewar figures.

The government of Norway, at the insistence of the Norwegian Socialist youth movement, was considering interest-free loans (to be repaid in three to ten years) to young couples to buy household furnishings at time of marriage. In Stockholm, Swed., a municipal family counselling bureau was opened in June. Because of the scarcity of manpower, the Swedish government continued to provide free medical and hospital care in childbirth and day nurseries for small children of working wives and mothers; in a survey of 907 expectant mothers, 45% of the wives and 66% of the husbands wanted the first-born to be a son with most parents desiring that the sex of the second child be opposite to that of the first-born. In Switzerland, a premarital counselling service was organized in Geneva by the Société Genevoise d'Utilité Publique. Of all divorces sought in Turkey, the wife was the plaintiff in two-thirds of the cases. Under the new marriage laws of Yugoslavia, women obtained rights equal to men, bigamy was illegal, and six grounds for divorce were established with both husband and wife having alimony rights.

In Argentina, a system of family allowances for all employed persons with less than 150 pesos monthly wages provided 15 pesos a month for each legitimate child under 15 years of age, to each wife who did not work and to each couple who supported a dependent parent. The government of India was urged by the National Planning commission to encourage family planning and limitation of children and to provide surgical sterilization; in Bombay, four birth control clinics were in operation. In a survey of men students in Japanese colleges, the vote was three to one in favour of the idealistic and western notion of love as a basis for marriage. Communist family law in North Korea provided women equality with men, outlawed polygamy and prostitution, set the minimum legal age for marriage for men at eighteen years and for women at seventeen, with no woman to be married without her own consent.

In South Africa, the Johannesburg Matrimonial Conciliation board estimated that reconciliations resulted among 23% of couples counselled. Marriage councils operating in Sydney and Melbourne were further augmented by the Marital Relationship Committee of Western Australia, organized by the synod of the Church of England.

Marshall, Caroline and Mariana Islands.

The Marshall, Caroline and Mariana Islands, stretching from about 1° to 20° N. lat. and from 130° to 170° E. long., constitute, with the exception of Guam in the Marianas, the Trust Territory of the Pacific Islands. The territory contains about 2,000 islands in 96 distinct island units of which 64 are inhabited, with a combined land area of about 687 sq.mi. Truk, in the centre of the territory, is 4,931 mi. W. of San Francisco, Calif., and 1,832 mi. E. of Yokohama, Jap. The population on June 30, 1951, totalled 56,178; three-fifths of the population live on the six principal island units: Saipan, the Palaus, Yap, Truk, Ponape and Majuro. Eleven different languages are spoken in the territory, including English and Japanese.

History.—The territory was under the administration of the U.S. navy until July 1, 1951, when control was transferred by presidential order to the department of the interior. The last naval officer to be high commissioner was Adm. A. W. Radford, who was appointed on April 2, 1949, and was also commander-in-chief of U.S. naval forces in the Pacific. He was succeeded as high commissioner on Jan. 8, 1951, by Elbert D. Thomas, former senator from Utah, who established his headquarters at Honolulu, T.H. The territory is divided for administrative purposes into five administrative districts: Saipan, Palau, Truk, Ponape and Marshall Islands. Although plans existed for creating a territorial legislature, by the end of 1951 one had not been established.

Education.—On June 30, 1951, there were 146 public schools, of which 138 were elementary, 6 were intermediate, 1 was advanced and 1 was a technical and normal school. These schools had 303 teachers, of whom all but 6 were native instructors, and 7,526 pupils. There were also 20 mission schools with 89 teachers and 1,760 pupils. Educational expenditures were estimated at 29% of total expenditures during the fiscal year 1951.

Finance.—During the fiscal year ending June 30, 1951, receipts totalled $467,304 and U.S. appropriated funds totalled $2,025,400. Expenditures totalled $2,492,704.

Production and Trade.—In the fiscal year ending June 30, 1951, exports of copra totalled 11,606 short tons and exports of phosphate rock totalled 143,738 short tons. In this period the value of exports totalled $2,213,622, of which copra represented $1,296,082 and phosphate rock $741,935. Other exports included handicrafts, shells, fruits and vegetables, and sponges. Imports were valued at $2,223,174; the most important imports were food, clothing, tools and marine gear.

Marshall Plan: *see* EUROPEAN RECOVERY PROGRAM.

Martin, Joseph William, Jr.

(1884–), U.S. congressman, was born on Nov. 3 in North Attleboro, Mass. He worked as a newspaper reporter and later bought the *Evening Chronicle* of North Attleboro, also becoming publisher of the *Franklin* (Mass.) *Sentinel*. He served in the Massachusetts state legislature from 1912 to 1917. In 1924 he was elected to the federal house of representatives and was re-elected consistently thereafter, being named house minority leader in 1939 and speaker of the house in 1947. He was a delegate to the Republican national convention at Chicago, Ill., in 1916 and at Cleveland, O., in 1936; chairman of the Republican national committee, July 1940 to Nov. 1942; and permanent chairman of the Republican national convention in 1940, 1944 and 1948.

On Feb. 12, 1951, in a talk in Brooklyn, N.Y., Martin urged the ouster of Secretary of State Dean Acheson and the use of Chinese nationalist troops to open a second front against the Chinese reds on the Asiatic mainland. On April 5 he read to the house a letter from Gen. Douglas MacArthur endorsing the idea of using the Chinese nationalist troops, a policy the Truman administration had rejected. After MacArthur had been relieved of his commands in the far east, Martin was coauthor of a joint resolution inviting the general to address a joint session of congress.

Martin was also a sharp critic of Pres. Harry S. Truman's domestic policies, being the author of the remark, concerning the wage-price freeze announced Jan. 26, that all it did was "freeze the hole in every family's pocketbook."

Martinique.

The status of this former French island colony situated in the Lesser Antilles was changed in 1946 to that of an overseas *département*. Area: 427 sq.mi. Pop.: (1936 census) 246,712; (1946 census) 261,595; (1950 est.) 273,000. The inhabitants are mainly coloured (Negro or mixed), speak a French patois and are Roman Catholic. The capital is Fort-de-France (pop., 1946 census, 66,006). Prefect: Christian Laigret.

History.—Two Communists and one moderate deputy were sent to the national assembly in Paris after the elections of June 17, 1951. In October six Socialists, six Radicals and moderates and five Communists were elected to the local general council. The new waterfront at Fort-de-France was completed. Work was continued on water supply, roads and the construction of a sanatorium. The rum industry's predicament was still serious. The cultivation of new crops was considered. French state revenue in the *département* rose to 2,400,000,000 fr., but the expenditure was 5,200,000,000 fr.

Education.—Provision is made for all children of school age. There is one *lycée* and one school of law.

Finance.—Currency: metropolitan franc. In Sept. 1951, U.S. $1 = 350 fr.

Foreign Trade.—(1950) Imports 7,400,000,000 fr.; exports 5,302,000,000 fr. Principal exports: sugar 2,051,000,000 fr., rum 1,095,000,000 fr., bananas 1,551,000,000 fr. Trade is almost wholly with the French union.

Transport and Communications.—Ships entered (1950): 673.

(Hu. De.)

Maryland.

One of the original states of the United States, long known as the "Old Line state," and, in later years, as the "Free state," Maryland is bounded on the north by Pennsylvania and Delaware, on the east by Delaware and the Atlantic ocean and on the south and west by Virginia and West Virginia. The total area is 10,577 sq.mi., of which 696 sq.mi. are water. Pop. (1950 census) 2,343,001, an increase of 28.6% from the 1940 population. Urban population was 69.0% of the total. Annapolis (pop., 1950, 10,047) is the capital. Other cities in the state, with 1950 population figures, are Baltimore (949,708), Cumberland (37,679), Hagerstown (36,260), Frederick (18,142) and Salisbury (15,141).

History.—A revised child labour law was enacted at the 1950 session of the general assembly. There was a one-day special session on July 27, 1950, to provide for absentee voting for members of the armed forces; and a one-day special session on Nov. 10, 1950, to exempt all purchases up to 50 cents and all foods and meals from the retail sales tax.

Under the 1950 census, Maryland gained an additional representative in the United States congress and a new congressional district was created at the 1951 session of the general assembly.

An important act relating to defective delinquents was also enacted at the 1951 session.

Education.—In 1950–51 there were 835 public elementary and occupational schools in the state (including Baltimore city), with a total enrolment of 240,447 and a teaching staff of 6,855. There were 219 secondary and vocational schools, with an enrolment of 128,426 and a teaching staff of 5,550. In the elementary schools approximately one student in four was a Negro, and in the higher schools approximately one in six was a Negro. The enrolment in Catholic schools for the entire state was 57,970 white and 2,521 Negro students. The enrolment in non-Catholic private schools was 11,672 white and 167 Negro students. Thomas G. Pullen, Jr., was state superintendent of schools.

Social Insurance and Assistance, Public Welfare and Related Programs.—As of June 30, 1951, old-age assistance was being given to 11,488 persons, with a total cost of $5,334,331.43 for the fiscal year ended June 30, 1951; public assistance was being given to 487 needy blind persons, with a total cost of $240,722.54 for the fiscal year; aid to dependent children was being given to 6,028 families, with a total cost of $5,929,593.31 for the fiscal year. As of Jan. 1, 1951, the administration of a new category of aid to the permanently and totally disabled was begun. This type of assistance was received by 2,150 persons in June 1951 and total expenditures for the fiscal year (covering the six months the program was in effect) were $295,190.22. Unemployment compensation benefits paid for the benefit year ending March 31, 1950, were $14,303,136, as compared with $31,319,231 in the preceding year.

Table I.—*Principal Crops of Maryland*

	1951	1950	Average, 1940–49

Tomatoes, market, bu.	1,000,000	940,000	1,114,000
Tomatoes, processing, tons	228,800	225,700	225,900
Watermelons, melons	2,200,000		2,330,000
Wheat, bu.	5,371,000	5,162,000	6,840,000

As of Dec. 1, 1951, there were 1,532 white inmates and 2,392 Negro inmates, or a total of 3,924 inmates, in the four state penal institutions; of these, 43 were white females and 117 Negro females.

Communications.—The state roads commission expended $76,720,548.52 for the fiscal year ended June 30, 1951. The total road mileage in the state highway system was 4,667, in the county system 12,065 and in the municipalities 1,161. In 1951 there were 1,320 line-mi. and 2,800 track-mi. of steam railroads and 41.4 line-mi. and 52 track-mi. of electric interurban railways. As of Dec. 1, 1951, there were 699,158 telephone instruments in service in the state, of which 316,586 were in the city of Baltimore. There were 2,577,000 mi. of wire, of which 1,384,000 mi. were in underground cable.

Banking and Finance.—As of June 30, 1951, state banks and trust companies had deposits of $948,740,646.69 and total resources of $1,034,905,217.90; mutual savings banks had deposits of $405,604,729.13 and total resources of $455,767,238.24. There were 59 national banks in the state with deposits of $696,302,000 and total resources of $752,480,000. The total resources of all state and national banks were $2,243,152,456.14. As of Dec. 31, 1950, 382 savings and loan and building and loan associations were computed to have assets of $395,917,055.

State appropriations for the year ended June 30, 1951, were $144,858,957.47 and expenditures were $158,931,903.32. State appropriations for the year ending June 30, 1952, were $163,182,343. The total bonded indebtedness of the state as of June 30, 1951, was $72,898,000 and there was a general surplus of $12,731,966.21.

Agriculture.—During the first ten months of 1951, Maryland farmers received an estimated $77,419,000 from the marketing of principal farm crops, as compared with $69,345,000 for the similar period in 1950. Livestock and livestock products brought a total of $157,539,000 during the first ten months of 1951, as compared with $132,149,000 in 1950. Total cash receipts from farm marketings in the first ten months of 1951 amounted to $234,958,000, compared with $201,494,000 for the first ten months of 1950.

Manufacturing.—The Maryland employment security board estimated the number of manufacturing establishments as of June 30, 1951, to be 3,211 employing 254,201 persons, as compared with 224,870 as of June 30, 1950, and the nonmanufacturing establishments (covered by unemployment compensation) at 35,905 employing 359,211 persons, as compared with 346,530 as of June 30, 1950.

The total pay roll for the three months ended June 30, 1951, was: manufacturing $210,466,268, nonmanufacturing $238,761,614, making total quarterly pay rolls for the 13-week period $449,227,882 as compared with $378,910,925 for the similar period of 1950. (H. E. F.)

Mineral Production.—Table II shows the tonnage and value of mineral production in the state in 1949, for commodities having a value in excess of $100,000, and the corresponding data for 1950, so far as they were available at the close of 1951.

Massachusetts.

A north Atlantic state of the U.S., Massachusetts was admitted to the union on Feb. 6, 1788. It is popularly known as the "Bay state." Area: 8,257 sq.mi., including 390 sq.mi. of water; population (U.S.

census 1950) 4,690,514 of which 3,959,239 or 84.4% was urban. This was a gain of 8.7% over 1940. The capital is Boston (pop., 801,444); other important cities are Worcester (203,486); Springfield (162,399); Cambridge (120,740); Fall River (111,963); New Bedford (109,189); Somerville (102,351); Lynn (99,738); Lowell (97,249); Quincy (83,835); Newton (81,994); Lawrence (80,536).

History.—State officials elected for the biennium 1951–52 were: governor, Paul A. Dever; lieutenant governor, Charles F. Jeff Sullivan; secretary of state, Edward J. Cronin; treasurer, John E. Hurley; attorney general, Francis E. Kelley; auditor, Thomas J. Buckley.

The general court is the name given to the Massachusetts legislature. It holds sessions annually, and adjourned its 158th session on Nov. 17, 1951, the longest session in the history of the state.

Unusual delays were encountered in enacting tax bills necessary to cover the increased expenditures. The budget for the fiscal year totalled $329,000,000. This appropriation included a bond issue in the amount of $23,250,000 for state buildings. The total represented an increase of $14,000,000 over the preceding fiscal year. Another bond issue of $30,000,000 was provided for the construction of sewers by the Metropolitan District commission.

In order to finance the increased expenditures, all temporary taxes, amounting to $53,000,000, were renewed, and new taxes totalling $32,000,000 were imposed. The gasoline tax was raised to collect an additional $10,000,000. The state income tax was increased from 1½% to 2½%, and the capital gains tax was doubled from 3% to 6%.

Some tax benefits were provided. Unearned income was to be exempt up to $2,000, an increase of $1,000 in the exemption. Exemption up to $5,000 was also provided on personal property tax, the previous base being $1,000. The effect of this change would be to equalize the imposition of the existing property tax for all citizens having less than the exempted amount. Formerly, while some cities and towns imposed a personal property tax wherever more than a $1,000 valuation was found, other cities and towns neglected to impose a personal property tax except on wealthy people.

Out of a total of 4,600 bills, a few more than 800 were enacted into law, and 80 resolves were passed. For the first time in many years the voters of Massachusetts would be allowed to express their presidential preference at the primary elections in 1952. Veterans of the Korean war were given civil service preference equal to that in effect for veterans of World Wars I and II.

In the Nov. 1951 election the voters adopted by an overwhelming vote a referendum increasing the minimum assistance under the old-age law to $75 per month, at the same time reducing the eligible age from 65 to 63. It was predicted that to finance this program of old-age assistance would require an additional annual expenditure of $54,000,000. The case was submitted to the supreme judicial court and the court, just before the effective date, found the referendum to be unconstitutional.

Education.—In 1951 there were 1,691 public elementary schools and 110 consolidated schools with 400,323 pupils; 108 junior high schools with 80,473 pupils; 225 senior high schools with 132,429 pupils. The public schools of the state employed a total of 24,844 full-time teachers at an average salary of $3,269.31. The total expenditure for public schools for support and outlay was $135,490,122.10. John J. Desmond, Jr., was the state commissioner of education.

Social Insurance and Assistance, Public Welfare and Related Programs.—During 1951 old-age assistance was extended to an average monthly number of 101,833 persons at an estimated annual cost of $77,992,808; an average monthly number of 13,202 families received assistance for the care of 32,103 dependent children (estimated cost $17,862,974); general relief was extended to an average monthly number of 19,819 persons (estimated cost $13,087,894).

Table I.—*Principal Crops of Massachusetts*

Crops	1951	1950	Average 1940–49

Table II.—*Estimated Value of Principal Products Manufactured in Massachusetts*

Products	Estimated Value, 1951
Electrical machinery, apparatus and supplies	$450,000,000
Woollen and worsted goods	440,000,000
Boots and shoes, other than rubber	356,000,000
Clothing, men's and women's, including work clothing	321,000,000
Cotton goods	229,000,000
Leather: tanned, curried and finished	194,000,000
Foundry and machine-shop products	188,000,000
Printing and publishing, book and job and newspapers	165,000,000
Rubber goods, including rubber tires and inner tubes	163,000,000
Bread and other bakery products	162,000,000
Paper and wood pulp	142,000,000
Boot and shoe, cut stock and findings	120,000,000
All other industries	3,428,000,000
Total value	$6,358,000,000

For the year ending July 1, 1951, the commonwealth appropriated $6,347,938 to maintain correctional institutions including the state prison (600 inmates), prison colony (825 inmates), reformatory for men (725 inmates), reformatory for women (250 inmates, including 30 babies under two years) and the state farm (2,000 inmates, including the criminally insane).

Banking and Finance.—Revenue receipts of the commonwealth for the fiscal year ended June 30, 1951, were $386,513,744.73. This included $86,645,000 collected from the sale of bonds, but it did not include any taxes collected by the state for distribution to the cities and towns. Expenditures for state government amounted to $357,464,211.90. The direct gross debt was $208,613,800, less a sinking fund of $6,017,140.15 for a net debt of $202,596,659.85.

The assessed valuation of the state as of Jan. 1, 1950, was $7,230,068,313. The estimated valuation on Jan. 1, 1951, was $7,510,028,145. As of June 30, 1951, bank deposits in savings banks amounted to $3,357,966,696; total assets of commercial departments of trust companies, $1,121,013,000; bank deposits in savings departments of trust companies, $252,265,000; total assets of credit unions, $81,447,487; total assets of co-operative banks, $657,678,711.

Agriculture.—Cash receipts from the marketing of farm products in 1950 totalled $173,957,000. This included total crop cash receipts of $55,742,000 and total livestock products of $118,215,000.

Manufacturing.—In 1951 there were 2,033 labour unions in Massachusetts. The total membership as of Jan. 15, 1951, was 605,220 (437,545 males and 167,675 females), an increase of 38,831 members over 1950.

(D. A. Dy.)

Mineral Production.—Table III shows the tonnage and value of mineral production in the state in 1949 for commodities having a value in excess of $100,000, and the corresponding data for 1950, so far as they were available at the end of 1951.

Table III.—*Mineral Production of Massachusetts, 1949–1950*

(Short tons)

Mathematics.

Publication of research papers in mathematics continued at a high rate during 1951. There were several outstanding discoveries, but the details are too technical to be stated here. The year was marked by two events of great significance for the future of mathematics.

The first of these events was the creation of a new division of mathematics in the National Research council. Before 1951 mathematics was a part of one of the eight divisions of the council, the division of mathematical and physical sciences. It was felt that the interests of that division were too diverse to represent the needs of mathematics adequately, and the council as a whole agreed with this point of view and split the division into a division of the physical sciences and a division of mathematics in Jan. 1951. The first officers of the new division were H. Marston Morse of the Institute for Advanced Study, Princeton, N.J., (chairman), Marshall H. Stone of The University of

Chicago (vice-chairman) and John R. Kline of the University of Pennsylvania, Philadelphia (executive secretary). Kline resigned later and was succeeded by James A. Clarkson of Tufts college, Medford, Mass.

The division was well organized by June 1951. The members of the division included representatives of the American Mathematical society, the Mathematical Association of America, Inc., the Institute of Mathematical Statistics, the Biometric society, the National Academy of Sciences, the American Physical society, the Association for Symbolic Logic, the Econometric society and the National Research council division of engineering and industrial relations.

Morse and Saunders MacLane were representatives of the division on the National Research council committee advisory to the office of ordnance research. The office of ordnance research accepts proposals for contracts to do research, and each such proposal is referred to the National Research council committee for consideration. There is a similar committee in mathematics advisory to the office of naval research, a committee advisory to the Fulbright commission and a fellowship committee.

A committee on operations research was studying the problem of finding and training specialists in that field. There was a committee on high speed calculating machines, a committee on editing the quarterly journal of mathematical tables and other aids to computation and a committee on scientific conferences. There was also a committee on the revolving fund for publication of mathematical books to advise on and encourage the publication of mathematical books not readily financed through other channels.

The division was trying to obtain a detailed background knowledge of the mathematical staff, student body, potential for increased mathematical research, and need of support in eighty or more graduate schools. It was expected that a committee on the regional development of mathematics would be appointed later.

A new and very important committee was the United States national committee for mathematics. This committee of the division of mathematics of the National Research council was created in response to the second significant event of 1951, the creation of an International Mathematical union. The union was established in Sept. 1951, with ten countries adhering. Five additional countries later adhered. A list of the members follows together with the names of the national adhering organizations, and the group in which the country adheres.

Australia (Group I). Australian National Research Council.
Austria (Group I). Oesterreichische Mathematische Gesellschaft.
Canada (Group II). Canadian Mathematical Congress. Société Mathématique du Canada.
Denmark (Group II). Det Kongelige Danske Videnskabernes Selskab.
Finland (Group I). Soumalainen Tiedeakatemia. Academia Scientiarum Fennica.
France (Group IV). L'Académie des Sciences de Paris, le Centre National de la Recherche Scientifique et la Société Mathématique de France.
Germany (Group IV). Deutsche Mathematikervereinigung.
Great Britain (Group V). The Royal Society.
Greece (Group I). Académie d'Athénes.
Italy (Group IV). Unione Matematica Italiana.
Japan (Group IV). Science Council of Japan.
Netherlands (Group II). Wiskundig Genootschap voor Nederland.
Norway (Group I). Det Norske Videnskaps Akademi i Oslo.
Peru (Group I). Academia Nacional de Ciencias Exactas.
United States of America (Group V). National Academy of Sciences—National Research Council.

The group to which a country belongs determines the number of votes of that country in the general assembly. The first general assembly was set for March 6–8, 1952, in Rome, It.

The new Union was expected to do much to promote the cooperation of the mathematicians of the world and the wider dissemination of the results of mathematical research. (*See* also Standards, National Bureau of.) (A. A. At.)

Maurice and Laura Falk Foundation, The: *see* Societies and Associations, U.S.

Mauritania: *see* French Union; French West Africa.

Mauritius. British colony in the Indian ocean with island dependencies, of which the largest are Rodriguez and Diego Garcia. Area: Mauritius 720 sq.mi.; Rodriguez 42 sq.mi. Pop.: (1950 est.) 489,000; (1944 census) Mauritius 419,185 (57% Indo-Mauritian), Rodriguez 11,885, Diego Garcia 501, other dependencies 1,077. Languages: Creole *patois,* Hindi, French and English. Religion: mainly Roman Catholic among those of European, African or mixed descent. Capital, Port Louis. Governor in 1951, Sir Hilary Blood.

History.—The malaria eradication campaign, which had been successful by April 1950 in reducing by about 80% the incidence of malaria in the treated areas, had by the end of that year virtually eliminated the disease from the island. Efforts during 1951 and the remaining year of the scheme were being concentrated on consolidation and the ensuring that no new infection was introduced from overseas. A development loan of £2,615,000 was over-subscribed and additional taxation to meet its charges was successfully levied. Income tax and a noncontributory old age pension scheme were also introduced. Another experiment begun during the year was the export of locally grown tobacco to the British market. Nearly 45,000 lb. were exported in January.

Education.—Primary pupils (1950) 51,281; 2 government secondary schools and several grant-aided; 1 teachers' training college.

Finance.—Currency, Mauritius rupee (Rs.1 = 21 cents U.S.). Budget (1950 act) revenue Rs. 55,100,000; expenditure Rs. 50,200,000.

Foreign Trade.—(1950) Imports £13,000,000; exports, £11,300,000. Principal exports: sugar, fibre, tea. Production (1950): sugar 456,000 tons, tobacco 427,500 kg., aloe fibre 1,173 tons, tea 750,000 lb.

(K. G. B.)

Maybank, Burnet Rhett (1899–), U.S. senator, was born at Charleston, S.C., on March 7. After service with the U.S. navy during World War I, he graduated from the College of Charleston, then entered a cotton export firm. He was an alderman of Charleston from 1927 to 1931, mayor of the city from 1931 to 1938 and governor of South Carolina from 1939 to 1941. He was elected U.S. senator from South Carolina on the Democratic ticket in 1941 to fill the unexpired term of James F. Byrnes when the latter was appointed to the U.S. supreme court. Maybank was re-elected to the senate in 1942 for the term 1943–49 and in 1948 for the term 1949–55. In Jan. 1949 he was named chairman of the senate banking and currency committee.

In the senate, Maybank ordinarily followed the Democratic party line. He did, however, support the Taft-Hartley law and joined the southern Democrats in blocking civil rights legislation. In Jan. 1950 he introduced a $2,200,000,000 housing bill for construction of more than 200,000 homes. After the Chinese intervention in Korea, he favoured use of the atom bomb by U.S. forces. In 1951 he again parted with the administration when he opposed its attempts to institute price rollbacks.

Meat. The average U.S. civilian in 1951 ate about 141 lb. of meat as compared with 143.7 lb. in 1950, but only 126.2 lb. prewar; of the total for four types, beef accounted for 58 lb. (63 lb. in 1950); veal declined from 7.9 lb. in 1950 to 7 lb. in 1951; mutton and lamb dropped 25% from 4 lb. to 3 lb.; and pork increased 6%, from 68.8 lb. in 1950 to 73 lb. in 1951. The total of approximately 22,365,000,000 lb. for the year was slightly more than the production for 1950, but very definitely lower than the 23,370,000,000 lb. for the year which had been forecast late in 1950.

Supply prospects for the year ahead, as forecast, were for an increase of more than 1,000,000,000 lb. over the 1951 supply, to 23,550,000,000 lb., an increase primarily in beef, which would

Table I.—*U.S. Meat Production*

Total. . . .	23,550	22,365	22,109	21,446	23,431	17,675

*Forecast by U.S. Department of Agriculture.

depend upon a slowdown in the rate of herd building. Though the prospect of a cut in the spring pig crop for 1952 indicated that pork would no longer be in a position to meet extra demands of meat eaters, there were indications that chickens, which provided 4,511,000,000 lb. of meat in 1951 as compared with 4,069,000,000 lb. in 1950, and turkeys which contributed 837,000,000 lb. in 1951 (only 755,000,000 lb. in 1950), would be available in equal if not larger amounts in 1952.

Fish, 11.4 lb. of which were consumed per person in 1951 and 1950, were expected to continue in abundance. Storage stocks and imports increased during the year.

Tailored price ceilings were imposed on beef in May 1951; ceiling prices on beef at wholesale and retail, except for minor adjustments, were not changed. Slaughter quotas on cattle, calves, hogs and sheep and lambs were banned by amendments to the Defense Production act. Rollbacks scheduled for Aug. 1 and Oct. 1 were cancelled. There were rumours of black markets, of producer strikes, of consumer strikes and of a complete breakdown in meat production and distribution. Plentiful supplies of pork, chicken, turkey and fish were probably to be credited with the situation remaining fairly well in hand.

As to prices, the spread between beef and pork was abnormally wide during the year, with the better cattle near $40 per hundredweight much of the year, and with butcher hogs below $20 per hundredweight during periods of heavy movement. Actually, though there were sharp fluctuations during the year, the index of prices farmers received for meat animals in Dec. 1951 was 379 as compared with 360 a year earlier.

Beef imports into the United States from Canada increased sharply, particularly before August. The U.S. imported about 35,000,000 lb. of hams, shoulders and bacon in 1951, more than 10,000,000 lb. of it from Canada and more than 13,000,000 from the Netherlands. The U.S. meat market was sufficiently attractive, price-wise, to draw Irish beef and Icelandic lamb. U.S. exports of meat and meat products in 1950–51 were 122,104,000 lb. valued at $37,437,000, very little more than in the previous year.

Meat output in the principal livestock countries of the world (excluding the far east) was estimated at 72,500,000,000 lb. in 1950, a new record, 5% more than in the previous year and about 6% more than prewar. Leading countries were the U.S. (22,236,000,000 lb.), Argentina (4,930,000,000 lb.), France (4,310,000,000 lb.), western Germany (3,596,000,000 lb.), Brazil (2,947,000,000 lb.), the U.K. (2,631,000,000 lb.), Australia (2,248,000,000 lb.) and Canada (1,916,000,000 lb.).

Meat consumption per capita in that year in some of the more important meat-consuming countries was: Argentina, 232 lb.; Uruguay, 230 lb.; New Zealand, 219 lb.; Australia, 214 lb.; U.S., 133 lb.; Canada, 129 lb.; Paraguay, 125 lb.; Denmark, 124 lb.; the U.K., 110 lb.; France, 102 lb.; Sweden, 99 lb.

International trade in meat in 1950 amounted to nearly 4,000,000,000 lb., still substantially less than the prewar average of 4,550,000,000 lb. Argentina, in spite of reduced supplies, contributed about one-fourth of the total, new Zealand 19%, Denmark 15%, Australia 12%, Uruguay 7%, and Canada 5%. Argentina's exports declined in 1951 and were officially restricted in spite of making cattle delivery compulsory.

In the U.K., fresh meat consumption in the first half of 1951 was only about half the level of 1050; the ration was cut very severely and the matter became a political question of serious import. An effort to increase home-grown supplies was made as well as to find more foreign supplies, even in France. A 15-year Anglo-Australian meat production agreement was signed, guaranteeing minimum prices equal to those paid Australia in 1950–51 for six years on beef and veal and three years on mutton and lamb. The Anglo-Uruguayan contract was renewed, and Britain and Argentina signed a new agreement in April after a ten-month deadlock, the new agreement calling for somewhat less meat and higher prices (as high as £146, or $410.60, per long ton) for chilled beef. (J. K. R.)

Medical Rehabilitation of the Disabled.

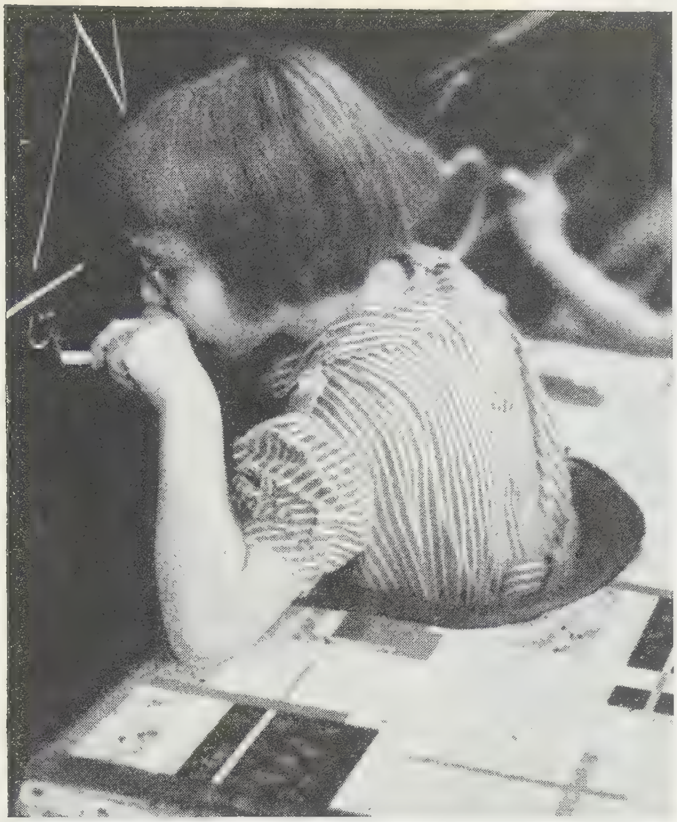
The rapid expansion of international rehabilitation efforts and the continued need to rehabilitate and place more handicapped workers in defense production were the two outstanding highlights of medical rehabilitation of the disabled during 1951.

As the tempo of defense production increased in both the United States and Great Britain, handicapped workers found their services and skills more readily accepted by industry. In the United States 277,000 handicapped workers were placed in jobs through the joint efforts of the federal-state employment services, an increase of 100,000 over the previous year. Several hundred thousand other handicapped workers found jobs by themselves or with the aid of voluntary agencies. The Office of Defense Mobilization appointed a special task force to study methods of rehabilitating more handicapped workers and placing them in jobs in support of the mobilization program.

Efforts to rehabilitate and place more handicapped workers in defense efforts were handicapped by the lack of rehabilitation programs in general hospitals and the lack of trained personnel, particularly of physicians and physical therapists. This need was accentuated not only by the needs arising from mobilization, but also by the increase of chronic disease resulting from increasing age level of the population. For example, while the population of the United States had doubled after 1900, the number of persons over 65 had almost quadrupled. Although disability strikes all ages, it is found much more frequently in the older age groups. In one comprehensive study, the ratio of acute and chronic illness among persons over 65 years of age was found to be 279 per 1,000 as contrasted with 171 per 1,000 among persons of all ages.

Although progress was slow because of the lack of both personnel and funds, there were indications during the year that a growing number of general hospitals were starting rehabilitation services. Among 1,600 hospitals of 50 beds and more responding to a questionnaire sent by the Commission on Chronic Illness, 65 reported they were operating organized rehabilitation services. Eighteen of these were functioning in special wards; in the other 47, the rehabilitation patients were not segregated. It was significant that a substantial number of those with rehabilitation services were located in general hospitals of less than 250 beds.

A fundamental change in policy affecting the rehabilitation



CEREBRAL PALSY VICTIM at a special public school class in New York city for children similarly handicapped. Blackboard writing (above) is made easier for them by support from a "standing table" and writing chalk set in rubber for easier grasping

of military casualties in the United States was made when the department of defense and the Veterans administration announced that military casualties whose disabilities were so severe as to require extended rehabilitation and would preclude return to active military duty would be transferred as soon as possible to the specialized rehabilitation centres of the Veterans administration. The new plan, it was stated, would insure better rehabilitation services for such casualties and would save highly trained personnel by eliminating rehabilitation services in the three military services which would duplicate those provided by the Veterans administration.

In the international field, a new rehabilitation unit was established in the Division of Social Affairs of the United Nations to co-ordinate the fellowship, technical assistance, consultation and publication services of the United Nations and its specialized agencies. As a result, it was expected that the international exchange of students, consultants and technical data would be greatly increased.

During the year a number of international conferences dealing with various aspects of rehabilitation were held. Among these were the second International Poliomyelitis conference in Copenhagen, Den., the organization meeting of the World Confederation for Physical Therapy in Copenhagen, the second International Gerontological congress in St. Louis, Mo., and the fifth world congress of the International Society for the Welfare of Cripples in Stockholm, Swed.

Among the most heartening reports at the latter meeting was that of L. Guttmann of the Spinal Injuries centre at Stoke Mandeville, Eng., who said that of more than 700 paraplegics trained in this centre, 74% were living out of the hospital and most were employed full time.

The conclusion of the poliomyelitis conference which was arranged by the Danish National Foundation for Infantile Paralysis and the National Foundation for Infantile Paralysis of the United States was that although the long-range objective of a single vaccine that would provide protection from poliomyelitis had not been achieved, prospects were becoming increasingly hopeful. It was noted that as a result of improved methods and rehabilitation, there was much less physical disability from this disease. (*See* also VOCATIONAL REHABILITATION, OFFICE OF.)

Medicine.

Great changes were occurring in medical practice in 1951 because of the development of new methods of diagnosis and treatment of disease. Pneumonia, which not long before had been second in the list of causes of death, had moved down to fifth. Accidents had moved up to fourth place. The leading causes of death in 1951, contrasted with 1901, follow:

1901	1951
Tuberculosis	Heart disease
Pneumonia	Cancer
Diarrhoea and enteritis	Brain haemorrhage
Heart disease	Accidents
Early infancy and congenital malformations	Nephritis
Brain haemorrhage	Pneumonia and influenza
Accidents	Tuberculosis
Cancer	Premature birth
Bronchitis	Diabetes
Diphtheria	Congenital malformations
Typhoid	Suicide
Influenza	Cirrhosis of liver
	Ulcer of the stomach

Bronchitis, diarrhoea and enteritis, diphtheria and typhoid were no longer among the leading causes of death in 1951. Many other infectious diseases formerly responsible for thousands of deaths were now controllable by new drugs. Indeed, progress in the discovery of new pharmaceuticals and expansion of use of products already known represented the outstanding medical advances of 1951.

Research with cortisone and ACTH proved to be the centre of interest in various aspects of medical progress during 1951. The specific action of these substances in controlling inflammation gave opportunity for use in a great variety of disorders concerned with the collagen or connective tissue system of the body.

Especially significant was the development of cortisone in a new form (Compound F); the original cortisone was Compound E of the adrenal hormones. Cortisone was developed in the form of tablets which can be taken by mouth. A new form of ACTH was offered which when injected acts for a longer time than did the first form.

These drugs were tried particularly in inflammatory conditions affecting the eye and for the prevention of sympathetic ophthalmia. Other uses were for toxaemia of pregnancy; intractable asthma; sarcoidosis; haemolytic anaemia; thrombocytopenic purpura, in which there is a lessened number of blood platelets; snake bite; and various forms of allergy and nervous disorders. (*See* CORTISONE AND ACTH; ENDOCRINOLOGY.)

Drugs.—Approximately 160 preparations of antibiotics were under investigation in 1951, including substances derived from many common plants and living materials such as tomatidine from the tomato, radicin from radishes, lupulin from hops, garlicin from garlic and fumagillin from a fungus that causes aspergillosis.

The leading products were still penicillin, streptomycin, chloromycetin, aureomycin and terramycin. Applied locally only were bacitracin and tyrothricin. Intensive research was being made on an antibiotic that may attack virus diseases, especially small viruses, such as those that cause poliomyelitis and epidemic encephalitis. Two such experimental substances were called viscosin and ehrlichin.

Interest was shown in the possible combination of several antibiotics in one dosage to reach a greater variety of germs and also to attack organisms that may have developed resistance to a single antibiotic. Aureomycin, chloromycetin and terramycin were shown capable of interfering with the action of penicillin, but the reverse was not true.

Germs may develop resistance to antibiotics after a time so that a new one must be substituted. Tuberculosis of the meninges or coverings of the spine used to be almost invariably fatal. One clinic reported more than 90% of the cases ended in death. With streptomycin and PAS, or paraminosalicylic acid, less than 15% died. The germs could become resistant to streptomycin but substitution of viomycin overcame them.

The sulfonamide or sulfa drugs continued to be studied. There was a trend toward using combinations of several such drugs in order to get a total beneficial effect with less toxic effect. Most widely used of the sulfa drugs was sulfadiazine, with sulfamerazine and a new preparation called gantrisin, which was widely used because of lessened toxicity, closely following.

Interest in synergism in the use of drugs was revived since various ways in which one drug may enhance or improve the action of another had been shown. Thiamin aids the action of local anaesthetics on the nerves. Potassium iodide improves the action of streptomycin in tuberculosis. Hyaluronidase has a spreading action which improves the rapidity of absorption and therefore the action of injected drugs.

Many new products were tested for action on high blood pressure; the most effective apparently was hexamethonium bromide, whose action is so efficient that danger may result from too sudden and too complete reduction of pressure.

"Dromoran" was the name given to a new opium derivative used for controlling pain. This product brought medicine closer to the development of a long-sought objective—a synthetic morphine.

Benemid, a carinamide, was proved valuable for elimination of uric acid in gout.

Banthine, welcomed for its effect on the sympathetic nervous system, and particularly on gastric ulcer, was found useful for controlling excessive sweating called hyperhidrosis.

Flies and mosquitoes developed resistance to DDT and then became susceptible to a new insecticide called "pyrolan."

The antihistaminic drugs, useful in a wide variety of allergies, were tested against poison ivy, dysmenorrhoea, colds, food poisoning, drug sensitivities and many other disorders which seemed to be associated with release of histamine in the body.

Radioactive Isotopes.—Radioactive iodine was shown to be especially useful in overcoming excessive action of the thyroid gland and greatly reduced the use of the thiouracils and also surgical procedures. The isotope likewise was found to be useful in more accurate determination of the basal metabolism. A radioactive substance called gold 198 when taken into the body localized in tumours of the ovary with results similar to those secured with deep X-ray treatment. Cobalt 60 was investigated as a substitute for radium in the treatment of cancer and even as a substitute for X-ray machines. Many other radioactive substances were used for the diagnosis of the rate of blood flow, for localizing brain tumours and for other uses depending on the tendency of certain elements to localize in certain tissues of the body.

Surgery.—The great numbers of men wounded in war and injured in industry in 1951 put new emphasis on methods and devices of rehabilitation. A new artificial limb was developed which was held in place by suction, making supporting straps unnecessary. Another invention was a small motor to aid motion.

MEDICAL STUDENTS at St. Louis university, Mo., listening simultaneously to the heartbeat of a patient. Sounds were picked up by a sensitive microphone and transmitted to earphones held by each student to his stethoscope diaphragm, a method of mass teaching introduced in 1951

New plastic procedures were worked out for replacing a lost thumb with a transplanted finger.

Surgery of the heart and blood vessels improved greatly in techniques, so that literally thousands of operations were now being done for narrowing of the heart valves and narrowing of the aorta, the large blood vessel leading from the heart; for improving the circulation of "blue babies"; and for aiding circulation to the vital organs such as lungs, brain, liver and the heart itself.

For revival when the heart stops during surgery, a technique was developed which involved opening the chest and massaging the heart with the hand and utilizing electric shock to stimulate movement of the heart. In one instance a patient was kept alive for several hours by this artificial method until the body recovered ability to renew the automatic action of the heart.

Wide success of surgery of the lung was reported—removing one or more lobes or an entire lung with complete recovery or long survival. Primary cancer of the lung was increasing in frequency, and some surgeons insisted on a relationship between excessive cigarette smoking and cancer of the lung and also on the effects of other irritant substances.

Vitamins.—Vitamin B_{12} was proved to be the most stimulating blood-producing substance. More emphasis was placed on the effects of vitamin P on the blood capillaries. Pyridoxine from the vitamin B complex was associated particularly with seborrhoeic or oily conditions of the skin. Vitamin nutrition is influenced by the antibiotic drugs, and addition of even small amounts of penicillin, aureomycin or terramycin to the diets of animals greatly increases their growth.

Cancer.—Removal of both adrenal glands in cases of cancer served to bring about striking improvement in 7 of 14 patients who were kept alive by administration of the newly isolated adrenal hormones such as cortisone and desoxycorticosterone. New blood tests for cancer were nearing perfection. Nitrogen mustards and urethane seemed to have influence in leukemia as did also certain antifolic acid substances called A-methopterin and A-denopterin. The uses of the Papanicolaou test were expanded to cover cells derived from lungs, lower bowel, stomach and other areas of the body. More attention was given to the possibility that some forms of cancer are related to virus transmission, since research on the Bittner virus showed that it can be transferred in the milk of mice and cause cancer in mice with hereditary strains of the disease. Studies showed that cancer of the breast has a specific hereditary tendency and is about three times more common among daughters of women with breast cancer than it is in the general population. Cancer of the breast develops about ten years earlier in the daughter than in the mother.

More evidence developed that a close relationship exists between the glandular activities and the growth of the cells seen in cancer.

Other Developments.—New research on virus disorders established viruses as causative in herpangina and pleurodynia, also called Bornholm disease. The virus responsible was now known as the Coxsackie virus, first isolated in a community of that name in New York.

Three types of the poliomyelitis virus immunologically distinct had been recognized as responsible for infantile paralysis epidemics in the United States. A specific vaccine had been worked out and was under test in 1951, as was also gamma globulin, which seemed to be effective in preventing the disease when given soon enough in adequate dosage. A blood test was also under process of perfection.

A new method of artificial respiration was being used as a substitute for the well-established Schafer method. In the new method, known as the Holger Nielson or hip-lift method, the worker kneels in front of the patient and raises the patient's hips. In the Schafer technique the worker kneels astride the patient, facing the same way, and presses down. (M. Fi.)

Chiropractic.—By the close of 1951, more than 32,000,000 persons had received chiropractic treatment since the profession was founded by Daniel David Palmer in 1895. Nearly 2,000,000 new patients are treated by approximately 22,000 doctors of chiropractic each year.

As of 1951, the National Council on Education had accredited 14 chiropractic colleges, teaching a minimum standard of four academic years, comprising at least 4,000 hours of instruction. Legislative regulation on a four-year basis had been achieved in 44 states, 5 Canadian provinces, the District of Columbia, Alaska and Hawaii. (L. M. R.)

Osteopathy.—A research program both fundamental and clinical in nature on the further development of the osteopathic concept was under way during 1951 in each of the colleges of osteopathic medicine. A U.S. navy research grant to one of the colleges also became effective in 1951. Grants in cancer teaching had been made to all these colleges by the United States public health service. Other research projects were financed directly by the profession through the Osteopathic Progress fund, which was also responsible in large part for the maintenance and expansion of the colleges. The fund, supported almost exclusively by the profession with an accomplished goal of $7,000,000, had a continuing goal in 1952 of $22,500,000, necessarily widened to include the general public.

There were six accredited osteopathic colleges in the United States during 1951 which admitted students who had 60 semester hours of preosteopathic (premedical) credit as a minimum. (R. P. K.)

Great Britain.—The 20,000 general medical practitioners in the United Kingdom did not possess any representative body of their own, such as the three royal colleges, though they were the largest section of the profession. True, there was a section of general practice in the Royal Society of Medicine and a general practices committee of the British Medical association; but John Hunt and F. M. Rose, who sponsored the project in letters to the *Lancet* and the *British Medical Journal* (Oct. 13, 1951), wanted a college of general practitioners which would be an academic headquarters, run for practitioners by practitioners, to develop medical education, encourage research and raise the status and quality of general practice, perhaps granting a diploma on the lines of the fellowships of the existing royal colleges. This was no new idea, for a college of general practitioners had come close to being established by act of parliament about 100 years before, when it was proposed by Sir James Graham, then home secretary, as a step toward settling the constant squabbles between the various professional bodies; that scheme fell through because of dissension among the practitioners themselves, and order was not fully restored until the General Medical council was formed in 1888.

The new plan was warmly supported by the presidents of the royal colleges and in principle by the medical journals. The *Lancet* feared that it might extend the fragmentation of the profession, and therefore advocated a faculty of general practitioners attached to all three royal colleges. The scheme's sponsors, however, thought that if a college was impossible, a better alternative would be an academy of general practice, linked with the royal colleges, the Society of Apothecaries (one of the companies or guilds of the city of London, granting a recognized medical qualification, the L.M.S.S.A.) and the British Postgraduate Medical federation (a constituent institution of London university co-ordinating postgraduate teaching in London). The best choice seemed to be the academy, for which there was an admirable precedent in the United States.

Metallurgy. The defense program furnished the impetus for the development of many new and interesting metallurgical developments during 1951, some of the more important of which are described briefly in the following paragraphs.

Bismuth.—Ductile wire and ribbon of bismuth were developed. Bismuth has unique electrical properties that make it useful in certain types of electrical instruments.

Cast Iron.—Gray cast iron in which the carbon has been spheroidized by the addition of nickel has about double the tensile strength of ordinary cast iron, with no decrease in machinability. Annealing reduces the tensile strength but develops a remarkable degree of ductility, indicated by 17%–23% elongation.

Cobalt.—The demand for cobalt was so enhanced by its use in high-temperature alloys for jet engines and gas turbines that not only were civilian uses curtailed but steps were also taken to reduce the cobalt content of the alloys in use and to develop others with lower cobalt content.

To help offset the cobalt shortages, a cobalt smelter, to be supplied with ore from Idaho, was under construction at Garfield, Utah in 1951.

Magnesium.—The substitution of magnesium for zinc in dry battery cases promised double life and a higher and more constant voltage.

Platinum.—New smelting and refining facilities were being installed in South Africa for treatment of the local platinum ores and concentrates that in the past had been sent to England. Platinum output had already been increased in 1951.

Silver.—A silver-clad sheet steel became available as a substitute for brass, nickel and nickel silver. It can be stamped, bent, drawn, spun, brazed and soldered.

Titanium.—The production of high-purity titanium metal was passing from the pilot plant stage into full commercial output. After production as metal sponge the metal is melted in an arc or induction furnace and cast into ingots weighing up to 1,000 lb. Ingots may be rolled, forged or drawn. Extensive development work was under way on the uses of pure metal and of numerous alloys in the cast, rolled and forged condition. The metal was quoted in 1951 as sponge, powder, forgings, round or square bars, plated, sheets, strip and wire at prices ranging from $5 to $15 per pound.

Continuous Casting.—The use of continuous casting advanced well past the experimental stage, and was in commercial use in a number of plants. (G. A. Ro.)

Metal Prices and Production: *see* MINERAL AND METAL PRODUCTION AND PRICES.

Meteorology.

Most meteorologists saw little reason to believe that the efforts of cloud seeders had made much difference in the amounts or distribution patterns of rainfall during 1951. Their exhaustive studies of weather maps and precipitation statistics showed nothing out of the ordinary in weather and climate, since these are always "unusual." In a paper published in the February issue of the *Bulletin* of the American Meteorological society, H. G. Houghton summarized existing knowledge and conclusions in words which probably expressed the consensus of authoritative meteorological opinion on the subject. He stressed the importance of further research to determine the practical possibilities. Economic and commercial incentives had reinforced scientific curiosity to urge experimentation and research that would bring answers to questions about artificial rain making and would also advance meteorological knowledge in many other ways.

Cloud Physics Research.—The natural formation of rain and snow in the atmosphere involves many complex variables—air pressure, temperature, humidity or vapour pressure, wind flow, vertical air currents, electrical charges and probably other unknown quantities. Better understanding of the behaviour of these variables in the free air and especially an understanding of their interrelations were foremost in interest for research meteorologists in 1951. Answers to these questions were necessary not only for intelligent application of cloud seeding techniques for precipitating rain or snow but also for progress in meteorological science in general and for improvements in weather forecasting in particular. It was generally agreed that only in part could the facts be determined by common laboratory research methods where space limitations prevent exact duplication of the gross processes that occur in the atmosphere. Much research would have to be performed through observations and measurements from aircraft flown into rain-forming clouds where observers could study nature at work in creation of clouds and snow or rain.

Research workers were agreed upon several basic principles established by recent studies. In the laboratory as well as in the atmosphere, water vapour (gaseous) does not condense into water droplets (visible) at ordinary temperatures unless suitable nuclei are present, even though the vapour is cooled far below normal saturation point. Usually there are enough nuclei present in the air to permit almost unlimited condensation as separate small droplets without coalescence into drops sufficiently large to fall as rain unless some mechanism is present to interrupt multiplication of droplets.

Most meteorologists apparently believed there are at least two such mechanisms to account for natural formation of rain. The first and best known is precipitation of ice crystals either spontaneously from water vapour or on suitable nuclei in the very cold air at high altitudes. When ice crystals fall among supercooled cloud droplets they grow rapidly into snow flakes at expense of the cloud droplets because of differences in saturation vapour pressures with respect to ice and water. Transformation from water droplets into ice particles in these circumstances is phenomenal and has been repeatedly demonstrated in the laboratory and in the atmosphere. In large clouds the ice particles may grow to good-sized flakes and fall to the ground either as snow or as rain after gathering the water from many droplets during descent. In the tropics, however, rain occurs without the initial ice particle stage. There the mechanism of rain formation may depend on presence of larger drops whose rates of fall would be different from those of smaller droplets and which might therefore grow by accretion from collisions with smaller droplets. Just how this mechanism would operate in nature was unknown and it was the object of intensive research by Ross Gunn in his laboratory in an 800-ft. mine shaft in Arizona, and by the Cambridge Research laboratory and the Massachusetts Institute of Technology, where radar was being used to assist in studies of cloud physics. Many other investigators were at work on these problems either in field observations or in theoretical studies. In Australia, E. G. Bowen tried introducing large water droplets into convectional clouds near their bases and reported some success in initiating showers by this means.

Tornado Forecasting Research.—To study synoptic conditions that give rise to tornadoes the weather bureau organized a network of closely spaced stations in southeastern Kansas and northern Oklahoma. The network of 135 stations was equipped in a few places with open-scale microbarographs which would record pressure-jump phenomena. The study was based on the assumption that the intersection of two pressure-jump lines would be significant in locating where tornadoes might develop. During 1951 this network was not traversed by a tornado and the studies were not conclusive. Some progress in forecasting tornadoes was reported by E. J. Fawbush, R. C. Miller and L. G. Starrett at Tinker Air base, Oklahoma City, Okla. Although the physical basis for their forecasting criteria was not completely understood, their practical rules based on moisture content and instability of the air masses aloft gave success in a number of cases where they forecast tornadoes. In other places radar equipment was in use to "see" destructive thunderstorms and possibly tornadoes after they actually formed at

sufficient distance to permit issue of warnings 30 minutes or more in advance of their arrival. Results in this method also were still inconclusive. Other studies directed toward identification and tracking of fronts and severe storms were published by M. H. Gilmore in his paper on frontal microseisms and by G. P. Cressman in his paper on the development and motion of a typhoon in the western Pacific. These papers were indicative of the breadth of meteorological research.

Meteorological Meetings and Publications.—The annual scientific sessions of the American Meteorological society were held in New York city the last week in Jan. 1951, in conjunction with the meetings of the Institute of the Aeronautical Sciences. The society adopted by an overwhelming vote of the membership a code of ethics for guidance of professional meteorologists. An international conference on atmospheric turbulence was held in Cambridge, Mass. in June to bring together research studies on the structure of turbulent flow, its effects, especially in eddy fluxes and eddy diffusion, and the latest problems of evaporation and interchange of heat and moisture between the ocean's surface and the overlying air. The conference was attended by representatives from research institutions in Australia, Canada, the United Kingdom, Japan and many universities and laboratories in the United States. Other noteworthy international meetings were held by the World Meteorological organization, in Paris, and by the Meteorological association of the International Union of Geodesy and Geophysics, in Brussels, Belg., during the latter part of August. Among the publications welcomed by meteorologists everywhere were the *Compendium of Meteorology,* compiled and published by a special board of editors under direction of the American Meteorological society, and the sixth revised edition of the *Meteorological Tables,* a much-enlarged volume published by the Smithsonian institution late in 1951 with the collaboration of the U.S. weather bureau.

World Meteorological Organization.—In Paris during March 1951, the 73-year-old International Meteorological organization was dissolved and the new World Meteorological organization, whose convention had been drawn up in Washington, D.C., in 1947 and subsequently ratified by most of the principal nations, came into being. Approximately 60 states and territories were members of the organization. In December the World Meteorological organization became a specialized meteorology agency of the United Nations.

The technical work of the organization was to be carried on through six regional associations and eight technical commissions. The latter comprised the commissions of bibliography and publications, instruments and method of observations, aerology, climatology, agricultural meteorology, maritime meteorology, synoptic meteorology and aeronautical meteorology. The Executive committee of the World Meteorological organization was to be responsible for general conduct of the technical program of the organization between the congresses of the organization, which were expected to be held at intervals of two to four years.

Anomalies in the Weather of 1951.—Jan. and Feb. 1951 were not unusual in the average distribution of winter temperature in the United States except for southern Texas, where freezing temperatures for the second successive year caused wide-

CHARTING WINDS by tracking a balloon at the U.S.A.F. air weather station in Orlando, Fla., where a study of thunderstorms was conducted in 1951

spread loss of fruit orchards. Relatively, the warmest weather was in Maine, where the winter temperature averaged about 6° F. higher than normal. In precipitation, however, there were serious deficiencies in the northern plains states and over most of the southern half of the country, especially serious in southern California, Arizona and southern Texas where the rainfall was only about 10% of normal for the season. Dry weather which prolonged the drought of 1950 brought water shortages in many places more critical than any time in recorded history.

At the beginning of January, snow covered the northern states practically everywhere north of the 40th parallel, except in the lower portions of Oregon. In the northern Cascades snow was 5 ft. deep or more, and in northern New England, New York, Wisconsin and Minnesota the depths were generally 12 in. or greater. Notwithstanding normal temperatures for the winter as a whole, the first week brought a cold air mass with temperatures almost 40° below zero in Minnesota and Wisconsin. Freezing weather extended southward over most of Texas. Cities along the Gulf coast recorded minima between 24° and 30° F. The last week in January brought another of the abrupt temperature changes for which the middle west is famous. On Jan. 26 the temperature at Goodland, Kan. rose to 79°. Eighteen hours later it had fallen to 3° as result of an arctic air mass which brought blizzard conditions in the northern Rockies and eventually carried freezing temperatures southward to many places on the Gulf coast. In Montana a temperature of 55° below zero was recorded at West Yellowstone.

Early in February an unusually heavy and widespread storm of sleet and freezing rain moved from southern Texas to the middle Atlantic coast, affecting most of the eastern states and causing severe damage to forests. Highway travel became impossible or extremely hazardous in many places. Schools were closed and in some cities power, water and communications were interrupted for two days or more. Another severe ice storm occurred in a wide belt from west central Texas to northwestern Missouri and southern Iowa on Feb. 15 and 16. The last of February the weather turned unseasonably warm with the average temperature for the week soaring to 18° above normal in Minnesota, but this was quickly followed by colder weather with heavy snows in the Dakotas, Minnesota, Iowa and Wisconsin giving an accumulation of snow in many localities to depths of 24 to 28 in. In sharp contrast to the week of warm weather in February, the average temperature for Montana and the Dakotas for the week ending March 13 ranged from 20° to 35° below normal. The lowest recorded at this time was 34° below zero in Montana. Snow remained on the ground the last of March to depths of 25 to 30 in. in Minnesota and northern Wisconsin. This month on the whole had temperatures below normal in all states west of the Mississippi, the greatest departure being 12° below normal in Montana, while the southern and eastern parts of the country enjoyed temperatures 2° to 4° above normal. Precipitation continued much below normal in the southwest.

April and May were characterized by unusually heavy rainfall in parts of the plains states, rains which saturated the soil and set the stage for the floods which occurred in July. The tropical revolving storms known as West Indian hurricanes rarely appear before June or July and do not reach their maximum frequency until September and October, but in 1951 an unusual hurricane skirted the coast of southern Florida on May 17 and moved slowly northward during the next few days. Its intensity was not sufficient to cause the gale winds and torrential rains usually brought by these cyclones.

Late in May winterlike invasions of cold air carried temperatures to readings below freezing in portions of northern Michigan and Minnesota, and during the first week in June another cold air mass brought snow and freezing temperatures to the northern plains states and extended as far south as Kansas. The mean temperature for the first week in June was 15° below normal in Montana and Wyoming. In the east, it was slightly above normal, the greatest average departures being 6° in the vicinity of New York city and Knoxville, Tenn. For the spring months as a whole temperatures averaged up to 4° below normal in the states from Louisiana and Mississippi to the Dakotas, Montana and Washington, and 2° to 4° below normal in the eastern and southwestern parts of the country. Precipitation anomalies were not significant except in Iowa, Nebraska, Kansas and Oklahoma, where for three months the precipitation was almost twice the usual amount. By the last week in June the continued heavy rains had brought flood stages to many of the rivers. In central and northeastern Kansas rainfall for the week ending June 26 amounted to 8 or 9 in.

The July floods in Kansas and Missouri aroused great interest not only because of their magnitude and the suffering and devastation they brought but also because many people thought they were the result of widespread discharge of silver iodide and dry ice into the atmosphere by commercial rain makers and individual ranchers in the semiarid regions of the west all the way from Mexico to the Canadian border. Most places in vicinity of the cloud seeding operations continued in need of rain, while the great plains states far to the east, where persistent spring rains had already given an excess of moisture, were the scene of still greater rainfall during June and July. Many residents in the affected areas said cloud seeding was responsible for the floods through some sort of delayed action or remote distance effect, but studies of synoptic weather analyses embracing the movements of air masses and interaction of frontal systems showed that the rains resulted from natural causes without any apparent influence by artificial seeding of clouds. This conclusion was substantiated later in August when the prolonged dry weather in the southwest was relieved by heavy rains associated with the aftereffects of a hurricane in conjunction with a common cold front without benefit of dry ice or silver iodide.

T denotes a trace of precipitation, less than 0.01 inch.

The July floods came from a long accumulation of rainfall beginning in April, increasing in amount during May and June and culminating in July with totals up to 12 and 15 in. in eastern Kansas and western Missouri during the two-week period ending July 17. These amounts were almost half the normal rainfall for the entire year. The soil had become so saturated that the water could no longer infiltrate into it but poured into the Missouri basin which was already filled to capacity and therefore overflowed. The vast quantities of moisture precipitated as rain had come from the Caribbean and the Gulf of Mexico borne on southerly winds in the upper air over Kansas. The behaviour of the fronts and cyclones was a common phenomenon to synoptic meteorologists and the heavy rainfall a usual result. Cold air masses that came down from northern Canada and the arctic from time to time lifted the moist southerly winds and produced the heavy rains. The fronts and air masses together with the resulting weather were unusual only in respect to their persistence in the same general region. In most cases such synoptic situations are displaced eastward and the locus of heavy rainfall moves on, but persistence of conditions like those over Kansas from May to July 1951 are not uncommon in meteorology. Their repeated appearances over the same river basin with such great flood potential was obviously coincidental.

A tornado associated with a cold front that moved across Minnesota on July 20 brought thunderstorms and heavy precipitation with total rainfall of eight and one-half inches within 24 hours at Maple Plains. The week ending July 31 saw temperatures normal or above almost everywhere in the United States. Weekly average temperatures were 9° above normal in the Dakotas. Heavy rains continued in the central Missouri valley through much of July and August and an all-time record was established for the year at Manhattan and Wichita, Kan., with totals of 60 and 50 in., respectively, highest previous annual amounts being 44 and 43 in.

By the end of August the prolonged and serious shortage of water in Arizona and other parts of the southwest had been relieved in most places by heavy rains which came as aftereffects of a distant tropical cyclone over Mexico assisted by cold air masses from the far north. The previous year (1950) was distinguished in Arizona by the least precipitation for any year since the beginning of meteorological records there (1895). Water reserves in the Salt river basin had dropped to approximately 5,000 ac.-ft. by Aug. 25, 1951, and extremely high temperatures aggravated the dry conditions. Meteorologists had long known that tropical cyclones were the means of lifting enormous quantities of water vapour from the ocean's surface into the upper air and transporting it hundreds of miles until it might eventually be precipitated as rain in connection with frontal systems in extratropical regions. A hurricane which traversed the Caribbean and crossed the coast into Mexico on Aug. 22 provided the moisture aloft which the winds eventually carried northward to Arizona where cold fronts were encountered and the moisture released, thus reversing the regime of dry weather that had held control in the southwest for so long. During the five days ending Aug. 30 more than 13 in. of rain fell on central Arizona. Reservoirs that had been almost dry received 200,000 to 300,000 ac.-ft. of water in storage. Later in the year snow to depths of 50 in. in some places was deposited on mountain ranges to give some assurance of a fair supply of water for the immediate future. The gross causes which led to these changes in moisture and precipitation regime in the southwest were clearly shown in the synoptic weather analyses, and there was no apparent connection with artificial cloud seeding. A few cloud seeders had surmised that excessive seeding might inhibit rather than contribute to formation of showers and there were at least some theoretical grounds for thinking so, but in both cases—the drought in Arizona and the floods in Kansas—the weather regimes changed from dry to wet or vice versa as a result of well-defined and large-scale changes in air masses and without regard to the presence or absence of silver iodide and dry ice discharged into the air by cloud seeders.

The first week in September brought temperatures up to 12° above normal in the eastern and southeastern half of the country and 9° below normal in Montana. This set the pattern for outbreaks of polar air over the northwest heralding an early touch of winter. Frost and below-freezing temperatures were rather general in the northern portion of the Rocky mountain region and on the high plateaus as far south as northern New Mexico and Arizona by mid-September. Another outbreak of cold air over the Great Plains brought frost to western portions as far south as Kansas in mid-September. The entire central portion of the country experienced subnormal temperatures, reaching 9° below normal for the week in Kansas. The Pacific coast states were above normal as were the Atlantic coast states, where departures were as much as 9° higher for the week than the weekly normal. For the month of September as a whole Montana averaged 6° above normal with lesser subnormalities in other north central states. The western, southern and eastern states were mostly 2° to 4° above normal.

For the last three months of 1951 weather was unusually close to normal for the continent as a whole. Average temperatures during October were within 4° of the long-term averages in most parts of the United States. In November they were somewhat below normal except in Maine and along the Pacific coast. Maximum departures in the averages for the month were reported in Missouri, where they were about 6° below the normal 40° to 45°, and along the Minnesota-Wisconsin border where they averaged 8° below the normal 30°. Except for a few isolated spots where rainfall was very heavy, the precipitation amounts were not unusual for the season. December averages in parts of the east gave good illustration of the anomalies that may be hidden in monthly averages. The figures for the month as a whole were only slightly above normal except in the southeast where they reached 15° to 25° above normal for several days, but the actual temperatures in the east during the first half of December contrasted sharply with those during the remainder of the month, thus balancing the two extremes to give an average near normal. Some of the coldest December weather for many years occurred in parts of the east during the last two weeks of the year.

Extraordinarily large storms in the North Atlantic during late December, resulting to a considerable extent from the circulation that brought cold weather to the mid-Atlantic states, caused much damage to maritime shipping. (*See* also DISASTERS; FLOODS AND FLOOD CONTROL.)

FILMS OF 1951.—*Clouds* (Almanac Films, Inc.); *The Clouds Above* (Bailey Films); *Weather* (Gateway Productions, Inc.). (F. W. RR.)

Methodist Church. World Methodism, on Aug. 28, 1951, opened its eighth decennial Ecumenical conference in Oxford, Eng., the city of its birth. Ministerial and lay delegates from 17 autonomous Methodist bodies and from 42 countries spent ten days in reviewing their common history, defining doctrinal emphases and comparing their programs of educational, missionary and philanthropic services.

Seeking a medium for closer fellowship, these independent bodies authorized a permanent secretariat to maintain offices in London and New York. Sentimentally moved by being housed in the colleges where, because of their self-imposed disciplines of worship, study and social service, John and Charles Wesley were first called "Methodists," the delegates took first steps toward the creation of a Wesley Memorial house in this university city as a residence for Methodist students. A third joint project authorized was a year of evangelism (1953) to be simultaneously observed by all Methodist bodies.

Membership figures for the major independent branches of John Wesley's "world parish," reaching to 90 countries and islands, were reported at Oxford as follows: the Methodist Church in Great Britain, 1,050,000 (including 300,000 in overseas missions); the Methodist Church (U.S.A.), 9,785,640 (including 850,000 in overseas missions); African Methodist Episcopal Church (U.S.A.), 1,166,301; African Methodist Episcopal Zion Church (U.S.A.), 588,000; Colored Methodist Episcopal Church (U.S.A.), 385,000; Free Methodist (U.S.A.), 50,177; Wesleyan Methodist Church (U.S.A.), 32,479; Methodist Church of Brazil, 35,000; Methodist Church of Mexico, 21,000; Methodist Church of South Africa, 460,000; the Methodist Church of Korea, 23,730; the Methodist Church of Australasia, 400,000 (including 200,000 in mission churches in the South Pacific); Methodist Church of New Zealand, 35,000 (not including 196 churches on Solomon Islands and New Guinea). Nineteen other independent small Methodist bodies, mostly in the U.S., had a total membership of 76,800. The total figures for world Methodism, because of lack of full co-ordination and different principles of compilation, could not be reported exactly. The membership total of 14,000,000 was thought to be about right, and the total for the Methodist community was estimated at about 40,000,000.

What follows pertains to the Methodist Church, the organization formed in 1939 by the reunion of three major U.S. bodies. To this church, three out of four Methodists of the world belonged in 1951.

Three large-scale national conferences marked the year: July 21–24 brought 2,000 rural laymen and ministers to Sioux City, Ia., to confer with experts and to exchange ideas in the second quadrennial National Town and Country conference. On Aug. 27 the National Methodist Youth convocation registered 4,900 young people who spent five days at Purdue university, West Lafayette, Ind., in developing the theme: "Christian Living in Our Time." An October week end (12–14) saw 1,200 couples from 48 states arrive in Chicago to hear addresses and to discuss the study reports of preceding months in the first National Conference on Family Life.

Bishop Arthur J. Moore of Atlanta, Ga., president of the board of missions and the 1951–52 president of the council of bishops, presided by invitation over a general conference of the Methodist Church of Korea in Pusan in November. The Rev. Hyung Ki Lew, who had been educated in the United States, was elected bishop to succeed Bishop You Soon Kim, who had been arrested and reported executed by North Koreans. Despite destruction of church property and the assassination and imprisonment of leaders, church membership in Korea had increased. Twenty-three young men were ordained at the session.

Only seven Methodist missionaries, of what in 1939 were 275, remained in China at the year's end. Most of them had been reassigned, in many cases to places with Chinese population. In addition to the routine commissioning of enough life-service missionaries to maintain the existing contingent of 1,200 in regular foreign service, 33 young persons were trained and sent to Africa for three-year terms as a special project. The Woman's Division of Christian Service selected and prepared 40 young women for two-year home missionary assignments. A special project of the Woman's division was the financing and publishing of a 700-p. compilation of *States Laws on Race and*

Color.

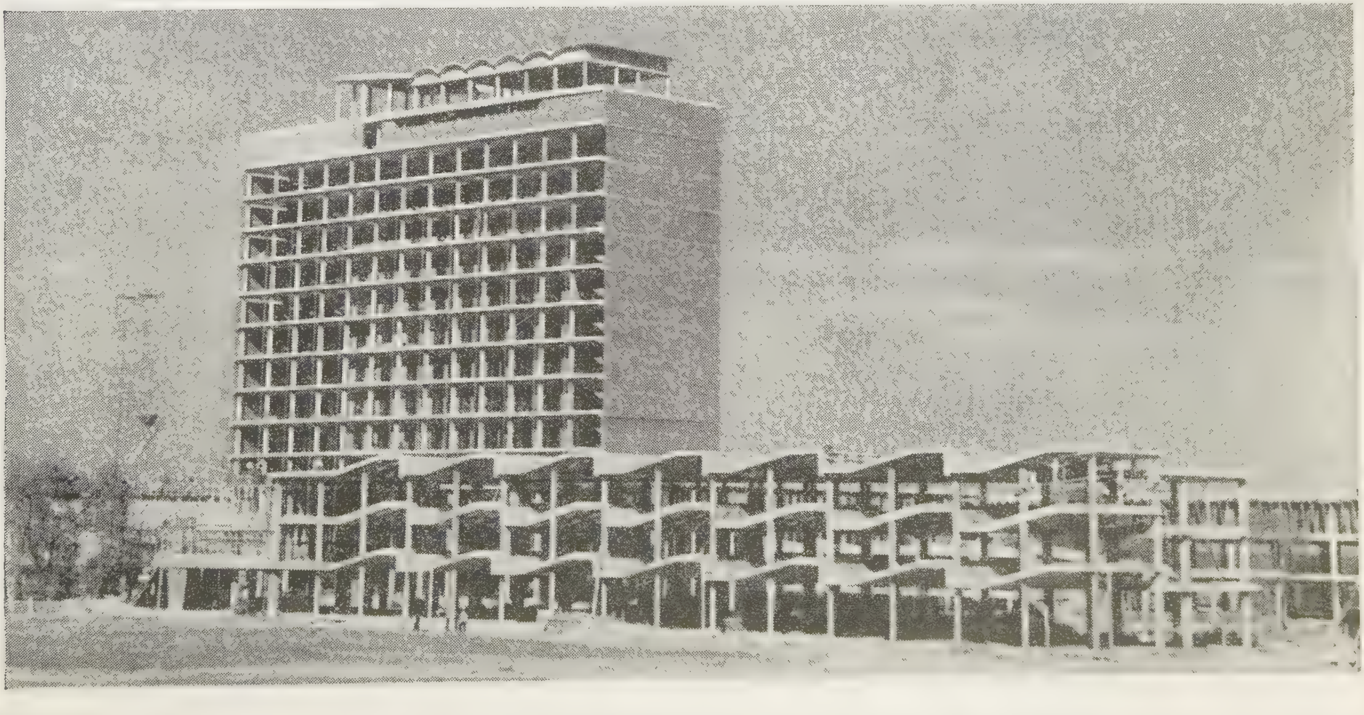
Nearly 5,000 displaced persons had been sponsored and placed in new homes by the Methodist Committee for Overseas Relief, and during the 1951 fiscal year, $979,858 was distributed in relief.

Scholarships for graduate work in the U.S. and other countries had been provided for 600 students from 64 countries, since World War II, of whom 135 received grants for 1951–52. During the year 387 scholarships were given and 1,235 loans made to U.S. students.

The Methodist Publishing House closed its year with combined net sales of $13,865,007, an all-time high. The board appropriated $400,000 for the aid of retired ministers. The net worth stood at $12,699,101. Employees numbered 1,698. Most significant of the 53 books published was vol. vii, the first to be issued, of the 12-vol. *Interpreter's Bible,* which was being prepared by scholars of numerous denominations.

Statistics as of the close of 1951 were: churches, 39,961; members, 9,065,727 (not including 784,880 preparatory members or 850,000 members in mission lands); contributions for all purposes, $268,623,814; benevolent gifts, $40,120,363; $82,000,000 paid for new buildings and improvements; the Woman's Society of Christian Service, membership 1,630,666, amount raised, $21,717,500; church school membership, 6,022,013, average attendance at Sunday schools, 3,014,054. (*See* also CHURCH MEMBERSHIP.) (R. SY.)

Mexico. A federal republic of Middle America lying between the United States on the north and Guatemala and British Honduras on the south, Mexico has an area of 760,373 sq.mi.; population (July 31, 1951): 25,715,350. Capital: Mexico City. Chief cities (July 31, 1951): Federal District, including Mexico City (3,049,367); Guadalajara (379,401); Monterrey (330,012); Puebla (210,533); Mérida (159,405); Torreón (128,557); San Luis Potosí (126,601); León (122,680); Cuidad Juárez (121,912); Veracruz (113,803); Tampico (97,673); Aguascalientes (93,432); Chihuahua (86,796); Saltillo (69,874); Mexicali (64,701); Morelia (60,650); Pachuca (58,698); Culiacán (49,801); Matamoros (43,830). Language: Spanish, with an estimated 6.29% (1940) speaking Indian tongues only. Religion: predominantly Roman Catholic. President, 1951: Miguel Alemán.



CLASSROOM BUILDING (foreground) at the new campus of the University of Mexico near Mexico City under construction in 1951. Classrooms were built with sloping floors

History.—Continued material prosperity, accelerated growth in industry and in agricultural development and concern over the rising cost of living were among highlights of 1951 for the Mexican nation. The flight of refugee capital into the republic which began in 1950 continued into 1951, causing dollar reserves to soar to $344,000,000 and creating speculation that the peso might be revaluated or permitted to seek its own level. By summer, however, the flow of gold and dollars into the republic had levelled off, and talk of peso revaluation ceased.

In an effort to curb inflationary trends created by excessive money in circulation, the government instituted drastic controls. Despite such controls, which caused a serious rift between government and industry, the cost of living reached an index of 401 on July 1, compared with 375 for Jan. 1 and 100 in 1939. In protest against price ceilings, many Mexican retailers openly boycotted the sale of controlled goods, contending that ceilings did not permit sufficient profit.

Against this background, Finance Minister Ramón Beteta reported that Mexico's national income had reached approximately $3,500,000,000, and the government's income for 1951 totalled about $497,625,700.

Continuing the trend which marked the republic as the United States' best Latin-American customer in 1950, Mexico bought so heavily during 1951 as to produce its worst trade balance in many years. Eased import restrictions and "war scare" purchasing gave additional impetus to buying. During the first six-month period, the republic imported about $337,000,000 worth of U.S. goods, exporting only $174,000,000. World imports through September doubled 1950's level, totalling $676,000,000, and exports were up 56% as of the same date. Canada proved to be Mexico's second-best trader, and west Germany emerged as one of the republic's major sources of supply, exporting some $10,900,000 in goods to Mexico between January and August and increasing its imports from the republic to 72,000,000 pesos for the same period. Between July 1950 and June 1951, imports from Great Britain doubled in value over the same period a year previously, and exports to the United Kingdom were five times as great as in 1949.

Mexico marched forward industrially in 1951. Before 1947, for example, about 97% of certain types of electrical household appliances were of foreign make; by 1951 nearly all such appliances were either manufactured or assembled in the republic. Expansion was marked in the extractive industries, notably in petroleum and in sulphur. A rich coal strike in the state of Oaxaca led to estimates that the area would produce enough coal to meet Mexico's needs for two centuries. Oil discoveries in the state of Tabasco prompted Antonio Bermúdez, head of Pemex, to predict that the state would soon be "a second Venezuela."

Labour's "share-the-wealth" hopes appeared nearer fruition as its efforts to seek enforcement of a profit-sharing provision in the constitution gained some congressional backing. The republic signed a six-month pact with the United States that would send an estimated 300,000 workers to U.S. fields in 1951. U.S. immigration and naturalization officials reported that illegal entrance of Mexicans into the U.S. had reached "invasion" proportions, and the Mexican government sought assurance that the U.S. would punish farmers who employed "wetback" labour.

In the political arena, Pres. Miguel Alemán made good his "no re-election" promise as the official government party, Partido Revolucionario Institucional (P.R.I.), announced the candidacy of Interior Minister Adolfo Ruiz Cortines for the July 1952 elections. Cortines promised to continue Alemán's policy of close U.S.-Mexican amity, and startled the nation by denouncing one-party government. Gen. Miguel Henríquez Guzmán, backed by the Federation of Peoples' Parties; Efraín González Luna, conservative National Action party; and Gen. Cándido Aguilar Vargas also were announced as candidates, but it was generally conceded that, with P.R.I.'s backing, Cortines would be Mexico's next president.

Education.—Education is free, compulsory and secular. In June 1950 an estimated 3,986,428 students were enrolled in 29,036 schools and taught by 90,212 teachers and professors. There were 3,096,537 illiterates as of Sept. 1950 (Mexican government estimate).

Defense.—As of Sept. 1, 1951, there were 58,400 men in the air and ground forces, 3,400 of whom were assigned to the air force. As of the same date, the air force had an estimated 270 planes. As of Jan. 1, 1952, the ministry of marine was operating 3 gunboats, 4 frigates, 1 armed transport and 22 coast guard vessels.

Finance.—The monetary unit is the peso of 100 centavos. In June 1949 the peso was stabilized at 11.56 cents, U.S. currency, or 8.65 pesos to the dollar. In this article, dollar sums are based on this rate of exchange.

The federal budget for 1951 totalled $358,700,000, and was distributed as follows: legislative $2,300,000; interior $2,300,000; foreign relations $5,400,000; finance $12,100,000; defense $31,800,000; agriculture $5,500,000; communications $62,200,000; economy $2,900,000; education $41,100,000; health $16,100,000; marine $9,000,000; hydraulic resources $37,700,000; military industry $2,700,000; investments $20,300,000; additional expenditures $17,700,000; public debt (including amortization) $83,500,000; other items $6,200,000.

The federal budget as presented in Dec. 1951 to the chamber of deputies for 1952 totalled $462,000,000.

Estimated national income for 1950 was $3,445,086,000. Provisional federal tax receipts for 1950 totalled $411,815,000. Public debt as of Dec. 31, 1950, was: internal $383,722,500; external $149,121,300, including railway debt. Notes in circulation as of Nov. 30, 1951, were valued at $359,024,100.

Gold and foreign exchange holdings as of June 30, 1951, totalled $244,000,000.

Trade and Communications.—Imports for the period Jan.-Sept. 1951 totalled 5,179,705,798 pesos, exports 3,894,070,237 pesos. There were approximately 16,500 mi. of railroad in Mexico in 1949. As of Oct. 1951 there were 14,032 mi. of passable roads, 9,261 mi. of which were paved. Passenger car registrations as of Dec. 1949 totalled 160,580, and trucks 106,321. A total of 26,041,104 mi. were flown by all air lines operating in Mexico in 1950, including American Airlines, Pan American World Airways, T.A.C.A., the principal Mexican lines, and 31 smaller companies. Passengers carried on all lines in 1950 totalled 1,032,413.

In Nov. 1951 the republic had 276,000 telephones. In Dec. 1951 standard broadcast radio stations totalled 230; television stations 2.

Agriculture.—Agricultural production for 1950–51 (in metric tons) included: maize 3,400,000; wheat 360,000; sugar 700,000; beans 235,000; chick-peas 75,000; coffee 72,600; henequen 83,000; barley 114,000; tobacco 700,000; cotton (bales) 1,220,000; linseed 40,000; cottonseed 387,090; vanilla 175,000.

The estimated number of animals in 1951 included: cattle 14,600,000; sheep 6,000,000; hogs 6,000,000. (Totals for other animals had not been revised since 1940.)

Manufacturing.—The total value of Mexican industrial production in 1950 was 4,778,353,904 pesos. Leading industries included cotton thread and cloth with production valued at 881,845,339 pesos; beer 450,930,395 pesos; cigarettes and cigars 430,054,183 pesos; iron and steel 420,179,005 pesos. Tourism produced approximately 2,000,000,000 pesos income during 1950 from 373,572 tourists.

Mineral Production.—A total tonnage of 861,220 in 1950 (excluding petroleum) was valued at $244,393,699. Leading in dollar values were petroleum (63,400,000 U.S. barrels); silver $1,528,470; iron $285,738; lead $238,078; zinc $220,654.

Michigan.

One of the north central group of states of the U.S., Michigan was the 26th state admitted to the union; it is popularly known as the "Wolverine State." Land area: 58,216 sq.mi. (excluding 39,960 sq.mi. of Great Lakes water surface); pop. (1950 census): 6,371,766, a gain of 21.2% since 1940. Estimated population, Jan. 1, 1952, 6,500,000. Of the state's population in 1950, 70.7% was urban and 29.3% rural (as compared with a 65.7 to 34.3 ratio in 1940). Whites composed 92.9% of the population, nonwhites 7.1% (as compared with a 95.9 to 4.1 ratio in 1940). Capital: Lansing (pop. 92,129). Larger cities were (1950 census): Detroit (1,849,568); Grand Rapids (176,515); Flint (163,143); Dearborn (94,994); Saginaw (92,918).

History.—Gov. G. Mennen Williams began his second term of office on Jan. 1, 1951, less than three weeks after the recount vote demanded by his Republican opponent in the election of Nov. 7, 1950, former Gov. Harry F. Kelly, had verified him as the voters' choice, and only two days after the Republican-dominated state legislature had ended the longest special session in the history of the state. The 66th legislature, convening on Jan. 3, was also strongly Republican, with 66 of the 100 members of the house and 25 of the 32 state senators of that party. In the senate the issue of greatest moment was the seating of two Democratic senators, Anthony J. Wilkowski and Charles C. Diggs, who had served prison terms. Both were denied seats, with the vote along strictly party lines. Peculiar interest attached to the case of Wilkowski, since a Republican senate about 14 years earlier, when the seat to which he had been elected remained vacant because of his serving a prison term, refused to unseat him; he had subsequently had two terms as a senator. In a special election, Diggs' son, Charles C. Diggs, Jr., was nominated and elected in his place; Wilkowski was defeated in an attempt at renomination.

Of the 850 bills introduced during the regular session of the legislature, 439 died in committee; about 270 were passed. The chief issues of the five-month session were "good roads" revenue, general fund taxes and the state budget. In the matter of taxes a bitter struggle between Governor Williams, who advocated a 4% corporation profits tax and no increase in the three-cent gasoline tax, and the Republican majority in the legislature, which opposed a corporation profits tax and favoured increasing the gasoline tax to five cents, resulted in the adoption of a one and one-half cent increase in the gasoline tax. At first, with the Democratic bloc in the house maintained intact, Governor Williams' veto of this measure was sustained by a single vote; however, a renewed attempt to override was successful when four Democrats deserted the governor's leadership. Among the chief accomplishments of the session were the passage of a revised unemployment compensation law—a Republican step approved by the Democratic minority and by labour lobbyists—and the restoration of the one-man grand jury law set aside two years earlier. The annual pay of legislators, increased by $500, was made $2,900, while their expense allowance was raised from $500 to $1,000. An 18th congressional district was created by dividing the 17th district which, with approximately 724,000 residents, was the third largest in the nation.

Chief state officers (elected in Nov. 1950) included G. Mennen Williams, governor; William C. Vandenberg, lieutenant governor; Fred M. Alger, Jr., secretary of state; Frank G. Millard, attorney general; D. Hale Brake, state treasurer; John M. Martin, Jr., auditor general. Of these, the governor was a Democrat, the others all Republicans.

Education.—In 1950–51 elementary school enrolment was 694,679 (preliminary) with 23,000 teachers; secondary school enrolment 371,532, with 15,000 teachers. There were 4,800 school districts. Institutions of collegiate rank numbered 40, with a combined enrolment of 83,650 as of June 30, 1951. Lee M. Thurston was superintendent of public instruction in 1951.

Social Insurance and Assistance, Public Welfare and Related Programs.—The department of social welfare reported that during 1951 the monthly average assistance loads and payments per case, and the total expenditures for assistance were (December estimated):

Program	Average case load	Average payment per case	Total assistance (annual)
Old-age assistance	95,878	$46.89	$53,950,000
Aid to dependent children	25,063	91.65	27,560,000
Aid to blind	1,852	52.26	1,161,000
Aid to the permanently and totally disabled	676	58.27	433,000
General assistance	24,614	40.14	11,858,000

As of June 30, there were 992 children who were wards of the state under the supervision of the Michigan Children's institute. As of the same date approximately 160 blind persons were employed at the Michigan Employment Institution for the Blind. The boys' vocational school was caring for 365 socially maladjusted boys; the girls' training school had an enrolment of 285 girls.

The various state institutions of correction and their populations as of June 1951 were as follows: State Prison of Southern Michigan, 6,170; Michigan reformatory, 1,287; Marquette branch prison, 966; Detroit house of correction, 424 (male, 146; female, 278); Cassidy Lake Technical school, 183; wayward minor boys in custody, 3. Total expenditures of the department of correction amounted to $8,787,758.49 (including $307,456.24 for capital expenditures).

Communications.—During the fiscal year ending June 30, 1951, the sum of $26,077,279 was expended for road and bridge construction, exclusive of the right of way; $14,860,285 for road maintenance; and $637,517 for bridge maintenance. During 1951, 503.4 mi. of state trunk-line highway and 278.5 mi. of county secondary roads were constructed. There were 105,735 mi. of highways in the state, including 92,209 mi. rural and 13,526 mi. urban. Railroad mileage totalled 6,807.

Banking and Finance.—As of Oct. 10, 1951, 342 state banks had total assets of $2,978,828,261.65; three industrial banks, $10,258,189.58; seven trust companies, $41,624,848.33. Total assets of 78 national banks in Michigan on June 30 were $3,326,206,000. There were 36 state-chartered and 34 federally chartered building and loan and savings and loan associations. Invested savings in the state-chartered associations totalled more than $121,000,000. Total state revenue for the fiscal year ending on June 30 was $593,622,188; total expenditures, $606,598,864. The total accumulated deficit was $40,850,260; the state had a bonded debt of $246,343,000.

Agriculture.—Michigan's production of field crops in 1951 was larger than a year earlier but smaller than the high level set in 1949. Total production of tree fruits and grapes dropped below a year earlier because of near failures in the peach and grape crops.

Table I.—*Principal Crops of Michigan*

Crop	1951	1950	Average 1940–49
Corn, all, bu.	69,056,000	61,022,000	59,089,000
Winter wheat, bu.	30,800,000	29,666,000	23,474,000
Oats, bu.	60,183,000	54,478,000	52,531,000
Potatoes, bu.	10,800,000	15,300,000	17,755,000
Barley, bu.	3,876,000	3,910,000	4,667,000
Beans, dry edible (100-lb. bags)	4,234,000	3,990,000	4,490,000
Hay, tons	3,882,000	3,495,000	3,768,000
Sugar beets, tons	589,000	1,020,000	704,000
Soybeans, bu.	2,460,000	2,280,000	1,593,000
Rye, bu.	868,000	870,000	930,000
Apples, commercial, bu.	9,085,000	7,020,000	6,850,000
Peaches, bu.	728,000	4,800,000	3,607,000
Cherries, tons	91,000	105,400	47,070
Grapes, tons	9,000	44,900	33,360
Pears, bu.	1,035,000	812,000	774,000
Plums, tons	4,800	5,500	4,330

Other minerals			?		4,505,392
Total			?		201,339,957

*Values for processed materials are not included in the totals.

Manufacturing.—The manufacturing industry continued to prosper in 1951—the only seriously retarding factor being limitations upon output established by the federal government in prosecuting its defense program. The automobile industry was particularly affected. By the end of the year, unemployment resulting from cutbacks in production in Detroit had reached alarming proportions, with some 120,000 jobless there; Governor Williams and Michigan senators and congressmen were making vigorous efforts to persuade the federal government to relax its restrictions. (L. G. V. V.)

Mineral Production.—Table II shows the tonnage and value of mineral production in the state in 1949 for commodities having a value in excess of $100,000, and the corresponding data for 1950.

Microbiology: *see* BACTERIOLOGY.

Middle East.

In the plans for organizing a common defense against potential Communist aggression, the countries of the middle east played from the beginning a great role. The first step toward United States initiative in such a defense effort was taken on March 12, 1947, when Pres. Harry S. Truman promised aid to Greece and Turkey in their struggle to maintain their freedom against encroachment by the U.S.S.R. The ancient importance of the middle east as a strategic centre of the old world had been enhanced in recent years by the growing importance of the rich middle eastern oil deposits. The events of 1951 underlined the importance of the area. The nationalization of the property of the Anglo-Iranian Oil company in Iran; the denunciation of the Anglo-Egyptian treaty of 1936 unilaterally by the Egyptian government before its expiration and the demand for the withdrawal of British forces from the Suez canal zone; the continuing bitter tension between Israel and the Arab states, fanned by the wretched misery of the 850,000 Arab Palestinian refugees; the assassination of King Abdullah of Jordan; the newly achieved independence of Libya which intended to join the Arab league and to apply for membership in the United Nations; and finally the revision of the Italian peace treaty of 1947 and of its clauses restricting Italy's military forces—all these events pointed toward the urgency of integrating the middle eastern countries into a united organization for the maintenance of peace.

For geographic reasons a middle east defense setup had to be based on Turkey and on the countries united in the Arab league. The Arab league included Egypt, Iraq, Syria, Lebanon, Saudi Arabia, Yemen and Jordan. The first six of these states were also members of the United Nations, where they closely co-operated with other Mohammedan countries like Pakistan, Indonesia and Iran, and with India. Though by the vastness of their territory, the potential wealth of their resources and their undeveloped manpower, the countries of the Arab league represented the strongest force among the indigenous elements in any mid-eastern unity project, Turkey was regarded as its keystone. Turkey had the largest and best equipped army in the middle east and was undoubtedly the best organized and most cohesive national entity in that area. From the beginning Turkey was eager to co-operate with the western powers. On the suggestion of the United States, Turkey and Greece were invited to become full members of the North Atlantic Treaty organization. Turkey also expressed its willingness to join in a middle east defense system.

Much more difficult was the attitude of the countries of the Arab league which neither in their national organization and cohesion nor in their military strength approached the standards achieved by Turkey. Their internal weaknesses were enhanced by their mutual jealousies and animosities which had prevented the Arab league from functioning with any degree of success. This became manifest in the war of 1948 between Israel and the Arab states in which the latter suffered an ignominious defeat as a result of their refusal to co-operate and of their general inefficiency. The same war, and the support given to Israel by the United States, left with the Arabs not only a profound fear of Israel's expansion but also a deep bitterness against the United States.

To meet the difficulties created by the Anglo-Egyptian dispute, the United States, Britain, France and Turkey proposed to the Egyptian government the establishment of an Allied middle east command in which the four nations, plus Australia, New Zealand and the Union of South Africa were willing to participate. Egypt was invited to take part as a founder member of the middle east command on a basis of equality and partnership with other founder members. The Allied Middle East Defense organization, the exact relationship of which with the North Atlantic Treaty organization remained to be worked out, was to take over, with Egypt's full and equal participation, the defense role assigned to Britain by the Anglo-Egyptian treaty of 1936. The Allied supreme commander's headquarters were to be located in Egypt's territory. Though some Arab states, especially Iraq and Syria, supported the general idea of such a middle eastern unity and found it advantageous for the growing strength and efficiency of their own armies, Egypt rejected the proposal. The four initiating powers declared their readiness to proceed in any case with the implementation of the plan. With Cairo eliminated as the headquarters for the new command, either Turkey or the island of Cyprus was regarded as its likeliest seat.

The Soviet Union protested on Nov. 21 the plans for creating a united middle eastern command. Strongly worded notes were sent to the initiating powers, to the Arab countries and to Israel. The soviet government considered the proposals by the United States, Britain and France as an expression of the aggressive plans of the North Atlantic treaty powers in an area situated not far from the borders of the Soviet Union. The realization of these plans would assure to the western governments the possibility of continuous interference in the internal affairs of the middle east countries and would deprive them of their national independence. In its reply on Dec. 19 the United States government made it clear that neither the middle east command nor the North Atlantic Treaty organization had any aggressive designs.

The united middle east command was designed, the United States note stated, to create a voluntary co-operative defense organization to provide for the security of the middle east area as a whole in the event that that area should become a target of outside aggression and to assist the states in the area to preserve and strengthen their independence and freedom so that their economic well-being and social institutions could develop in an atmosphere unclouded by fear for their security. States choosing to participate in the command would do so voluntarily as equal and sovereign members.

Thus in 1951 the foundations for establishing middle eastern unity were laid. A joint statement by the United States, Britain, France and Turkey on Nov. 10 declared that the middle east command would not interfere in problems and disputes arising within the area.

With the rise of Mohammedan hostility to the United States and Britain in Egypt and Iran, proposals were made to organize the middle east not in collaboration with the west but as the pivotal area of the Islamic world reaching from Morocco to Indonesia. In February a world Moslem conference attended by representatives of almost 40 nations held a 12-day session in Karachi, Pakistan, where the headquarters of a permanent organization were established. But this tie between the middle east and the whole Islamic world had equally not gone beyond the initial stage.

Millikin, Eugene Donald

(1891–), U.S. senator, was born on Feb. 12 at Hamilton, O. He took his law degree from the University of Colorado, Boulder, in 1913 and was admitted to the Colorado bar the same year. During World War I he advanced from private to lieutenant colonel with the United States expeditionary forces in France and was awarded the Pershing citation for meritorious services. After the war he resumed law practice, also taking an active part in Republican politics. In 1941 he was appointed U.S. senator from Colorado to fill an unexpired term. He was elected in 1944 for the full term 1945–51 and re-elected in 1950 for the term expiring in 1957. In Jan. 1947 he was appointed chairman of the senate finance committee.

During 1950–51 Millikin was a leading critic of Secretary of State Dean Acheson and of U.S. policies in the far east. He supported the administration, however, in voting for the Universal Military Training and Service bill and the resolution which approved sending additional U.S. troops to Europe. A proponent of economy in government, he voted on Aug. 31 to reduce European economic aid by $500,000,000, and on Sept. 13 to cut the U.S. defense appropriation to $59,500,000,000.

Mineral and Metal Production and Prices.

In Table I there has been compiled as much of the world production of minerals and metals as can be included in two pages. Even after enlarging this table from one page to two, many minor producers and minor products cannot be included for lack of space. In the make-up of this table a new feature of arrangement has been used. A continental subdivision is the first stage, under which the countries are arranged, not in the usual alphabetical order, but in the order of relative commercial accessibility to the United States, so far as that can be judged. The only deviation from this arrangement is the grouping together of all soviet satellite countries, regardless of continental location, since not only is commerce with these countries so restricted as to be of minor importance, but in fact the commercial and political interests of this group are basically opposed to those of the United States.

In effect then, this table depicts not only the bulk of the world's output of minerals and metals, but at the same time roughly indicates the accessibility of these products to the United States.

Table II is a compilation of the prevailing prices for the leading minerals and metals as quoted on the New York and London markets at the opening and closing of the year 1951. In the United States after the sharp drop in prices that took place during March–June 1949, there was only a temporary recovery, and March 1951 prices were again down to about the same level as in June 1949. A definite upturn in prices started in April 1950, and was well under way before the Korean war gave it additional impetus and carried it on to a record peak in Feb. 1951. Price control measures brought moderate declines during March–September, followed by an upturn that brought the year-end level to a new record high. This trend can best be followed by citing the composite price index for nonferrous metals as compiled by the *Engineering and Mining Journal*, which were as follows: Feb. 1949, 185.75; June 1949, 131.20;

Notes: A ? indicates an estimate or no data available. The letter "p" indicates a small production, unknown in amount or less than the minimum base of the table; "P" indicates a larger but unknown production.

[1] Metal content of ore. [2] White arsenic. [3] Nitrogen content of fertilizer compounds. [4] Includes all platinum group metals. [5] K_2O equivalent of salts produced. [6] 60% WO_3 basis. [7], [8], [9] indicate data for 1947, 1948 or 1949, where 1950 figures are lacking.

Mineralogy. The name sabugualite was given by Clifford Frondel to a new uranium mineral, $HAl(UO_2)_4(PO_4)_4.16H_2O$, from three localities in Portugal (*American Mineralogist*, 36:671–679). Huttonite, a new monoclinic thorium silicate, $ThSiO_4$, from South Westland, N.Z., was described by A. Pabst (*ibid.*, 36:60–69). Priderite, a new potassium titanate mineral containing barium and iron, which occurs in the west Kimberly area of Western Australia, was reported by K. Norrish (*Mineralogical Magazine*, London, vol. xxix, pp. 496–501). In addition, the following new minerals were described at the meeting of the Mineralogical Society of America held in Detroit, Mich., Nov. 8–10, 1951: by D. B. Givens and C. W. Beck, a basic copper phosphate from Santa Rita, N.M. (name not yet assigned); by L. G. Perry, J. J. Fahey and E. H. Bailey, robinsonite, a lead antimony sulphide from the Red Bird mine, Pershing county, Nev.; by A. R. Graham and S. Kaiman, aurostibite, $AuSb_2$, from the Giant Yellowknife mine, Northwest Territories, and the Chesterville mine, Larder lake area, Ont.; by M. E. Mrose, hurlbutite, $Ca_2Be_2(PO_4)_2$, from the Smith mine, Chandler's Mill, Newport, N.H.

A detailed description of the work of the Diamond Research laboratory of Johannesburg, U. of S. Af., was given by R. S. Young (*Gems and Gemology*, vol. vi, pp. 327–333). The recognition of surface irradiated diamonds was discussed by F. H. Pough and A. A. Schulke (*ibid.*, vol. vii, pp. 3–11). The standardized nomenclature of gems, as adopted by American Gem society, March 18, 1951, was published in *Gems and Gemology*, vol. vii, pp. 58–67. Kay Swindler gave an interesting review of the progress made in advancing the study of gemology by the Gemological Institute of America in the 20 years since its founding in 1931 (*ibid.*, vol. vii, pp. 35–48).

The December number (vol. xxix, no. 211) of the *Mineralogical Magazine* (London) was issued in honour of Leonard J. Spencer's 50 years' service as editor of that publication. Spencer's long association with the British Museum was reviewed by W. Campbell Smith, and in addition there were 15 papers from Spencer's friends in nine countries.

During the year the following texts appeared: *An Index of Mineral Species and Varieties Arranged Chemically* by Max Hey, London; *Das Polarisationsmikroskop* by Conrad Burri, Zürich, Switz.; *Crystal Growth* by H. E. Buckley, New York and London; *Silicate Melt Equilibria* by Wilhelm Eitel. The fourth edition of *Mineralogy; An Introduction to the Study of Minerals and Crystals*, by E. H. Kraus, W. F. Hunt and L. S. Ramsdell also appeared.

The seventh meeting of the International Federation of the Industry, Craft, and Trade of Jewellery, Precious Stones, Gold and Silverware, and Horology, usually known as the B.I.B.O.A., held in London, May 23–26, 1951, was attended by about 200 delegates from European countries. Papers dealing with diamonds, pearls and precious stones were presented and important resolutions adopted. (*Summary Report of the British National Committee of B.I.B.O.A.*, London; also *Gemmologist*, London, vol. xx, pp. 149–150 and 167–168.)

The first award of the Mineralogical Society of America to a young mineralogist was presented to O. F. Tuttle of the Geophysical laboratory, Washington, D.C., in recognition of his significant and comprehensive investigation of the inversion temperatures of quartz.

For his many significant contributions involving the use of chemistry and physics in the study of geological problems, Martin J. Buerger, professor of mineralogy and crystallography at the Massachusetts Institute of Technology, Cambridge, was awarded the Arthur L. Day medal by the Geological Society of America. (*See* also CHEMISTRY; MINERAL AND METAL PRODUCTION AND PRICES.) (E. H. KR.)

Minnesota. A north central state, admitted to the union on May 11, 1858, Minnesota includes the northernmost land of the United States—the northwest angle. It is variously known as the "North Star" state, "Gopher" state, and "land of 10,000 lakes." Its water area covers 4,059 sq.mi. of its total area of 84,068 sq.mi. The population according to the 1950 federal census totalled 2,982,483, an increase of 6.8% over 1940. Of this total, 54.5% lived in cities of 2,500 or more and in the urban fringe areas; nonwhites represented slightly less than 1%. Three cities had a population of more than 100,000—St. Paul, the capital city, with 311,349; Minneapolis with 521,718, and Duluth with 104,511.

C. ELMER ANDERSON, Republican, who succeeded Luther W. Youngdahl as governor of Minnesota, Sept. 27, 1951

History.—The state legislature held its biennial session Jan. 2 to April 24, 1951. No major tax increases were voted and few additions or changes in state organization and services were made. Appropriations totalled $28,915,841, a 24% increase over the previous biennium. Most of this was absorbed by higher costs. The one new department created was for civil defense. On Aug. 9 Grand Portage was dedicated as a national historic site. During the year Gov. Luther W. Youngdahl resigned to accept a federal judgeship in Washington, D.C. Lt. Gov. C. Elmer Anderson was sworn in as governor on Sept. 27. The other chief officers of the state during 1951 were: secretary of state, Mike Holm; state auditor, Stafford King; state treasurer, Valdimar Bjornson; attorney general, J. A. A. Burnquist.

Education.—Approximately $140,946,000 was spent for education by the 6,479 public school districts in Minnesota for 1950–51. This amount provided for 348,675 pupils in 4,869 elementary schools, 179,560 in 645 secondary schools, 1,347 in 9 junior colleges and 175 in 12 teacher training departments. These pupils were taught by 12,360 elementary teachers, 8,921 secondary teachers, 139 teachers in junior colleges and 12 in teacher training departments. In addition, five teachers' colleges were operated from public funds. For the support of these public elementary and secondary schools, the state contributed $46,811,368, revenue from trust funds and the state income tax. Dean M. Schweickhard was commissioner of education.

Social Insurance and Assistance, Public Welfare and Related Programs.—In the fiscal year ending June 30, 1951, $51,627,780 was granted to a monthly average of 98.595 persons as compared with $46,400,407 to a monthly average of 104,700 in the previous year. Approximately 99,000 persons 65 years of age or over, 38.6% of this age group, were receiving either old-age assistance, old-age and survivors insurance or both in June 1951. On March 31, 1951, 9,578 children or 0.9% of the population under 21 years were receiving public welfare services.

Approximately 810,000 workers were covered by the Minnesota Employment and Security law during 1950. An estimated $9,200,000 was paid in unemployment compensation benefits during 1951. Concurrently about $58,000 was paid in unemployment and self-employment benefits to World War II veterans under the Servicemen's Readjustment Allowance program.

On Nov. 30, 1951, the state prison and two state reformatories had a total of 1,865 inmates. In addition there were 354 wards of the State Youth Conservation commission in correctional institutions while 165 more were in diagnostic centres. The state had eight mental hospitals and two for mental defectives and epileptics, containing 11,067 and 3,911 patients respectively.

Communications.—There were in 1951, 11,882 mi. of state trunk highways, 42,756 mi. of county roads, 56,648 mi. of township roads, 7,822 mi. of municipal streets and 2,014 mi. of parkway and institutional roads. The state highway department expended $46,056,373 during the fiscal year ending June 30, 1951, excluding principal and interest payments on bonded indebtedness reduced to $2,650,000.

Twenty-two railroads operated 8,350 mi. of main line trackage and 4,304 mi. of second main line, sidings, yards and switching trackage. There were 81 municipally-owned airports, 2 state-owned emergency landing strips, 29 privately-owned commercial fields, 17 seaplane bases, and 267 private landing strips.

Banking and Finance.—Minnesota's 676 state and national banks reported total resources on June 30, 1951, of $3,197,032,000, as compared with $3,196,070,000 for 678 banks on June 30, 1950.

Represented were 498 state banks, 1 mutual savings bank and 4 trust companies reporting deposits of $987,306,000 with resources of $1,069,949,000, a decrease of $3,838,000 in deposits and an increase of $2,293,000 in resources; 178 national banks reporting deposits of $1,964,126,000 with resources of $2,127,083,000, disclosing decreases of $9,419,000 and $1,331,000 respectively. There were 42 chartered savings, building and loan associations which reported resources of $106,191,000 as compared with 41 state chartered associations with resources of $98,345,000, while 30 federal savings and loan associations reported resources of $301,292,000 as compared with $266,440,000.

Total operating disbursements of the state government (exclusive of public debt redemption, stores for resale, annuities and pensions, land and interest in land) amounted to $401,446,189 for the fiscal year ending June 30, 1951, as compared with $486,479,797 for the year ending June 30, 1950. Concurrently the state's total indebtedness in bonds and certificates of indebtedness was $127,289,669.13, a decrease of $2,525,463.98. The four principal trust funds of the state—internal improvement land, swamp land, permanent school and permanent university funds—the income from which is devoted largely to schools, reached $201,944,964 on June 30, 1951 with $189,900,176 the previous year.

Agriculture.—During 1950 Minnesota farmers received $1,214,000,000 from the sale of crops, livestock and livestock products, to rank Minnesota fifth in the nation. Based on the trend for the first ten months of 1951, income was up 13% above 1950. This increase can be attributed entirely to a 25% increase in income from livestock and livestock products since income from crops was 15% below 1950.

Table I.—*Principal Crops of Minnesota*

Crop	1951	1950	Average 1940–49
Corn, all, bu.	215,038,000	197,030,000	219,083,000
Oats, bu.	212,764,000	188,737,000	174,751,000
Barley, bu.	38,555,000	36,308,000	30,714,000
Wheat, all, bu.	20,022,000	15,512,000	22,004,000
Flaxseed, bu.	10,845,000	13,387,000	13,929,000
Potatoes, bu.	11,900,000	16,275,000	18,147,000
Soybeans for beans, bu.	18,848,000	17,794,000	7,221,000
Hay, all, tons	6,921,000	5,669,000	6,277,000

Apples, bu.	320,000	65,000	182,000

Source: U.S. Department of Agriculture.

Manufacturing.—In Oct. 1951 Minnesota's manufacturing employment reached 207,650 and showed an increase of 1.4% or 9,163 over Oct. 1950. Nonagricultural employment in 1951 ranged from a low of 759,508 in February to an all-time high of 830,650 in September. Value added by manufacture rose to an estimated $1,200,204,000 for 1950, ranking Minnesota 17th in the nation. This amount included food products, machinery (except electrical), printing, paper and fabricated metal products, in order of importance. (B. A. B.)

Mineral Production.—Table II shows the tonnage and value of mineral production in the state in 1949 for commodities having values in excess of $100,000, and the corresponding data for 1950, so far as they were available at the close of 1951. Minnesota ranked tenth among the states in value of mineral production and first in iron ore.

Table II.—*Mineral Production of Minnesota*

(Short tons)

Mineral	1950		1949	
	Quantity	Value	Quantity	Value

Missions, Foreign (Religious).

In 1951 the most crucial areas in Christian foreign missions continued to be China and Korea. In China the Communists intensified their efforts to cut all ties between the churches and their connections in the west, and to render the churches subservient to their purposes. Missionaries, both Catholic and Protestant, were still leaving the country. In an effort to discredit them and their western associations, several, including some who had long applied for exit permits, were deported after public trials and denunciatory meetings on the charge that they were agents of foreign imperialism. Some were imprisoned and a few were killed or perished. Protestant churches were required to become fully independent of western financial assistance and any semblance of outside control. They were also constrained to join in the campaign to "resist America, aid Korea." Bonds were severed with the World Council of Churches and the Chinese president of that body, T. C. Chao, resigned. An effort was made, apparently with only slight success, to induce Chinese Catholics to set up a national church independent of Rome. Some prominent Chinese Christians were put under pressure to denounce missionary friends and fellow Chinese Christians for their western affiliations and alleged subversive activities. Christian schools were more and more brought under full government control and some were transformed fully into national institutions. Hospitals were also taken over by the state. Orphanages were expropriated or closed and some of the missionaries who had conducted them were accused of murdering infants.

All this was done in an effort to eliminate western influences. It was based on political or moral grounds, for religious liberty was still ostensibly guaranteed.

Both Catholics and Protestants reallocated numbers of their China missionaries in other lands and made provision for the training of Chinese Christians outside of China. Many China missionaries were assigned to Japan. Some were sent to the Chinese in Malaya. Others went to quite different peoples. The Catholics had theological seminaries in Manila for Chinese.

NUNS of the Sacred Heart Orphanage community in Nanking, China, being greeted by an Italian missionary in Hong Kong after they were deported by the Chinese Communist government in June 1951

In Korea, the continuation of war made missionary work difficult, even in areas protected by the armies of the United Nations. Some relief was administered through missionaries.

American Protestants became interested in Indonesia, until World War II almost exclusively a Dutch and German field. Since Dutch were usually unacceptable to the Indonesian Christians and difficulties stood in the way of sending many Germans, Indonesian church leaders were asking for aid from the United States, both in personnel and funds.

The increase of the missionary body in Japan, Protestant and Catholic, continued. The numbers of Christians in Africa south of the Sahara desert mounted, as in preceding years, and more U.S. Catholic missions were inaugurated in that area. Protestantism continued to grow in Latin America, in part through missions from the United States, in part by indigenous efforts. The Catholics of the United States reinforced their church in Latin America by sending priests.

Protestants were making a comprehensive study of "the missionary obligation of the church," which included both the theological and biblical basis and the program of missions, in preparation for a meeting of the International Missionary council in Germany in the summer of 1952.

(K. S. L.)

Mississippi.

A southern state of the U.S. admitted to the union in 1817, Mississippi is popularly known as the "Magnolia state"; area: 47,716 sq.mi. (47,248 sq.mi. land and 468 sq.mi. water); pop. (1950): 2,178,914, a decrease of 0.2% since 1940; capital: Jackson (98,271). Other cities of more than 20,000 population (1950 census): Biloxi (37,425); Greenville (29,936); Gulfport (22,659); Hattiesburg (29,474); Laurel (25,038); Meridian (41,893); Natchez (22,740); Vicksburg (27,948). Of the state's population in 1950, 607,162 or 27.9% were urban.

HUGH WHITE, Democrat, elected governor of Mississippi, Nov. 6, 1951

History.—For 1952–56 the elected officials of the state were: governor, Hugh L. White; lieutenant governor, Carroll Gartin; secretary of state, Heber Ladner; attorney general, J. P. Coleman; state treasurer, Newton James; auditor of public accounts, William D. Neal; superintendent of education, J. M. Tubb; commissioner of agriculture, S. E. Corley; commissioner of insurance, Walter Dell Davis; state tax collector, Mrs. Thomas L. Bailey; state land commissioner, Walter L. McGahey; supreme court clerk, Tom Q. Ellis.

In 1951 unusual activity centred around, first, a road-development program, and, second, the development and execution of plans for further expansion of schools and colleges for both white and Negro students.

A new college for Negroes was established at Indianola, a town in the Mississippi delta. Progress was made on the construction of new teaching and hospital buildings for the new four-year school of medicine of the University of Mississippi, located in the city of Jackson. The school was to be in operation by 1954, under the jurisdiction of, but separate from, the university at Oxford.

Education.—In 1950–51 there were 1,037 white elementary schools in Mississippi and 2,847 Negro elementary schools, a total of 3,884. The enrolment in elementary schools was 470,504, of whom 218,884 were whites and 251,620 Negroes. The state had 479 approved white high schools and 162 approved Negro high schools. The enrolment of these approved high schools plus enrolments in nonaccredited schools gave a total enrolment of 85,651 in 1950–51. There were 9,767 white elementary and high school teachers (including superintendents and principals) and 6,748 Negro elementary and high school teachers (including superintendents and principals), a total of 16,515 teachers. The total enrolment in white elementary and high schools was 281,510; in Negro elementary and high schools, 274,605.

Social Insurance and Assistance, Public Welfare and Related Programs.—From July 1, 1950, through June 30, 1951, the state department of public welfare in Mississippi paid $14,068,439 to 74,055 recipients of old-age assistance; $830,971 to 3,275 recipients of aid to the blind; $2,895,055.40 to 16,656 families for 47,059 dependent children; and $32,596 to 492 recipients for aid to the permanently and totally disabled. This program, which began in Dec. 1950, was made possible through legislation passed by the Mississippi legislature in its regular session in 1950. Special child welfare workers were assigned to 18 county departments of public welfare and to Oakley Training school. There were training units in two counties in which child welfare workers in training were given instruction before being assigned as workers to a county unit. The federal-state-county program of foster boarding care for children cared for 244 children in foster homes at a cost of $51,246.19.

Communications.—In 1950–51 the state maintained 7,349.1 mi. of highways. In 1950–51 the counties maintained approximately 53,751 mi. In the fiscal year 1949–50 the state maintenance expenditures were estimated at $4,073,891. The total mileage of railroads in the state on Dec. 31, 1951, was 3,838.28.

Banking and Finance.—On June 30, 1951, there were 177 state banks in Mississippi, with 23 branch banks and 39 branch offices; there were 24 national banks. The resources of the state banks were $596,424,340.22 and the total deposits were $551,404,185.16; the resources of the national banks were $228,042,482.31 and the total deposits were $213,079,331.44.

As of Dec. 31, 1951, the balance in the general fund account was $25,832,191.51; the special fund account was $27,631,283.35. On Dec. 31, 1951, the full faith and credit debt of the state of Mississippi was $4,807,000; outstanding highway bonds (payable from gasoline tax) amounted to $63,228,000, making a total debt of $68,035,000.

Agriculture.—The 1950 census reported 251,378 farms. The 1945 census reported 19,616,533 ac. in farms. In 1950 the cropland harvested was 5,789,000 ac. The 1949 receipts from farm marketings were $490,236,000, of which $376,282,000 were from crops and $113,954,000 from livestock products; the value of farm products consumed in farm households was $102,852,000.

Table I.—*Principal Crops of Mississippi*

Crop	1951	1950	Average 1940–49
Cotton (500-lb. bales)	1,620,000	1,332,000	1,644,000
Cottonseed, tons	645,000	534,000	680,000
Corn, bu.	38,141,000	52,123,000	44,756,000
Hay, tons	774,000	1,009,000	1,088,000
Oats, bu.	3,335,000	4,300,000	10,679,000

Manufacturing.—The value of manufactured products in Mississippi for the year 1950 was $914,000,000, as compared with $664,000,000 in 1949. Income from pay rolls and profits totalled $297,000,000 in 1950, as compared with $216,100,000 in 1949. (A. B. Bu.)

Mineral Production.—Table II shows the tonnage and value of mineral production in the state in 1949 for commodities having values in excess of $100,000, and the corresponding data for 1950, so far as they were available at the close of 1951.

Table II.—*Mineral Production of Mississippi*

(In short tons, except as noted)

Missouri.

A west north central state of the U.S., Missouri was admitted to the union in 1821; it is popularly known as the "Show Me state." Area: 69,674 sq.mi., of which 448 are water. Pop.: (1950 census) 3,954,653 (61.5% urban, 38.5% rural); (1940 census) 90.5% native white, 6.5% Negro, 3% foreign-born white. Capital: Jefferson City (1950 census, 25,099). Largest cities (1950 census): St. Louis (856,796); Kansas City (456,622); St. Joseph (78,588); Springfield (66,731); University City (39,892); Joplin (38,711); Independence (36,963).

History.—The 66th general assembly convened in regular session on Jan. 3, 1951, and by the close of the year had not finally adjourned. Both houses had Democratic majorities, the house of representatives consisting of 85 Democrats and 67 Republicans (with two vacancies), the senate of 20 Democrats and 13 Republicans. An important statute enacted by the 66th general assembly was a more strict automobile drivers' license law.

The July 1951 flood along the Missouri river was the largest since 1844. Excessive rains in Kansas resulted in a rapid rise of the Kaw river. On July 13 the flooded Kaw topped the barrier protecting Kansas City's industrial district, engulfing the livestock, packing and manufacturing area. The rampaging waters of the Kaw then swept into the Missouri river, and, fed by high waters on tributary streams, meandered across the state and into the Mississippi. Farms and towns along the Missouri were inundated, roads were flooded and 11 lives were lost. All bridges across the Missouri were closed (except the Daniel Boone bridge near St. Louis).

The major state officers (1951), all Democrats, were: Forrest Smith, governor; James T. Blair, Jr., lieutenant governor; Walter H. Toberman, secretary of state; W. H. Holmes, auditor; M. E. Morris, treasurer; J. E. Taylor, attorney general.

Education.—For the school year ending June 30, 1951, the public school system consisted of 6,302 elementary schools, with 515,949 pupils and 17,642 teachers; 767 secondary schools, with 150,212 pupils and 7,414 teachers. For the same school year expenditures for public schools totalled $130,253,982. Hubert Wheeler was state commissioner of education.

Under the G. I. Bill of Rights and the Vocational Rehabilitation act for disabled veterans, 23,970 veterans of World War II were enrolled in schools and colleges in the state, 15,503 were receiving farm training and 2,984 job training on Nov. 30, 1951.

Social Insurance and Assistance, Public Welfare and Related Programs.—For the year ending June 30, 1951, unemployment insurance totalled $11,862,531, paid to about 185,000 persons. In Dec. 1950 about 44,300 received payments and in Dec. 1951, about 51,800. For the year ending June 30, 1951, old-age assistance amounted to $67,118,200, aid to dependent children $15,714,967, general relief $5,171,714, pensions for the blind $1,370,327 and aid to the disabled $2,378,844. In June 1951, 131,748 persons received old-age assistance, 23,833 families (59,196 children) aid to dependent children, 27,319 persons general relief, 2,767 persons pensions for the blind, 8,016 persons aid to the disabled. During the year ending June 30, 1951, the state penitentiary had an average of 3,001 inmates per day, the reformatory (Algoa) 444, and the expenditures for these institutions amounted to $2,174,538. On June 30, 1951, the three state training schools (Boonville, Chillicothe and Tipton) had a population of 272 boys and 161 girls, and for the year ending June 30, 1951, their expenditures (including a building program) totalled $1,267,458.

Communications.—On Dec. 31, 1950, Missouri had 18,947 mi. of state highways and 81,775 mi. of rural roads. During 1950 the state highway department spent $53,038,663 (state and federal funds), of which $27,417,865 was for construction and $11,533,135 was for maintenance. In 1951 railroad mileage totalled 6,735 mi. There were 1,198,202 telephones in use on Dec. 31, 1951.

Banking and Finance.—On June 30, 1951, Missouri had 497 state banks with deposits of $2,269,215 and resources (loans and investments) of $2,093,464; 79 national banks with deposits of $1,364,328 and resources (loans and investments) of $1,298,508; 152 savings and loan associations with resources of $354,386,412. During the fiscal year ending June 30, 1951, the receipts of the state treasury totalled $262,924,161; disbursements $259,390,836. The state debt (road bonds) on July 1, 1950, was $37,000,000 and on June 30, 1951, $30,000,000.

Agriculture.—During 1951 cash income from crops and livestock was $1,260,000,000; in 1950 cash income from government payments was $10,374,000. The value of Missouri's 1950 crops was $584,507,000 and the

*Value included in other minerals.

value of the 1951 crops, harvested from 12,685,800 ac., was estimated at $560,642,000. Unfavourable planting conditions, the abandonment of acreage because of floods and wet weather, and the winter killing of small grains, caused the 1951 production of the state's principal crops to be the lowest in several years.

Manufacturing.—The number of persons employed in Missouri's manufacturing industries in 1947 was 327,515, and salaries and wages totalled $827,184,000. The value added by manufacture of products in 1947 totalled $1,623,145,000, compared with $581,804,000 in 1939, when the previous U.S. census of manufactures was taken. (R. P. Br.)

Mineral Production.—Table III shows the tonnage and value of mineral production in the state in 1949 for those commodities having values in excess of $100,000, and the corresponding data for 1950, so far as they were available at the close of 1951. Missouri ranks first among the states as a producer of lead.

Monaco.

This sovereign principality on the Mediterranean coast, 9 mi. E. of Nice, Fr., is bounded on all land sides by the French *département* of Alpes Maritimes. Area: 0.6 sq.mi. Pop. (1946 census): 19,242, including 1,975 Monacans, 10,522 French and 6,745 other foreigners; (1951 est.) 20,000. Ruler: Prince Rainier III; minister of state: Pierre Voizard.

History.—In March 1951 the inauguration of the statue of the prince's great-grandfather, Albert I, took place. The statue, in bronze and representing the prince at the helm of his yacht, was erected on a platform in St. Martin's gardens close to the Oceanographical museum and overlooking the Mediterranean.

Prince Rainier instituted a prize of 1,000,000 fr. and appointed a committee to decide to whom it should be given for the best literary work. The winner for 1951 was Julian Green. The 21st International Automobile rally was held in January and a cup to be called Prince Rainier III of Monaco cup was presented for the first time to the winner. An international committee was formed to standardize touristic terms, and the first meeting was held in Monaco during August.

On Dec. 23, at the palace of Monaco, Robert Schuman, French minister of foreign affairs, and Pierre Voizard, minister of state, signed a new Franco-Monegasque treaty to replace those of April 19, 1912, June 26, 1925, and April 23, 1945.

Education.—Schools (1949–50): primary 9, pupils 1,494, teachers 85; secondary 3, pupils 312, teachers 38.

Finance.—Budget (1950 actual): revenue 1,085,538,272 fr., expenditure 1,182,829,773 fr. (including 126,047,371 fr. extraordinary for equipment and reconstruction). One franc = .2857 U.S. cents. (K. E. E.)

Monetary Units: *see* Exchange Control and Exchange Rates.

Mongolian People's Republic.

Chronologically the first soviet-dominated people's republic (founded on July 11, 1921), Mongolia is bound on the north by the Asiatic part of the Russian S.F.S.R., and on the east, south and west by China. Area: 606,000 sq.mi. Pop.: no census has ever been taken and estimates vary from 850,000 (soviet, 1941) to 2,078,000 (Chinese, 1945). United Nations est. 1950 was 900,000. Capital: Ulan Bator (pop., 1951 est., 80,000). Language: Mongol. Religion: Lama-Buddhism. Chairman of the presidium of the Great Hural in 1951, G. Bumatsende; chairman of the council of ministers and commander in chief, Marshal Choi-Balsan.

History.—For the first time since the foundation of the republic a general election took place on June 10, 1951, for the Great Hural, which, under the constitution of 1940, was the highest state authority, one deputy being returned per 1,500 inhabitants and universal franchise operating from the age of 18, together with a common right of election. According to an official communiqué of the central electoral commission, there were 295 constituencies in which 489,031 persons recorded their votes, or 99.92% of the electorate; 487,358 (99.67%) of votes were for candidates of the bloc of the Mongolian People's Revolutionary (Communist) party and nonparty citizens. In Ulan Bator, the capital, 48,776 voters went to the polls out of a registered total of 48,790 and only four voted against the official candidates. If these figures were correct, the population of Mongolia could not be much more than 800,000.

When unveiling a monument to Joseph Stalin at Ulan Bator on July 11, and also in an article published in July by the Moscow monthly *Bolshevik*, Choi-Balsan summarized the achievements of his government. Great strides had been made in combating illiteracy. Whereas 30 years earlier there was only one school in Mongolia, in 1951 there were many secondary and technical schools and one primary school in every *somon* (the country was divided into 18 *aimak* or provinces and 322 *somon* or districts). From cultural darkness the country had progressed by 1951 to 87% adult literacy. There were 8 national and 19 local newspapers and 16 periodicals.

According to Choi-Balsan, livestock breeding, the basis of Mongolian economy, had increased by 150% in the 30 years of independence. Since soviet sources attributed about 12,500,000 head of livestock to Mongolia in 1921, it would appear that in 1951 livestock numbered more than 31,000,000 head, the official target of the Mongolian postwar five-year plan for 1952. Choi-Balsan, however, abstained from proclaiming that part of the five-year plan had thus been fulfilled a year in advance. Industrialization, too, was making progress. The total yearly value of the industrial production, which was 77,000,000 tugriks in 1940, increased to 196,000,000 tugriks in 1950. In that year alone coal production at Nalaikha increased by 25% and that of woollen fabrics by 20%. By 1950 27 times more butter was being produced than in 1945.

Finance.—Budget (1951 est.): revenue 351,400,000 tugriks; expenditure 346,400,000 tugriks. The Mongolian tugrik was at parity with the rouble. The theoretical exchange rate, therefore, was: £1 = 11.20 tugriks and U.S. $1 = 4 tugriks. (K. Sm.)

Montana.

A northwestern state of the United States, Montana is popularly known as the "Treasure state." Land area: 145,878 sq.mi.; water area 1,260 sq.mi.; pop. (1950 census): 591,024, an increase of 5.6% over the population of 1940. Principal cities: Helena, the capital (17,581); Great Falls (39,214); Butte (33,251); Billings (31,834); Missoula (22,485); Bozeman (11,325); Anaconda (11,254); Kalispell (9,737);

Miles City (9,243); Havre (8,086). The urban population was 258,034 or 43.7% as compared with 37.8% in 1940. The Indian population numbered about 18,000.

History.—Incumbents in the principal state offices in 1951 were John W. Bonner (Dem.), governor; Paul Cannon (Dem.), lieutenant governor; Sam W. Mitchell (Dem.), secretary of state; Arnold H. Olsen (Dem.), attorney general; John E. Henry (Rep.), treasurer; John J. Holmes (Dem.), auditor; and Mary M. Condon (Dem.), superintendent of public instruction. In the biennial election of 1950, Republicans gained control of both houses of the state legislature.

In 1951 as the first part of a long range program for reorganization of the state government, a law was enacted consolidating the most valuable parts of the budget act of 1919 and the offices of state accountant and state purchasing agent under one head known as the state controller. Appointed by the governor for eight years with the consent of the senate, not removable except for cause and unable to succeed himself, it was expected that this act would guarantee the political independence of the controller, give him central control over all spending as well as budgeting, and make him the principal liaison agent between the executive and the legislature. Governor Bonner appointed A. M. Johnson as the first controller under this act in 1951. An additional act by the 1951 legislative session set up a nonpartisan Commission on Reorganization of State Government composed of eight members, four from the house and four from the senate, which was empowered to make a complete and constructive study of the entire organization and structure of state government in Montana. This commission was given authority to subpoena or requisition information necessary to make a thorough investigation of all state offices, boards, bureaus and institutions with the purpose of recommending the consolidation, reorganization or abolition of those not deemed essential to the welfare of the people of the state. The sum of $25,000 was appropriated for its work and the commission was to report to the state legislature in Jan. 1953.

Initiative measure no. 54, passed at the 1950 general election, providing for $22,000,000 (to be raised by an excise tax on cigarettes) for an honorarium or adjusted compensation for residents of the state in active duty in the armed forces of the United States in World War II, was upheld as constitutional by the Montana supreme court in Jan. 1952, thus voiding an earlier Montana supreme court decision in 1922 which held that a bonus was unconstitutional.

Education.—There were 1,180 elementary schools in Montana in 1951, with an enrolment of 80,589 and a teaching staff of 3,692. There were 176 high schools with 26,867 students and 1,496 teachers. The total cost of operating elementary and secondary schools was $26,000,000 in 1951, exclusive of expenditures for capital outlay, debt service, transportation and lunches.

Social Insurance and Assistance, Public Welfare and Related Programs.—Approximately 23,137 persons received public assistance in 1951. Grants totalling $11,912,036 were distributed as follows (figures in parentheses indicate the average number of recipients per month): old-age assistance (11,654) $7,345,846; aid to dependent children (8,529) $2,471,592; aid to needy blind (536) $372,070; subsistence (838) $330,113; medical care (834) $172,318; aid to disabled (850) $579,356; hospitalization (509) $591,281; burials (37) $49,460. Unemployment benefits of $2,568,298 were paid to 16,268 persons, an average of $17.76 per week for 8.9 weeks, or $157.87 per claimant. Correctional institutions with their average populations and total expenditures for 1951 were: Montana state prison, 570 inmates, $435.996; state industrial school, 125 inmates, $181,778; vocational school for girls, 36 inmates, $98,423.

Communications.—In 1951 the state highway commission maintained 8,297 mi. of highways, of which 854 mi. were unsurfaced. State highway expenditures in 1951 were $20,645,155, including federal aid. The local rural mileage system totalled 60,984 mi. The total number of airports listed on the U.S. aeronautical charts for Montana in 1951 was 118, not including 200 landing strips intermittently used by farmers and ranchers within the state boundaries. The railway mileage was 5,241. The number of telephones was 152,800.

Banking and Finance.—There were 110 banks in the state in 1951. The 39 national banks had total deposits of $265,985.000, and their total assets were $280,778,000. State banks had total deposits of $258,581,481, and their assets were $273,012,600. There were 16 building and loan associations with assets of $25,133,758. For the fiscal year ending June 30, 1951, the net state revenue, all sources, was $79,228,275, and the expenditures were $75,923,255. The gross debt of the state on July 1, 1951, was $6,586,000 and the net debt $5,423,791.

Table I.—*Principal Crops of Montana*

Crop	1951	1950	Average 1940–49
Wheat, bu.	97,988,000	91,434,000	68,845,000
Hay, tons	2,363,000	2,651,000	2,612,000
Barley, bu.	12,880,000	23,430,000	14,692,000
Sugar beets, tons	544,000	744,000	816,000
Oats, bu.	10,200,000	15,651,000	12,486,000
Potatoes, bu.	2,150,000	2,700,000	2,100,000
Alfalfa seed, bu.	157,000	161,000	120,000
Corn, bu.	2,392,000	3,492,000	3,059,000
Dry beans, 100-lb. bags	141,000	161,000	311,000
Flaxseed, bu.	198,000	561,000	1,418,000
Mustard seed, lb.	18,700,000	17,100,000	25,658,000

Other minerals		?		4,936,368
Total		?		$97,946,046

Agriculture.—Despite some drought and much bad weather at harvest time, Montana's wheat crop set an all-time high in 1951. With the exception of mustard seed, the volume of all other crops harvested was less than in 1950. The aggregate value of all crops was $307,000,000, an increase of $9,000,000 above the 1950 value. Wheat accounted for 63% of the total, followed by hay with 22% and barley with 4%. Total acreage of all crops harvested was 9,313,000, an increase of 185,000 over the acreage harvested in 1950.

Manufactures.—The total value added by manufacture (1947 census) in the 652 manufacturing establishments in Montana in 1947 was $92,258,000, as compared with $38,828,000 for 552 establishments in 1939. Reports of the state unemployment compensation commission showed that during the fiscal year 1950–51 an average of 18,130 persons were employed in manufacturing in Montana, with total wages of $62,990,385. Official estimates by the state employment service listed total employment figures for all Montana in 1950–1951, aside from agriculture, as 150,800. Electrical power to a total of 3,234,500,000 kw.hr. was generated in the state in 1951. (E. E. B.)

Mineral Production.—Table III shows the tonnage and value of mineral production in the state in 1949 for those commodities having values in excess of $100,000, and the corresponding data for 1950, so far as they were available at the close of 1951. Montana ranks third among the states as a producer of copper.

Montreal. A city in the province of Quebec, Canada, first called Ville Marie, Montreal was founded in 1642. Preliminary figures of the 1951 official census of Canada gave the city a population of 1,002,703, and that of greater Montreal 1,370,044.

The port of Montreal is the largest in Canada. Deep-sea arrivals in 1951 (commercial) numbered 1,186, with a net tonnage of 4,230,000. The number of coastal or inland vessel arrivals (commercial) in 1951 was 3,152, with a net tonnage of 3,450,000.

The total of cargo tonnage which passed through the port during 1950 was 15,315,533; this consisted of 8,579,034 inward (foreign 6,292,018, domestic 2,287,016) and 6,736,499 outward (foreign 3,435,195, domestic 3,301,304).

The assessed value of real estate (1951) was $1,557,008,439, of which $1,193,740,926 was taxable and $363,267,513 was exempt from taxation.

In 1951, building permits were issued for 9,721 new buildings having a value of $191,082,200, and for 2,731 repairs having a value of $10,881,900.

Bank debits for 1950 were $32,847,407,939, and bank clearings for 1951 were $26,602,217,000. (J. A. Ma.)

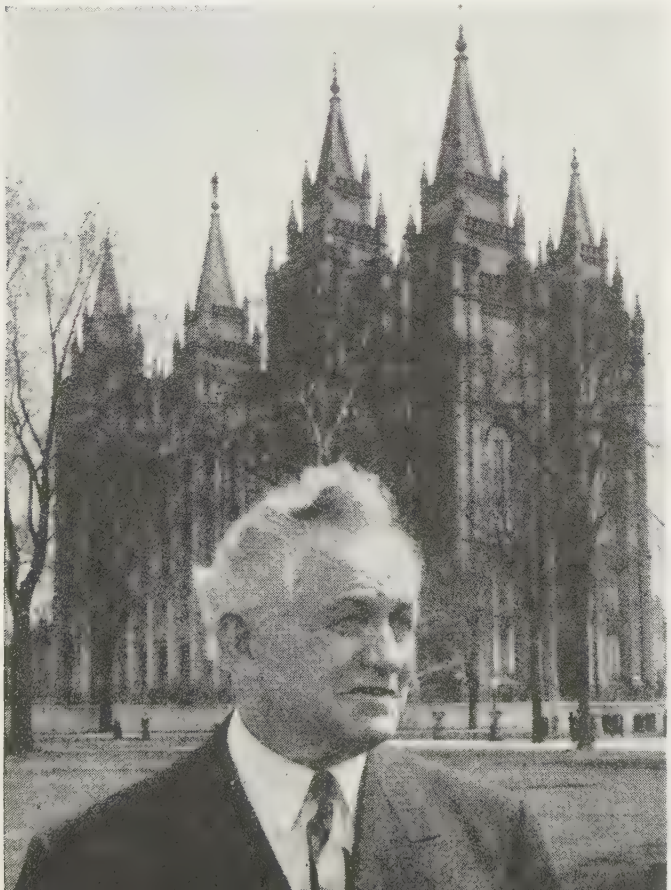
Montserrat: *see* Leeward Islands.

Mormons. On April 4, 1951, George Albert Smith, president of the Church of Jesus Christ of Latter Day Saints, died at his home in Salt Lake City, Utah. This dissolved the first presidency of the church, the highest authority therein. On April 8, 1951, David Oman McKay was ordained as president of the church and as prophet, seer and revelator for the church in a meeting of the Council of the Twelve and the Patriarch of the church held in the Salt Lake Temple. On the day following, in a solemn assembly of the priesthood of the entire church (a constituent assembly) he was sustained by the assembly as president of the Church of Jesus Christ of Latter Day Saints and as prophet, seer and revelator thereto.

President McKay had been ordained an apostle of the church in 1906; was general superintendent of the church Sunday schools, 1918–34; was church commissioner of education, 1919–21; second counsellor in the first presidency, 1934–51, first under Pres. Heber J. Grant, then under Pres. George Albert Smith; and was sustained as president of the Council of the Twelve in 1950.

During 1951, 78 chapels were completed and dedicated in the stakes of the church, and 32 in the missions (United States and Canada); there were approximately 12,000 convert baptisms, probably the largest number for any one year in the history of the church; 54 production projects were added to the church welfare plan; 11 additional stakes and 116 additional wards were created. (*See* also Church Membership.) (J. R. Cl.)

DAVID O. McKAY, who succeeded George A. Smith as president of the Church of Jesus Christ of Latter-Day Saints (Mormons) in Salt Lake City, Utah, in April 1951



Morocco, French. A sultanate of northwest Africa, with both Mediterranean and Atlantic coastlines, divided into unequal parts, the French protectorate described from 1947 as potentially an associated state of the French union, the Spanish protectorate consisting of a northern and a southern zone (*see* Spanish Colonial Empire) and the international zone of Tangier (*q.v.*). Areas and populations are shown in the table.

	Area (in sq. mi.)	Population (1950 est.)
French protectorate	153,870	8,410,000
Spanish protectorate*	17,631	1,192,000
Places of Spanish sovereignty†	823	206,000
Tangier	232	111,000
Total	172,556	9,819,000

*Including the southern zone, comprising 10,039 sq.mi. but only about 12,000 inhabitants.
†Alhucemas, Ceuta, Chafarinas, Melilla, Peñon de Veles and the Ifni territory (741 sq.mi.).

In the French protectorate the population was estimated in 1949 at 9,200,000, mostly Arabs and Berbers who are Moslem and speak Arabic (64%) or Berber (22%) or are bilingual (14%). The 1947 census revealed a European population of 325,000 including 266,133 French. The Jewish community numbered 225,000. Chief towns (pop. 1947 census): Rabat (cap., 161,416); Casablanca (551,222); Marrakesh (238,277); Fez (200,946); Meknès (159,811). Ruler in 1951: Sultan Sidi Mohammed ben Youssef III; grand vizier: Si Mamri; French residents general: Gen. Alphonse Juin and (from Oct. 3) Gen. Augustin Guillaume.

History.—At the end of 1950, Istiqlal (nationalist) members had left the council of government, and Thami el-Glaoui, pasha of Marrakesh, had protested to the sultan about his keeping Istiqlal members in his cabinet and refusing to sign the *dahirs* (laws) for reform that were presented by General Juin. Serious developments in the crisis took place in Feb. 1951. Pres. Vincent Auriol sent a message, and as tribes from the mountains converged on Fez and Rabat the sultan signed a protocol of agreement with the residency (Feb. 25).

Dissolving his cabinet, the sultan declared that Morocco expected the dawn of a new era in its relations with France. Si Mamri, the grand vizier, added: "We condemn the methods of a certain party, which rely on intimidation and force." Of especial significance were two *dahirs* signed by the sultan: one to set up *jemaa* (municipal councils) in the rural communes; the other to broaden the electorate for the chambers of agriculture and commerce. Distorted accounts of the affairs—there was talk of a bombardment of Fez—gave rise to anti-French demonstrations in Egypt at the beginning of March. In April Moroccan nationalists signed a pact of union at Tangier, undertaking not to negotiate with the French authorities within the framework of the existing regime.

On Nov. 2 elections to the chambers of commerce and agriculture were boycotted by the Istiqlal. Five people were killed and 40 wounded in disturbances at Casablanca. The states of the Arab league brought the question of Morocco to the attention of the United Nations, but discussion was postponed by the assembly.

Nine large bases for U.S. forces were being prepared in pursuance of the North Atlantic treaty.

Education.—Schools, French zone (1950): primary and secondary, pupils, Moslem 120,000, European 72,400, Jewish 31,800; institutions of higher education 3, students 1,725.

Finance.—Budget, French zone (1951 est.): balanced at 60,856,000,000 fr. Monetary unit: Moroccan franc=metropolitan franc=.2857 U.S. cents (Sept. 1951).

Foreign Trade.—French zone (1950): imports 114,810,000,000 fr. (including 78,181,000,000 fr. from the French union); exports 65,799,000,000 fr. (including 30,719,000,000 fr. to the French union). Principal exports: phosphate rock 12,777,000,000 fr.; preserved fish 8,982,000,000 fr.; cereals 7,398,000,000 fr.; citrus fruits 3,911,000,000 fr.; vegetables 4,436,000,000 fr.; lead 2,176,000,000 fr.; linseed 1,864,000,000 fr.

Transport and Communications.—French zone (1950): railways (normal gauge only) 1,690 km., including 719 electrified; roads 9,181 km.; motor vehicles 65,000; ships entered at Casablanca 6,238; aircraft landed 6,395.

Industry.—French zone, production (metric tons, 1950): phosphate rock 4,022,000; coal 637,000; iron ore 319,000; manganese 257,000; lead ore 65,000; zinc ore 22,000; oil 39,000; cement 321,000; electricity 481,000,000 kw.hr. (Hu. De.)

Morocco, Spanish: *see* Spanish Colonial Empire.

Morse, Wayne Lyman (1900–), U.S. senator, was born on Oct. 20 near Madison, Wis. He received his bachelor's degree from the University of Wisconsin, Madison, in 1923 and his master's degree in 1924; he took law degrees from the University of Minnesota, Minneapolis (1928) and Columbia university (1932). In 1924 he was appointed assistant professor at the University of Minnesota, serving until 1928. He was assistant professor of law (1929–30) and associate professor (1930–31) at the University of Oregon, Eugene; he was dean and professor of law 1931–44. Meanwhile he had served as special assistant to the U.S. attorney general (1936–39), Pacific coast arbitrator for the U.S. department of labour in the shipping industry (1938–42), chairman of the president's railway emergency board (1941) and member of the national war labour board (1942–44). In 1944 he was elected U.S. senator from Oregon as a Republican; he was re-elected in 1950 for the term 1951–57.

A member of the progressive Republican group in congress, Morse frequently backed the Democratic administration's policies. On Feb. 26, 1951, he declared that if the Republican platform for the 1952 national elections was "isolationist," he would "take a long walk." During the MacArthur hearings he supported the state department and the administration and denounced the Republican minority report which criticized Gen. Douglas MacArthur's dismissal by Pres. Harry S. Truman. On July 6 Morse and Sen. Brien McMahon introduced a senate resolution asking for an investigation of any foreign lobbies that might have influenced the foreign policy of the United States after 1941.

Mortgages, Home: *see* Housing.

Moscow. Capital of the Union of Soviet Socialist Republics and of the Russian Soviet Federated Socialist Republic, Moscow had in 1950 an estimated population of 7,000,000.

During 1951 about 735,000 square metres of floor living space were completed, which was 224,000 sq.m. more than in 1950, about 300,000 sq.m. more than in 1949 and almost twice as much as in 1940. Included in this were three skyscrapers, one in the Lenin hills to be Moscow State university, another an administrative 30-story building in Smolenskaya square and the third a 34-story block of flats on the Kotelnicheskaya embankment. Twenty-four schools with a seating capacity of 20,640 and 58 kindergartens for 5,320 pupils were also completed.

A new section of the great circular or *bolshoye koltso* underground railway between Kursky and Byelorussky railway stations added 4 stations (to the existing 35 stations) and 6.7 km. of track to the Moscow *metropoliten* which by the end of the year covered more than 100 km.

The western colony continued to dwindle. Many foreign diplomatic missions drastically reduced their staffs and, following the example given by New Zealand in the preceding year, Iceland closed its legation. These moves were dictated by the high cost to western countries of being represented in Moscow. With an official exchange rate of four roubles to the U.S. dollar the soviet capital was the most expensive city in the world, typical prices to foreigners ranging from 12 cents for a newspaper to $16.80 for a square meal. The Moscow budget estimates for 1950 planned for a revenue of 3,504,800,000 roubles but the actual total was 4,130,100,000 roubles. The estimated revenue for 1951 was 3,538,700,000 roubles. (K. Sm.)

Mossadegh, Mohammed (1880–), Iranian statesman, was born at Tehran, the son of Mirza Hedayat, for 30 years minister of finance.

He served his apprenticeship as financial agent in the province of Khurasan. He studied in Paris and later at the University of Neuchâtel, Switz., where in 1914 he received his degree of doctor of laws.

He was for a short period minister of justice (1920), of finance (1921) and of foreign affairs (1922), but was not popular with Iranian officialdom because of his insistence on cutting salaries and dismissing useless office holders. During 1923–27 he was member for Tehran of the *majlis*, but had to retire from public life because of his opposition to Riza Khan Pahlavi who in Dec. 1925 was proclaimed new shah of Iran. Mossadegh returned to politics in 1944, was elected to the *majlis* and put through a bill forbidding the government to grant an oil concession to anyone without legislative permission. As leader of the small National Front party (with 8 seats out of 136) he succeeded in convincing the *majlis* to reject on Nov. 26, 1950, the supplementary oil agreement signed by the government with the Anglo-Iranian Oil company. On March 15, 1951, mainly under his pressure, the *majlis* passed the Oil Nationalization act. On April 28 he was elected prime minister with the purpose of enforcing the act. On Oct. 8 he arrived at New York city to present Iran's case before the U.N. Security council and returned to Tehran on Nov. 23. (*See* also Iran.)

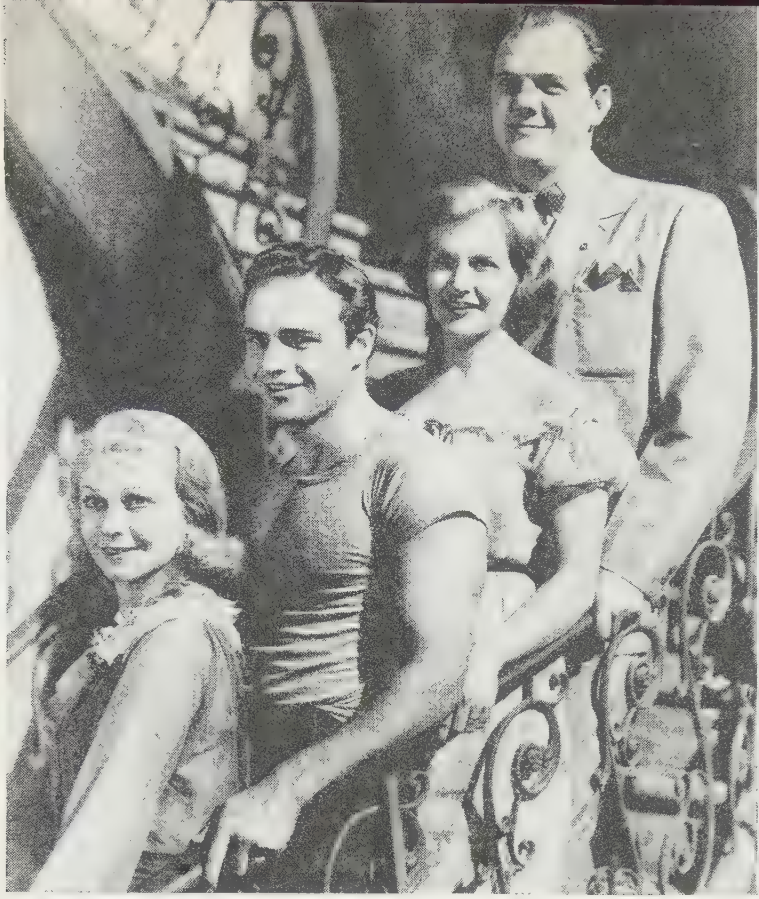
Motion Pictures. The U.S. motion-picture industry in 1951 halted and reversed the unfavourable business trends which had beset it since 1947. The upturn was by far the industry's most significant development of the year, since it indicated that the business had confounded its prophets of doom and had survived what was possibly the gravest crisis in its history. Estimates of the degree of box-office improvement varied from 4.1% to as high as 20% in certain areas.

Many factors entered into the upturn, in addition to better pictures which resulted in greater attendance. They included adjustment to television's worst competitive effects; larger number of films in colour, always a box-office stimulant; an increase in the number of theatres, particularly drive-ins; improvement in foreign revenues; slashes in production costs; excellent position in regard to excess profits tax; good effects of the fall promotion campaign entitled "Movietime, U.S.A."; and greater co-ordination of various industry elements in matters affecting their common welfare under the auspices of C.O.M.P.O. (Council of Motion Picture Organizations).

Paul Raibourn, vice-president of Paramount Pictures and one of the industry's leading economic authorities, estimated that the business volume of the industry in 1951 was from 6% to 8% greater than in 1950. A 10% decline at the beginning of the year, he stated, was offset by later business volume which exceeded the preceding year by as much as 20%.

One of the most significant indications of the change in the industry's outlook was 20th Century-Fox's full restoration of cuts in the salaries of 130 top executives which had been made as an economy measure in 1950. The restoration was based on the company's earnings during the final six months of 1951.

Unspectacular but steady gains in weekly attendance also reflected the upturn. From a low in weekly U.S. attendance of around 53,000,000, the figures climbed to around 55,000,000 to

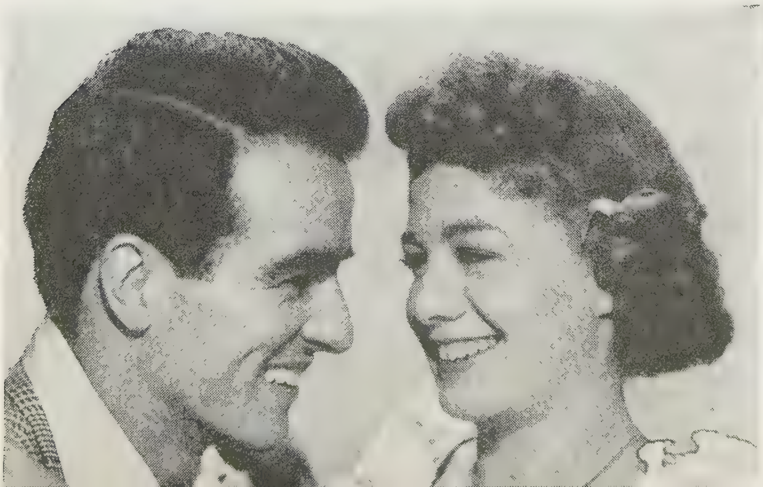


VIVIEN LEIGH (left) was chosen the best actress of the year for her role in *A Streetcar Named Desire*. The awards for best supporting actress and actor went to Kim Hunter (third from left) and Karl Malden (right). Behind Miss Leigh is Marlon Brando, who also starred in the Charles K. Feldman Group production, presented by Warner Bros.

HUMPHREY BOGART in a scene from *The African Queen*; for his performance in this jungle film, made in the Belgian Congo, he received the Academy award as the best actor of the year

Award winners among the films and players selected by the Academy of Motion Picture Arts and Sciences for highest achievement in 1951

(Above) GENE KELLY (left) and Georges Guetary in *An American in Paris*, a musical which was judged the best picture of the year and won other honours, including best scoring, best photography, best art direction (colour) and best costume design



(Left) *A PLACE IN THE SUN*, in which Montgomery Clift and Shelley Winters made a romantic team, won the award for best directing for George Stevens and best film editing for William Hornbeck

60,000,000 weekly.

Box-Office Receipts.—Gross revenue in 1951 appeared certain to exceed substantially the 1950 total world gross of approximately $2,220,500,000, of which the U.S. gross amounted to $1,320,000,000. After noting a $25,100,000 jump in the grosses of nine major film and theatre corporations over 1950 in a nine-month period, weekly *Variety* estimated the total business of 131 top-grossing pictures as running to $221,175,000 in the U.S. and Canada, as compared with $210,565,000 for the top-grossing pictures of 1950.

On Jan. 1, 1951, there were 19,797 U.S. indoor motion-picture theatres and 3,323 drive-in theatres, according to the U.S. department of commerce. These 23,120 theatres had a total seating capacity of 14,684,150—an increase of 21.1% over capacity in 1948, when a similar study was made.

Plant Investment and Profits.—Capital investment of the United States motion-picture industry amounted to $2,922,000,000 in physical properties and real estate, with $2,740,000,000 covering theatres, $141,000,000 studios, $25,600,000 as distribution's share and $16,000,000 embracing miscellaneous categories.

Higher taxes were offset by economies which reduced production costs from 25% to 35% below 1947 figures and thus enabled companies to maintain continuing profits, with the likelihood that the $50,000,000 total profit of the major film companies in 1950 would be matched or slightly exceeded in 1951.

Production; Foreign Sales and Imports.—Hollywood feature productions approved by the Production Code administration in 1951 totalled 370, in contrast to 379 in 1950. Foreign features approved by the P.C.A. in 1951 totalled 63, in contrast to 50 approved in 1950. Included under "foreign features" were films made outside the U.S. by Hollywood companies, such as *Quo Vadis,* which was shot in Rome.

The P.C.A. approved 383 short subjects in 1951, compared with 447 in 1950. Hollywood feature films released in the U.S. during 1950 totalled 383 with a slight drop indicated for 1951. The number of films in colour in 1951 exceeded 100, considerably more than in 1950 and 1949.

The foreign market for U.S. films expanded during 1951, as the total of film theatres in the world rose to 99,617, an increase of 8,000 over the preceding two years. Progress in easing currency and quota restrictions, as well as better pictures, also were important factors; dollar remittances from abroad for 1951 were estimated at between $120,000,000 and $125,000,000 as compared with previous figures of about $100,000,000 annually. The total estimated gross of U.S. pictures abroad amounted to $900,500,000 in 1950, and 1951 figures indicated the 1950 gross would be exceeded by $50,000,000 to $75,000,000.

Showings of foreign films in the U.S. increased during the year, as indicated by the fact that the number of foreign films approved by the P.C.A. in 1951 rose by 13 over 1950.

Trends in Production.—The popularity of religious subjects set against spectacular backgrounds, revived by Cecil B. de Mille's *Samson and Delilah* in 1950, reached a peak in 1951 with *David and Bathsheba,* the top-grossing film of the year, and the release, toward the year's end, of Metro-Goldwyn-Mayer's *Quo Vadis.*

Colourful musicals, numerous comedies, a wide range of war stories, several excursions into the classics, a number of biographies, fantasies, adventure epics, science-fiction features and films on political, racial and social themes—such as *I Was a Communist for the FBI, Storm Warning, The Well* and *Sound of Fury*—rounded out the extensive assortment. Many of the films, such as *The Red Badge of Courage,* also had historical backgrounds.

Large-scale westerns were not so prominent among box-office leaders as in previous years, and films with crime, gangster, psychological and horror themes continued their relative decline.

At the close of 1951, the major studios alone had poured approximately $285,000,000 into films of all types.

***Motion Picture Herald* and Film Critics' Polls.**—U.S. exhibitors, by confidential ballots cast in the annual poll of the *Motion Picture Herald,* chose the following as the ten top box-office stars for 1951: John Wayne, Dean Martin and Jerry Lewis, Betty Grable, Bud Abbott and Lou Costello, Bing Crosby, Bob Hope, Randolph Scott, Gary Cooper, Doris Day and Spencer Tracy.

The New York Film Critics in Dec. 1951 announced the following choices: best English-language motion picture of the year, Warner Bros. Pictures, Inc., *A Streetcar Named Desire;* best foreign-language picture, *Miracle in Milan;* best actress, Vivien Leigh in *A Streetcar Named Desire;* best actor, Arthur Kennedy in *Bright Victory;* best director, Elia Kazan, for *A Streetcar Named Desire.*

Academy Awards.—The Academy of Motion Picture Arts and Sciences announced in March 1951 the following awards for 1950 (*see* photographs on page 473 for 1951 awards):

Thalberg Memorial award, Darryl F. Zanuck. Best picture, *All About Eve,* a 20th Century-Fox Film Corp. production. Best performances: actor, José Ferrer in *Cyrano de Bergerac,* Stanley Kramer production, United Artists corporation; actress, Judy Holliday in *Born Yesterday,* Columbia Pictures Corp.; supporting actor, George Sanders in *All About Eve,* 20th Century-Fox; supporting actress, Josephine Hull in *Harvey,* Universal International Films, Inc. Best direction, Joseph L. Mankiewicz for *All About Eve,* 20th Century-Fox. Writing: (screen play) Joseph L. Mankiewicz for *All About Eve,* 20th Century-Fox; (motion-picture story) Edna and Edward Anhalt for *Panic in the Streets,* 20th Century-Fox; (story and screen play) Charles Brackett, Billy Wilder and D. M. Marshman, Jr., for *Sunset Boulevard,* Paramount Film Corp. Best art direction: black and white, Hans Dreier and John Meehan for *Sunset Boulevard,* Paramount; colour, Hans Dreier and Walter Tyler for *Samson and Delilah,* Cecil B. de Mille, Paramount. Best cinematography: black and white, Robert Krasker for *The Third Man,* Selznick Enterprises, London Films production; colour, Robert Surtees for *King Solomon's Mines,* Metro-Goldwyn-Mayer Pictures. Best sound recording, W. D. Flick and Roger Heman for *All About Eve,* 20th Century-Fox. Short subjects: cartoon, *Gerald McBoing-Boing,* United Productions of America, Columbia, (Stephen Bosustow, executive producer); one-reeler, *Grandad of Races,* Warner Bros. Pictures, Inc. (Gordon Hollingshead, producer); two-reeler, *In Beaver Valley,* Walt Disney, RKO release (Walt Disney, producer). Best film editing, Ralph E. Winters and Conrad A. Nervig for *King Solomon's Mines,* Metro-Goldwyn-Mayer. Best scoring: musical picture, Adolph Deutsch and Roger Edens for *Annie Get Your Gun,* Metro-Goldwyn-Mayer; dramatic or comedy picture, Franz Waxman for *Sunset Boulevard,* Paramount. Best original song, "Mona Lisa" from *Captain Carey, U.S.A.,* Paramount (music and lyrics by Jay Livingston and Ray Evans). Best special effects, Lee Zavitz for *Destination Moon,* George Pal Productions, Eagle Lion Classics. Best set decoration: black and white, Sam Comer and Ray Moyer for *Sunset Boulevard,* Paramount; colour, Sam Comer and Ray Moyer for *Samson and Delilah,* Cecil B. de Mille, Paramount. Costume design: black and white, Edith Head and Charles LeMaire for *All About Eve,* 20th Century-Fox; colour, Edith Head, Dorothy Jeakins, Elois Jenssen, Gile Steele and Gwen Wakeling for *Samson and Delilah,* Cecil B. de Mille, Paramount. Best documentaries: short subjects, *Why Korea?,* 20th Century-Fox Movietone (Edmund Reek, producer); feature, *The Titan: Story of Michelangelo,* Michelangelo company, Classics Pictures, Inc. (Robert Snyder, producer). Foreign-language film award, *The Walls of Malapaga.* Special awards: Louis B. Mayer for pioneering leadership in the motion-picture industry; George Murphy, for his services in interpreting the film industry correctly to the country at large. Special awards, scientific or technical: James B. Gordon and the 20th Century-Fox camera department for the design and development of a multiple-image film viewer; John Paul Livadary, Floyd Campbell, L. W. Russell and the Columbia Pictures sound department for the development of a multitrack magnetic rerecording system; Loren L. Ryder and the Paramount studio sound department for the first studio-wide application of magnetic sound recording to motion-picture production. (A. Ar.)

Educational Motion Pictures.—Much of the scope and nature of educational motion-picture production in 1951 can be described by reporting the film production activities of ten producers. The ten producers listed in the table were representative of U.S. commercial educational sound motion-picture film producers. To this must be added the film production activities of U.S. government agencies, the information offices of other governments and hundreds of industrial and manufacturing groups, all of whom produced films for general information purposes. Many of these films were of such content that they could be used in schools for educational purposes.

Representative Educational Motion-Picture Production, 1951

Name of producer	Number of films produced	Titles reserved for television	Titles of representative films
Academy Films	4	all	*Nile River*
Bailey Films	12	all	*Art in Our World* *Artist and Nature*
Arthur Barr Productions	6	none	*Geysers and Hot Springs*
Coronet Films	70	4 groups of 13 subjects	*Are You Ready for Service?*
Encyclopaedia Britannica Films Inc.	50	all	*Booker T. Washington* *Monarch Butterfly*
Johnson-Hunt Productions	4	none	*Parallel Lines* *Two-Part Singing*
McGraw-Hill Text-films	40	21	*Mt. Vernon in Virginia*
United World Films	24	all	*Unlocking the Atom*
Young America Films, Inc.	16	12	*The Outsider* *The Other Fellow's Feelings*

Encyclopædia Britannica Films led 1951 production with films presenting biographical sketches of great Americans. Such films as *Thomas Jefferson, Benjamin Franklin* and *Booker T. Washington* were representative. Young America Films made a contribution to the study and practice of human relationships with such films as *The Other Fellow's Feelings* and *The Outsider*. McGraw-Hill Text-films continued to produce films for use in teacher-training situations both in service and in professional education classes for teachers in training. The series of *Are You Ready for Service?* films, produced by Coronet Films, was aimed at intelligently conditioning high-school-age youth toward a wholesome outlook about induction into the armed forces.

Film production budgets for 1951 were in general increased, mostly because of increases in local school film purchases. The greatest increase in film purchases was by newly created school film libraries.

The most significant effort in the use of films in adult education continued to be through the agency of the United States department of agriculture and the land-grant agricultural colleges. Production of informational or land-use educational films, once launched and accomplished entirely by the department of agriculture, had become widely supplemented by local college production throughout the United States. A 1951 report, *Agricultural Films Produced by Agricultural Colleges, State Extension Services, Universities and Other State Agencies,* motion picture service, U.S.D.A. (July 1951), revealed that almost every state in the union contributed to the production of educational films dealing with some important aspect of farming and farming methods.

Formerly the institution known as the University Press or College Press was engaged in disseminating socially valuable information learned through service and research. By 1951 most of the great U.S. universities and colleges were distributing similar current information through the medium of the 16-mm. sound motion-picture film. Such films were being produced in college and university divisions specifically established for film production. This development had become significant enough to warrant the formation of a professional group known as the College and University Film Producers association.

A total of 287 educational film libraries announced from 200 to more than 6,000 film titles available for school use in 1951. These 287 educational film libraries were listed as being departments of city, county, college or university institutions. In addition there were more than twice that number of similar libraries listed as having 175 or fewer titles available. All these were exclusive of parochial, religious and commercial film rental libraries.

California, Virginia, Texas, New York and Illinois led in the establishment of decentralized film library service to public schools.

Professional training in 16-mm. sound motion-picture film production was added to the curricula of many colleges and universities in the United States. Representative universities offering such training during the year were the University of Southern California; the state universities of Indiana, Iowa, Michigan and Wisconsin; Boston university; and Syracuse university.

While the school use of educational films climbed to its highest peak in the history of U.S. education, several national organizations continued to sponsor programs of acquainting the adult population of the United States with the power of the educational film. The American Library association guided educational film use research for public enlightenment at the adult level in several states. The Educational Film Library association served more than 600 members with information about currently released educational films and their use. The Film Council of America instituted sweeping revisions in service and leadership functions during 1951 which included streamlining the constitution of that organization, refinancing the service activities to which it was committed through a substantial grant-in-aid from the Ford foundation, and securing new and additional staff leadership. The Film Council of America supplied information about the selection and use of 16-mm. sound motion-picture films to supplement and augment the educational programs of the organizations seeking such assistance.

Significant in helping to sponsor the general improvement of classroom teaching through the use of carefully selected educational sound motion pictures is the department of audio-visual instruction of the National Education association. The 1951 membership of the professional education group numbered more than 1,400 and included the majority of the nation's teachers, directors of visual instruction and college and university professors whose responsibilities had to do with the organization and administration of programs which sought to improve instruction through the use of educational films. (W. A. Wi.)

Technical Developments. — *Theatre Television.* — Theatre television became a commercial reality in 1951, with the first exclusive theatre telecast of a major sports event being shown in nine theatres in six different cities to capacity audiences. About 50 installations were made of direct projection theatre television systems, and there were several theatre systems in use that photographed a small-sized television receiver tube with either 16- or 35-mm. reversal film. This film was processed in 30 to 40 seconds and then projected with normal film equipment.

New Technicolor System.—Technicolor introduced a new colour system balanced for 3,350 K tungsten illumination with an ASA exposure speed of approximately 50, whereas the original three-colour system was balanced to 5,700 K daylight illumination with an exposure speed of approximately 18. The new system was readily accepted and several feature pictures were made and released using the system. The increased speed, plus the fact that it allowed the use of incandescent rather than arc lamps, resulted in substantial economies in set lighting.

Negative-Positive Colour System.—Ansco and the Eastman Kodak company both introduced new negative-positive colour films which were daylight balanced, with an ASA exposure speed of approximately 18. A negative-positive system is one in which two multilayer-type colour films are provided, one for camera use and the other for preparation of release prints. Both films are intended for processing by the user. The camera film, or negative, is exposed in conventional motion-picture cameras. The positive material may be printed on modified conventional printers. Processing is carried out in continuous-type developing machines similar to those used for conventional black-and-white film processing, but with more tanks to allow for the increased number of steps required.

Strippable Negative Colour System.—Eastman Kodak company also made available on an experimental basis a multilayer

THEATRE AUDIENCE viewing three-dimensional motion pictures in colour through special glasses at the 1951 Festival of Britain in London

stripping negative for colour, said to have an ASA speed rating of 64 (tungsten). This negative consists of a single film base bearing three black-and-white emulsions. The layer next to the base is red sensitive, the next is green sensitive and the top emulsion is blue sensitive. Between the red- and green-sensitive layers is a special interlayer which has the property of adhering to the emulsions when dry but readily separating when wet. A similar interlayer is between the green- and blue-sensitive emulsions. As the green- and red-sensitive emulsions are also sensitive to blue light, a yellow filter layer is interposed between the blue and green emulsions. After exposure, but before development, the two upper layers are wet stripped separately and each transferred to its own film base. This strippable negative can be exposed in regular studio cameras, and it also provides separation or three-strip negatives which can be developed in standard black-and-white processing equipment.

Film Base.—An entirely new synthetic base for photographic film was developed by E. I. du Pont de Nemours & Co. Preliminary tests showed that it was several times tougher and had much greater dimensional stability than other film. The new material, a polyester, is chemically related to dacron polyester fibre. Both are condensation polymers made from ethylene glycol and terephthalic acid. The base was produced in laboratory scale equipment and was presented to the motion-picture industry for commercial evaluation.

Diffused Lighting Units for Motion-Picture Sets.—A new, extremely lightweight, diffusing-type light source for set lighting was designed and introduced by the Motion Picture Research council. The unit consists of a corrugated aluminum panel 8 ft. by 6 ft., painted flat white. In front of this reflector is a framework mounting two rows of photoflood lamps which throw light toward the panel which diffusely reflects the light to the set. These units provide a large area of illumination at a relatively low intensity. They establish an evenly distributed shadowless fill light over every part of the set. The key light is then established with normal units.

Remote-Control Lighting Units.—This system, developed by Paramount studios, consists of a number of lightweight set lighting units, a control unit for each lamp that when activated by remote control automatically tilts, pans or adjusts the lamp beam from spot to flood, and a remote master control by which the lamps in the system may be selectively controlled individually or in groups. The lamps are considerably lighter than regular studio units and employ a principle of radiation-type cooling as contrasted to the former convection (air) cooled lamp house. While the system had been used in actual production, it was still under development. (W. F. KY.)

Canada.—In addition to its continued production of short documentary films during 1951, the National Film board pioneered in several directions. The most humour-provoking effort was the three-dimensional coloured animated cartoon invented by Norman McLaren. The board also created a cinemicrography unit, which, combining camera and microscope, produced motion pictures of minute organisms magnified up to 1,000 diameters. As part of Canada's policy of racial tolerance, the board initiated a film on Negro life, taking the first sequences at the Emancipation day celebrations at Windsor, Ont., in July.

During 1951 the National Film board won a number of awards, including: Sestrieres (Italy) Ski club award for *Ski Skill; Scholastic Teacher* magazine award (as one of the ten best 1950 films for school use) for *Family Circles;* Canadian film award, sponsored by the Canadian Association for Adult Education (best short theatrical of 1950), for *Après le Bagne;* Canadian film award (best nontheatrical) for *Feeling of Depression.* Crawley Films *Child Development Series* was also one of the ten best 1950 films for school use, the only other Canadian film winning an international award in 1951.

Ten Canadian film companies were active doing short commercial and package-type film work for U.S. television stations. Despite higher living costs, a Gallup poll revealed that 54% of the population continued to go to the movies at least once a month, while 20% went four times or more a month.

Carillon Pictures of Montreal made Canada's first all-colour feature-length motion picture, called *Etienne Brule, Gibier de Potence,* based on H. J. Cranston's *Etienne Brule, Immortal Scoundrel.*

BIBLIOGRAPHY.—Hye Bossin (ed.), *1951 Year Book, Canadian Motion Picture Industry* (1951); National Film Board, *Films and Filmstrips,* catalogue, 1939–51 (1951). (C. CY.)

European Film Festivals.—During 1951 the chief European film festivals were held at Cannes, Fr. (at which the main awards went to Vittorio de Sica's *Il Miracolo a Milano,* Luis Bunuel's *Los Olvidados* and Alf Sjöberg's *Miss Julie*), in Berlin (where the Swiss film *Four in a Jeep* gained the *grand prix*), at Venice, It. (where a Japanese film, *In the Woods,* Jean Renoir's *The River* and Robert Bresson's *Le Journal d'un curé de Campagne* won the chief awards) and at Edinburgh, Scot. (an annual noncompetitive festival). The film festival for eastern Europe took place at Karlovy Vary, Czech.

Great Britain.—During 1951 two new schemes to develop film production were implemented by the government. These were the group scheme of the National Film Finance corporation (which up to March 31, 1951, had had £6,000,000 placed at its disposal by the board of trade for loans to film producers) and the British Film Production fund, commonly called the Eady plan after its originator, Sir Wilfrid Eady of the treasury. The group scheme, announced in Jan. 1951, initiated three production groups, the first based on Pinewood studios, Buckinghamshire, and formed in association with General Film Distributors, which agreed to guarantee 70% of production finance; the second based on Elstree, Hertfordshire, and formed in connection with the Associated British Picture corporation; and the third group providing opportunities for young and unknown film makers to produce special low-budget feature films, based on Southall studios, Middlesex.

The British Film Production fund was initiated during 1950, and resulted from a levy paid by exhibitors; this levy, from Aug. 1951, was ¼*d*. on all seats sold at a price between 4*d*. and 1*s*., and ¾*d*. on seats sold at more than 1*s*. It was estimated that the money raised by these means would amount to about £3,000,000 a year, and producers of British quota films exhibited would receive payments from it in direct proportion to the box-office earnings of their productions, the rate being about 40% of the gross takings. Meanwhile, attendance at British motion-picture theatres continued to decline. Attendance in 1951 averaged 26,000,000 a week, and entertainment duty amounted to 35% of the theatres' gross total takings.

Many outstanding feature and documentary films were produced during the year. These included *The Browning Version, Cry the Beloved Country, High Treason, Encore* (the third in the series of Somerset Maugham short-story films), *The Magic Box* (produced by the industry as a whole as its feature contribution to the Festival of Britain), *The Lavender Hill Mob, The Man in the White Suit, Murder in the Cathedral, No Resting Place, Secret People* and *Outcast of the Islands.*

France.—French feature film production, like that of Great Britain, suffered setbacks after World War II, but its output in 1950 was 112 feature films. In 1948 the Paris Film Accord limited the entry of United States films to France, and made it obligatory for French motion-picture theatres to show French films for 5 weeks out of each period of 13 weeks. A national film fund was also created from the receipts of a heavy tax imposed on every film, French or foreign, that was distributed and also from a small entertainment tax on theatre seats. French producers who undertook the further production of films, however, received a grant-in-aid from this fund which amounted to a complete refund of the tax on any previous film to their credit in proportion to its box-office receipts. Even with this substantial assistance, it remained difficult for the many independent producers who made up the French film industry to raise the full capital necessary to undertake fresh production. The French domestic market, working on a single-feature program basis, could absorb only 70 to 100 films a year after the annual foreign importations of about 185 films had been allowed for.

Documentary films were normally produced as private commercial ventures, and then as far as possible placed with distributors for exhibition so that they might earn the 3% of the program receipts which were due to them by law. The abuse of this system was that producers of feature films themselves manufactured cheaply made short films so that they might retain the 3% of the proceeds due to the documentary in the program in which their feature was shown.

Among the chief French feature films of 1951 were *Les Amants de Brasmort* (directed by Marcello Pagliero), *L'Auberge rouge* (Claude Autant-Lara), *Barbe-Bleue* and *Souvenirs perdus* (Christian Jaque), *Edouard et Caroline* (Jacques Becker), *Le Garçon sauvage* (Jean Delannoy), *Juliette ou la clef des songes* (Marcel Carné), *Maîtres après Dieu* (Louis Daquin), *La Nuit est mon royaume* (Georges Lacombe), *Olivia* (Jacqueline Audry), *Le Plaisir* (Max Ophüls), *Sous le ciel de Paris* (Julien Duvivier) and *Le Journal d'un curé de Compagne* (Robert Bresson).

Italy.—Italian motion-picture production increased from 48 films in 1945 to 68 in 1949 and 100 in 1950. Documentary productions, as in France, received 3% of the receipts of the film programs to which they were assigned, and there was therefore regular production of documentary films, many of them of a high artistic standard. Italy also had an arrangement of awarding feature films of merit a degree of tax remission.

The chief Italian productions of the year were *Il Miracolo a Milano* and *Umberto D* (directed by Vittorio de Sica), *Il Cristo proibito* (the first film to be directed by the novelist Curzio Malaparte), *Anna* and *Luci del Varietà* (Alberto Lattuada), *Napoli milionaria* (Eduardo de Filippo), *Paris est toujours Paris* (made by Luciano Emmer in France), *The Medium* (Gian-Carlo Menotti's film version of his famous opera), *Cronaca di un amore* (Michelangelo Antonioni) and *Due Soldi di speranza* (Renato Castellani).

Western Germany.—The standard of postwar film production in western Germany was not high. The great majority of film producers tried to obtain quick success. A production which attracted attention during the year, however, was a political melodrama, *Der Verlorene,* which Peter Lorre, a well-known actor in U.S. films, returned to Germany to write and direct.

Yugoslavia.—Although it was intended that the six constituent republics of Yugoslavia should develop independent film production, only Slovenia, Serbia and Croatia had in fact begun work to any extent by 1951. In Belgrade a so-called "film city" was in process of construction just outside the town; it was begun in 1947 and its plans were based on studies undertaken by Yugoslav architects in Czechoslovakia and Germany. The studios were in use in 1951, and the whole undertaking was expected to be completed by 1953. The country as a whole had about 1,000 motion-picture houses, seating from 300 to 1,000 people. It was planned to increase the number so that there would be one for every 10,000 people, and to serve the villages with mobile units.

Among the more successful Yugoslav films were: *Fra Brne* (directed by Fedor Hanjekovich), a story showing the corruption of monks and the monastic system in 19th century Dalmatia; and *The Last Day* (directed by Vladimir Pogatchitch), a melodrama about sabotage.

Czechoslovakia.—Production in Czechoslovakia during 1951 was increasingly influenced by soviet films. The chief films produced were: *New Warriors Will Arise* (directed by Jiri Weiss), a study of the origins of the national proletarian movement in the 19th century; *The Basket Bells* (directed by J. Jorcicka), another historical study of the workers' movement; *Herald of the Dawn* (directed by V. Krska), a biographical film about Bozek, the Czech inventor of the steam car; *It Happened in May* (directed by Martin Fric), a comedy of a factory worker whose prejudices against becoming a shock worker are overcome; *Girl at the Wheel* (directed by Jiri Sequens), the development of a village to Communist forms of production; and *The Fight Will End Tomorrow* (directed by M. Cikán), a Slovak story of the workers' struggle in the 1930's.

U.S.S.R.—Among the films released during 1951 were: *Admiral Ushakov* (directed by M. Romm); *Admiral Suvorov* (directed by V. Petrov); *The Conscience of the World* (directed by A. Room), a film on the dilemma of a scientist; *Farewell America* (directed by A. Dovzhenko); *The Glory of the People* (directed by G. Alexandrov), a biography of the composer M. I. Glinka; *Green Ocean* (directed by Mark Donskoi); *Harvest* (directed by V. I. Pudovkin), a film on a backward collective farm; *Sadko* (directed by V. Ptushko), a film of Nicolas Rimsky-Korsakov's opera; and two biographical films, *Rimsky-Korsakov* (directed by G. Roshal) and *Pushkin* (directed by S. Gerasimov).

FILMS OF 1951.—*Egypt's Hollywood* (Hamilton Wright Organization, Inc.); *History Brought to Life, Screen Actors, This Theatre and You, Understanding Movies* (Teaching Films Custodians). (R. MAN.)

Motor-Boat Racing. Ten unlimited hydroplanes completed for the Gold cup in Lake Washington at Seattle, Wash., Aug. 4, 1951, among them being Stanley S. Sayres' "Slo-Mo-Shun IV," which had set the existing world speed record of 160.3235 m.p.h. for a straightaway mile in

1950, and "Slo-Mo-Shun V," which was also designed for Sayres by Ted Jones and built by Anchor Jensen of Seattle. In two 30-mile heats "Slo-Mo-Shun V," driven by Lou Fageol, was never headed, and was awarded the Gold cup after the third heat was called off when another boat capsized and killed the crew of two. "Slo-Mo V's" best speed for a 30-mile heat was 91.766 m.p.h. Horace Dodge's new "Hornet," driven by Bill Cantrell, finished second and "Slo-Mo IV," driven by Ted Jones, third. Each of these three boats was powered with a single Allison engine.

Walter and Roy Dossin's big, twin-Allison-powered "Miss Pepsi," driven by Chuck Thompson, had set a new Gold cup qualifying record of 100.558 m.p.h. in the qualifying heat, but engine trouble put it out of the race. Later in the season it won the Silver cup at Detroit, Mich., with a best-lap speed of 98.085 m.p.h., and followed this up by winning the President's cup at Washington, D.C., in September—the first boat and driver to run two consecutive wins in this annual event.

Two Canadian speedboats won racing honours in England on Lake Windermere during the summer. "Costa Livin," owned by Arthur Hatch of Hamilton, Ont., Can., won the Duke of York trophy and "Z-z-zip," owned by Jack Langmuir of Brockville, Ont., Can., the *Daily Telegraph* trophy.

Numerous speed records went by the board during the year. One of the new marks was 111.742 m.p.h. made in competition by "Slo-Mo-Shun IV," driven by Lou Fageol, at Seattle, Wash., in a race subsequent to the Gold cup event. Bob Rowland of South Norfolk, Va., drove his 225 class hydroplane, "You All," to a competition record of 83.488 m.p.h. at New Martinsville, W.Va. C. Mulford Scull of Ventnor, N.J., drove his 48 hydro "Shooting Star" to a new competition mark of 58.121 m.p.h. at Red Bank, N.J., and a mile straightaway of 72.727 m.p.h. at New Martinsville. Other new inboard straightaway mile marks included Joe Taggart's "Tommyann's," 98.361 m.p.h. in the 7-litre class and Tony Margio's "Miss Fort Pitt's," 71.891 m.p.h. in the 91 hydros.

Outboards enjoyed an active season of competition and set several new records. The increase in popularity of stock outboard utility boats was especially noticeable. (W. H. Tr.)

Motor Transportation.

The postwar upward trend in motor vehicle ownership and operation in the United States continued to new highs in 1951. The total number of motor vehicles registered reached an all-time record of more than 52,000,000, which was 6% above the previous high established in 1950. There were 17,000,000 more vehicles on the road in 1951 than there were ten years before. Passenger cars accounted for nearly 43,000,000 units, and there were more than 9,000,000 trucks.

Production of 6,800,000 new motor vehicles in United States plants during the year was the second highest output in the history of the industry, yet 1,200,000 fewer vehicles were produced than in the peak year 1950. This reduction was the result of cuts in production during the second half of the year necessitated by government orders limiting the amount of steel and other scarce materials for civilian goods. Under the controlled materials plan, production of passenger cars in the third quarter was set at 1,200,000 units, and another cut in the fourth quarter reduced output to 1,100,000. As a result, new passenger cars for the year numbered only 5,400.000, or 1,300,000 units fewer than the record of 1950. Truck production, on the other hand, was the highest ever attained, with 1,400,000 vehicles rolling off the assembly lines during 1951. This accomplishment was made possible by heavy output during the first half of the year, since government-approved production rates in the second half limited truck manufacture to an annual rate of approximately 1,100,000 units. Bus production in 1951 was 70% above the 1950 rate.

A significant milestone in the history of the automobile industry was passed in the latter part of December, when somewhere in the United States the 100,000,000th passenger car was produced. It had taken 51 years to achieve this mark, but the last 5 of these years had accounted for 25,000,000 of the 100,000,000 total.

The wholesale value of 1951 motor vehicle production was $9,600,000,000, a slight decline from the record $10,400,000,000 of the previous year; but heavy output of replacement parts increased the wholesale value of these items to $2,500,000,000, substantially above the 1950 figure. Exports of motor vehicles totalled 478,000, which was 57% above 1950.

The increased number of motor vehicles on the highway caused a proportionate increase in traffic volume, which was nearly 500,000,000,000 mi. for the year. More gasoline was consumed than in any previous year. These factors in turn led to an increase in traffic deaths, more than 37,000 motorists and pedestrians being fatally injured in highway accidents.

A survey of automobile ownership and use during 1951 revealed that 2 out of 3 households in the United States owned a car, and 1 out of 12 owned two cars or more. On an average day 59,000,000 adults—more than half of all adults in the United States—rode at least once in an automobile. Two-thirds of all mileage driven was for home-to-work travel and shopping.

The postwar decline in intercity travel by bus was reversed during 1951, and approximately 21,000,000,000 passenger-mi. of bus travel was nearly 10% higher than the level of patronage in 1950. This increase was attributed to the requirements of the expanding defense program, including the movement of defense workers, soldiers and sailors on leave, and visits of relatives and friends to training camps. Public transit vehicles in cities, however, experienced a continuing downward trend in business, and the 16,000,000,000 passengers carried during 1951, most of them by bus, represented a decline of more than 1,000,000,000 passengers from 1950.

Intercity trucks accounted for 137,000,000,000 ton-mi. of freight transportation during the year, or about 10% more than during 1950. But the over-the-road carriers, after sharp increases during the first half, suffered the first third-quarter drop since 1945. This reversal, principally the result of the conversion of industry to defense production and liquidation of oversized inventories, was halted during the fourth quarter.

The demand for better highways continued with the growth of motor vehicle traffic, and highway expenditures during 1951 reached an unprecedented level of $4,500,000,000. By the end of the year, however, shortages of materials were beginning to reduce the pace of road construction, and numerous projects were being held up for lack of steel. The year was nevertheless marked by significant roadbuilding innovations in the form of expanding toll road developments. All but the northern 9 mi. of the 130-mi. New Jersey turnpike were opened to traffic, providing a modern expressway from the Delaware river north to connect with the Hudson crossings to New York city. This brought the first major relief from the traffic congestion of parallel U.S. 1, the heaviest-travelled route in the world. Pennsylvania likewise opened the eastern and western extensions of the Pennsylvania turnpike, bringing total length of the toll road to 327 mi. and providing an express route from Philadelphia to the Ohio border. New York voters approved a $500,000,000 bond issue for a 500-mi. Thruway to further the trend back to the toll gate.

A government-sponsored study of the problem of maintaining automobile transportation during the defense period concluded that, under conditions governing in 1951, at least 26,000,000 passenger cars would have to be kept in operation to provide the transportation services necessary to keep the economy going at top speed. It was noted that average car life by the end of 1951 was 7.3 years, compared with 5.3 years in 1941, and that there were 18,000,000 prewar cars on the road. To replace these worn-out vehicles and provide new equipment for an expanding population would require average annual production of about 4,000,000 passenger cars over a period of several years. Municipal Government. Throughout 1951 cities in key U.S. defense areas experienced severe housing shortages and strains on community facilities such as sewers, schools, water, streets and recreation much as in World War II. To meet the situation, the Defense Housing and Community Facilities Services act (public law 139, approved Sept. 1, 1951) was passed. It relaxed the curbs on housing credit and authorized various sums for public housing, community facilities, federal mortgage insurance and other private housing aids. Responsibility for determining which municipalities qualified as critical defense housing areas eligible for federal assistance under the act was vested in the Office of Defense Mobilization. By Nov. 8, 78 areas had been so designated.

Organized Crime.—The U.S. senate special committee to investigate organized crime—the so-called "Kefauver committee"—filed its third interim report May 1, 1951, and its final report on Aug. 31. The committee's exposure of nation-wide gambling and vice, involving the corruption of innumerable police and other law enforcement officers throughout the country, was followed by greatly intensified activity in local law enforcement. It resulted in the creation of state legislative committees to investigate crime, grand jury investigations in many areas and the organization of various state and local crime commissions, as in Tampa and Miami, Fla., New York city, Dallas, Tex., and many other places. The report emphasized that, while there were a number of matters falling within the jurisdiction of the federal government, the problem was basically a state and local one. The committee's seven recommendations included, in addition to the appointment of state and local crime committees and grand jury investigations, the establishment of special-purpose squads in each state, particularly on both state and local levels, for the suppression of the narcotics traffic. The committee's exposure of the narcotics evil had immediate results in the modification of court procedures, passage of remedial laws and undertaking of special programs of education. Investigations throughout the country resulted in wholesale dismissals of police officials, from chiefs down, and the implication of innumerable criminal, political and law enforcement interests.

Municipal Finance.—The upward trend in 1951 municipal budgets was reflected in a survey of the annual budgets of 24 U.S. cities by the Municipal Finance Officers association, which showed an increase in total budgeted expenditures of 16% over 1950. Special studies of postwar municipal expenditures in Baltimore, Md., and Syracuse, N.Y., revealed a per capita budget increase of almost 60% after 1946 in the former city and an increase in Syracuse's operating budget of more than 70%. In St. Louis, Mo., the 1951–52 budget for operating costs exceeded that of the preceding year by 12% and the last prewar year of 1939–40 by 126%. Expanded municipal services and the decreased purchasing value of the dollar accounted largely for the rapid postwar rise.

The annual report of the census bureau on the finances in 1950 of the 474 cities with populations of 25,000 or more, published in Oct. 1951, showed an increase of about 7% over 1949 in both revenue and spending; capital outlay increased 12.1% and outstanding gross debt 7.2%.

There were no spectacular new grants of local taxing powers by the states in 1951; the most significant was the extension to all cities in West Virginia of the power—previously limited to cities with home rule charters—to levy a variety of taxes, including capitation, motor vehicle, domestic animals, licence and privilege taxes, and to impose specified service charges. Tennessee authorized its cities to levy a 10% tax on the retail price of beer, and New Mexico authorized a city cigarette tax. Baltimore was empowered by the state legislature to impose a group of special taxes; New York state authorized the city of New York to increase its local sales tax from 2% to 3%, and its hotel and lodging house tax was made permanent. The Florida state legislature approved charter changes granting broader nonproperty taxing powers to a number of cities. Saginaw, Mich., adopted a local income tax, which was subsequently invalidated, however, by a state circuit court ruling.

More significant were the grants to local governments of new or increased shares in state-collected revenues. Important highway-aid legislation was enacted in North Carolina, Michigan, Illinois, Kansas, Wyoming, Pennsylvania and Minnesota. Among the states with new legislation for sharing state taxes and revenues were Oregon (liquor monopoly revenues), North Dakota and Wyoming (cigarette tax levies) and Nebraska (insurance company tax).

The postwar upward trend in property tax rates and assessed valuations, which appeared to be somewhat retarded in 1950, was resumed in 1951. According to the annual tabulation prepared by the Detroit Bureau of Governmental Research—which in 1951 became the Citizens Research Council of Michigan—published in the *National Municipal Review*, the average unadjusted tax rate for 1951 for 212 cities of more than 30,000 population increased 2.5% over that for 1950, compared with an increase of only 0.7% the preceding year; average adjusted tax rates—based on the ratio of assessed values to market values—decreased 5.1% in 1951, compared with a decrease of 11.2% in 1950. Total assessed values rose 8.2% in 1951—the largest postwar increase recorded in this series since 1947; the increase in 1950 was 2.3%. The trend in tax collections remained virtually unchanged; 297 reporting cities showed 96.01% of taxes collected in 1951, compared with 96.57% collected in 1950, a minor fluctuation characteristic of recent years.

The outstanding gross debt of all cities reached $11,700,000,000 in 1951, a record high; it exceeded that for 1950 by 7.5%; almost 40% was incurred to finance public utility systems.

About mid-year, state and local governments were requested by Charles E. Wilson, director of the Office of Defense Mobilization, to defer capital borrowing if at all possible, as a means of combating inflation. A voluntary credit restraint committee appointed by the board of governors of the federal reserve system suggested specific types of capital projects which might well be postponed and issued cautionary recommendations concerning short-term indebtedness. Regional committees of investment bankers were established for the advanced clearing of proposed financing involving sums of $1,000,000 or more. Notwithstanding these developments, and the increasing shortages of materials, state and local borrowing continued at a high level up to the close of the year. Bond sales, according to *The Bond Buyer,* reached an aggregate of $3,300,000,000 for the year, compared with $3,700,000,000 in 1950, and approximately $3,000,000,000 in both 1949 and 1948. Bond approvals reached an all-time high of $2,250,000,000, compared with $1,500,000,000 in

1950, $2,210,000,000 in 1949 and $1,400,000,000 in 1948.

The cost of state-local borrowing continued favourable to governmental units. *The Bond Buyer's* index based on 20 municipal bonds stood at 2.10% on Dec. 27, 1951, compared with 1.70% and 2.08% in the last weeks of 1950 and 1949, respectively.

City Employees, Social Security.—The census bureau's report on *City Employment in 1950,* issued in 1951, indicated that municipal pay rolls for nonschool employees more than doubled over the decade 1940–50, while the number of employees increased 25%. The increase in average pay for this period was 76%, practically paralleling the rise in the cost of living. The bureau's report, *Public Employment in October, 1951,* showed a levelling off in the postwar rise in number of employees, accompanied by a new spurt in pay roll increases. The number of nonschool city employees in October totalled 1,102,000; corresponding totals for 1950, 1949 and 1948 were 1,106,000, 1,082,000 and 1,039,000, respectively. Pay rolls, on the other hand, increased 10% over Oct. 1950 to reach an all-time high of $253,900,000; the increase the preceding year was 4.7% over 1949. The pay roll increase in 1951, when municipal employment was virtually at a standstill, strikingly illustrated the impact of inflation on municipal costs.

At least 34 states had passed enabling action in 1951 and by Sept. 15, 24 agreements had been made between states and the federal government for the coverage of eligible state and local government employees under the new 1950 Social Security amendments. No action was taken on proposed amendments to extend the act to include employees having their own retirement systems.

Civil Defense.—Final action by congress on the 1952 civil defense appropriation came as a shock to the state and local governments. The federal Civil Defense administration's request for $535,000,000 was cut to slightly less than $75,000,000. Of this amount, $11,100,000 was for operating purposes. Funds for bomb shelters, for which $250,000,000 had been requested, were omitted entirely. Funds for matching expenditures for attack warning systems, communications, fire-fighting services, warden service, rescue service, medical supplies and equipment and training and education, were reduced from $45,200,000 to $7,700,000. Appropriations for emergency supplies and equipment—solely a federal responsibility—were cut from $200,000,000 to $56,000,000. The appropriations were divided into broad categories only, leaving to the FCDA the task of allocation to the specific program items, some of which were restricted or eliminated entirely by congress. The revised limited program thus imposed upon the FCDA was only just beginning to emerge at the close of the year.

Notwithstanding the failure of congress to support the program it had originally proposed and urged upon the states and municipalities, states and cities, particularly in the northeast and northwest sections, proceeded with the adoption of interstate and intermunicipal civil defense pacts, as authorized under the Federal Civil Defense act, and with the financing of civil defense programs. Seventy-eight cities which spent $275,000 for civil defense in fiscal 1950 reported they had spent or appropriated more than $4,300,000 in fiscal 1951, and reports from about half of 87 reporting cities indicated their civil defense appropriations for fiscal 1952 amounted to more than $12,000,000.

Housing; Urban Redevelopment.—Congress authorized construction of 50,000 units under the 1951–52 public housing program, compared with the 75,000 units recommended by Pres. Harry S. Truman.

Rent controls were extended by federal action through June 30, 1952. The president was given authority—through the Defense Production administration—to impose controls in any state, county or community declaring the need for it, and was required to establish controls in any area—whether previously controlled or not—certified by federal defense officials as a "critical defense housing area." Otherwise, states and municipalities were still permitted to request the removal of federal controls.

As of July 1, 1951, 34 states, the District of Columbia and Alaska had some form of urban redevelopment legislation; at least seven states and Alaska enacted such legislation in 1951. Philadelphia on June 22, 1951, became the first of 123 cities developing slum clearance projects to receive approval of final loan and grant funds. (*See* also HOUSING.)

Home Rule.—Home rule was advanced through state legislation or constitutional provision in 1951 in Connecticut, Georgia, Maryland and Rhode Island. A committee was appointed in New Orleans, La., to prepare a new charter as authorized by constitutional amendment in 1950. Boston elected officials in November to carry into effect in Jan. 1952 the new strong-mayor charter with its improved administrative procedure which had been approved in 1949. Los Angeles voters in May approved a charter amendment providing for a city administrative officer, appointed by the mayor, comparable to similar officials in Los Angeles county, San Francisco, Calif., Seattle, Wash., and Philadelphia, Pa., under its new charter. Most notable was the adoption by Philadelphia of a new home-rule charter at a special election on April 17, 1951, to become effective in Jan. 1952 under a mayor and council chosen at the Nov. 1951 elections. Its authorization by state legislation in 1949, its formulation and its adoption were all made possible by an unusual degree of collaboration between organized civic groups, following an era of excessive malfeasance by city officials.

Traffic and Parking.—Increased adoption of one-way traffic streets proved effective in permitting a greater traffic volume with reduced delays and fewer accidents, and became a significant factor in slowing the decentralization of downtown business districts. A major study of the parking problem, financed through the Automotive Safety foundation and under the direction of the Highway Research board, was launched in 1951, to diagnose the problem in terms of the economic health of communities, retail business and motor vehicle use. At least 17 states in 1951 enacted laws enlarging the powers of their cities to provide additional off-street parking facilities. Milwaukee, Wis., pioneered with considerable success in the renting of curb space for overnight parking. New York city's parking authority went out of business without having really started, following failure of the 1951 legislature to broaden its powers and make it workable. With the installation by New York city of its first parking meters in Sept. 1951, Baltimore remained the only city of more than 500,000 population without parking meters. San Francisco, Chicago, Ill., and Philadelphia had completed plans for greatly increased new installations.

Council-Manager Cities; Proportional Representation.—The number of council-manager cities, exclusive of counties, in the United States, including Alaska, totalled 1,040 as of Dec. 31, 1951, according to figures released by the International City Managers' association. Adoptions during 1951 numbered 56, compared with 52 in 1950; there were 5 abandonments, compared with 4 in 1950. San Antonio, Tex. (pop. 408,442) became the fourth largest city to adopt the manager plan.

Elections under proportional representation were held in 1951 in Cincinnati and Hamilton, O.; in the six Massachusetts cities with plan E council-manager charters; and in Oak Ridge, Tenn. Saugus, Mass., abandoned proportional representation at a special referendum. The Ohio supreme court unanimously upheld its validity in Cincinnati. Its repeal in 1949 as part of the Massachusetts plan E optional charter law was upheld by the Massachusetts supreme judicial court, thereby affecting the continuance of council-manager government without proportional representation in the cities of Gloucester and Somerville, and a referendum to be held in Chelsea. (*See* also ELECTIONS, U.S.; TOWN AND REGIONAL PLANNING; also under individual large cities.) (A. M. Ds.; L. Gu.)

Canada.—By Dec. 31, 1950, the total outstanding municipal debt was estimated at $1,198,100,000, up 13.6% from its level a year before.

It was awareness of this deteriorating financial position of the municipalities that had caused the federal government in 1949 to announce grants in lieu of taxes to municipalities where federal property existed. In the 1949–50 fiscal year, however, the grants amounted to only about $1,587,000. (C. Cy.)

Munitions of War.

U.S. Army.—A listing of the U.S. army's munitions items of interest for the year 1951 follows. Additional data of the same character will be found in the air force's listing of new developments.

Ammunition Centre.—In mid-June army ordnance established a small arms ammunition centre in St. Louis, Mo. This centre was to supervise and control nation-wide procurement of small arms ammunition for all of the armed forces.

Amphibious Vehicle.—The department of the army in April awarded a contract to the Pontiac Motor division of General Motors corporation to build a new amphibious vehicle christened the "Otter." It would carry an operating crew of two, transport a number of fully equipped fighting men and develop a speed of 36 m.p.h. The Otter could plow through mud, go through water and travel speedily over land. Although it was a track-laying vehicle it was easily steered and manoeuvred.

Arctic Uniforms.—The quartermaster corps announced in July the development of a new arctic uniform, lighter in weight than former designs but affording better protection against extreme cold while giving more freedom of movement.

Battery.—Developed at University of Michigan (Ann Arbor) Engineering Research institute under sponsorship of army ordnance, this new, lightweight storage battery would start a car at −65° F. or at 165° F. It was made possible by lead-plating materials ordinarily corroded by sulphuric acid.

Bleach.—The construction of a plant for the production of subtropical bleach, valuable for decontamination purposes, was decided upon by the army chemical corps. It was planned to build this factory at Natrium, W.Va.

Bus.—A new, dual-purpose, 37-passenger bus, capable of being converted into an emergency ambulance, was designed by the ordnance corps and put into production by the Twin Coach company of Kent, O. This bus could be readied to transport a total of 14 litters in less than 30 min. and, by removing all seats except that of the driver, could handle 21 litters.

Camera.—Using a newly discovered electrostatic, electrophotographic process in which light was recorded in selenium-coated metal plates, sensitized by an electrical charge, the signal corps engineering laboratories were developing a new camera which produced a finished four-inch by five-inch picture two minutes after the shutter was snapped. No darkroom was needed since the entire process happened within the camera. The plates, which needed no chemicals for processing, could be used again and again merely by electrically erasing the image.

Cargo Tractor.—In October the army announced the newest member of its family of vehicles, the M 8 E cargo tractor which was put into production at the Allis-Chalmers plant, La Porte, Ind. It would be used primarily to tow the 75-mm. Skysweeper anti-aircraft gun and other heavy weapons. This 22-ton tractor was powered by a Continental, an air-cooled engine capable of giving it a top speed of 40 m.p.h. The tractor could cross swamps and small trenches; climb or descend 35-degree slopes; and travel speedily on improved highways and cross-country roads.

Compasses.—Two new types of compasses designed to assist ground forces in reconnaissance and navigation and to help forward observers in directing fire control were delivered to U.S. forces in Korea. One of these was a wrist compass with a fully illuminated dial; the other was a lensatic compass suited particularly for fire-control work.

Containers.—A disk-shaped container developed by the quartermaster corps in co-operation with the General Tire and Rubber company was tested to provide aerial free-fall delivery of gasoline, water and other liquids to army troops. Drop tests were made from altitudes of 400 to 2,000 ft. without bursting or spilling any of the contents.

Fire Control.—The army placed initial orders with the AC Spark Plug division of the General Motors corporation for fire-control systems for the army's Skysweeper anti-aircraft gun. This electrically operated system directed the gun by radar and could be used to spot moving aerial targets. The Skysweeper gun and carriage were designed and developed by army ordnance; the fire-control system by the Sperry Gyroscope corporation.

Grease.—Army ordnance developed a new grease which performed equally well in tropical heat or arctic cold. It was planned to replace at least six different types of greases formerly used. The new lubricant was suitable for use over a temperature range from −65° F. to 125° F.

Handie-Talkie.—This new set, the first FM radio of its type produced, was put into production by the signal corps for possible issue to units in Korea.

Microwave Communications.—The signal corps placed orders for transportable microwave equipment for communications installations. This equipment incorporated the best features of both radio and telephonic communications. Included in the gigantic order was material for terminal and repeater stations with complete stand-by equipment for each. Such stations would make possible communications systems whereby eight telephone conversations in either or both directions could be carried on via a single radio channel for each direction.

Personnel Carrier.—The T 18 E 1, a fully tracked infantry personnel carrier, was announced for production during the year. It was being produced by the International Harvester company of Chicago, Ill., and the Food Machinery and Chemical corporation of San José, Calif. This new carrier was powered by the ordnance corps latest six-cylinder, air-cooled engine with cross-drive transmission; it would travel on improved roads at sustained speeds of more than 35 m.p.h.; turn in its own length; and climb or descend 60% slopes. Designed to carry a squad of 12 men, this 20-ton carrier could also be used as a cargo or litter carrier, as a prime mover for towing artillery or as a command-post car. It was armed with a .50-calibre machine gun.

Primaquine.—This new drug, designed for the more effective treatment of malaria, was tested extensively for army use.

Rifle.—Army ordnance developed a combination rifle and shotgun weighing three and one-half pounds. It was intended for issue to the air matériel command.

Rifle Pack.—A new greaseless rifle pack was standardized by army ordnance to replace the coatings of heavy grease preservative used in the past. The new pack consisted of an outer layer of cotton scrim, a layer of plastic-coated aluminum foil and an inner sheet of kraft paper coated with a special chemical-coated compound known as volatile corrosion inhibitor—VCI.

Shrouds.—Plastic shrouds developed by army ordnance, in co-operation with private industry, were expected to replace scarce and costly canvas tarpaulins, wooden boxes and crates used in shipping ordnance matériel. A vinyl chloride shroud large enough to cover a machine weighing 20,000 lb. would weigh only 30 lb., whereas a waterproof tarpaulin would be several times heavier and more costly.

Sleds.—The quartermaster corps developed and standardized light and strong plastic, glass-fibre sleds to transport small supply loads over ice and snow. Two sizes, one of 100-lb. capacity and another of 200-lb. capacity, weighed 24 and 36 lb. respectively. They were capable of being pulled by one or two men over rough terrain and would be used to replace the former army 400-lb. capacity wooden sled.

Tank.—The ordnance corps developed a new light-gun tank, the T 41, to supply the armed forces with a highly manoeuvrable reconnaissance vehicle which would pack a husky wallop with its high velocity 76-mm. gun. This tank was put into quantity production at the army's Cleveland (O.) plant under management of the Cadillac division of the General Motors corporation. The T 41 could be operated as easily as a civilian automobile. Its superhigh-velocity gun was fitted with special fire-control apparatus which enabled it to get into action rapidly. The new tank had more than twice the horsepower of its World War II predecessor and developed a top speed of more than 40 m.p.h.

Television.—In September the signal corps announced that it would soon be ready to start experiments with a mobile television system capable of transmitting pictures from relatively remote field activities for study in the rear, and also capable of providing simultaneous instruction to a considerable number of individuals at one and the same time. This equipment was described by electronics engineers as one of the most complete television systems ever mounted on wheels. (R. S. T.)

U.S. Navy.—In the year 1951 major emphasis was placed on broadening the naval production and procurement program to provide for the increased demands resulting from the Korean conflict and to bring to the greatly augmented fleet the new and improved weapons developed since the end of World War II.

Approximately 75% of the money allotted to the navy for armament during the year was for procurement of ordnance and ammunition, as compared with 23% the previous year. The contracts which these funds covered involved at least 1,000 plants located in 37 states. In placing the orders, geographical concentration near strategic targets was avoided, and two or more sources of supply for all items of importance were obtained. In this way, the groundwork was laid for dispersal of plant capacity and for expanding production rapidly in the event of full mobilization.

Recognizing that aviation is a major factor in navy fire power, more than one-half of the procurement effort, dollarwise, was for aircraft weapons. New aircraft machine guns, with higher rates of fire, were capable of greater accuracy and longer effective ranges. Also in production were new streamlined bombs with improved systems of fuzing and arming. New aircraft rockets, including the first air-to-air rocket, were in quantity production for use by air force as well as navy planes.

Procurement of new and improved antisubmarine warfare weapons was stepped up appreciably in 1951. The shipbuilding and conversion program, approved by the congress, provided for the conversion of certain types of World War II vessels to carry these new weapons. The recently commissioned SSK's (antisubmarine submarines) would be equipped with the most advanced antisubmarine weapons, as well as the latest listening and long-range detection equipment.

To improve the fleet's defense against faster and more elusive targets, new three-inch rapid-fire anti-aircraft guns were replacing World War II 40-mm. guns on board combatant ships. The fire control for the new guns was markedly superior to World War II types. It was expected that heavier anti-aircraft guns with fully automatic loading features would be ready for installation in the fleet in the near future.

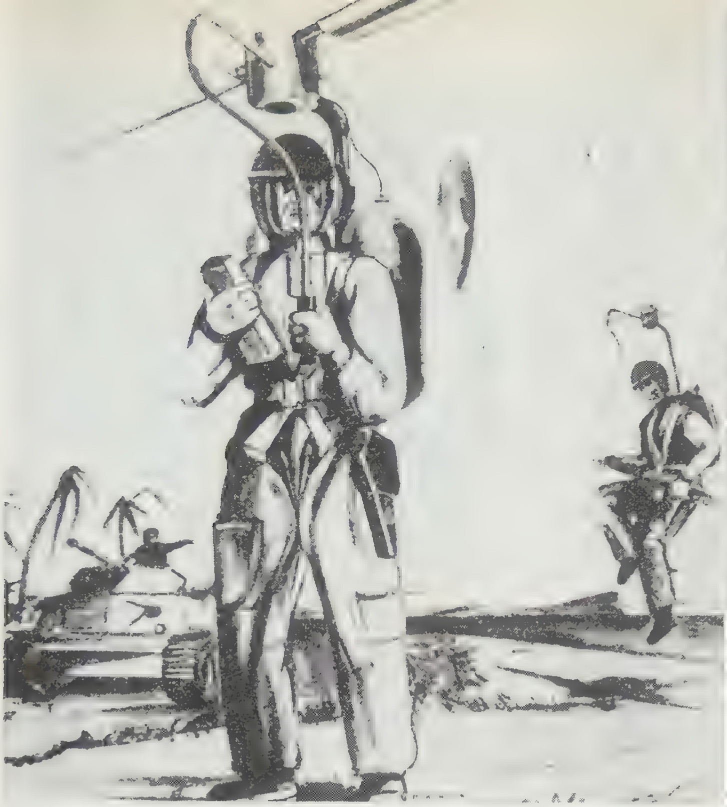
Construction was started during the year on the nation's first facility for large-scale production of guided missiles. The navy-owned plant at Pomona, Calif., was to be operated by Consolidated Vultee Aircraft corporation, one of a group of seven industrial organizations and eight universities engaged in a project initiated in the fall of 1944 for the development of supersonic guided missiles for the bureau of ordnance. (M. F. S.)

U.S. Air Force.—Experts stated that the United States was almost over the hump in 1951 with short-range missiles for tactical use, and limited production orders for several types were placed. One of these was the Martin B-61 Matador pilotless bomber, designed for use on the battlefield against enemy ground forces, bridges, passes, ammunition dumps, concentrations of enemy troops, etc. Initial training of the air force "first pilotless bomber squadron (light)" was begun at the air force missile test centre near Banana river, Fla., under the supervision of a guided missile training wing. After the unit became "combat ready," training was to be completed under the tactical air command, to develop techniques and train air force units to work with the army field forces as a co-ordinated air-ground team. The Matador was powered by an Allison J-35 jet engine, with the initial push supplied by a Rato (rocket assisted take-off) unit.

Considerable progress was made on the development of the air force missile test centre in connection with its basic program for testing long-range missiles. This centre had been established near Patrick air force base, where personnel increased to 5,000 during 1951. Though operated by the air force, the centre was available also to test missiles under development for the navy. Because space at the New Mexico flight test centres (air force at Holloman air force base, army and navy at White Sands proving ground) was too limited for the far-ranging missiles being developed, their facilities were restricted to short-range missiles. All long-range types were tested on the Florida flight test range, with a limit of about 1,000 mi., just beyond the southwestern tip of Puerto Rico. With the existing flight line, maximum range limit was 3,000 mi., but if the course could be elevated a few degrees to the east, flight range could be extended to 5,000 mi. into the South Atlantic. This is the range required for any future intercontinental strategic missile. Eight operating subdivisions of the 1,000-mi. range were under construction during 1951, and some of them began operation. These included the launching site at Cape Canaveral (Fla.), Point Jupiter (20 mi. N. of West Palm Beach), Grand Bahama and Eleuthera Islands. The others included San Salvador, Mayaguana, Grand Turk and Puerto Rico. These operating subdivisions were essentially instrumentation stations, and included accommodations for the in-flight safety officer, instrumentation officer, test control officer and a communications building. Operations during 1951 included two "Bumper" flights (V-2 rocket with a WAC Corporal rocket mounted on its nose for the second stage), and several firings of the Martin Matador and Fairchild Lark.

The U.S. navy department announced during the year that limited production contracts had been awarded for its two top priority defense missiles, Convair's two-stage rocket Terrier for shipboard launchings against high-flying aircraft, and the Douglas Sparrow air-to-air missile. Both were supersonic.

Limited production for operational evaluation of the U.S. army's Nike for the anti-aircraft artillery was begun in 1951. The prime contractor was Western Electric for the highly complex electronic guidance mechanism developed by Bell Tele-



Above, left: ONE-MAN ROCKET-POWERED HELICOPTER shown in a drawing released in Oct. 1951 by the office of naval research, Pasadena, Calif. The helicopter had a two-bladed rotor with a small rudder and a fuel tank which was on the flyer's back. His left hand is shown on the control apparatus

Above, right: PHOSPHORUS SHELLS silhouetting a target during a U.N. night raid at Wonju, South Korea, in March 1951

Right: THE B-61 MATADOR, a pilotless bomber, shown dropping its fuel tank and heading upward. A pilotless bomber squadron was activated by the U.S.A.F. on Oct. 1, 1951, the first operational unit for guided missiles

Below, left: SELF-LOADING 0.280-calibre rifle (left) adopted for use in the British army in 1951 and featuring rapid firing rate, light weight and sights which required no mechanical adjustment for varying range. It is pictured here beside a standard British 0.303 rifle

Below, right: UNDERWATER TESTS in 1951 for the M-34, a U.S. army truck designed to ford streams or move from landing ship through surf to shore. It could remain submerged up to four hours with only "schnorkel" (air intake) and "snorter" (exhaust) extensions above surface

phone laboratory, with Douglas Aircraft the major subcontractor for the rocket itself.

During 1951 big expansion of other test facilities for rockets and guided missiles was authorized and begun. Among these were an $8,000,000 expansion of Holloman air force base, a $9,000,000 expansion of navy's Point Mugu test centre (Calif.), the army's $7,000,000 expansion for anti-aircraft missiles at White Sands proving ground and $1,500,000 development of facilities at the California Institute of Technology, Pasadena, jet propulsion laboratory. New manufacturing facilities included Consolidated Vultee Aircraft's huge plant at Pomona, Calif., for production of Convair's Terrier and other supersonic interceptor-type missiles for the navy's bureau of ordnance, and a $25,000,000 plant for navy guided missiles being built by the Sperry corporation at Bristol, Tenn. Firestone Tire and Rubber company was awarded a contract for a number of Douglas Corporal E tactical missiles for the air force.

The subminiturization of electronic components (such as a five-tube radar amplifier for the Ryan Firebird air-to-air missile) was continued. The National Advisory Committee of Aeronautics, at its Lewis Flight Propulsion laboratory, Cleveland, and Pilotless Aircraft division at Wallops Island, Va., gave high priority to problems relating to ramjet engines for supersonic guided missiles at speeds of Mach 2.5 (1,450 m.p.h. at high altitude) and higher.

During the autumn of 1951 the biggest and fastest guided missile yet built by British scientists flew over England. It was a 50-ft. rocket with a speed of 2,000 m.p.h. Technicians guided it along a radar beam to its target. An accelerated program of testing at the Woomera rocket range in Australia was also begun in 1951. Intelligence sources indicate that the U.S.S.R. was also very active in this entire field, but no details were available. (N. F. S.)

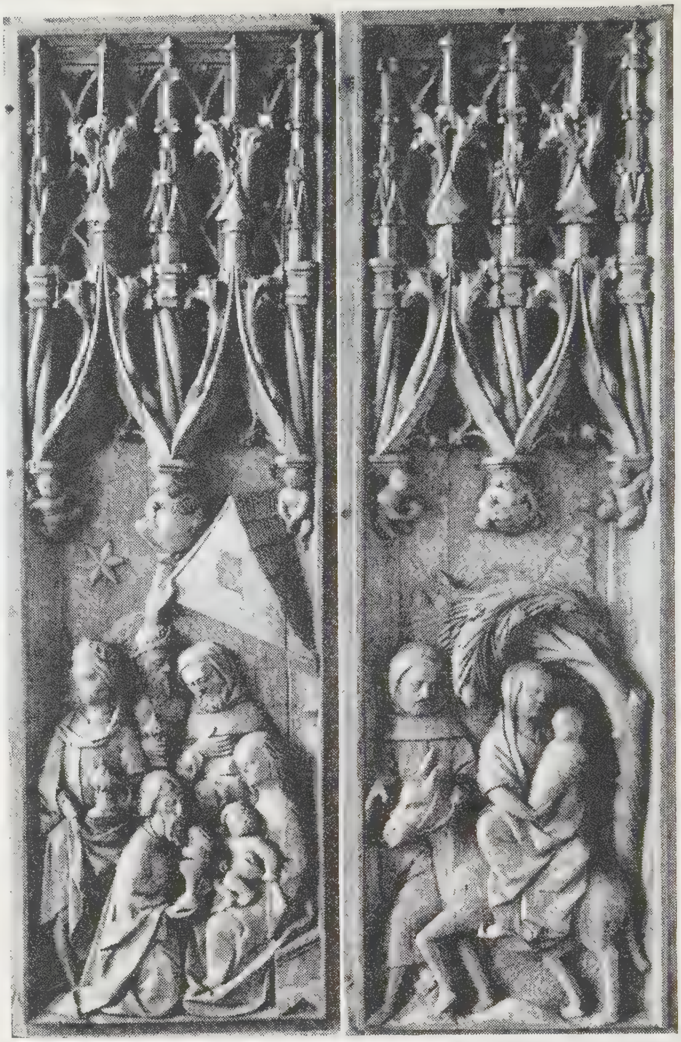
Museums.

Events which illustrate the activity and growth of museums in the United States during 1951 included the opening of the Felix M. Warburg Memorial hall in the American Museum of Natural History, New York city. The new exhibits used a rich variety of visual devices to explain the geological and biological processes at work in 30 ac. of familiar landscape near New York city and showed the interrelation of man's daily life with this environment. Other examples of progressive trends in exhibition were the new Hall of Earth History in the Chicago Natural History museum, the nearly completed Dinosaur hall in the Carnegie museum, Pittsburgh, Pa., and the museum at Ocmulgee national monument, Macon, Ga., showing 10,000 years of Indian life in central Georgia. Outstanding installations made in art museums during the year were the Karolik collection of American painting occupying ten new galleries in the Boston Museum of Fine Arts, the classical and prehistoric galleries at the University museum, Philadelphia, Pa., and the American painting galleries in the Art Institute of Chicago.

Special exhibitions temporarily bringing together objects of unusual interest continued to be a major activity, particularly of art museums. The National Gallery of Art in Washington, D.C., attracted more than 24,000 visitors in one evening to see paintings, sculpture and bronzes collected by the Kress foundation. Another special exhibition, "Italy at Work," made a promising contribution to international understanding by showing well-designed everyday things which Italians buy for their homes. It opened at the Brooklyn museum, and then started on a three-year circuit.

The Henry Francis du Pont Winterthur museum, which opened during the year near Wilmington, Del., contained more than 100 period rooms of carefully chosen domestic furnishings illustrating American home life, 1640–1840. Another landmark was the action of the National Trust for Historic Preservation in the United States in undertaking the development and display of its first historic house. The trust accepted a long-term lease on Woodlawn, the mansion given by George Washington to his adopted daughter. In Philadelphia the national park service took over administration of Independence hall, Congress hall and Old City hall as part of the projected Independence National Historical park. Colonial Williamsburg had seven more 18th-century buildings in process of restoration or reconstruction during the year, while at Mystic, Conn., the Marine Historical association was adding five buildings and a ship to its old seaport development.



TWO OF 37 oak panels carved about A.D. 1500 for the royal abbey of Jumièges in Normandy. The panels became a permanent exhibit of The Cloisters, New York city, in June 1951

Museums continued to build during 1951. The Boston Museum of Science and the Detroit Historical museum opened the first units of large new buildings. A $1,000,000 addition for the California Academy of Sciences, San Francisco, was completed, and the Denver Museum of Natural History began construction of a $500,000 wing. Seven smaller museums finished new buildings and numerous additions were in progress.

Among at least 15 museums newly opened to the public, those of widest interest were the Corning Museum of Glass at Corning, N.Y., and the Woolaroc Museum of History near Bartlesville, Okla. (*See* also SMITHSONIAN INSTITUTION.) (R. H. Ls.)

Accessions to Art Galleries and Art Museums.—The year 1951 marked not only the acquisition of notable individual objects by museums but also witnessed the passing of important collections into the hands of public institutions. Mr. and Mrs. Walter Arensberg presented their outstanding collection of 20th-century art to the Philadelphia museum. Outstanding in the collection was a group of sculpture by Constantin Brancusi (1876–) and paintings by Marcel Duchamp (1887–), including the famous "Nude Descending a Staircase."

Philadelphia purchased a significant painting by Peter Paul Rubens, "Prometheus Bound," painted in 1612. It came from Kimbolton castle, owned by the duke of Manchester, and was recorded by Rubens himself, "Original by my hand and the eagle done by Snyders."

Many fine items came to the Metropolitan museum (New York) whose endowment fund reached $48,000,000 with the addition of several gifts of money. They received from R. Thornton Wilson a great collection of European pottery and porcelain valued at $500,000. About 400 pieces span a period from the 15th to the 19th century. Among the rarest items were three Sèvres vases in Pompadour rose, made *c.* 1760 and presented by Louis XVI to Prince Henry of Prussia.

Mrs. Otto H. Kahn and her children made a gift of 25 ancient Chinese bronzes to the Metropolitan museum. Another rare item to enter their collection was a drawing by Leonardo da Vinci. It was acquired at auction at Sothebys in London for $22,400, and was a study of the Virgin's head for the painting, "Virgin and Child and Saint Ann" in the Louvre.

The Cleveland museum celebrated its 35th anniversary with a group of notable acquisitions, largely paintings of the Venetian school. These included Jacopo Tintoretto's "Baptism of Christ," Paolo Veronese's "Annunciation," Titian's "Portrait of a Prelate" and Lorenzo Lotto's "Portrait of a Nobleman."

The Art Institute of Chicago purchased a 98-page sketch book by Paul Cézanne with remarkably fine drawings dating mostly from the 1880s and 1890s.

Sam A. Lewisohn, New York collector, died leaving his $1,000,000 collection to six different institutions. Several paintings went to the Metropolitan museum: "Repast of the Lion" by Henri Rousseau, "An Afternoon on the Island of the Grande Jatte" by Georges Seurat (1859–91), "Ia Orana Maria" by Paul Gauguin (1848–1903), "In the Meadow" by Auguste Renoir (1841–1919) and "L'Arlesienne" by Vincent Van Gogh (1853–90). El Greco's "St. Francis and the Skull" went to Princeton university and other pictures to the National gallery.

Boston's Museum of Fine Arts opened up ten newly constructed galleries with the Karolik collection of 230 American paintings of the period 1815–65. Many unknown or little-known artists of this forgotten period in American art were rediscovered.

A cedarwood Egyptian figure of the Old Kingdom, dating from about 2450 B.C., was acquired by the William Rockhill Nelson gallery in Kansas City, Mo. This was regarded as the finest preserved Egyptian wood figure in existence.

Another outstanding example of ancient art was added to the Boston Museum of Fine Arts collection. This was a Greek head of the 5th century B.C. probably by Myron who made the famous "Discus Thrower."

A top quality 15th-century Flemish painting, "Death of the Virgin" by Petrus Christus, was purchased for the San Diego museum through the Putnam foundation.

Three distinguished early Italian paintings were purchased by the Frick museum in New York, "Two Saints of the Augustine Order" by Piero della Francesca, dating from about 1470, and the "Flagellation" attributed to Cimabue, about 1270. (*See* also ART EXHIBITIONS; ART SALES; PAINTING.) (F. A. Sw.)

Great Britain.—The year was notable in Great Britain for the great encouragement to museum activities given by the Festival of Britain, in which museums all over the country played an essential part. The Walker art gallery, Liverpool, and Cumberland house, Portsmouth, both damaged in World War II, were reopened and the London museum was installed in temporary accommodation in Kensington palace. In London important galleries were reopened at the British Museum—in particular, a new bird gallery with a bird pavilion of original design at the British Museum (Natural History)—the Victoria and Albert, Science and National Maritime museums, and the National and Tate galleries.

Europe.—Museum extensions and reorganized galleries were opened in 31 French towns. These included five rooms at the Louvre, imperial apartments at Malmaison and Compiègne, a series of new rooms at the Musée des Tissus, Lyons, rooms at the Musée des Beaux-Arts, Rouen (where Le Secq des Tournelles was reopened), and rooms at Bourges, Rheims, Dieppe and Tours. The Musée de l'Ile de France, Sceaux, and Bernadotte museum at Pau were reopened. In Paris a new gallery for exhibitions of *arts et traditions populaires* was inaugurated.

In Belgium 18 works recovered from German loot were among the 60 acquisitions at the Musées Royaux des Beaux-Arts. A new museum of Swiss and German paintings, given by Oskar Reinhart, was founded at Winterthur in Switzerland.

Among Italian collections reopened in 1951 were the Galleria del Banco, Naples, the Galleria Spada, Rome, and the Museo Nazionale in Aquila. Major reorganization was completed at the Uffizi gallery, Florence, and at museums at Genoa—the centre of the international celebrations of Columbus' 500th anniversary—Padua, Arezzo, Milan and Pavia.

Reconstruction of the old wing of the National Archaeological museum of Greece continued. Of other museums in Athens, the Pinacotheque was still without a building, the Benachi and the National Museum of Decorative Arts were fully open, and the restoration of the Byzantine museum nearly completed. The antiquities from Knossos were again open to the public at the Heraklion museum, Crete, although the reconstruction of the museum was not complete.

Much reconstruction work took place in Poland. New museums included the Ethnographic museum, Cracow, a museum at Biskupin where excavation of the pre-Christian Slav settlement continued, museums at Pila (commemorating the writer Stanisław Staszyc), at Białystok, and at Oswiecim (Auschwitz) and Majdanek commemorating "the martyrdom of nations under Nazism."

In Germany, the rebuilt Goethe's house, Frankfurt-on-Main, was reopened in May and the Kunsthalle, Karlsruhe, in June. Famous Munich collections, most of which lost their buildings during World War II, were beginning to reappear in alternative accommodation.

In Spain the Museo Lazaro Galdiano, Madrid, was opened to house the armoury and paintings bequeathed to the nation by Lazaro Galdiano.

The Kayseri museum, Turkey, acquired material from the nearby Kültepe excavation, as did the Museum of Archaeology in Ankara, where the Hittite stone collection was rearranged in the central hall. A section of the Museum of Archaeology, Izmir (Smyrna), dealing with Ionic art, was installed in a new pavilion at the Izmir fair. The gallery at the Istanbul Academy of Fine Arts was reopened to exhibit new works by Turkish artists, and the Sultans' palace of Topkapi was refurnished and opened to the public. (G. P. G.)

Music. Three new operas were the main events of the music year 1951: Igor Stravinsky's *The Rake's Progress*, Benjamin Britten's *Billy Budd* and the television opera by Gian-Carlo Menotti, *Amahl and the Night Visitors.*

The *première* of Stravinsky's opera, conducted by the composer, took place on Sept. 11, in Venice, It. The atmosphere of the occasion recalled the great operatic unveilings of the past; musical notables assembled from all over Europe and America; the tickets sold at a premium; perhaps not since the production of Giuseppe Verdi's *Aïda* in Cairo, Egy., had there been created such keen anticipation. The libretto of the opera was fashioned by W. H. Auden and Chester Kallman after the famous paintings by William Hogarth. As in most of Stravinsky's works of the past decade, the musical idiom in *The Rake's Progress* harked back to the old formulas of the classical and romantic models; of course, the rhythm and the harmony had the 20th-century touch.

Benjamin Britten's opera *Billy Budd* (after Herman Melville) was produced in London on Dec. 1, the cast calling for men's voices only. In the opinion of many critics, *Billy Budd* was Britten's best opera since *Peter Grimes*.

Menotti's opera, *Amahl and the Night Visitors,* made history, for it was the first opera specially written for the new medium of television. It was produced on Christmas eve by the National Broadcasting company, and was directed by Menotti himself, who was also the author of the libretto. The affecting story of a poor Arab boy whose home is visited by the three kings on their way to see the Christ Child was accompanied by a skilful and melodic score. The reception of Menotti's opera by the television audiences and the critics was enthusiastic.

Another important operatic event was the *première* of *The Pilgrim's Progress* (after John Bunyan) by Ralph Vaughan Williams, the dean of British composers. It took place in London on April 26. The composer's own designation of the work was "morality" rather than an opera. Another new work by Vaughan Williams was a cantata, *Sons of Light,* performed in London on May 6, with a chorus of 1,000 school children. Both works displayed the composer's familiar qualities of simplicity and directness.

Incognita by Egon Wellesz, the Viennese composer and music scholar, who had made his home in England after 1938, was presented in a world *première* at Oxford, Eng., on Dec. 5. Wellesz, a disciple of Arnold Schönberg, departed in this opera from the atonal idiom of his former works, and adopted a clear tonal language.

An operatic world *première* with political ramifications was *Trial of Lucullus* by Paul Dessau, produced in the soviet sector of Berlin on March 17. The composer and the librettist Bert Brecht, both acknowledged Communists, were sharply criticized by the east German authorities for the improper treatment of the story (which dealt with a Roman conqueror put on trial by his victims) and for the western influences in the music. As a result, the opera was taken off the repertory after a single performance.

In the United States, the Metropolitan Opera company continued its policy of staging public favourites. Particularly successful, in New York city and on the road, was the revival of Johann Strauss's *Die Fledermaus.*

Three modern operas were presented in concert form by the conductor of the New York Philharmonic-Symphony, Dimitri Mitropoulos: Alban Berg's *Wozzeck;* Ferruccio Busoni's *Arlecchino;* and Schönberg's monodrama, *Erwartung.*

The Columbia University Opera workshop presented, on March 28, the world *première* of *Giants in the Earth,* a three-act opera by Douglas Moore, to the story of Norwegian settlements in the Dakota territory. This opera was awarded a Pulitzer prize.

The New York City Opera company produced, on Oct. 4, *The Dybbuk* by David Tamkin, after the well-known play by S. Ansky.

Music festivals were more lavish than in the previous year. The Festival of Britain included 22 concerts of English music presented in London. Music festivals were also held in Aberdeen, Aldeburgh, Belfast, Bournemouth, Brighton, Cambridge, Canterbury, Cheltenham, Dumfries, Edinburgh, Inverness, Liverpool, Norwich, Oxford, Worcester and York. Of these, the most important was the Edinburgh festival in August and September, which featured a series of concerts of the New York Philharmonic-Symphony and presentations by several European groups of performers.

The Bayreuth festival resumed its presentation of Richard Wagner's operas, with Wagner's grandsons in charge of the proceedings. The Salzburg festival regained its rightful place among world music events: in 1951, Alban Berg's opera *Wozzeck* was presented along with Mozart.

For the first time since 1927, the annual festival of the International Society for Contemporary Music took place in Germany. It was held in Frankfurt between June 22 and July 1, and presented a long array of contemporary works: the world *première* of *The Duenna,* opera after Richard Sheridan by the Spanish composer Roberto Gerhard; *First Symphony* by Ernst Toch; *Six Chants* for chorus and orchestra by the French composer Jean-Louis Martinet; *Coro di Morti* by the Italian composer Goffredo Petrassi; *Third Symphony* by the Swedish composer Karl-Birger Blomdahl; *Piccola Sinfonia* by the Swiss Willy Burkhard; *Four Symphonic Movements* by the Dutch composer Guillaume Landré; and a piano concerto by the German-American composer Richard Mohaupt.

A special concert of contemporary German music opened the Frankfurt festival in the following program: *Third Symphony* by Karl Amadeus Hartmann; *Catulli Carmina* by Carl Orff; *Concerto* for two pianos and orchestra by Hermann Reutter; and *Sonata for Orchestra* by Werner Egk.

The Donaueschingen festival, held in October, presented new works by Ernst Krenek; Hermann Reutter; Marcel Mihalovici; Olivier Messiaen; Hans Werner Henze; the Viennese 12-tone composer, Hanns Jelinek; the Hungarian composer resident in Paris, Tibor Harsányi; the Italian, Guido Turchi; and the 26-year-old French composer Pierre Boulez, whose work, *Polyphonie X* for 17 instruments, written in an extremely complex modern idiom, aroused considerable excitement and some protests from the audience.

At the International festival in Strasbourg, several new works were presented, among them the world *première* of Jean Rivier's *Fifth Symphony* on June 24.

In Zürich, the program of the festival, commemorating the 600 years of the Swiss Confederation, included the world *première* of Arthur Honegger's orchestral work, *Monopartita,* given on June 12.

The 50th anniversary of Verdi's death was marked by memorial concerts in Europe and America. Arturo Toscanini conducted the *Manzoni Requiem* in New York city. A unique tribute was the performance of excerpts from Verdi's operas staged in the ruins of the Roman colosseum on Oct. 7. This was the first time that the ancient arena was used as a scene of public spectacles since the Roman empire.

Symphonic music was in ascendance in the United States. According to a tabulation by the American Symphony Orchestra league, there were 702 symphony orchestras of various sizes in 1951, as compared with only 9 such groups in 1900.

Among significant first performances by United States orchestras during the year were the world *premières* of Honegger's *Fifth Symphony,* given by the Boston Symphony orchestra on March 9, and Walter Piston's *Fourth Symphony,* presented by the Minneapolis Symphony orchestra on March 30. The 29-year-old German-born American composer Lukas Foss was the soloist in his new *Piano Concerto* on a tour with the Boston Symphony orchestra in November.

The Cincinnati Symphony orchestra gave the world *première* of the *Cumberland Concerto* by Roy Harris, on Oct. 19, Thor Johnson conducting.

The Louisville orchestra, under its permanent conductor Robert Whitney, continued its fruitful policy of annual commissions of new works by European and American composers. In 1951, it presented the world *premières* of *Suite Archaïque* by Arthur Honegger (Feb. 28); the *Third Piano Concerto* by Francesco Malipiero (March 8); *The Origin of the Amazon River* by Heitor Villa-Lobos (Nov. 7); and *The Triumph of Saint Joan* by Norman Dello Joio (Dec. 5).

A delayed world *première* that attracted a great deal of attention was the performance, on Feb. 22, of the *Second Symphony* by Charles Ives, given by Leonard Bernstein with the New York Philharmonic-Symphony orchestra. This symphony, written half a century before, anticipated many harmonic procedures of today.

In Latin America musical activities were steadily increasing. Thus, in Mexico City there were given during the year, 62 orchestral concerts, 20 operas, 15 ballets, 20 chamber music concerts, 15 piano recitals, 10 song recitals and 8 violin recitals. Tabulations of concerts in other capitals of Latin American countries showed similar figures in proportion to the population.

BRUNO WALTER, conductor, and Joseph Szigeti, violinist, during the recording of a Beethoven concerto in a studio in New York city

After its tour in the United States, the Israel Philharmonic orchestra returned to its homeland in the spring and resumed its concerts there. A festival of works by Israeli composers was staged on the shores of Lake Tiberias.

Native works were presented by orchestral and other organizations in France, Belgium, Holland, Sweden, Norway and Finland. In Denmark, Nicolai Malko, Russian-American conductor, led the State Radio orchestra in the world *premières* of two Danish works: Knudåge Riisager's *Violin Concerto* (Oct. 11) and Vagn Holmboe's *Seventh Symphony* (Oct. 18).

Despite political pressures, soviet composers continued to produce new works. Sergei Prokofiev's 60th birthday in April was marked by several performances of his works; his *Winter Campfire* was commended as signalizing his return to the Russian traditions. On the other hand, Dmitri Shostakovich was sharply criticized for his cycle of 24 preludes and fugues, which were described in the soviet press as lapsing into imitation of the western models of musical modernism.

The new soviet operas, *Family of Taras* by Dmitri Kabalevsky, *Ivan Bolotnikov* by Leonid Stepanov and *Free China* by Clement Kortchmarev, all produced in Moscow during the year, were approved, but the opera *From My Heart* by the Ukrainian composer Herman Zhukovsky, given at the Moscow Opera in April, received a sharp rebuke from the soviet authorities for the falsity of its libretto and the inadequacy of its music.

In Czechoslovakia, the second plenary session of the Union of Czechoslovak Composers was held in February, and presented nearly 200 works by 80 native composers, among them the opera *Jan Hus* by Gorky; *Cantata of a Communist Country* by Otchenash; *Cantata for Gottwald* by Yurovsky; *Cantata for Peace* by Kardos; and *Hands Off Korea* by Miroslav Barvik.

Native compositions in Poland, Hungary and Rumania reflected in their titles the political slogans of their governments.

Exhibitions of extreme experimental music were not lacking during the year. A provocative program was presented in Paris on Nov. 28 by the Cercle Culturel du Conservatoire, featuring music in quarter tones by the soviet *émigré* composer Ivan Wyschnegradsky and *Three Melodies in an Imaginary Language* by Marina Scriabin, the daughter of the composer Alexander Scriabin.

In Vienna, a series of choral works by 11 contemporary composers was presented in October; the program included two compositions, written in a highly complex idiom, by Josef Matthias Hauer, the apostle of atonality and a pioneer in the development of 12-tone music. (N. Sy.)

Popular Music.—The one reassuring note of the year 1951 in popular music was the score of *The King and I*, by Richard Rodgers and Oscar Hammerstein II, which represented a new level of achievement even for those gifted collaborators and raised the standards of the musical stage above anything that it had known in the past, including such gems as *South Pacific*, *Oklahoma!* and *Show Boat*. At least half a dozen songs in *The King and I* were musically and poetically better than any others of the year (one could mention particularly "My Lord and Master," "Hello, Young Lovers," "Getting to Know You," "We Kiss in a Shadow," "I Have Dreamed" and "Shall We Dance?"), but none of these arrived at a really national popularity.

The popular hit of the year was probably a reminiscent little song called "Too Young," vaguely suggesting the encouragement of juvenile delinquency. "Too Young" topped the Lucky Strike Hit Parade a dozen times on both radio and television.

It was closely followed by an old-timer, "Because of You," written by Arthur Hammerstein (Oscar's uncle) and Dudley Wilkinson. Here the new recording star, Tony Bennett, deserves the major credit, if any. Patti Page, another of the year's most popular singers on records, helped along the folklike "Mockin' Bird Hill," besides keeping alive the similarly "corny" "Tennessee Waltz," by singing it as a duet with herself.

Perry Como's recording of an English song of 1934 called "If" ("I had everything") put it high up in the 1951 list of all-round hits, while the spectacular team of Les Paul and Mary Ford brought back "How High the Moon," written a dozen years before by Nancy Hamilton and Morgan Lewis for a show called *One for the Money*. Far older (and equally popular) was the true folk song, "On Top of Old Smoky," whose tune was also used in the past for "The Little Mohee."

Mitch Miller, a bearded virtuoso of the oboe, put new life into Columbia records by his clever selection and arrangement of potential hits, participating personally in the development of two possessive songs, "My Heart Cries for You" and "My Truly, Truly Fair." Mario Lanza, who played *The Great Caruso* on the screen, waxed the old waltz, "Over the Waves," to a surprising success as "The Loveliest Night of the Year," although he did not sing it in the picture.

The novelty of the year was the Armenian-dialect "Come On-a My House," for which William Saroyan wrote the words on a bet (to music by a relative named Bagdasarian). The rest of the hit parade of 1951 concentrated largely on imitations and revivals.

"I Get Ideas" merely borrowed the classic tango, "El Choclo," while a familiar "Melody," by the former Vice-Pres. Charles G. Dawes, reappeared as "It's Only a Game." "Aba Daba Honeymoon" supplied old-fashioned nonsense, and some much needed charm was added by "The World Is Waiting for the Sunrise," written by Gene Lockhart and Ernest Seitz in 1919. "Sweet Violets" borrowed an old title and formula, once notorious for its bawdy parodies. Such titles as "Shanghai," "Mister and Mississippi," "It's No Sin," "Down Yonder," "Undecided" and "Slow Poke" filled out a definitely bad year in popular music.

(S. Sp.)

Music in Industry.—The drive for increased industrial productivity during 1951 focused management's attention on planned music programs as a tool for reducing job fatigue, dispelling work monotony, relieving nervous tension, masking machine noises and creating a cheerful relationship among employees.

So great were the number of inquiries from industry and labour about the value of music as an aid to production that the federal government reprinted the wartime study, *Music in War Plants*, originally published in 1943 by the War Production Drive headquarters, for the guidance of labour-management committees. The survey findings, subsequently printed in condensed form by Muzak corporation under the title, *Muzak in Industry*, pointed up the paramount importance of music specially recorded for industrial use.

To be functionally effective, the music had to be nondistracting, had to provide a lift without commanding the attention of the worker. The melody line had to predominate. To be avoided were the disconcerting elements of high, piercing registers, sudden dynamic changes, abrupt key transpositions, draggy tempos and novelty sound effects.

It was established that "music while you work" was a highly developed science demanding specialized training and techniques in arranging, recording and programming, if the desired physiological and psychological effect upon the worker were to be achieved.

Aside from its findings on music, the survey showed that the value of a plant-wide public address system was incalculable. This was borne out during 1951 by the greatly increased number of plants using music amplification systems as a channel of employee communications for practice air raid alerts, paging purposes, time signals, shift changes and emergency announcements.

Recordings.—In 1951 almost all serious music; *i.e.* music other than popular songs, dance tunes, jazz, etc., recorded during the year for sale in the U.S., was pressed on LP (long-playing) $33\frac{1}{3}$ r.p.m. disks. In Great Britain and Europe the LP system continued to grow in acceptance. The total volume of record sales during the year in the U.S. amounted to about $200,000,000, spokesmen for the industry estimated. Of this amount, the sale of LP's represented 30% of the total; and the combined sale of 45 r.p.m. records (the seven-inch diameter, large center-hole vinylite disks introduced by RCA Victor at about the same time in 1948 that Columbia introduced the LP disks) and 78 r.p.m. records (the type standard throughout the world prior to 1948) represented the remaining 70% and accounted for the expenditure of $140,000,000.

Among the recordings issued during the year which were distinguished for both musical subject matter and performance, as well as for technical merit in the craft of sound transcription, were the following: Aaron Copland's *Concerto for Clarinet and String Orchestra*, Roger Sessions' *Symphony No. 2* and Ludvig von Beethoven's *Symphony No. 5*—all on the Columbia label; Claude Debussy's *La Mer* played by the NBC Symphony orchestra under Arturo Toscanini, Hector Berlioz' *Symphonie fantastique* and Igor Stravinsky's *Le Sacre du printemps*—the latter three works conducted by Pierre Monteux and all four of them made available by RCA Victor; Béla Bartók's *Music for String Instruments, Percussion and Celesta* on Mercury, and the same composer's *Suite* from the *Miraculous Mandarin* issued by the Bartók society; the string trios of Beethoven (opus 3, 8 and 9) on the Allegro label; the Gioachino Rossini-Ottorino Respighi *La Boutique Fantasque* on London; Sergei Prokofiev's *Scythian Suite* and the Franz Joseph Haydn symphonies no. 100, 95, 55 and 104 on Westminster; the overture and incidental music to *A Midsummer Night's Dream* (Felix Mendelssohn) on Decca; Franz Schubert's three posthumous sonatas played by Webster Aitken on the EMS label; the *Mass in B Minor* of Johann Sebastian Bach conducted by Herman Scherchen on Westminster; Paul Hindemith's *Apparebit Repentina Dies* on Capitol; the J. S. Bach *Passion According to St. John* directed by Robert Shaw on RCA Victor.

More complete operas on records were released during 1951 than in any previous year, and of these the following were among the best: Georges Bizet's *Carmen* and Verdi's *La Traviata* on RCA Victor; Wolfgang Amadeus Mozart's *Magic Flute* and *The Marriage of Figaro* on Columbia; Richard Strauss's *Der Rosenkavalier* on Urania.

Films of 1951.—*Mozart & Barrios on Six Strings* (A. F. Films, Inc.); *Musical Instruments: The Strings* (Carl F. Mahnke Productions); *Music is Everywhere Series* (2 films), *The Cineconcert Series* (5 films) (Artists Films, Inc.); *The Ambassador Master Works Musical Series* (13 films) (Sterling Films); *The Harpsichord* (Almanac Films, Inc.). Narcotics and Narcotic Traffic.

The sixth session of the United Nations Commission on Narcotic Drugs, held in New York city in 1951, reached an agreement on principles to limit the production of opium to medical and scientific needs. The producing countries—Turkey, Iran, Yugoslavia and India—agreed to limit areas of production and stocks in accordance with estimates to be supplied by each country to an international body. France introduced a draft protocol to adapt the provisions of the 1931 convention to opium. The commission came to the conclusion that by a plan of this kind progress could be made toward the ultimate aim of the limitation of the production of opium to the world's medical and scientific needs.

Proposed Single Convention on Narcotic Drugs.—The commission heard a statement by the representative of the International Association of Penal Law and of the International bureau, two nongovernmental organizations which have consultative status with the council, on the framing of certain provisions for a single convention on narcotics control. The view expressed by this representative was that under the new treaty, parties should be required to treat illicit trafficking in narcotics as a serious criminal offense. In addition the acceptance by all parties of the principle of universality in the punishment of traffickers would provide a powerful deterrent to participation in this activity. As an additional curb on the illicit traffic, it might also be desirable to provide for the isolation and compulsory treatment of drug addicts in closed institutions.

After a discussion of the procedure to be followed in the further elaboration of the draft instrument, the commission concluded that it would be desirable for an international diplomatic conference to be called to adopt the new treaty.

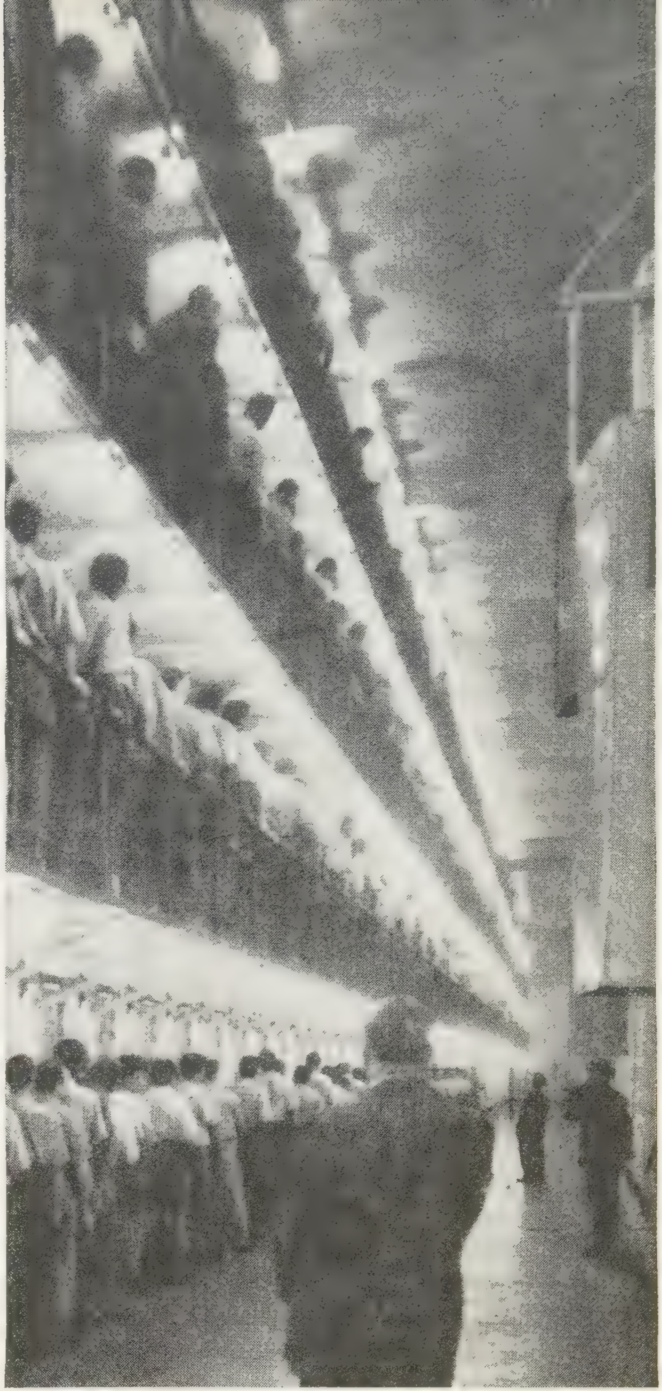
Coca-Leaf Chewing.—The commission of inquiry which had visited Bolivia and Peru reported that coca-leaf chewing has harmful effects; and that since the habit is the consequence of unfavourable social and economic factors, the solution of the problem would involve improvement of living conditions and the adoption of a governmental policy to limit the production of coca leaf and control its distribution. The commission of inquiry made detailed recommendations in regard to these two aspects in its report.

International Illicit Traffic.—The principal sources of supply of illicit narcotics in 1951 were still Italy, Turkey, Iran, Syria, India, Mexico, China and Hong Kong. They were joined by Thailand whose soft metal tubes of monopoly opium were seized in several instances. The energetic action of the governments of Italy, Turkey and Greece had already produced a diminution of the illicit heroin traffic in the United States.

The United States recommended that in future reports the International Criminal Police commission should give the names of all traffickers, so that governmental authorities throughout the world could take appropriate action, such as denying entry visas or seamen's licences to undesirable individuals.

Teen-age drug addiction became a world-wide social danger. In 1951 it was found in the United States, Canada, Turkey, Germany, Japan, China, Egypt, Great Britain and other countries.

Arab League's Permanent Office for Narcotics.—Despite an intensified campaign against narcotics, Egypt, because of its geographical position, reported considerable difficulties in preventing the smuggling of narcotics into the country through the desert near Suez and on board small coastal vessels. Other Arab states had experienced similar difficulties and accordingly, while the commission was holding its sixth session, the Arab league reported that it had set up a permanent office of narcotics.



NARCOTICS TRAFFIC brought one out of every four prisoners shown above to Chicago's Municipal House of Correction in 1951. The crowding resulted when a city ordinance was passed calling for harsher sentences for anyone selling narcotics to persons under 21 years of age

Proposal for U.N. Committee in Far East.—The commission considered a proposal by Burma that a United Nations committee be established to co-ordinate the efforts of Burma and certain neighbouring countries to suppress poppy cultivation and the smuggling of opium. National Geographic Society.

From July 25 to Aug. 21, 1951, the span from the end of one winter to the start of the next at Chubb crater in northwestern Quebec province, Can., a team of six scientists cosponsored by the National Geographic society and Toronto's Royal Ontario museum studied many aspects of the gigantic depression in the subarctic granite that had first come to public attention the year before. Led by geologist Victor Ben Meen, Royal Ontario museum director, they found a maximum depth of 825 ft. in the crater lake. They established the full crater depth at 1,325 ft. and its rim diameter at more than 2 mi. During the final 48 hr. of the four weeks allowed them by the weather for their 1951 research, they came upon a magnetic anomaly as their magnetometer survey reached the extreme east portion of the rim—a conclusive indication of the presence underground of a mass of iron-bearing meteorite material. Thus, despite failure to find actual meteorite fragments, they confirmed the crater's meteor-crash origin. More than double the width and depth of Arizona's meteor crater, it ranks as the largest of the earth's known meteor-gouged scars.

By late 1951, 1,000 new clusters of nebulae—the farthest 350,000,000 light-years distant in space—had been discovered and recorded for the first time on plates exposed with the 48-in. Schmidt wide-angle phototelescope on Palomar mountain. The plates were made in the course of the four-year National Geographic society-Palomar observatory sky survey, begun in 1949 in conjunction with the California Institute of Technology, Pasadena. Only about 20 such massive clusters of gas and stars were on record prior to the sky survey's start. The distant systems were found to follow the law of red shifts, indicating to the Palomar astronomers in what direction they were moving. A comet of the 15th magnitude was recorded on a plate exposed on Aug. 5 mapping a celestial area within the constellation Ophiuchus. When completed in 1953, the 2,000 plates of the sky survey would provide photographic prints for a sky atlas of unprecedented depth, mapping the four-fifths of the entire heavens visible from Palomar mountain.

Matthew W. Stirling early in 1951 led his 11th field trip to a Middle American archaeological site under National Geographic society-Smithsonian institution auspices. With his archaeologist wife, Marion Stirling, and Robert Rands, the scientist penetrated parts of the wild Atlantic drainage basin of western Panamá—a region that had gone virtually unexplored since Christopher Columbus probed its coast in 1502. Moving inland up short rivers by native dugout canoe, the director of the Smithsonian's Bureau of American Ethnology found types of pottery and stone implements which for the first time linked ancient cultures of the isthmus' Atlantic and Pacific slopes.

Balloon trains carrying delicate scientific instruments were sent aloft to heights of 20 mi. in the stratosphere above Fort Churchill on Hudson bay for the second straight year in 1951 in the society's seven-year-old program of cosmic ray studies. The project was conducted jointly with the Bartol Research foundation of the Franklin institute of Philadelphia, Pa., with Bartol physicist Martin A. Pomerantz directing the field work. The National Defense board of Canada co-operated in the Fort Churchill studies.

Carl W. Gartlein, physicist and leader of the continuing study of the aurora instituted in 1938 by the National Geographic society and Cornell university, Ithaca, N.Y., described in 1951 a new method of indexing auroras according to size or southern extent and time of occurrence. The method, depending on multiple observation of auroras by interested amateurs, added convincingly to evidence that auroras are most prevalent near the time of the equinoxes.

Published in the society's *National Geographic Magazine* during 1951 were about 1,100 colour pictures of scenes around the world and natural history subjects. Flags of the United Nations, America's fruits, ancient Mesopotamia and Indochina were among subjects covered in approximately 300 reproductions of paintings.

Four large wall maps in colour were prepared by the society's cartographic staff and distributed as supplements to the magazine. Subjects were: Asia and adjacent areas; United States, based on new 1950 census data; central Europe, including the Balkan states; and the world. The year's distribution of the society's ten-colour wall maps exceeded 8,000,000 copies.

About 300 news releases, describing National Geographic-sponsored expeditions and researches or supplying background information about places and events in the day-to-day news, were sent during 1951 by the society's news bulletin service to its list of 800 newspapers, press associations and radio news staffs, domestic and foreign, requesting this service. Maps prepared especially for newspaper use accompanied a few of the releases.

From the news bulletins Geographic school bulletins were prepared and sent weekly during the school year to 35,000 teachers for classroom use.

The society's members at the year's end numbered approximately 1,965,000. Its headquarters are at 16th and M streets, N.W., Washington 6, D.C. Officers: president and editor, Gilbert Grosvenor (in his 53rd year as editor); vice-president and associate editor, John Oliver La Gorce; secretary, Thomas W. McKnew; treasurer, Robert V. Fleming. The society's research committee: chairman, Lyman J. Briggs; vice-chairman, Alexander Wetmore. (G. Gr.)

National Guard.

During 1951 four of the army national guard divisions in federal service were ordered overseas: the 40th division of California and the 45th of Oklahoma to the far eastern command; the 28th of Pennsylvania and the 43rd of Connecticut, Rhode Island and Vermont to the European theatre.

In Jan. 1951, two additional divisions, the 31st from Alabama and Mississippi and the 47th of Minnesota and North Dakota, were ordered to active military service. The 37th division of Ohio and the 44th of Illinois were alerted for active duty.

In addition, the army national guard had three regimental combat teams and nondivisional units in active service. Since the Korean incident, approximately 1,460 federally recognized army guard units with an aggregate strength of more than 110,000 officers and men had reported for active military service.

To meet critical requirements of the army for certain equipment and material incident to the Korean situation and the expansion of the army, the army national guard had furnished approximately $185,000,000 worth of this material to the army since D-day in Korea. This material was over and above that which the national guard units took into active service and included such heavy items as motor vehicles, tanks, weapon and light aircraft, as well as many smaller items.

More than 84% of the air national guard had been ordered to active military service with the U.S. air force. The units remaining under state jurisdiction were assigned an air defense role in addition to their normal M-day training mission.

In addition to the units, the air national guard turned over to the federal government more than $500,000,000 worth of equipment and facilities.

In order to intensify the training program of the national guard in state status during the emergency, 6 week ends of additional training were authorized. The citizen soldiers responded and attendance at both armoury and field training reached an all-time high. More than 210,000 national guardsmen attended the 15-day field-training period.

Legislation was pending in congress at the close of the year to authorize the retention of army national guard unit designations on active military service for a period of three years beyond the two years of active military service required of the national guardsmen. Interim carrier units would in turn be authorized for national guardsmen returning to their homes. Cadre units were authorized to prepare for the return of air national guard personnel and unit designations.

During 1951, many guardsmen responded to state orders to preserve life and property in floods, hurricanes and other domestic crises. Some were serving at home and overseas as members of the U.S. military establishment while others were fighting in Korea in the forces of the United Nations. (R. H. FL.)

National Labor Relations Board.

In its fourth year of enforcing Title I of the Labor Management Relations act, 1947 (commonly known as the Taft-Hartley law), the National Labor Relations board processed the largest number of unfair labour practice and representation cases in its history, 15,794, compared with the previous high of 14,456 in 1947.

The year was marked also by the first amendment to the act since 1947. This amendment, approved by the president Oct. 22, 1951, as public law 189, abolished the requirement of a poll of employees before a union and an employer may make a union-shop contract. However, the law still required that a union making such a contract must first file non-Communist affidavits for each of its officers and comply with the other filing requirements of the act. The law also still provided for the holding of union-shop deauthorization polls when employees wish to revoke their union's authority to make union-shop contracts. The limitations on the type of union shop permitted remained unchanged.

During the four years and two months in which the union-shop poll was required, the board conducted 46,119 such polls. Negotiation of union-shop agreements was authorized by vote of the employees in 44,795 of these polls, or 97.1%. In all polls conducted, 6,542,564 employees were eligible to vote. Ballots in favour of the union shop were cast by 5,071,978 employees. This was 91.4% of those voting, and 77.5% of those eligible to vote.

The 1951 amendment also legalized a number of union-shop authorizations, certifications of bargaining agents and unfair labour practice case decisions which had been, in effect, invalidated by a ruling of the supreme court in the case *N.L.R.B.* v. *Highland Park Manufacturing Co.*, 341 U.S. 322 (May 14, 1951). In this case, the supreme court ruled that the term "national or international labor organization," as used in the section of the act requiring non-Communist affidavits by union officers, encompasses parent labour federations such as the American Federation of Labor and the Congress of Industrial Organizations. Therefore, the court ruled, these federations had to file such affidavits before any of their affiliated unions were entitled to bring cases before the board. The board previously had held that the A.F. of L. and C.I.O. officers did not need to file except when the parent federations sought directly to represent employees. The court's ruling in effect invalidated union-shop authorizations and representation certificates issued by the board to A.F. of L. affiliates before the A.F. of L. filed on Nov. 7, 1947, and to C.I.O. affiliates before the C.I.O. filed on Dec. 22, 1949. Congress by the amendment reinstated these authorizations and certificates, as well as certain—but not all—unfair labour practice cases based on charges filed by A.F. of L. and C.I.O. unions during these periods.

During 1951, the board made a number of decisions which were significant in the field of collective bargaining. Among these was the decision in the *Jacobs Manufacturing Co.* case, clarifying the continuing duty of an employer and a union to bargain after a contract has been signed. In this case, a majority of the board held that the statutory duty to bargain over wages, hours or other conditions of employment requires the parties to bargain over any of these issues, whenever raised, provided that they are in no way treated in the current contract and were never negotiated during discussions leading up to the contract. In the same case, a majority made up of different board members held that the parties are not obligated to bargain on any revived issue if it was advanced and discussed as part of the negotiations leading up to the original contract, even though it was in no way treated in the written agreement. In the same case, the board also unanimously reaffirmed its ruling that an employer does not bargain in good faith when he refuses to take any steps whatever to substantiate by facts a bare and adamant assertion during negotiations that he cannot grant a requested pay increase.

Dealing with another aspect of collective bargaining, the board in the *Western Electric* case changed its rule in representation cases on the effect of reopening contracts. In prior years, the board had followed the policy that the reopening of a contract before the end of its term, except within the definite limits of a reopening clause contained in the original agreement, would open the way for a new representation election. The board followed this policy to give employees frequent opportunities to change bargaining agents, if they wished. But in 1951, after considering the advances in knowledge of collective bargaining techniques on the part of employees and the need for stability in labour-management relations, the board discarded the old rule. Instead, the board held, the reopening of a contract by mutual consent of employer and union does not itself open the contract for a new election. However, the board reaffirmed the continuance of its policy that any extension of the contract beyond its original duration does not bar the holding of an election near the original expiration date of the contract.

In a series of decisions on the discharge of employees under valid union-shop agreements, the board ruled that: (1) discharge of an employee for failure to pay union fines is illegal; (2) charging higher initiation fees for "old" employees, as against newly hired employees, is discriminatory; (3) discharge of an employee for failure to pay his dues on time, under a valid union-shop agreement, is legal; and (4) union assessments are not "periodic dues" which employees may be required to pay in order to hold their jobs under a valid union-shop contract.

During the year, the board also had occasion, for the first time, to apply its jurisdictional standards in a secondary boycott case. Such cases, by their nature, must involve at least two employers—the primary employer with which the union has a dispute and the secondary employer whose employees the union is charged with encouraging to strike or boycott in order to force the secondary employer to cease doing business with the primary employer. In view of this fact, the board decided unanimously that, in determining whether to assert jurisdiction in such cases, it will consider impact upon interstate commerce of (1) the business of the primary employer, or employers, and, (2) if that is not sufficient to meet the board's jurisdictional standards, the business of the secondary employer, or employers, to the extent affected by the alleged boycott activities. In the case where this policy was announced, the board rejected jurisdiction when the business of the primary employer added to the value of the secondary employer's project which was picketed, in the alleged secondary boycott activities, did not make an amount sufficient to meet the board's usual jurisdictional minimum.

During the fiscal year ended June 30, 1951, the five-member board issued 2,474 formal decisions, compared with 2,245 in the preceding fiscal year. Of the 1951 decisions, 498 involved unfair labour practices and 1,945 were in representation proceedings.

A total of 6,342 representation elections were conducted among 666,556 employees to determine their choice of collective bargaining agent, if any. Bargaining representatives were chosen in 4,758 elections, or approximately 75% of those conducted. In these elections, unions were authorized to represent a total of 505,322 employees in bargaining. Unions affiliated with the American Federation of Labor won 2,650 out of 3,988 representation elections in which they participated during the fiscal year. Unions affiliated with the Congress of Industrial Organizations won 1,375 out of 2,234 elections in which they took part. Unaffiliated unions won 733 out of 1,181.

The office of the general counsel, which is responsible for the investigation and prosecution of unfair labour practice cases, issued formal complaints in 792 cases during fiscal 1951, compared with 708 issued in fiscal 1950. Of the complaints issued in 1951, employers were charged with unfair practices in 630 (79.5%) and unions in 162 (20.4%). This corresponded almost exactly with the relative percentages of cases filed against employers and unions. Charges of unfair practices were filed in 5,261 cases. Of these, 4,164 or 79% were levelled against employers, and 1,097, or 21%, against unions.

To remedy unfair labour practices, $2,220,000 was awarded in back pay to 7,550 employees who had suffered illegal discrimination. Of these, 3,864 were also reinstated in their jobs. Of the back pay, employers paid $2,177,320, while unions were found to owe $42,660. In addition, unions were required to refund $780 in dues collected under illegal union shops. Collective bargaining was directed in 280 cases. (*See* also Labour Unions; Law; Strikes.) (P. M. Hg.)

National Museum: *see* Smithsonian Institution.

National Parks and Monuments.

Public use of the national parks of the United States and other areas administered by the national park service of the department of the interior reached record proportions during 1951, with visitors totalling approximately 36,680,000, a 12% increase over the record travel of 1950.

This increased use brought added problems of protection and maintenance. A major problem was experienced in Yellowstone National park, Wyoming-Montana-Idaho, where careless visitors tossed various objects into geyser vents and hot-spring formations. So much debris was deposited in Morning Glory pool that this beautiful park feature was almost ruined. Unlawful feeding of bears by visitors to Yellowstone National park and several other national parks presented another serious problem. In these areas, intensive campaigns were conducted, through the use of warning posters and stickers and by dissemination of information at campfire programs, to "educate" visitors on the serious injury that could result from feeding these seemingly tame, yet wild, animals.

One of the year's most significant developments was the transfer, on Jan. 2, of administration, but not ownership, of Independence hall, Congress hall and associated historic structures in Independence square, Philadelphia, Pa., from city to federal control. At ceremonies held in Philadelphia on that date, Secretary of the Interior Oscar L. Chapman accepted the keys to Independence hall symbolizing the transfer. These structures form the nucleus of the Independence National Historical Park project authorized by congress in 1948.

Other significant historic site developments to occur during the year were the establishment of the birth site, near Diamond, Mo., of the noted scientist-educator George Washington Carver as a national monument; the designation, as a national historic site, of Grand Portage trail in northeastern Minnesota which figured in the history of the fur trade and the exploration and colonization of the northwest; and the designation, as a national historic site, of Dorchester heights, South Boston, Mass., an important point in George Washington's successful effort to force the evacuation of Boston by British troops in 1776. Designation of the Dorchester site coincided with the celebration on March 17 of the 175th anniversary of the evacuation.

As in the past, conservation organizations throughout the United States voiced strong opposition to proposed nonconforming installations on park and monument areas, notably dams and water-control projects, which would do irreparable damage to scenic and other values. In this connection, Secretary of the Interior Chapman issued an order to the agencies of the interior department designed to protect not only areas administered by the national park service but also established wilderness areas in national forests and national wildlife refuges against water-control investigations. This order prohibited investigations by such agencies in these areas without the prior written approval of the secretary of the interior or unless they were specifically authorized by congress. The order also provided that where it appeared in the public interest to permit the investigation of proposed power and reclamation projects the resulting reports should contain comparable data on all alternative project possibilities adequate for the secretary to reach an informed decision as to which project, if any, should be selected.

Other significant developments and activities of the year 1951 included the approval by Secretary of the Interior Chapman of standard provisions to be included in contracts governing concession operations in national park service areas; continued co-operation with state agencies to aid them in developing park and recreation programs supplementary to those on a national level; completion of the Mississippi River Parkway survey; continuation of the Alaska Recreational Resources survey; appointment of Maj. Gen. U. S. Grant, III, of Washington, D.C., and Turpin C. Bannister of Urbana, Ill., to the advisory board on national parks, historic sites, buildings and monuments; and the resignation in April of Newton B. Drury as director of the national park service. Arthur E. Demaray, associate director of the service, was named to succeed him. Upon Demaray's retirement early in December, Associate Director Conrad L. Wirth became director. (C. L. Wi.)

Canada.—Two national historic parks were established at Lower Fort Garry, near Winnipeg (13 ac.), and Fort Battleford, Saskatchewan (formerly the North West Mounted Police memorial and Indian museum, 37 ac.). Canada's 17 national parks and 11 national historic parks had 2,000,000 visitors, a record number, about 10% more than in 1950. Highway improvement continued, a total of 120 mi. of road being hard-surfaced and many miles gravelled; bridges were repaired or replaced. Accommodation for visitors was increased, and recreation facilities (camping grounds, outdoor swimming pools, children's playgrounds, tennis courts and golf courses) were extended. (*See* also TOURIST TRAVEL.)

Navies of the World.

At the end of 1951 there were two first-class navies, namely those of the United States and of Great Britain, the former being about four times larger than the latter. The fleets of the U.S.S.R., France and Italy could be considered second class, and those of Sweden, the Netherlands, Turkey, Spain, Australia, Canada, Argentina, Brazil and Chile third class. The remaining, not so well balanced, navies fell into lesser categories. Several of the smaller countries continued to add to their naval strength by acquiring warships from the United States and Great Britain. The relative strengths in ships, of and above the escort vessel categories, of the navies of the world were as shown in the table on page 494.

The principal trends in the navies of the larger maritime powers in 1951 were the improvement of anti-submarine and anti-aircraft weapons, the reconstruction and conversion of aircraft carriers to operate larger and faster aircraft, the adaptation of large destroyers as fleet anti-submarine escorts, the conversion of smaller destroyer types into fast anti-submarine frigates, and an increase in the speed and underwater endurance of submarines. Events in the far east and middle east gave a sharp impetus toward rearmament. In the United States many warships which had been in a state of preservation were brought back into commission, while in Great Britain a number of reserve ships which had been laid up were brought forward for active service. In both countries many new warships, especially smaller types such as anti-submarine escorts or frigates and minesweepers, were ordered or projected.

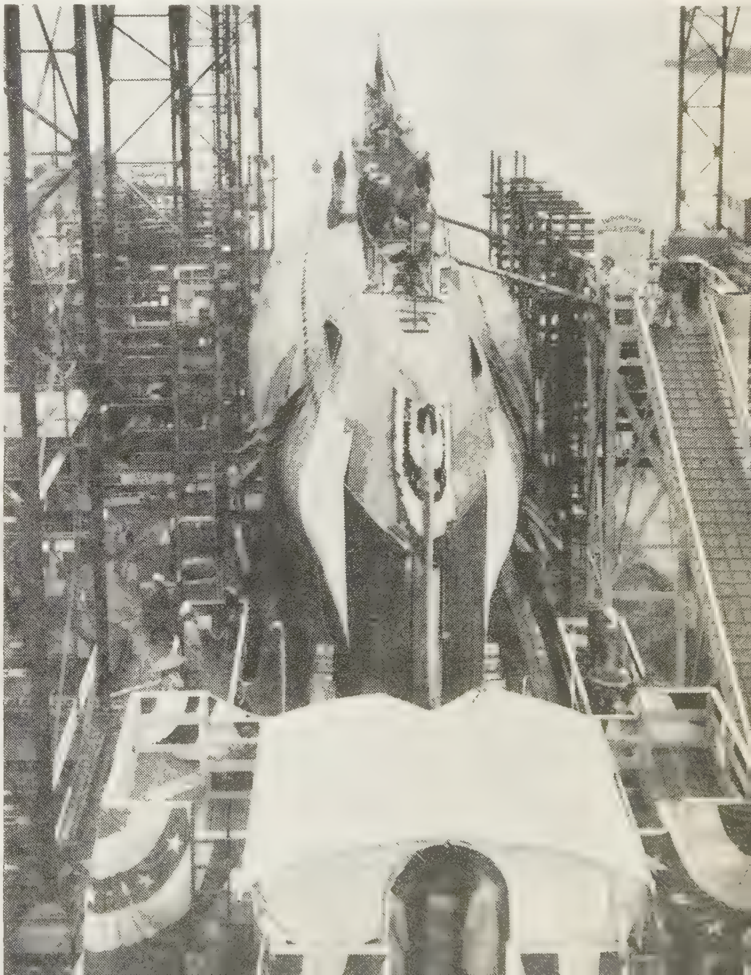
Among the naval events of the year which shocked and stirred the world were the loss of 75 officers and men in the British submarine "Affray," which submerged in the English channel on April 16 and was not located until June 14; the destruction of the naval armament carrier "Bedenham," which blew up in Gibraltar harbour in April; the loss of the U.S. minesweeper "Partridge," which struck a floating mine and sank off the east coast of Korea in February; and the revolt of the Thailand navy culminating in the sinking of a coast defense ship and a torpedo boat in July.

Many U.S., Australian, Canadian and New Zealand warships were active in the Korean theatre. Many British warships were also concerned in the Korean campaign, and others were called upon to deal with the emergencies in the Persian gulf and the approaches to the Suez canal and hurricane relief in Jamaica.

United States Naval Strength.—A giant flush-decked aircraft carrier of 59,900 tons was ordered, named "James V. Forrestal." Twelve aircraft carriers of the "Essex" class, including the "Bon Homme Richard," "Hancock," "Hornet," "Kearsage," "Lake Champlain," "Lexington," "Randolph," and "Wasp," were scheduled to be converted on similar lines to the newly completed "Oriskany" and the recently converted "Essex" to enable them to operate heavier aircraft. By the end of 1951 all four of the battleships of the "Iowa" class were in commission. The U.S. navy comprised 28 fleet aircraft carriers, 8 light fleet carriers, 66 escort carriers, 15 battleships, 2 large (battle) cruisers, 25 heavy cruisers, 42 light cruisers, 348 destroyers, 263 escort destroyers and frigates, 194 submarines, 214 minelayers and minesweepers, 168 patrol vessels, 1,000 amphibious craft, 553 fleet auxiliaries, about 2,000 service craft and 74 drydocks —a total of 5,000 vessels, of which half were in service, the remainder being in reserve.

British Naval Strength.—Late in 1951 there were seven fleet aircraft carriers, six light carriers and one escort carrier. The large fleet aircraft carrier "Eagle" was completed on Oct. 31. Considerable progress had been made with the light fleet carriers "Albion," "Bulwark" and "Centaur," but the remaining ship of the class, the "Hermes," had not been launched. The light carriers "Hercules," "Leviathan" and "Powerful" were still suspended. Of the five surviving battleships none was in operational commission at the end of the year, the "Vanguard"

THE U.S.S. "TRIGGER," a long-range, fleet-type submarine fitted with snorkels and diesel machinery, ready for launching at Groton, Conn., in June 1951



being withdrawn for refit as flagship of the home fleet, and the four of the "King George V" class relegated to reserve, three being laid up in a state of preservation. There were 24 cruisers, excluding a trials ship and a cadets' training ship. No building progress was made with the cruisers "Blake," "Defence" and "Tiger." Destroyers numbered 95. The seventh of the eight large destroyers of the "Daring" class was launched. There were 162 frigates including the "Relentless" and "Rocket" the conversion of which from destroyers was completed in July. As a result of scrappings and transfers submarines were reduced to 53, excluding 4 "midgets." Other vessels included 3 fast minelayers, 2 aircraft maintenance carriers, 2 monitors, 60 ocean minesweepers and many coastal craft, miscellaneous ships and auxiliaries.

Commonwealth.—Australia had a compact fleet of 1 light carrier (a sister ship was under construction in Great Britain), 3 cruisers, 5 destroyers (4 more under construction), 5 fast anti-submarine frigates under conversion from destroyers, 14 frigates, 32 fleet minesweepers and a number of small craft and auxiliaries.

Canada also had a well-balanced fleet of 1 light carrier, 2 cruisers, 11 destroyers (2 of which were to be converted to fast anti-submarine frigates), 6 frigates (14 more were under construction or projected), 9 fleet minesweepers and numerous smaller craft.

U.S.S.R.—The construction of one to four battleships of a new type was persistently reported. The total available naval strength at the end of 1951 was 3 battleships, 14 cruisers, 2 coast defense ships, 82 destroyers, 370 submarines, 58 escort vessels and numerous minesweepers, minelayers, patrol vessels, torpedo boats and ancillary ships.

France.—The fast light fleet aircraft carrier "Langley" was acquired from the United States and renamed "Lafayette." The reconstruction of the cruiser "De Grasse" was resumed and she was to be completed as an anti-aircraft cruiser. The fleet comprised 2 light carriers, 1 escort carrier, 2 battleships, 6 cruisers, 11 first-class escorts (destroyers), 26 second-class escorts (frigates), 10 submarines and numerous patrol vessels, miscellaneous ships and auxiliaries.

*Battle Cruiser.

Other naval forces, not shown in the table because they comprise only minor war vessels, are those of Bulgaria, Ceylon, Finland, Haiti, Honduras, Hungary, Iceland, Iraq, Nicaragua, Panamá, Paraguay, Philippines and Uruguay.

Italy.—The navy consisted of 2 battleships, 3 cruisers, 6 destroyers, 5 frigates, 12 torpedo boats, 23 corvettes and a number of minesweepers and auxiliaries, 1 cruiser having been discarded, 2 destroyers and 3 frigates acquired from the United States and 2 torpedo boats rerated as escorts (frigates).

Other European Countries.—Sweden had 4 cruisers, 3 coast defense ships (small battleships), 13 destroyers, 2 anti-submarine frigates, 6 torpedo boats (small destroyers), 24 submarines, 2 minelayers and numerous other vessels.

The Netherlands had a well-balanced fleet of 1 light aircraft carrier, 2 light cruisers, 5 destroyers, 9 frigates, 7 submarines, 4 patrol vessels, 1 minelayer and a number of other warships.

Turkey possessed 1 old battle cruiser, the only warship of this category remaining in the world, 10 destroyers, 11 submarines, 13 fleet minesweepers and numerous other warships and auxiliaries.

Spain had 6 cruisers, 18 destroyers, 12 frigates, 6 submarines, 6 minelayers and 7 fleet minesweepers, as well as many minor warships and auxiliaries.

South America.—Argentina had 2 old battleships, 5 cruisers (2 of which were transferred from the United States in 1951), 1 coast defense ship, 11 destroyers, 7 frigates, 4 escorts (old destroyers), 3 submarines, 11 minesweepers and other craft.

Brazil possessed 1 old battleship, 2 cruisers purchased from the United States in 1951, 9 destroyers, 8 frigates, 3 submarines, 11 corvettes, 8 submarine chasers and numerous smaller craft.

Chile had 1 old battleship, 2 cruisers acquired from the United States in 1951, 6 destroyers, 6 frigates, 7 submarines and a number of small craft, miscellaneous ships and auxiliaries.

Modern Types of Warships.—The principal types of modern warships in the navies of the world were as follows:

Fleet Aircraft Carriers.—"Midway" (U.S.), 45,000 tons, fourteen 5-in. guns, 137 aircraft, 212,000 s.h.p., 33 knots; "Eagle" (British), 36,800 tons, sixteen 4.5-in. guns, 110 aircraft, 152,000 s.h.p., 31½ knots; "Oriskany" (U.S.), 30,800 tons, ten 5-in. guns, 100 aircraft, 150,000 s.h.p., 33 knots; "Implacable" (British), 26,000 tons, 72 aircraft, sixteen 4.5-in. guns, 148,000 s.h.p., 32½ knots.

Light Fleet Aircraft Carriers.—"Saipan" (U.S.), 14,500 tons, 50 aircraft, 120,000 s.h.p., 33 knots; "Theseus" (British), 13,350 tons, 35 aircraft, 40,000 s.h.p., 25 knots; "Belleau Wood" (U.S.), 11,000 tons, 45 aircraft, 100,000 s.h.p., 32 knots.

Battleships.—"Iowa" (U.S.), 45,000 tons, nine 16-in. and twenty 5-in. guns, 212,000 s.h.p., 33 knots; "Vanguard" (British), 44,500 tons, eight 15-in. and sixteen 5.25-in. guns, 130,000 s.h.p., 30 knots; "South Dakota" (U.S.), 35,000 tons, nine 16-in. and twenty 5-in. guns, 130,000 s.h.p., 28 knots; "Jean Bart" (French) 38,750 tons, eight 15-in. and nine 6-in. guns, 150,000 s.h.p., 30 knots; "King George V" (British), 35,000 tons, ten 14-in. and sixteen 5.25-in. guns, 110,000 s.h.p., 28.5 knots.

Large (Battle) Cruisers.—"Alaska" (U.S.), 27,500 tons, nine 12-in. and twelve 5-in. guns, 150,000 s.h.p., 33 knots.

Heavy Cruisers.—"Des Moines" (U.S.), 17,000 tons, nine 8-in. and twelve 5-in. guns, 120,000 s.h.p., 33 knots; "Oregon City" (U.S.), 13,700 tons, nine 8-in. and twelve 5-in. guns, 120,000 s.h.p., 33 knots.

Light Cruisers.—"Worcester" (U.S.), 14,700 tons, twelve 6-in. and twenty 3-in. guns, 120,000 s.h.p., 32 knots; "Fargo" (U.S.), 10,000 tons, twelve 6-in. and twelve 5-in. guns, 100,000 s.h.p., 32½ knots; "Superb" (British), 8,000 tons, nine 6-in. and ten 4-in. guns, 72,500 s.h.p., 31.5 knots; "Tre Kronor" (Swedish), 7,500 tons, seven 6-in. guns, 100,000 s.h.p., 33 knots; "Juneau" (U.S.), 6,000 tons, twelve 5-in. guns, 75,000 s.h.p., 35 knots; "Diadem" (British), 5,900 tons, eight 5.25-in. guns, 62,000 s.h.p., 32 knots.

Destroyers.—"Daring" (British), 2,610 tons, six 4.5-in. guns, 54,000 s.h.p., 34 knots; "Gearing" (U.S.), 2,425 tons, six 5-in. guns, 60,000 s.h.p., 35 knots; "Jutland" (British), 2,400 tons, five 4.5-in. guns, 50,000 s.h.p., 34 knots; "Battleaxe" (British), 1,980 tons, four 4-in. guns, 40,000 s.h.p., 34 knots; "Öland" (Swedish), 1,880 tons, four 4.7-in. guns, 44,000 s.h.p., 35 knots.

Frigates.—"Relentless" (British), 1,705 tons, two 4-in. guns, two 21-in. torpedo tubes, 40,000 s.h.p., 34 knots; "Mounts Bay" (British), 1,580 tons, four 4-in. guns, 5,500 i.h.p., 19½ knots; "Tacoma" (U.S.), 1,430 tons, three 3-in. guns, 5,500 i.h.p., 20 knots; "Amethyst" (British), 1,490 tons, six 4-in. guns, 4,300 s.h.p., 18½ knots; "Brecon" (British), 1,175 tons, six 4-in. guns, three 21-in. torpedo tubes, 19,000 s.h.p., 25 knots.

Submarines.—"Tench" (U.S.), 1,570 tons, one 5-in. gun, ten 21-in. torpedo tubes, 6,500 s.h.p., 20 knots; "Amphion" (British), 1,120 tons, one

4-in. gun, ten 21-in. torpedo tubes, 4,300 s.h.p., 18 knots; "Créole" (French), 820 tons, one 3.5-in. gun, ten 21.7-in. torpedo tubes, 3,000 s.h.p., 17 knots; "K-1" (soviet), 1,457 tons, two 4-in. guns, ten 21-in. torpedo tubes, 22½ knots. (R. V. B. B.)

Navy, U.S. Department of: *see* GOVERNMENT DEPARTMENTS AND BUREAUS, U.S.

Nazimuddin, Khwaja (1894–), Pakistani statesman, was born at Dacca, Bengal, July 19. He was educated at Mohammed Anglo-Oriental college, Aligarh, United Provinces, at Dunstable Grammar school, Bedfordshire, Eng., and at Trinity hall, Cambridge. He was chairman of the Dacca municipality from 1922 to 1929. In that year he entered Bengal provincial politics, and as minister of education (1929–34) piloted through the legislative council the Compulsory Primary Education act, 1930; he was home minister, 1937–41. Khwaja[1] Nazimuddin had been prominent in the revival of the All-India Moslem league in 1937 and was a member of its working committee, 1937–47. In 1941 he resigned from the Bengal government over the membership on the Indian defense council of Fazlul Huk, the premier. Nazimuddin led the Moslem league opposition in the legislative assembly until early in 1943 when he ended a brief interregnum in Bengal's autonomy (during a famine) by forming a ministry, 1943–45.

When Pakistan was formed on Aug. 15, 1947, he was appointed premier of East Pakistan (East Bengal). On Mohammed Ali Jinnah's death (Sept. 11, 1948) he became governor general of Pakistan.

Following the assassination of Liquat Ali Khan on Oct. 16, 1951, Nazimuddin resigned the governor generalship to become prime minister.

N.E.A.: *see* SOCIETIES AND ASSOCIATIONS, U.S.

Nebraska. The "Cornhusker state" is located in the west north central portion of the U.S. It was granted a territorial governor as a result of the Kansas-Nebraska act of 1854 and was admitted to the union in 1867. Land area: 76,663 sq.mi.; water area: 564 sq.mi.; pop.: 1,325,510 by the 1950 census, a gain of 0.7% since 1940. The urban population was 46.9% of the total.

Capital: Lincoln, with pop. 98,884; largest city: Omaha, with pop. 251,117.

History.—Elected state officials for the 1951–53 period included: governor, Val Peterson (Rep.); lieutenant governor, Charles J. Warner (Rep.); attorney general, Clarence S. Beck (Rep.); auditor, Ray C. Johnson (Rep.); treasurer, Frank B. Heintze (Rep.); superintendent of public instruction, Freeman Decker (nonpartisan); secretary of state, James Pettinger (Rep.), appointed upon death of incumbent, Frank Marsh; chief justice, Robert G. Simmons (nonpartisan).

The unicameral legislature held its regular session in 1951. Legislative action included a loyalty oath required of all state employees and public school teachers; county and state employees were placed on social security. The following amendments to the state constitution were presented to the voters for approval in 1952: to provide for annual legislative sessions; to grant legislators a yearly salary of $1,250; to replace the superintendent of public instruction with a board of education; to hold a constitutional convention in 1954.

Education.—There were 6,210 elementary and 559 high school districts by the end of 1950 of which 168 had no schools and 1,702 contracted with other districts. The sum of $26,750 was appropriated for district reorganization for the 1949–51 period. Total enrolment for elementary and secondary schools during 1950 was 227,879. Teaching staffs numbered 11,949. Total expenditures for education during the 1949–50 period were $43,244,437.64. The sum of $145,779.41 was distributed as special aid to state schools in 1950. The direction of elementary and secondary education remained primarily in the hands of local school districts with limited supervisory authority by the state superintendent of public instruction. Higher education was directed by the University of Nebraska located at Lincoln, the college of medicine at Omaha and four state colleges. There were 19 private institutions of higher education.

Social Insurance and Assistance, Public Welfare and Related Programs.—The state appropriation for public assistance for the 1949–51 period was $37,982,400, of which $19,622,600 was federal funds. There were 1,513 cases resulting in 2,369 persons' receiving general relief in Oct. 1951. Each case received an average of $43.32. During this same period a total of 7,245 dependent children from 2,970 families received $91.50 per family; 759 blind persons received a monthly average of $64.30; and there were 22,542 recipients of old-age assistance who received a monthly average of $52.62.

The state maintained a total of 17 charitable, mental, reformatory and penal institutions in 1951 of which seven were for children, three penal, five mental and two classified as miscellaneous. Total population as of Oct. 31, 1951, was 8,566. These institutions were under the board of control to which the legislature appropriated $23,230,127 for the 1951–53 period.

Communications.—Total road mileage of Nebraska for 1951 was 105,729. The state maintained a total of 9,612 mi., of which 1,373 mi. were oiled and 5,035 mi. were gravel. State appropriations for highway purposes during 1951 amounted to $21,317,000 with an additional $6,167,000 federal funds.

There were 256 licensed airports in Nebraska. This included 4 state, 2 Civil Aeronautics administration intermediate, 1 federal, 65 municipally owned, 30 commercial and 154 personal airports. There were 6,326 mi. of railroad in 1951. Radio stations numbered 25, of which 2 were television transmitters. Daily newspapers numbered 21, and there were 280 weekly and semi-weekly newspapers.

Banking and Finance.—The state budget for the 1951–53 period was $165,095,321.27, the largest in the history of Nebraska. State banks numbered 288 with assets of $404,909,136.12 and total deposits of $375,394,337.24 as of June 30, 1951. On June 30, 1950, building and loan associations totalled 41 with assets of $102,441,882.88. On June 30, 1951, there were 6 trust companies with total assets of $19,459,091.07; 58 residential co-operative credit associations with total assets of $8,601,719.07; 5 occupational credit unions with total assets of $453,911.03; and 57 credit unions with total assets of $2,760,779.03. On June 30, 1951, Nebraska's national banks had total resources of $999,234,000 and deposits of $903,905,000.

Agriculture.—The total acreage harvested in 1951 was 19,537,000 compared with 19,882,000 in 1950. Excluding government payments for sugar beets, the total value of production for 1951 was $613,040,000 as compared with $715,809,000 in 1950.

Table I.—*Principal Crops of Nebraska*

Crop	1951	1950	Average, 1940–49
Corn, bu.	187,620,000	249,012,000	210,496,000
Winter wheat, bu.	57,232,000	87,714,000	62,598,000
Spring wheat, bu.	841,000	768,000	1,054,000
Oats, bu.	60,816,000	63,576,000	58,716,000
Barley, bu.	4,620,000	4,650,000	19,514,000
Rye, bu.	1,717,000	2,464,000	3,593,000
Potatoes, bu.	6,000,000	11,180,000	10,542,000
Sugar beets, tons	682,000	812,000	717,000
Alfalfa hay, tons	3,040,000	2,696,000	1,759,000
Wild hay, tons	2,733,000	2,464,000	2,027,000
Sorghum grain, bu.	1,664,000	4,850,000	2,043,000
Beans, dry (100-lb. bags)	838,000	976,000	863,000
Soybeans, bu.	1,276,000	1,200,000	436,000

Manufacturing.—Nebraska's industry depends largely upon the agricultural materials produced within the state. There were 1,900 manufacturing and processing establishments in 1950. They employed approximately 56,200 persons during 1951. (S. J. HE.)

Mineral Production.—Table II shows the tonnage and value of mineral production in the state in 1949 for those commodities having values in excess of $100,000, and the corresponding data for 1950, so far as they were available at the close of 1951.

Table II.—*Mineral Production of Nebraska*

(In short tons, except as noted)

Mineral	1950 Quantity	1950 Value	1949 Quantity	1949 Value
Petroleum (bbl.)	1,547,000	$3,290,000	330,000	$ 730,000
Sand and gravel	5,077,792	3,167,659	5,114,766	2,911,734
Stone	736,660	1,042,035	504,870	840,758
Other minerals		?		5,619,021
Total		?		$10,101,513

Negroes, American. Following an order for complete racial integration of the U.S. armed forces in the far eastern command, the 24th U.S. infantry regiment, oldest active Negro unit in the army (1869), was dis-

---

[1] *Khwaja*=teacher. Mr. Nazimuddin kept this courtesy title after his tenure of the Bengal portfolio of education.

NATIONAL GUARDSMEN trying to disperse a crowd which gathered on July 12, 1951, near an apartment building in Cicero, Ill., after a Negro family rented an apartment in the building

banded during 1951. This integration policy proceeded rapidly in the various army commands, with the conspicuous exception, however, of the European army of occupation. The U.S. navy and air force reported an almost complete carrying out of the policy, which also prevailed in all recruit and draftee training camps. There was a marked increase in officer commissions and promotions for Negroes, especially in the air force. Heroic defense under surprise attack near Hungnam, Korea, won high official commendation for a Negro platoon under the command of Lt. Harry E. Sutton.

Legal and Political Developments.—In the District of Columbia, final legal action was pending before the District supreme court, on the validity of an old civil rights statute of 1873, declared inoperative by the lower court, but valid by the appeals court. Validation in final court would open all public facilities in Washington, D.C., to Negroes. Action against segregation in public elementary schools, the first cases at that level, were taken in several states; decisions were pending at the close of 1951 in Delaware and Florida. In South Carolina, in a similar action, the federal court by a 2 to 1 decision upheld segregation provided all facilities were equalized; appeal was taken to the U.S. supreme court. In Cicero, Ill., riots of considerable proportion broke out in July to prevent a Negro veteran's family from occupying an apartment in a racially restricted neighbourhood, resulting in court injunctions against the town officials and finally the calling out of state militia troops by the governor. A federal grand jury later indicted the mayor, the chief of police and others for malfeasance in office. In a murder conviction in Trenton, N.J., where there was suspicion of race discrimination by the prosecution, the case, known as the "Trenton Six," was reopened to new trial by the state supreme court, and four of the six were freed. The 4th federal circuit court upheld a decision forbidding segregation of passengers by the Atlantic Seaboard railroad; the 5th circuit court upheld the conviction of a Georgia sheriff and his deputies for not giving Negro prisoners adequate protection; and the District of Columbia court dismissed the U.S. department of justice case against W. E. DuBois and codefendants in an attempted prosecution under the McCarran act for failure to register as agents of a foreign government because of their participation in an international peace crusade.

The outstanding political development was the rapidly increasing resumption of voting by Negroes in the southern states, as an aftermath of the decision outlawing the closed "white" primary. The Louisiana primaries were officially thrown open for the first time since the Reconstruction period; Negro candidates ran in New Orleans. An estimated 20,000 Negro voters qualified in Mississippi, and with the outlawing of the poll tax in South Carolina and Tennessee, increased political activity by Negroes was anticipated.

On Dec. 4, Pres. Harry S. Truman issued an Executive Order implementing the nondiscrimination clauses in government contracts and appointing a federal commission to supervise compliance with the order. Because of heavy government spending, especially in war production, considerable pressure for fair industrial placement and up-grading was expected. With F.E.P.C. legislation enacted in ten states and requested by the governors of five others, this movement was gaining momentum.

Educational and Cultural.—The *Crisis* annual education survey reported 60,963 Negro students enrolled in U.S. colleges, with 7,749 bachelor's degrees granted, 446 master's degrees, 595 professional degrees and 11 doctorates. There were marked gains in the admission of Negro students to southern state universities, some by legal order, some by administrative initiative.

The District of Columbia Medical society decided to admit Negro physicians to membership. The National theater in Washington, D.C., was purchased by new management which was in agreement with a nondiscriminatory policy. Ethel Waters' autobiography, *His Eye Is On The Sparrow,* had great success saleswise, and several films appeared with more progressive treatment of Negro characters and themes, among them, *The Well, Bright Victory* and *The Jackie Robinson Story.*

In national baseball, 14 Negro players were members of the 1951 major league teams.

The 1950 census reported a definite trend of the Negro population away from the southern states and toward other sections, particularly the midwest industrial centres. (*See* also EDUCATION; LAW.)

Nehru, Jawaharlal

(1889–), Indian statesman, was born at Allahabad, United Provinces, on Nov. 14. He became prime minister of India on Aug. 15, 1947. For his early career see *Encyclopædia Britannica.*

Addressing the Commonwealth Prime Ministers' conference in London on Jan. 4, 1951, Nehru said that it was "idle and irrelevant" to speak of China as a soviet satellite and that "her voice should now be heard in the Council of Nations." He reiterated this attitude in broadcasts from London (Jan. 12) and Delhi (Jan. 24) and in his foreign policy statement to the Indian parliament on Feb. 12. At a public meeting in Bombay on March 4, however, he described Communist policy as one of "destruction and chaos."

Informal discussions on the Kashmir dispute at Chequers, Buckinghamshire, on Jan. 13–14 between Nehru and the prime ministers of Great Britain, Pakistan and other commonwealth countries produced little result. Speaking in the Indian parliament on March 28, Nehru insisted that Kashmir was "juridically and politically an integral part of the State of India."

It had been known for some time that a minority group in the Congress party—mainly Nehru's supporters—was dissatisfied with the administration of the majority led by the party president, Purshottamdas Tandon. During 1951 this situation developed into a personal struggle for supremacy in the party between the prime minister and the Congress president. Investigation of the minority group's complaints, promised to Nehru by the working committee at its Bangalore session in July, did not materialize, and on Aug. 11 he resigned from the committee. On Aug. 21 he received a vote of confidence from 234 of the 279 members of the parliamentary Congress party and, on Sept. 6, 16 of the 21 members of the Congress working committee resigned. On Sept. 8, finding himself virtually isolated, Tandon resigned and Nehru succeeded him as president.

In visiting Kathmandu, June 16–19, Nehru became the first foreign prime minister to enter Nepal. (*See* also INDIA; PAKISTAN.)

Nepal.

An independent kingdom in the Himalaya, Nepal lies between India and Tibet. Area: *c.* 54,000 sq.mi. Pop. (1950 est.): 7,000,000. Aboriginal stock is Mongolian with Hindu admixture. Religion: Buddhism mixed with Hinduism. Capital, Kathmandu (pop. *c.* 110,000). Ruler, Tribhubana Bir Bikram Shah Deva; prime minister in 1951, Mohan Shumshere Jung Bahadur Rana and (from Nov. 16) Matrika Prasad Koirala.

History.—On Jan. 8, 1951, it was announced that Nepal would have constitutional reforms generally on lines proposed by India. Pending the meeting of a constituent assembly in 1952 to frame a constitution with adult suffrage, a cabinet would be at once set up under the prime minister, Mohan Shumshere Jung Bahadur Rana, and composed of an equal number of representatives of the Rana family and the Nepali Congress party on the basis of joint responsibility. King Tribhubana was to continue on the throne but could appoint a regent in his absence. The king started to exercise his functions as a constitutional monarch on Jan. 18, consultations between him and the prime minister being conducted through the Nepali ambassador at New Delhi. He flew back to Kathmandu on Feb. 15 after three months' stay

PHOTOGRAPH published in 1951 showing French mountain climbers in Nepal during an expedition to the Himalaya. Two of the party set a world record for the highest peak scaled when they reached the top of Mt. Annapurna in June 1950 in India. Three days later he issued a proclamation under which the interim cabinet was duly sworn in.

In April serious trouble broke out again as a result of an attempt by the Gurkha Dal and some junior members of the Rana family to demonstrate in favour of the former regime. The king took over the post of commander in chief from the prime minister; 31 members of the Rana family were arrested and the Gurkha Dal was banned.

On Nov. 11, five Nepali Congress ministers headed by the home minister, B. P. Koirala, resigned, handing in their resignations direct to the king. Koirala broadcast his and his colleagues' view that the cabinet was unworkable on a mixed basis and that any attempt to compromise with the Rana regime had been abortive. On Nov. 16 a new cabinet, headed by M. P. Koirala, was sworn in. None of the five former Rana ministers was in the new government, which consisted of eight members of the Nepali Congress party and four Independents. The retiring prime minister left for Bombay on Dec. 14, and this was the end of the oligarchical rule of the Rana family.

A warm welcome was given to Jawaharlal Nehru on June 16 when he arrived on a short visit, the first foreign prime minister ever seen in Kathmandu. In September a treaty of friendship was signed with the United States, the missions of both countries being raised to embassy rank. (E. HD.)

Finance and Banking.—Estimated gross revenue 12,500,000 rupees. Monetary unit: Nepal rupee, with an exchange rate (Nov. 1951) of 4.77½ rupees to the U.S. dollar.

Foreign Trade.—(1944–45) Imports 32,520,000 rupees; exports 37,376,000 rupees. Principal imports: textiles, cigarettes, salt, paraffin, sugar, spices, machinery, medicines and boots and shoes. Principal exports: food grains, jute, timber, oilseeds, potatoes, hides and skins.

Transport and Communications.—Roads (1950): 237 mi. suitable for motor vehicles. Licensed motor vehicles (Dec. 1950): cars 220; commercial 80.

Nervous System: *see* PSYCHOSOMATIC MEDICINE.

Netherlands.

A kingdom of northwest Europe, the Netherlands is bounded north and west by the North sea, east by Germany and south by Belgium. Area: 12,868 sq.mi. (not including the waterways and sheets of water larger than 185 ac. and minor acquisitions along the German frontier). Pop. (Oct. 1951 est.) 10,286,250. Language: Dutch. Religions (1947): Roman Catholic 38.50%, Dutch Reformed 31.03%, Reformed Churches 7.93%, nonchurch members 17.04%. Chief towns (pop., 1949 est.): Amsterdam (cap., 832,583); Rotterdam (671,901); The Hague (555,339); Utrecht (191,811); Haarlem (161,380); Eindhoven (139,320). Ruler, Queen Juliana; prime minister in 1951, William Drees.

History.—In Dec. 1950 negotiations took place between the Netherlands and Indonesia about the definitive status of western New Guinea. The Indonesians clung to their demand for an unconditional transfer of sovereignty. Toward the close of the conference the Dutch delegation tabled a compromise proposal by which the sovereignty was to be conferred on the Netherlands-Indonesian union, but this was declined as was also the suggestion to invoke the good offices of a third party. Before the Dutch government made its compromise proposal the Labour group of the second chamber, anxious to prevent a deadlock, had privately suggested to the Indonesian delegation that the sovereignty might be transferred to Indonesia on condition that the actual Netherlands administration was to be maintained for a certain period. The other parties did not, however, want to tamper with the actual sovereign rights over New Guinea. In the Indonesian parliament, meanwhile, a movement arose against the union arrangement recently established by the Round Table conference of The Hague. All parties were desirous of having the union statute revised; in Jan. 1951 a proposal to have it terminated within three months was defeated by only 66 votes against 63. The Indonesian government asked for negotiations on the future of the union statute, which were to take place in Jan. 1952 at The Hague.

On Jan. 23, 1951, P. J. Oud, acting on behalf of the Liberal group, proposed in the second chamber a motion of censure on the ground of the government's having, without the chamber's sanction, abandoned its expressed determination to hold fast to the Netherlands sovereignty over New Guinea. Although the motion was rejected by 66 votes to 26, the Liberal minister of foreign affairs, D. U. Stikker, handed in his resignation. Whereupon the Drees-van Schaik cabinet resigned as a whole, since one of the foundations on which it had been formed (the liberal party) had fallen away.

Not until the middle of March did a new cabinet take office, of broadly the same composition as the old and with Drees once more as prime minister. The foundations were again "broad," the Catholic People's party, the Labour party, the Liberal party and the Christian Historical union participating.

The new government had to cope with great economic difficulties. As a result of the Korean war world prices of goods needed for import had risen to a far greater extent than the articles exported by the country. Aid from the European Recovery program was decreasing, while military expenditure had to be raised from 1,000,000,000 florins to 1,500,000,000 florins. The balance of payments moved disastrously against the Netherlands. Inflation threatened when, because of the rise of prices, wages had to be raised by 5%. These dangerous tendencies were met by efforts to stimulate production and by drastic cuts in investments and in consumption. The Netherlands bank in April raised its bank rate from 3% to 4%. Partly as a result of these measures the rise of prices was stopped.

The policy of the minister of finance was nevertheless criticized with growing bitterness by the Anti-Revolutionary (Calvinist) party (in opposition), the Christian Historical (Protestant) union and the Liberal party; the right wing of the Catholic party, too, joined in the attacks. A bill introducing government supervision of credit was passed in November against Anti-Revolutionary, Christian-Historical and Liberal votes (55 to 31).

Toward the end of April the second chamber ratified the Benelux treaty for the equalization of excises, and a few weeks later a treaty was signed at The Hague prescribing uniform legislation in the matter of international private law in Belgium, the Netherlands and Luxembourg. The economic union between the three countries could not so far be achieved, mainly in consequence of the unfavourable position of the Netherlands balance of payments.

In early October the second chamber became the first of the European parliaments to pass the Schuman plan. The Communists were alone in voting against it. With regard to the Pleven plan the Netherlands government was against carrying through a radical military unification before a real political integration of western Europe had been achieved. It did not want to sacrifice its national army to French fears of an independent German participation. At the Rome conference of the North Atlantic council in November the Benelux states urged inclusion of Great Britain and the Scandinavian states in the European army scheme. (*See* also EUROPEAN RECOVERY PROGRAM; KOREAN WAR; NETHERLANDS ANTILLES; NETHERLANDS NEW GUINEA; NORTH ATLANTIC TREATY ORGANIZATION; SURINAM.)

Education.—Schools (1949–50): Infant: government 294, pupils 48,206, teachers 1,240; private 2,720, pupils 267,478, teachers 6,245. Elementary: government 2,401, pupils 319,680, teachers 9,685; private 4,697, pupils 860,478, teachers 24,939. Secondary: day 1,281, pupils 209,818, teachers 11,614; evening 126, pupils 15,905, teachers 1,095; agricultural 236, pupils 50,380; technical and housewifery 892, pupils 236,278, teachers 11,405. Schools for mentally and physically defective children 217, pupils 26,565, teachers 1,675. Teachers' training colleges 89, students 10,545, lecturers 1,152. Universities: state 4, students 17,928, professors and lecturers 684; free 2, students 2,271, professors and lecturers 99; technical 4, students 8,367, professors and lecturers 274.

Finance and Banking.—Budget: (1951 est.) revenue 4,898,000,000 florins, expenditure 4,617,000,000 florins; (1952 est.) revenue 4,711,000,000 florins, expenditure 4,297,000,000 florins. National debt (June 1950) 26,704,000,000 florins. Currency circulation (Aug. 1951) 2,886,000,000 florins. Bank deposits (Aug. 1951) 3,993,000,000 florins. Gold reserve and foreign exchange of Central bank (Sept. 1951) U.S. $535,000,000. Monetary unit: florin or guilder, with an exchange rate of 3.80½ florins to the U.S. dollar.

Foreign Trade.—(1950): Imports 7,752,000,000 florins, exports 5,288,000,000 florins. Main sources of imports (1950): Belgium-Luxembourg 18%; Germany 13%; U.S. 12%; U.K. 10%. Main destinations of exports: Germany 22%; U.K. 15%; Belgium-Luxembourg 14%; Indonesia 6%. Main imports: textile fibres, yarns and fabrics 13.6%; petroleum and products 6.5%; iron and steel manufactures 5.3%; cereals and flour 5.2%. Main domestic exports: milk, dairy products and eggs 14.8%; yarn, rope and fabrics 7.9%; fertilizers and chemicals 6.0%; electrical machinery and equipment 5.0%.

Transport and Communications.—Roads (Jan. 1950): main 1,724 mi.; secondary 2,694 mi.; third class and unclassified, more than 10,713 mi. Licensed motor vehicles (Dec. 1950): cars 138,625, commercial 88,126. Railways (1950): 1,925 mi., of which electrified 555 mi.; passenger-miles 3,802,000,000; freight tons carried 21,200,000; freight net ton-miles 1,870,000,000. Inland waterways: 4,335 mi., of which about 1,000 mi. for ships of more than 1,000 gross tons. Shipping (merchant vessels of 100 gross tons and over, July 1950): 1,536; total tonnage 3,110,739. Air transport (1950): passenger-miles 469,000,000; freight net ton-miles 19,500,000. Telephones (Jan. 1950): subscribers 692,000. Radio receiving sets (April 1951): 1,527,597.

Agriculture.—Main crops (metric tons, 1951): wheat 258,000; rye 400,000; barley 231,000; oats 426,000; (1950) potatoes 4,052,000; sugar, raw value 398,000; rapeseed 45,000; linseed 12,000; dry peas 67,000; broad beans 12,000; flax fibre 15,700. Livestock (May 1951): cattle 2,882,000; pigs 1,947,000; horses used in agriculture (May 1950) 252,000; sheep 371,000; poultry 25,460,000. Meat production (metric tons 1949): total 258,000, of which beef and veal 88,000 and pork 164,000. Dairy production (metric tons, 1950): milk delivered 4,766,000; butter 93,200; cheese 126,800. Fisheries: total catch (1949) 235,800 metric tons; herring exports (1950) 33,860 metric tons, valued at 17,500,000 florins.

Industry.—Industrial establishments (1948): 115,580; persons employed 1,227,297. Total working population (1950): 3,953,000. Fuel and power (1950): coal (metric tons) 12,252,000; lignite 192,000; crude oil 704,900 metric tons; manufactured gas 1,596,000,000 cu.m.; electricity 5,472,000,000 kw.hr. Raw materials (metric tons, 1950): pig iron 453,600; crude steel 489,600; zinc, smelter 19,800; aluminum, primary metal 10,800; tin, metal 16.200; salt 419,000. Manufactured goods (metric tons, 1950): cement 593,000; cotton yarn 60,400; wool yarn 26,800; rayon filament yarn 21,700; rayon staple fibre 11,000; paper 325,000; leather footwear (1949) 18,500,000 pairs. New dwellings completed (1950): 47,304.

FILMS OF 1951.—*The Dutch Way* (Almanac Films, Inc.). (P. GL.)

Netherlands Antilles.

Six islands in the West Indies constitute the Netherlands Antilles. Three small ones lie on the northeastern rim of the Caribbean, Saba (5 sq.mi.), St. Eustatius (7 sq.mi.) and the southern half of St. Martin (17 sq.mi.), while 500 mi. to the southwest, off the Venezuelan coast, are the three principal islands, Curaçao (210 sq.mi.), Aruba (69 sq.mi.) and Bonaire (95 sq.mi.). The population of the entire group of islands is 163,000 (est. 1950), and that of Willemstad, the capital, on Curaçao, about 48,000. The official language is Netherlandish but a local patois of diverse origin is equally widespread. All citizens of the Netherlands Antilles are Dutch subjects with the same rights and duties as the inhabitants of the Netherlands.

History.—During 1951 L. A. H. Peters was governor until March, and after he returned to The Hague as minister of overseas territories in April, A. A. M. Struycken, former minister of justice in the Netherlands, was designated his successor.

The legislative council, elected at the end of 1950, convened in February, but not until April could a cabinet be formed, with M. F. da Costa Gomez as prime minister.

A labour dispute occurred at midyear in the two principal oil refineries, and was terminated only after protracted commotion and some disorder. As unemployment was relatively high on the islands of Curaçao and Aruba (to which a good deal of skilled and unskilled labour had been drawn in years of construction), costly legislation and heavy taxation were under discussion through the second half of 1951. The future constitutional and economic relationship of the Netherlands Antilles with the Netherlands was to be settled at a conference early in 1952.

As a first step toward systematic provision of advanced education, the Council of an Institute of Advanced Studies was set up in the autumn, with Governor Struycken as president.

(C. ME.)

Education.—In 1951 there were 48 elementary schools with 15,912 pupils, 31 higher elementary schools with 11,765 pupils and 3 secondary schools with 417 students.

Finance.—The monetary unit is the Netherlands Antilles guilder or florin, valued at $0.530264 U.S. currency during 1951. The budget for the fiscal year 1951 estimated expenditure at 55,273,236 *f.* and revenue at 55,362,515 *f.* Actual revenue in 1950 amounted to 60,588,122 *f.* The public debt on Jan. 1, 1952, was 8,450,000 *f.*; notes in circulation 35,217,000 *f.*; gold reserves 35,217,000 *f.*

Trade and Communications.—Exports in 1950 totalled 1,042,330,178 *f.*; imports were 1,134,246,985 *f.* More than 98% of the exports consisted of petroleum products and about 80% of the imports consisted of crude petroleum, principally from Venezuela. The U.S. supplied about two-thirds of the nonpetroleum imports.

The highway mileages of the islands of the Netherlands Antilles in 1950 were as follows: Curaçao, 210; Aruba, 150; Bonaire, 32.5; St. Martin, 17; Saba, 4.5 and St. Eustatius, 2.5. On Jan. 1, 1951, 5,008 automobiles and 1,712 trucks were in use on Curaçao and 3,379 automobiles and 1,063 trucks on Aruba. On Jan. 1, 1952, there were 6,456 telephones, of which 4,117 were on Curaçao and 2,145 on Aruba.

Manufactures.—The three refineries—Curaçaosche Petroleum Industrie Maatschappij, N.V. (Shell) on Curaçao and Lago Oil and Transport Co. (Standard Oil Company of New Jersey) and the Eagle Oil Co. (Shell) on Aruba—produced 39,300,000 metric tons of refined petroleum products in 1950, including 29,300,000 tons of heavy oils, 5,500,000 tons of gasoline and 2,100,000 tons of diesel oil. (J. W. Mw.)

Netherlands New Guinea.

The western part of this second largest island of the world, with smaller adjacent islands, forms part of the territory of the kingdom of the Netherlands. Area: 151,789 sq.mi. Pop.: *c.* 1,018,000 of whom (1951 est.) 321,000 lived in districts under regular Dutch administration. Principal towns: Hollandia (cap.; pop., 1951 est., 32,059), Manokwari, Sorong and Merauke. Governor in 1951, S. L. J. van Waardenburg.

History.—Under the royal charter the administration of the territory enjoyed a large measure of autonomy in matters of legislation and executive power. In matters of finance the bare and thinly populated country was still dependent on the Netherlands.

The budget for 1951 (normal expenditure) amounted to 58,500,000 guldens, subsidized by the Netherlands in the amount of 16,200,000 guldens, while the costs of military and naval protection were for Dutch account. The capital budget of 24,300,000 guldens was also financed by the Netherlands.

The administration was organized in four services: home affairs and justice, financial, economic, and social and cultural affairs. Particular attention was being paid to establishing a suitable educational system for the primitive Papuan population; by Jan. 1951 there were 524 village schools with 26,285 pupils; care was taken to avoid doing any harm through a too sudden impact of western civilization on primitive society.

Opening up the interior of the country and its modest agricultural resources through roadbuilding met with great difficulties because of excessive rainfall (annual average 100 in. or more). Pending agricultural development, the area still largely depended on imports of food. On the western tip of the island, the New Guinea Petroleum company (jointly owned by Royal Dutch, Standard-Vacuum and Caltex groups in a 4:4:2 proportion) produced from its Klamono field near Sorong an average of 4,680 bbl. per day of crude oil, which was shipped to refineries in Indonesia, Australia and Japan. A contract for the exploitation and development of nickel and chrome was granted by the governor to a syndicate of Dutch and foreign operators.

Regular air and shipping connections were established with Australia, and via Singapore through to the Netherlands. The government of Indonesia, vexed by its unfulfilled ambitions of annexation (*see* INDONESIA), severed all connections between Indonesia and New Guinea after June 1951. In Nov. 1951 R. G. Casey, Australian minister of external affairs, paid a visit to the Netherlands government in The Hague to discuss matters of mutual interest concerning New Guinea. (W. G. P.)

Nevada. A state of the mountain group of western states, Nevada was the 36th state to be admitted to the union, on Oct. 31, 1864; it is popularly called the "Sagebrush state" or the "Silver state." Land area 109,789 sq.mi.; water area 51 sq.mi. Pop. (1950 census) 160,083, a gain of 45.2% since 1940. Rural population 68,458; urban 91,625; white 149,907; nonwhite 10,176. The principal cities are: Carson City, the capital, 3,082; Reno, 32,497; Las Vegas, 24,624; Sparks, 8,203; Elko, 5,393; Ely, 3,558.

History.—The Nevada legislature considered many important issues in 1951. It passed a bill outlawing the union shop in Nevada. It enacted a basic science law, reorganized the state's only mental institution, created new departments of insurance and purchasing, abolished the valuation division of the state tax commission and increased the salaries of public officers and employees. It increased slightly monthly payments to old-age pensioners, but failed to pass an over-all public assistance measure. It reduced the state's share of the property tax from 72 cents to 69 cents per $100 of valuation.

On Jan. 1, 1952, elected state officers were: governor, Charles H. Russell; lieutenant governor, Clifford A. Jones; secretary of state, John Koontz; state controller, Peter Merialdo; state treasurer, Dan W. Franks; surveyor general, Louis D. Ferrari; inspector of mines, Mervin J. Gallagher; superintendent of state printing, J. A. McCarthy; clerk of the supreme court, Ned A. Turner; superintendent of public instruction, Glenn A. Duncan; attorney general, W. T. Mathews.

Education.—In June 1951 Nevada had 179 elementary schools with a total enrolment of 22,654; teachers numbered 870. High schools totalled 39, with an enrolment of 6,557, and were staffed by 329 teachers. Kindergarten enrolment was 1,937 in 15 kindergartens with 36 teachers. Total school population was 31,148. Average annual salaries paid to high school teachers was $3,456, to elementary teachers $3,037 and to kindergarten teachers $3,036. State-wide expenditures for elementary and secondary education, all schools, was $8,001,495 for the year, of which $2,415,247 was provided as state aid.

Social Insurance and Assistance, Public Welfare and Related Programs.—For the fiscal year ending June 30, 1951, $623,971 was expended by the state health and welfare departments. In addition, $1,846,504 was expended for old-age assistance benefits to 2,775 persons, who received an average monthly amount of $50.32. On June 30, 1951, the state prison had 219 men and 3 women inmates; total expenditures for the fiscal year were $314,986. The Nevada school of industry had 28 boys and 3 girls under school control; total expenditures for the fiscal year were $46,157. The state hospital for mentally ill persons had 374 patients in average daily residence during the fiscal year; expenditures were $318,625. The state children's home had 46 boy and 48 girl residents during the fiscal year, and the cost to the state was $103,178.

Communications.—During the fiscal year ending June 30, 1951, the total disbursement for highways was $8,432,290. There were approximately 3,560 mi. of road in the designated state highway system. Railroad mileage totalled 1,645 in 1951. Motor vehicle registrations in 1951 totalled 81,907, of which 80,233 were privately owned and 1,674 publicly owned. There were 385 registered aircraft and 67 established airports in 1951.

Banking and Finance.—On July 1, 1951, there were 30 individual banking institutions in the state, of which 22 were branches, 5 were national banks and 3 were state banks. The resources of Nevada banks totalled $191,587,000, and deposits were listed at $178,738,000.

The credits of the state for the fiscal year ending June 30, 1951, amounted to $31,194,103; the debits to $29,075,115. There was a treasury balance of $8,062,183. The state had bonds outstanding in the amount of $955,000 for construction of office and institutional buildings. The par value of bonds and securities held by the state totalled $7,243,518, and they produced an income of $192,734. Nevada has no sales taxes, income taxes or inheritance taxes. A 2% tax on gambling netted the state $1,766,712, and a state property tax of 72 cents on each $100 of valuation netted $2,241,354. The total assessed valuation of the state for 1951 was $344,849,162.

Agriculture.—The total farm value of the principal crops in 1949 was $18,644,000; the total acreage harvested was 510,000. In 1949 the cash income from crops sold was $8,242,000; from livestock sold, $38,024,000; from government payments, $129,000.

Table I.—*Principal Crops of Nevada*

Crop	1951	1950	Average 1940–49
Barley, bu.	816,000	792,000	778,000
Potatoes, bu.	364,000	416,000	524,000
Wheat, bu.	502,000	471,000	529,000
Hay, tons	585,000	582,000	622,000
Oats, bu.	320,000	360,000	332,000
Corn, bu.	120,000	70,000	85,000

Zinc	21,606	6,136,104	20,443	5,069,864
Other minerals		?		3,636,557
Total		?		$37,376,038

*Value included with other minerals.

Manufacturing.—Manufacturing in Nevada is limited in scope and production. In 1947 there were 126 industrial establishments in the state, employing approximately 2,667 persons and paying approximately $8,409,000 in wages for the year. The value added by manufacturing was approximately $27,777,000. Expenditures for new plants and equipment totalled $2,959,000 in 1947. By 1951, chemicals and allied products were being manufactured in ever-increasing quantities by lessees at the state-owned Basic Magnesium project at Henderson, Nev. (J. E. Spr.)

Mineral Production.—Table II shows the tonnage and value of mineral production in the state in 1949 for those commodities having values in excess of $100,000, and corresponding data for 1950, so far as they were available at the close of 1951.

New Brunswick. Second largest of the four Atlantic provinces of Canada, New Brunswick entered the confederation in 1867. Area: 27,985 sq.mi. Pop.: (1941) 457,401; (1951 census) 515,697.

History.—The third session of the 14th legislature, which continued under the power of Liberal Premier John B. McNair, passed an all-time record total of 239 bills. Rent controls, dropped by the federal government, were assumed by New Brunswick municipalities. In an effort to expand the New Brunswick market for manufactures, the maritime board of trade made representations to the provincial government to co-operate with other Atlantic province governments to work out a scheme for settlement of European immigrants on New Brunswick farms. About 60,000 U.S. tourists visited the Fundy National park, and a program of road and accommodation improvement was pushed forward, in order to increase the inflow of tourist dollars.

Education.—The provincial government co-operated with the federal department of agriculture in offering five-month courses in the science and practice of farming. Latest statistics available in 1951 for provincially controlled schools were for 1948: total enrolment, 98,331; average daily attendance, 81,057; teachers, 3,019; total revenue, $7,562,848.

Transportation.—Total paved highway mileage passed the 1,000-mi. mark. Because a 3% increase in the number of cars in 1950 over the number in 1949 was accompanied by a 14.7% increase in accidents, a new highway safety board was created in 1951.

Finance.—The government's decision to change the end of the fiscal year from Oct. 31 to March 31, to make it coincide with the federal fiscal year, complicated comparisons. For the Oct. 1949–Oct. 1950 year, revenues were $30,871,720 and expenditures were $29,113,491, providing the 11th consecutive annual surplus. For the period Oct. 31, 1950, to March 31, 1951, revenues were $16,799,483 and expenditures were $16,286,345. The provincial net debt on March 31, 1951, stood at $116,121,695 (compare Oct. 31, 1950, $107,969,637).

Agriculture.—An estimated 11,100,000 bu. of potatoes were produced in 1951 on about 50,000 ac.; a better than normal apple crop yielded about 335,000 bu., with McIntoshes accounting for about 45% and Cortlands 15% of the total. Oats running to 8,000,000 bu. led the grain crops. Agriculture trends included a swing from dairy to beef cattle, and an active drive by the government to increase the province's egg production.

Fisheries.—The total 1951 harvest of fish was abnormally low: 175,753,000 lb. for the Jan.–Sept. period, compared with 219,128,000 lb. for the same 1950 period.

Forestry.—In 1950 the province's seven paper mills had a gross output of about $80,000,000, and estimates for 1951 production topped that record by $10,000,000. An important development was the use of hardwoods in pulp production, to lessen the drain on softwoods and improve the management of forest areas. Crown stumpage rates for peeled spruce and fir pulpwood were raised from $3 to $4.50 and for poplar and hardwood pulpwood from $1.50 to $2.25.

Industry.—Industrial expansion took place not only in the pulp and paper field, but also in the fields of cement production, fish processing, woodworking and peat extraction. The possibility of obtaining an additional 500,000 h.p. of hydroelectric energy from the St. John river was under study by a joint Canadian-U.S. group. The latest production statistics available in 1951 were for 1948 (1945 in parentheses): gross value $412,711,909 ($258,227,300); net $204,384,387 ($139,435,400), which was 2.2% (2.5%) of the national net, or $406 ($298) per capita.

Minerals.—During 1951 operations began on stripping overburden from Grand lake coal mines, where additional reserves of 8,000,000 tons were discovered.

Newfoundland and Labrador.

A province of Canada, Newfoundland joined the confederation in 1949. Area: Newfoundland Island, 42,734 sq.mi.; Labrador, *c.* 112,000 sq.mi. Pop.: Newfoundland (1951 prelim. census) 357,762; Labrador (1951 prelim. census) 7,847.

History.—On April 1, 1951, when the province opened its third year of confederation, Liberal Premier Joseph Smallwood, chief architect of union with Canada, stated the two parts of his program: first, the development of natural resources, and second, the creation of a great provincial co-operative movement. Considerable headway had been made with the first part of the program, according to Smallwood, when early in November he called a provincial election. By that date cement, plywood and gypsum factories had been built by the province and the Newfoundland-Labrador development corporation had been formed. Winning 22 of the 28 legislative seats at the Nov. 26 election (he held 20 seats upon dissolution), Smallwood launched the second phase of the economic program. It consisted of guaranteeing bonds for various European companies (lacking dollars but having machinery and know-how) to start steel, machinery, shoe and other industries. No work was done in 1951 on the definition of the Quebec-Labrador boundary.

Education.—During 1951 a serious teacher shortage kept more than 2,000 children from school. School attendance had increased from 75,006 in 1949 to 78,613 in 1950. The 1950–51 estimates allocated $5,453,500 for education.

Transportation.—About half of the 358-mi. Quebec North Shore and Labrador railway (from Sept Iles to Knob lake) was scheduled to run through Newfoundland territory. The federal government paid the island $1,000,000 on account for construction of the Newfoundland section of the Trans-Canada highway, and completion of the 610 mi. from St. John's to Port aux Basques was scheduled for 1953. Auto registrations increased from 12,009 in 1950 to 17,460 in 1951. The federal government charted the Newfoundland and Labrador coasts.

Finance.—Provincial revenues for the 1951–52 financial year were set at $30,694,300 (1950–51 $26,446,000), expenditures $28,829,100 (1950–51 $26,588,500).

Fisheries.—In the Jan.–Sept. 1951 period Newfoundland processed 33,305,000 lb. of frozen fish, compared with 33,841,000 lb. for the similar 1950 period.

Industry.—The provincial government invested a total of $6,425,000 in cement, plywood and gypsum plants and arranged for loans to European industrialists totalling about $25,000,000 to build leather, heavy machinery, cotton, construction, oil-processing, furniture, glass, chemical and other plants.

Minerals.—Much interest centered on the Quebec-Labrador iron ore development, where $200,000,000 was being invested with production expected to start in 1954. During the first half of 1951, compared with the same 1950 period, production of the following minerals was up: asbestos 25%; salt 34%; gypsum 8%; lime 20%. (C. CY.)

New Guinea: *see* NETHERLANDS NEW GUINEA; TRUST TERRITORIES.

New Hampshire.

One of the New England states of the United States and one of the original group of 13, New Hampshire is popularly known as the "Granite state." Area: 9,304 sq.mi., including 287 sq.mi. of inland water. Population (1950 census) was 533,242, representing a gain of 41,718 over the population for 1940, or 8.5%; 57.5% of the population was urban and 42.5% rural. In 1940 there were 490,989 whites, including 422,693 native-born and 68,296 foreign-born. Capital: Concord, with pop. (1950) of 27,988. Other cities: Manchester, 82,732; Nashua, 34,669; Portsmouth, 18,830; Berlin, 16,615; Dover, 15,874; and Keene, 15,638.

History.—The legislature met in regular session from Jan. 3 to Aug. 31, 1951, the longest session in the history of the state. The principal task was that of providing additional revenue to meet the state budget. Proposals for a state income tax, a sales tax, a lottery and an increased tax on betting at the Rockingham race track were rejected and the legislature finally resorted to an emergency head tax of $5, applying to all persons from 21 to 70. It was estimated that this levy would raise $1,275,000 a year, but in order to meet a remaining deficit it was necessary to utilize $1,700,000 of a $2,000,000 surplus left over from the war years. Taxes were also increased on gasoline, liquor and tobacco for an additional revenue of $1,000,000. State aid to education was increased from $400,000 to $600,000 a year. The legislature also passed an act making membership in the Communist party after Oct. 1 punishable by five years in prison, or a $5,000 fine, or both; an act authorizing the state highway department to issue bonds to the amount of $14,000,000 to initiate the financing of a 15-year road-improvement program; and an act authorizing the governor and executive council on behalf of the state to enter into a four-state Connecticut river flood control compact.

ICE SCULPTURE forming the traditional centrepiece for the annual Dartmouth Winter carnival in Hanover, N.H. The 1951 figure was a 24-ft. Swiss alpinist puffing his cheeks on a 40-ft. horn

State officers in 1951 were: governor, Sherman Adams; secretary of state, Enoch D. Fuller; state treasurer, Winfield J. Phillips (elected on June 20 to fill an existing vacancy); adjutant general, Charles F. Bowen; attorney general, Gordon M. Tiffany; commissioner of education, Hilton C. Buley; commissioner of agriculture, Perley I. Fitts.

Education.—In 1949–50 there were 469 public elementary schools in the state and 83 public secondary schools. In 1950–51 there were in the elementary schools 50,625 pupils and 1,821 teachers and in the secondary schools 23,568 pupils and 1,233 teachers. Total payments covering expenditures of school districts for year ending June 30, 1950, were $18,043,423.25. In 1949–50 Catholic parochial elementary schools had a total registration of 19,306, while other private elementary schools had a registration of 683. The total number of students enrolled in approved public academies, accredited secondary schools and other private secondary schools in 1949–50 was 6,440.

Other state educational institutions were the University of New Hampshire, at Durham; Keene Teachers college, at Keene; and Plymouth Teachers college, at Plymouth.

Social Insurance and Assistance, Public Welfare and Related Programs.—As of Nov. 1951 the numbers of those receiving public assistance under the Social Security act were as follows: old-age assistance, 7,027 cases for the month, with expenditures of $339,413; aid to dependent children, 1,482 families, representing 3,695 children, with expenditures of $158,158; aid to needy blind, 306 cases, with expenditures of $15,500. In each of the three categories the number of cases and expenditures represented a drop during the preceding twelve months. With a decrease in the direct relief case load from 3,216 in Dec. 1950 to 2,733 in Nov. 1951 there was a decrease in expenditures during the same period from $142,566 to $126,772. In the year 1949–50 New Hampshire received $3,085,000 in federal grants for public assistance, while in the same year assistance to recipients in the state amounted to $6,645,000. The sum of $5,139,000 was collected in contributions for unemployment insurance in 1950 and $7,765,000 paid in benefits under state laws. Funds available for benefits at the close of 1950 amounted to $19,863,000.

The net appropriation for the operation of the state prison at Concord for the fiscal year ending June 30, 1951, was $236,736.50; and for the Industrial School for Committed Minors at Manchester, $181,228.20.

Communications.—At the end of 1949 there were 12,511 mi. of rural roads in New Hampshire, including highways under state, local and federal control. Disbursements from state highway funds for 1949 amounted to $17,659,000. In 1949 there were 937 mi. of steam railways owned within the state as compared with 1,002 mi. in 1940. At the close of 1949 there were approximately 36,000 business and 105,000 residential telephones in operation.

Banking and Finance.—As of June 30, 1951 there were in New Hampshire 51 national banks with deposits of $185,182,000 and resources of $208,577,000, as compared with 51 banks with deposits and resources, respectively, on June 30, 1950, of $175,176,000 and $196,322,000. Fifty-seven state-chartered banks had deposits of $346,486,889 and resources of $413,532,250, as compared with 58 institutions reporting deposits and resources, respectively, of $360,628,387 and $409,565,741 on June 30, 1950. There were 24 state-chartered building and loan associations with assets of $28,248,416, as compared with 24 institutions with assets of $25,366,494 for the previous year 1950. As of June 30, 1950, state-chartered savings banks and savings departments of trust companies reported deposits of $344,932,569.40, an amount $4,106,750.01 more than the total for June 30, 1949, and an all-time high as of that date.

Cash receipts of the state treasury department for the fiscal year ending June 30, 1951, were $115,086,028.63; cash disbursements, $114,672,018.69. Cash balance, June 30, 1951, was $4,435,281.12; cash balance, July 1, 1950, was $4,021,271.18. The total net bond and note indebtedness on June 30, 1951, was $20,020,432.26.

Agriculture.—The estimated acreage from which crops were harvested or hay cut, or which was planted in orchards, amounted to 383,000 in 1949. Cash receipts from farm marketings in 1949 amounted to $63,413,000, with an additional $399,000 in government payments.

Table I.—*Principal Crops of New Hampshire*

Crop	1951	1950	Average 1940–49
Corn, bu.	602,000	672,000	527,000
Oats, bu.	180,000	205,000	239,000
Hay, tons	403,000	364,000	430,000
Potatoes, bu.	975,000	1,210,000	1,102,000
Apples, bu. (commercial)	988,000	1,100,000	740,000
Maple syrup, gal.	57,000	64,000	49,000
Maple sugar, lb.	14,000	22,000	18,000

Source: U.S. Department of Agriculture.

Manufacturing.—There were estimated to be about 1,075 manufacturing establishments in New Hampshire as of Sept. 1950, and approximately 83,000 persons employed as of Feb. 1951. A 1951 estimate reported that manufacturing pay rolls would probably exceed $400,000,000 in that year. The principal categories of manufactures were textiles, lumber products, paper, leather and leather products and machinery. (W. E. Ss.)

Table II.—*Mineral Production of New Hampshire*

Mineral	1950		1949	
	Quantity	Value	Quantity	Value
Sand and gravel (short tons)	1,713,284	$226,424	2,000,842	$ 236,895
Stone (short tons)	15,760	383,667	6,910	381,141
Other minerals		?		766,100
Total		?		$1,384,136

Mineral Production.—Table II shows the tonnage and value of mineral production in the state in 1949 for those commodities having values in excess of $100,000, and corresponding data for 1950, so far as they were available at the close of 1951.

New Hebrides.

Anglo-French condominium; group of about 30 islands and many islets in the western Pacific. Area: *c.* 5,700 sq.mi. Pop. (1940 census, partly estimated): 45,000 excluding British (Dec. 1949, 436); French (1,230); Asiatics (1,828). Native population: Melanesian, some Polynesian admixture. Capital: Vila (pop. 1,200). Religion: mainly pagan. Resident commissioners: British, R. D. Blandy; French, P. Anthonioz.

There was still a severe shortage of labour in 1951, but high copra prices encouraged native as well as plantation production. Native production was about half the total.

Education.—Government primary schools, 2 French, 2 British; various mission schools.

Finance and Trade.—Currency: sterling and French. Budget (1950–51 est.): revenue £188,000; expenditure £176,000. Foreign trade (1950): imports £528,000; exports £1,419,000. Principal exports: copra (21,500 tons), kauri pine. (K. G. B.)

New Jersey.

New Jersey, the "Garden state," is one of the northeastern states of the United States, bordering the Atlantic ocean. It was the third state to enter the union, approving the constitution on Dec. 18, 1787. It has an area of 7,836 sq.mi. of which 314 sq.mi. are water. The population in 1950 numbered 4,835,329, of which 86.6% was urban and 94.3% was white. The population of the capital, Trenton, was 128,009 in 1950; other large cities were Newark, 438,776; Jersey City, 299,017; Paterson, 139,336; Camden, 124,555; and Elizabeth, 112,817.

History.—Some of the more important measures approved by the legislature in 1951 were: authorization for municipalities to establish consolidated local public health districts; assistance to permanently and totally disabled persons; ratification of the civil defense and military aid compact made with New York in Dec. 1950, and authorization of mutual aid between the New Jersey national guard and similar agencies in other states; more severe penalties for violation of state narcotic control laws; and ratification of the Water Project compact of the Interstate Commission on the Delaware River Basin. A general revision of the laws on civil and criminal procedure was approved by a special session of the legislature, and in November the voters approved a public referendum authorizing the issuance of $15,000,000 in bonds for state teachers' college construction and renovation.

The chief officers during 1951 were Alfred E. Driscoll, governor; Lloyd B. Marsh, secretary of state; Theodore Parsons, attorney general; Walter T. Margetts, Jr., state treasurer; and Arthur T. Vanderbilt, chief justice.

Education.—Public school day enrolment totalled 529,898 for grades 1 through 8 in 1951, enrolment for grades 9 to 12 was 158,159 and for special classes 6,639. Day school teachers numbered 28,457. The 4 universities, 9 liberal arts colleges, 8 professional and technical colleges and 11 junior colleges had a combined enrolment of 41,775 full-time and 17,215 part-time students in 1951. The 6 state teachers' colleges had a total enrolment of 6,778, while the 51 professional and technical schools had 1,786 full-time and 3,674 part-time students. The state commissioner of education was John H. Bosshart.

Social Insurance and Assistance, Public Welfare and Related Programs.—In June 1951 the state's welfare system cared for 13,136 patients in institutions for the mentally ill, 6,293 patients in institutions for the mentally deficient and epileptic, 2,648 patients in tuberculosis sanatoria, 666 pupils in training schools for juvenile delinquents and 217 veterans in soldiers' homes. Old-age assistance recipients numbered 23,227 in June 1951, with expenditures for the fiscal year 1950–51 totalling $12,939,948. The number of dependent children under the care of the state board of child welfare numbered 21,012 in June 1951, 781 received blind assistance and the number of general assistance recipients was 16,484. Expenditures for dependent children amounted to $5,502,152 for the fiscal year ended June 30, 1951, and aid to the blind totalled $341,988. During the calendar year 1951, first payments were made to 199,043 applicants for unemployment insurance and benefit payments totalled $44,157,341; disability benefits amounted to $5,274,341.

The six institutions for adult offenders contained 4,049 inmates in June 1951, and cost $3,583,634 to maintain during the fiscal year 1950–51.

Communications.—The total highway mileage of New Jersey in 1950 was 28,550. This consisted of 6,560 mi. of county roads, 13,700 mi. of improved municipal roads, 6,100 mi. of unimproved municipal roads and 2,190 mi. of state roads. Traffic congestion was greatly eased with the opening in Nov. 1951 of the 118-mi., $255,000,000 New Jersey turnpike connecting Delaware with New York.

In 1950 railroad track mileage totalled 3,128, while line mileage amounted to 1,998. The number of commercial and municipal airports within the state in 1950 was 88. Telephones in service numbered 1,643,000.

Banking and Insurance.—Deposits of the 141 institutions under the supervision of the state department of banking and insurance amounted to $3,104,786,000 on Dec. 31, 1951, an increase of $169,493,000 over the previous year. The deposits of the 118 commercial institutions were $2,441,707,000, an increase of 10.7%. The number of national banks in New Jersey numbered 202 in Oct. 1951, with total assets of $2,777,571,000. The 470 state-chartered savings and loan associations had assets of $621,748,230 on Dec. 31, 1950.

State expenditures for the fiscal year 1950–51 totalled $164,313,033.

Agriculture.—In 1950 the total value of agricultural production was $291,141,000. Cash income from crops amounted to $102,595,000, from livestock $187,534,000 and from government payments $911,000. The value of the 19 truck crops for fresh market (excluding potatoes and strawberries) totalled $30,316,000.

Manufacturing.—The value added by manufacture of all industries in New Jersey in 1950 amounted to $4,867,312,000 as compared with $4,206,331,000 in 1949. The number of employees engaged in manufacture totalled

Table I.—*Principal Crops of New Jersey*

	1951	1950	Average, 1940–49

New Mexico.

Fourth largest state in the southwestern United States, popularly known as the "Sunshine state," New Mexico was admitted to the union in 1912. Area: 121,666 sq.mi. (121,511 sq.mi. land, 155 sq.mi. water); pop.: (1950) 681,187, a 28.1% increase over 1940; rural 339,298; urban 341,889; white 630,211; nonwhite 50,976. Capital, Santa Fe (27,998). Other cities: Albuquerque (96,815, 173.1% increase); Roswell (25,738); Carlsbad (17,975); Clovis (17,318); Hobbs (13,875); Las Cruces (12,325).

History.—The first Republican governor in New Mexico in 20 years took office in 1951. Otherwise the administration, legislature and congressional representation were Democratic. The chief officers of the state elected in 1950 were: governor, Edwin L. Mechem; lieutenant governor, Tibo J. Chavez; secretary of state, Beatrice Bassett Roach; auditor, Robert Donald "Bob" Castner; treasurer, R. R. Grissom; attorney general, Joe L. Martinez; superintendent of public instruction, Tom Wiley.

The 1951 legislature rescinded the Indian liquor prohibition law; created a nine-member bipartisan legislative council and a board of educational finance for institutions of higher education, and modified the primary law to provide for a preprimary nominating convention. The gasoline tax was reduced from seven cents to six cents, and the Kit Carson Memorial state park was established at Taos.

Education.—For the school year 1950–51, 3,886 teachers served in municipal schools at an average salary of $3,401.44, and 1,387 teachers in rural schools at $3,006.18. The total pupil enrolment was 155,661 and total expenditures were $35,310,483.50.

Social Insurance and Assistance, Public Welfare and Related Programs.—During the calendar year 1951, $1,031,350 was paid out for civilian unemployment benefits; for unemployed veterans $16,614; and for self-employed veterans $1,200.

On June 30, 1951, an estimated $2,963,304 had been spent for old-age and survivors insurance.

The penitentiary appropriation was $400,000 for 683 inmates (Sept. 1); insane asylum $1,200,000, 1,109 inmates (Sept. 1); Los Lunas Mental hospital $177,000, 118 inmates (November); industrial school $65,000, 147 inmates (December); Girls' Welfare home $190,000, 149 inmates (December).

Communication.—New Mexico had an estimated 57,545 mi. of unpaved and 5,832 mi. of paved roads in 1951. The state highway department expended $20,229,245.69. Steam railway companies operated 2,495 mi. of main track. There were 95 airports; 1,939 mi. of controlled civil airways; and 4 scheduled air carriers. There were about 129,775 telephones.

Banking and Finance.—On June 30, 1951, there were 26 national banks with total deposits of $252,203,000; loans $89,227,000; investments $97,977,000; and on Dec. 30, 1950, there were 25 state banks with deposits of $98,605,964.52; loans $34,551,774.48; investments $40,284,768.77. Total resources of 11 building and loan associations in 1950 were $13,143,402.49 and of 7 federal savings and loan associations $21,596,277.41.

Table I.—*Principal Crops of New Mexico*

Crop	1951	1950	Average 1940–49
All hay, tons	418,000	408,000	477,000

Other Minerals		?		1,004,118
Total				$198,824,566

*Value included with other minerals.

The total of all state receipts for the fiscal year ending June 30, 1951, was $101,274,325.27. The total bonded debt was $20,573,000.

Agriculture.—The total estimated value of agricultural production in 1951 was $109,229,000; acreage harvested 1,398,000. Livestock was estimated at $232,269,000 (Jan. 1, 1951).

Manufacturing.—Manufactured products were valued at $102,997,000 and an average of 13,512 employees received $38,971,000 in wages and salaries in 1950.

(F. D. R.)

Mineral Production.—Table II shows the tonnage and value of mineral production in the state in 1949 for those commodities having values in excess of $100,000, and corresponding data for 1950, so far as they were available at the end of 1951.

Newspapers and Magazines.

U.S. Newspapers.—The death of William Randolph Hearst, creator of one of the greatest chains of newspapers, magazines and radio stations and one of the most potent influences on American journalism in the first half of the 20th century, was perhaps the biggest news among U.S. newspapers and magazines during 1951. He died on Aug. 14.

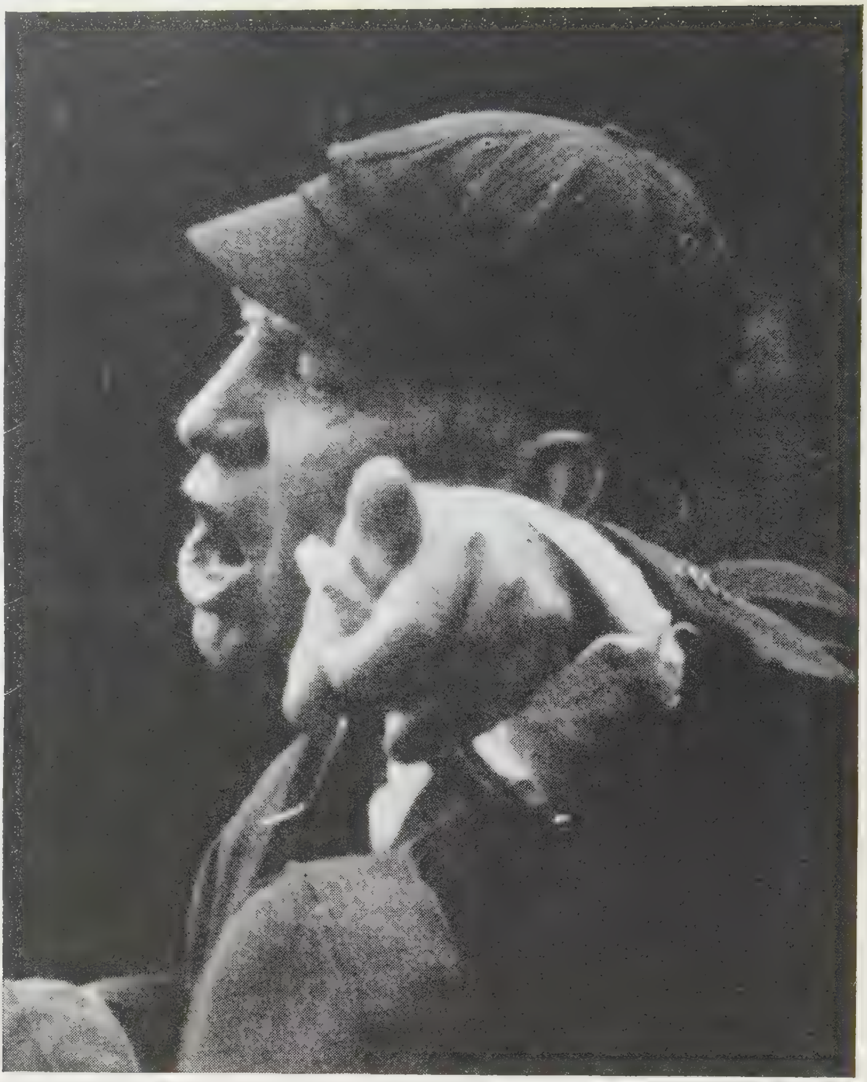
"The ten biggest news stories of 1951," as selected by United Press editors, were: (1) Pres. Harry S. Truman fires Gen. Douglas MacArthur; (2) Korean armistice negotiations; (3) Kefauver crime hearings; (4) government controls to combat inflation; (5) Korean war atrocities; (6) amateur sports scandals; (7) internal revenue dismissals; (8) Winston Churchill's return to power; (9) Missouri-Kansas floods; (10) development of tactical atomic weapons. Other stories "nominated" were: Japanese peace treaty; 85 killed in Woodbridge, N.J., train wreck; Anglo-Iranian oil dispute; National league pennant play-off; persecution of Americans behind the "iron curtain"; congressional investigation of the Reconstruction Finance corporation; Gen. Dwight D. Eisenhower's North Atlantic Treaty Organization mission; and the Suez-Sudan crisis.

The first ten-cent daily newspapers, appearing on California newsstands, climaxed a year of difficult finances. For the fifth year, newspaper income climbed—58% above 1946—but costs soared faster—68%—leaving only a 5% gain in profit margin. Hundreds of newspapers raised subscription rates, but total circulation rose again—perhaps 1.5% above the 53,829,072 daily of 1950. Advertising linage increased about 3% over 1950, but was greatest in classified want ads; advertising rates increased an average of 15%. Labour costs continued to rise; paper went

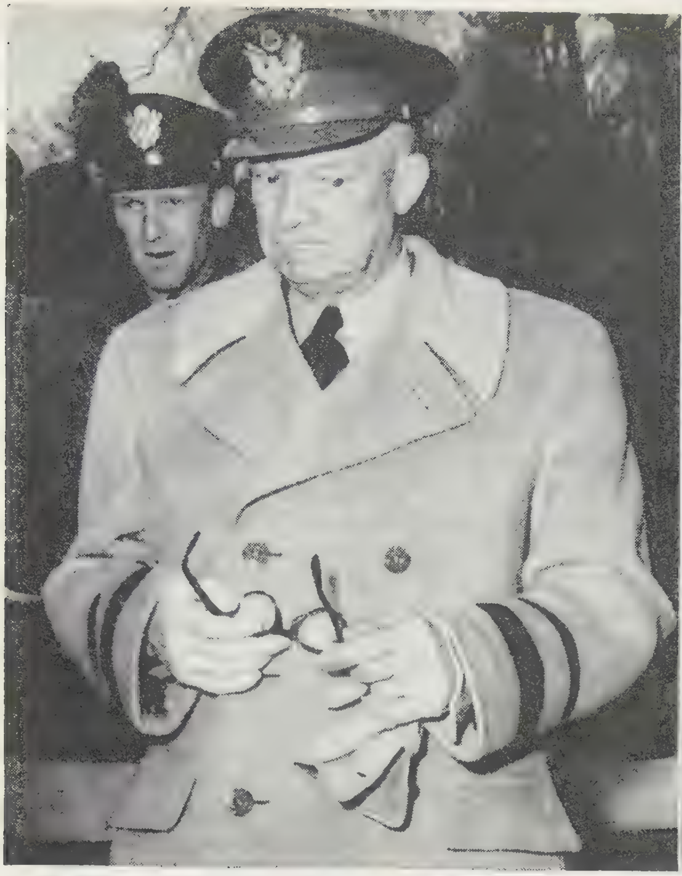
CONTEST WINNERS

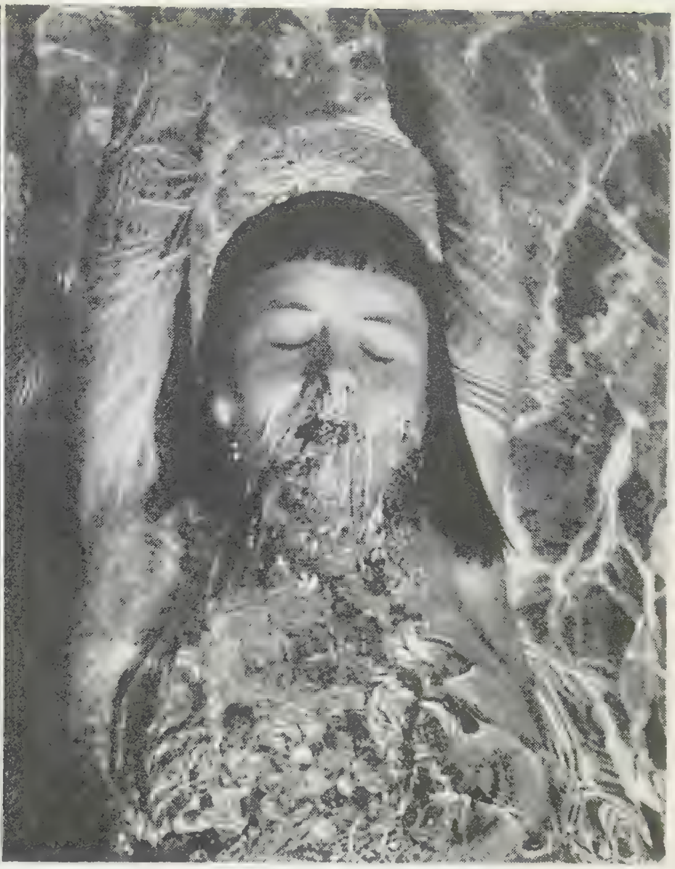
"NEWS PICTURES OF THE YEAR"

Right: "You Heard Me," first-prize winner in the SPORTS category, photographed by Steve Sintay of the *Detroit Times*, as Umpire Charles F. Berry ordered Robert A. (Red) Rolfe, manager of the Detroit Tigers, from the game



Below: "Eileen Recovers from Polio," from a story sequence photographed for the *Woman's Home Companion* by Suzanne Szasz and awarded first prize in the feature class of the PICTURE STORY category

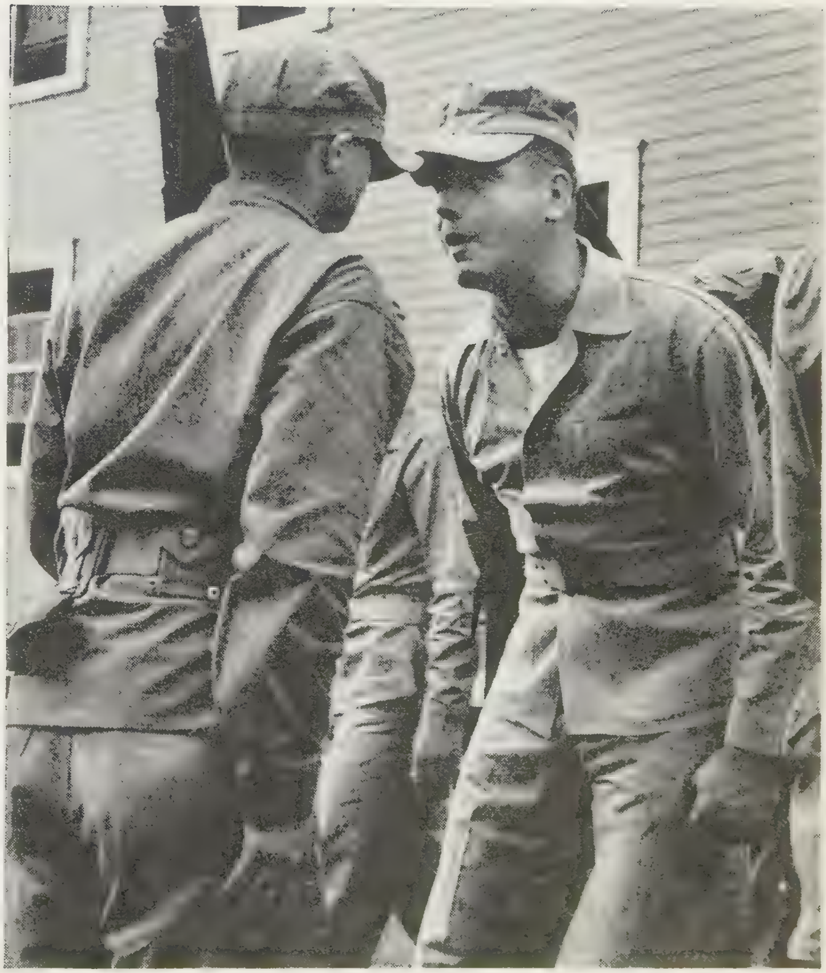




Above, left: "Well I'll be Darned!" prize-winning NEWS photograph from the Associated Press by *Stars and Stripes* photographer Francis J. Grandy. The picture was titled from Gen. Dwight D. Eisenhower's comment at Coblenz, Ger., April 11, 1951, when he heard the news of Gen. Douglas MacArthur's dismissal from Allied command in the far east

Above, right: "Mermaid," by Leonard McCombe of *Life* magazine, was chosen for first prize in the FEATURE category

Right: "Marine Boot Training," by Mark Kauffman of *Life* magazine, part of a photo sequence included in his first-prize PORTFOLIO. Kauffman was chosen "Photographer of the Year," the third consecutive year in which a *Life* photographer won the competition's highest award



Prize-winning photographs chosen in the ninth annual international "News Pictures of the Year" competition and exhibition, jointly sponsored by the *Britannica Book of the Year* and the University of Missouri school of journalism. With more than 80 additional "best-of-show" prints from the competition, these pictures were published in the book *News Pictures of the Year* by Louis Mariano, Chicago, Ill. The pictures were judged in several categories, and the outstanding prints in each category formed a travelling exhibition which was offered for display at colleges and schools of journalism and under the auspices of newspapers and camera clubs throughout North America.

MARK KAUFFMAN of *Life* magazine, "Photographer of the Year" for 1951

up $10 a ton to an average of $116; Western Union raised wire charges 15%; United Press levied a 10% assessment; but there were fewer mergers or suspensions than in other recent years. Congress voted higher postal rates—30% spread over three years—with the first 10% to go into effect on April 1, 1952.

Paper shortage, threatened early in the year, eased during the summer as production reached a new peak and consumption declined slightly; the mills produced about 6,620,000 tons while newspaper use was down 2% below the 5,500,000 tons of 1950. The July price rise came during futile appeals to the Office of Price Stabilization (OPS). The Knight Newspapers (led by the *Chicago Daily News*) spent $2,500,000 to buy a paper mill, a midwest group paid $1,500,000 for a Minnesota mill and a New Jersey publisher paid $4,000,000 for a mill.

Although few strikes occurred during the year, the International Typographical union (I.T.U.) launched a project of publishing newspapers of its own "to break monopoly." Calling its project Unitypo, I.T.U. planned to start nine newspapers and actually began four—in Meriden, Conn., Monroe, La., Texarkana, Tex., and Springfield, Mo. The American Newspaper guild also planned a national labour daily to be called *National Reporter*. Efforts to enforce the Oct. 28, 1949, order of the National Labor Relations board against I.T.U. insistence on the closed shop, in violation of the Taft-Hartley law, was taken into federal court in Chicago in January and hung fire through the year. Court action ended strikes of delivery men in New York city and of union printers in Miami, Fla., but three newspapers in Cleveland, O., were tied up for eight days. I.T.U. attempted, through wire unions, to gain jurisdiction over the new teletypesetter circuits. The guild set a new goal of $138.40 a week, including a 15% increase in New York, and sent 35 organizers to a training school at the University of Wisconsin, Madison.

A boom of teletypesetter wire news circuits was the mechanical innovation of 1951. As more newspapers equipped their linotypes for operation by perforated tape, a few newspapers had tried transmitting perforated tape by wire. Early in 1951 the three wire services promoted circuits whose teletypes supplied perforated linotype tape along with typewritten news copy. By July, Associated Press had five such circuits and projected teletypesetter service to 300 newspapers. Beginning with a 25-paper circuit in Oklahoma, United Press planned teletypesetter service for 150 to 200 clients and International News Service prepared to serve 150 or more. State-wide teletypesetter circuits appeared in Illinois, Wisconsin and other states. The big new competitor of the newspaper—television—caused worry in newspaper offices, but surveys of TV homes showed only slight drop in newspaper reading. United Press began to supply television stations with a new Movietone news service. United Press in December bought Acme Newspictures to launch U.P. Telephoto service, to compete with A.P. Wirephoto.

Four antitrust suits by the federal department of justice, to attack newspaper monopolies, led journalistic court actions during 1951. The action against the *Lorain Journal,* O., started in 1950, resulted in a federal court injunction in Jan. 1951, forbidding the newspaper to refuse ads of merchants who used a competing radio station, and was upheld by the U.S. supreme court in December. A similar action was started against the *New Orleans Times-Picayune,* La., for its "unit" combination rates with another newspaper, the *States*. Suit was filed in Tampa, Fla., in June, against the Western Newspaper Union attacking its monopoly of "ready print" material for weekly newspapers. Antitrust action was also brought against the *Mansfield News-Journal,* O. Five newspapermen in Lake Charles, La., faced trial for "criminally defaming" 3 gamblers and 16 public officials in a vice crusade. In March, columnist Drew Pearson brought a $5,100,000 libel suit against ten defendants. Widespread newspaper protest resulted from the Sept. 25 "security order" of Pres. Harry S. Truman authorizing federal executive agencies to withhold various types of news from the press.

The Korean war, "most reported war in history," resulted in an increasing casualty list of newsmen and photographers—15 killed, 2 captured, several missing and 6 awarded Purple Hearts. Newspaper protest against military censorship and inadequate communications continued. The United Nations Convention on Freedom of Information (world free press), after three years of debate, was revised in a new draft in February and further discussed in Geneva, Switz., but was vigorously opposed by U.S. and British newspapermen. Trial on charges of espionage of William N. Oatis, U.S. Associated Press correspondent in Prague, aroused demands from newspaper groups for action by the U.S. government, but he was still in prison in Czechoslovakia at the year's end. An effort to bar representatives of Tass, soviet news agency, from congressional press galleries resulted in the refusal of the standing committee on Sept. 20 to expel them. Alberto Gainza Paz, editor-publisher of *La Prensa* of Buenos Aires, Arg., who had been ousted by Pres. Juan Perón, was honoured by 33 editors at Northwestern university, Evanston, Ill., Oct. 1 and later in New York city. Press services carried 1,850,000 words and 700 pictures on the signing of the Japanese peace treaty in San Francisco, Calif., in September.

The *New York Times* celebrated its 100th birthday on Sept. 18 with the publication of a book by Meyer Berger. The *New York Post* celebrated its 150th birthday on Nov. 12. The *St. Louis Star-Times* was merged with the *St. Louis Post-Dispatch* in June. Col. R. R. McCormick of the *Chicago Tribune,* owner of the *Washington Times-Herald,* took over as editor-publisher in April. Ridder Brothers sold the *Chicago Journal of Commerce* to the Dow Jones *Wall Street Journal* in January. Dailies merged and reorganized in Davenport, Ia., and Lincoln, Neb. New papers started were the *New York Review,* the *Chicago Oil Daily,* the *New York Protestant World,* and the Catholic *New York Banner*. Costly new buildings were opened by the *Washington Times-Herald,* the *Hartford Courant* (Conn.), the *South Bend Tribune* (Ind.), and the *Lansing State Journal* (Mich.). The Communist *Daily Worker* struggled against financial difficulties all the year. The total of accredited schools of journalism increased to 40 in 27 states, and Frank L. Mott, dean of the University of Missouri (Columbia) school of journalism, retired.

U.S. Magazines.—The year 1951 brought greater income, soaring costs and narrower profits to magazine publishers. Advertising reached an all-time high, and rates were raised 6% to 10%. Printers' wages went up 12%. A threatened paper shortage was relieved by 800,000-ton increased production, in spite of a shortage of sulphur, but prices rose $10 in August to an average of more than $200 a ton. Publishers worried over the new postal rates coming in 1952—not only the three-year 30% increase in second class but also the 50% increase in third class, which affected magazines more. Newsstand sales went up 5% with fewer "returns." Surveys relieved the fear that television would reduce magazine reading and advertising. Comic magazines increased from 250 to 400 titles, with weekly newsstand sales of 50,000,000, and campaigned against the use of narcotics by youths. Church groups attacked "girlie" and picture magazines in many cities. *Ladies' Home Journal, Life, True Confessions* and the *Saturday Evening Post* led newsstand sales, in that order. *Time*'s four plane-delivered foreign editions, started in 1941, attained 1,500,000 circulation. Men's magazines grew in popularity, especially *Argosy, Esquire, True, Field and Stream, Outdoor Life*—and a new $3 men's magazine, *Gentry,* was started. Service magazines (telling how to do something) tended to lead all other types. The new Negro magazines grew, especially in the south. *American Weekly* adopted a new rotogravure printing process. (G. M. Hy.)

Canada.—Soaring publishing costs were reflected in 1951 not only in climbing subscription rates but also in higher advertising rates. For the first six months of 1951 space rates in 62 daily papers went up an average of 12.5%, in 93 trade and business publications an average of 15% and in 10 farm publications 15%.

During the year, the *Edmonton Bulletin* suspended operations; the Roy Thomson chain of dailies expanded to 14 with the purchase of the *Oshawa Times-Gazette;* the *Vancouver Sun* bought the *Vancouver News-Herald,* and the rival *Victoria Times* (evening) and the *Victoria Colonist* (morning) moved to the same building and shared composing room equipment and composing room staff, but otherwise maintained separate identities.

YOUR EDITORS OUGHT TO HAVE MORE SENSE THAN TO PRINT WHAT I SAY !
PRESS
Packer

"CLASSIFIED!" a cartoon by Packer of the *New York Daily Mirror,* published in 1951

The post office increased the postal rate on newspapers (with 50% advertising) from one and one-half to three and one-fourth cents per pound. The voluntary Canadian central registry of subscription representatives, whose purpose it was to control and regulate subscription selling of magazines, went into action. The *Montreal Standard* launched a week-end magazine section on Sept. 8, called *Weekend Picture Magazine,* and by the end of the year had sold it to about ten dailies which abandoned their own magazine sections. The Canadian Press opened a French-language service. (C. Cy.)

Great Britain.—The fear that any further advance in newsprint prices would affect the selling prices of newspapers became a reality in 1951. The *Scotsman* and the *Glasgow Herald* set the pace at the beginning of April by advancing their prices from *2d.* to *3d.,* and they were followed a month later (May 7) by the London dailies and by most of the provincials—the penny papers advancing to 1½*d.* and the prices of the others increasing by varying amounts. Sunday newspapers that had previously cost *2d.* were raised to 2½*d.* As a result, the circulation of almost every newspaper in the country decreased. The *Times* (London), already *3d.,* was one of the few newspapers which made no change in its selling price.

Reuters, Great Britain's chief news agency, celebrated its centenary during the year and the *Sunday Dispatch* celebrated its 150th anniversary.

The periodical press suffered a cut in newsprint in March 1951 amounting to 20% for large users and 10% for small users. The majority of large circulation periodicals were not affected by this cut, as they mostly used mechanical printing paper, which was uncontrolled. The rise in paper and production costs caused increases in advertisement rates, and nearly 300 publications raised their selling prices. To meet increased costs amounting to nearly £1,000,000 a year, the *Radio Times,* with its 8,000,000 circulation, went from *2d.* to *3d.*

Commonwealth.—A nonpolitical magazine, the *African Drum,* catering to African readers, made its appearance in Capetown. *Die Volkstem* of Pretoria, dating from 1873, suspended publication temporarily because of rising costs. The *Rhodesian Herald,* the oldest newspaper in Rhodesia, celebrated its diamond jubilee.

The selling price of Australian newspapers was advanced to *4d.* in Sydney and *3d.* in other cities, and was followed by some reduction in circulations. The Adelaide weekly magazine *Express* ceased publication.

In China, the *Hongkong Telegraph* discontinued publication, and the *North-China Daily News* closed down because of the steady decline of the foreign population and the Chinese decision not to allow news from foreign sources.

The ten-year-old *Daily Express,* Jamaica's only evening newspaper, ceased publication because of newsprint difficulties.

Among proposals to amend India's constitution introduced in May was one which gave the government power to curb the press under certain circumstances. Opposition to the amendment was expressed by all sections of the newspaper industry.

In Singapore, the Malay vernacular newspaper *Malayu Raya* was banned for nine months because of "systematic publication of material concerning the Maria Hertogh case in such a manner as to inflame inter-religious and inter-racial antagonism."

Europe.—During 1951, price increases and cuts in the size of newspapers were made in many countries. France, western Ger-

(F.L.Mt.)

many, Greece, Spain and Yugoslavia were among those which received emergency allocations from the International Materials conference. An international press institute was established with headquarters in Zürich, Switz., and E. J. B. Rose of the *London Observer* was appointed its first director.

The Belgian Press association declared that the existence and independence of the press were threatened by rising costs and requested the government to abolish or reduce import duties on newsprint.

In France, the steep increase in the price of newsprint brought a request for a government subsidy to keep prices stable. Several newspapers found themselves in financial difficulties and *L'Aube* temporarily suspended publication. The selling price of Paris newspapers was twice increased during the year; those previously costing 10 fr. jumped to 15 fr.

In Germany, many of the small newspapers promoted by former nazi printers and publishers, which began operations in the autumn of 1949 when the licensing system was ended, ceased publication. The newspapers started with the aid of the western Allies had held their own generally with little loss of circulation. There were in western Germany about 950 daily newspapers with a total circulation of 14,000,000, but only three had circulations of more than 250,000 each. All the 16 Communist newspapers appearing daily in western Germany came in for terms of 90 days' suspension during the year.

The Greek government suppressed the left-wing *Democraticos*. Italian newspapers increased their selling prices from 20 to 25 lire. The *Corriere della Sera* of Milan had a 75th anniversary. In Poland, two important dailies ceased publication. In Sweden, where there were about 240 dailies, newspaper sales had increased by 40% after 1942.

Sweden increased the tax on exported newsprint from £3 10*s.* to £18 a ton.

A new fortnightly magazine called *News*, printed in English, made its appearance in Moscow. The British government closed down the *Soviet Monitor*, the radio monitoring service maintained by the soviet Tass agency. (*See* also ADVERTISING.)

(D. HN.)

The University of Missouri school of journalism, in its 22nd annual presentation, gave awards for distinguished service in journalism to the following during the university's journalism week, May 1–5, 1951: Marquis Childs, Washington columnist of United Feature Syndicate; George Horace Gallup, director, American Institute of Public Opinion; the *Minneapolis Star* and *Tribune*, Minn.; George H. Scruton, editor and publisher, the *Sedalia Democrat* (Mo.); and Lee Hills, managing editor, the *Miami Herald*, Fla.

FILMS OF 1951.—*City Desk Item* (Almanac Films, Inc.); *How to Read a Newspaper* (Coronet Films).

New York.

New York, one of the original 13 states, has been known since 1784 as the "Empire state." Northernmost of the middle Atlantic states, it covers an area of 49,576 sq.mi., of which 1,632 sq.mi. are water. It is the most populous of the states of the United States, the 1950 census giving it a total of 14,830,192 persons, or 9.8% more than in 1940. The principal cities and their 1950 populations are: New York 7,891,957; Buffalo 580,132; Rochester 332,488; Syracuse 220,583; Yonkers 152,798; Albany (state capital) 134,995; Utica 101,531; Schenectady 91,785; Niagara Falls 90,872; Binghamton 80,674.

History.—Of the 1,266 bills passed by the 1951 legislature, 838 were signed by Gov. Thomas E. Dewey and became law. Perhaps the most important pieces of legislation enacted were the Hughes-Brees act affecting the state unemployment insurance system, and the laws setting up the state defense council and the state civil defense commission.

Under the Hughes-Brees act, a new system of employer rates based on individual employment stability was installed, the new rate to take effect on Jan. 1, 1952. The new law also raised the maximum weekly benefit rate for unemployment insurance claimants from $26 to $30, and prevented an employee from collecting unemployment insurance for more than 26 weeks in any period of unemployment. After receipt of benefits for 26 weeks, the employee must be employed again for at least 20 weeks before a new claim may be valid.

Other significant new laws enabled the state power authority to plan and build facilities for the production of hydroelectric power in the Niagara river; raised the amounts of insurance required of a motorist with a previous serious accident; allowed savings banks to increase the maximum amount they might accept for deposit from one person from $7,500 to $10,000; provided, for the first time, minimum standards of fire protection and of safety and sanitary conditions for all types of new and old multiple dwellings. The life of the temporary state rent commission was extended until July 1, 1953, and the plan of the commission approved. The plan permitted seven types of rent rises, generally limited to 15%, and required maintenance of usual services and facilities.

On March 29, 1951, Governor Dewey created the New York state crime commission, headed by Joseph M. Proskauer of New York city, with John M. Harlan as chief counsel. The commission was formed to investigate any connection between organized crime and units of government anywhere in the state.

Voters approved eight amendments to the New York state constitution in Nov. 1951 elections. One of these put the state's credit behind Thruway authority bonds and enabled the authority to obtain lower interest rates on bond issues. A second amendment authorized New York city to go beyond its constitutional debt limit after Jan. 1, 1952, to borrow $500,000,000 for constructing a new Second avenue subway. The subway was to be completed in 1956.

Thomas E. Dewey (Rep.) was re-elected for a third term as governor on Nov. 7, 1950. Other state officials elected at that time were: lieutenant governor, Frank C. Moore; comptroller, J. Raymond McGovern; and attorney general, Nathaniel L. Goldstein.

Education.—At the close of the school year ending June 1950 there were 5,927 elementary public schools with 1,369,080 school children; 146,482 pupils in 164 junior high schools; and 829 public high schools with 482,567 students. There were also 1,173 private and parochial schools with 400,000 pupils in elementary grades, and 82,427 students in 296 secondary schools. Enrolment at universities, colleges and institutions of higher learning in 1950 totalled 270,915, excluding 154,817 summer and extension students. Special state schools included 6 Indian schools; 6 agricultural and technical institutes; 5 institutes of applied arts and sciences; 133 schools of nursing; 3 institutes for the blind; and 6 institutes for the deaf.

Social Insurance and Assistance, Public Welfare and Related Programs.—The 1,303,000 persons given assistance, care or service at public expense in 1950 represented an increase of 117,000 persons over 1949. During 1950 expenditures for public welfare totalled $407,157,000. Of this sum, the federal government's share was $73,754,728; the state's share, $151,983,567; and the local government's share, $181,418,705. An additional 2,450,000 persons were given assistance or care in New York state as private charges. During 1950 the state certified 12,403,354 unemployment insurance claims (13,151,206 weekly units) totalling $298,026,365. On Dec. 31, 1950, the New York State Unemployment Insurance Trust fund had a balance on hand of $904,616,065.

In 1950 the average yearly population of the state's 17 correctional institutions was 17,191 inmates, who were cared for at an average cost of $1,398.42 per person (1950–51 fiscal year). The state maintained 20 hospitals for mental patients, 6 schools for mental defectives and a colony for epileptics.

Communications.—New York state had 86,257 mi. of roads on Jan. 1, 1951, of which 14,280 mi. were state highways (exclusive of through ways, parkways, city and village streets) and 71,977 mi. were county and town roads. Hard-surfaced roads totalled 67,016 mi. The 46 railroads in the state operated 7,529 mi. of roadbed. The state maintained a system of more than 500 mi. of canals. Including the rivers and lakes which are part of the New York State Barge Canal system, the total length is more than 800 mi. During 1950 the three major commercial airports of the New York metropolitan area (La Guardia, Newark and New York International) handled a combined volume of 4,809,214 passengers. There were 50 seaplane bases and 260 airports operating in the state during the year. There were 4,472 civil aircraft and 26,040 licensed pilots registered in 1950.

Banking and Finance.—At the end of 1950 there were 763 banks with total resources of $49,736,976,000 and deposits of $44,395,378,000 operating in the state. In addition, there were 236 savings and loan associations with $1,465,285,000 of total assets and $1,238,517,000 due private shareholders.

For the fiscal year ending March 31, 1951, the financial status of the state was as follows: general revenue, $881,746,791.91: expenditures, $891,282,572.18; total operating deficit, $9,535,780.27; state debt, $736,240,183. Capital Construction Fund (formerly Postwar Construction Fund) reserve for postwar construction and reconstruction, appropriations in force April 1, 1951, $373,750,634.66. Of the general fund expenditures, 59% was for state aid to local governmental units. This totalled $530,208,461.41, an increase of $25,126,657.57 over the previous fiscal year. This increase was largely accounted for by a $14,725,175.13 gain in state aid to education.

Agriculture.—Gross sales of agricultural products totalled $810,864,000 in 1950. In addition, government payments to farmers were $5,737,000. The sale of milk and other dairy products in 1950 amounted to $346,002,000. The total harvested acreage, excluding orchards and vineyards, was 6,426,000 ac. The value of livestock and poultry on farms as of Jan. 1, 1951, was $523,852,000. This included 2,248,000 head of cattle, 17,821,000 chickens, 126,000 horses, 2,000 mules, 193,000 hogs and 182,000 sheep.

Table I.—*Principal Crops of New York*

Crop	1951	1950	Average, 1940–49
Corn, bu.	28,116,000	28,638,000	24,787,000
Wheat, bu.	10,319,000	11,344,000	8,367,000
Oats, bu.	36,240,000	30,917,000	23,711,000
Barley, bu.	2,516,000	2,754,000	2,750,000
Buckwheat, bu.	908,000	1,462,000	2,076,000
All hay, tons	5,678,000	5,378,000	5,864,000
Beans, dry (100-lb. bags)	1,529,000	1,436,000	1,344,000
Tobacco, lb.	450,000	700,000	1,076,000
Potatoes, bu.	27,900,000	34,390,000	32,145,000
Apples, bu	18,095,000	18,700,000	14,007,000
Peaches, bu.	1,312,000	1,023,000	1,285,000
Pears, bu.	1,024,000	1,066,000	850,000
Grapes, tons	62,400	104,000	53,720
Cherries, tons	37,200	31,500	18,960
Maple sugar, lb.	43,000	46,000	86,000
Maple syrup, gal.	466,000	505,000	634,000

Zinc	38,321	10,883,164	37,973	9,417,304
Other minerals		?		7,496,620
Total		?		$138,492,875

*Values for processed materials are not included in the totals.

Manufacturing and Industry.—New York state's manufacturing industries outrank those of every other state in number of establishments, volume of employment, size of manufacturing pay rolls and value added by manufacture.

In 1947 the state's manufacturing firms added $9,666,588,000 in value to the raw and semifinished material they purchased for processing, compared with $3,313,649,000 in 1939, according to the U.S. census of manufactures. In terms of value, New York state produces approximately 67% of the country's total output of women's dresses, coats and blouses; 94% of women's furs; and 41% of men's and boys' tailored clothes. The state leads all others in printing and publishing and the rug and carpet industry, and produces 66% of the value of photographic equipment manufactured in the nation.

In 1950 there were 581,000 business firms in the state. There were 5,572,500 persons employed in the state exclusive of agricultural workers, proprietors, domestics and personnel of the armed forces, a gain of 1,572,500 since 1939. Average weekly factory earnings in 1950 were $59.55. Retail sales in the state were estimated at $15,600,000,000 in 1950. During that year, 48% of all the water-borne foreign trade of the nation, in terms of value, was handled by New York state ports.

(F. P. Kl.)

Mineral Production.—Table II shows the tonnage and value of mineral production in the state in 1949 for commodities having values in excess of $100,000, and corresponding data for 1950, so far as they were available at the close of 1951.

New York City.

Housing, both public and private, remained the major problem of the city of New York in 1951 because of the continuing increase in population. According to the City Planning Commission, the permanent inhabitation of the metropolis reached an all-time high of 7,960,000 on Dec. 31, 1951.

Meanwhile, the public housing authorities reported an increase of 8,749 apartments in 1951, bringing the total number of units made available under integrated construction schedules to 55,621. The department of buildings reported plans filed in 1951 for 9,977 industrial, commercial and residential structures to be built at an estimated cost of $454,248,978.

The department of hospitals kept abreast of its 1951 construction timetable with the erection of the 570-bed Kings County Hospital for Chronic Diseases and the 1,920-bed Memorial Hospital and Home, both part of the city's $192,000,000 hospital expansion program. Work was also started on the conversion of buildings on North Brother Island to use as a 150-bed hospital for the treatment of narcotic addicts. These facilities were expected to be ready in April, 1952.

A city-wide atomic air raid exercise was held in November to familiarize the general public with civil defense operations; 354,000 volunteer civil defense workers, 30,000 police and firemen, units of the U.S. air force and personnel from the other armed services took part.

Rudolph Halley, former counsel to the senate crime investigating committee, was elected to the presidency of the city council on Nov. 6, 1951, to fill out the unexpired term of Vincent R. Impellitteri, who had been elected mayor the previous year.

City Commissioner of Commerce Walter T. Shirley, in a report to the mayor and the board of estimate, disclosed that 237,000 business establishments, including 42,000 manufacturing plants, were in operation in the five boroughs of New York city in 1951. These firms gave employment to 3,200,000 persons and carried a total pay roll of $12,000,000,000 annually. The gross value of the 1951 industrial output was estimated at $14,000,000,000. The manufacture of wearing apparel continued as the city's leading industry, embracing approximately 17,200 firms, employing 375,000 workers and producing garments having a dollar volume in excess of $4,000,000,000.

Approximately 4,950 New York firms engaged in foreign trade in 1951, handling export-import transactions estimated to reach $9,000,000,000 in dollar value. The total shipping handled in the port of New York during the year, including coastal as well as overseas, exceeded 125,500,000 tons. (*See* also MUNICIPAL GOVERNMENT.) (F. L. Do.)

New Zealand. A self-governing member of the Commonwealth of Nations, New Zealand consists of two large and several small islands in the south Pacific. Area: dominion proper, 103,416 sq.mi.; other islands, 523 sq.mi. Pop.: dominion proper (April 17, 1951, census) 1,939,703, including 113,777 Maoris. Cook and other Pacific islands (pop., 1951 census): 21,320. Western Samoa, a trusteeship, has an area of 1,133 sq.mi. and pop. (1951 census) 82,493. Language: English. Religion: mainly Christian. Chief cities (1951 census, urban area only): Wellington (cap., 133,400); Auckland (329,000); Christchurch (174,100); Dunedin (95,300); Hutt (74.900); Palmerston North (32,800). Governor general, Lieut. Gen. Sir Bernard Cyril Freyberg; prime minister in 1951, Sidney George Holland.

History.—The dominion continued to enjoy great prosperity during 1951. The national finances were in a sound condition, production was high, there was full employment and more goods were available than ever before. The only jarring note was a long waterfront strike which greatly harassed the transport of overseas goods. The high prices received for wool meant that overseas earnings were substantially greater than overseas spending despite the removal of many import restrictions.

In the field of international affairs, the visit of John Foster Dulles, Pres. Harry S. Truman's emissary, early in the year to Australia and New Zealand for discussions on Pacific affairs proved the forerunner of the signing of the Japanese peace treaty and the conclusion of a Pacific security treaty by the United States, Australia and New Zealand. The latter treaty was signed on Sept. 1 in San Francisco, Calif. The British government was fully consulted during the negotiations and concurred in the regional arrangement since the treaty served to strengthen the vital interests in the Pacific of the commonwealth as a whole.

In support of the Colombo plan New Zealand decided upon a contribution of £3,000,000 in three years toward the development of southeast Asia.

Wool prices fell steeply in the middle period but the season's clip returned about £140,000,000. Dairy production had a record year, with an increase of 7% in volume and 13% in value above the previous year.

Rising prices continued to have an inflationary effect. The government allowed wool growers to withdraw up to 20% of the £32,000,000 frozen in 1950 in their private accounts. General wage rates rose about 15%. A dollar surplus of $20,500,000 for 1950 was mainly brought about by an increase in the sale of wool to the United States. The national income figures reached a new high level of £578,000,000 for 1950–51, just three times as much as in 1938–39, while investments, including private savings, rocketed from £16,000,000 to £130,000,000 during the same 13-year period.

A vast forest project was outlined by the government to develop the great softwood forests around Kaiangaroa. Three main enterprises were envisaged: the production of newsprint, of pulp and of timber for building. This new project would require £14,000,000 for capital development. Six big projects for hydroelectric development were under construction.

One of the longest industrial disputes in the history of the country was the waterfront strike which lasted from February to June. Miners and refrigeration workers supported the strikers for various periods, but the government's firm policy in deregistering the striking unions and encouraging the formation of new unions brought about the resumption of work. This stoppage cost an estimated £3,000,000 in wages and £25,000,000 on the wool cheque. The government was challenged by the opposition on its handling of the dispute and appealed to the country in August. The general election resulted in an increased majority for the government. The state of the parties in the new parliament was National 50 seats, Labour 30 seats.

Education.—Schools (Dec. 1949): primary 1,905, pupils 241,699, teachers 7,481; Maori village schools 160, pupils 13,288, teachers 396; Maori mission schools 10, pupils 771; secondary 47, pupils 21,910, teachers 1,049; private secondary 74, pupils 9,160, teachers 491; Maori secondary 10, pupils 729, teachers 41; district high schools 103, pupils 7,075, teachers 402; Maori district high schools 7, pupils 245, teachers 15; technical 28, pupils 12,504, teachers 722; teachers' training colleges 5, students 2,486; agricultural colleges 2, students 1,120. University of New Zealand (four colleges), students 11,000.

Finance and Banking.—Budget (consolidated fund and social security fund, excluding war expenses account): (1950–51 actual) revenue £N.Z.193,600,000, expenditure £N.Z.184,900,000; (1951–52 est.) revenue £N.Z.208,200,000, expenditure £N.Z.207,600,000. Gross national debt (March 1951) £N.Z.693,400,000. Currency circulation (Sept. 1951): £N.Z.53,100,000. Bank deposits (Aug. 1951): £N.Z.188,200,000. Gold and foreign exchange (Aug. 1951) U.S. $340,000,000. Monetary unit: New Zealand pound, with an exchange rate of £N.Z.1.00375 to the pound sterling and £N.Z.0.362 to the U.S. dollar.

Foreign Trade.—(1950): Imports £N.Z.157,900,000; exports £N.Z.182,400,000. Main sources of imports (nine months of 1950): U.K. 59.9%; Australia 11.8%; U.S. 7.5%; Canada 2.4%. Main destinations of exports (1950): U.K. 66.7%; U.S. 10.1%; France 4.4%; Germany 3.3%.

Transport and Communications.—Roads (1949): 12,708 mi., of which arterial roads 5,234 mi. Licensed motor vehicles (Dec. 1950): cars 253,751, commercial 85,470. Railways (March 1950): 3,526 mi.; traffic (March 1951): passenger journeys 24,800,000; goods carried 9,800,000 metric tons; goods ton-miles 1,043,000,000. Shipping (merchant vessels of 100 gross tons and over, July 1950): 165, total tonnage 201,010. Air transport (1950): passenger-miles 97,600,000; cargo net ton-miles 2,200,000. Telephones (March 1950): 257,034 subscribers. Radio receiving set licences (March 1950): 449,347.

Agriculture.—Main crops (metric tons, 1950–51): wheat 161,000; barley 44,000; oats 38,000; maize 6,000; potatoes 110,000; linseed 8,000; tobacco 2,500. Livestock (1950): cattle 4,949.000, of which dairy cows 1,846,000; sheep 33,857,000; pigs 552,000; horses 195,000. Livestock products (metric tons): wool, greasy basis (1951–52) 172,000; meat (1950) 566,000, of which beef and veal 188,000, pork 41,000, mutton and lamb 337,000; factory butter (1950) 171,700; factory cheese 107,000. Fisheries: total catch (1948) 33,500 metric tons.

Industry.—Industrial establishments (April 1951): 37,420; persons employed 491,204. Fuel and power (1950): coal 934,000 metric tons; lignite 1,776,000 metric tons; manufactured gas 156,000,000 cu.m.; electricity, *c.* 87% of total generation 2,625,000,000 kw.hr. Industrial products (1950): superphosphates 630,000 metric tons; cement 252,000 metric tons. (A. T. Cl.)

Nicaragua. A Central American republic, Nicaragua is situated between Honduras on the north and Costa Rica on the south. Area: 57,145 sq.mi., of which 3.475 sq.mi. are water. Pop. (preliminary figures, 1950 census of the Americas): 1,053,189, of whom 688,373 were rural residents. Capital: Managua (1948 pop. est.: 146,819). Other urban centres are Chinandega (26,112), Granada (39,643), Jinotega (41.065), León (53,277), Masaya (38,761) and Matagalpa (53,118). Language: Spanish; religion: predominantly Roman Catholic. President in 1951: Gen. Anastasio Somoza, on an interim basis until May 1; thereafter constitutional president.

History.—Some administrative reorganization in consequence of the adoption of the constitution of 1950 occupied the attention of government circles in the early months of 1951. In January Luis Somoza, son of the acting president, was named first presidential designate, a post which made him next in line for the presidency in the event that his father might leave that office. Luis Somoza was also elected presiding officer of the chamber of deputies. On May 1, Acting President Anastasio Somoza completed the unexpired portion of the term of Victor M. Román y Reyes, who had died in 1950; Somoza promptly began a new term as constitutional president.

Promulgation of an educational measure produced a crisis in May when students at the University of Granada rioted in protest against a decree providing for the merger of their institution with the University of León. During the disorders, President Somoza on May 31 placed Granada under modified martial law to prevent the student demonstrations there from expanding into a more serious movement of political protest. Normality was restored at Granada by mid-June.

An agreement for an International bank loan of $4,700,000 to Nicaragua was signed on June 7, and the following day the United States contracted to provide the Managua government with Point Four assistance for the purpose of developing educational projects. President Somoza proposed on Aug. 15 that the U.S. and all other American republics unify their armed forces under joint chiefs of staff, and that military weapons and regulations be standardized within the western hemisphere. Nicaraguan diplomatic relations with Guatemala, which had been severed for four years, were resumed on Sept. 15. (G. I. B.)

Education.—During the school year 1951–52 there were 1,035 national primary schools with 65,305 pupils matriculated and 2,129 teachers, 91 private schools with 10,663 pupils and 431 teachers, 63 municipal schools with 2,738 pupils and 77 teachers, 13 national institutes with 1,575 students, 3 normal schools with 462 students, 32 commercial schools with 3,944 students and 24 private secondary schools with 2,077 students. The National university (León) had 620 students in 7 faculties, including one at Managua. The national budget allocated 7,716,363 cordobas for education. In 1951 there were 50 motion picture theatres with seating capacity of 48,000.

Finance.—The monetary unit is the cordoba, valued on Oct. 31, 1951, at $0.2000 U.S. currency, official rate, $0.1429, basic rate, and $0.1408, curb rate. The national budget for the fiscal year 1951–52 provided for expenditure of 94,700,000 cordobas. In 1949–50 expenditure totalled 105,024,000 cordobas and revenue 108,470,000 cordobas. The public debt in June 1951 was 47,665,000 cordobas, of which 8,505,000 cordobas was external. Currency in circulation (Oct. 31, 1951) was 69,900,000 cordobas; demand deposits 67,200,000 cordobas; gold reserves $2,770,000; foreign exchange reserves $8,950,000. The retail food price index (Managua) stood at 482 in Aug. 1951 (1939=100).

Trade and Communications.—Exports in 1950 amounted to $25,750,000 (excluding gold exports valued at $8,240,000); imports were $25,300,000. Leading exports besides gold were coffee (65%), tropical woods (7%), sesame (6%) and bananas (2%). Leading customers were the U.S. (77%) and the United Kingdom (14%). The U.S. (82%) was the principal supplier. Leading imports included textiles, iron and steel and manufactures, cotton manufactures and machinery.

In 1949 there were 236 mi. of railway and 417 mi. of surfaced highways. As of Jan. 1, 1949, registered motor vehicles included 1,443 automobiles, 672 trucks and 151 buses.

Agriculture.—Exports of coffee, the chief crop, in the 1950–51 season totalled 262,578 bags of 132 lb. each, of which 94.5% went to the U.S. In 1950–51, 6,850 short tons of sesame and 30,000 tons of sugar were produced. Cattle numbered 1,060,000 in 1950. In 1949, 22,197,867 bd.ft. of timber were exported.

Mineral Production.—Mineral exports in 1950 included 230,103 troy ounces of gold and 187,663 oz. of silver. (J. W. Mw.)

Nickel.

World production of nickel is shown in Table I, as reported by the U.S. bureau of mines.

United States.—Domestic consumers are almost entirely dependent on Canadian imports, as is indicated in Table II, as reported by the U.S. bureau of mines.

Canada.—Production increased from 123,209 short tons in 1950 to 90,561 tons in the first eight months of 1951.

Cuba.—The plant of the Nicaro Nickel company, constructed and operated during World War II, was in 1951 being reconditioned for operation. (G. A. Ro.)

Nobel Prizes.

The Nobel prizes for literature, physics, chemistry, medicine and peace, first awarded in 1901, were established by the Swedish industrialist, Alfred Bernhard Nobel (1833–1896). Each award consists of a gold medal and a sum of money which varies with the income from the fund, but which was reported in 1951 to be about $32,357. Pär Lagerkvist, Swedish novelist, poet, essayist and philosopher, received the 1951 literature prize. The award for physics was divided between Sir John Cockcroft, director of Great Britain's atomic establishment at Harwell, and Professor E. T. S. Walton of Trinity college, Dublin, Ire. They received the prize for the atomic experiments they performed as a team in 1932, paving the way for later atomic developments. The prize in chemistry was divided between Glenn T. Seaborg and Edwin M. McMillan, both of the University of California at Berkeley, for their discovery of plutonium. McMillan's work made possible the creation of cosmic rays in the laboratory. The prize in medicine and physiology was awarded to Max Theiler of the International Health division of the Rockefeller foundation of New York city for his researches into the yellow fever virus and the development of the first effective vaccines against the disease. The peace prize was awarded to Léon Jouhaux, French anti-Communist labour leader. (R. E. Bs.)

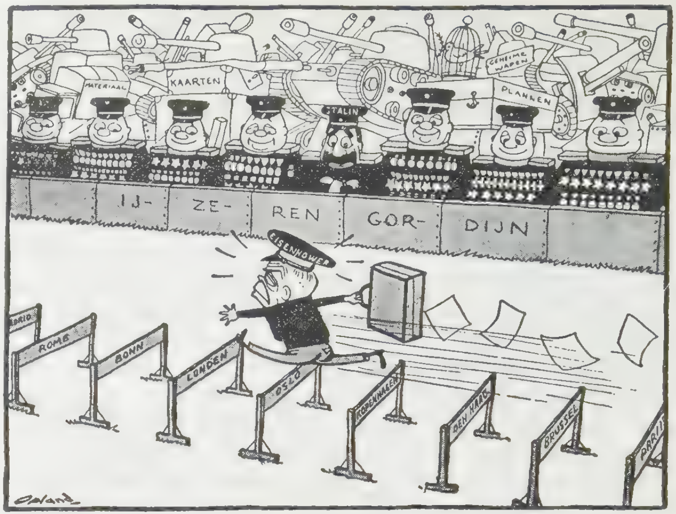
North Atlantic Treaty Organization.

The following nations concluded the North Atlantic treaty in Washington, D.C., in April 1949: Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, the United Kingdom and the United States. The treaty originated in the recognition of the strategic and defense unity of the democratic nations of western Europe and North America and the need for the timely organization of this unity in appropriate forms for the preservation of peace and freedom. In signing the treaty on behalf of the United States, Pres. Harry S. Truman declared: "It is a simple document, but if it had existed in 1914 and in 1939, supported by the nations who are represented here today, I believe it would have prevented the acts of aggression which led to two world wars." The signers stressed not only "the common heritage of democracy, individual liberty, and the rule of law," but expressed also their conviction that the treaty was more than a protective umbrella. "We must pray to God," the Italian foreign minister, Count Carlo Sforza, said, "that this pact will prove like the English Magna Carta: on one side intangibles, on the other side a continuous creation."

The events of 1951 began to fulfil these expectations. In Dec. 1950 arrangements were completed for the establishment of an integrated military force under a centralized control and command, and U.S. General of the Army Dwight D. Eisenhower (*q.v.*) was appointed as supreme commander. During 1951 he established the Supreme Headquarters of the Allied Powers in Europe (SHAPE) at Rocquencourt near Paris, Fr. A North Atlantic force composed of contingents supplied by nations outside continental Europe and of a similar contribution by continental European nations came into being in 1951. The United States contributed six divisions, Great Britain three armoured divisions, and Canada a brigade, while by the end of 1951 a European defense community consisting of France, Italy, the German Federal Republic, Belgium, the Netherlands and Luxembourg was coming into being as an integral part of the North Atlantic Treaty organization. At the same time negotiations were started for the build-up of a middle eastern defense community, in which the leading North Atlantic community powers would participate. The decision adopted at the seventh session of the North Atlantic council at Ottawa, Ont., in Sept. 1951 to admit Greece and Turkey was regarded as helpful in forging a strategic link between the military defense effort of the North Atlantic community, concentrating on the defense of western Europe and the Atlantic, and the middle eastern community guarding the important southern flank of the North Atlantic area.

In 1951, the first year of the functioning of the North Atlantic community as an organization for common defense, it became clear that in the near future its organization would have to be reformed and its scope broadened if it was to fulfil its purpose. A complicated machinery was slowly evolving to deal with the various military, political and economic problems, and the need was felt of simplifying this machinery and of creating an international steering authority which would be able to take the required decisions in the various fields and supervise their execution. The North Atlantic treaty forces had received at the beginning of 1951 a supreme commander who had shown in World War II unusual ability in handling with skill and effectiveness the armed forces of diverse nations and integrating them into a whole. But the question remained unanswered at the close of the year as to whom the supreme commander was responsible. The creation of such a supranational North Atlantic high authority was one of the needs revealed by the end of 1951. The other need came from the growing realization that the North Atlantic community could not confine itself to matters of defense but had to be equally concerned with economic and social problems. The close connection between rearmament and the general economic life of the nations involved was more and more emphasized during 1951. Thus it became clear that the North Atlantic community, in order to fulfil its task of preserving the freedom and peace of the western world and of maintaining a standard of living and of social justice indispensable for the flowering of democracy, had to expand its original goal and structure. The logic of the situation demanded the transformation of the North Atlantic Treaty organization into an Atlantic union.



"HÚ-Ú-ÚP!! EISENHOWER," a cartoon by Opland published in *De Volkskrant* (Amsterdam, Neth.) in 1951

A major reorganization in the machinery of the North Atlantic Treaty organization (NATO) was carried through at the beginning of May. A supreme council was established, consisting of one representative of each government and meeting four times a year. The chairmanship of the council would rotate. In this new council the countries would be represented, according to the case discussed, by their foreign, defense or finance ministers and, in the event of a grave emergency, by the prime ministers and presidents. On a day-to-day basis, high level direction would be given by the tri-power permanent standing group in Washington, D.C., in military matters, and by the committee of the North Atlantic treaty deputies, who were to meet twice weekly in London to discuss political and economic matters. In addition to the 12-power Defense Production board, which was to sit in London, a Financial and Economic board was created with headquarters in Paris so that it could work closely with the Organization for European Economic Cooperation (O.E.E.C.). This new board was asked to study immediately the impact of rearmament on the economic life of the NATO powers and to recommend anti-inflationary steps to counter the effects of military preparations on the economies of the Atlantic nations. The new board was also asked to advise on the fair distribution of the burdens of the common defense effort.

These tendencies found an expression in the session of the North Atlantic council which convened in Ottawa, in mid-September. There the spokesmen of almost all the member states emphasized the need for the NATO to concern itself in the future more with the economic integration not only of Europe but of the whole North Atlantic community including the United States and Canada. While in 1950 the United States was prodding Europe to integrate its economies, the European members began in 1951 to prod the United States to integrate North America with western Europe. The originally neglected article 2 of the North Atlantic treaty of 1949 was now being emphasized and its implementation demanded. The article reads: "The Parties will contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions, by bringing about a better understanding of the principles upon which these institutions are founded, and by promoting conditions of stability and well-being. They will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between any or all of them."

At the same time demands were raised by the European members of the NATO that it should act as a true coalition in all matters that affect all its members. It was regarded as harmful to the unity and strength of the coalition that the United States government showed a tendency to commit itself publicly to certain policies, such as the rearmament of Germany and the entrance of Greece and Turkey into the NATO, before discussing these matters with the other members of NATO. As a result of this feeling, a committee was established in Ottawa, composed of the foreign ministers of Belgium, Canada, Italy, the Netherlands and Norway, to consider and make recommendations on the following three points: co-ordination and frequent consultation among the member nations on foreign policy; closer economic, financial and social co-operation in order to promote and ensure conditions of economic stability and well-being; collaboration in the fields of culture and public information. A committee of experts was instructed to study the creation of an international rearmament fund within the framework of NATO, to remove the threat of mounting defense costs to the living standards of western Europe. The Ottawa session of the council released a statement making clear the importance which the member governments attached to the development of the North Atlantic community, not only to safeguard their freedom and common heritage on an equal footing but also to strengthen their free institutions and to advance the well-being of their peoples.

The general mood of the Ottawa meeting was expressed by Herbert Morrison, the British foreign secretary, who said: "Besides developing to the utmost our cooperation under this treaty in the problems of defense, I am sure we should strive by every possible means to increase the common action and common thinking of the Atlantic powers in matters of peace, until eventually we create a true community or union within the free world. We are now concentrating on strengthening our defenses and insuring our Western way of life against risk of aggression. But we must not forget the long term objectives and the desperate need for unity among free men. I am sure that we should look forward to the day when in the fullness of time there will be a common citizenship for all the peoples in the North Atlantic community, with all the barriers to thought, travel, trade and understanding swept away. We are moving in that direction slowly but surely, and this meeting in Canada's capital of more than thirty responsible ministers from all the nations in the community, marks a stage on the road."

At Ottawa it was decided that the council of the NATO should meet much more often than in the past, and in accordance with this decision, a meeting of the council, its eighth session, took place in Rome, It., from Nov. 24 to Nov. 28, 1951, and the next meeting was scheduled for Lisbon, Port., in Feb. 1952. The meeting in Rome brought together the most representative group of western statesmen so far assembled. The ministers of foreign affairs, defense and finance and the military leaders of the 12 member states and official observers for Greece and Turkey met, and for the first time the supreme military commander of the NATO forces attended with his deputy commander to report on the progress achieved and to recommend measures for the further strengthening of the NATO defense forces. But military matters, though they still occupied a large part of the deliberations, were not stressed alone. In his address of welcome, Alcide de Gasperi, premier of Italy, stressed the ties of a common tradition of civilization which were even more binding and permanent than the terms of the treaty. To meet the deep desire of the democratic peoples and of the war-exhausted nations of Europe for a clear expression of peace as the only aim of the NATO defense activities, Premier De Gasperi declared in a press statement: "If we could make public the military part of our deliberations it would be clear to all that nobody among us has aggressive ideas, that nobody is thinking of preventive war. The only thing in question is our defensive possibilities and we are not yet certain that we could defend ourselves successfully in case we were attacked. In the whole conference there was not a single word of preconceived hostility toward any power or of preventive war." Similarly, General Eisenhower stressed above all the fact that the only aim of the NATO was peace. He would not serve any organization, he declared, which was not devoted to the preservation of peace.

The immediate issue which the finance and other ministers of the NATO nations faced at their meeting in Paris in mid-Dec. 1951 was how far they could go in devoting their financial and economic resources to defense without endangering their national economies and standards of living. This problem was discussed in an interim report of the Temporary Council committee of the NATO nations headed by W. Averell Harriman for the United States, Sir Edwin Plowden for Great Britain and Jean Monnet for France.

On Nov. 19 an Atlantic treaty defense college was established in Paris. French Vice Admiral André Georges Lemonnier, chief naval adviser to General Eisenhower, became the first commandant of the institution. "The opening of this new college is an event in military history," he said at the opening. "For the first time a completely international college belonging to a twelve-nation community is bringing together soldiers and civilian officials in an attempt to work out a peacetime system of cooperation for international forces and to train leaders for these international forces." To lay the foundations for the future development of NATO, British Prime Minister Winston Churchill visited Paris in the second half of Dec. 1951 to confer with French leaders and General Eisenhower, and went to Washington, D.C. at the beginning of 1952 to carry on similar conversations with Pres. Harry S. Truman. The immediate task of these meetings was to accelerate and co-ordinate the defense preparations of the western world; but the ultimate goal was the improvement of the standards of life in the democracies and the forging of closer political ties among them. North Carolina. A south Atlantic coast state, popularly known as the "Old North state" or the "Tar Heel state," North Carolina is one of the original 13 states of the union. Area: 52,712 sq.mi. (49,097 sq.mi. land, 3,615 sq.mi. water). Pop. (1950): 4,061,929 (ranking 10th among the states in this respect), of which 1,368,101 (33.7%) were urban, 2,693,828 (66.3%) rural and 1,096,720 (27%) nonwhite. Capital: Raleigh, with pop. (1950) 65,679; other cities: Charlotte (134,042); Winston-Salem (87,811); Greensboro (74,389); Durham (71,311); Asheville (53,000).

History.—The Negro issue, which had played a major part in the defeat of Frank P. Graham, liberal university president, by Willis Smith, conservative Raleigh attorney, for the Democratic nomination for the senate in 1950 (tantamount to election in Democratic North Carolina), recurred in 1951. On Oct. 9, 1950, a federal district court upheld the "separate but equal" facilities doctrine and refused to order the admission of Negroes to the law school of the University of North Carolina. On appeal, this decision was reversed by the fourth United States circuit court on March 27, 1951, when it ruled that Negroes must be admitted to the University of North Carolina Law school provided they met the school's standard requirements for admission.

Gov. W. Kerr Scott's "Go Forward" program of rural road construction, rural electrification and telephone service, public education and public health and welfare was in its third year in 1951. By Oct. 1, with funds from the $200,000,000 state bond issue approved in 1949, 9,249 mi. of secondary roads had been paved (78% of the 12,000-mi. goal) and 11,657 mi. had been stabilized for all-weather travel (33% of the 35,000-mi. goal). An extensive school building expansion program in the counties and towns, aided by $50,000,000 of state funds, neared completion in 1951.

North Carolina's five year hospital plan, begun in 1947, moved nearer completion in 1951. Of 102 hospital projects, costing a total of $50,000,000, 44 had been completed prior to Nov. 1, 1951, 46 were under construction, and the 12 remaining were in the planning stage.

The principal state officers in 1951 were W. Kerr Scott, governor; H. P. Taylor, lieutenant governor; Thad Eure, secretary of state; Henry L. Bridges, auditor; Brandon P. Hodges, treasurer; Clyde A. Erwin, superintendent of public instruction; Harry McMullan, attorney general; William A. Devin, chief justice.

Education.—In 1949–50 there were 2,852 public elementary schools with 21,399 teachers and principals and 711,804 enrolled pupils, and 958 public high schools with 7,735 teachers and principals and 181,941 enrolled pupils; these schools were operated at a cost of about $112,500,000, including $10,000,000 of federal funds. The average daily attendance in the public schools was 797,691 (635,677 elementary, 162,064 high school); the number of inhabitants of school age was 1,095,734. Not including principals or vocational teachers, the average salary for elementary teachers was about $2,510 and for high school teachers about $2,500.

Social Insurance and Assistance, Public Welfare and Related Programs.—In Oct. 1951 public grants amounting to $1,234,359 were made to 53,008 persons for old-age assistance; $757,914 to 16,383 families for aid to dependent children; $99,205 to 3,685 persons for aid to the permanently and totally disabled; $153,828 to 4,493 blind persons; and $38,866 for general relief in 2,044 cases. During the year ending June 30, 1951, the total amount of public relief funds distributed was $27,374,138, and during the first 11 months of 1951 unemployment benefits amounted to $16,022,245. In 1951 the state maintained 12 charitable institutions with 12,140 inmates on Oct. 1; 5 correctional institutions with 723 inmates; and the state prison system with 8,914 prisoners.

Communications.—In 1951 the state highway and public works commission maintained 11,612 mi. of state highways, of which 11,145 mi. were hard-surfaced; and 54,063 mi. of county roads, of which 11,554 mi. were hard-surfaced. There were 4,521 mi. of railroads, 870 mi. of city bus routes and 11,912 mi. of passenger bus routes in 1950. There were 119 airports. There were 577,445 telephones in use in the state on June 30, 1951.

Banking and Finance.—On June 30, 1951, there were 69 national banks and branches with assets of $503,095,000, and 381 state banks and branches with deposits of $1,257,454,644.62 and assets of $1,398,906,709.92. On Jan. 1, 1951, there were 147 building and loan associations operating under state charters with 186,906 members and total assets of $212,253,512.27, and 29 federal savings and loan associations with total assets of $118,312,319.22. In 1950–51 state receipts were $638,669,616; disbursements $617,917,428. On June 30, 1951, the state gross bonded debt was $286,570,500, less $67,748,263.60 of bonds invested in sinking funds. The assessed value of property was $4,252,311,273 in 1950. In the state general fund there was a cash surplus of about $17,738,031 at the end of the fiscal year.

Agriculture.—The cash income of North Carolina farmers in 1950 was $648,796,000 from crops; $146,707,000 from livestock and livestock products; and $8,800,000 from government payments. The value of the lands and buildings on the 288,508 farms in 1950, 38.3% of which were operated by tenants, was $1,905,714,485.

Manufacturing.—Thirty-one new manufacturing industries selected North Carolina sites for plant investments of $104,000,000 in 1950, the largest being the $30,000,000 plant of E. I. du Pont de Nemours company, near Kinston. In 1950 manufacturing establishments numbering 6,575 employed 403,000 wage earners at wages of $945,078,000, and added value by manufacture of $1,858,230,000. Value added by textile establishments was $857,885,000; by tobacco establishments $317,513,000; by lumber and lumber products establishments $129,462,000; and by furniture and fixtures establishments $106,501,000. Estimated industrial production in 1950 was $5,031,000,000, and electric power production was 12,334,000,000 kw.hr. (Jo. C. S.)

Table I.—*Principal Crops of North Carolina*

Crop	1951	1950	Average 1940–49
Tobacco, lb.	978,620,000	875,990,000	701,601,000
Cotton, 500-lb. bales	550,000	181,000	579,000

Mineral Production.—Table III shows the tonnage and value of mineral production in the state in 1949 for commodities having values in excess of $100,000, and corresponding data for 1950, so far as they were available at the close of 1951.

North Dakota.

A west north central state of the United States, North Dakota was admitted to the union Nov. 2, 1889; popular name, "Flickertail state." Area: 70,665 sq.mi., including 608 sq.mi. of water. Pop. (1950 census): 619,636, a loss of 3.5% since 1940. Urban population (places of 2,500 or over), 26.6%. Capital, with 1950 pop., Bismarck (18,640); chief cities: Fargo (38,256); Grand Forks (26,836); Minot (22,032).

History.—State officers in 1951 were: governor, Norman Brunsdale; lieutenant governor, Ray Schnell; secretary of state, Thomas Hall; auditor, Berta Baker; treasurer, Albert Jacobson; attorney general, E. T. Christianson; commissioner of insurance, A. J. Jensen; commissioner of agriculture and labour, Math Dahl; superintendent of public instruction, M. F. Peterson; tax commissioner, John Gray; public service commissioners, Elmer Cart, Ernest D. Nelson, and E. H. Brant.

In April the first oil was discovered south of Tioga by the Amerada Petroleum corporation. By the end of the year three additional wells found oil nearby (the Beaver Lodge field), 10 dry holes had been put down, 11 wells were being drilled and about 28,229,000 ac. were under lease at an estimated $1 an acre. Since 1947, more than $100,000,000 had been spent on oil exploration in the state.

By the end of 1951 about $115,000,000 of an estimated cost of $278,000,000 had been spent on Garrison dam. The project would be half completed at the close of 1952. The 32nd legislative assembly raised the gasoline tax one cent to aid highway construction, levied an additional cent on cigarettes for the benefit of municipalities, raised the salaries of officials and legalized parking meters.

Education.—Public school teaching positions for the year ending June 30, 1950, were 6,537; public school enrolment 114,488 (elementary 87,636; high school 26,852); parochial enrolment 11,730; Indian schools 1,940; schools in session 3,272; average annual salary of teachers, including city superintendents, $2,162 (1946, $1,417); average cost per pupil enrolled, $196; total expenditure for public elementary and high schools, $23,942,130. Enrolment in 12 institutions of higher learning: 6,286 full-time college students, 517 part-time, 618 faculty.

Social Insurance and Assistance, Public Welfare and Related Programs.—For the year ending June 30, 1951, public assistance totalled $9,799,482 (federal 43.4%, state 35.4%, county 21.2%). Old-age assistance cost $5,551,267 (average number of cases 9,045); aid to dependent children $2,277,953 (4,994 children); aid to dependent children in foster homes $195,204 (373 cases); aid to blind $71,629 (112 persons); aid to permanently and totally disabled $89,948 (290 cases in six months); general assistance $661,439 (1,188 cases); welfare services $180,980; administrative expense $771,062. Total expenditures for four charitable and four correctional institutions for the year ending June 30, 1951, $4,476,283. Number of inmates June 30, 1951: feeble-minded 1,085; insane 2,102; blind 30; deaf 90; tubercular 312; penitentiary 211; training school 266; state farm 30.

Communications.—Highway mileage: state 6,969; rural 107,457. Spent for construction of state highways: $5,182,600 by the state, $5,177,952 by the federal government for the year ending June 30, 1951. For maintenance

Table I.—*Leading Agricultural Products of North Dakota*

Crop	1951	1950	Average 1940–49
Spring wheat (other than durum), bu..	121,365,000	91,546,000	105,369,000
Durum wheat, bu.	29,610,000	32,440,000	32,575,000
Corn, bu.	23,332,000	24,814,000	25,856,000
Oats, bu.	56,811,000	58,352,000	64,394,000
Barley, bu.	51,336,000	51,504,000	48,604,000
Rye, bu.	2,562,000	2,310,000	5,370,000
Flaxseed, bu.	15,272,000	17,181,000	9,801,000
Potatoes, bu.	15,580,000	21,280,000	19,589,000
Hay, tons	3,163,000	3,270,000	3,074,000

Source: U.S. Department of Agriculture

of state highways $3,621,693; for operation $449,359. Additional amounts appropriated to counties were: motor fuel taxes $1,410,249; motor vehicle licence fees $2,753,830. Motor vehicle registration: 193,704 passenger cars, 86,091 trucks. Six railroads operated 5,259 mi. of track.

Banking and Finance.—On June 30, 1951, the Bank of North Dakota and 109 state banks had resources of $319,484,477 and deposits of $295,461,306. Resources of 40 national banks were $245,809,500 and deposits were $229,980,799. State treasury collections to June 30, 1951, were $70,978,169; payments $63,940,263. Total bonded indebtedness $38,154,250. Tax collections in 1951 totalled $21,628,881.

Agriculture.—In 1951, 21,662,000 ac. were harvested, including wild hay. Cash farm income from marketing was estimated at $603,000,000 or almost $10,500 per farm. North Dakota led the nation in wheat production though the crop was reduced by a dry growing and wet harvest season.

Manufacturing.—Nonagricultural employment in 1951 averaged 113,679; manufacturing employment 6,009; average annual wage in manufacturing (places with 8 or more employees) $3,046.16. Unemployment declined as North Dakotans left for defense positions on the west coast and in other industrial areas. (E. Rn.)

Mineral Production.—Table II shows the tonnage and value of mineral production in the state in 1949 for commodities having values in excess of $100,000, and corresponding data for 1950, so far as they were available at the close of 1951.

Table II.—*Mineral Production of North Dakota*

(Short tons)

Mineral	1950 Quantity	1950 Value	1949 Quantity	1949 Value
Coal	3,260,973	$7,757,935	2,967,260	$7,003,712
Sand and gravel . . .	4,270,838	1,660,371	4,370,521	1,638,293
Other minerals		?		168,181
Total		?		8,810,186

Northern Ireland: *see* Ireland, Northern.
Northern Rhodesia: *see* Rhodesia, Northern.

Northwest Territories.

The Northwest Territories comprise all that part of Canada north of the 60th parallel of north latitude, except the portions thereof within the Yukon territory and the provinces of Quebec and Newfoundland, and the islands in Hudson bay, James bay and Ungava bay, except those islands within the provinces of Manitoba, Ontario and Quebec. Area: 1,304,903 sq.mi. of which 51,465 sq.mi. are water; pop. (1941 census) 12,028 including 2,284 whites, 4,334 Indians and 5,404 Eskimos; (1951 census) 15,016.

For purposes of organization and administration the territories were divided by order in council dated March 16, 1918, into the provisional districts of Mackenzie (527,490 sq.mi.), Keewatin (228,160 sq.mi.) and Franklin (549,253 sq.mi.). The Northwest Territories act, 1905, as amended, provides for the government of the territories by a commissioner (who, during 1951, was deputy minister of the department of resources and development) under instructions given from time to time by the governor in council or the minister of resources and development. Legislative powers are exercised by the commissioner in council. This council consists of eight members, one of whom is deputy commissioner. Five of the members are appointed by the governor in council and three are elected to represent electoral districts in the Mackenzie district. In 1951 the council was headed by Maj. Gen. H. A. Young as commissioner. Appointed council members were F. J. G. Cunningham, deputy commissioner; L. C. Audette, H. B. Godwin, D. M. MacKay and L. H. Nicholson. Council members elected in Sept. 1951 for a three-year term were Frank Carmichael, James Brodie and Mervin Hardie. The seat of government is at Ottawa, Ont.

Education.—The education of white, native and half-breed children in the Northwest Territories was carried on during 1951 at 12 day schools operated by the Northwest Territories administration, seven Indian day schools operated by the Indian affairs branch of the department of citizenship and immigration, two mining company schools, as well as at residential and day schools operated by missions of the Church of England, the Roman Catholic Church and other missionary organizations, with government financial assistance. As of Dec. 31, 1950, there were 1,247 pupils enrolled in grades 1 to 12 at schools in the Mackenzie district. Approximately 584 pupils attended government and mission schools in the eastern arctic.

The only organized school districts in the Northwest Territories were at Yellowknife where an 11-room public school was in operation and a separate school district had just been established. Scholarship awards were available for the assistance of worthy students who wished to proceed to further study, and correspondence courses were available free of charge to any child whose parents requested this service and to adults who desired to enrol.

Public Health and Welfare Services.—During 1951 there were in operation eight mission hospitals, two company hospitals and one community hospital. The government supply ship for the eastern arctic had medical and dental services available and medical teams visited each settlement to conduct physical examinations and X-ray surveys, and give preventative inoculations and ophthalmological and dental treatment. In 1951 there were also eight nursing stations and health centres in operation.

Communications.—The Mackenzie river and its tributaries, the Athabaska and Slave rivers, provide a direct inland water transportation route for a distance of about 1,700 mi. In addition, subsidiary routes on Lake Athabaska, Great Slave lake and Great Bear river and lake total more than 800 mi. The all-weather Mackenzie highway from Grimshaw, Alberta to Hay river settlement on Great Slave lake was used extensively in 1951. Scheduled air mail, passenger and express services were maintained throughout the year to most settlements in the Mackenzie district.

Radio communication between important settlements and trading posts in the territories and outside points was maintained through government and private radio stations.

Eastern Arctic Patrol.—The 1951 annual eastern arctic patrol was carried out by the government vessel "C. D. Howe," assisted by small privately-owned vessels. Replacement personnel as well as mail and supplies are transported by this patrol for the Royal Canadian mounted police detachments, medical centres, radio and weather stations, trading posts, missions and schools. Officers of the administration investigate such matters as Eskimo economy, food and health conditions, trading, administration of family allowances, relief and old age allowances, education, social conditions, vital statistics and other items of general administration.

The Canadian Handicrafts guild, assisted by a grant from the administration, was attempting to supplement the income of the natives by organizing the handicraft industry. In 1951 Eskimos produced for successful commercial marketing carvings in stone, ivory and wood and articles made of various skins and furs.

Agriculture and Fisheries.—Limited general farming and horticultural operations were carried on in 1951 at most of the settlements in the Mackenzie district. Federal experimental substations carried on field work during the year. Commercial fishing on Great Slave lake, inaugurated in 1945, produced a total catch of 6,813,706 lb. during the summer season of 1950 and the winter season of 1950–51. Whitefish and lake trout were the principal catch.

Fur Trading.—Fur production in the territories during the year ended June 30, 1950, was valued at $909,504 with a total of 561,400 pelts taken during that period. Muskrats constituted 80% of the catch. Trapping continued to be the chief occupation of the native population and was strictly controlled by regulations. Reindeer herds were maintained in the Mackenzie delta region.

Production and Industry.—Mineral production in the Northwest Territories for the year 1950 was valued at $8,050,899 of which gold accounted for $7,635,227. Crude oil production was continued at Norman Wells on the Mackenzie river. After being processed at the Norman Wells refinery the oil was shipped to Yellowknife and other points in the territories.
(H. A. Y.)

Norway.

A democratic monarchy of northern Europe, Norway is bounded north by the Arctic ocean, east by Finland, the U.S.S.R. and Sweden and west by the North sea. Area: 125,182 sq.mi.; pop.: (Dec. 3, 1946, census) 3,094,873; (1950 est.) 3,281,000. Capital: Oslo (1946, 285,844; 1948, after extension of city limits, about 420,000). Other principal cities with 1946 census figures are Bergen (107,293); Trondheim (56,522) and Stavanger (49,173). Religion: Lutheran Christian. Ruler in 1951: King Haakon VII. Prime minister: Einar Gerhardsen, until November; thereafter, Oscar Torp.

Spitsbergen (Svalbard), Norwegian since 1925, is an archipelago lying about midway between northern Norway and the north pole. Area: 23,979 sq.mi. Pop. (1949): about 1,600 Norwegians and an estimated 2,350 Russians.

History.—Einar Gerhardsen, prime minister since June 1945 when the government returned from its wartime sojourn in London, resigned suddenly in Nov. 1951, saying only that the reasons were purely personal, and that six and a half years of strenuous service was enough.

Gerhardsen had had remarkable success in keeping labour at work and satisfied with the small automatic wage increases to adjust to the cost-of-living index. However, in the fall of 1951 a conflict arose from the demands of 180,000 workers; Gerhardsen could not persuade the labour and the employer organizations to come to agreement. Up to 1949 the government had the right to request the wage bureau to issue a binding judgment, but that power had been abandoned. Hence, a special bill was passed in November to use this system of force in the case of the 180,000. Gerhardsen resigned a few days later.

The new prime minister was Oscar Torp, a party stalwart who had served 12 years in various cabinet posts. He pledged that there would be no change in either domestic or foreign policy. Three other cabinet ministers resigned at the time of the shift in prime ministers: Olav Meisdalshagen, Kristian Fjeld and Reidar Carlsen. In their respective places the vice-president of the Labour party, Trygve Bratteli, became minister of finance; Rasmus Nordbö, a farm specialist, took over the department of agriculture; and Peder Holt, governor of Finnmark, went to the fisheries department. In the defense ministry, Jens Christian Hauge submitted his resignation too, but because of a series of conferences in connection with the North Atlantic treaty he was asked to stay for several weeks longer.

The communal elections in October indicated slight gains for Labour, Conservatives and Farmers over the 1947 voting, and heavy losses for the Communists. In the country as a whole the Communist vote declined by about one-third.

Norway was active in support of the policies of the North Atlantic Treaty organization. Early in the year the training period for conscripts was raised from 9 months to 12, and the age for induction was lowered from 20 to 19. Total military forces were to be increased 30% by the end of 1952, to provide an army of 270,000. Expenditures were almost doubled, to approximately $100,000,000. For the air force 11 fighter squadrons were being developed; fliers were being trained in the United States and in Germany; and a first instalment of five Thunderjets arrived from the United States.

The U.S.S.R. protested against the consolidation of several small cemeteries of soviet World War II prisoners in Norway. In October the soviet government charged that Spitsbergen had been turned over to the North Atlantic Treaty organization contrary to international agreements by which Norway was granted sovereignty. The Norwegian government denied the charges. In November the U.S.S.R. sent a second note repeating the complaints. Also in November the soviet press circulated stories mentioning Gen. Robert K. Taylor and United States plans to establish on Spitsbergen an air base from which to attack the Soviet Union. General Taylor, in charge of the northern air forces of the North Atlantic states, said that the soviet statements were ridiculous, and that he knew of no U.S. plans concerning Spitsbergen.

The Norwegians worked vigorously to put their economy on an even keel, but imports still far surpassed exports. The difference was made up by two means—European Recovery program aid, which by 1951 totalled more than $400,000,000, and the earnings of the merchant fleet. The fleet's net earnings for the year were up about $52,000,000; tonnage had risen to 5,260,000, almost half of which was in tankers. Industry increased its share in the national product from 34% prewar to 40%; production of electric power from Norway's great waterfalls was up 70% over 1939. Completion of the aluminum plant at Sunndalsöra seemed assured by a grant of $24,000,000 from the Economic Co-operation administration and by special arrangements to repay in aluminum for Swedish credits for housing and other equipment. With this plant in operation Norway hoped to produce 100,000 tons of aluminum yearly. Private U.S. co-operation was planned for the construction of a sponge iron and alloy steel plant at Larvik in the southeast. (F. D. S.)

Education.—Schools (1947–48): elementary, rural 5,404, pupils 224,789; in the towns, pupils 71,414; secondary 295, pupils 42,158. Universities (1949): 2, students 5,294; other institutions of higher education 6, students 1,836, excluding teachers' training colleges with 1,520 students.

Foreign Trade.—Imports (1950) kr. 4,846,000,000, exports kr. 2,789,000,000. Main sources of imports (1950): U.K. 22.3%; Sweden 14.5%; U.S. 12.2%; France 6.5%. Main destinations of exports: U.K. 18.2%; western Germany 11.3%; U.S. 9.9%; Sweden 7.8%. Main imports: ships and boats 17%; textiles 13%; coal, petroleum and products 10%; machinery 10%. Main exports: wood pulp and paper 23%; fish and products 16%; fats and oils 14%; nonferrous metals and manufactures 12%.

Finance and Banking.—Budget: (1950–51 est.) revenue kr. 2,562,000,000, expenditure kr. 2,562,000,000; (1951–52 est.) revenue kr. 2,866,000,000, expenditure kr. 2,866,000,000. National debt (Dec. 1950) kr. 10,972,000,000, including balance of occupation account kr. 6,202,000,000 and foreign debt kr. 1,062,000,000. Currency circulation (Sept. 1951) kr. 2,381,000,000. Deposit money (Aug. 1951) kr. 5,233,000,000. Gold and foreign exchange (Sept. 1951) U.S. $155,000,000. Monetary unit: krone (pl. kroner), with an exchange rate (Nov. 1951) of kr. 7.14 to U.S. $1.

Transport and Communications.—Roads (1950): 27,742 mi. Licensed motor vehicles (Dec. 1950): cars 60,111, commercial 59,674. Railways (1950): 2,776 mi., including state railways 2,725 mi.; traffic on state railways (1950): passenger-miles 961,900,000; freight net ton-miles 817,300,000. Shipping (merchant vessels of 100 gross tons and over, July 1950): 2,224; total tonnage 5,690,000. Air transport (1950): miles flown 4,800,000; passenger miles 99,600,000; freight net ton-miles 3,000,000; mail ton-miles 600,000. Telephones (1950): 447,500. Radio receiving set licences (1949): 709,116.

Agriculture and Fisheries.—Main crops (metric tons, 1950–51): wheat 69,000; barley 107,000; oats 181,000; rye 3,000; potatoes 1,169,000 Livestock (June 1950): cattle 1,237,000; sheep 1,812,000; pigs 422,000 goats 130,000; horses 191,000; chickens 4,985,000. Food production (metric tons, 1950): delivered milk, *c.* 50% of total production, 977,000; butter 11,500; cheese 25,400; meat 109,000, of which beef and veal 41,000, mutton and lamb 16,000, pork, excluding lard, 49,000. Wool production, greasy basis (1950–51), 3,000 metric tons. Fisheries (1950): total catch 1,344,000 metric tons; value kr. 323,000,000. Whale oil production (1950): 1,106,000 bbl.; value kr. 282,000,000.

Industry.—Industrial establishments, excluding electrical plants, construction and building industries (1949): 6,176; persons employed: 36,212 salaried staff and 206,950 workers; gross value of production kr. 7,328,500,000. Fuel and power (1950): coal 384,000 metric tons; manufactured gas 45,600,000 cu.m.; electricity 17,328,000,000 kw.hr. Timber production (1950): 1,400,000 cu.m. Raw materials (metric tons, 1950): iron ore, 65% metal content, 403,000; pig iron 220,000; copper 9,400; zinc 43,100; aluminum 46,600; nickel 10,000; ferrosilicon, calculated 45% basis, 63,900; other ferroalloys 94,800; sulphur 96,200; pyrites 749,400; nitrogen 160,700; wood pulp, wet basis, 727,800. Manufactured goods: cellulose, dry basis, 483,600; newsprint 114,000; other paper and board 317,000; cement 583,300. Merchant vessels of 100 gross tons and over launched (1950): 57; total tonnage 53,402. Index of industrial production (1937=100; 1950): general index 141; producers' goods 148; consumers' goods 127.

Nose and Throat, Diseases of: *see* EAR, NOSE AND THROAT, DISEASES OF.

Nova Scotia.

Second smallest of the Atlantic provinces of Canada, Nova Scotia entered the confederation in 1867; area: 21,068 sq.mi.; pop. (1951 preliminary census) 638,277; capital: Halifax, pop. (1951 preliminary census) 84,433.

History.—The second session of the 21st legislature focused attention on Nova Scotia's main problem in 1951, which was the expanding costs of government services (especially in the fields of highways, public works, education, health and welfare) and the failure of sources of revenue to keep pace with the expenditures. Thus provincial tax increases went into effect on liquor, gasoline, amusements and telephone tolls. The 15-cent per gallon gasoline tax made the Nova Scotia levy the highest in Canada.

Education.—The provincial government paid 55.7% of the entire cost of education, which amounted to $8,739,000 in the 1951–52 estimates. Latest revised statistics for provincially controlled schools were for 1948: total enrolment 124,128; average daily attendance 103,858; teachers 3,958; total revenues $10,153,413.

Finance.—Revenue for the 1951–52 year was estimated at $40,714,128 (compared with actual revenue for 1950–51 of $36,778,962) and expenditures at $38,655,745 (1950–51, $36,641,088).

Transportation.—The Canso causeway linking mainland Nova Scotia with Cape Breton Island, to cost about $16,000,000 of federal and $7,000,000 of provincial money, was to be opened by 1955. By 1951 the total of paved highways reached 1,265 mi.

Agriculture.—A major step toward increased farm production was the near completion (with federal aid) of the 40,000-ac. reclamation scheme for marshlands, classified as among the most fertile in Canada. The 1951 potato crop dropped off 100,000 bu., and the apple crop fell from 750,000 bu.

HARVESTING SHAD in the Bay of Fundy, Nova Scotia, where nets are set up at low tide. When the tide sweeps in and covers the nets, fish are caught by their gills; they are plucked off at low tide as the fisherman drives across the flats in his wagon

in 1950 to 500,000 bu. Revised figures set the 1950 farm income at $55,000,000 (1949, $52,000,000). The total value of forest products in 1950 was $41,000,000.

Fisheries.—Landings for the first nine months of 1951 totalled 296,024,000 lb. (compared with 294,251,000 lb. for the same 1950 period), with a landed value of $16,167,000 ($20,800,000 for all of 1950). A $6,000,000 fish processing plant and wharf was opened at Louisburg, with an annual capacity of 66,000,000 lb.

Minerals.—A $10,000,000 federal loan to the Sydney coal interests helped boost coal production to 4,870,000 tons for Jan.–Sept. 1951, 320,000 tons more than the same 1950 period. Total 1950 mineral production was valued at about $60,000,000. (C. Cy.)

Nursing: *see* HOSPITALS.

Nutrition, Experimental.

Experimental nutritionists in 1951 continued to show interest in the possibility of producing food from mass cultures of microscopic plants. An alga commonly mentioned as a possible plant for mass culture was *Chlorella,* a green fresh-water microscopic unicellular form, which for years had been a favourite subject for research in photosynthesis. Fundamental work on the chemical composition of *Chlorella* and the effect of environmental conditions was undertaken by H. A. Spoehr and H. W. Milner. The object was to find environmental conditions which would modify the relative proportions of carbohydrates, proteins and lipids (fats)—three essential classes of nutrients.

By varying the composition of the "air," the solution in which the algae were grown, and the quality and quantity of sunshine available, Spoehr and Milner were able to vary considerably the composition of these tiny plants. The protein content varied from 9% to 58%, carbohydrate from 6% to 38% and fat from 4.5% to 85%.

Several scientists forecast that much of the world's future food supply would be grown by mass culture of some simple form of life such as *Chlorella.* The problems of conversion of algae into suitable and palatable forms of food remained unsolved, however, in 1951.

Arteriosclerosis.—Investigations designed to increase knowledge of the causes and to find more successful treatment of arteriosclerosis (hardening of the arteries) proceeded along two important lines: (1) attempts to produce the disease in animals and (2) documentation of the natural history of the disease in man. The extent to which arteriosclerotic lesions in animals can be considered to be experimental counterparts of the human disease was still widely discussed.

Experimental arteriosclerosis had been produced in several animal species such as the chicken, rabbit, dog and monkey. The disease in animals is usually induced by feeding a diet relatively high in fat and is associated with a prolonged rise in the blood fat component, cholesterol. A previous report that a high-cholesterol diet will induce arteriosclerosis in the golden hamster and the guinea pig was confirmed in 1951.

The production of arteriosclerosis in dogs requires not only the feeding of high cholesterol diets but the administration of a drug to slow down the activity of the thyroid gland. With such experimental studies the earliest lesions in the blood vessels appeared after about two months. The lesions were similar to those seen in the older dogs studied previously.

Observations made of chickens demonstrated spontaneous occurrence of arteriosclerosis comparable to that in man. The susceptibility of this species to arteriosclerosis was further demonstrated when it was found possible to produce lesions consistently by inclusion of cholesterol in the feed. In contrast to other species, particularly the rabbit and dog, chickens and other birds acquire arteriosclerosis under natural conditions of diet and environment. It would seem, therefore, that the chicken is particularly well adapted for laboratory investigation of arteriosclerotic changes. S. Rodbard and others in 1951 attempted an evaluation of the effect of age and the aging process on the susceptibility of chicks to arteriosclerosis when diets were supplemented with cholesterol. An interesting and unanticipated discovery was that certain age periods in the life of the chick are characterized by greater susceptibility to an increase in blood cholesterol and the blood vessel lesions.

Animal Nutrition.—Considerable information had been accumulated on the nutritional requirements of such experimental animals as the mouse and the rat. Very little information was available in 1951, however, on the nutritional requirements of inbred strains of such animals.

The nutritional requirements of the highly inbred strains of mice used extensively in experimental cancer studies had only recently been investigated. It was reported that C_{57} mice had a lower requirement for riboflavin than strain A mice. These strains differed markedly in their susceptibility to spontaneous mammary tumours, the A strain being susceptible and the C_{57} strain being resistant. It was also noted that strain C_{57} mice required less pantothenic acid for growth than did strain A mice, or mice of the C_3H strain, a strain highly susceptible to mammary tumours.

P. F. Fenton and C. J. Carr in 1951 determined the protein requirements for growth in four inbred strains of mice. The strains studied were C_{57}, I, A, and C_3H. The I strain is similar to the C_{57} strain in that it is resistant to spontaneous tumours, whereas the A and C_3H strains have a high incidence of spontaneous tumours.

Three levels of dietary protein were tested, 10%, 30% and 90%. Food consumption and weight gains were recorded. Mice of the I and C_{57} strains made relatively poor weight gains on the 10%-protein diet; during a 30-day experimental period these strains increased their body weight approximately six grams. In contrast, mice of the C_3H and A strains increased their body weight approximately 14 g. over a 30-day period on the 10%-protein diet.

On the 30%-casein diet the average 30-day body weight gains were 14, 13, 12 and 10 g., respectively, for strains C_3H, A, C_{57} and I. It is thus evident that increasing the dietary protein from 10% to 30% had no influence on the growth rate of strains C_3H and A, but resulted in a marked increase in the growth rate of strains C_{57} and I.

When diet containing 90% casein was fed, the mice of strains C_{57}, A and C_3H behaved alike and all gained about nine grams in body weight during the 30-day period. Strain I mice, in contrast, gained only about five grams during the same period on this diet.

These studies emphasized the fact that inbred strains of animals of a given species are characterized by different metabolic patterns which are reflected in differing nutrient requirements. The results clearly indicated that strain differences exist with respect to the utilization of protein for growth in mice. In the strains studied it was apparent that those with the lower protein requirement were distinguished by their susceptibility to spontaneous tumour development, while the strains with a high protein requirement were resistant to tumours. It appeared that the riboflavin and pantothenic acid requirements are low in strains which have a high protein requirement, and that such strains are further characterized by their resistance to spontaneous tumour development. Nuts.

The four U.S. tree nut crops were all above average in 1951 and prices continued favourable. The pecan crop of 143,137,000 lb. was 14% greater than the 1950 crop and 15% above average for the preceding decade. Improved varieties, predominantly grown in Georgia and Alabama, accounted for all of the increase, those types producing 77,612,000 lb. in 1951 but only 57,753,000 lb. in 1950. Oklahoma was the leading producer of wild pecans; the Texas crop was reduced 77% compared with 1950.

The 1951 California almond crop of 42,700 tons exceeded moderately the 37,700 tons of 1950 and substantially the 25,480-ton average for 1940–49. Shelled almond production in the Mediterranean basin and the middle east was estimated at 65,600 tons, much below the 98,500 tons for 1950 but near the average for 1940–49.

The English walnut crop, produced largely in California but partly in Oregon, of 75,800 tons was 18% more than in 1950 and 11% above average. Mediterranean basin production was estimated at 53,000 tons compared with 57,400 tons in 1950 and 65,800 tons in 1949.

Filberts, mostly produced in Oregon but partly in Washington, amounted to 7,390 tons compared with 6,680 tons in 1950 and 6,693 tons average for 1940–49. A large crop of 133,100 tons, compared with 83,500 tons in 1950, was forecast for the important Mediterranean basin area, especially Turkey, Italy and Spain.

The Brazil nut harvest was estimated at 33,000 tons, about one-half larger than 1950 or average. The estimated cashew production in India was 50,400 tons, lower than the 56,000 tons of 1950 but 6% above the 1940–49 average. (*See* also PEANUTS.)

(J. K. R.)

Nyasaland.

Nyasaland is a British protectorate in central Africa. Area: (including lakes) 47,900 sq.mi.; (land only 36,800 sq.mi.). Pop.: (1945 census) 2,049,917; (1950 est.) 2,337,000. Religion: pagan, with Christian minority. Chief towns: Zomba (cap.), Blantyre, Limbe. Governor, in 1951: Sir Geoffrey Colby.

History.—Nyasaland celebrated its diamond jubilee as a protectorate on May 15, 1951. A ceremonial parade was held in Zomba and a special issue of stamps made. African opinion was strongly opposed to the proposals for a federation of the Rhodesias and Nyasaland produced by a conference of officials in London and discussed at Victoria Falls in September (*see* RHODESIA, SOUTHERN.)

Education.—European schools (1950) 5 (attendance 281); Asian and coloured 9 (attendance 645); African 4,184 (attendance 134,931).

Finance and Trade.—Currency: sterling, with Rhodesian silver coinage. Budget: (1950 actual) revenue £2,343,593, expenditure £3,235,677; (1951 est.) revenue £3,900,900, expenditure £3,865,543. Foreign trade (1950): imports £7,543,323; exports £5,052,061. Principal exports (1950 values): tobacco £2,766,731, tea £1,690,712.

Communications.—Roads (1948) 4,000 mi.; railways 316 mi.

(G. R. MN.)

Oats.

The 1951 U.S. oat crop was an average one of 1,316,396,000 bu., resulting from above average yields on an acreage substantially reduced in the southwestern part of the main belt by a very wet and late sowing season, which caused some shift to other crops. Minnesota (212,764,000 bu.) replaced Iowa (182,886,000 bu.) as the leading oat producing state, followed by Wisconsin, Illinois and South Dakota.

Table I.—*U.S. Oat Crops*

	1951	1950	1949	Average 1940–49
Total production (thousands of bushels)	1,316,396	1,410,464	1,329,473	1,311,651
Acreage harvested (thousands) . . .	36,454	40,733	40,440	39,460
Yields (bushels per acre)	36.1	34.6	32.9	33.2

Table II.—*Oat Production of the Principal Producing Countries*

(In thousands of bushels)

Country	1951	1950	Average 1935–39
United States	1,316,396	1,410,464	1,045,329
U.S.S.R	—	750,000	1,165,000
Canada	502,114	419,930	338,071
France	248,160	227,690	329,304
Western Germany	190,000	175,000	194,500
United Kingdom	170,000	188,500	138,628

In spite of imports from Canada of more than 30,000,000 bu. in 1950–51 and an anticipated import in 1951–52 at about the same rate, the season average price received by farmers was estimated at 84.5 cents or 5 cents per bushel more than in 1950. Prices continued above the government support price of 72 cents per bushel and late in the year went above 90 cents per bushel. A national production goal of 1,360,000,000 bu. of oats was officially recommended for 1952 from 42,900,000 planted acres. The support price was set at not less than 78 cents.

The world oat crop of 1951 was estimated at 4,305,000,000 bu., as compared with 4,210,000,000 bu. in 1950 and 4,365,000,000 bu. before World War II, produced from 127,800,000 ac., as compared with 131,680,000 ac. in 1950 and 144,000,000 ac. prewar.

(J. K. R.)

Obituaries.

The following is a selected list of prominent men and women, of the United States and other countries, who died during the year 1951:

Abdullah ibn Hussein, king of the Hashemite Kingdom of Jordan (b. Mecca, Saud. Arab., 1882—d. Jerusalem, July 20, 1951), was the second son of King Hussein of the Hejaz. He joined his father in exile in Istanbul in 1893 and in 1907 was a member of the Ottoman parliament. During World War I he participated in the Arab revolt which started in June 1916. His father's unauthorized assumption of the title of "king of the Arab countries" was not viewed with favour by Ibn Sa'ud, king of Nejd. The estrangement between the two rulers resulted in a territorial dispute on the Hejaz-Nejd border. In May 1919 the Hejaz forces under Abdullah were annihilated by Ibn Sa'ud's army. In March 1921, after Transjordan was separated from Palestine, Winston Churchill, then British secretary of state for the colonies, offered Abdullah the rule of the new country as emir under British mandate. On May 25, 1946, he was crowned sovereign king of the Hashemite Kingdom of Transjordan (renamed Jordan in 1949). On May 15, 1948, he declared war on Israel, but his British-trained army failed to justify its reputation; an armistice was signed with Israel on April 3, 1949. On April 24, 1950, Abdullah announced in a speech from the throne the annexation of Arab Palestine to Jordan. He had interested himself particularly in plans for bringing about a union between Jordan, Syria and Iraq, the so-called "fertile crescent" scheme, but he encountered much opposition both in Damascus, Syr., and in Baghdad, Iraq. He was assassinated in Jerusalem. Abdullah was well known as a loyal friend of Great Britain.

Adamic, Louis, U.S. author (b. Blato, Slovenia, Yugos., March 23, 1899—d. near Riegelsville, N.J., Sept. 4, 1951).

Addison, Christopher Addison, 1ST VISCOUNT, OF STALLINGBOROUGH, LINCOLNSHIRE, British surgeon and politician (b. Hogsthorpe, Lincs., Eng., June 19, 1869—d. West Wycombe, Bucks., Eng., Dec. 11, 1951), was educated at Trinity college, Harrogate, Yorks., and at St. Bartholomew's Hospital Medical college, London. He was subsequently an anatomy lecturer at "Bart's," professor of anatomy at University college, Sheffield, and, in 1901, Hunterian professor at the Royal College of Surgeons, London. Elected Liberal member of parliament in 1910, he was parliamentary secretary, board of education, 1914–15, minister of munitions, 1916–17, minister in charge of postwar reconstruction, 1917, and first minister of health, 1919–21. He promoted an ambitious state-subsidized housing scheme, which caused an outcry against the heavy burden upon the taxpayer it would involve, and which strained the hitherto close relations between himself and Lloyd George, the prime minister. In 1921 Addison was transferred to a ministry without portfolio and in the same year he resigned from the government altogether. In 1922 he transferred his allegiance to the Labour party; in the same year he published *The Betrayal of the Slums* and, in 1926, *Practical Socialism.* In the 1929 general election Addison was returned to parliament, in the Labour interest, and the new prime minister, Ramsay MacDonald, appointed him successively parliamentary secretary to the ministry of agriculture and fisheries (1929–30) and minister of agriculture and fisheries (1930–31). In 1937 he was created a baron, and when the Labour party was returned to power in 1945 he was elevated to a viscountcy and appointed dominions secretary, remaining in charge when this department became the commonwealth relations office in 1947. In the same year, however, he asked to be relieved of some of his heavy duties because of his responsibilities as leader of the house of lords, and he was appointed lord privy seal. In 1948–49 he was paymaster general. When in March 1951 Herbert Morrison became foreign secretary, Addison succeeded him as lord president of the council.

Ahern, Michael J., U.S. educator and lecturer (b. New York, N.Y., May 25, 1877—d. Boston, Mass., June 5, 1951).

Aitken, Robert Grant, U.S. astronomer (b. Jackson, Calif., Dec. 31, 1864—d. Berkeley, Calif., Oct. 29, 1951), studied at Williams college, Williamstown, Mass., and taught mathematics and astronomy for several years before joining the staff of the Lick observatory on Mt. Hamilton, Calif. He was named associate director of the observatory in 1923 and director in 1930, retiring from that post in 1935. He devoted much of his career to the study of double stars, and in 1932 received the gold medal of the Royal Astronomical society. (*See* also *Encyclopædia Britannica.*)

"Alain" (EMILE-AUGUSTE CHARTIER), French writer (b. Mortagne, Orne, Fr., March 3, 1868—d. Le Vésinet, near Paris, Fr., June 2, 1951), took his pseudonym from Alain Chartier (*c.* 1392—*c.* 1430), French poet and political writer. He graduated from the Paris Ecole normale supérieure and taught philosophy at various *lycées.* He published about 50 books of which the best known were *Mars ou la guerre jugée* (1921), *Propos sur le christianisme* (1924) and *Les Eléments d'une doctrine radicale* (1925). His outlook was dominated by scepticism, resignation and pacifism, and he had considerable influence on French intellectuals and politicians. Although he continued to write in the *Nouvelle revue française* when it came under German control, he was awarded the Grand Prix National des Lettres in May 1951.

Allan, Sir Hugh Montague, Canadian steamship owner (b. Montreal, Que., Oct. 13, 1860—d. Montreal, Sept. 26, 1951).

Altamira y Crevea, Rafael, Spanish historian and jurist (b. Alicante, Sp., Feb. 10, 1866—d. Mexico City, Mex., June 1, 1951), was from 1897 to 1910 professor of the history of Spanish law in the University of Oviedo and from 1914 to 1936 was professor of the history of political and civil institutions in America in the University of Madrid. From 1922 to 1946 he was a judge of the Permanent Court of International Justice at The Hague. A republican, he did not return to Spain after the civil war, accepting instead a chair at the Autonomous National University of Mexico, Mexico City. His principal works were *Historia de España y de la civilización española* (4 vol., 1900–11) and *Psicologia del pueblo español* (3rd ed. 1945).

Amélie (MARIE AMÉLIE LOUISE HÉLÈNE DE BOURBON ORLÉANS), former queen of Portugal (b. Twickenham, Mdx., Eng., Sept. 28, 1865—d. Le Chesnay-Versailles, Fr., Oct. 25, 1951).

Anderson, Clifford C., U.S. archaeologist (b. 1870?—d. Xenia, O., Aug. 8, 1951).

Angly, Edward, U.S. war correspondent and author (b. Palestine, Tex., Jan. 29, 1898—d. New York, N.Y., Dec. 7, 1951).

Armstrong, Henry W. ("HARRY"), U.S. composer (b. Sommerville, Mass., July 22, 1879—d. New York, N.Y., Feb. 28, 1951), wrote the music for a number of ballads, of which "Sweet Adeline" was by far the most successful. The lyric for this ballad was written by Richard Gerard Husch, who wrote under the name Richard H. Girard. Originally entitled "You're the Flower of My Heart, Sweet Rosalie," it was not successful, but finally, in tribute to the opera singer, Adelina Patti, the name "Rosalie" was changed to "Adeline." The song was published in 1903 and later became immensely popular. Although it earned more than $2,000,000 during the following 50 years, the composers had sold their rights for $5,000, of which Armstrong had received $1,000.

Atwood, John Murray, U.S. theologian (b. Brockton, Mass., Sept. 25, 1869—d. Canton, N.Y., Nov. 4, 1951).

Azevedo, Philadelpho de Barros, Brazilian jurist (b. Rio de Janeiro, Braz., 1893?—d. The Hague, Neth., May 7, 1951).

Bachmann, Werner Emmanuel, U.S. chemist (b. Detroit, Mich., Nov. 13, 1901—d. Ann Arbor, Mich., March 22, 1951), studied at the University of Michigan at Ann Arbor and later at the University of Zürich, Switz., as a Rockefeller foundation fellow and in London and Munich as a Guggenheim Memorial foundation fellow. He became an instructor at the University of Michigan in 1925 and was made a full professor in 1939. Renowned professionally for his contributions in the field of organic synthesis, he was best known publicly for the development of a method of producing the explosive R.D.X. (cyclo-trimethylene-trinitramine) or cyclonite in quantity at low cost. The explosive, 50% more powerful than T.N.T., was widely used by the U.S. forces during World War II.

Badayev, Alexei Goodovich, soviet government official (b. Yuryevo, Russia, 1883—d. Moscow, U.S.S.R., Nov. 3, 1951).

Bailey, Mildred (MILDRED RINKER), U.S. blues singer (b. Indian reservation, Washington state, 1903?—d. Poughkeepsie, N.Y., Dec. 12, 1951).

Baker, Al, U.S. magician (b. Poughkeepsie, N.Y., 1874?—d. New York, N.Y., Oct. 24, 1951).

Baker, George Philip, British author (b. May 21, 1879—d. April 19, 1951).

Baldwin, Francis Marsh, U.S. biologist (b. West Upton, Mass., Jan. 16, 1885—d. Los Angeles, Calif., Feb. 2, 1951).

Ballantine, Henry Winthrop, U.S. law educator (b. Oberlin, O., Oct. 12, 1880—d. Berkeley, Calif., Dec. 4, 1951).

Bán, Antal, former Hungarian government official (b. 1903—d. announced at Zürich, Switz., Aug. 26, 1951).

Barbour, Sir John Milne, Irish industrialist (b. Lisburn, County Antrim, Ire., Jan. 4, 1868—d. near Belfast, N. Ire., Oct. 3, 1951).

Barere, Simon, Russian pianist (b. Odessa, Russia, 1896—d. New York, N.Y., April 2, 1951).

Barnes, Albert Coombs, U.S. art collector (b. Philadelphia, Pa., 1872—d. near Philadelphia, July 24, 1951), received an M.D. degree from the University of Pennsylvania, Philadelphia, in 1892 and later studied at the University of Heidelberg in Germany. He developed the formula for the antiseptic Argyrol, from which he made a fortune, but after about 1913 he devoted himself chiefly to the building up of an art collection, and in 1929 he sold his company, the A. C. Barnes Co., to the Zonite Products Corp. His collection eventually included art of all periods from before the time of Christ, containing 200 Renoirs, 100 Cézannes, 75 Matisses, 35 Picassos and more than 1,000 other pieces, which he reputedly purchased for only a quarter of their estimated $20,000,000 value. He was the author, or co-author, of five volumes on art: *The Art in Painting, Art of Cézanne, Art of Henri-Matisse, Art of Renoir* and *French Primitives and Their Forms.* He

1951 OBITUARIES: Abdullah ibn Hussein, king of Jordan; Ernest Bevin, British statesman; Fanny Brice, U.S. comedienne; Joseph B. Chifley, Australian statesman; Charles G. Dawes, U.S. financier

also established the Barnes foundation at Merion, Pa., to promote art education.

Bartholow, Otho F., U.S. religious leader and teacher (b. 1868?—d. Urbana, Ill., Sept. 26, 1951).

Basil, Vassily de (VASSILY GRIGORIEVICH VOSKRESENSKY), Russian ballet impresario (b. Caucasus (?), Russ., 1886?—d. Paris, Fr., July 27, 1951), was a colonel in the Imperial Russian army but after the Russian revolution went to western Europe and was for a time manager to the pianist Vladimir Horowitz. In 1925 he joined Prince Zereteli in the direction of the Russian Opera company, which appeared at the Lyceum theatre, London, with Fyodor Chaliapin in leading parts. From 1932 De Basil was co-director (and later was sole director) of the Ballets Russes de Monte Carlo. Under De Basil's direction this company became well-known in Europe and the United States; at various times it engaged such choreographers and dancers as Léonide Massine, Michel Fokine, George Balanchine, Irina Baronova and Tamara Toumanova.

Bates, Daisy, British friend of Australian aborigines (b. London, Eng., 1861—d. Adelaide, Austr., April 19, 1951).

Bauer, Harold, Anglo-American concert pianist (b. New Malden, Eng., April 28, 1873—d. Miami, Fla., March 12, 1951), began his musical career at the age of ten as a concert violinist. Ignace Jan Paderewski, the Polish pianist, prevailed upon Bauer to devote himself exclusively to the piano, and he became a concert soloist known to two generations in Europe and the Americas. He frequently participated in chamber music recitals, and for several years played sonata recitals with the Spanish cellist, Pablo Casals, and the French violinist, Jacques Thibaud. After 1941 he devoted himself largely to teaching and editing music. His reminiscences, published in 1948, were entitled: *Harold Bauer: His Book.* (*See* also *Encyclopædia Britannica.*)

Baur, Paul V. C., U.S. archaeologist (b. Cincinnati, O., Jan. 14, 1872—d. New Haven, Conn., June 5, 1951).

Baxter, Warner, U.S. actor (b. Columbus, O., March 29, 1893—d. Beverly Hills, Calif., May 7, 1951), was interested in amateur theatricals even while in high school, and retained that interest when he went into business—selling farm implements at first, and later insurance. In Dallas, Tex., he began playing roles in a stock company. He attempted to enter motion pictures, but remained on the stage for seven years before he became successful in films.

His best known role was as the Cisco Kid in the picture *In Old Arizona.* For this role he won an Academy Award in 1929 as the year's outstanding actor. He won further success later as Dr. Robert Ordway in the "Crime Doctor" series of movies. Other pictures in which he appeared were *Six Hours to Live, Paddy, the Next Best Thing, Forty-Second Street, Stand Up and Cheer, King of Burlesque, Slave Ship,* and *Kidnapped.* He virtually retired from the movies in the late 1940s and operated a real-estate venture in Malibu, Calif., where he had been a former mayor.

Baynton, Henry, British Shakespearean actor (b. Warwick, Warwick, Eng., Sept. 23, 1892—d. Worthing, Sus., Eng., Jan. 2, 1951).

Beakes, William E., U.S. radio pioneer (b. Newburgh, N.Y., 1880?—d. Miami, Fla., March 30, 1951).

Beattie, Douglas, U.S. opera singer (b. Calif., 1910—d. Fresno, Calif., Sept. 18, 1951).

Beck, Thomas Hambly, U.S. editor and publisher (b. Oakland, Calif., July 24, 1881—d. Stamford, Conn., Oct. 16, 1951).

Beebe, Lewis C., U.S. army officer (b. Iowa, Dec. 7, 1891—d. Faribault, Minn., Feb. 17, 1951).

Beerbohm, Lady (FLORENCE KAHN), U.S.-born British actress (b. Memphis, Tenn.—d. Rapallo, It., Jan. 1951).

Bender, Harold Herman, U.S. educator and etymologist (b. Martinsburg, W. Va., April 20, 1882—d. Princeton, N.J., Aug. 16, 1951).

Beneš, Vojta, Czechoslovak educator and political leader (b. Kozlany, Czech., May 17, 1878—d. South Bend, Ind., Nov. 20, 1951), was the brother of Eduard Beneš, president of Czechoslovakia. He began his career as a schoolteacher, and when the republic of Czechoslovakia was founded in 1919 he was superintendent of schools in Bohemia. He served in the chamber of deputies, 1925–35, and in the senate, 1935–39 and was central inspector of his country's public school system, 1930–36. He fled Czechoslovakia when Hitler invaded the country, returned after the end of World War II to serve again as senator until his resignation in 1948, after which he went to the United States.

Benmosché, Moses, British-born U.S. cancer research specialist (b. London, Eng., Dec. 5, 1883—d. New York, N.Y., Sept. 4, 1951).

Benson, Frank Weston, U.S. painter and etcher (b. Salem, Mass., March 24, 1862—d. Salem, Nov. 14, 1951).

Bernard, Merrill, U.S. climatologist (b. Burlington, Ia., July 25, 1892—d. Washington, D.C., April 13, 1951).

Bernus, Pierre, French editor (b. Basle, Switz., May 29, 1881—d. Paris, Fr., Dec. 22, 1951).

Bethune-Baker, James Franklin, British educator (b. Edgbaston, Warwick, Eng., Aug. 23, 1861—d. Cambridge, Cambs., Eng., Jan. 13, 1951).

Bevin, Ernest, British government official (b. Winsford, Som., Eng., March 9, 1881—d. London, Eng., April 14, 1951), son of an agricultural labourer, worked as a farmer's boy, van boy, streetcar conductor and truck driver. He became a national organizer of the Dockers' union in 1913 and in 1921 became secretary of the Transport and General Workers' union, of which he was the creator. From 1925 to 1940 he was a member of the general council of the Trades Union congress and in 1937 was its chairman. In May 1940 he became minister of labour and national service in Winston Churchill's coalition government and entered the house of commons as M.P. for central Wandsworth. He became secretary of state for foreign affairs in the Labour government in July 1945.

Bevin was present at the Potsdam conference in July–August 1945; he went to Moscow in Dec. 1945 to attend the "Big Three" foreign ministers' conference and returned there in March 1947 to take part in a "Big Four" council of foreign ministers. Until then Bevin had hoped that peace could be achieved through the friendly co-operation of the western powers with the U.S.S.R. and that a German peace treaty, reuniting the four occupation zones, was possible. In the summer of 1947, however, the soviet veto against the use of Marshall plan aid by the soviet-controlled European countries and Vyacheslav Molotov's refusal at the London meeting of the Council of Foreign Ministers (Nov.–Dec. 1947) to abandon the soviet plan of a highly centralized Germany closely tied to the U.S.S.R. finally convinced Bevin that he had been too optimistic; political, military and economic co-operation of the free nations of Europe was the only alternative. At Brussels, Belg., on March 17, 1948, he signed a treaty of alliance with France, Belgium, the Netherlands and Luxembourg. In Paris, on April 16, he presided over the signature of a convention creating the Organization for European Economic Cooperation. In Washington, D.C., on April 4, 1949, Bevin signed the North Atlantic treaty. In his last year of office Bevin's activity was reduced by poor health. On March 9, 1951, he resigned and was appointed lord privy seal.

Bickell, John P., Canadian mining financier (b. Molesworth, Ont., Sept. 26, 1884—d. New York, N.Y., Aug. 22, 1951).

Birdwood, William Riddell Birdwood, 1ST BARON OF ANZAC AND OF TOTNES, Devon, British field marshal (b. Kirkee, Bombay Presidency, Ind., Sept. 13, 1865—d. near London, Eng., May 17, 1951). (*See* also *Encyclopædia Britannica.*)

Bissonnette, Thomas Hume, Canadian-born U.S. biologist (b. Dundas, Ont., June 27, 1885—d. Hartford, Conn., Nov. 30, 1951).

Bjerknes, Vilhelm Friman Koren, Norwegian meteorologist (b. Norway, 1862—d. Oslo, Nor., April 9, 1951).

Blackwood, Algernon (Henry), British novelist and short story writer (b. Kent county, Eng., 1869—d. London, Eng., Dec. 10, 1951).

Blair, Emily (MRS. EMILY NEWELL BLAIR), U.S. author (b. Joplin, Mo., 1877?—d. Alexandria, Va., Aug. 3, 1951).

Blakstone, Nan (MRS. RONALD A. GERARD), U.S. singer (b. San Antonio, Tex., 1906—d. Chicago, Ill., Sept. 24, 1951).

Blamey, Sir Thomas Albert, Australian field marshal (b. Wagga Wagga, N.S.W., Austr., Jan. 24, 1884—d. Melbourne, Vict., Austr., May 27, 1951), was trained for the teaching profession but in 1906 joined the Australian permanent force. He later served in India and England and, during World War I, in Egypt, at Gallipoli and in France. In 1918 he became chief of staff of the Australian corps on the western front; his order to the Australians at the start of the final Allied offensive became a model for instruction at military schools and staff colleges. In 1919 he was chief of staff, Australian Imperial force. He was second chief of general staff, Australian Commonwealth Military forces, 1923–25, and chief commissioner of police, Victoria, 1925–37. From 1931 to 1937 he also commanded the 3rd Australian division and in 1939–40 was general officer commanding, 6th division, A.I.F. He commanded the 1st Australian corps in the middle east in 1940 and was appointed deputy commander in chief, middle east, under Lord Wavell in 1941; as such he was in charge of the ill-starred expedition to Greece. In 1942–45 he was commander in chief, Allied land forces, southwest Pacific area, under Gen. Douglas MacArthur, and received the surrender of the Japanese in that theatre in Sept. 1945. Blamey had been knighted in 1935 and was promoted field marshal in 1950; he was the first Australian soldier to attain this rank.

Bland, E. Beatrice, British impressionist painter (b. Lincoln, Lincs., Eng., 1868—d. London, Eng., Jan. 20, 1951).

Blegvad, Harald, Danish biologist (b. Samsö, Den., 1886?—d. announced Copenhagen, Den., Aug. 21, 1951).

Bliss, Gilbert Ames, U.S. mathematician (b. Chicago, Ill., May 9, 1876—d. Harvey, Ill., May 8, 1951).

Blue, Edna, U.S. welfare worker (b. New York, N.Y., 1901?—d. New York, March 24, 1951).

Bohr, Harald August, Danish mathematician (b. Copenhagen, Den., April 22, 1887—d. Copenhagen, Jan. 22, 1951).

Bolm, Adolf, Russian-born ballet dancer and choreographer (b. St. Petersburg, Russia, 1885?—d. Hollywood, Calif., April 16, 1951).

Bonomi, Ivanoe, Italian government official (b. Mantua, It., 1873—d. Rome, It., April 20, 1951), one of the founders of the Italian Socialist party in 1892, was elected deputy in 1909, but in 1912 was expelled from the party because he supported the Libyan war. In the same year, together with Leonida Bissolati-Bergamaschi, he founded the Socialist Reformist party which at the outbreak of World War I declared itself interventionist, whereas the "official" Socialist party was neutral. He was a minister in the Boselli cabinet (1916) and in the Orlando cabinet (1919), and minister of war and later minister of the treasury in the Giolitti cabinet (1920–21). In July 1921 he became prime minister but had to resign in Feb. 1922. Being anti-Fascist he was soon forced to retire from politics, not reappearing again until the German occupation of Rome in Sept. 1943, when he became head of the Roman Committee of National Liberation. From June 9, 1944, to June 12, 1945, he led two successive provisional governments. In 1948 he was elected president of the senate.

Bonsal, Stephen, U.S. writer and diplomat (b. Baltimore, Md., March 29, 1865—d. Washington, D.C., June 8, 1951), studied at St. Paul's school, Concord, N.H., the universities of Heidelberg and Bonn in Germany and in Vienna, Aus. At the age of 20 he was sent by the *New York Herald* to the Balkans to cover the Serbo-Bulgarian War. His other assignments as a correspondent included the Chino-Japanese War (1895); the Spanish-American War (1898); the China Relief expedition (1900); troubles in the Philippines (1901), Venezuela (1903), the Balkans (1904), and Russia (1907); and the Francisco Madero revolution in Mexico in 1910 and 1911.

He entered the U.S. foreign service as secretary of the legation and chargé d'affaires in Peking, China, and later served in the same capacity in Madrid, Sp., Tokyo, Japan, and in Korea. In 1917 he was named a major, stationed at the U.S. Army War college in Washington, D.C., and in 1918 he joined the headquarters staff of Gen. John J. Pershing, becoming attached to the U.S. mission to the peace conference at the end of World War I. At the Versailles peace conference he served as interpreter for Pres. Woodrow Wilson.

He won the 1945 Pulitzer prize in history for his book, *Unfinished Business*. He was also the author of other books extending over a half century of publishing history, from *Morocco as It Is* (1892) to *Suitors and Suppliants* (1946). His books helped to establish the behind-the-scenes exposé type of book later favoured by other foreign correspondents.

Booz, Edwin George, U.S. management counselor (b. Reading, Pa., Sept. 2, 1887—d. Evanston, Ill., Oct. 14, 1951).

Borchard, Edwin, U.S. law professor (b. New York, N.Y., Oct. 17, 1884—d. Hamden, Conn., July 22, 1951), served on the Yale university law school faculty for more than 30 years. An authority on international law and constitutional law, he also devoted much of his career to legal reforms. His book *Convicting the Innocent* (1932) was a study of miscarriages of justice. A lifelong exponent of U.S. neutrality, Borchard's works were frequently quoted in congressional debates prior to the U.S. entry into World War II. He served as adviser to many departments of the U.S. government.

Bosch, Ernesto, Argentine statesman (b. Buenos Aires, Arg., Jan. 8, 1863—d. announced Buenos Aires, Aug. 22, 1951).

Box, Charles Richard, British physician and surgeon (b. 1866—d. London, Eng., April 3, 1951).

Branham, Vernon C., U.S. criminologist (b. Denver, Colo., 1890?—d. Silver Springs, Md., Oct. 23, 1951).

Brice, Fanny, U.S. actress (b. New York, N.Y., Oct. 29, 1892—d. Hollywood, Calif., May 29, 1951), was born Fannie Borach, daughter of a lower east side New York saloonkeeper. She began her acting career at the age of 13 when she won an amateur singing contest. When she was 16 she obtained a job in the chorus of a George M. Cohan-Sam Harris review, but Cohan fired her when he discovered she could not dance. She then sang in burlesque houses in New York city, and eventually Florenz Ziegfeld, the producer, heard her and launched her on her career as a star.

She appeared as a singing comedienne in the *Ziegfeld Follies* for many years beginning in 1916. Her early acts included satires on ballet dancers, fan dancers and "vamp" actresses. She appeared with such stars as Eddie Cantor, Will Rogers, W. C. Fields and Willie Howard and in such reviews as *Music Box Review of 1924*, *Sweet and Low* and *Crazy Quilt*. She was especially renowned for her interpretations of two songs, "My Man" and "Rose of Washington Square."

She first created the character Baby Snooks, an annoying little girl, to amuse her friends, but brought Snooks to the radio in 1938 and played the role for many years. Her motion picture roles included acting the part of herself in *The Great Ziegfeld*, and appearances in *Everybody Sing* and *Be Yourself*.

She was married three times, first to Frank White, a Springfield, Mass., barber; later to Jules W. ("Nicky") Arnstein and then to the producer Billy Rose.

Bridie, James (Osborne Henry Mavor), British dramatist and physician (b. Pollokshields, Glasgow, Scot., Jan. 3, 1888—d. Edinburgh, Scot., Jan. 29, 1951).

Britton, Roswell Sessoms, U.S. educator (b. Shanghai, China, 1897?—d. New York, N.Y., Feb. 2, 1951).

Broch, Hermann Joseph, Austrian-born U.S. author and lecturer (b. Vienna, Aus., Nov. 1, 1886—d. New Haven, Conn., May 30, 1951).

Brockway, Howard, U.S. composer (b. Brooklyn, N.Y., Nov. 22, 1870—d. New York, N.Y., Feb. 20, 1951).

Broom, Robert, South African palaeontologist (b. Paisley, Renfrew, Scot., Nov. 30, 1866—d. Pretoria, Trans., U. of S.Af., April 6, 1951).

Brouckère, Louis de, Belgian government official (b. Roulers, Belg., 1870—d. Brussels, Belg., June 4, 1951).

Brown, Edward Killoran, Canadian-born U.S. educator (b. Toronto, Ont., Aug. 12, 1905—d. Chicago, Ill., April 23, 1951).

Brown, Lewis H(erold), U.S. industrialist (b. Creston, Ia., Feb. 13, 1894—d. Delray Beach, Fla., Feb. 26, 1951).

Browne, Arthur Heber, Anglican bishop of Bermuda (b. 1864—d. Hamilton, Bermuda, June 10, 1951).

Browning, Grace, U.S. social worker (b. Geary, Okla., Dec. 30, 1904—d. Indianapolis, Ind., Feb. 7, 1951).

Bryant, Lane (Mrs. Lena Himmelstein Bryant Malsin), U.S. clothing designer and retailer (b. Lithuania, 1879?—d. New York, N.Y., Sept. 26, 1951), went to the U.S. in 1895 and worked as a seamstress. She married David Bryant, a jewellery salesman, who died early in their marriage, and she was compelled to return to her work. In 1906 she opened a store, and it was in establishing a bank account that she accidentally signed her name "Lane" instead of "Lena." Embarrassed by the error, she did not correct it and was known as Lane Bryant thereafter. She won customers especially for her maternity dresses, designed to be "presentable but comfortable." In 1909 she married Albert Malsin, and thereafter devoted herself largely to creating designs while he ran the merchandising end of their business, which expanded rapidly. In 1923 the Lane Bryant enterprises were grossing $5,000,000 a year; by 1947 they were grossing $45,000,000 a year, and included 22 retail shops across the U.S. She had retired but had retained the title of vice-president of the company and took an interest in its operation until her death.

Buchholz, John Theodore, U.S. botanist (b. Polk County, Neb., July 14, 1888—d. Champaign, Ill., July 1, 1951).

Buck, Sir Peter Henry (Te Rangi Hiroa), New Zealand physician, politician and anthropologist (b. Urenui, Taranaki, N.Z., Aug. 15, 1880—d. Honolulu, T.H., Dec. 1, 1951).

Burch, Guy Irving, U.S. population analyst (b. Clayton, N.M., May 24, 1899—d. Washington, D.C., Jan. 13, 1951).

Burgess, (Frank) Gelett, U.S. author and humorist (b. Boston, Mass., Jan. 30, 1866—d. Carmel, Calif., Sept. 18, 1951), was graduated from the Massachusetts Institute of Technology, Cambridge, Mass., and began work as a draftsman with the Southern Pacific railway. He later taught topographical drawing at the University of California. Many of his subsequent writings were about California.

Burgess founded a magazine, the *Lark*, and in the first number appeared a quatrain which he wrote, and which became famous:

"I never saw a purple cow;
I never hope to see one;
But I can tell you anyhow,
I'd rather see than be one."

He thereafter went to New York city where he continued his humorous writing, which included *The Lively City o' Ligg* (1898), *Goops and How to Be Them* (1900), *The Rubaiyat of Omar Cayenne* (1904), and *Why Men Hate Women* (1927). He was credited with adding to the language a number of words, such as "blurb" and "goop," as well as a new meaning of the word "bromide."

Burton-Chadwick, Sir Robert, British government official (b. Birkenhead, Ches., Eng., June 20, 1869—d. London, Eng., May 21, 1951).

Busch, Fritz, German-born conductor (b. Siegen, Westphalia, Ger., March 13, 1890—d. London, Eng., Sept. 14, 1951).

Bush, John Fellows, U.S. former hospital official (b. Rochester, N.Y., 1874?—d. Rochester, N.Y., Nov. 29, 1951).

Bushnell, Edward Rogers, U.S. athlete and writer (b. Republican City, Neb., 1876?—d. Moorestown, N.J., Jan. 5, 1951).

Bustamante y Sirven, Antonio Sánchez de, Cuban jurist (b. Havana, Cuba, April 13, 1865—d. Havana, Aug. 24, 1951), studied at the University of Havana and at the University of Madrid in Spain, and began the practice of law in Havana in 1884. He was elected senator in 1902 when the republic of Cuba was constituted, and served until 1918. A delegate to the second peace conference at The Hague in 1907 and the Paris peace conference in 1919, he was made a member of the Permanent Court of Arbitration of The Hague in 1908 and a judge of the Permanent Court of International Justice in 1921. In 1928 he was chosen president of the sixth Pan-American conference, held at Havana, and was the author of a code of private international law which was adopted by that conference. He taught law for many years at the University of Havana, and lectured from time to time in the United States. He was the author of numerous works pertaining to international law. (*See* also *Encyclopædia Britannica.*)

Butler, Sir Harold Beresford, British labour relations expert (b. Oxford, Eng., Oct. 6, 1883 -d. Reading, Berks. Eng., March 26, 1951).

Byron, Joseph Wilson, U.S. army officer (b. Fort Meade, S.D., June 3 1892—d. at sea in the Caribbean, April 13, 1951).

Cadbury, Dame Elizabeth Mary (Mrs. George Cadbury), British social worker (b. London, Eng., June 24, 1858—d. Birmingham, Eng., Dec. 4, 1951).

Caffey, Francis Gordon, U.S. retired jurist (b. Gordonsville, Ala., Oct. 28, 1868—d. Verbena, Ala., Sept. 20, 1951).

Cahan, Abraham, Russian-born U.S. newspaperman and novelist (b. Podberezie, Russia, July 7, 1860—d. New York, N.Y., Aug. 31, 1951).

Cahier, Sarah, U.S. singer and teacher (b. Nashville, Tenn., 1874?—d. Manhattan Beach, Calif., April 15, 1951).

Caldwell, Fred T., U.S. business executive (b. Bloomfield, Ia., 1883—d. New York, N.Y., Dec. 21, 1951).

Caldwell, Robert J., U.S. industrialist and author (b. Louisville, Ky., May 12, 1875—d. Winter Park, Fla., Dec. 21, 1951).

Callaway, Llewellyn Link, U.S. jurist (b. Tuscola, Ill., Dec. 15, 1868—d. Helena, Mont., Aug. 6, 1951).

Capper, Arthur, former U.S. senator and publisher (b. Garnett, Kas., July 14, 1865—d. Topeka, Kas., Dec. 19, 1951), began his career as a typesetter on the *Topeka Daily Capital*. He later became a reporter, then city editor of that paper, and moved to New York city in 1891, serving as a reporter in New York and Washington, D.C., until 1893, when he returned to Kansas and entered business as owner of the *North Topeka Mail*, a small weekly farm journal. He later bought or founded numerous other publications in the farm field, including *Capper's Weekly, Capper's Farmer, Household, Missouri Ruralist, Kansas Farmer, Ohio Farmer, Pennsylvania Farmer, Michigan Farmer*—publications with tremendous influence in the farm belt and with a rich circulation and advertising revenue.

Capper was president of the board of regents of Kansas State Agricultural college, Manhattan, 1910–13, and in 1915 entered politics as governor of Kansas—the first native-born chief executive of the state. In 1918 he was elected to the U.S. senate and continued in service until his retirement on Jan. 3, 1949, when he was the oldest member of that body, though second to Kenneth McKellar of Tennessee in point of service.

Capper did not vote consistently with his Republican associates in the senate. He favoured U.S. entry into the Permanent Court of International Justice, and was author of a resolution that would have bound the U.S. to a general embargo against a nation that might violate the Kellogg pact to outlaw war as an instrument of national policy. He also favoured the New Deal type of farm legislation embodied in the Agricultural Adjustment act. Before World War II he was a leading noninterventionist, and in 1940 was one of four senators who voted against a big navy appropriation. He also opposed peacetime conscription.

Carbonara, Teresa, Italian-born U.S. educator (b. Italy, 1895?—d. New York, N.Y., Feb. 21, 1951).

Carey, William Francis, U.S. engineer and industrialist (b. Hoosick Falls, N.Y., Sept. 14, 1878—d. Indio, Calif., Feb. 23, 1951).

Carl, Prince (OSCAR CARL WILHELM), president of Swedish Red Cross (b. Stockholm, Swed., Feb. 27, 1861—d. Stockholm, Oct. 23, 1951).

Carmona, Antonio Oscar de Fragosa, Portuguese army officer and statesman (b. Lisbon, Port., Nov. 24, 1869—d. Lisbon, April 18, 1951), was a full general when first brought into contact with Portuguese politics as a member of a nonparty cabinet in Nov. and Dec. 1923. After the military *coup d'état* of May 28, 1926, headed by a triumvirate composed of himself, Gen. Gomes da Costa and Comdr. Mendes Cebeçâdas, he succeeded in removing his two colleagues. By July he was prime minister and on Nov. 26, 1926, he also assumed by decree the position of president of the republic. By the plebiscite of March 25, 1928, he was confirmed as president for five years (prolonged to seven in 1933 in accordance with the constitution of that year), and was re-elected in 1935, 1942 and 1949. Meanwhile Antonio de Oliveira Salazar had become prime minister in 1932 and was Portugal's real leader. On May 28, 1947, Carmona was raised to the rank of first marshal of Portugal. (*See* also *Encyclopædia Britannica.*)

Carpenter, John Alden, U.S. composer (b. Park Ridge, Ill., Feb. 28, 1876—d. Chicago, Ill., April 26, 1951), studied music at Harvard university under John Knowles Paine. Graduating from Harvard in 1897, he entered his father's mill, railroad and ship supply firm, and remained with this firm until his retirement in 1936. He continued to study music under Sir Edward Elgar and Bernhard Ziehn, however, and began to compose about the turn of the century. By 1912 his work had become fairly well-known. His *Concertino* for piano and orchestra was first played in 1916 by the Chicago Symphony orchestra with Percy Grainger conducting. His *Adventures in a Perambulator*, depicting the emotions of a baby on an outing, was perhaps his most-played work. His ballets included *The Birthday of the Infanta, Krazy Kat* and *Skyscrapers*.

Carter, Henry, British religious leader (b. Plymouth, Dev., Eng., Nov. 3, 1874—d. London, Eng., June 19, 1951).

Carton de Wiart, Henry Victor Marie Ghislain, COUNT, Belgian lawyer and statesman (b. Brussels, Belg., Jan 31, 1869—d. Brussels, May 6, 1951), entered politics as a member of the Catholic (later Social Christian) party; in 1896 he was elected a member for Brussels of the chamber of representatives and was afterwards constantly re-elected. From 1911 to 1918 he served as minister of justice. In 1919 he was appointed minister of state, and he served for a short period as minister to The Hague. He was prime minister and minister of the interior in 1920–21, minister of social welfare in 1933–34, minister without portfolio in 1949 and minister of justice in 1950. He was also a writer of distinction: *La Cité ardente* (1904) and *Les Vertus bourgeoises* (1910) gave him a European literary reputation. Until 1947 he was president of the Inter-Parliamentary union.

Casas, José Joaquin, Colombian government official (b. Chiquinquirá, Boyacá, Colom., Feb. 24, 1866—d. Bogotá, Colom., Oct. 8, 1951).

Cathcart, George Clark, British physician (b. Edinburgh, Scot., 1860?—d. Edinburgh, Jan. 4, 1951).

Chambers, Frank A., U.S. smoke expert (b. 1884?—d. Chicago, Ill., March 21, 1951).

Chambers, Ralph Hamilton, U.S. consulting civil engineer (b. St. Joseph, Mo., April 17, 1871—d. New York, N.Y., Dec. 22, 1951).

Chang Po-ling, Chinese educator (b. Tientsin, China, 1874—d. Hong Kong, China, Feb. 27, 1951).

Chapman, Virgil Munday, U.S. senator (b. Middleton, Ky., March 15, 1895—d. Bethesda, Md., March 8, 1951).

Chase, Irving Hall, U.S. industrialist (b. Waterbury, Conn., May 13, 1858—d. Waterbury, March 14, 1951).

Chase, Stanley Perkins, U.S. educator and author (b. Portland, Me., April 14, 1884—d. Brunswick, Me., Jan. 21, 1951).

Cheatle, Sir George Lenthal, British surgeon (b. June 13, 1865—d. Bushey, Herts., Eng., Jan. 2, 1951).

Chen Kuo-fu, Chinese government official (b. Wu-hsing, China, 1892—d. Taipei, Formosa, Aug. 25, 1951).

Chevallier, Pierre, French politician (b. 1909—d. Orleans, Fr., Aug. 12, 1951).

Cheyney, Peter (REGINALD EVELYN PETER SOUTHOUSE-CHEYNEY), British novelist (b. Feb. 22, 1896—d. London, Eng., June 26, 1951).

Chibas y Rivas, Eduardo, Cuban former senator (b. Santiago de Cuba, Cuba, Aug. 26, 1907—d. Havana, Cuba, Aug. 16, 1951).

Chifley, Joseph Benedict, Australian government official (b. Bathurst, N.S.W., Austr., Sept. 22, 1885—d. Canberra, N.S.W., Austr., June 13, 1951), was educated at the Patrician Brothers' High school, Bathurst. He worked for a time in a store, then joined the N.S.W. railways and became prominent in the Railway Locomotive Engine-Drivers' union. In 1928 he was elected representative of Macquarie (the Bathurst constituency) in the federal house of representatives and from 1929 to 1932 he was minister for defense. But he had lost his parliamentary seat in the election of 1931 and did not return to the house until 1940. In 1941 the Labour party returned to power: Chifley was appointed commonwealth treasurer and in 1942 was given an additional portfolio—postwar reconstruction. In April 1945, during the illness of the prime minister, John Curtin, Chifley acted for him and on Curtin's death (July 5) he succeeded to the Labour party leadership, and (on July 13) to the post of prime minister. He was confirmed in power in the 1946 elections, but his government's policy of nationalizing the private banks and the increasing labour unrest led to the defeat of the Labour party in 1949, when Chifley was succeeded as prime minister by Robert Menzies.

Christian, Henry Asbury, U.S. pathologist (b. Lynchburg, Va., Feb. 17, 1876—d. Whitefield, N.H., Aug. 24, 1951).

Christians, Mady (MARGUERITA MARIA CHRISTIANS), Vienna-born actress (b. Vienna, Aus., Jan. 19, 1900—d. Norwalk, Conn., Oct. 28, 1951), was the daughter of an actor-manager father and a mother who was a concert singer. Her family came to the U.S. in 1912, where her father managed the old Irving Place theatre in New York city, and she made her debut there at the age of 16. Returning to Europe, in 1917 she enrolled in Max Reinhardt's school of acting, Berlin, Ger., and for five years she toured Europe under Reinhardt's supervision, playing in a variety of dramatic as well as musical comedy roles.

She returned to the U.S. in 1931 and appeared initially in a series of plays that were failures. In Oct. 1938 she opened in *Hamlet* with Maurice Evans. Her subsequent roles included appearances in Shakespeare's *Henry IV* (part I), Lillian Hellman's *Watch on the Rhine*, and—perhaps her best-remembered role—that of the principal character (Mama) in John van Druten's adaptation of *I Remember Mama*, which was first produced in Oct. 1944 and continued for 720 performances on Broadway. She also appeared in numerous motion pictures.

Clovese, Joseph ("UNCLE JOE"), last surviving Negro veteran of the U.S. Civil War (b. St. Bernard parish, La., Jan. 28, 1844?—d. Allen Park, Mich., July 13, 1951).

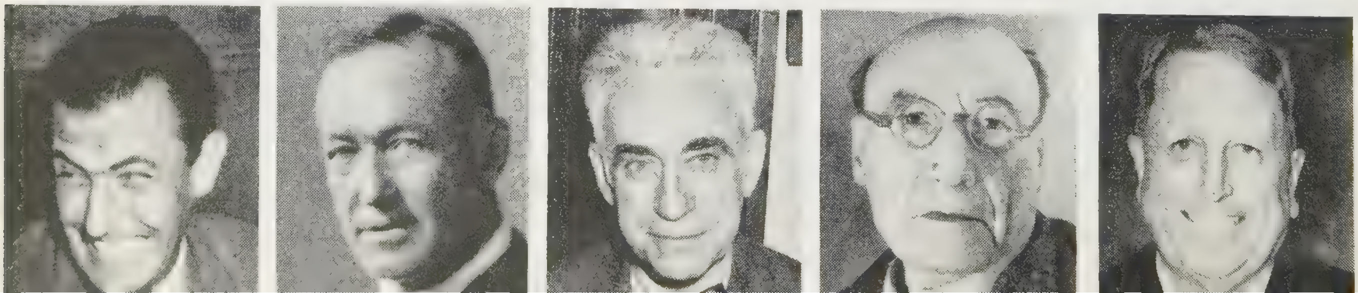
Cochran, Sir Charles Blake, British impresario (b. Lindfield, Sus., Eng., Sept. 25, 1872—d. London, Eng., Jan. 31, 1951).

Cody, Henry John, Canadian clergyman (b. Embro, Ont., Dec. 6, 1868—d. Toronto, Ont., April 27, 1951), was educated at the Galt Collegiate institute and the University of Toronto. He became rector of St. Paul's Anglican church in Toronto in 1899. He was a candidate for the bishopric of Toronto in 1909 but was defeated. However, he declined the positions of bishop of Nova Scotia (1904) and archbishop of Melbourne, Austr. (1921), besides refusing various other honours in order to remain with his Toronto parish. He served as minister of education for Ontario in 1918–19 and concurrently represented northeast Toronto in the Ontario legislature. He left his pulpit in 1932 to become president of the University of Toronto, serving in that capacity until 1945, and as chancellor of the university from 1944 to 1947.

Coe, George Albert, U.S. religious educator (b. Monroe county, N.Y., March 26, 1862—d. Claremont, Calif., Nov. 9, 1951).

Cogshall, Wilbur Adelman, U.S. astronomer (b. Mendon, Mich., Feb. 8, 1874—d. Rockford, Ill., Oct. 5, 1951).

Cohn, Jefferson Davis, British-born U.S. financier and sportsman (b. London, Eng., 1881—d. New York, N.Y., Feb. 20, 1951).



1951 OBITUARIES: Eddy Duchin, U.S. musician; Lincoln Ellsworth, U.S. explorer; John Erskine, U.S. educator; André Gide, French novelist; William Randolph Hearst, U.S. publisher

Collins, Edward Trowbridge ("EDDIE"), U.S. baseball player, manager and coach (b. Millerton, N.Y., May 2, 1887—d. Boston, Mass., March 25, 1951), entered professional baseball while still an undergraduate at Columbia university. He played second base with the Philadelphia Athletics from 1906 until 1914. In that time he starred in four world series, and when he was sold to the Chicago White Sox it was for a reported $50,000, the highest price ever paid for a ball player up to that time. He played second base for the White Sox for 12 years, ending as player-manager in 1925 and 1926. He rejoined the Athletics, but in 1933 went to the Boston Red Sox as general manager and vice-president. He continued in the position of vice-president after Joe Cronin was made the team's general manager in 1948. In their fourth annual poll (1939), the Baseball Writers' Association of America voted Collins a member of Baseball's Hall of Fame at Cooperstown, N.Y. His batting average over 25 years was .333, and his best two campaigns were in 1911 when he hit .365 and in 1923 when he hit .360.

Colpitts, Walter William, Canadian-born U.S. consulting engineer (b. Moncton, N.B., Sept. 17, 1874—d. Princeton, N.J., Dec. 23, 1951).

Cook, Waldo Lincoln, U.S. newspaper editor (b. Woonsocket, R.I., Feb. 19, 1865—d. Springfield, Mass., Sept. 16, 1951).

Coxey, Jacob S(echler), U.S. businessman and politician (b. Selinsgrove, Pa., April 16, 1854—d. Massillon, O., May 18, 1951), was the leader of the famed "Coxey's army" of the unemployed, which marched on Washington, D.C., in 1894. Coxey, as "general" of this army, sought to dramatize his idea that public works should be sponsored by the national government to end unemployment. He also sought currency and credit reforms. He was impelled to organize the march after he had been forced to discharge a number of his employees because of the economic slump of 1893.

Coxey himself was not too adversely affected by the panic. He was reasonably well-to-do and was widely known in sports fields. In fact, he led the march riding in a buggy pulled by a pacer from his stable, Acolyte, that was valued at $40,000. He was arrested in Washington for walking on the grass and for parading with banners in a restricted area and spent 20 days in jail. He eventually won a hearing before a subcommittee of the house ways and means committee, but no action was taken on his proposals.

He repeatedly sought public office and was elected mayor of Massillon in 1931, though he lost when he sought re-election in 1934 and again in 1943. On May 1, 1944, as a type of anniversary of the earlier march, he went to Washington and completed the speech unfinished 50 years before.

Dautry, Raoul, French government official (b. Montluçon, Fr., 1880—d. Lourmarin, Fr., Aug. 21, 1951).

Davenport, Ray Hills, U.S. inventor and business executive (b. Riseville, Pa., 1873?—d. Elizabeth, N.J., March 1, 1951).

Davis, Arthur Joseph, British architect (b. London, Eng., May 21, 1878—d. London, July 22, 1951).

Dawes, Charles Gates, U.S. former vice-president (b. Marietta, O., Aug. 27, 1865—d. Evanston, Ill., April 23, 1951), studied at the Cincinnati Law school, was admitted to the bar in 1886, and practised in Lincoln, Neb., until 1894. He became interested in utility companies in the midwest, and his success in these ventures brought him to public attention. He entered Republican politics as Illinois campaign manager for Pres. William McKinley in 1896 and was comptroller of the currency in the McKinley administration from 1898 to 1902. He then went into the banking field in Chicago.

When the U.S. entered World War I in 1917 Dawes went to France as a lieutenant colonel of the 17th engineers and later was promoted to the rank of brigadier general and appointed to the administrative staff of Gen. John J. Pershing. After the war he helped administer the disposal of U.S. war surplus in France. Returning to the U.S., he advocated U.S. ratification of the Versailles treaty including U.S. membership in the League of Nations, despite his party's general opposition to both stands.

He campaigned for federal budget reforms, and was named first director of the bureau of the budget in 1921. In 1923 he was named to a commission to study Germany's ability to pay war reparations. The result was the Dawes plan, which called for a restoration of sound currency in Germany as a prerequisite to reparations payments and for more realistic scales of payments themselves. For this effort he was awarded the Nobel peace prize in 1925, jointly with Sir Austen Chamberlain, British foreign secretary.

In 1924 he was nominated for vice-president on the Republican ticket headed by Calvin Coolidge which won an overwhelming triumph. He was U.S. delegate to the London Naval conference in 1930; U.S. ambassador to Great Britain, 1929–32, and in 1932 was named president of the Reconstruction Finance corporation. He resigned the same year and re-entered the banking field.

Dawes was also a musician and composer and was author of several books. (*See* also *Encyclopædia Britannica.*)

Day, Clive, U.S. educator and author (b. Hartford, Conn., Feb. 11, 1871—d. Greensboro, Vt., July 27, 1951).

Day, Edmund Ezra, U.S. educator (b. Manchester, N.H., Dec. 7, 1883—d. Ithaca, N.Y., March 23, 1951), was president of Cornell university, Ithaca, from 1937 to 1949. He studied at Dartmouth college, Hanover, N.H., and at Harvard university, receiving his Ph.D. at the latter institution in 1909. He taught at Harvard until 1923, meanwhile serving in government posts in World War I. He next went to the University of Michigan, Ann Arbor, where he headed the economics department, and also organized and served as dean of the school of business administration. From 1928 to 1937 he was director for social sciences for the Rockefeller foundation. At Cornell he established the first state school of industrial and labour relations in the U.S., a graduate school of aeronautical engineering and other projects that contributed to the growth of the university.

De Jesús, Angel Román, Puerto Rican jurist (b. Ciales, P.R., Aug. 9, 1891—d. San Juan, P.R., April 30, 1951).

Dempster, James H., Canadian-born U.S. roentgenologist (b. Elgin county, Ont., May 12, 1873—d. Detroit, Mich., Aug. 5, 1951).

De Nardis, Camillo, Italian composer (b. Orsogna, It., May 26, 1857—d. Naples, It., Aug. 5, 1951).

De Priest, Oscar Stanton, U.S. former congressman (b. Florence, Ala., March 9, 1871—d. Chicago, Ill., May 12, 1951).

Diegel, Leo, U.S. professional golfer (b. Detroit, Mich., April 27, 1899—d. North Hollywood, Calif., May 8, 1951).

Diffendorfer, Ralph Eugene, U.S. Methodist missionary and author (b. Hayesville, O., 1879?—d. New York, N.Y., Jan. 31, 1951).

Dix, Dorothy (MRS. ELIZABETH MERIWETHER GILMER), U.S. journalist (b. Montgomery county, Tenn., Nov. 18, 1870—d. New Orleans, La., Dec. 16, 1951), began newspaper work as a columnist on the *New Orleans Picayune*, and soon persuaded her editor to permit her to write a column to answer the various letters from readers about romantic problems. Thus began her famous *Dorothy Dix Talks* which became one of the most widely read U.S. news syndicate features. From 1900 to 1927 she worked largely out of New York city and then she returned to New Orleans. She received more than 2,000 letters a week about "heart problems," and worked daily on a schedule that called for her to develop a story angle, then to expand it in the form of advice felt to be suitably general and of universal romantic interest. She was also the author of several books, including *Fables for the Elite*, *My Joy Ride Around the World*, and *Hearts à la Mode*.

Dodd, Alvin Earl, U.S. industrial expert (b. Hudson, N.Y., March 11, 1883—d. New York, N.Y., June 2, 1951).

Dodero, Alberto Augustín, Uruguayan shipping executive (b. Montevideo, Urug., Jan. 2, 1887—d. Montevideo, March 2, 1951).

Dougherty, Dennis Joseph Cardinal, archbishop of Philadelphia and ranking prelate of the Roman Catholic hierarchy in the U.S. (b. Girardville, Pa., Aug. 16, 1865—d. Philadelphia, Pa., May 31, 1951), was the fifth American to become a cardinal, and the first American to be named a papal legate to a Eucharistic congress.

He worked summers as a breaker boy in a coal mine during his elementary school years, and studied for the priesthood in St. Mary's college, Montreal, Que., and the Theological Seminary of St. Charles Borromeo, Philadelphia, being ordained in Rome, It., May 31, 1890, after a session at the North American college there. He returned to St. Charles as a member of the faculty and became known as a brilliant instructor. From 1903 to 1915 he served as bishop in dioceses of the Philippines.

In 1915 he was appointed bishop of Buffalo, N.Y., assigned to restore the finances of the diocese which had been strained by the construction of a new cathedral. Within three years he had wiped out a deficit of $1,600,000. In 1918 he was named archbishop of Philadelphia, and Pope Benedict XV vested him with the red hat of the cardinalate in 1921.

He was one of the authors of the Legion of Decency movement, aimed against indecent motion pictures. He consistently voiced opposition to the encroachment of the state upon the liberties of the individual. His especial interests also included the status of the Roman Church in Mexico, and the growing problem of intemperance. He was incensed at the trials by Communist nations of members of the Catholic hierarchy, and the only press conference he ever called as a cardinal was for the purpose of speaking out, in 1949, against the Hungarian government's imprisonment of Joseph Cardinal Mindszenty.

Douglas, Lloyd C(assel), U.S. minister and author (b. Columbia City, Ind., Aug. 27, 1877—d. Los Angeles, Calif., Feb. 13, 1951), was one of the most popular American authors, although he did not write his first novel until he was 50 years old. He was the son of a minister and, after receiving the A.M. degree from Wittenberg College, Springfield, O., in 1903, he was ordained in the Lutheran ministry. He served in pastorates in North Manchester, Ind., Lancaster, O., and Washington, D.C. From 1911 to 1915 he was director of religious work at the University of Illinois, Urbana. The next six years he was minister of the First Congregational church in Ann Arbor, Mich., from there moving to Akron, O., then to Los Angeles, Calif., and finally to the St. James United church at Montreal, Que., from which pulpit he retired to write.

His written works were of a moral, didactic and distinctly religious tone. His first novel, *The Magnificent Obsession*, published in 1929, was an immediate and sensational success. Critics held that his type of fiction was in the tradition of the great religious writings of an earlier generation, such as *Ben Hur* and *Quo Vadis*.

Douglas then wrote *Forgive Us Our Trespasses*; *Green Light*; *White Banners*; *Disputed Passage*; *Doctor Hudson's Secret Journal*; *The Robe*, and *The Big Fisherman*. *The Robe* sold more than 2,000,000 copies, without any reprint edition. Douglas sold the motion picture rights to this story, but after $750,000 had been spent on the production the project was abandoned. This experience prompted Douglas, when he produced *The Big Fisherman* as the sequel to *The Robe*, to stipulate that *The Big Fisherman* would be his last novel, and that he would not permit it to be made into a motion picture, used over the radio, condensed or serialized.

Douglas, Robert Langton, British art expert (b. 1864—d. Fiesole, It., Aug. 15, 1951).

Driscoll, Charles Benedict, U.S. journalist and editor (b. Wichita, Kan., Oct. 19, 1885—d. Yonkers, N.Y., Jan. 15, 1951), had written the syndicated column "New York Day by Day" from 1938, when its original author O. O. McIntyre died, until his own death. As executive editor of the McNaught Syndicate, Inc., he had also contracted for or sponsored columns such as those by Mrs. Franklin D. Roosevelt, former Gov. Alfred E. Smith, Jimmie Fidler, Will Rogers, Irvin S. Cobb and Albert Einstein. His hobby was buried treasure and his best-known book, published in 1930, was *Doubloons, the Story of Buried Treasure.*

Drum, Hugh Aloysius, U.S. general (b. Fort Brady, Mich., Sept. 19, 1879—d. New York, N.Y., Oct. 3, 1951), received a presidential appointment as second lieutenant of infantry in Sept. 1898, while a student at Boston college.

He was promoted to first lieutenant in 1900 and captain in 1906. In 1911 he was graduated from the Army School of the Line and in 1912 completed the course at the Army Staff college, both at Ft. Leavenworth, Kan. He served in the Philippines and on the Mexican border in 1914. In World War I he was a brigadier general and served as chief of staff of the U.S. 1st army. Between the wars he was deputy chief of staff under Gen. Douglas MacArthur. By 1940 he was the senior ranking officer of the army in permanent commission, and had commanded all units from a brigade to a field army. After the Japanese attack on Pearl Harbor he was commanding general of the U.S. Eastern Defense command and of the 1st army, and in 1943 he retired with the rank of lieutenant general. From 1943 to 1948 he commanded the New York state guard, and in 1944 he assumed the position of president of the Empire State building, succeeding Alfred E. Smith. During half of his 45 years in military service he held the rank of general officer.

Duchin, Edwin Frank ("Eddy"), U.S. pianist and orchestra leader (b. Cambridge, Mass., April 1, 1909—d. New York, N.Y., Feb. 9, 1951), studied at the Massachusetts College of Pharmacy, Boston. He played the piano for college orchestras and in 1928 received an audition from orchestra leader Leo Reisman. He accepted a job as pianist on condition that he be permitted to return to finish his college studies. He received his pharmacy degree in 1929, then rejoined the Reisman orchestra and never returned to pharmacy.

In 1931 he made his debut with his own orchestra, and soon became one of the country's most popular orchestral entertainers. His orchestra appeared in motion pictures and at major night clubs and hotels. In 1942 he enlisted in the navy, and served on destroyer duty in both the Atlantic and the Pacific, leaving the service as a lieutenant commander. He wrote four books on piano technique.

Duffy, George Gavan, Irish judge (b. Rock Ferry, Ches., Eng., Oct. 21, 1882—d. Dublin, Ire., June 10, 1951).

Dugan, Winston Dugan, 1st Baron of Victoria and of Lurgan in the County of Armagh, British government official (b. May 8, 1877—d. London, Eng., Aug. 17, 1951).

Dumaine, Frederic Christopher, U.S. industrialist (b. Hadley, Mass., March 6, 1886—d. Groton, Mass., May 27, 1951).

Dumond, Frank, U.S. painter and art director (b. Rochester, N.Y., 1865—d. New York, N.Y., Feb. 6, 1951).

Duryea, Nina Larrey Smith (Mrs. Chester B. Duryea), U.S. author and playwright (b. Cohasset, Mass., Aug. 11, 1869—d. Great Barrington, Mass., Nov. 1, 1951).

Dykema, Peter W., U.S. music educator and composer (b. Grand Rapids, Mich., Nov. 25, 1873—d. Hastings-on-the-Hudson, N.Y., May 13, 1951).

Early, Stephen Tyree, U.S. journalist and government official (b. Crozet, Va., Aug. 27, 1889—d. Washington, D.C., Aug. 11, 1951), attended school in Virginia and in Washington, D.C., and began newspaper work in 1908. He covered the U.S. navy department for the Associated Press during the time that Franklin D. Roosevelt served as assistant secretary of the navy. He served overseas as a captain with a machine-gun outfit in World War I, winning the Silver Star, and in 1920 was associated with Franklin D. Roosevelt's unsuccessful campaign for the vice-presidency. He rejoined the Associated Press in 1920 and left that organization seven years later to become Washington representative of Paramount-Publix corporation and Paramount News. When Roosevelt became president in 1933 Early became the president's assistant secretary in charge of press relations and later secretary. Throughout most of the Roosevelt regime he was known as the official spokesman of the White House.

In May 1945 he retired to private business as a vice-president of Pullman, Inc., but returned to government service in April 1948 as undersecretary of defense. He left government service again in Sept. 1950 but was recalled for an emergency period in December of that year after the death of the presidential press secretary Charles G. Ross, remaining only long enough for the appointment of a successor.

Eisler, Paul, U.S. composer and conductor (b. Vienna, Aus., Sept. 9, 1878—d. New York, N.Y., Oct. 16, 1951).

Ellenbogen, Wilhelm, Austrian Socialist leader (b. Nicolsburg, Moravia, 1863—d. New York, N.Y., Feb. 25, 1951).

Ellinger, Desirée, British singer (b. Manchester, Lancs., Eng., Oct. 7, 1893—d. London, Eng., April 30, 1951).

Ellmaker, Lee, U.S. publisher (b. Lancaster, Pa., Aug. 7, 1896—d. Philadelphia, Pa., March 27, 1951).

Ellsworth, Lincoln, U.S. explorer (b. Chicago, Ill., May 12, 1880—d. New York, N.Y., May 26, 1951), was the son of a mine operator and financier from whom he inherited the fortune that made his later explorations financially possible. He studied at the Sheffield scientific school at Yale university and at the Columbia university school of mines, but on leaving college turned to frontier life in the northwest, as an axman on a railroad survey across Canada and as a mining engineer. He qualified as a flier in France during World War I, but was not accepted for active duty. In 1924 he led an expedition sponsored by Johns Hopkins university to make a geological cross section of the Andes mountains from the Pacific ocean to the headwaters of the Amazon river. In 1941, as a lieutenant commander of the U.S. naval reserve, he led a journey of exploration into Peru to search for the tombs of the Inca emperors.

It was as an explorer in the arctic and antarctic that he was best known. In 1925, with Roald Amundsen, he led a transpolar flight of two planes from Spitsbergen to Alaska, which almost ended tragically in a forced landing with the loss of one plane near the pole. In 1926, with Amundsen and Col. Umberto Nobile in the latter's dirigible "Norge," he flew across the pole to Alaska. Congress awarded him a special gold medal for his polar explorations.

In 1931 he helped Sir Hubert Wilkins plan his submarine expedition to the arctic and in the same year flew in the "Graf Zeppelin" on its arctic flight. In 1933 and again in 1934 he was prevented by accidents from attempting flights across the antarctic continent with the pilot Bernt Balchen. In 1935, however, he flew across the continent with Herbert Hollick-Kenyon as pilot. The explorers were downed in a blizzard, being rescued finally from the shack that had been occupied by Adm. Richard E. Byrd during his previous antarctic explorations. On his antarctic flights Ellsworth claimed more than 300,000 sq. mi. of territory for the United States.

Erhardt, John George, U.S. ambassador (b. Brooklyn, N.Y., Nov. 4, 1889—d. Capetown, U. of S. Af., Feb. 18, 1951).

Errol, Leon, U.S. stage and motion-picture comedian (b. Sydney, N.S.W., Austr., July 3, 1881—d. Hollywood, Calif., Oct. 12, 1951).

Erskine, John, U.S. educator and author (b. New York, N.Y., Oct. 5, 1879—d. New York, N.Y., June 2, 1951), as a youth wished to be a musician, and he studied piano and composition, the latter with the composer Edward MacDowell. Throughout his life Erskine continued to play with amateur groups and occasionally on the concert stage. He was active in Metropolitan Opera affairs and served as president of the Juilliard School of Music from 1928 to 1937.

He pursued his higher education at Columbia university, taught English at Amherst college, Mass., then went to Columbia university where he remained from 1909 to 1937 as professor of English literature.

Erskine was a challenging and inspiring teacher, especially because of his ability to instil in his students a new appreciation of the great works of the past. Among his disciples in the Great Books movement were Mortimer Adler, Clifton Fadiman and Mark Van Doren. His influence remained after his death, implicit in the extension of the Great Books movement to hundreds of communities and tens of thousands of students.

As an author, Erskine was best known for his *Private Life of Helen of Troy*, a work that used a classical background to comment on the contemporary "jazz age." Published in 1925, the book established Erskine's popular reputation as a writer. It was translated into 16 languages. He published 30 books in the next 20 years, many of them also having classical themes. Among them were reconstructions of the stories of Sir Galahad, Adam and Eve and François Villon.

Essary, Helen (Mrs. William J. Murphy), U.S. news columnist (b. Baltimore, Md., 1886?—d. Washington, D.C., Aug. 15, 1951).

Fairbank, Janet Ayer (Mrs. Kellogg Fairbank), U.S. author (b. Chicago, Ill.—d. Milwaukee, Wis., Dec. 28, 1951), was married in 1900 to Kellogg Fairbank, Chicago attorney, and began her novel-writing with *At Home* (1910). She was a leader in the cause of woman suffrage and was prominent in Democratic politics as Illinois national committeewoman from 1924 to 1928. Her other novels included *The Smiths* (1925), *The Lion's Den* (1930), *The Bright Land* (1932), *Rich Man—Poor Man* (1936) and a book of short stories, *Idle Hands* (1927).

Falcaro, Joe, Italian-born U.S. bowling champion (b. Naples, It., 1896?—d. Flushing, N.Y., Sept. 6, 1951).

Felici, Ettore, papal nuncio to Ireland (b. Segni, It., March 12, 1881—d. Dublin, Ire., May 9, 1951).

Fellowes, Edmund Horace, British Elizabethan music authority (b. London, Eng., Nov. 11, 1870—d. Windsor, Eng., Dec. 21, 1951).

Fellows, Frank, U.S. congressman (b. Bucksport, Me., Nov. 7, 1889—d. Bangor, Me., Aug. 27, 1951).

Fentress, E. S., U.S. newspaper publisher (b. near Parsons, Kan.—d. Waco, Tex., Feb. 14, 1951).

Fergusson, Sir Charles, former governor general and commander in chief of New Zealand (b. Edinburgh, Scot., Jan. 17, 1865—d. Ayrshire, Scot., Feb. 20, 1951).

Firestone, Russell Allen, U.S. business executive (b. Akron, O., Dec. 3, 1901—d. New York, N.Y., Dec. 12, 1951).

Fiset, Sir Eugene (Marie-Joseph), Canadian government official (b. Rimouski, Que., March 15, 1874—d. Rivière du Loup, Que., June 8, 1951).

Fisher, Dudley, U.S. cartoonist (b. Columbus, O., 1890?—d. Rockport, Mass., July 10, 1951), was the originator of the cartoon "Right Around Home," first conceived for the *Columbus Dispatch*, but eventually syndicated by King Features Syndicate to nearly 200 newspapers. He also was the author of the strip "Myrtle," which he began in 1942 and in which the principal character was based on his daughter Marion.

Flaherty, Robert Joseph, U.S. motion picture producer (b. Iron Mountain, Mich., Feb. 16, 1884—d. Dummerston, Vt., July 23, 1951).

Flowers, Robert Lee, U.S. college president (b. Alexander county, N.C., Nov. 6, 1870—d. Durham, N.C., Aug. 24, 1951).

Foerster, Josef Bohuslav, Czechoslovak composer (b. Bohemia, Dec. 30, 1859—d. Stara Boleslav, Czech., May 29, 1951).

Forbes, Ralph, U.S. actor (b. London, Eng., Sept. 30, 1905—d. New York, N.Y., March 31, 1951), made his first stage appearances in England but moved to the U.S. in 1924. He played opposite Ruth Chatterton in *The Magnolia Lady*, and they were married in Dec. 1924. They acted together in *The Little Minister* and *The Man With a Load of Mischief*, after which Forbes went to Hollywood and appeared in motion pictures. His marriage to Ruth Chatterton ended in divorce, as did his later marriage to Heather Angel. In 1946 he married Dora L. Sayers. His plays included *Private Lives*; *The Doctor's Dilemma*, opposite Katharine Cornell; *Hedda Gabler* opposite Katina Paxinou; *A Kiss for Cinderella* with Luise Rainer. His motion picture films included appearances in *The Little Minister, Bachelor Father, The Green Goddess, Her Wedding Night, Frenchman's Creek, Stage Door, The Last of Mrs. Cheyney, Mary of Scotland*, and *Romeo and Juliet.*

Foster, Frances Middleton, U.S. educator and editor (b. New York, N.Y., 1888?—d. Bronxville, N.Y., Nov. 5, 1951).

Fremstad, Olive (ANNA OLIVIA), Swedish-born U.S. singer (b. Stockholm, Swed., 1871?—d. Irvington, N.Y., April 21, 1951).

Fulton, Chester Alan, U.S. mining engineer (b. Brooklyn, N.Y., Dec. 18, 1883—d. Baltimore, Md., Aug. 16, 1951).

Fyfe, W. Hamilton, British author and journalist (b. London, Eng., Sept. 28, 1869—d. Eastbourne, Sus., Eng., June 15, 1951).

Gates, Eleanor, U.S. novelist and playwright (b. 1875?—d. Los Angeles, Calif., March 7, 1951).

Gauss, Christian, U.S. educator (b. Ann Arbor, Mich., Feb. 2, 1878—d. New York, N.Y., Nov. 1, 1951).

Geist, Walter, U.S. manufacturing executive (b. Milwaukee, Wis., Dec. 1, 1894—d. Milwaukee, Jan. 29, 1951).

Gentile, Don S., U.S. air force officer (b. Piqua, O., June 12, 1920—d. near Ritchie, Md., Jan. 28, 1951), was the 12th ranking U.S. ace in World War II. He became a royal Canadian air force cadet in July 1941. The following December he was appointed an R.C.A.F. pilot officer and flew with various R.C.A.F. squadrons out of England until June 1942 when he joined the Eagle squadron. He destroyed his first enemy aircraft in Aug. 1942, and the following month he was commissioned a second lieutenant in the U.S. army and assigned to the 8th air force as a fighter pilot. He and his wingman, Capt. John T. Godfrey, were praised by Gen. H. H. Arnold as the greatest combat team of any war. Hermann Goering, commander of the German *Luftwaffe*, remarked that he "would gladly give two of his best squadrons for the capture of the Italian Gentile and the Englishman Godfrey." Winston Churchill described the pair of fliers as the Damon and Pythias of the 20th century. They alternated flying protection for each other, and together destroyed more enemy planes than any other two U.S. fighter pilots. Gentile flew 182 combat missions, and destroyed 19.80 German planes in the air and 6 on the ground. (The fractional number is accounted for by "kills" he shared with other pilots.) He crashed in a jet training plane while on a routine flight out of Andrews air force base.

George VI, king of Great Britain, Ireland and the British dominions beyond the seas (b. York Cottage, Sandringham, Eng., Dec. 14, 1895—d. Sandringham, Eng., Feb. 6, 1952). *See* article GEORGE VI.

Georges, Alphonse Joseph, French army officer (b. Montluçon, Allier, Fr., Aug. 15, 1875—d. Paris, Fr., April 24, 1951), graduated from Saint-Cyr and later attended the École Supérieure de Guerre. He subsequently served in Algeria and, during World War I, after being badly wounded as an infantry battalion commander, held staff posts at Salonika and on the western front. In 1925 he became chief of staff to Marshal Henri Philippe Pétain during the Moroccan campaign against Abdel Krim. Appointed to command the Algiers division in 1928, three years later he became commander of the 19th (Algerian) army corps. He was severely wounded in Oct. 1934 while in the company of King Alexander of Yugoslavia at the time of the latter's assassination at Marseilles, Fr. General of the army in 1939, Georges became deputy to the Allied commander in chief Gen. Maurice Gustave Gamelin, and commander in chief of the northeastern front; however, the two generals quarrelled and Georges found himself deprived of much of his authority. After the French capitulation in 1940 he went into retirement, but in 1943 escaped to Algiers and placed his services at the disposal of Gen. Henri Giraud.

Gerard, James Watson, U.S. lawyer and diplomat (b. Geneseo, N.Y., Aug. 25, 1867—d. Southampton, L.I., N.Y., Sept. 6, 1951), won historic fame as U.S. ambassador to Germany during the early years of World War I. Though without previous diplomatic experience, he was responsible for a firm U.S. attitude toward Germany, which also included representations on behalf of the Allied nations then at war with the Germans, which won him acclaim on both sides of the Atlantic. Gerard attended Columbia university and the New York Law school, and served in the Spanish-American War. His first public office was as counsel to the sheriff of New York county. He was next elected to the New York state supreme court, but resigned in 1913 when he was appointed ambassador to Germany. During World War I he raised large sums for the national treasury through his speaking campaigns on behalf of the Liberty Loans. He later wrote two books, based on his experiences in Germany, both of which gained wide circulation. They were *My Four Years in Germany*, and *Face to Face with Kaiserism* (1918). (*See* also *Encyclopædia Britannica.*)

Germanos (LUCAS STRENOPOULOS), Greek Orthodox archbishop (b. near Silivri, eastern Thrace, Turk., Sept. 27, 1868—d. London, Eng., Jan. 23, 1951).

Gide, André Paul Guillaume, French writer (b. Paris, Fr., Nov. 22, 1869—d. Paris, Feb. 19, 1951), attended the Ecole Alsacienne, Paris, a Protestant secondary school, until the age of 11, when his father died, leaving him in the care of his mother and aunt, women of rigid morals. His first book, *Les Cahiers d'André Walter* (1891), in which he attempted to describe the sufferings of adolescence, was published anonymously and at his own expense. He became a frequenter of the Parisian *fin-de-siècle* literary world revolving round such figures as Paul Valéry, Stéphane Mallarmé, Pierre Louys, Maurice Maeterlinck and Oscar Wilde. Entering the literary field as an essayist, André Gide found expression also in poetry, fiction, drama, criticism, reminiscence and translation from English literature. Before World War I he published about 20 books, of which *Les nourritures terrestres* (1897), *L'Immoraliste* (1902), *Le retour de l'enfant prodigue* (1907) and *Les Caves du Vatican* (1914) were the most important. He earned, however, small recognition until his emergence after the war as an apostle of revolt against traditional morality: in the atmosphere of disillusion that succeeded victory, works such as the autobiographical *Si le grain ne meurt* (1921), *Corydon* (written in 1911 but published in 1924) and the novel *Les Faux-Monnayeurs* (1926) appealed to a large section of French and European youth. A visit to the French Congo in 1926 produced *Voyage au Congo* (1927) in which he attacked the abuses of colonialism. This book marked the awakening of a social consciousness and Gide's conversion to communism followed in the early 1930s. A journey to soviet Russia, however, resulted in disenchantment with the Communist regime (*Retour de l'U.R.S.S.*, 1936). In 1947 he received the Nobel prize for literature. In the years before his death, the successive volumes of Gide's *Journal*, which had been published in France since 1930, began to appear in English translation. (*See* also *Encyclopædia Britannica.*)

Gillet, Martin Stanislaus, French archbishop (b. Louppy-sur-Loison, Meuse, Fr., Dec. 14, 1875—d. Aix-les-Bains, Fr., Sept. 4, 1951).

Gillette, Wilson Darwin, U.S. congressman (b. Sheshequin, Pa., July 1, 1880—d. Towanda, Pa., Aug. 7, 1951).

Goddard, Charles William, U.S. screen writer (b. Portland, Me., Nov. 26, 1879—d. Miami, Fla., Jan. 11, 1951).

Goldsborough, T(homas) Alan, U.S. jurist (b. Greensboro, Md., Sept. 16, 1877—d. Washington, D.C., June 16, 1951), studied at Washington college, Chestertown, Md., and the University of Maryland at College Park, and began the practice of law in Denton, Md. In 1904 he was elected county prosecutor. He served in the U.S. house of representatives from 1921 to 1939, when he resigned to accept an appointment as U.S. district judge in the District of Columbia.

Judge Goldsborough attained national prominence through his two rulings holding John L. Lewis and the United Mine Workers union in contempt of court for violating injunctions restraining them from continuing strikes. In 1946 he levied fines of $10,000 against Lewis and $3,500,000 against the union, the latter penalty being reduced to $700,000 by the U.S. supreme court. In 1948 he denied the union's contention that a nation-wide halt of production was a "voluntary work stoppage," and fined Lewis $20,000 and the union $1,400,000, both fines being upheld by the supreme court.

Judge Goldsborough also presided at the trial of Oscar Collazo, Puerto Rican nationalist, for murder committed during the attempted assassination of Pres. Harry S. Truman on Nov. 1, 1950.

Gonzalez, Elpidio, former vice-president of Argentina (b. Argentina, 1875?—d. Buenos Aires, Arg., Oct. 18, 1951).

Goodenough, Sir William MacNamara, British financier (b. March 10, 1899—d. Gloucestershire, Eng., May 23, 1951).

Grant, Bert, U.S. composer of popular ballads (b. New York, N.Y., 1878?—d. New York, N.Y., May 10, 1951).

Graves, Henry Solon, U.S. educator (b. Marietta, O., May 3, 1871—d. Brattleboro, Vt., March 7, 1951).

Greene, Henry Copley, Austrian-born U.S. author and historian (b. Vienna, Aus., Nov. 21, 1871—d. Cambridge, Mass., Dec. 29, 1951).

Grever, Maria, Mexican-born U.S. composer (b. Mexico City, Mex., 1894—d. New York, N.Y., Dec. 15, 1951).

Grey, Frank Herbert, U.S. composer and conductor (b. Philadelphia, Pa., Nov. 15, 1883—d. Beverly Hills, Calif., Oct. 3, 1951).

Gruenwald, Alfred, Austrian-born U.S. librettist and playwright (b. Vienna Aus., 1883?—d. Forest Hills, N.Y., Feb. 24, 1951).

Gurney, Henry Lovell Goldsworthy, British high commissioner of Malaya (b. June 27, 1898—d. near Fraser's Hill, Malaya, Oct. 6, 1951).

Haggin, Ben Ali, U.S. portrait painter (b. New York, N.Y., 1882?—d. New York, N.Y., Sept. 2, 1951).

Haldeman-Julius, E(manuel), U.S. publisher (b. Philadelphia, Pa., July 30, 1889—d. Girard, Kan., July 31, 1951).

Hall, James Norman, U.S. author (b. Colfax, Ia., April 22, 1887—d. Papeete, Tahiti, July 5, 1951), was the coauthor with Charles Bernard Nordhoff of the famous trilogy about the British ship "Bounty"—*Mutiny on the Bounty, Men Against the Sea* and *Pitcairn's Island.*

He graduated from Grinnell college in Iowa in 1910, and was in England on a tour when World War I broke out in 1914. He enlisted and became a member of the "First Hundred Thousand" who responded to Earl Kitchener's call for volunteers. He served in France for several months in 1915 as a lance corporal in charge of a machine-gun section, and the next year he joined the Lafayette escadrille of U.S. volunteer fliers. For two years he was one of the most widely known U.S. pilots, famed for reckless adventures in the air. He was later with Eddie Rickenbacker in the U.S. 94th aero pursuit squadron.

His books on the war included *Kitchener's Mob* (1916) and *High Adventure* (1918). In 1920 he went to the south seas in search of further adventure, and he remained there the rest of his life, taking up residence in Tahiti where, in collaboration with Nordhoff, he wrote the books that brought him fame. *Mutiny on the Bounty*, the first book of the trilogy, became especially renowned after it was made into a motion picture. Hall was sole author of a number of books, and with Nordhoff also wrote *Faery Lands of the South Seas* (1921); *Falcons of France* (1929); *The Hurricane* (1936); *The Dark River* (1938); *Out of Gas* (1939); *Botany Bay* (1941); and *Men Without Country* (1942).

Harkins, William D., U.S. nuclear scientist (b. Titusville, Pa., Dec. 28, 1873—d. Chicago, Ill., March 7, 1951).

Hart, Richard, U.S. stage, screen and television actor (b. Providence, R.I., 1915?—d. New York, N.Y., Jan. 2, 1951).

Hartford, John A., U.S. merchant (b. 1872?—d. New York, N.Y., Sept. 20, 1951).

Hazen, Henry Honeyman, U.S. public health specialist (b. Oldwick, N.J., July 21, 1879—d. Washington, D.C., May 1, 1951).

Hearst, William Randolph, U.S. publisher and editor (b. San Francisco, Calif., April 29, 1863—d. Beverly Hills, Calif., Aug. 14, 1951), was one of the most controversial figures of his day in both journalism and politics. He developed mass-circulation methods in newspaper and magazine publishing which his opponents characterized as "yellow journalism," based principally on sensational news stories.

The son of wealthy parents, Hearst attended Harvard university but left the school in 1885 without taking a degree. He became editor of the *San Francisco Examiner*, which was owned by his father, and in 1896 entered the New York city newspaper field by purchasing the *Morning Journal*, which he later renamed the *American*. Then followed a lively contest for mass circulation between the Hearst publication and Joseph Pulitzer's New York newspaper, the *World*.

Hearst was elected to the U.S. house of representatives in 1902 and served two terms. In 1904 he received 200 votes in the Democratic national presidential convention at St. Louis, Mo., his nomination having been seconded by Clarence Darrow. Judge Alton B. Parker, however, won the nomination with 658 votes. Hearst next ran for mayor of New York city and was defeated by about 4,000 votes in nearly 500,000 ballots. He then ran for governor of New York state against Charles Evans Hughes, but lost out by a small margin of votes. Again in 1909 he was defeated in the race for the mayoralty of New York city, and after other setbacks in New York politics he transferred his residence in 1927 to California. At the 1932 Democratic national convention, Hearst was said to have clinched the presidential nomination for Franklin D. Roosevelt by swinging his papers' support from John Nance Garner to Roosevelt, in a manoeuvre that gave Garner the vice-presidential candidacy. However, before the New Deal had been in effect more than a few months, Hearst turned against the administration and thereafter campaigned ceaselessly against it and its successor.

At the height of his power Hearst administered a publishing empire that included more than a score of the top-circulation newspapers of the United States, from coast to coast, plus magazines and motion-picture and radio holdings that made him renowned as the man who, in terms of the number of people reached by his views, probably wielded more editorial influence than any other man of his era.

A reorganization of his properties in 1937 and again in 1939 seemed to curtail his personal power and authority, though his publishing empire continued intact until his death.

Hedrick, Ulysses Prentiss, U.S. horticulturist (b. Independence, Ia., Jan. 15, 1870—d. Clifton Springs, N.Y., Nov. 14, 1951).

Heflin, J(ames) Thomas, former U.S. senator (b. Louina, Ala., April 9, 1869—d. Lafayette, Ala., April 22, 1951), attended Southern university at Greensboro, Ala., and Alabama Polytechnic institute at Auburn. He began the practice of law, but within a few months entered politics and was elected (1893) mayor of Lafayette. From then until 1930, when he was read out of the Democratic party for bolting it in protest against the nomination of Alfred E. Smith for the presidency, Heflin was never defeated in a political campaign.

He was successively mayor of Lafayette; register in chancery; secretary of state of Alabama (1902); representative in congress (1904–20) and U.S. senator (1920–31). He initially entered the senate to fill the unexpired term of Sen. John H. Bankhead. He eventually lost his senate seat to Bankhead's son after the party dispute of 1930.

His advocacy of higher prices for cotton won him the nickname of "Cotton Tom," and he was almost a model for the popular picture of an ultra-conservative southern senator, with his frock coat, cream-coloured vest, striped trousers, patent-leather boots and black felt hat. His chief oratorical targets were the "wolves of Wall Street," the liquor interests, the Roman Catholic hierarchy and Tammany Hall. He professedly was proudest of his sponsorship of a bill setting aside the second Sunday in May as Mother's day.

Hektoen, Ludvig, U.S. pathologist (b. Westby, Wis., July 2, 1863—d. Chicago, Ill., July 5, 1951).

Hervey, Harry Clay, U.S. author and screen writer (b. Beaumont, Tex., Nov. 5, 1900—d. New York, N.Y., Aug. 12, 1951).

Hill, David Spence, U.S. educator and author (b. Nashville, Tenn., Dec. 14, 1873—d. Louisville, Ky., Nov. 10, 1951).

Holt, Hamilton, U.S. educator and former college president (b. Brooklyn, N.Y., Aug. 18, 1872—d. Putnam, Conn., April 26, 1951).

Holt, Jack, U.S. motion picture actor (b. Winchester, Va., May 31, 1888—d. Los Angeles, Calif., Jan. 18, 1951), was a great-great-grandson of Chief Justice John Marshall and the son of an Episcopal minister. He studied civil engineering at the Virginia Military institute, Lexington, Va., and shortly went to Alaska, where he worked for six years as a surveyor, labourer, miner and teamster. Returning to San Francisco, Calif., he entered motion pictures as a stunt man, but soon began playing character roles. His first big parts cast him as a villain, but he proved so popular with the audiences that he was soon cast as a hero. He played opposite many great actresses, including Pavlova, Mary Pickford and Clara Kimball Young. His chief fame was as a cowboy star until later years of his career when he again played character roles.

Holt, William Franklin, U.S. agricultural leader (b. Merced county, Mo., 1864?—d. Los Angeles, Calif., Nov. 21, 1951).

Honeywell, J. Frank, U.S. author of juvenile books (b. Pontiac, Ill., 1877?—d. San Diego, Calif., Aug. 6, 1951), began his writing career as a Chicago, Ill., newspaperman, then turned to writing fiction thrillers for boys. His series of sequel-books extended from his *Over There* books written during World War I to his *The Radio Boys* series that continued to sell toward the end of the half-century.

Howard, Henry, U.S. chemist and inventor (b. Jamaica Plain, Mass., July 5, 1868—d. Cambridge, Mass., Aug. 26, 1951).

Hupfeld, Herman, U.S. composer of popular songs (b. Montclair, N.J., Feb. 1, 1894—d. Montclair, June 8, 1951).

Hutcheson, Ernest, Australian-born pianist, composer and conductor (b. Melbourne, Vict., Austr., July 20, 1871—d. New York, N.Y., Feb. 9, 1951).

Ingalls, Robert Ingersoll, U.S. industrialist (b. Huntsville, O., Oct. 27, 1882—d. Birmingham, Ala., July 12, 1951).

Inverchapel, Archibald John Kerr Clark Kerr, 1st Baron, of Lock Eck, Argyllshire, British diplomat (b. Hamilton, Lanarkshire, Scot. (?), March 17, 1882—d. Greenock, Renfrewshire, Scot., July 5, 1951), was educated privately, entered the diplomatic service in 1906 and during the period 1906–25 served in Berlin, Buenos Aires, Washington, Rome, Tehran, Tangier and Cairo. He was minister to the Central American republics, 1925–28, and to Chile, 1928–30. From 1931 to 1935 he was minister to Sweden, and from 1935 to 1938 was ambassador to Iraq. In 1938 he went to Chungking, China, as successor to Sir Hughe Knatchbull-Hugessen, who had been severely wounded in an air attack. In Jan. 1942 he succeeded Sir Stafford Cripps as ambassador to Moscow. In 1946 he went on a special mission to Java to try to effect a settlement of the complex political situation; in the same year he was created a baron. From 1946 to 1948 he was British ambassador to the United States.

Irvine, Harry, U.S. actor (b. Vellore, British India—d. Nyack, N.Y., Aug. 7, 1951).

Irwin, Robert Benjamin, U.S. welfare worker (b. Rockford, Ia., June 2, 1883—d. Bremerton, Wash., Dec. 12, 1951).

James, Edwin Leland, U.S. editor (b. Irvington, Va., June 25, 1890—d. New York, N.Y., Dec. 3, 1951), studied at Chesapeake academy and at the Randolph-Macon college, Ashland, Va., and worked on newspapers in Baltimore, Md., Pittsburgh, Pa., and Albany, N.Y., before moving to the *New York Times* in 1915. He covered politics in Albany, then in 1918 went to Europe as chief correspondent with the U.S. army. He served as Paris correspondent during the 1920s, becoming his paper's chief European correspondent before he returned to New York city, and became managing editor of the paper in 1932.

Jeffreys, Charles William, English-born artist (b. Rochester, Kent, Eng., Aug. 25, 1869—d. Toronto, Ont., Oct. 8, 1951).

Jenkins, Charles Francis, U.S. publisher (b. Norristown, Pa., Dec. 17, 1865—d. Philadelphia, Pa., July 2, 1951), was chairman of the board of the publishers of the *Farm Journal*, largest U.S. farm magazine, for 68 years. During this period the circulation of the publication increased from 25,000 to more than 2,800,000. For 40 years Jenkins helped manage the *Friends Intelligencer*, a weekly publication of the Society of Friends. He established the Hemlock arboretum on his estate where were reputedly grown the largest variety of hemlocks in the world.

Johnson, Ligon, U.S. copyright lawyer (b. Tuskegee, Ala., Jan. 20, 1873—d. Greenwich, Conn., March 29, 1951).

Johnson, Sir Robert Stewart, British shipbuilder (b. Londonderry, Londonderry, Ire., Aug. 7, 1872—d. Birkenhead, Ches., Eng., Aug. 28, 1951).

Johnson, William C., U.S. industrialist (b. Birmingham, Ala., May 25, 1902—d. Milwaukee, Wis., July 26, 1951).

Johnston, Alvanley, U.S. labour leader (b. Seeleys Bay, Ont., May 12, 1875—d. Cleveland, O., Sept. 17, 1951), studied in Canada and the U.S. and began railroad work for the Great Northern railroad in 1892. He became an engineer for that road in 1897 and in 1909 was made general chairman of the Great Northern unit of the Brotherhood of Locomotive Engineers. He was assistant to the head of the union from 1918 to 1925 and its head, or grand chief engineer, from 1925 until he retired in 1950. When he assumed leadership of the union its finances were in a perilous state, since brotherhood funds had been invested in banks, investment companies and Florida real estate, all of which were collapsing. The financial difficulties eventually resulted in his being indicted with others in 1933 in connection with the failure of the Standard Trust company of Cleveland, O. He was sentenced to from 1 to 30 years, but the sentence was reversed in 1935. He was a figure in major rail strike threats in 1941 and 1943, while perhaps his most sensational appearance in the public prints came in connection with the strike in 1946 which was called off only minutes before Pres. Harry S. Truman was to seek from congress power to draft the strikers.

Jouvet, Louis, French actor and producer (b. Crozon, Finistère, Fr., Dec. 24, 1887—d. Paris, Fr., Aug. 16, 1951), studied pharmacy as a youth and worked for a time as a druggist before turning permanently to the theatre. From 1910 to 1914 he played at the Odéon, the Châtelet and Jacques Copeau's Théâtre du Vieux Colombier. During World War I he served in the front lines for three years as a medical corpsman. In 1918 he went to New York city, appearing there with Copeau's company. Returning to Paris the next year, he designed a new theatre for the Vieux Colombier and continued to play leading parts with the company. In 1922 he joined the Comédie des Champs-Elysées as stage manager and two years later was appointed director. During the next ten years he produced and acted in a number of successes, starting with *Au Grand large* in 1926 and including a repertory of Molière as well as contemporary dramatists. His production of Jean

Giraudoux's *Siegfried* in 1928 was the start of a long and fruitful collaboration between Giraudoux and Jouvet which lasted until the playwright's death in 1944. In 1934 Jouvet organized the Théâtre de l'Athénée-Louis Jouvet and in the same year was appointed to the faculty of the Conservatoire de Paris. He closed his theatre after the Germans occupied Paris in 1940, refusing to operate under German direction and touring instead with his company in Switzerland, unoccupied France, South and Central America, Mexico and Cuba. In Feb. 1945 he returned to France and in December of that year presented Giraudoux's last play, *The Madwoman of Chaillot.*

From 1932 Jouvet had appeared in scores of French motion pictures, including many which enjoyed success in the United States—*Volpone, La Kermesse Heroïque* (*Carnival in Flanders*), *The Lower Depths*, etc.

Kahn, Howard, U.S. newspaper man (b. Bloomington, Ind., Jan. 30, 1886—d. St. Paul, Minn., March 28, 1951).

Keck, Charles, U.S. sculptor (b. New York, N.Y., Sept. 9, 1875—d. Carmel, N.Y., April 23, 1951), was an assistant to Augustus Saint-Gaudens from 1893 to 1898, and was one of the best-known practitioners in the Saint-Gaudens tradition. Among his art works, of which examples may be found in almost every state of the U.S., are: an equestrian monument of Thomas J. ("Stonewall") Jackson at Charlottesville, Va.; a Booker T. Washington monument, Tuskegee, Ala.; a Soldiers' memorial, Brooklyn, N.Y.; an equestrian monument of Andrew Jackson, Kansas City, Mo.; a statue in Rio de Janeiro commemorating the centennial of the independence of Brazil, presented on behalf of the people of the U.S.; a peace memorial to St. Isaac Jogues, Lake George, N.Y.; and the Father Duffy memorial in New York city.

Kee, John, U.S. congressman (b. Glenville, W.Va., Aug. 22, 1874—d. Washington, D.C., May 8, 1951).

Kellermann, Bernhard, German novelist (b. Fürth, Ger., March 4, 1879—d. Klein Glienicke, near Berlin, Ger., Oct. 17, 1951). (*See* also *Encyclopædia Britannica.*)

Kellogg, Will Keith, U.S. industrialist and philanthropist (b. Battle Creek, Mich., April 7, 1860—d. Battle Creek, Oct. 6, 1951), conceived the idea of manufacturing and marketing cereals from his association with his brother, a physician, who was superintendent of a sanitarium at Battle Creek. He was 46 years old when he set up a toasted corn flake company. The company later added other cereal products and grew to be an international enterprise. In 1930 Kellogg established the W. K. Kellogg foundation to promote "health, happiness and welfare of mankind, principally of the children and youth." The foundation operated from a trust fund of more than 1,000,000 shares of stock in the Kellogg company, which by 1951 had earned $47,000,000, of which more than $32,000,000 had been spent on vast child-welfare, public-health and similar programs. Kellogg made many gifts to his native Battle Creek, including an auditorium, two schools, a youth centre with swimming pool, a gymnasium and an airport. He also established a 600-ac. bird sanctuary in southwestern Michigan, an 800-ac. horse ranch near Los Angeles, Calif., which eventually was handed over to the University of California and then to the U.S. Army remount service, and made large gifts to various educational institutions.

Kelso, James Anderson, U.S. theologian and archaeologist (b. Rawalpindi, India, June 6, 1873—d. Pittsburgh, Pa., Nov. 3, 1951).

Kenedy, Arthur, U.S. publisher (b. Brooklyn, N.Y.—d. New York, N.Y., Feb. 3, 1951).

King, Robert N., U.S. research expert (b. Brooklyn, N.Y.—d. Westport, Conn., May 12, 1951).

King, Stanley, U.S. college president (b. Troy, N.Y., May 11, 1883—d. Chilmark, Mass., April 28, 1951), was graduated from Amherst college, Mass., and studied law at Harvard university. He practised law in Boston, was for some years in business and became president of Amherst college in 1932. He was the first Amherst president who was neither minister nor educator. He retired in 1946.

Kingery, Robert, U.S. engineer (b. Emporia, Kan., Sept. 26, 1890—d. Evanston, Ill., Nov. 13, 1951).

Klem, William J., U.S. baseball umpire (b. Rochester, N.Y., Feb. 22, 1874—d. Coral Gables, Fla., Sept. 16, 1951).

Knapp, Joseph Palmer, U.S. publisher and insurance executive (b. Brooklyn, N.Y., May 14, 1864—d. New York, N.Y., Jan. 30, 1951), attended the Polytechnic institute of Brooklyn and Columbia university. His father owned a lithographing firm and the younger Knapp began working for it, eventually buying out the business. The elder Knapp then concentrated on the insurance field; he had founded the Metropolitan Life Insurance company in 1868 to obtain the type of life insurance he desired for his employees. The son founded the American Lithographic company in 1895, retaining it until 1929.

He helped to develop a multicolour press, which led to his establishing the *Associated Sunday Magazine* in 1903, the first syndicated Sunday newspaper supplement. With associates he purchased the Crowell Publishing company in 1906, and in 1911 the company bought the *American Magazine.* In 1919 he took over the P. F. Collier & Son firm, including *Collier's* magazine and a substantial subscription book business. He was chairman of the board of Crowell-Collier Publishing company from 1937 to 1946.

Publications of his firms included *Collier's*, the *American Magazine*, the *Woman's Home Companion* and *This Week* (through United Newspapers Magazine corporation, which he owned). He was also a former director and former chairman of the finance committee of Metropolitan Life, and was known as an active proponent of wildlife preservation.

Knappen, Theodore Temple, U.S. civil and hydraulic engineer (b. Minneapolis, Minn., 1900?—d. New York, N.Y., March 20, 1951).

Knott, William John, U.S. hotel owner and operator (b. New York, N.Y., 1882?—d. Glen Cove, L.I., N.Y., Oct. 25, 1951).

Koussevitzky, Sergei (Alexandrovitch), Russian-born conductor (b. Vyshny, Volochek, Tver, Russia, July 26, 1874—d. Boston, Mass., June 4, 1951), studied at the Philharmonic Music school at Moscow, where he also taught, leaving there to play in the Imperial orchestra at Petrograd. He cultivated the double bass as a solo instrument and gave recitals throughout Europe. In 1910 he founded an orchestra of 85 musicians and toured the large cities of Russia besides making trips elsewhere by chartered steamer on the Volga river. He left Russia in 1920 and conducted orchestras in France, Germany, England and other European countries. He visited the United States in 1916–17, and in 1924 was made conductor of the Boston Symphony orchestra. Under his leadership the orchestra, while retaining its emphasis on traditional classics, also became famed for its courageous innovations and especially for its introduction of new composers to the U.S. musical scene. Koussevitzky gave his final concert with the Boston Symphony on April 29, 1949.

Especially renowned as an interpreter of such contemporary composers as Jean Sibelius and Igor Stravinsky, Koussevitzky explained his philosophy of music as follows:

"The works of the great classic masters are indispensable, but music is not a static art. Music constantly is being made which is an expression of the period in which it appears." Until his last illness he had been working with Boris Goldovsky, Boston composer and conductor, on an opera to be called *Pique Dame.*

Kretschmer, Herman Louis, U.S. urologist (b. Chicago, Ill., April 22, 1879—d. Chicago, Sept. 23, 1951).

Lambert, Constant, British composer and conductor (b. London, Eng., Aug. 23, 1905—d. London, Aug. 21, 1951).

Lampland, Carl Otto, U.S. astronomer (b. Dodge County, Minn., Dec. 29, 1873—d. Flagstaff, Ariz., Dec. 14, 1951).

Laureano, Napoleão, Brazilian cancer specialist (b. Brazil, 1915?—d. Rio de Janeiro, Braz., May 31, 1951), made himself a living symbol of the need for better cancer-fighting facilities when he went to the U.S., discovered that he himself was doomed by the disease, then toured his native country raising funds for a cancer hospital to be constructed in João Pessao. Before his death he was assured that the hospital would be built.

Lehtonen, Aleksi Emanuel, Finnish archbishop (b. Nystad, Fin., June 21, 1891—d. Turku [Abo], Fin., March 27, 1951).

Lescohier, A. William, U.S. business executive (b. Detroit, Mich., June 27, 1885—d. Detroit, Nov. 17, 1951).

Lewis, Sinclair, U.S. novelist (b. Sauk Centre, Minn., Feb. 7, 1885—d. Rome, It., Jan. 10, 1951), graduated from Yale university, then worked as a free-lance writer and newspaper reporter, and magazine and book editor. He published several unsuccessful novels before *Main Street* (1920) finally established him as a fiction writer of major stature. His earlier novels included *Our Mr. Wrenn* (1914), *The Trail of the Hawk* (1915), *The Job* and *The Innocents* (1917) and *Free Air* (1919).

Lewis was the son of a physician and was thought to have described his father's career in his book *Arrowsmith* (1925). Others of his better known works were *Babbitt* (1922), *Mantrap* (1926), *Elmer Gantry* (1927), *Dodsworth* (1929), *Ann Vickers* (1933), *Work of Art* (1934), *It Can't Happen Here* (1935), *Cass Timberlane* (1945), *Kingsblood Royal* (1947) and *The God-Seeker* (1949). He was generally regarded as one of the most influential American writers of all time. His frank appraisals of the mores of the American middle class founded an entire school of followers and imitators, many of whom imitated only his indignation and none of his sensitivity. In 1926 he refused the Pulitzer prize for the best novel of the year on the grounds that the prize was unworthily hedged with conditions as to depicting "wholesomeness" in U.S. life. In accepting the Nobel prize for literature, which was awarded him in 1930, he pointed out that no such restrictions obtained. (*See* also *Encyclopædia Britannica.*)

Lewis, Tracy Hammond, U.S. outdoor writer and sportsman (b. New York, N.Y., Nov. 30, 1890—d. Richmond, Va., Nov. 7, 1951).

Lewisohn, Sam Adolph, U.S. financier, philanthropist and art patron (b. New York, N.Y., March 21, 1884—d. Santa Barbara, Calif., March 13, 1951).

Leyendecker, Joseph Christian, German-born artist (b. Montabour, Ger., March 23, 1874—d. New Rochelle, N.Y., July 25, 1951).

1951 OBITUARIES: Sergei Koussevitzky, Russian-born conductor; Sinclair Lewis, U.S. novelist; Maxim Litvinov, soviet diplomat; Carl Mannerheim, Finnish military leader; Henri Philippe Pétain, French marshal

Liaquat Ali Khan, Pakistani statesman (b. Karnal, India, Oct. 1, 1895—d. Rawalpindi, Pak., Oct. 16, 1951), the son of a wealthy landowner, was educated at the Mohammedan Anglo-Oriental college in Aligarh, and at Allahabad university, both in India, and at Exeter college, Oxford, Eng., where he took a law degree in 1921. He was called by the Inner Temple in 1922, returned to India in that year and in 1923 joined the All-India Moslem league. He was a member of the United Provinces legislative council and leader of the Democratic party in the house from 1926 to 1940 when he was elected to the central legislative assembly. His close association with Mohammed Ali Jinnah began in 1936 when he was elected general secretary of the resuscitated Moslem league; later he became deputy leader of the party. He was appointed to the viceroy's executive council in 1946 and held the portfolio of finance. On Aug. 15, 1947, Jinnah appointed him the first prime minister and minister of defense of the new nation of Pakistan. After the death of Jinnah (Sept. 11, 1948), Liaquat became undisputed leader of Pakistan. Virtually the whole of his career from that time until his death was taken up with the protracted dispute with India over Kashmir. In April 1950, however, he negotiated with Jawaharlal Nehru an agreement on the treatment and rights of minorities. While he was addressing a public meeting at Rawalpindi, Liaquat Ali Khan was assassinated by a member of the Khaksar semimilitary movement.

Liautaud, André, Haitian government official and agriculturalist (b. Port au Prince, Haiti, Oct. 1, 1906—d. Port au Prince, July 26, 1951).

Linley, Betty, British-born actress (b. Malmesbury, Eng., 1889?—d. New York, N.Y., May 9, 1951).

Lister, Charles Baynard, U.S. firearms expert and editor (b. Wilmington, Del., July 4, 1898—d. Washington, D.C. May 14, 1951).

Lister, Francis, British actor (b. London, Eng., April 2, 1899—d. London, Oct. 28, 1951).

Litten, Frederic Nelson, U.S. author and educator (b. Chicago, Ill., May 26, 1885—d. Lake Bluff, Ill., July 26, 1951).

Littlefield, Catherine (MRS. STERLING NOEL), U.S. choreographer and ballet dancer (b. Philadelphia, Pa., Sept. 16, 1904—d. Chicago, Ill., Nov. 19, 1951).

Litvinov, Maxim Maximovich (MEYIR MOYSEVEVICH VALLAKH), Soviet diplomat (b. Bialystok, Russian-occupied Poland, July 17, 1876—d. Moscow, U.S.S.R., Dec. 31, 1951), was the son of a bank clerk. After an education in the local Russian *Realschule*, he enlisted in the Tsarist army. In 1898 he joined the Russian Social Democratic Labour party (R.S.D.L.P.). Arrested and deported to Siberia, he escaped in 1902, went to Switzerland and the following year was delegate to the London congress of the R.S.D.L.P., where the party split into the Bolshevik and Menshevik fractions, Litvinov joining the former. In 1905 he was sent back to Russia, where he helped to found *Novaya Zhizn* (*New Life*), returning to London two years later after the revolution had failed. At the beginning of 1918, after the Bolshevik revolution, L. D. Trotsky, then foreign commissar, made him plenipotentiary to Great Britain. In Oct. 1918 he was arrested as a hostage for Robert Bruce Lockhart, for whom he was exchanged, and in Jan. 1918 Litvinov joined the *collegium* of the people's commissariat of foreign affairs. In 1920 he was appointed soviet minister to Estonia and the following year became first deputy commissar of foreign affairs. He took part in the Genoa and The Hague conferences of 1922. From 1927 to 1930 he headed the soviet delegation to the preparatory commission of the disarmament conference, and in the latter year he became commissar of foreign affairs; in 1932 he was chief of the soviet delegation at the disarmament conference at Geneva, Switz. He secured the recognition of the soviet regime by the United States and visited Washington, D.C., in Oct. 1933. Between 1937 and 1938 he represented the U.S.S.R. in the council of the League of Nations. In 1939, he was succeeded as commissar of foreign affairs by V. M. Molotov; as a Jew he could not be helpful in the new policy of collaboration with nazi Germany inaugurated by Joseph Stalin. After the German invasion of the U.S.S.R., however, Stalin appointed him ambassador to Washington and minister to Cuba in 1941. On Aug. 21, 1943, Litvinov was replaced by A. A. Gromyko and returned to Moscow where until Aug. 25, 1946, he was nominally a deputy commissar of foreign affairs. (*See* also *Encyclopædia Britannica.*)

Liversedge, Harry Bluett, U.S. marine corps officer (b. Volcano, Calif., 1894—d. Bethesda, Md., Nov. 25, 1951).

Lord, Frederic Wait, U.S. engineer and author (b. Brooklyn, N.Y., July 3, 1871—d. New York, N.Y., Dec. 31, 1951).

Lucke, Charles Edward, U.S. mechanical engineer (b. New York, N.Y., June 20, 1876—d. New York, March 25, 1951).

Luckenbach, John Lewis, U.S. marine architect and shipping executive (b. Kingston, N.Y., Nov. 19, 1883—d. New York, N.Y., July 4, 1951).

Maarseveen, Johannes H. van, Netherlands government leader (b. Utrecht, Neth., 1894?—d. Utrecht, Nov. 19, 1951).

Macaulay, Robert Wilson, Australian churchman and author (b. Newcastle-on-Tyne, Northumb., Eng., 1883?—d. Melbourne, Vict., Austr., Aug. 1, 1951).

McClung, Nellie (MRS. R. W. MCCLUNG), Canadian author and suffragist (b. Chatsworth, Ont., 1874?—d. Victoria, B.C., Sept. 1, 1951).

McClure, Roy Donaldson, U.S. surgeon (b. Bellbrook, O., Jan. 17, 1882—d. Detroit, Mich., March 31, 1951).

McCrea, Roswell Cheney, U.S. economist (b. Norristown, Pa., July 30, 1876—d. Newton, N.J., July 2, 1951).

MacHarg, William (Briggs), U.S. author (b. Dover Plains, N.Y., Sept. 18, 1872—d. Alpine, N.J., Feb. 21, 1951).

McIntyre, John T(homas), U.S. novelist and playwright (b. Philadelphia, Pa., Nov. 26, 1871—d. Philadelphia, May 21, 1951).

McKay, Hugh Deane, U.S. advertising executive (b. Louisville, Ky., May 3, 1896—d. New York, N.Y., Nov. 30, 1951).

Mahoney, Benjamin Franklin, U.S. aircraft builder (b. Wilkes-Barre, Pa., 1901?—d. Los Angeles, Calif., July 31, 1951).

Mahoney, Michael (KLONDIKE MIKE), Alaskan gold-rush figure (b. 1873?—d. Santa Monica, Calif., April 8, 1951).

Mannerheim, Carl Gustaf Emil, BARON, Finnish army officer and statesman (b. Villnas, near Turku, Fin., June 4, 1867—d. Lausanne, Switz., Jan. 27, 1951), was the son of a Swedish-Finnish landowner and attended the Fredrikshamn Cadet school near Viipuri and the Nikolaev Cavalry school in St. Petersburg, Russia. He distinguished himself in the Russo-Japanese War, in which he rose to the rank of colonel. In World War I he commanded a cavalry division in Poland and later an army on the Rumanian front. Finland proclaimed its independence and in Jan. 1918 Mannerheim was appointed commander in chief of the nascent Finnish army. Through his leadership, the Finnish Communists, armed and supported by the Russians, were defeated. In Dec. 1918 he was elected regent of Finland and on July 17, 1919, he promulgated the republican constitution; in the first presidential election he was defeated. In 1931 he was called back from retirement to serve as chairman of the council of national defense. In May 1933 he was created field marshal and it was his decision to build the defenses across the Karelian isthmus, which came to be known as the Mannerheim line. On Nov. 30, 1939, the U.S.S.R. attacked Finland, and Mannerheim at 72 took command of his country's forces. Despite his skill and the Finns' heroism the Mannerheim line was broken and Finland had to accept terms (March 12, 1940). On June 27, 1941, in Finland's second war with the Soviet Union, Mannerheim again assumed command and on June 4, 1942, he was made marshal of Finland. On the same day he was visited at his headquarters by Adolf Hitler, who was pressing him to cut the Anglo-soviet supply route to Murmansk and to attack Leningrad; but the Finnish army remained passive. On Aug. 1, 1944, Mannerheim was elected president of the republic. On Sept. 19 the armistice was signed with the U.S.S.R., and on March 4, 1946, he resigned. He spent the remaining years of his life nursing his health in Switzerland.

Manney, Charles Fonteyn, U.S. composer (b. Brooklyn, N.Y., Feb. 8, 1872—d. New York, N.Y., Oct. 31, 1951).

Marchetti-Selvaggiani, Francesco Cardinal, Italian prelate (b. Rome, It., Oct. 1, 1871—d. Vatican City State, Jan. 13, 1951), was ordained priest in 1896 and later served in the papal diplomatic service in Bavaria, Switzerland and elsewhere. He was consecrated titular archbishop of Seleucia in Isauria in 1916. In 1918 he went to Venezuela, being papal nuncio there in 1920. From 1920 to 1923 he was nuncio to Austria. He was elevated to the Sacred College of Cardinals in 1930 and in 1936 was consecrated bishop of Frascati, It. In 1948 he became dean of the Sacred College.

Margetson, Arthur, British actor (b. London, Eng., April 27, 1897—d. London, Aug. 13, 1951).

Margotti, Carlo, Italian Roman Catholic archbishop (b. near Ravenna, It., April 22, 1891—d. Gorizia, It., July 31, 1951).

Mario, Queena (QUEENA MARION TILLOTSON), U.S. opera singer (b. Akron, O., Aug. 21, 1896—d. New York, N.Y., May 28, 1951).

Marshall, Albert Edward, British-born chemist (b. Liverpool, Eng., May 18, 1884—d. Providence, R.I., Sept. 15, 1951).

Marshall, Charles (CARLO MARZIALI), U.S. dramatic tenor (b. Auburn, Me., 1887—d. Lake George, N.Y., May 8, 1951).

Marshall, Henry Wright, U.S. publisher and industrial leader (b. near Springfield, O., Jan. 29, 1865—d. Lafayette, Ind., Jan. 31, 1951).

Martin, Townsend, U.S. playwright (b. New York, N.Y., 1896—d. New York, Nov. 22, 1951).

Maude, Cyril, British stage and screen actor (b. London, Eng., April 24, 1862—d. Torquay, Devon., Eng., Feb. 20, 1951).

Maurice, Sir Frederic Barton, British army officer (b. Jan. 19, 1871—d. Cambridge, Eng., May 19, 1951).

Maxwell, James Laidlaw, British authority on leprosy (b. June 9, 1873—d. Hangchow, China, Aug. 10, 1951).

Mayo, Margaret, U.S. playwright and actress (b. Brownsville, Ill., 1882?—d. Ossining, N.Y., Feb. 25, 1951).

Mecklem, Austin Merrill, U.S. artist (b. Colfax, Wash., Dec. 17, 1894—d. Kingston, N.Y., Oct. 7, 1951).

Medtner, Nicholas R., Russian-born composer and pianist (b. Moscow, Russia, Dec. 24, 1879—d. London, Eng., November 13, 1951).

Mengelberg, Willem, Dutch orchestral conductor (b. Utrecht, Neth., March 28, 1871—d. Chur, Switz., March 21, 1951).

Meyer, Annie Nathan (MRS. ALFRED MEYER), U.S. novelist and playwright, one of the founders of Barnard college (b. New York, N.Y., Feb. 19, 1867—d. New York, Sept. 23, 1951).

Meyer, Henry Herman, U.S. educator (b. Champaign, Ill., Nov. 21, 1874—d. Brooklyn, N.Y., Oct. 6, 1951).

Meyerhof, Otto (Fritz), German-born U.S. physiologist (b. Hanover, Ger., April 12, 1884—d. Philadelphia, Pa., Oct. 6, 1951), was educated at the

Königlische Wilhelmsgymnasium, Berlin, and at Heidelberg university. He was awarded the Nobel prize in physiology and medicine for 1922 (jointly with A. V. Hill) for his work on the chemistry of the functioning muscle. He was director of the Kaiser Wilhelm Institute of Physiology, Heidelberg, from 1929 until 1938 when the Nazi persecution of Jews forced him to leave Germany, and he then became director of research, Institute of Biology, Paris. When France was invaded in 1940 he escaped to the U.S. He was appointed research professor of biochemistry, University of Pennsylvania, in Philadelphia, and became a U.S. citizen. Meyerhof was a foreign member of the Royal Society, London.

Michelfelder, Sylvester Clarence, U.S. Lutheran leader (b. New Washington, O., Oct. 27, 1889—d. Chicago, Ill., Sept. 30, 1951).

Milligan, Harold Vincent, U.S. organist, composer and author (b. Astoria, Ore., Oct. 31, 1888—d. New York, N.Y., April 12, 1951).

Minnigerode, Cuthbert Powell, director emeritus of the Corcoran Gallery of Art, Washington, D.C. (b. St. Louis, Mo., June 2, 1876—d. Washington, D.C., March 1, 1951).

Mitchell, Sir James, Australian government official (b. Bunbury, W. Austr., Austr., Apr. 27, 1866—d. Perth, W. Austr., July 26, 1951).

Montez, Maria (MME. JEAN PIERRE AUMONT), Dominican-born actress (b. Ciudad Trujillo, Dom. Rep., June 6, 1920—d. Paris, Fr., Sept. 7, 1951), the daughter of the Spanish consul to the Dominican Republic, was educated in the Canary Islands. While working as an artist's model in New York city she was offered a screen test, and began her motion-picture acting career. She played roles in adventure films, set against western, oriental or south seas backgrounds. In 1943 she received honours from the Dominican Republic for "promoting friendly relations between the United States and the Dominican Republic and for outstanding feminine achievement." The same year she married the French actor, Jean Pierre Aumont. She died in her bath, either of a heart attack or of drowning following a heart attack.

Moore, Bryant Edward, U.S. army officer (b. Ellsworth, Me., June 6, 1894—d. Han River (west central front), Korea, Feb. 24, 1951).

Moore, Charles Ruby, U.S. engineer and inventor (b. Edwardsville Crossing, Ill., 1881?—d. Washington, D.C., March 17, 1951).

Moorhead, Louis D., U.S. physician and surgeon (b. Chicago, Ill., Nov. 22, 1892—d. Chicago, Sept. 14, 1951).

Moreno, Alfredo Baquerizo, Ecuadorian statesman (b. 1850?—d. New York, N.Y., March 19, 1951).

Morris, Homer Lawrence, U.S. relief and welfare worker (b. Dublin, Ind., July 1, 1886—d. Philadelphia, Pa., Nov. 26, 1951).

Morton, Mark, U.S. industrialist and experimental farmer (b. Omaha, Neb., Nov. 22, 1858—d. near West Chicago, Ill., June 25, 1951), was the son of J. Sterling Morton, former U.S. secretary of agriculture and founder of Arbor day. After working in the railroading, lumber and packing industries, he joined his brother Joy, who had been junior partner in E. I. Wheeler and Co., agents in Chicago for the Michigan Salt association. In 1885 the firm of Joy Morton and Co. was organized. In 1910 this became the Morton Salt Co., of which Mark was the vice-president and director until his death. He was also president of the Western Cold Storage Co. for many years and was one of the founders of the International Live Stock exposition held annually in Chicago. He established and generously endowed the Mark Morton foundation to benefit retired or disabled employees of the salt company and for general charitable purposes.

Mushanov, Nikola, Bulgarian government official (b. Drenovo, Bulg. [then a Turkish province], 1872—d. Bulgaria, June, 1951).

Musser, Paul Howard, U.S. educator (b. Bedford, Pa., March 27, 1892—d. Philadelphia, Pa., Nov. 21, 1951).

Nagai, Takashi, Japanese scientist (b. Matsue, Japan, 1908?—d. Nagasaki, Japan, May 1, 1951).

Nashimoto, Morimasa, Japanese prince (b. Tokyo, Japan, March 9, 1874—d. Tokyo, Jan. 1, 1951).

Natzka, Oscar, New Zealand-born opera singer (b. Auckland, N.Z., June 15, 1907—d. New York, N.Y., Nov. 5, 1951).

Nelles, Percy Walker, Canadian naval officer (b. Brantford, Ont., Jan. 7, 1892—d. Victoria, B.C., June 13, 1951).

Newsome, Albert Ray, U.S. historian (b. Marshville, N.C., June 4, 1894—d. Chapel Hill, N.C., Aug. 5, 1951).

Neymann, Clarence Adolph, U.S. psychiatrist and neurologist (b. Chicago, Ill., Nov. 7, 1887—d. St. Petersburg, Fla., Jan. 12, 1951).

Nishina, Yoshio, Japanese physicist (b. 1889?—d. Tokyo, Japan, Jan. 10, 1951).

Nörlund, Poul, Danish archaeologist (b. Slagelse, Den., 1888—d. Copenhagen, Den., May 27, 1951).

Novello, Ivor (DAVID IVOR DAVIES), British actor-manager, playwright and composer (b. Cardiff, Wales, Jan. 15, 1893—d. London, Eng., March 6, 1951), son of the Welsh musician, Dame Clara Novello Davies, was educated at Magdalen College school, Oxford. During World War I, in which he served with the royal naval air service, his song "Keep the Home Fires Burning" became very popular. He first appeared on the stage in 1921, and in 1924 presented his first play, *The Rat* (written in collaboration with Constance Collier). He subsequently wrote, produced and acted in such successful comedies as *The Truth Game* (1928), *A Symphony in Two Flats* (1929), *Party* (1932), and *Proscenium* (1933), and wrote *Comedienne* (1938), in which Dame Lilian Braithwaite took the lead. But he became best-known for his "Ruritanian" musical plays like *Glamorous Night* (1935), *Careless Rapture* (1936), *The Dancing Years* (1939), *Perchance to Dream* (1945) and *King's Rhapsody* (1949). His last musical play, *Gay's the Word* (1950), was a cheerful travesty of the spectacular romances which had brought him success. He also acted in many British and U.S. films.

Oestreicher, John C(ahill), U.S. newspaper editor (b. Brooklyn, N.Y., Sept. 22, 1905—d. New Rochelle, N.Y., Dec. 16, 1951).

Omholt, Mrs. Ella Reeve Bloor ("MOTHER BLOOR"), U.S. left wing leader (b. near Mariners, Staten Island, N.Y., July 8, 1862—d. Quakertown, Pa., Aug. 10, 1951).

Osborn, Alexander Perry, U.S. lawyer, banker and broker (b. Garrison-on-Hudson, N.Y., June 6, 1884—d. Tucson, Ariz., March 6, 1951).

Osborn, William Church, U.S. lawyer, civic leader and art collector (b. Chicago, Ill., Dec. 21, 1862—d. New York, N.Y., Jan. 3, 1951).

Palmer, Courtlandt, U.S. composer and pianist (b. New York, N.Y., 1872—d. New York, Dec. 15, 1951).

Patenotre, Raymond, French former government official and newspaper publisher (b. Atlantic City, N.J., 1900?—d. Paris, Fr., June 19, 1951).

Patton, Fred, U.S. singer and teacher (b. Manchester, Conn., Oct. 2, 1888—d. Detroit, Mich., October 25, 1951).

Paullin, James Edgar, U.S. physician and authority on poliomyelitis (b. Fort Gaines, Ga., Nov. 3, 1881—d. Atlanta, Ga., Aug. 13, 1951).

Pavlenko, Peter Andreyevich, Russian novelist (b. St. Petersburg, Russia, 1899—d. Moscow, U.S.S.R., June 16, 1951).

Peabody, Dean, Jr., U.S. architect, educator and author (b. Reading, Mass., July 3, 1888—d. Hubbardston, Mass., Aug. 7, 1951).

Penton, Brian Con, Australian editor, novelist (b. Brisbane, Queens., Austr., Aug. 4, 1904—d. Sydney, N.S.W., Austr., Aug. 24, 1951).

Perry, John Morris, U.S. lawyer (b. Brooklyn, N.Y., 1866?—d. New York, N.Y., March 1, 1951).

Perth, (James) Eric Drummond, 16TH EARL OF, British statesman (b. Aug. 17, 1876—d. Rogate, Sus., Eng., Dec. 15, 1951).

Pétain, Henri Philippe Benoni Omer Joseph, French soldier and statesman (b. Cauchy la Tour, Pas de Calais, Fr., April 24, 1856—d. Ile d'Yeu, Fr., July 23, 1951), graduated from Saint-Cyr military academy in 1878. In World War I, in Aug. 1914, as colonel, he commanded the 33rd Infantry regiment; at the end of August he was promoted brigadier general; at the battle of the Marne he commanded the 6th division; and in October he was at Arras commanding the 33rd army corps. In Feb. 1916, when the situation at Verdun became critical, Gen. Joseph Joffre sent Pétain there as army commander. Although the battle of Verdun cost the French an estimated 350,000 men, it was regarded as a triumph for Pétain, and made him the hero of France. In May 1916 he was appointed commander of the centre army group, and a year later he succeeded Gen. Robert Nivelle as French commander in chief. When Gen. Eric Ludendorff launched his offensive in March 1918, Pétain's nerve showed signs of cracking: Raymond Poincaré described him in his memoirs as "defeatist" and Georges Clemenceau preferred Ferdinand Foch, chief of the general staff, as candidate for the supreme command of the Allied armies in France. On July 23, 1918, Pétain was awarded the *Médaille Militaire* and in November of that year he was made marshal of France.

After the war he was appointed vice-president of the Supreme War council and in Jan. 1922 he was also made inspector general of the army. In 1925-26, jointly with Gen. Primo de Rivera, he led the French-Spanish forces against the revolt of Abd el-Krim in Morocco. In 1934 he was minister of war in the Gaston Doumergue cabinet. In March 1939 Edouard Daladier appointed Pétain French ambassador to Spain, but Paul Reynaud recalled the marshal in May 1940 and made him vice premier in the hope that his presence would strengthen the national morale. In June Pétain led the cabinet majority in favour of capitulation and asked Adolf Hitler for an armistice. On July 10, at Vichy, a panic-stricken national assembly voted by 569 votes to 80 full executive and legislative powers to him as head of the *Etat Français*. On Oct. 24 he met Hitler at Montoire, Fr., and an agreement in principle on collaboration was reached.

Until 1944 Pétain hoped for a peace of compromise, with France acting as intermediary. On Aug. 20, 1944, the Germans forced him to leave Vichy for Belfort and later Sigmaringen, Germany. On April 26, 1945, he presented himself at the Swiss-French frontier. His trial before the High Court of Justice in Paris opened on July 23, and on Aug. 15 he was sentenced to death, degradation and loss of property, but with a recommendation to mercy. Gen. Charles de Gaulle, then prime minister, commuted the sentence to detention for life. Pétain was imprisoned in the fortress of Portalet, was transferred to a fort on the Ile d'Yeu in Nov. 1945 and thence, a month before he died, to the Villa Luco. (*See* also *Encyclopædia Britannica.*)

Petsche, Maurice, French statesman (b. Paris, Fr., Dec. 1, 1895—d. Paris, Sept. 16, 1951), graduated from the École des Sciences Politiques and was first elected to the French chamber of deputies from the department of Hautes-Alpes in 1925. He was re-elected deputy several times thereafter, serving also as undersecretary of war and later undersecretary of finance in the cabinets of André Tardieu in 1929 and 1930. From 1930 to 1932 he was a French delegate to the League of Nations. During the German occupation of France in World War II he was an active member of the resistance movement. After the liberation of France he was elected to the assembly which drafted the new constitution of the fourth republic, and in Nov. 1946 was elected to the new national assembly, again from the department of

Hautes-Alpes. On Jan. 12, 1949, he was appointed minister of finance in the cabinet of Henri Queuille, holding that position in succeeding governments until the national elections of June 1951. Pres. Vincent Auriol called on Petsche to form his own government following the elections, but he failed to win the assembly's approval on Aug. 3. Taken ill shortly thereafter, Petsche did not resume his post as finance minister and was appointed instead to the honorary office of minister of state in the cabinet of René Pleven. As minister of finance, Petsche fought a determined but losing battle against postwar inflation in France. He devalued the franc in 1949 and adopted numerous other measures to bolster the French economy.

Phemister, Dallas B(urton), U.S. surgeon (b. Carbondale, Ill., July 15, 1882—d. Chicago, Ill., Dec. 28, 1951), was one of the first to show that surgical shock was due to loss of blood and was noted also for devising a procedure to equalize bone growth in children. He established the department of surgery at The University of Chicago medical centre, and was chief of surgery at the centre from 1925 until his retirement in 1945. He served as president of the American College of Surgeons and of the American Surgical association and was a member of the Society of Clinical Surgery.

Philipson, Mrs. Hilton (Mabel Russell), British actress and member of parliament (b. Jan. 1, 1887—d. Brighton, Eng., Jan. 9, 1951).

Phillips, Henry Albert, U.S. author, editor and lecturer (b. Brooklyn, N.Y., Jan. 28, 1880—d. Stamford, Conn., Jan. 28, 1951).

Pitoeff, Ludmilla, Russian-born French actress (b. Tiflis, Georgia, Russ., 1896—d. Rueil, near Paris, Fr., Sept. 15, 1951).

Plotnikoff, Eugene, Russian-born composer and cellist (b. Odessa, Russia, Aug. 30, 1877—d. New York, N.Y., Sept. 28, 1951).

Poe, E. Holley, U.S. engineering executive (b. Pawnee, Okla., Sept. 14, 1896—d. Tulsa, Okla., March 9, 1951).

Poindexter, Joseph Boyd, former governor of Hawaii (b. Canyon City, Ore., April 14, 1869—d. Honolulu, T.H., Dec. 3, 1951).

Poor, Charles Lane, U.S. astronomer and inventor (b. Hackensack, N.J., Jan. 18, 1886—d. New York, N.Y., Sept. 27, 1951).

Pressburger, Arnold, Austrian-born film producer (b. Austria, Aug. 27, 1885—d. Hamburg, Ger., Feb. 17, 1951).

Prince, William Meade, U.S. illustrator and author (b. Roanoke, Va., July 9, 1893—d. Chapel Hill, N.C., Nov. 10, 1951).

Purcell, Charles Henry, U.S. engineer (b. North Bend, Neb., Jan. 27, 1883—d. Sacramento, Calif., Sept. 8, 1951).

Pyle, Robert, U.S. horticulturalist (b. London Grove, Pa., March 7, 1877—d. West Chester, Pa., Sept. 28, 1951).

Queipo de Llano, Gonzalo, Spanish military officer (b. Tordesillas, Sp., Feb. 5, 1875—d. Seville, Sp., March 9, 1951).

Radford, Cyrus Sugg, U.S. retired Marine general (b. Hopkinsville, Ky., June 3, 1868—d. Toms River, N.J., Jan. 19, 1951).

Rajpipla, Maharaja of (Maharana Shri Sir Vijayasinhji Chhatrasinhji), Indian prince and sportsman (b. Rajpipla, India, 1889?—d. London, Eng., April 29, 1951).

Randolph, Robert Isham, U.S. engineer and civic leader (b. Chicago, Ill., April 14, 1883—d. Santa Barbara, Calif., Oct. 18, 1951).

Ransohoff, Nicholas S., U.S. orthopaedic surgeon (b. Salt Lake City, Utah, Oct. 18, 1895—d. Long Branch, N.J., April 25, 1951).

Raper, Henry Stanley, British expert on chemical physiology (b. Bradford, Yorks., Eng., 1882—d. Manchester, Eng., Dec. 12, 1951).

Rautenstrauch, Walter, U.S. educator (b. Sedalia, Mo., Sept. 7, 1880—d. New York, N.Y., Jan. 3, 1951).

Razmara, Ali, Iranian army officer and government official (b. Tehran, Iran, 1901—d. Tehran, March 7, 1951), graduated in 1925 from the French military academy of Saint-Cyr. He served in the pacification campaigns in the Kurdistan and Laristan provinces. In 1938 he became director of the Tehran Military Cadet college. His book on the military history of Persia earned him international repute. In 1944, during the Allied occupation of Iran, the shah made him general and ordered him to reorganize the military forces. Two years later he was appointed chief of staff and was responsible for the entry of the central government forces into Iranian Azerbaijan to supervise the elections there, from which resulted the collapse of the Soviet-sponsored puppet rule. On June 26, 1950, the shah appointed him prime minister. Though efficient and hard-working, he had no large personal following. He tried to make the rich carry more of the burden of the state and he was opposed to the nationalization of the oil industry on the grounds that, for the time being, it would be impossible to run the industry with Iranian technicians only. On March 7, 1951, he was assassinated outside the Maschede Soltaneh mosque by Abdullah Rastigar, a member of the Fadayian Islam (Devotees of Islam) organization.

Reed, Alfred C., U.S. professor of medicine (b. Pleasant Hill, Mo., Dec. 2, 1884—d. Mill Valley, Calif., June 20, 1951).

Remez, David, Israeli government official (b. Copees, province of Mohilev, Russia, April, 1886—d. Jerusalem, May 19, 1951).

Reynolds, William Neal, U.S. tobacco manufacturer and sportsman (b. Patrick county, Va., March 22, 1863—d. Winston-Salem, N.C., Sept. 10, 1951), was the brother of Richard Reynolds who founded the R. J. Reynolds Tobacco company. William Reynolds became a partner in the company in 1886, president in 1918, and chairman of the board in 1924, and from 1931 until he retired in 1942, he was chairman of the executive committee.

His horse Mary Reynolds won the 1933 Hambletonian, the top U.S. harness race, and his horses Tar Heel and Solicitor were leading three-year-old pacers during the 1951 season. His benefactions included the donation of the Kate Bitting Reynolds Memorial hospital for Negroes in Winston-Salem; $100,000 toward a new library in Winston-Salem and $100,000 for a Presbyterian school for mountain children at Roaring Gap, N.C.

Rickard, Edgar, French-born mining engineer (b. Pontgibaud, Fr., Jan. 17, 1874—d. San Francisco, Calif., Jan. 21, 1951).

Riddell, Robert Gerald, Canadian permanent representative to the United Nations (b. Edmonton, Alta., May 4, 1908—d. Virginia Beach, Va., March 16, 1951), studied at the University of Manitoba and the University of Toronto, Can., and at Oxford university in England. He lectured in history at the University of Toronto and was senior tutor at Victoria university until 1942. In 1943 he joined the Canadian department of external affairs as a special assistant to the undersecretary of state. In 1946 he became head of the first political division, in charge of United Nations affairs and international conferences. Later he represented Canada at meetings of various U.N. bodies, including the Security council and the general assembly. In June 1950 he became permanent representative for Canada to the United Nations, assuming his duties Aug. 14. On Aug. 16, 1950, he was chosen as alternate Canadian representative to the fifth regular session of the general assembly. He wrote and edited numerous articles and publications on historical subjects and international affairs.

Riddle, Samuel D., U.S. turfman (b. Glen Riddle, Pa., July 1, 1861—d. Glen Riddle, Jan. 8, 1951), was best known as the owner of the famous U.S. race horse Man o' War. He bought the big chestnut with the 24-foot stride in Aug. 1918 and raced him during the 1919 and 1920 seasons. In that time the horse lost only 1 of 21 races, and won purses totalling $249,465. One of his offspring, War Admiral, also owned by Riddle, won the 1937 Kentucky Derby, Preakness and Belmont Stakes, the "triple crown" of horse racing.

Rigby, Edward, British actor (b. Ashford, Kent, Eng., Feb. 5, 1879—d. Richmond, Sur., Eng., April 5, 1951).

Ritt, Joseph Fels, U.S. mathematician and educator (b. New York, N.Y., Aug. 23, 1893—d. New York, Jan. 5, 1951).

Rizzo, Count Luigi, Italian naval officer (b. Milazzo, Sicily, 1887—d. Rome, It., [announced] June 28, 1951).

Robertson, Sir Malcolm Arnold, British diplomat (b. Sept. 2, 1877—d. Walmer, Kent, Eng., April 23, 1951).

Robinson-Duff, Frances, U.S. dramatic coach (b. Blue Hill, Me., 1877?—d. New York, N.Y., Oct. 30, 1951).

Rockart, John R., U.S. architect (b. St. Paul, Minn., 1872?—d. Bronxville, N.Y., Oct. 13, 1951).

Rohwer, Sievert Allen, U.S. entomologist (b. Tulluride, Colo., Dec. 22, 1888—d. Washington, D.C., Feb. 12, 1951).

Romañach, Leopoldo, Cuban painter (b. Carralillo, Cuba—d. Havana, Cuba, Sept. 10, 1951).

Romberg, Sigmund, Hungarian-born composer (b. Szegedin, Hung., July 29, 1887—d. New York, N.Y., Nov. 9, 1951), was the author of more than 70 musical stage and motion picture plays and of about 2,000 songs. He was regarded as a prodigy of the violin at the age of seven, but he never actually attended music school until he moved to Vienna, Aus., as a youth. He went to New York City in 1909, with a letter of introduction from the composer Franz Lehar to the producer J. J. Shubert, but he was obliged to begin work in a pencil factory while trying to establish himself in music. Eventually he began playing in restaurant orchestras, then formed his own orchestra. His first musical hit (1914) was *The Whirl of the World*. Then followed musical shows including his first operetta *The Blue Paradise* (1915), *Soldier Boy* (1916), *The Girl from Brazil* (1916), *Maytime* (1917), and *Sinbad* (1918).

He himself confessed that he could not remember the titles of all the songs he had written. His best known musicals included *In Blossom Time* (1921), *The Student Prince* (1924), *The Desert Song* (1926) and *New Moon* (1927). He was also busily engaged in later years writing scores for motion pictures and for radio. For a time he virtually commuted between Hollywood, Calif., where he was at work on motion picture scores, and New York

1951 OBITUARIES: Sigmund Romberg, Hungarian-born composer; Artur Schnabel, Austrian-born pianist; Arnold Schönberg, Austrian-born composer; John Sloan, U.S. painter; Arthur Vandenberg, U.S. senator

City, where he worked on stage plays. One of his early adaptations for the screen was of Giacomo Puccini's *Girl of the Golden West.*

Rosanoff, Martin Andre, Russian-born chemist (b. Nicolaeff, Russia, Dec. 28, 1874—d. Pittsburgh, Pa., July 30, 1951).

Ross, Edward Alsworth, U.S. sociologist (b. Virden, Ill., Dec. 12, 1886—d. Madison, Wis., July 22, 1951).

Ross, Harold Wallace, U.S. editor (b. Aspen, Colo., Nov. 6, 1892—d. Boston, Mass., Dec. 6, 1951), worked on newspapers in Salt Lake City, Utah, Marysville, Calif., Sacramento, Calif., Panamá, New Orleans, La., Atlanta, Ga., and San Francisco, Calif. From 1917 to 1919 he served overseas with the U.S. expeditionary force. He became an editor of the army newspaper, *Stars and Stripes*, and through that association came to know some of the outstanding U.S. literary figures. His associates, banded under the name of the Thanatopsis Literary and Inside Straight club, included Raoul Fleischmann, heir to a yeast fortune, who underwrote the publication of a new magazine the *New Yorker*, first published in 1925.

Ross was credited with being the guiding genius behind the steady rise of this magazine's popularity. He attracted to it—or discovered for it—many of the best-known cartoonists of the day. It was also known as one of the more literate magazines in the field of criticism. Among its authors and cartoonists were James Thurber, Peter Arno, William Steig, Wolcott Gibbs, Leonard Q. Ross, Clarence Day, Robert Benchley and Dorothy Parker.

Ross, John K. L., Canadian industrialist, sportsman and naval officer (b. Lindsay, Ont., 1876?—d. Jamaica, B.W.I., July 25, 1951), was the son of James R. Ross, one of the builders of the Canadian Pacific railway. He was graduated from McGill university, Montreal, Que., in 1897, began his business career in the machine shops of the Montreal street railway and eventually became manager of several British streetcar-line companies.

He served as a destroyer commander in World War I, and during World War II purchased a yacht for the Canadian government to use as a torpedo vessel. He commanded the ship for two years on antisubmarine patrols in the Atlantic, was awarded the Order of the British Empire and received two mentions in dispatches.

In the years between the wars he owned a large racing stable and his horse Sir Barton was the only Canadian horse to win a Kentucky Derby, which it did in 1919. Ross made many gifts, among them being the $700,000 Ross pavilion to the Royal Victoria hospital in Montreal.

Rothier, Leon, French-born opera singer (b. Rheims, Fr., Dec. 26, 1874—d. New York, N.Y., Dec. 6, 1951).

Rubien, Frederick W., U.S. sports leader (b. 1871?—d. Manhasset, N.Y., July 5, 1951).

Russell, Elbert, U.S. educator (b. Friendsville, Tenn., Aug. 29, 1871—d. St. Petersburg, Fla., Sept. 21, 1951).

Russell, William Logie, Canadian-born psychiatrist (b. New Brunswick, Can., July 24, 1863—d. Santa Barbara, Calif., March 31, 1951).

Ryazanov, Vasily G., Soviet army officer (b. 1889?—d. Moscow (?), U.S.S.R., July 8, 1951).

Sadako, Dowager Empress of Japan (b. 1884?—d. Tokyo, Japan, May 17, 1951).

Salinas, Pedro, Spanish-born author and educator (b. Madrid, Sp., Nov. 27, 1892—d. Boston, Mass., Dec. 4, 1951).

Sapieha, Adam Stefan Cardinal, Polish prelate (b. Krasiczyn, Pol., May 14, 1867—d. Cracow, Pol., July 23, 1951), of princely birth, was ordained priest in Oct. 1893. For a few years he was professor at the Lwow seminary and canon of the metropolitan chapter, but Pope Pius X called him to Rome in 1905, and he remained at the pontifical court until, on Dec. 17, 1911, the pope consecrated him prince-bishop of Cracow. During World War I Sapieha had done important work as chairman of an episcopal relief committee and in the restored Polish state he at once became prominent in the nation as well as in the church. In 1925 Cracow was raised to be a metropolitan see. During the German occupation, 1939-45, the archbishop spoke again and again for the Polish nation. He was elevated to the Sacred college by Pius XII in Feb. 1946 as cardinal priest. He was at the time of his death the last cardinal at liberty behind the "iron curtain."

Sauerbruch, (Ernst) Ferdinand, German surgeon (b. Barmen [part of Wuppertal from 1929], Ger., July 3, 1875—d. Berlin, Ger., July 2, 1951), was professor of surgery at Zürich university, 1911-18, at Munich university, 1918-28, and at Berlin university, 1928-49. He was noted for his method of using a loop of skin-protected muscle in the stump of an amputated member to operate, for instance, the hand, or even the fingers, of an artificial arm. His main publication on this topic was *Die willkürlich bewegbare künstliche Hand* (1911).

Saunders, Hilary Aidan St. George, British historian and novelist (b. Eng., Jan. 14, 1898—d. Nassau, the Bahamas, Dec. 16, 1951).

Sawyer, Wilbur Augustus, U.S. medical scientist (b. Appleton, Wis., Aug. 7, 1879—d. Oakland, Calif., Nov. 12, 1951).

Schlarman, Joseph H., U.S. Roman Catholic bishop (b. Breese Township, Ill., Feb. 23, 1879—d. Peoria, Ill., Nov. 10, 1951).

Schnabel, Artur, Austrian-born pianist (b. Lipnik, Aus., April 17, 1882—d. Axenstein, Switz., Aug. 15, 1951).

Schönberg, Arnold, Austrian-born composer and musician (b. Vienna, Aus., Sept. 13, 1874—d. Brentwood, Calif., July 13, 1951).

Schultz, Adolph George ("GERMANY"), U.S. former football star (b. 1882?—d. Detroit, Mich., April 14, 1951).

Schultz, Leonard, U.S. architect (b. Chicago, Ill., Dec. 5, 1877—d. Scarsdale, N.Y., Aug. 25, 1951).

Schulz, Edward Hugh, U.S. army engineer (b. Wheeling, W.Va., Jan. 23, 1873—d. Berkeley, Calif., March 3, 1951).

Schwab, Laurence, U.S. author and producer (b. Boston, Mass., Dec. 17, 1893—d. Southampton, L.I., N.Y., May 29, 1951).

Schwarz, Frank Henry, U.S. mural painter (b. New York, N.Y., June 21, 1894—d. Mount Vernon, N.Y., Sept. 5, 1951).

Scott, John, Canadian newspaper editor and publisher (b. St. John, N.B., 1874?—d. Toronto, Ont., Sept. 23, 1951), sold papers as a boy and meantime managed a baseball team. It was through his newspaper contacts in publicizing the results of his team's play that he entered the field of journalism, first as a sports writer on the *St. John Gazette.* He spent 26 years on the *Montreal Gazette*, then from 1927 to 1936 was managing director of the Mail Printing Company, Ltd., which published the *Toronto Mail and Empire* until it was merged with the *Toronto Globe.* For a time he was president of the Canadian Press, Canada's national news service. He retired in 1936.

Seashore, Robert Holmes, U.S. psychologist (b. Iowa City, Ia., June 14, 1902—d. Chicago, Ill., Aug. 27, 1951).

Seton-Watson, Robert William, British historian (b. Ayton, Perthshire, Scot., Aug. 20, 1879—d. Isle of Skye, Scot., July 25, 1951), was educated at Winchester college and at New college, Oxford. When visiting Vienna and Budapest in 1905 he became interested in political movements of the Habsburg monarchy; he started writing to the *Spectator* as "Scotus Viator" and in 1908 published a book on the *Racial Problems in Hungary*, followed in 1911 by *The Southern Slav Question.* In 1910 he met Thomas Masaryk and their friendship enabled Seton-Watson to render outstanding services to the Czechoslovak cause. Masaryk in exile was on the board of Seton-Watson's *The New Europe* (1916-20), a weekly review which stood for the reconstruction of central and eastern Europe on national and democratic principles. In 1922 Seton-Watson was appointed professor of central European history in the University of London and became joint editor (with Sir Bernard Pares) of the *Slavonic and East European Studies.* He held the London chair until 1945 when he became the first professor of Czechoslovak studies at Oxford; he retired in 1949. His most notable books included *A History of the Roumanians* (1934), *Britain in Europe, 1789-1914* (1937), *From Munich to Danzig* (1939) and *History of the Czechs and Slovaks* (1944). He contributed to the *Encyclopædia Britannica.*

Sherman, Forrest Percival, U.S. naval officer (b. Merrimack, N.H., Oct. 30, 1896—d. Naples, It., July 22, 1951), was the youngest naval officer to become chief of naval operations of the United States and the first naval flier to hold that post in time of peace. He studied a year (1913-14) at Massachusetts Institute of Technology, Cambridge, and entered the U.S. Naval academy, Annapolis, Md., graduating in 1917, second in his class. During World War I he saw duty in European waters, and after that war he became a naval aviator. Early in World War II he served with the war plans division of the office of chief of naval operations and later was given command of the carrier "Wasp," which was sunk by the Japanese in 1942. He then served as chief of staff to Vice-Adm. John H. Towers, commander of the navy's Pacific air forces, and as deputy chief of staff to Adm. Chester W. Nimitz, commander in chief of the Pacific fleet. In Dec. 1945 he was named deputy chief of naval operations and helped draw up the original plans for unification of the armed services. In Jan. 1948 he was named commander of the U.S. naval force patrolling the Mediterranean. It was from this duty that he was recalled to Washington, Nov. 1, 1949, to become chief of naval operations, succeeding Adm. Louis E. Denfeld. In 1951 he was one of the first to testify in support of the removal of Gen. Douglas MacArthur from his command in the Pacific. He was on a mission to Europe involving the collaboration of the Spanish government in the defense of western Europe when he died.

Shidehara, Kijuro, Japanese civil leader (b. Osaka, Japan, Aug. 11, 1872—d. Tokyo, Japan, March 10, 1951), studied at the Imperial university of Tokyo and entered the foreign service in 1899. In 1912 he was named counsellor of the embassy in Washington, D.C., and in 1914 he went to The Hague for a year as minister. He was one of the signers of the Versailles treaty ending World War I. From 1919 to 1922 he was ambassador to the U.S. He was Japanese foreign minister from 1924 to 1927 and again from 1929 to 1931 and as such defended Japan's invasion of Manchuria on the grounds that Japan was saving the country from the Russians. He faded from leadership during World War II, but emerged as the first prime minister of Japan under Allied occupation following that war. He had received the title of baron in 1920, but this status was taken from him in the postwar reforms. At the time of his death he was speaker of Japan's house of representatives. (*See* also *Encyclopædia Britannica.*)

Sikelianos, Angelos, Greek poet (b. Levkas, Ionian Islands, Gr., 1884—d. Athens, Gr., June 19, 1951).

Simkhovitch, Mary Kingsbury (MRS. VLADIMIR G. SIMKHOVITCH), U.S. settlement-house worker (b. Chestnut Hill, Mass., Sept. 8, 1867—d. New York, N.Y., Nov. 15, 1951).

Sinclair, Arthur, Irish actor (b. Dublin, Ire., Aug. 3, 1883—d. Belfast, N. Ire., Dec. 14, 1951).

Skum, Nils Nilsson, Lapp artist (b. 1872?—d. Siskawaara Mts., Swed., Dec. 27, 1951).

Sloan, John, U.S. artist (b. Lock Haven, Pa., Aug. 2, 1871—d. Hanover, N.H., Sept. 8, 1951), studied at the Pennsylvania Academy of the Fine Arts, Philadelphia, worked as an illustrator for Philadelphia newspapers and in 1905 went to New York city, where he did magazine and book illustrations while helping to launch a revolt of young modernists against the formalism of the preceding generation of artists. He and his associates, residents of New York's Greenwich Village, were known as the "eight" and "the black gang" and were credited with creating "the ash-can school" of art. Their insistence was on painting life as they saw it, not as a romanticized and remote experience.

His work went unrecognized for years. He never exhibited a painting until he was 29, and never sold one until he was 49. Fortune came rapidly after that, and by the time of his death his paintings were on exhibit in most of the major museums of the United States. His influence was exerted directly on a generation of American artists, since he devoted much of his time to teaching.

"Honest, ironic and an exceptional draftsman, he painted the back alleys and barrooms, characters of questionable virtue, bringing to art the beauty of realism, to become a heroic figure in contemporary American art," in the words of the catalogue of the *Encyclopædia Britannica* Collection of Contemporary American Painting. One of his paintings in this collection, "Chinese Restaurant," was uniformly voted one of the most popular of the 126 paintings exhibited by Britannica during their five-year tour of the United States.

Smith, George Albert, president of the Church of Jesus Christ of Latter Day Saints (b. Salt Lake City, Utah, April 4, 1870—d. Salt Lake City, April 4, 1951), was a church leader the greater part of his life. His grandfather was a cousin of Joseph Smith, founder of the Mormon sect, and a counsellor to Brigham Young. George Albert Smith was named to the Latter Day Saints Council of Twelve Apostles in 1903 and was made president of the apostles in 1943, being elevated to the position of president of the church in 1945. He was active in the management of various business enterprises controlled by the church and a leading spirit in the promotion of dry farming, irrigation and the preservation of far western historical sites.

Smith, George Milton, U.S. cancer specialist (b. Hong Kong, China, July 5, 1879—d. Pine Orchard, Conn., Feb. 26, 1951).

Smith, Henry Lewis, U.S. X-ray pioneer and educator (b. Greensboro, N.C., July 30, 1859—d. Greensboro, Feb. 27, 1951).

Smith, Hurlbut William, U.S. industrialist and civic leader (b. Centre Lisle, Broome County, N.Y., June 24, 1865—d. Syracuse, N.Y., Dec. 16, 1951).

Smith, Robert B., U.S. librettist and lyricist (b. Chicago, Ill., 1875?—d. New York, N.Y., Nov. 6, 1951).

Solh, Riad es, Lebanese statesman (b. Saida, Lebanon, 1894—d. Amman, Jor., July 16, 1951), was sentenced to death during World War I by a Turkish court martial for his pro-Arab activities, but the sentence was commuted to deportation. After World War I he fought against the French mandate in the Lebanon, was sentenced to death by a French court martial, but was pardoned in 1924. He opposed the Franco-Lebanese treaty of Nov. 13, 1936, and was exiled. From Sept. 1943 to Jan. 1945 he was the first prime minister of Lebanon; he returned to power in June 1947 and resigned in Feb. 1951. His assassination, while on a visit to King Abdullah, was attributed to members of the Syrian Nationalist party.

Sommerfeld, Arnold (Johannes), German physicist (b. Königsberg, Ger., Dec. 5, 1868—d. Munich, Ger., April 26, 1951).

Soule, Malcolm Herman, U.S. bacteriologist (b. Allegany, N.Y., Dec. 5, 1896—d. Ann Arbor, Mich., Aug. 3, 1951).

Speare, Dorothy (MRS. CHARLES J. HUBBARD), U.S. operatic singer, author and lecturer (b. Newton Center, Mass., Dec. 13, 1898—d. Boston, Mass., Feb. 4, 1951).

Stacpoole, Henry de Vere Stacpoole, British novelist (b. Dublin, Ire., 1863—d. Isle of Wight, Eng., April 12, 1951).

Stacy, Walter Parker, U.S. jurist (b. Ansonville, N.C., Dec. 26, 1884—d. Raleigh, N.C., Sept. 13, 1951).

Stanley, Robert Crooks, U.S. industrialist (b. Little Falls, N.J., Aug. 1, 1876—d. Dongan Hills, Staten Island, N.Y., Feb. 12, 1951).

Stevens, Ashton, U.S. drama critic (b. San Francisco, Calif., Aug. 11, 1872—d. Chicago, Ill., July 12, 1951), was drama critic for the Chicago Hearst newspapers for 40 years, after beginning his reporting of the theatre in San Francisco and continuing it for the *New York Evening Journal*, the present *Journal-American*. He was the friend of most theatrical personages of the 20th century, and collaborated with Charles Michelson on the play *Mary's Way Out*. An expert banjo player, he wrote the article on this instrument for the *Encyclopædia Britannica*.

Stires, Ernest Milmore, U.S. Protestant Episcopal bishop (b. Norfolk, Va., May 20, 1866—d. Palm Beach, Fla., Feb. 12, 1951), studied at the University of Virginia at Charlottesville and at the Protestant Episcopal Theological Seminary in Virginia at Alexandria, and was ordained a priest in 1892. He served in ministries in Virginia, Georgia and Illinois, then moved to St. Thomas' church in New York city, which he built into a prosperous parish. He was consecrated bishop of Long Island, N.Y., Nov. 24, 1925, and retired in 1942. For a number of years he was chairman of the fabric committee that was responsible for planning the building of the Cathedral of St. John the Divine in New York city.

Stolberg, Benjamin, German-born labour publicist and author (b. Munich, Ger., Nov. 30, 1891—d. New York, N.Y., Jan. 21, 1951).

Street, Sir Arthur William, British government official (b. Cowes, Isle of Wight, May 16, 1892—d. London, Eng., Feb. 24, 1951).

Street, Charles Evard ("GABBY"), U.S. baseball player and manager (b. Huntsville, Ala., Sept. 30, 1883—d. Joplin, Mo., Feb. 6, 1951), entered professional baseball at the age of 16 and remained in the game for 40 years. He played in several minor leagues, then entered the major leagues with Cincinnati in 1904. He spent the next year with the Boston Braves, returned to the minors as catcher for the Chattanooga, Tenn., Southern Association team, and in 1908 became catcher for the Washington Senators in the American league. He gained fame as the catcher for Walter Johnson, and had the novel distinction of being the first man to catch a baseball dropped from the top of the Washington monument in Washington, D.C.

From 1920 to 1929 he managed various minor league teams, and in the latter year went to the St. Louis Cardinals as coach. In 1930, as manager of this team, he led it to the National league championship, and in 1931 the team again won the pennant and the world series as well. His last major-league job was as manager of the St. Louis Browns, in 1938. In later years he was a radio baseball announcer in St. Louis, Mo.

Sumner, (Benedict) Humphrey, British historian (b. Aug. 8, 1893—d. Oxford, Eng., April 25, 1951).

Swinton, Sir Ernest Dunlop, British army officer and military historian (b. Bangalore, India, Oct. 21, 1868—d. Oxford, Eng., Jan. 15, 1951).

Szyk, Arthur, Polish-born artist and miniaturist (b. Lodz, Pol., June 3, 1894—d. New Canaan, Conn., Sept. 13, 1951).

Taylor, Floyd, U.S. journalist (b. Riverside, Calif., March 20, 1902—d. Plandome, L.I., N.Y., Aug. 24, 1951).

Tennyson-D'eyncourt, Sir Eustace (Henry William), British naval architect (b. April 1, 1868—d. Hailsham, Sus., Eng., Feb. 1, 1951).

Thomas, George, U.S. educator (b. Hyde Park, Utah, Dec. 29, 1866—d. Salt Lake City, Utah, April 11, 1951).

Thomas, John Webster, U.S. business executive (b. Tallmadge, O., Nov. 18, 1880—d. Akron, O., Nov. 26, 1951).

Thompson, Cecil Vincent Raymond, British journalist and author (b. London, Eng., 1906?—d. New York, N.Y., June 12, 1951).

Thyssen, Fritz, German industrialist (b. Mülheim, Ger., Nov. 9, 1873—d. Buenos Aires, Arg., Feb. 8, 1951), was the son of August Thyssen, who was generally credited with founding the German iron and steel industry. His father died in 1926 and the son acceded to the industrial empire. He became one of Germany's wealthiest and most powerful men, holding 15% of the total capital of the Vereinigte Stahlwerke, a trust that controlled most of Germany's ore reserve and employed 200,000 workers.

Historically, Thyssen's greatest significance was in his espousal of the cause of Adolf Hitler and the nazi party in Germany. He was one of Hitler's earliest supporters, and helped organize the meeting of German industrialists on Jan. 26, 1933, which heard Hitler outline his nazi program and which eventually supported him in his drive to become Germany's chancellor. Thyssen spent 3,000,000 marks to sponsor Hitler. His excuse was that Hitler would save Germany from communism.

When he eventually saw Hitler lead the country into some of the very abuses he had feared and eventually into World War II, Thyssen fled the country. His property, then valued at $88,000,000, was confiscated, and he was deprived of his citizenship. Eventually, for propaganda purposes, he was labelled a Communist by the nazis. In 1941 while he was trying to make his way to South America he was picked up by the Vichy government in France and turned over to the nazis. He reportedly spent some time in the Dachau concentration camp. After World War II a denazification court found him guilty of being a "minor nazi," and he was ordered to turn over 15% of his available property in Germany to the fund for the victims of nazi persecution.

Titus, Paul, U.S. gynecologist and obstetrician (b. Batavia, N.Y., May 6, 1885—d. Pittsburgh, Pa., June 28, 1951).

Trevelyan, Robert Calverley, British poet and author (b. England, June 28, 1872—d. Surrey, Eng., March 21, 1951).

Truslow, Francis Adams, U.S. lawyer (b. Summit, N.J., May 4, 1906—d. on shipboard, July 8, 1951).

Tyrwhitt, Sir Reginald, British naval officer (b. May 10, 1870—d. London, Eng., May 30, 1951).

Usborne, Cecil Vivian, British naval officer, inventor and author (b. Queenstown, Ire., May 17, 1880—d. London, Eng., Jan. 31, 1951).

Valle, Mario, Italian-born baritone and stage director (b. Rome, It., 1881?—d. New York, N.Y., May 14, 1951).

Valtin, Jan (RICHARD JULIUS HERMAN KREBS), German-born author (b. Darmstadt [or near Mainz?], Ger., Dec. 17, 1905—d. Chestertown, Md., Jan. 1, 1951), was the author of a book of supposed reminiscences of a career as a Communist plotter and a supposed member of the gestapo, entitled *Out of the Night*. Although the book itself created a sensation in the early days of World War II, chiefly for its exposé of methods of the gestapo, it was not established whether or not Valtin ever had all of the experiences he claimed. He was reputed to have joined the Communists in Germany at the end of World War I; fled when they were defeated; studied in the soviet sabotage school in Leningrad, then served as a Communist agent trying to create an uprising in Hawaii. In 1921 he first visited the U.S. In 1926 he was sentenced to serve ten years in San Quentin prison in California for assault with a deadly weapon, and in 1929 he was released and deported to Germany. According to his own book, he entered the fight against the nazis, was seized and tortured, pretended to join the nazis, and finally fled the country. During that period, his book related, he worked for the gestapo. In March 1938 he fled Germany as a seaman and jumped ship at a U.S. east coast port. In 1947 Valtin was granted U.S. citizenship, at which time his World War II record with the U.S. 24th division was offered as partial evidence of his worth as a potential citizen.

Van Alstyne, Egbert A., U.S. composer (b. Marengo, Ill., 1878?—d. Chicago, Ill., July 9, 1951), wrote more than 500 popular songs during his career. Many of the most famous so-called "barbershop" tunes were his products. The list includes some written in collaboration with lyric writers Harry Williams, Gus Kahn and Haven Gillespie. The songs include "In the Shade of the Old Apple Tree," "Navajo," "Seminole," "Pretty Baby," "Your Eyes Have Told Me So," "Drifting and Dreaming," "Little Old Church in the Valley," "That Old Girl of Mine," "Pony Boy," "Won't You Come Over to My House" and "Sailing Away on the Henry Clay." In 1950 Van Alstyne was given a tribute in the form of a pageant, witnessed by the 100,000 persons who attended the 21st annual Chicagoland Music festival, which featured many of his songs and marked one of his last public appearances.

Vandenberg, Arthur Hendrick, U.S. publisher and senator (b. Grand Rapids, Mich., March 22, 1884—d. Grand Rapids, April 18, 1951), began the study of law at the University of Michigan, Ann Arbor; but after family financial reverses he went to work, entering the newspaper field. He became manager of the *Grand Rapids Herald* at the age of 22, and continued as manager or editor until 1928, when he was appointed to the U.S. senate on the death of Sen. Woodbridge N. Ferris. He had, meanwhile, won wide attention for his editorials and as early as 1916 served as chairman of the Republican state convention. From 1921 to 1928 he was a member of the Republican state committee in Michigan.

During his earlier career he opposed U.S. intervention abroad and in the years immediately preceding World War II was one of the outstanding isolationists—though he used the term "insulationist." He had opposed U.S. entry into the League of Nations and saw the beginnings of World War II as justifying that earlier stand. Accordingly, it was a spectacular political development when, in a complete reversal of policy, he announced in a Jan. 1945 senate speech that he thereafter favoured U.S. positive leadership in world affairs.

After the 1946 elections, when the Republicans obtained control of the senate, Vandenberg, as chairman of the committee on foreign relations, began to steer important legislation through the senate under what he termed an "unpartisan" foreign relations policy. He was a delegate to the United Nations Conference on International Organization at San Francisco, Calif., in 1945. He served as U.S. adviser to the council of foreign ministers at the 1946 Paris peace conference and was an early exponent of the policy of firmness in dealing with the U.S.S.R. The culmination of his bipartisan leadership was his sponsorship in the senate of the Marshall plan for economic aid to western Europe, and the later plan for military aid that eventually was embodied in the North Atlantic Treaty organization.

Vandenberg had been a chief Republican presidential possibility as early as 1940, and wielded great influence in his party's inner circles virtually throughout his adult life.

Van der Meersch, Maxence, French novelist (b. Roubaix, Fr., May 4, 1907—d. Le Touquet, Fr., Jan. 14, 1951).

Varela, José Enrique, high commissioner of Spanish Morocco (b. near Cadiz, Sp., 1891?—d. Tetuán, Spanish Morocco, March 24, 1951).

Vavilov, Serghey Ivanovich, Russian scientist (b. Moscow, Russia, 1891—d. Moscow, Jan. 25, 1951), graduated from Moscow university in 1914, served in the Russian army and, after World War I, was appointed lecturer in physics at his old university. For his research in optics he was elected in 1931 corresponding member of the Soviet Academy of Sciences, was made full member a year later and in 1945 was elected president. He was also an editor of the *Bolshaya Sovietskaya Entsiklopedia.* He was awarded the Stalin prize in 1943 and 1946.

Voronoff, Sergei (Serghei Voronov), Russian-born French surgeon (b. Voronezh, Russia, July 10, 1866—d. Lausanne, Switz., Sept. 1, 1951), served as chief surgeon of the Russian hospital in France during World War I, much of his surgery being devoted to bone-grafting. In 1921, he became director of experimental surgery at the Collège de France, Paris, where he carried out experiments in grafting glands into sheep, with a view to improving their physique and the quality of their wool. On Oct. 5, 1937, he attracted attention when he informed the Société de Pathologie Comparée, Paris, that intelligence and physical growth of backward children could be improved by grafts of thyroid glands of monkeys. Among his published works were *Life, a Study of the Means of Restoring Vital Energy* (1921); *The Study of Old Age and My Method of Rejuvenation* (1926); and *Conquest of Life* (1932). Voronoff had become a French citizen in 1897.

Walker, Dame Ethel, British artist (b. Edinburgh, Scot., June 9, 1861—d. London, Eng., March 2, 1951).

Walker, John Moore, U.S. churchman (b. Macon, Ga., Nov., 24, 1888—d. Atlanta, Ga., July 16, 1951).

Walker, Robert, U.S. screen actor (b. Salt Lake City, Utah, 1919?—d. Los Angeles, Calif., Aug. 28, 1951).

Walsh, Gerald Groveland, U.S. educator and author (b. South Norwalk, Conn., Nov. 9, 1892—d. New York, N.Y., Dec. 17, 1951).

Waltz, Jean Jacques (Oncle Hansi), French caricaturist and writer (b. Colmar, France, Feb. 23, 1873—d. Colmar, June 10, 1951).

Warfield, David, U.S. actor (b. San Francisco, Calif., Nov. 28, 1866—d. New York, N.Y., June 27, 1951), had played the part of a comedian for ten years before he attracted the notice of David Belasco in 1900. Belasco had the play *The Auctioneer* written for and around Warfield in a comedy role, but it won Warfield acclaim as a character actor.

For a quarter of a century Warfield's reputation rested chiefly on roles in four plays, *The Auctioneer*, *The Music Master*, *A Grand Army Man* and *The Return of Peter Grimm.* He played a great variety of other roles, however, from time to time, including Shylock in Belasco's production of William Shakespeare's *The Merchant of Venice.*

Warfield joined with Marcus Loew in many successful ventures in the development of the Loew theatrical enterprises, and retired, wealthy, in 1924. He refused to take roles in motion pictures, though he admitted that he had once been offered $1,000,000 to do so.

Watson, Elmo Scott, U.S. educator and journalist (b. Colfax, Ill., April 2, 1892—d. Denver, Colo, May 5, 1951).

Weaver, Powell, U.S. composer (b. Clearfield, Pa., June 10, 1890—d. Kansas City, Mo., Dec. 22, 1951).

Wendt, Theophil, English-born conductor and composer (b. London, Eng., 1874—d. Johannesburg, U. of S. Af., Feb. 6, 1951).

Werner, Max, Ukrainian-born author and military analyst (b. Krakov, Ukraine, Aug. 11, 1901—d. New York, N.Y., Jan. 8, 1951).

Wherry, Kenneth Spicer, U.S. senator (b. Liberty, Neb., Feb. 28, 1892—d. Washington, D.C., Nov. 29, 1951), received his bachelor's degree from the University of Nebraska, Lincoln, in 1914 and studied at Harvard university in 1915–16. During World War I he served in the U.S. naval flying corps. From 1929 to 1932 he was a member of regular and special sessions of the Nebraska state legislature; he was mayor of Pawnee City, Neb., from 1929 to 1931 and again from 1938 to 1943. In 1939 he was elected Republican state chairman for Nebraska. Three years later he defeated Sen. George W. Norris, veteran independent, in the Nebraska senatorial election. He was re-elected in 1948 for the term beginning in 1949. From 1944 to 1946 he was senate minority whip, and from 1944 to 1948 Republican whip; in 1949 he was elected Republican floor leader and on Jan. 3, 1951, was re-elected to that post.

As Republican leader, Wherry repeatedly denounced the Truman administration's domestic and foreign policies. On Aug. 16, 1950, he said that "the blood of our boys in Korea" was "squarely on the shoulders" of Secretary of State Dean Acheson. Wherry endorsed former Pres. Herbert Hoover's proposal to limit the U.S. defense perimeter and in Jan. 1951 introduced a senate resolution barring use of U.S. troops abroad without the approval and control of congress. The Wherry resolution precipitated a three-month debate in the senate which ended April 4 with passage of a resolution approving four additional U.S. divisions for Europe but advising President Truman to consult with congress before sending more.

Whitworth, Geoffrey Arundel, founder of the British Drama league (b. London, Eng., April 7, 1883—d. Oxford, Eng., Sept. 9, 1951).

Wiggin, Albert Henry, U.S. banker (b. Medfield, Mass., Feb. 21, 1868—d. Greenwich, Conn., May 21, 1951).

Wilhelm (Friedrich Wilhelm Victor August Ernest) **Von Hohenzollern,** former crown prince of Germany (b. Potsdam, Ger., May 6, 1882—d. Hechingen, Württemberg, Ger., July 20, 1951), was the eldest son of the former Kaiser Wilhelm II. At 14 he entered the Plön Cadet school and in 1900 became an officer in the 1st Foot guards. The next year he entered Bonn university and studied law until 1903. On June 6, 1905, he married Cecilia, duchess of Mecklenburg-Schwerin, and soon afterwards was appointed commander of the "Death's Head" hussar regiment stationed at Danzig. In 1913 he was seconded to the general staff in Berlin. He made himself famous by a telegram he sent in that year to a German officer bullying the Alsatians of Saverne in which he used the phrase "Hit hard, always hard." He was given command on the outbreak of World War I of the 5th army and in 1915 of the army group which in 1916 tried to take Verdun. On Nov 10, 1918, following his father, he fled to Holland and on Dec. 1, 1918, he formally renounced his rights of succession to the crowns of Prussia and the German Empire. In Nov. 1923 Gustav Stresemann, then the chancellor, authorized him to return to Germany on condition that he would take no part in politics. In 1932, however, "Little Willie" urged Berliners to vote for Hitler and in 1933 he joined the N.S.K.K. (Nazi motorized corps). During World War II he stayed on his estate at Oleśno (Oels), Silesia; in 1944 he moved to his Potsdam palace, the Cecilienhof, and in 1945 he fled to Lindau, Bavaria. He was later captured by the French.

Wilks, Mrs. Hetty Sylvia Ann Howland Green, U.S. heiress (b. London, Eng., Jan. 7, 1871—d. New York, N.Y., Feb. 5, 1951).

Wilson, George Grafton, U.S. authority on international law (b. Plainfield, Conn., March 29, 1863—d. Cambridge, Mass., April 30, 1951).

Wilson, Leroy A(ugust), U.S. industrialist (b. Terre Haute, Ind., Feb. 21, 1901—d. New York, N.Y., June 28, 1951), rose from part-time telephone worker to president of the American Telephone and Telegraph company, the parent company of the $12,000,000,000 Bell system. He was graduated from the Rose Polytechnic institute in Terre Haute in 1922, and went to work as a traffic student with the Indiana Bell Telephone company. He continued with this company until 1929 when he moved to the operation and engineering department of A.T. & T. in New York city. He headed this department by 1942, and in 1944 was promoted to vice-president, to study revenue needs and develop a program of internal and external public relations. In June 1946 he was elected financial vice-president of A.T. & T., and in Feb. 1948, shortly after his 47th birthday, president of the company.

Wiman, Dwight Deere, U.S. theatrical producer (b. Moline, Ill., Aug. 8, 1895—d. Hudson, N.Y., Jan. 20, 1951).

Wittgenstein, Ludwig, Austrian-born philosopher (b. Vienna, Aus., 1889—d. Cambridge, Eng., April 29, 1951).

Wood, Francis Carter, U.S. cancer research specialist (b. Columbus, O., Dec. 30, 1869—d. Englewood, N.J., Jan. 5, 1951).

Woods, Albert H(erman), U.S. theatrical producer (b. New York, N.Y., Jan. 3, 1870—d. New York, N.Y., April 24, 1951), was the producer of more than 400 plays and claimed credit for having helped the careers of John Barrymore, Mary Pickford, Douglas Fairbanks, Claudette Colbert, Katharine Cornell, Clark Gable, Joan Blondell, Kay Francis, Ann Harding, Sylvia Sidney and Leslie Howard. One of his early successes, *The Fatal Wedding*, ran for three years largely because of the presence in the cast of a child actress, Gladys Mary Smith, who later changed her name to Mary Pickford.

Among his productions were *Within the Law, Getting Gertie's Garter, Up in Mabel's Room, Potash and Perlmutter, The Shanghai Gesture, The Trial of Mary Dugan, Ladies' Night, Parlor, Bedroom and Bath, East of Suez, The Whole Town's Talking, The Green Hat, A Farewell to Arms*, and his last play, produced in 1943, *Try and Get It.*

Woods, Walter O., former treasurer of U.S. (b. Carlinville, Ill., Oct. 31, 1873—d. Washington, D.C., June 7, 1951).
